Hussein (1935–1999). King of Jordan 1952–99. Great-grandson of *Hussein, King of the Hejaz, he succeeded his father *Tall (1911–1972), removed from the throne due to insanity. Educated in England, married four times, he showed great dexterity in accumulating under great pressure on the sea bed phenomena by self. This process, which Husserl called a 'phenomenological reduction', leads to the revelation of a 'transcendental self', the experiences of which it is the task of the researcher in this field to explore. In his last years he adopted a more all-embracing concept of consciousness, which satisfied nobody. Husserl broke with Heidegger over his support for *Hitler.

Hutcheson, Francis (1694–1747). Scottish philosopher, born in Ulster. He held a chair of philosophy at Glasgow from 1727, was outstanding as a moral philosopher and wrote on ideas of beauty and virtue or the nature and conduct of the passions. His most important work, A System of Moral Philosophy, was published posthumously (1755). Hutcheson denied that beneficence is motivated by selfishness and argued that ethical distinctions result from a 'moral sense', the criterion is the tendency to promote the good of the greatest number, an anticipation of utilitarianism.

Hutten, Ulrich von (1488–1523). German poet and reformer. A man of puny stature but impetuous pride, he gave up monastic life, studied in Germany and Italy and then found employment at the court of the Archbishop of Mainz. The anonymous and satirical Letters of Obscure Men, of which he was part-author, poured ridicule in dog-Latin on the doctrines, morals, follies, speech etc. of the monks and ecclesiastics of the time, and provided much of the intellectual tinder that *Luther and others were to set aflame. Meanwhile he had been made (1517) Poet Laureate by the emperor *Maximilian. He supported Luther at first from national sentiment against papal claims, but later became one of the most formidable religious propagandists. Forced to leave the archbishop's service he led a dangerous existence until with the help of *Zwingli he found an island refuge in Lake Zürich.

Hutton, James (1726–1797). Scottish geologist. After studying medicine at Edinburgh, Paris and Leyden he returned to Scotland to devote himself to agriculture, chemistry, and (from 1768 when he moved to Edinburgh) to geology. In his Theory of the Earth (1795) Hutton expounded his view that the continuing geological processes of erosion by rivers and seas result in the sedimentary deposit accumulating under great pressure on the sea bed...
and subsequently splitting into cracks and fissures, into which the flowing of molten mineral matter would produce granite and other igneous rocks in the earth's crust. Rain, he explained, was caused by condensation due the mingling of two air strata of different temperatures.

**Huxley, Aldous Leonard** (1894–1963). English novelist and essayist. Grandson of T. H. *Huxley, defective vision eventually, much helped by the system he described in *The Art of Seeing* (1943), prevented him from studying biology. He contributed essays and criticisms to several London journals before attracting attention with a series of satirical novels, *Crome Yellow* (1921), *Antic Hay* (1923), *Those Barren Leaves* (1925) and *Point Counter Point* (1928). Huxley became the mouthpiece of the disillusioned generation that followed World War I. In *Brave New World* (1932) he mockingly described a 'Utopia' in which human beings allowed themselves to be directed by an elite of planners who are able to satisfy emotional cravings by drugs. He returned to the theme in *Brave New World Revisited* (1958), and less pessimistically in *Island* (1962). His own favourite was *Time Must Have a Stop* (1944), set in London and Florence in the 1920s. Apart from *Grey Eminence* (1941), a brilliant biography of Richelieu's alter ego, and *Ape and Essence* (1949), a satirical appraisal of the results of atomic war, most of his later work was philosophic or mystical. He lived in Italy (1923–30), France (1930–38) and California (from 1938).

**Huxley, Thomas Henry** (1825–1895). English biologist, born in Ealing. Having studied medicine, he sailed (1846) as assistant surgeon with HMS *Rattlesnake* which had been commissioned to chart areas off the Australian Great Barrier Reef. He took the opportunity to collect, examine and compare some of the myriad marine organisms in those seas, from which he derived and published evidence that later lent support to *Darwin's evolutionary theory. Huxley's work was immediately appreciated and he was elected FRS in 1850, the year of his return. In 1854 he became lecturer in natural history at the Royal School of Mines. Meanwhile he continued his studies of the invertebrates and when Darwin published *The Origin of Species* (1859) Huxley was one of his warmest supporters. Faced with the criticism that the human brain had no counterpart in the animal kingdom he used the recent discovery of Neanderthal Man and his own anthropological studies to make a reply which forms the substance of his book of essays *Man's Place in Nature* (1863). Huxley is said to have introduced the word 'agnostic' to define his own philosophical viewpoint, which is set out in his *Science and Morals* (1886). He retained his position at the School of Mines until his health gave way (1885). Meanwhile he had held other academic or honorary appointments, e.g. Fullerian professor at the Royal Institution 1863–67, Secretary 1871–80, and President 1880–85 of the Royal Society. He was awarded the Copley Medal in 1888 and made a privy counsellor (PC) in 1892. His great interest in education was recognised by his seat on the first London School Board 1870–72. The first biological laboratory in Britain was opened through his inspiration and his *Science and Education* (1899) contains many of his papers on this theme. Many of his public lectures, among the most popular of the period, appeared in *Lay Sermons, Addresses and Reviews* (1870). In moulding opinion in the great controversies of his own and succeeding generations on the relationship of religion and science and the place of science in a general education, Huxley's role was of outstanding importance.

**Huygens [or Huyghens], Christiaan** (1629–1695). Dutch mathematician, astronomer and physicist, born in The Hague, Son of a diplomat, he was educated at Leiden and Breda and attracted the interest of *Descartes. He developed the art of grinding lenses, and designed an eyepiece that greatly reduced spherical aberration. With a powerful telescope of his own making he investigated and explained the 'rings' of Saturn. He built (1656) the first clock to be regulated by a compound pendulum, and also applied the balance wheel to the same purpose. He lived in Paris 1661–83 and visited London in 1689, proposing an alternative to *Newton's theory of gravity. He published *Horologium Oscillatorium* (1673), his great work on pendulum clocks, and in 1690 his *Traité de la Lumière* (1690), a partially satisfactory wave theory of light. He also translated John *Donne's poems.*
Huysmans, Joris Karl (1848–1907). French writer, of Dutch descent. His first novels, e.g. *Marthe* (1876), were in the naturalistic and often sordid pattern set by Émile *Zola. His best known novel *A Rebours* (1884), however, in revolt from this style, tells of a sensualist’s search for new experience through perverse and deliberate derangement of the senses. The writing of *Là-bas* (1891), a life of the Satanist Gilles de *Rais, had the paradoxical effect of converting him to Catholicism; *En Route* (1895) describing the journey that took him to this goal.

Hyde, Douglas (1860–1949). Irish writer and philologist. Mainly concerned with the survival of the Gaelic language and its use in literature, he founded (1893) the Gaelic League and was professor of modern Irish at the National University of Ireland 1909–32. Nonpolitical and a Protestant, he became first the president of the Republic of Ireland (Eire) 1938–45 under the 1937 constitution.

Hyde, Edward and Anne see Clarendon, 1st Earl of

Hyder, Ali see Haidar Ali

Ibáñez, Vicente Blasco see Blasco Ibáñez, Vicente

Ibn Battutah (1304–1369). Arab explorer, born in Tangier. Trained as a judge, from 1325 he travelled extensively in North Africa, Syria, Arabia, Mesopotamia and Persia, going to India (after 1332) by crossing the Black Sea and journeying through Central Asia. In Delhi he was employed by the Sultan Muhammad Ibn Tuqluq, who sent him as an envoy to China in 1342. He reached the Chinese imperial court only after many adventures in Southeast Asia. After his return to Morocco in 1349 he visited Granada and western Sudan. In 1353–54 he dictated an account of his travels and his experience of different rulers and societies.

Ibn Khaldun (1332–1406). Arab historian, born in Tunis. He served as a diplomat and administrator in North Africa, Spain and Egypt. After his pilgrimage to Mecca (1382–87) he spent the rest of his life in Cairo. His history of Islam has a valuable account of the Berbers, prefaced by a treatise on the philosophy of history, of which he was one of the earliest exponents.

Ibn Sa’ud, Abdul ‘Aziz (c.1880–1953). King of Saudi Arabia (from 1932). He spent his early years in exile but in 1902 seized Riyadh, home of the Sa’ud family, and made it the base for a revival of the Wahabis, a puritanical Mohammedan sect dating from the 18th century. During World War I he declined to join the Arab revolt organised by T. E. *Lawrence but used the opportunity to throw off Turkish suzerainty and greatly expanded his territories. Recognised from 1921 as the sultan of Nejd, he came into conflict with *Hussein, King of Hejaz, whom he dethroned and whose kingdom he annexed (1926), thus acquiring Mecca, with the prestige and wealth attached to its possession; in 1932 he assumed the title King of Saudi Arabia. The discovery of oil (1933) and the lucrative concession to the Americans provided him with great wealth, which he used personally or by distributing to the tribal sheiks, mainly his relatives. Ibn Sa’ud was a great Arab warrior of the traditional type, who proved his potency by the number of his wives and children as much as by his physical prowess in war, but, shrewd and often harsh as he was, and although he avoided any close international alignment, he was loyal to principles and obligations.

Ibn Sina see Avicenna

Ibrahim Pasha (1789–1848). Egyptian soldier. Son or stepson of *Mehemet Ali, the Turkish Viceroy of Egypt. As a Turkish general Ibrahim achieved military success against the Wahabis (*Ibn Sa’ud) in Arabia (1818) and the Greek insurgents (1824) during the Greek War of Independence. After his father broke away from the Ottoman sultan he was made Governor of Syria, where he became involved in hostilities against the Turks. He succeeded in conquering much of Asia Minor but British and Austrian intervention forced him to withdraw (1841). In the last year of his life, when his father became insane, he was regent in Egypt.

Ibsen, Henrik (Johan) (1828–1906). Norwegian dramatist, born in Skien. His father, ruined by speculation, apprenticed him to an apothecary. His first play was rejected but he became a stage manager at Bergen and later was artistic director of the Norwegian Theatre in Christiania (Oslo). During this time he was writing plays, at first in the conventional Romantic mould and later inspired by the old sagas. The historical drama The Pretenders (1864) already showed much psychological insight. Angered that Sweden and his own Norway should leave the Danes to fight alone against Prussia (1864), he lived mainly in Italy and Germany for many years. The first fruits of his disillusion, the lyrical dramas Brand (1867) and Peer Gynt (1867), were both intended to display the timidity and irresolution of which he accused his countrymen. He returned to a historical subject with The Emperor and the Galilean (1873) about the struggle of Christianity with paganism under Julian the Apostate, and then at last, when he was already middle-aged, came the series of prose dramas that revolutionised the European theatre. By relating the character of individuals to their social environment, by relying for drama on psychological development rather than external events, by substituting realism for romanticism, and by revealing the passions, the deprivations and the rebellions of women, he made the theatre a reflection of the contemporary world outside. Without Ibsen, *Shaw, *Hauptmann, *Brieux and many others could hardly have written as they did. The plays that brought about this remarkable change were Pillars of the Community (The Pillars of Society, 1874), A Doll’s House (1879), Ghosts (1881), which dealt frankly with hereditary disease, A Public Enemy (An Enemy of the People, 1882), The Wild Duck (1884), Rosmersholm (1886), The Lady from the Sea.
(1888), Heddá Gabler (1890), The Master Builder (1892), perhaps marking the highest point of his technique, Little Eyolf (1894), John Gabriel Borkman (1896) and When We Dead Awaken (1900). He was nominated for the Nobel Prize for Literature in 1902, 1903 and 1904, without success.

Ickes, Harold LeClaire (1874–1952). American administrator. A Chicago reporter, one of Theodore Roosevelt’s ‘Bullmoosers’, then a lawyer, he served as Franklin D. Roosevelt’s Secretary of the Interior, and briefly under Harry Truman, for a record term 1933-46, began implementing conservationist measures and attracted the enmity of big business. Known as ‘the Old Curmudgeon’ for his blunt speaking and stormy temperament, he disliked most of the New Dealers.

Idris I (Muhammad Idris of Senussi) (1890–1983). King of Libya 1951–69. As chief of the Senussi tribesmen he led resistance to the Italians, who after defeating Turkey (1911–12) occupied Tripolitania and Cyrenaica. Italy’s defeat in World War II provided an opportunity for Idris, exiled in Egypt, to return. Emir of Cyrenaica from 1945, in 1951, when the United Nations established the new kingdom of Libya, Idris was chosen as first king. He was deposed by a military coup d’etat in September 1969.

Ieyasu, Tokugawa (1542–1616). Japanese soldier and statesman. He assisted Nobunaga (d.1582) and Hideyoshi in overcoming the feudal nobility, and after the latter’s death (1598) succeeded in establishing in his own Tokugawa family a hereditary Shogunate (nominally subject to the emperor), which lasted until 1867. At first he tolerated the Christians, but, hearing how in other lands the entry of Jesuit missionaries had led to Spanish and Portuguese conquest, he expelled them. He adopted and applied Confucian syncretism to absorb the apparent contradictions of Buddhism and Shinto. For foreign trade he relied on the English and Dutch, and kept William Adams at his court as adviser on shipbuilding and navigation.

Ignatius Loyola, St see Loyola, St Ignatius

Ignatius of Antioc, St (also known as Theophrus) (c.35–107). Christian Father of the Church, born in Syria. Probably the third bishop of Antioc, according to *Eusebius he was executed in Rome under *Trajan, being thrown to lions in the Colosseum. His seven ‘epistles’, which seem to have been written on the journey from Antioc to Rome for his execution, contain valuable information about the early Church. There is a legend that he was the child taken up in his arms by Christ (Mark ix. 36).

Li Naosuke (1815–1860). Japanese nobleman and statesman. He favoured developing relations with the West, an issue raised when the US sent a fleet to Japan in 1853 to bring about the end of Japanese isolation. The government of the *Tokugawa shogun, which Li supported was not in a position to repel the fleet, and began on his advice to negotiate new relations and trade. This exacerbated disagreements between factions in Japan, already divided over the succession to the Shogunate (military dictatorship), Li Naosuke took direct control as Chief Councillor in 1858, settled the question of succession and forced acceptance of a Japanese–American treaty. He was murdered by political enemies.

Ikeda Hayato (1899–1965). Japanese politician. After serving many years in the Ministry of Finance, he was elected to the Diet (1949) as a Liberal Democrat and held several offices in connexion with finance and trade before becoming Prime Minister 1960–64, retiring through ill health, having earned much credit for Japan’s spectacular economic advance.

Imhotep (fl. 2650 BCE). Egyptian sage. Traditionally versed in alchemy and astrology as well as medicine, some accounts say that he designed the step pyramid of Sakkara for King *Zoser, whose chief minister he was. In Ptolemaic times he was identified with Asclepios (Aesculapius), the Greek god of healing.
Indy, (Paul Marie Theodore) Vincent d’ (1851–1931). French composer. A pupil of César Franck, and an ardent Wagnerian, he was a prolific composer of operas and religious, instrumental and orchestral music, a notable teacher and a vigorous opponent of the modern movement, now remembered only for his Symphony on a French Mountain Air (1886) and Istar (1896). He was a reactionary and anti-Semitic.

Inghenhouz, Jan (1730–1799). Dutch physician. He practised medicine in Holland, Austria and England, at the same time carrying out scientific studies of considerable interest. In 1779 he published his Experiments Upon Vegetables in which he described the respiration of plants and drew attention to the importance of the process in relation to animal life.

Ingres, Jean Auguste Dominique (1780–1867). French classical painter, born at Montauban. Son of a sculptor, he went to Paris (1797) to study under David, whose influence is marked in the brilliant portraits (1805, now in the Louvre) of the Riviere family. He won the first Prix de Rome (1802) with the Ambassadors of Agamemnon and lived in Rome 1806–20, 1835–41 (and in Florence 1820–24). Greatly impressed by 15th-century Italian painting, he became increasingly convinced that the highest effects in painting were to be achieved by line and form, emphasised by the cold jewel-like brilliance of his colour. He now came under the spell of Raphael who remained a major influence on his style and it was perhaps some consequent softening of his line that won his Vow of Louis XIII such instant acclaim at the Salon (1824). *Delacroix and Picasso were among his admirers.

Innocent III (Lotario de’Conti de Segni) (1161–1216). Pope 1198–1216. Son of a noble family in the Papal States, he was a nephew of Pope Celestine III, wrote the widely read tract On the Misery of the Human Condition, and was elected Pope in a very brief conclave, at the age of 37 and in full vigour. Though his interventions were sometimes ill-advised, he was one of the most successful medieval popes in exercising the papal right of intervening in temporal affairs. He deposed the emperor Otto IV, excommunicated King John of England but attacked Magna Carta, promoted the 4th Crusade (diverted to the conquest of Constantinople), and the bloody crusade that crushed the Albigenians in France. He presided at the Fourth Lateran Council (1215).

Innocent X (Ghiambattista Pamphili) (1574–1655). Pope 1644–55. Born in Rome, to a rich and powerful family, he became a curial lawyer, apostolic nuncio to Spain and a cardinal in 1626. Elected to the papacy as a compromise candidate, he was anti-French and pro-Habsburg, opposed concessions to Protestantism in the Treaty of Westphalia (1648) and was influenced by a rapacious sister-in-law Olimpia Maidalchini. *Velázquez’s portrait of Innocent (1650) is a masterpiece: the subject commented ‘troppe vero’.

Innocent XI (Benedetto Odescalchi) (1611–1689). Pope 1676–89. Deeply pious, he became involved in a bitter struggle with Louis XIV of France over the rights of the Gallican Church, and especially Louis’ claim to administer and collect the revenue of vacant bishoprics. More fruitful was the part he played in bringing about and sustaining the alliance between the emperors Leopold I and Jan Sobieski, King of Poland, which relieved Vienna from the Turkish threat (1683).

Inönü, İsmet (1884–1973). Turkish soldier and politician, born in Smyrna (Izmir). He was the comrade-in-arms of Mustafa Kemal (*Attatürk) and fought in the Balkan Wars and World War I. He was Atatürk’s Chief of Staff in the campaigns (1919–23) that ended in the expulsion of the Greeks from Asia Minor. He signed the Treaty of Lausanne (1923) on behalf of Turkey, and was the first Prime Minister of the new republic, serving 1923–24; 1925–37. On Atatürk’s death, he succeeded him as President 1938–50. Defeated in 1950 by Celal Bayer and Adnan Menderes, he led the Republican People’s Party in opposition. Following a military coup (1960) he was again Prime Minister 1961–65, resigning after the defeat of his government in the Assembly.

Frey, F. W., The Turkish Political Elite. 1965.

Ionesco, Eugène (1912–1994). French playwright, born in Romania. He spent his childhood in Paris and adolescence in Bucharest, settling permanently in France in 1942. His first play The Bald Prima Donna (1950) established him as the most important writer in the ‘theatre of the absurd’. He went on to write numerous plays, mostly translated into English and successfully performed in England and the US. They include The Lesson (1951), Rhinoceros (1960), Exit the King (1962) and Hunger and Thirst (1965). His ballet, The Triumph of Death, was first performed in Copenhagen (1972). He was made a member of the Académie Française (1970) and Légion d’Honneur (1970).

Iqbal, Sir Muhammad (1876–1938). Indian poet and philosopher. He taught philosophy in Lahore, before visiting Europe at the age of 30. His poetry, written in Persian and Urdu under the name of ‘Iqbal’, at first dealt mainly with general themes of grief and love and their philosophic implications but became increasingly a means of awakening the social consciousness of the Muslims of India, whose poverty and passivity he considered unworthy of their ancestors. He was originally a believer in Hindu–Muslim unity, but, although never a narrow nationalist, he gradually came to advocate a separate Muslim state and was President of the Muslim League (1930).

Schimmel M., Gabriel’s Wing. 1963.
Ireland, John Nicholson (1879–1962). English composer, born in Cheshire. His music was often inspired by ancient traditions and sites, e.g. his orchestral prelude *The Forgotten Rite* (composed 1913) by the Channel Islands and the rhapsody Mai-Dun (1920–21) by Maiden Castle, Dorset. Other works include song settings of poems by, e.g. Hardy, Housman and Masefield (I have twelve oxen, Sea fever etc.), and much music for piano.

Ireland, William Henry (1777–1835). English forger. Son of an engraver, he became a forger of 'Shakespearian' manuscripts, including the plays *Vortigern and Rowena* and *Henry II*, which he was able to impose even on acknowledged experts. *Sheridan* produced *Vortigern* at Drury Lane. Ireland eventually confessed he was a fraud.

Ireton, Henry (1611–1651). English soldier. Son-in-law of Oliver *Cromwell*; he was taken prisoner at Naseby (1645) but was soon rescued by Cromwell's cavalry charge. He was prominent in Army politics between 1647 and 1649, notably at the Army Council discussions with the Levellers at Putney ('The Putney Debates' Oct. 1647) and was one of the instigators of Pride's Purge (Dec. 1648). He took part in the trial of *Charles I*, and signed his death warrant. He was second-in-command to Cromwell in Ireland, became Lord-Deputy (1650) and died of the plague after the fall of Limerick. He had a clear mind, a ready tongue and had considerable influence with Cromwell.

Irigoyen, Hipólito (1850–1933). Argentinean President. A teacher by profession, he became (1896) leader of the Radical Civic Union party and in 1905 unsuccessfully attempted a revolution. After a change in the corrupt electoral system he was elected President, and, though splitting the party by his autocratic rule (1916–22), he carried through considerable social reform. He maintained the neutrality of his country in World War I. In 1928 he was again elected President, but the ineffectiveness of his administration provoked a military coup and his deposition (1930).

Ironside, William Edmund Ironside, 1st Baron (1880–1959). British soldier. He joined the army in 1897, served in South Africa and was the model for John *Buchan's* soldier-hero Richard Hannay. He commanded the unsuccessful British army of intervention against the USSR at Archangel 1918–19 and also served in Persia and India and as Governor of Gibraltar 1938–39. He was Chief of the Imperial General Staff (CIGS) September 1939–May 1940, until *Churchill* kicked him upstairs as a field marshal and baron.

Irving, Sir Henry (John Henry Brodribb) (1838–1905). English actor and manager, born in Somerset. He made his debut in Sunderland (1856) and first appeared in London in 1859. His first appearance as Matthias in *The Bells* (1871), a play that was to prove such a standby in the years to come, marked a stage on his road to popularity, and his *Hamlet* which ran for 200 nights (1874–75) established him as a tragic actor of the highest rank. In 1878 began his tenure, as lessee manager, of the Lyceum Theatre, London, where in memorable association with Ellen *Terry* he directed and acted in a series of Shakespearian and other plays that made theatrical history. The first actor to be knighted (1895), he was buried in Westminster Abbey.

Irving, Washington (1783–1859). American author and diplomat, born in New York. Son of an English immigrant merchant, he spent many years in Europe, where he made many literary friendships, e.g. with *Scott* at Abbotsford. He held occasional diplomatic appointments, and is remembered for his success, while a member of the American embassy in Madrid, in rescuing the Alhambra from falling into ruins. He made his reputation as a writer with his good-humoured satire *History of New York … by Diedrich Knickerbocker* (1809), but his lasting popularity depends upon the short pieces in his *Sketch Book* (1819–20), containing *Rip Van Winkle*, *Bracebridge Hall* (1822) and *Tales of a Traveller* (1825).

Irwin, 1st Baron see Halifax, Edward Frederick

Lindley Wood, 1st Earl of

Isaac (fl. c.2000 BCE). Hebrew patriarch. According to *Genesis* xxi–xxviii, Abraham was preparing to obey the command to sacrifice his son Isaac when, at the last moment, God substituted a ram for the boy. By his wife Rebecca, Isaac was the father of Jacob and Esau, and died aged 180 years.

Isaacs, Rufus Daniel see Reading, 1st Marquess of

Isabella (known as 'the Catholic') (1451–1504). Queen of Castile (from 1474). Daughter of John II of Castile, she married (1469) the prince who, already King of Sicily, became *Ferdinand II of Aragon in 1479. She had succeeded her brother Henry IV on the throne of Castile in 1474, so she and her husband
were joint rulers of the whole of Spain, which became a united country under their successors. For the main events of the reign see Ferdinand II.

Isabella II (1830–1904). Queen of Spain 1833–70. With her mother as regent, she succeeded her father *Ferdinand VII*, who had induced the Cortes to repeal the Salic Law against female succession. In what came to be known as the First Carlist War (1833–39), her uncle Don Carlos, who disputed her title, was defeated, a liberal rising which followed her abolition of the Cortes one of her first acts after being declared of age (1843) was put down. She proved herself an unreliable and wilful intriguer, and her government was inefficient and corrupt. The so-called ‘Glorious Revolution’ (1870) forced her to abdicate in favour of her son *Alfonso XII*. She lived abroad, mostly in France, for the rest of her life.

Isaiah (c.770–700 BCE). Hebrew prophet. He received his call in the temple in the year of King Uzziah's death (c.727) and seems to have acted as adviser, both in spiritual and temporal affairs, to Kings Jotham, Ahaz and Hezekiah. The interpretation of the biblical Book of Isaiah has always been difficult as so many of his prophecies may equally well refer to contemporary as to future events. He foresees the survival of a national remnant (referring either to those who returned from Babylonian exile or to those who maintained their religious identity after the great dispersal) and looked forward to the coming of a Messiah. Almost all scholars are now agreed that chapters xi–xvi are by a later hand, since the background events belong to the 6th rather than the 8th century BCE.

Isherwood, Christopher William Bradshaw (1904–1986). British author, American by naturalisation. The period he spent in Berlin (1928–33) before the Nazis came to power provided the material for his best known novels, *Mr Norris Changes Trains* (1935), *Goodbye to Berlin* (1939), and for his play (and film) *I am a Camera*, on which was based the musical *Cabaret*. He later wrote plays, e.g. *The Ascent of F. 6* (1936), in collaboration with his friend W. H. Auden. He settled in America in 1939, and wrote for films. His interest in Indian religion led him to translate, inter alia, *The Bhagavad Gita* (1944).

Ishmael. (fl. c.2000 BCE). Hebrew outcast. Son of *Abraham and Hagar* (the Egyptian handmaid of Abraham's wife Sarah), according to Genesis xvi, xvii and xxi, he and his mother were driven into the desert as a result of Sarah's jealousy. He is said to be the ancestor of Arab tribes and of Muhammad.

Isidore of Seville (c.560–636). Spanish prelate and scholar. Bishop of Toledo (from c.600), he was prominent at the councils of Seville (619) and Toledo (633), but is best known as a writer on religion, science (astronomy etc.) and history (e.g. of the Goths, Vandals and Sueves). His most important work is his *Etymologies*, a kind of encyclopaedia which, as an early medieval reference book, transmitted much classical knowledge. It was one of the earliest books printed and was much consulted until the 17th century.

Ismael (d.760). Islamic leader. He was the son of Jafar, the sixth Imam of the line stemming from Ali, Muhammad's son-in-law. This line, according to the Shi'ite sect, is that of the true succession. When Jafar died the majority of the Shi'ites passed over Ismael and chose his younger brother Musa as imam. A minority recognised Ismael and formed a separate sect. The movement eventually spread to India where the *Aga Khan became its spiritual leader.

Ismail Pasha (1830–1895). Khedive of Egypt 1867–79. Grandson of *Mehemet Ali*, he was appointed as the Ottoman viceroy in 1863 and created khedive in 1867. He obtained large credits owing to the rise in the value of the cotton crop when American shipments dwindled in the Civil War. He embarked on an extravagant development program: much of Alexandria and Cairo was rebuilt and the construction of the Suez Canal put in hand. But his plans were too grandiose for his means and some of the money was squandered. Egypt's national debt rose from £7 million in 1863 to £100 million in 1879. Crippled by interest payment, he sold his Suez Canal shares to Britain, but despite temporary relief he was forced to accept Anglo-French financial control (1876) and to abdicate (1879) in favour of his son *Tewfik.

Ismay, Hastings Lionel Ismay, 1st Baron (1887–1965). British general. As military Secretary to the War Cabinet (1940–45) he was one of Winston Churchill's closest companions and advisers during World War II. He was *Mountbatten's Chief of Staff in India 1947–48, Secretary for Commonwealth Relations 1951–52 and Secretary-General to NATO 1952–57*. Knighted in 1940, he was made a CH in 1945 and received a peerage in 1947.

Israel see Jacob

Isocrates (436–338 BCE). Greek philosopher, born in Athens. His family was rich, he studied under *Socrates, founded a school of oratory and wrote speeches for clients. He went into political exile after Athens came under Macedonian rule and died at the
Ivan IV (known as 'the Terrible') (1530–1584). Tsar of Russia (Muscovy) 1547–84. Son of Vasily III and grandson of *Ivan III, he was crowned at the age of 17. His minority spent at the mercy of boyars (nobles) competing for power had implanted in him a bitter hatred of the whole class. In the early part of his reign he carried out many legal and social reforms, but from about 1564 his behaviour, always harsh, rapidly deteriorated and his fear and suspicion developed. He instituted a secret police (oprichnina), and torture, execution and imprisonment became the everyday instruments of a neurotic sadism. In a fit of rage he killed his son Ivan (1580); he spent the rest of his life in penance. Despite, or because of these methods, his personal power was greater than that of any previous Russian ruler and he established firmly the autocratic tsarist tradition. He conquered the Tartars' Khanates of Kazan and Astrakhan and extended his territory to the Caspian. He formed links also with the western and offered to Queen *Elizabeth of England a trade treaty and even his hand in marriage. He was the subject of a remarkable film by Sergei *Eisenstein.

Iveagh, Edward Cecil Guinness, 1st Earl of see *Guinness, Sir Benjamin Lee

Ives, Charles Edward (1874–1954). American composer, born in Danbury, Connecticut. The son of a bandmaster with an enthusiasm for *Bach and musical experimentation, educated at Yale, he had some composition lessons from the conservative Horatio Parker but was essentially self-taught. He became an actuary and ran a New York agency for Mutual Insurance, Ives & Myrick. Until he retired in 1930 Ives composed only at weekends, when he also played the organ in church. A bold experimenter with 12–tone music, dissonance, and complex rhythms, little of his music was performed in his lifetime. *Schonberg recognised him as a genius and his cause was taken up by *Copland, *Stokowski and *Bernstein. His works included *The Unanswered Question (1906) and *Three places in New England (1908–14), for orchestra, four symphonies, much chamber and piano music and over 100 songs. He is now generally regarded as the greatest American composer.

Iwakura Tomomi, Prince (1825–1883). Japanese nobleman and politician, born in Kyoto. Anti–foreign at the time of American penetration of Japan, he was a key figure in organising the restoration of imperial rule in 1868 (*Mutsuhito). In 1871–73 he led a mission of 50 officials to investigate modern administration in the US and Europe, and favoured the adoption of a Prussian model. He was Chief Minister 1873–83.

Ito Hirobumi, Prince (1841–1909). Japanese statesman. After the fall (1867) of the shogunate ('vezau') and the restoration to active rule of the emperor *Mutsuhito (under the title of Meiji), Ito led the group of able politicians who set about bringing Japan out of isolation and turning it into a powerful modern state. He was four times Prime Minister 1885–88, 1892–96, 1898, 1900–01 and a principal architect of the Anglo-Japanese alliance (1902), which enabled Japan to wage victorious war against Russia (1904–05) without fear of outside intervention. Ito was special adviser to the emperor during the war and in 1906 was appointed Resident-General in Korea (by then a virtual protectorate of Japan). Korea was annexed after his assassination by a Korean.

Iwakura Tomomi, Prince (1825–1883). Japanese nobleman and politician, born in Kyoto. Anti–foreign at the time of American penetration of Japan, he was a key figure in organising the restoration of imperial rule in 1868 (*Mutsuhito). In 1871–73 he led a mission of 50 officials to investigate modern administration in the US and Europe, and favoured the adoption of a Prussian model. He was Chief Minister 1873–83.
Jabotinsky, Ze’ev (Vladimir Evgenyevich) (1880–1940). Russian Zionist, born in Odessa. A journalist, translator and orator, he advocated an organised Jewish defence against pogroms in Russia. During World War I, he served in the British army as an officer in a Jewish battalion, formed the Haganah in 1920 as a Jewish self-defence force against the Arabs and was briefly imprisoned. He advocated the establishment of a Jewish state on both banks of the River Jordan, founded the Zionist Revisionist organisation in 1925 and was working for the establishment of a Jewish army when he died in New York State. His followers organised the Irgun Zvai Leumi.

Jack the Ripper. Pseudonym of murderer in London who stabbed and mutilated at least seven prostitutes in the Aldgate and Whitechapel areas of East London in 1888. He was never caught, public alarm at his escape brought pressure to bear on the police and produced reforms in detection methods. There have been numerous ingenious attempts to identify him, most recently Patricia Cornwall’s expensive but unconvincing identification of the painter W. R. *Sickert.

Jackson, Andrew (1767–1845). 7th President of the US 1829–37. Born in South Carolina, he fought as a boy in the American War of Independence. Later, as a lawyer in Tennessee, he entered local politics and became a general in the militia. His defence of New Orleans in the war of 1812 against the British, and subsequent exploits against the Indians in Florida (of which he became military governor in 1821) made him a national hero. He had already served briefly in the US House of Representatives 1796–97 and US Senate 1797–98, 1823–25 and his political allies decided to exploit his popularity by putting him up for the presidency. In 1824, four candidates, Jackson, John Quincy *Adams, Henry *Clay, and William Crawford from Georgia (all from the Democratic-Republican Party), ran for president. Jackson led on the primary vote but without a majority in the Electoral College. The election was then referred back to the House of Representatives, which elected Adams. However, in 1828 Jackson beat Adams decisively, campaigning as a ‘Democrat’, the friend of the people, standing for what later came to be known as ‘the common man’. In encouraging the ‘spoils system’, by which political service was rewarded by official positions, he saddled the Democratic party and indirectly the whole of American public life with this lasting incubus. His attitude to the issues that confronted him was distinctively personal. He supported a strong federal government against states’ rights, and struck a blow at the power of money by vetoing the rechartering bill for the Bank of the United States, which he later crippled by removing federal deposits. He overcame what might have developed into a disruptive refusal to accept a new tariff bill by accepting compromise under which the tariff was imposed on condition that it was steadily reduced. In his second term he tried to purchase Texas from Mexico and would have annexed it when it revolted had he not been prevented by the opponents of slavery (it finally joined the Union in 1845). He was succeeded by his nominee Martin *Van Buren and continued to dominate Democratic politics. Though there was much of the simple frontiersman indicated by the nickname ‘Old Hickory’ in Andrew Jackson, he had an imaginative perception of the popular will and an astute and logical mind to interpret it, together with a deep sense of loyalty to the people.

Jackson, John Hughlings (1835–1911). British neurophysiologist. After 1863 he practised at the London Hospital and at the National Hospital for the Paralysed and Epileptic and was preoccupied with the neurological explanation of physical and mental disorders. Best remembered for his work on the localisation of brain function, there was still great debate in mid-century as to whether bodily movements were controlled by the brain as a whole, or by different sectors of the brain for each function. Partly on the basis of studies of patients with injured, diseased, or deficient brains, he proposed a localisation model. His insights were confirmed by the electrical experiments of Fritsch and Hitzig, and David Ferrier.

In 1993 he was accused of sexual molestation of juveniles. In 1994 he married the daughter of Elvis Presley. His death, following a drug overdose, led to a manslaughter conviction for his physician. 

**Jackson, Thomas Jonathan** (known as 'Stonewall Jackson') (1812–1863). American soldier. He served in the Mexican War (1846–48) and taught at the Virginia Military Institute (1851–61). His stand at the Battle of Bull Run (1861) in command of the Confederate forces in the Civil War earned him his nickname. In 1862, as commander in the Shenandoah Valley, by successively defeating his opponents and constantly threatening Washington he relieved the Confederate capital, Richmond, of much of the pressure upon it. Later in the year he joined Lee at Richmond and played an important part in the invasion of Maryland. At Chancellorsville (May 1863), when returning from a reconnaissance, he was mistaken for the enemy and shot by one of his own men. His firmness of character, sustained by rigid Calvinism, made him a strict disciplinarian but his masterly tactics, based on those of Napoléon, and his personal idiosyncrasies gave him popularity with his troops.

**Jacob** (Ya'aqob: later called Israel) (fl. c.1900 BCE). Hebrew patriarch. Second son of Isaac and Rebecca, according to Genesis xxviii, he tricked his elder brother Esau out of his birthright. By his two wives Leah and Rachel (for each of whom he had to serve their father Laban seven years) he had 12 sons, from whom were descended the 12 tribes of Israel: Reuben, Simeon, Levi, Judah, Zebulon, Issachar, Dan, Gad, Asher, Naphtali, Joseph and Benjamin.

**Jacobsen, Arne Emil** (1902–1971). Danish architect. He was among the most prominent of those who in the 1930s introduced 'functionalism' into Danish architecture. He designed (sometimes in collaboration) many civic and industrial buildings in Denmark, e.g. Aalborg Town Hall (1938–42), the Glostrup Town Hall (1953), office and residential buildings and his influence soon spread. He was chosen to design the new building for St Catherine's College, Oxford (completed 1965). He also turned his attention to applied art and designed furniture, lighting appliances, textiles etc.

**Jacquard, Joseph-Marie** (1752–1834). French inventor. After many years of experimenting with textile machinery he devised a successful loom for the mechanical weaving of complicated patterns (1801). This was bought by the French Government (1806), but Jacquard received a royalty on all machines sold. The Jacquard loom has played a major role in the development of patterned textiles for 150 years. His use of punched cards on which details of patterns were recorded was adopted by *Babbage in his calculating machine. Jacquard's cards remained indispensable until the electronic era.

**Jadwiga, St** (c.1373–1399). Polish Queen. Daughter of Louis (Lajos) the Great of Hungary and Poland, she married Władysław II and was canonised in 1997.

**Jagger, Mick** (Sir Michael Philip) (1943– ). English singer, actor and songwriter, born in Kent. He was a co-founder of The Rolling Stones in 1962 and its lead singer for decades.

**Jagellon**. Lithuanian dynasty that reigned in medieval Poland, Hungary and Bohemia. It is named after Jagielło, who became Grand Duke of Lithuania in 1381 and in 1386, having married Jadwiga, heiress to the Polish throne, became king of that country as Władysław (Ladislav) II. Six kings of his dynasty reigned in Poland until 1572. Another Władysław, son of *Casimir IV, was elected King of Bohemia (1471) and became (1490) King of Hungary also, but the defeat and death of his son *Louis at the Battle of Mohács (1526) ended the Jagiellon dynasty in both those countries.

Jahangir (Salam) (1569–1627). Emperor of India 1605–27. Fourth of the Moghuls, he succeeded his father *Akbar the Great. He was cruel, idle, and self-indulgent, but artistic. He left the administration to his wife, the strong-minded Nur-Jahan (‘light of the world’), who is said to have varied her governmental duties ‘by polo playing and shooting tigers’. Jahangir’s reign saw the arrival of the first Englishmen ever to visit the Moghul’s court. One of them, William Hawkins, who brought a letter from James I, was favourably received and given leave to start a trading port at Surat. Jahangir laid out the Shalimar gardens in Kashmir and erected several magnificent buildings in Lahore and elsewhere.

Jahn, Friedrich Ludwig (1788–1852). German philologist. Known as ‘Father’ Jahn (but not a priest), he was a gifted publicist who promoted the idea of Germany as an ‘organic state’, based on the Volk (folk) principle: this was timeless, involving all Germans, living, dead or unborn, in contrast to the English or French ideal of individualist, liberal society. His ideas were largely adopted by the Nazi movement.

James (the Great), St (Ya’aqob in Aramaic) (d.c.44 CE). Christian apostle. Son of Zebedee and brother of St John (the Divine), he was prominent among the apostles and after the Resurrection became a leader of the Church in Jerusalem. Beheaded on the order of *Herod Agrippa, he was the first apostle to be martyred. According to legend his body was taken to Spain, where in 835 the bones were found at Santiago (St James) da Compostella, which became and remains a great centre of pilgrimage. James became Spain’s patron saint. Another apostle, identified as James the son of Alphaeus or ‘James the Less’ plays no distinctive part in the New Testament story.

James (the Just), St (d.c.62 CE). Christian apostle. Leader of the Church in Jerusalem after the Resurrection, Paul called him (Galatians i:19) ‘James the Lord’s brother’ but Catholics translate the Greek adelphos as ‘kinsman’. He presided at the first apostolic council, held in Jerusalem c.49–50 CE, to decide whether Gentile converts had to undergo circumcision, and proposed a compromise position (Acts xv:13–21). The Epistle of James, one of the earliest books in the New Testament, was probably written about 58 CE. He was ascetic, a vegetarian and never married. Generally conservative, he appears to have interpreted Jesus’ teachings in an essentially Jewish context, in contrast to the appeal to the Gentiles by *Peter and *Paul. *Josephus reports that James was hallowed from the pinnacle of the Temple and stoned to death: *Eusebius adds that he was beaten to death by a fuller’s club. His followers retreated to Pella. Supporters of the Roman Petrine tradition played down James’s leadership of the Jerusalem Church.

James (the Less), St (fl. 1st century CE). Christian apostle. Not to be confused with James ‘son of Zebedee’ or ‘James the Lord’s brother’, he was son of Alphaeus and may have been the brother (or father?) of St *Jude. His fate is unknown.

James (Jaime) I (1208–1276). King of Aragon and Catalonia 1213–76. Although known as the ‘Conqueror’ for his victories over the Moors, Majorca was conquered by Catalans (1229–32) and the Moorish Kingdom of Valencia by the Aragonese in 1245. By relinquishing fiefdoms on the French side of the Pyrenees by the Treaty of Corbell (1258) he made Catalonia a purely Spanish kingdom. He initiated many legal reforms and the first maritime code.

James Edward Stuart see Stuart, James Edward

James I (1394–1437). King of Scotland 1406–37. Son of *Robert III, while at sea on the way to be educated in France, he was captured and detained in England for 21 years, honourably treated at court and made a Knight of the Garter. Ransomed in 1424, he returned to Scotland where his energetic attempt to introduce a parliament on the English model failed, his personal foibles lost him general support and the antagonism of the nobles led to his assassination. James is credited with having written The King is Quair, a fanciful poem about his love for Joan Beaufort, whom he married in 1424. His son James II (1430–1460) and his grandson James III (1452–1480), succeeded in turn. The reigns of both began with long minorities, both had to contend with a discontented and factious nobility, and both met violent deaths, the former killed at the siege of Roxburgh, the latter found murdered near the battlefield of Sauchieburn.

James I (1566–1625). King of England 1603–25 and (as James VI) of Scotland 1567–1625. Born at Edinburgh Castle, he was the only child of *Mary Queen of Scots and Henry, Lord *Darnley. As a baby he succeeded his mother after her enforced abdication, in a Scotland torn by rival political and religious factions, for whom possession of his person and the powers of regency that went with it were valuable prizes to be won. There were two sides to James: (i) boring and often cranky moralist; and (ii) extravagant bisexual hedonist. He grew up nervous, awkward and pedantic, with a great fund of knowledge and little common sense and was dubbed ‘the wisest fool in Christendom’. However, when he came to rule he managed with some astuteness to keep Roman Catholic and Presbyterian factions at bay by favouring each in turn and seeking a middle-way. He was helped to do this by the Treaty of Berwick (1586) under which, in return for subsidies, he pledged himself to be England’s ally. Meanwhile his mother, whom he could not remember and whose folly had brought such misfortune, was a prisoner in *Elizabeth’s hands. He interceded on her behalf but was careful not to jeopardise his own hopes of
accession, based on descent from Margaret, daughter of *Henry VII and wife of Scotland's *James IV. These hopes, with the collaboration of Elizabeth's chief minister, Robert *Cecil, were attained in 1603. One of his earliest acts was the summoning of the Hampton Court Conference to discuss the grievances of the Puritans in the Church of England. This broke down but at least one of its projects was implemented, the 'Authorised Version' of the Bible which was completed in 1611 and sponsored by James. Despite their shared escape when Roman Catholic malcontents planned the Gunpowder Plot (*Fawkes) to blow up the king in parliament, the relations between James, a firm believer in the 'divine right' of kings, and his legislature were sometimes strained. From 1611 to 1621 he ruled without summoning parliament (apart from the 'Addled Parliament' in 1614 which lasted six weeks), raising troops for Ireland by creating baronetcies a title introduced by him and carrying this obligation and money by selling monopolies, benevolences etc.

The Roman Catholic conspiracy did not prevent James from reversing Elizabethan policy towards Spain, but by assenting to *Raleigh's execution and by his attempt that ended in fiasco to arrange a Spanish marriage for Prince Charles, he only added to his own unpopularity. In 1589 James had married Anne of Denmark. Henry, the elder son, predeceased his father, the younger succeeded as *Charles I, and from his daughter *Elizabeth, the 'Winter Queen' of Bohemia, was descended the house of Hanover. For much of his reign James was under the sway of two unworthy favourites, Robert Carr, whom he created Earl of Somerset, and George Villiers, Duke of *Buckingham. In addition to several books on politics he wrote *A Counterblast to Tobacco (1604), and issued *The Book of Sports (1617) defining the amusements (e.g. archery, dancing, but not bowls) permissible on Sundays. Historians have tended to stress James's deficiencies, but they can be exaggerated. The Elizabethan literary flowering (*Shakespeare, *Donne, *Jonson) continued in the Jacobean era.

**James II** (1633–1701). King of England and Scotland 1685–88. Second son of *Charles I, born in London, before returning to England after the restoration of his brother, *Charles II, he had fought with courage in the armies of France and Spain. As Lord High Admiral 1669–73 he did much to restore the efficiency of the navy and was a successful general against the Dutch (1664–67). His conversion to Roman Catholicism (1670) meant that after the passing of the Test Act (1673) he had to resign his command. The 'Popish Plot' (Titus *Oates), it was alleged, was designed to place him prematurely on the throne, but after the failure of two Exclusion Bills, he succeeded Charles II with parliamentary and general consent. A rising in the West Country under Charles' illegitimate son *Monmouth was quickly and cruelly suppressed, but James' precipitate attempts to advance the Roman Catholic cause quickly aroused antagonism. He used dispensing power' (i.e. from the provisions of the Test Act) to promote Catholics to office, raising a standing army, stationed on Hounslow Heath with obvious intent to overawe the capital. In 1687 he issued a Declaration of Indulgence giving toleration to dissenters, Catholic and Protestant alike. A second Declaration in 1688 was ordered to be read in all churches. The acquittal of 'the Seven Bishops' for seditious libel in petitioning not to have to do so was greeted with popular enthusiasm. Leading Anglican politicians invited James' cousin and son-in-law, *William of Orange, to intervene in England. William's landing in England (1688) found James with an army uncertain in its loyalty and with no strong body of support. James fled, leaving the way clear for William to take the throne jointly with his wife *Mary. These events are commonly labelled the Glorious Revolution. James attempted to regain his kingdom from Ireland, but his cause was finally lost when he was defeated at the Battle of the Boyne. For the rest of his life he lived in France, died at St Germain-en-Laye and is buried there. By his first wife *Anne Hyde (1638–1671), daughter of the Earl of *Clarendon, he had two daughters: Mary II, wife of William III, and *Anne, afterwards queen. By his second wife *Mary of Modena, he was the father of James Edward *Stuart, the 'Old Pretender'.

**James IV** (1473–1513). King of Scotland 1488–1513. Son of James III, he took part in the nobles' rebellion which led to his father's death but soon asserted his mastery over them. By strengthening the administration of justice he restored confidence in law and order. His court became renowned for pageantry, tournaments and sport. He renewed the traditional alliance with France but at the same time came to terms with England, and in 1503 made the marriage with *Henry VII's daughter *Margaret which eventually united the Scottish and English crowns. When *Henry VIII, in response to the pope's appeal, attacked France, James, torn by conflicting loyalties, took (1513) the fateful decision of invading England, but when the armies met at Flodden Field, James was killed and the Scots routed with great slaughter.

**James V** (1512–1542). King of Scotland 1513–42. He was only 17 months old when he succeeded his father, *James IV. During his minority, the English faction, headed by his mother and her second husband Archibald Douglas, Earl of Angus, competed for power with the French faction led by the Duke of Albany. Albany ruled until 1524 when, by declaring the 12-year-old king capable of rule, his mother and Angus began to exercise authority in his name. In 1528 James asserted his independence, quelled his
turbulent subjects and with political and matrimonial alliances to offer was immediately courted by the rulers of Europe. France gained the day and he married (1538) *Mary of Guise. The consequences were persecution of the Protestants and a war with England. The humiliation of the defeat at Solway Moss (1542) coupled with the strain of maintaining an efficient administration in a country so difficult to rule was too much for a highly strung temperament. He died three weeks later, only a few days after his daughter *Mary, the future Queen of Scots was born.

James VI and James VII (of Scotland) see James I and James II (of Great Britain)

James (‘the Old Pretender’) see Stuart, James

James, Henry (1843–1916). American novelist, born in New York. Named for his father, a Swedenborgian theologian and amateur philosopher, he was a brother of William *James. His sporadic education, much of it in Europe but finishing at Harvard, made him cosmopolitan, and he was already a mature intellectual when (1865) he began writing essays and reviews for the *Atlantic Monthly. But it was only in the more sophisticated circles in Europe that he was happy. He left America (1869) and lived in England from 1876. He never married. His work is usually divided into three periods, sometimes categorised as ‘James the First, James the Second and the Old Pretender’. The predominant theme of the first is the impact of European culture on American life, e.g. in *Roderick Hudson (1875), *Daisy Miller (1879), one of his rare popular successes, *The Portrait of a Lady (1881) and in the same year *Washington Square (dramatised and filmed in 1949 as *The Heiress), *The Aspern Papers (1888), also later dramatised. The second period, distinguished as the English one, shows the shrewdness with which this cosmopolitan American could assess national character, e.g. in *The Tragic Muse (1890), and *The Awkward Age (1899). He was a master of the long short story or novella, *The Turn of the Screw (1898), a ghost story, equally successful as a play, became an opera by Benjamin *Britten. The last period, in which he returns to the contrast between Americans and Europeans, contains three of his greatest novels: *The Wings of the Dove (1902), *The Ambassadors (1903) and *The Golden Bowl (1904). Among his many miscellaneous writings is a biography of Nathaniel *Hawthorne. His *Notebooks remained unpublished until 1948. He was mildly anti-Stratfordian in the *Shakespeare authorship controversy, and somewhat dismissive of Jane *Austen and *Tolstoy. James’ style has been interminably discussed, some find it tortuous and over-elaborate, addicted to the double negative, but his many admirers delight in the precision of his observation, meticulous care (like *Flaubert) in selecting a phrase, always using appropriate vocabulary for each character, the patience with which he follows the labyrinthies of the human mind. He was nominated for the Nobel Prize for Literature in 1911, 1912 and 1916. As a gesturer of sympathy for the Allied cause in World War I, James assumed British citizenship in 1915 and was awarded the OM in January 1916, just before he died.

James, M(ontague) R(hodes) (1862–1936). English scholar and author. During an academic career culminating in his appointment as provost of King’s College, Cambridge 1905–18, and of Eton College 1918–36, he found relaxation in writing ghost stories with an antiquarian flavour. These were collected as *Ghost Stories of an Antiquary (1905), *More Ghost Stories (1911) etc. His scholarly books include *The Apocryphal New Testament (1924). He received the OM in 1930.

James, William (1842–1910). American philosopher and psychologist. A brother of Henry *James the novelist, he studied art, chemistry and medicine at Harvard before turning to his real interests, psychology and philosophy. Meanwhile he had been incapacitated by melancholia for several years. After teaching physiology at Harvard he held professorships there in philosophy and psychology 1885–97. His *Varieties of Religious Experience (1902) reveals the direction of much of his psychological work. He is also known for the disputed James-Lange theory which equates emotion with the perception of bodily change. In *Pragmatism (1907) the word was originally used in this sense by Charles *Peirce. He expounds the doctrine that the validity of human ideas and principles can only be tested by an examination of their practical results. James’s influence was extensive (John *Dewey).

Jameson, Sir Leander Starr, 1st Baronet (1853–1917). South African politician, born in Edinburgh. A physician, he established a medical practice in the diamond town of Kimberley and became the friend and agent of Cecil *Rhodes. He administered Mashonaland (1891) after *Lobengula had granted concessions to Rhodes’s company and became the virtual founder of Rhodesia. With Rhodes’s support (and the collusion of Joseph *Chamberlain, the Colonial Secretary), he led the notorious Jameson Raid (Dec.1895–Jan.1896), a three-day incursion into the Boer South African Republic (Transvaal), intended to coincide with a rising of the Uitlanders (British and other settlers) who had been denied civil rights. The raid was a fiasco. No uprising occurred and the incident strengthened *Kruger’s international
standing. Handed over to the British who sentenced him to 15 months’ jail, he was released after 3 months because of illness. He became Prime Minister of Cape Colony 1904–08 and first Leader of the Opposition in the Union Parliament 1910. He died in London but was buried next to Rhodes in the Matopos National Park, now in Zimbabwe.

Janáček, Leoš (1854–1928). Czech composer, born in Hukvaldy. Son of a village schoolmaster, he was choir master at Brno in Moravia before studying in Prague and Leipzig. He produced a large volume of compositions of strongly national character including many operas: Jenůfa (composed 1896–1903), Katya Kabanova (1919–21), The Cunning Little Vixen (1921–23), and The Makropulos Case (1923–25). In 1917 he fell in love with a young married woman, Kamila Stösslová (1892–1935) and wrote her 722 letters of extraordinary poignancy and intensity until his death. This relationship stimulated a fresh burst of creativity that included the orchestral works TarasBulba (1918) and Sinfonietta (1926), the song cycle The Diary of One Who Disappeared (1919) and two string quartets. The Glagolitic Mass was premiered in 1926. His powerful and original works were rarely heard outside his native country until after 1945, but he came to be recognised as one of the few outstanding 20th-century operatic composers. The Australian conductor (Sir) Charles Mackerras (1925–2010) played a central role in their revival, recording and promotion.

Jane, Frederick Thomas (1870–1916). English naval writer and artist. He founded and edited Jane's Fighting Ships in 1898 and All the World's Aircraft in 1909. The series is still regarded internationally as the most authoritative independent catalogues.

Jane (Seymour) (1509–1537). English queen consort 1536–37. Sister of the Duke of *Somerset, she married *Henry VIII as his third wife. She gave birth to his only son, afterwards *Edward VI, and died 12 days later.

Jansen, Cornelius (1585–1638). Dutch Roman Catholic theologian. After teaching in school and college he became a professor at Louvain (1630) and Bishop of Ypres (1636). In his book Augustinus (published 1642) he claimed that the Jesuit teaching on the freedom of the will (i.e. that man's power to choose between good and evil is a matter for his own free choice and not necessarily dependent on divine grace) was identical with the heretical doctrine of the Pelagians condemned by St Augustine. The book attracted many Roman Catholics, especially in France, but aroused much controversy. Jansenism, whose best known proponent was *Pascal, found a stronghold among scholars and theologians of Port-Royal-les-Champs in Paris, but it was condemned as heretical by the papacy and harshly repressed by Louis XIV.

Escholier, M., Port-Royal. 1968.

Jansky, Karl Guthe (1905–1950). American radio engineer. He worked for the Bell Telephone Laboratories and concluded (1932) that one source of communications static was waves from beyond the solar system. This was the beginning of radio-astronomy, but Jansky took no further part in its development, which was taken up by Grote Reber (1911–2002) who invented the parabolic receiving dish, later working in Tasmania (*Penzias).

Jaques-Dalcroze, Émile (1865–1950). Swiss music teacher. He originated the system, now known as eurhythmics, by which musical appreciation is taught through physical movement. Graded exercises, musically accompanied, enable different rhythms to be expressed by movements of head, arms and legs.

Jarry, Alfred (1873–1907). French dramatist. His farce Ubu roi (1896), a parody of Macbeth, was a subversive work that anticipated surrealist theatre and set design in the late 20th century. The play was revived in Europe and the US in the 1950s.

Jaruzelski, Wojciech (1923– ). Polish soldier and politician. Minister for National Defence 1968–83, he became First Secretary of the Polish United Workers' (Communist) party 1981–89 and Prime Minister 1981–85, after Soviet forces entered Poland and martial law was imposed to suppress *Walesa's Solidarity movement. He was President of Poland 1985–89.

Jaspers, Karl Theodore (1883–1969). German philosopher. Trained in medicine, he held chairs of psychology 1916–21 and philosophy 1921–37 at Heidelberg. His The Psychology of World Views (1919) was an early statement of existencialism, later adapted and popularised by *Sartre. He took the pessimistic view that ultimately all reasoned analysis fails, and a leap of faith is required to reach transcendence. He was deeply critical of *Descartes, *Darwin, *Marx and *Freud. He became a Swiss citizen in 1948.

Jaurès, (Auguste Marie Joseph) Jean (Léon) (1859–1914). French Socialist politician and historian, born in Castres. He lectured in philosophy at Toulouse University 1883–85, 1887–93 and was a member of the Chamber of Deputies 1885–87, 1893–98, 1902–14. The *Dreyfus case converted him from liberalism to socialism. His Socialist History of the French Revolution (1901–07) was written ‘under the triple inspiration of *Marx, *Plutarch and *Michele' but he was not a Marxist in an organisational sense. He was a co-founder of the journal L’Humanité (1904) and after the creation of a united socialist
Jay, John (1745–1829). American lawyer and politician. He belonged to the revolutionary party in New York and later helped to draw up the state's constitution and became its first Chief Justice. Meanwhile he had been a delegate to the first and second Continental Congresses, and later took part with *Hamilton and *Madison in the defence of the new US constitution in the *Federalist. In 1782–83 he was one of the commissioners who went to Paris and negotiated with Britain the Treaty of Versailles, by which American independence was recognised; he returned to be US Secretary of Foreign Affairs 1784–89. In 1790 he became the first US Chief Justice and in 1794 went to England to negotiate outstanding questions. Concessions granted by him in the so-called Jay's Treaty provoked severe controversy; he resigned from the supreme court and was elected Governor of New York State 1795–1801.

Jebb, Sir Richard Claverhouse (1831–1905). Scottish classical scholar, born in Dundee. His distinguished academic career culminated in his appointment (1889) as Regius professor of Greek at Cambridge University. He wrote many books on classical subjects but his great edition of the plays of *Sophocles (1883–86), with textual and critical commentary and prose translation, was his chief work. He helped to found the British School of Archaeology at Athens, was MP for Cambridge University 1891–1905 and received the OM (1905).

Jefferies, (John) Richard (1848–1887). English naturalist and author, born in Wiltshire. He grew up on a farm and began his career as a journalist specialising in rural subjects. In addition to, e.g. The Amateur Poacher (1879), The Story of a Boy (1882), he wrote the strange introspective autobiography Story of My Heart (1883) and the imaginative After London, or Wild England (1885).

Joubert, Raoul Villain (1871–1937), a French revolutionary. His early years were spent in Paris, the strengthening of the Revolution there and gave its first leaders the benefit of American experience. (His letters indicate a strong attraction to absolutist aspects of
the Revolution.) He returned from France to be US Secretary of State 1790–94, under *Washington, and pursued a policy of no 'entangling alliances'. With his political followers he formed, in opposition to Hamilton's centralising policy, a new grouping called the Republican party (despite its name, ancestor of the modern Democratic Party). Jefferson ran second to *Adams in the presidential election of 1796 and, according to the constitutional provision of the time, became Vice President (but virtually Leader of the Opposition). In 1800 he defeated Adams, but tied with Aaron *Burr in the Electoral College and was elected as President by the House of Representatives, Burr becoming a grossly disloyal Vice President. In 1804 he won re-election easily, defeating C.C. *Pinckney. Jefferson was the first president to be inaugurated in Washington (which he had helped to plan).

The most important event of his presidency was the ‘Louisiana Purchase’ (1803) of the French territories in the Mississippi basin, made possible by *Napoleon's difficulties in maintaining adequate communication and control. In internal affairs he followed a conciliatory policy and did not press his earlier campaign for states' rights. The slave trade was abolished (1808). In 1809 he retired to Monticello, the home of his own design, here he returned to the studies of his earlier years and in particular became absorbed in the work for the establishment of the University of Virginia, inaugurated (1825) at Charlottesville. Jefferson envisaged the United States as a mainly agricultural community, since industrialisation, in his opinion, would put power in the hands of financial interests. His political doctrines were based on those of *Locke and *Rousseau; his practice proved him to be one of the great liberal statesmen of history. He married (1772) a widow, Martha Skelton (née Wayles) who died in 1782; only two daughters survived infancy. Jefferson's relationship with the mixed-race slave Sally Hemings (c.1773–1835), who travelled to France with his family, is controversial but it is probable that he fathered six children, four of whom survived. All were freed on his death.

He died on the 50th anniversary of the signing of the Declaration of Independence, on the same day as John *Adams.

Jeffery, (Philip) Michael (1937– ). Australian soldier. He served in Vietnam, was involved in counter-terrorism, rose to the rank of major-general, and became Assistant Chief of Staff for Materiel 1991–93. He was Governor of Western Australia 1993–2000 and Governor-General of Australia 2003–08.

Jeffreys, George Jeffrey, 1st Baron (1648–1689). English lawyer. He rose rapidly in his profession, partly through royal favour, showing subservience and a talent for intrigue. He was knighted (1677), made a baronet (1681) and Chief Justice of the King's Bench (1683). His first trial resulted in the condemnation and execution of Algernon *Sidney, and he presided over the trial of Titus *Oates. Soon after the accession of James II, he was given a peerage and earned the reputation for infamy that still clings to his name by his conduct of the ' Bloody Assize' which followed the defeat at Sedgemoor (1685) of the rebellious supporters of the Duke of *Monmouth. During his progress through Dorset and Somerset he condemned some 320 men to be hanged, more than 800 to be transported and even large numbers to be imprisoned and flogged. Jeffreys was appointed Lord Chancellor in October 1685 and served *James II well. When in the autumn of 1688, faced with the invasion of *William of Orange and the desertion of many of his friends, James contemplated flight, Jeffreys delivered up to him the Great Seal, which James dropped into the Thames. Jeffreys tried to escape, disguised as a sailor, but was taken at Wapping and lodged in the Tower of London, where he died. Jeffreys had many of the qualities of a good lawyer, but his reputation was marred by his brutality, irascibility (he suffered from the stone) and his patent support for royal claims.

Jekyll, Gertrude (1843–1932). English artist, gardener and crafts woman. Trained in music and painting, she travelled in the Mediterranean, and from 1891 devoted herself to garden design. She wrote extensively and later collaborated with the architect (Sir) Edwin *Lutyens.

Jellicoe, John Rushworth Jellicoe, 1st Earl (1859–1935). British sailor. He commanded the Allied expedition to relieve Peking during the Boxer Rising (1900). A strong supporter of Admiral *Fisher, he was on the committee that produced designs for the revolutionary first Dreadnought and, having been Second Sea Lord 1912–14, became Commander-in-Chief of the Grand Fleet 1914–16. His tactics at the Battle of Jutland (31 May 1916) were criticised at the time and it seemed, at best, a draw. Only later it became clear from German documents that Jellicoe had won. The German fleet never put to sea again. He received the OM in 1916 and was First Sea Lord 1916–17, until *Lloyd George replaced him with the more dashing *Beatty. He became a viscount in 1918, an admiral of the fleet in 1919, Governor General of New Zealand 1920–24 and an earl in 1925.

Jenghiz Khan see Genghis Khan

Jeng Ho see Zheng He

Jenkins, Florence Foster (1868–1944). American amateur singer. Celebrated for her eccentric concert performances in New York, her singing is still available on CD.

Jenkins, Roy Harris, Baron Jenkins of Hillhead (1920–2003). British politician, born in Wales. Son of a miner who later became a union official and Labour MP, he was educated at Oxford, became an army captain in World War II, Member of Parliament 1948–77, and a member of the executive committee of the Fabian Society 1949–61. Regarded as a liberal (or right-wing) socialist, he was Minister of Aviation in Harold Wilson’s Cabinet 1964–65, Home Secretary 1965–67 and 1974–76 and Chancellor of the Exchequer 1967–70. His connection with European politics began in 1955 when he served as a delegate to the Council of Europe. He resigned from parliament in 1977 to accept appointment as President of the European Commission 1977–81. In 1979 he had advocated the formation of a ‘Middle Party’ in British politics and in 1981 he established the Social Democratic Party (SDP) with the support of Shirley *Williams, David *Owen and Bill Rodgers (‘The Gang of Four’). He won re-election to the House of Commons in a by-election (1982) and was first leader of the SDP until 1983. He wrote biographies of *Artlee, *Dilke, *Asquith, *Truman, *Gladstone and *Churchill, and was Chancellor of Oxford University 1987–2003. He received the OM in 1993.

Campbell, J., Roy Jenkins, 2014.

Jenner, Edward (1749–1823). English physician, born at Berkeley, Gloucestershire. Renowned as the originator of vaccination, he became a resident pupil of John *Hunter in London and while there arranged the specimens brought back by Captain Cook from his first voyage. In 1773 he returned to his birth place to practise medicine. During the next 20 years his observation of smallpox cases seemed to confirm the local belief that dairymaids who contracted cowpox (the milder bovine form of the disease) were immune. This led him to inoculate a boy of eight with lymph taken from cowpox sores (1796). Jenner’s account of this and subsequent successful vaccinations was published in his Inquiry into the Causes and Effects of the Variolae Vaccinæ (1798). A number of leading physicians soon declared their acceptance of the idea and the opposition of the majority of other doctors was overcome when the number of deaths from smallpox fell by about two thirds in less than a decade. Parliament awarded him £30,000 for his discovery which was rapidly taken up throughout the world.

Jensen, Johannes Vilhelm (1873–1950). Danish novelist and lyric poet. His native Jutland provides a background for his Himmerland Tales (1898–1910). His six-volume epic The Long Journey (1908–22) traces the evolution of humanity from pre-glacial times to the age of *Columbus. A convinced Darwinian, he was a prolific mythmaker. He was awarded the Nobel Prize for Literature (1944).

Jeremiah (?650–c.570 BCE). Hebrew prophet. Active from c.626 BCE during the reign of the Judaeans *Josiah (d.609 BCE) and Jehoiakim (d.598 BCE), he spoke against the contemporary worship of gods other than Jehovah. This view, he foretold, would bring divine retribution in the form of attack from the north. When these prophecies were fulfilled in the assault by the Babylonians, he urged submission to what he saw as a just punishment of the Jews by Jehovah. This view aroused great hostility and he was kidnapped and exiled to Egypt c.586.

Jerome, Jerome K (lapka) (1859–1927). English humorous writer and playwright. His best known works are Three Men in a Boat (1889), Three Men on the Bummel (1900), and the morality play The Passing of the Third Floor Back (1908).

Jerome, St (Sophronius Eusebius Hieronymus) (c.340–420). Latin Doctor of the Church, born in Dalmatia. Educated in Rome, after a period of travel and study he fell ill at Antioch and for a time lived as an ascetic in the desert. He was ordained priest in 379. In 382 he went to Rome, became the secretary of Pope Damasus and was commissioned to revise Latin translations of the Gospels and Psalms. On the death of the pope he again went to Antioch where he was joined by Paula, a wealthy Roman matron, and a party of female devotees with whom he visited sacred sites in Egypt and the Holy Land before settling at Bethlehem, where he founded a convent with Paula in charge of the women, he himself of the men. Here (from c.385) he spent the rest of his life and made his famous Latin translation of the Hebrew Old Testament, which, together with his New Testament revisions, forms the vulgate translation still used by Roman Catholics. In addition, he wrote biographies of well-known Christians, theological works, commentaries and letters. He is commemorated on 30 September.
Jespersen, Jens Otto Harry (1860–1943). Danish philologist. Professor of English at Copenhagen University 1893–1920, and an outstanding phonetician, he wrote several studies of English grammar, and originated (1928) the international language 'Novial'.

Jesus Christ (Greek name: Iesous Christos. Aramaic: Yeshu’a Mashiah. Also known as Jesus of Nazareth, to his contemporaries Yeshu’a ben Yosef) (c.8/4 BCE–30 CE). Jewish teacher and prophet; to his followers, Son of God and the central figure of Christianity. The main sources for the life of Jesus are the Letters of St *Paul, the Acts of the Apostles, the four Gospels, which barely cover 40 days, two brief references to the crucifixion in *Suetonius and *Tacitus and a disputed passage in *Josephus. The synoptic Gospels (attributed to *Mark, *Matthew and *Luke) were written after the Pauline epistles, partly aimed at a Gentile audience and playing down Jesus’ Judaism. *John’s Gospel, written about 100, is more theological and mystical, deeply Hellenistic and anti-Jewish, and less biographical. Archaeological research in Palestine and the discovery of the Dead Sea Scrolls suggest interesting parallels between the Essenes and Jesus’ teachings, but no specific evidence has been found.

The Gospel story, set in Judaea (Palestine) under Roman occupation with client Jewish rulers, is told with significant variations by the evangelists. Matthew and Luke state that Jesus was born, after the miraculous conception ('The Annunciation') by his mother, Mary, at Bethlehem in Judaea, where *Joseph, a Nazarene carpenter (or builder?) descended from *David, had brought his wife (or betrothed) for a census or to pay a Roman tax. (There are some historical and logical difficulties with these accounts: Jesus’ background and his probable birthplace was Galilean, the Bethlehem claim by Matthew and Luke is presumably to reinforce Davidic links and Old Testament prophecies. Matthew asserts that Jesus was born in the reign of *Herod (d.4 BCE) while Luke specifies the year of a Roman census (6–7 CE). According to Matthew, soon after the birth of Jesus, his parents took him to Egypt to escape Herod’s Massacre of the Innocents. The family returned to Nazareth (a village near Sepphoris) where Jesus was brought up. Matthew xiii: 55–56 refers to the brothers *James, Joses, Simon and Judas and to sisters but Catholic teaching insists that Jesus had no siblings. A visit to Jerusalem at the age of 12 is the only recorded incident of his youth and early manhood but presumably he worked as a carpenter in Nazareth. Nothing is known of his education except that his literacy surprised his contemporaries. Baptised in the River Jordan by hiskinsman *John the Baptist, after 40 days of ‘temptation in the wilderness’ he began his public ministry, a timing possibly determined by John’s arrest by Herod Antipas. He also chose 12 disciples, beginning with Simon (*Peter) and *Andrew. His career as preacher, which lasted two (perhaps three) years, was largely confined to Galilee with its mixed population of Arabs, Greeks, Syrians and Phoenicians, although he travelled in Samaria and as far north as Sidon, visited Jerusalem several times, and lived in Capernaum. The chronology of his life is uncertain. The Gospels are silent on Jesus’ marital status and celibacy was rare among Jewish males. References to his age are ambiguous: Luke iii: 39 says he was ‘about 30’ when he began his mission while John viii:57 refers to him as ‘not yet 50’. The crucifixion could have been as late as 36 CE. The Gospels record 34 miracles by Jesus: three raised from the dead, seven cured of blindness, five of paralysis, and the feeding of two great crowds, one of 4000 another of 5000. In his preaching he used many parables of which the Gospels recount 40, illustrating the Fatherhood of God, the closeness of the Kingdom of Heaven, the brotherhood of man and the need for repentance. The disciples frequently failed to grasp the significance of his mission and it was many months before Peter recognised him as the Christ, ‘the Son of the living God’ at Caesarea Philippi (Matthew xvi:16). Included in the Sermon on the Mount (Matthew v, vi, vii) are the Beatitudes, the Lord’s Prayer, and his limitation of the Mosaic Law. Later, Jesus sent out 70 (or 72) followers to preach throughout Palestine (Luke x:16). His popularity clearly dismayed the Jewish leaders, whose hypocrisy and rigidity he attacked. As Passover drew near Jesus and his disciples set out for Jerusalem. His approach caused great excitement in the city crowded with Jews gathered to celebrate the feast of Jewish independence. Jesus added to this by driving the money-lenders from the Temple. *Judas Iscariot, one of the 12 apostles, betrayed Jesus to the authorities, according to the Gospels, but his motivation is obscure: he may have been a disappointed zealot concerned that Jesus’ kingdom was ‘not of this world’. Then came the Last Supper, from which Judas Iscariot stole out to complete his betrayal, the night of prayer in the garden of Gethsemane, the arrest, a rushed hearing on a charge of blasphemy before a Jewish tribunal (which had no power to inflict a death penalty), and an appearance before the Roman procurator, Pontius *Pilate, at the Citadel (formerly Herod’s palace). Pilate first attempted to refer the case to *Herod Antipas, tetrarch of Galilee who returned the case. Pilate eventually condemned Jesus to death on a charge of sedition, based on a misunderstood claim to Jewish kingship. The crucifixion took place immediately, on a Friday, at Golgotha (Calvary), outside Jerusalem. Permission was given for the body to be interred to the sepulchre of *Joseph of Arimathea which was found to be empty on the morning of the third day (Easter Sunday). He appeared first to *Mary Magdalen, then to the disciples and others on several occasions in different places until the time, 40 days later when (in the words of the Apostles’ Creed), ‘he ascended into Heaven’. The Gospels and Paul’s Letters seem to have been written in the expectation of an imminent Second Coming.
In the Christian calendar devised in the 6th century by *Dionysius Exiguus, the starting point was the Annunciation of Jesus. Year I Anno Domini (‘Year of Our Lord’) was year 754 of the Roman calendar. This estimate was probably four to eight years too late.

Jezebel (c.875–852 BCE). Phoenician princess. The wife of Ahab, king of Israel, she introduced the worship of Baal and her name became a byword for wickedness or a painted wayward woman. She was eventually trapped to death by the horses of the successful rebel, Jehu, and reputedly eaten by dogs (II Kings ix:32).

Jiang Jieshi see Chiang Kai-shek
Jiang Qing see Mao Zedong
Jiang Tsulin and Jiang Xuehliang see Zhang Tsolin and Zhang Xuehliang

Jimenes see Ximenes de Cisneros, Francisco
Jiménez, Juan Ramón (1881–1958). Spanish poet. Although many of his poems are written in an evocative and melancholy mood he is a modernist in the sense that he constantly introduces new words, new sound-pictures and rhythms, e.g. those of jazz, from the modern world. He had much influence in Spain during the republican era but on the outbreak of the Spanish Civil War (1936) went to America and later lived in Florida and Puerto Rico. He won the Nobel Prize for Literature (1956), the citation praising the ‘high spiritual quality and artistic purity’ of his lyrics.

Jinnah, Mohammed Ali (1876–1948). Pakistani politician, born in Karachi. He studied law in London, was called to the bar and became deeply impressed by W. E. *Gladstone. He practised in Bombay, entered politics in 1906 and became President of the Moslem League (1916). He tried at first to work in concert with the Indian National Congress, was present at the Round Table Conference 1930–31 and promised to try to make the 1935 constitution effective. Gradually, however, he became convinced that Hindus and Moslems could not work in harmony and from 1940 he strenuously advocated the partition of India by the creation of a Moslem state to be known as Pakistan. All subsequent British attempts at compromise broke down, when the two dominions of India and Pakistan were established by a British Act of Parliament (August 1947). Jinnah became the first Governor-General 1947–48 of Pakistan. He died of tuberculosis.

Joachim, Joseph (1831–1907). Hungarian violinist and composer. He was a child prodigy, and as a virtuoso violinist at the age of 12 attracted the notice and encouragement of *Mendelssohn. When 13 he first appeared in England, where later he was a frequent and much honoured visitor. He became (1868) director of the Berlin Conservatoire (Hochschule) and founded (1869) the celebrated Joachim Quartet. He wrote much performed cadenzas for violin concertos by *Mozart, *Beethoven and *Brahms, revived J. S. *Bach’s sonatas and partitas for solo violin, and collaborated with *Schumann, Brahms and *Dvořák. His gramophone recordings (1903) are the earliest by a major violinist. His compositions are now neglected.

Joan of Arc, St (Jeanne d’Arc) (c.1412–1431). French heroine, known as the ‘Maid of Orléans’, born in Domrémy. The daughter of prosperous and devout peasants living on the borders of Lorraine, at 13 she began to hear mysterious voices, which she claimed to be those of St Michael, St Margaret and St Catherine, and became convinced that she had been chosen by God to deliver France from the English. Receiving a specific call to rescue beleaguered Orléans she went, early in 1429, to Robert de Baudricourt, in command of the neighbouring castle of Vaucouleurs, and persuaded him to supply an escort to take her to the Dauphin (Charles VII) at Chinon. Having convinced him and the ecclesiastics who examined her of the genuineness of her call, she was allowed to join the army gathered for the relief of Orléans. Wearing armour, and with the shining confidence stemming from...
from complete faith in her divine summons, she so inspired the troops that on 8 May 1429, within 10 days of her coming, the siege of Orleans was raised. Joan's next move was to persuade Charles to be crowned. Accompanied by Joan and with an army of 12,000 men, he marched deep into enemy-held territory to Rheims, where in the cathedral, the traditional place for the crowning of French kings, the coronation was held. The event raised French morale to its highest point and Joan pressed for an immediate advance on Paris, but Charles dallied and before anything was achieved Joan had been captured (May 1430) while she was leading a sortie from Compiègne, threatened by Burgundian attack. The Burgundians sold Joan to their English allies. She was tried by an ecclesiastical court, presided over by Pierre Cauchon, Bishop of Beauvais, which found her guilty of witchcraft and heresy. She had been defended herself with great skill and superb courage, but now for the first time she weakened and made a recantation. almost immediately withdrawn: she was burned at the stake (30 May 1431) in the market place at Rouen. The judgment was reversed in 1456 and Joan was canonised in 1920 by Pope Benedict XV. She was the subject of Voltaire’s La Pucelle and dramas by *Schiller, *Shaw and *Anouilh.

João (John). Six Portuguese kings, João I (1357–1433, succeeded 1385) married Philippa, daughter of *John of Gaunt. João II (1455–1495, succeeded 1481) gave encouragement and help to *Bartolomeo Diaz who rounded the Cape of Good Hope (1488). João III (1502–1557, succeeded 1521) was responsible for the introduction (1533) of the Inquisition into Portugal. João IV (1603–1656, succeeded 1640) was the first king of the house of Bragança (Braganza), his reign marking the end of 60 years' union with Spain. His daughter Catherine married *Charles II of England. João V (1689–1750), succeeded 1707 was a great patron of learning. Fifty thousand men were employed for 13 years on the palace and monastery of Mafra which he started. João VI (1769–1826, succeeded 1816) took refuge in Brazil during the Napoléon Wars and remained there until 1821. In 1822 Brazil became independent with his son Pedro as first emperor.

Job. Old Testament hero. The character of Job, according to the narrative in the Book of Job, was tested and his spiritual pride cured by the loss of his property and family and by much illness and suffering, all of which he endure with exemplary patience; wealth and a long life were his eventual reward. The authority of both story and text is a matter of controversy.

Jobs, Steve (Steven Paul) (1955–2011). American designer and entrepreneur, born in San Francisco. After a modest education in Oregon, he worked for Hewlett-Packard and Atari, and in 1976 was the designer, with Steve *Wozniak, of the Apple I computer, followed by the more successful Apple II and the Macintosh. He was chairman of Apple Computer Inc. 1975–85, resigning after personality clashes with his board. He founded NeXT Inc., in 1984 and Tim *Berners-Lee used a NeXT computer to develop the World Wide Web (WWW). Jobs returned to Apple as Chief Executive in 1996. Essentially a designer and a marketer of genius, he developed the iPhone, iPad, iTunes, iPod, Pixar and the laser printer. He lived at Palo Alto and died of pancreatic cancer, after a long illness. His death was marked by an extraordinary outpouring of grief, internationally. However, colleagues found him erratic, domineering and difficult to work with.

Jodl, Alfred (1890–1946). German soldier. Described as the ‘arch planner of the war’, he was chief of staff to *Keitel in World War II. The great victories by which Europe and much of Russia were overrun were made possible by his strategic concepts and brilliant grasp of intricate detail. He was tried and hanged at Nuremberg for having authorised the execution of commandos and prisoners of war.

Joffre, Joseph Jacques Césaire (1852–1931). French marshal. His early career as an engineer officer was spent mainly in the colonies, Tongking, French Sudan, Madagascar, and during a successful rescue operation (1894) he captured Timbuktu. He became a divisional commander (1905) and Chief of the General Staff (1911), a post that made him automatically Commander-in-Chief of the French armies when World War I broke out. The original defence plans broke down, but the great victory of the Marne (September 1914), which halted and repelled the German advance on Paris, was largely due to his courage and decision. The prolonged stalemate which followed the stabilisation of the line, coupled with the heavy losses incurred on the Somme and at Verdun, caused his replacement (December 1916) by Nivelle. He was made a marshal in 1916 (the first created since 1870), elected to the Académie Française in 1918 and received the British OM in 1919.

Johanson, Don (ald Charles), (1943– ). American palaeoanthropologist. Educated at the Illinois and Chicago universities, he held a chair at the Case Western Reserve University and, from 1997, in Arizona. In November 1974, with Mauruze Taieb and Yves Coppens, in Hadar, Ethiopia, he discovered the first skeleton of a new anthropoid species *Australopithecus afarensis, named ‘Lucy’ after

John the Baptist, St (Yohan’an) (c.9/5 BCE–28/29 CE). Jewish prophet. According to the account in St Luke’s Gospel, an angel appeared to a priest called Zacharias to tell him that his prayers had been answered and that his wife Elizabeth, hitherto believed barren, would bear him a son. This son, John, appeared (c.27 CE) in the desert beyond the River Jordan giving warning of the judgement to come and ‘preaching the baptism of repentance and the remission of sins’. Some asked him if he was the promised Messiah but this he denied saying that he was only the forerunner of a mightier one, ‘the latchet of whose shoes I am not worthy to unloose’. John showed his fearlessness in denouncing sin when he rebuked Herod Antipas for marrying his brother Philip’s wife, Herodias. Cast into prison, he was executed at the request (prompted by her mother Herodias) of Salome – unnamed in the Bible – who had pleased Herod by her dancing. He may have been a member of the ascetic Essene community.

John (the Divine), St (Aramaic: Yohan’an) (also known as ‘the Apostle’ and ‘the Evangelist’) (c.3 CE–100 CE?). Christian apostle, one of the four evangelists. He was a son of Zebedee and brother of James and like him a Galilee fisherman. Jesus called them the ‘Boanerges’, sons of thunder, because they asked permission to call down fire from Heaven upon a Samaritan village. The identification of John with the disciple whom Jesus loved of the fourth Gospel is traditional but disputed, but he was certainly in the inner ring of the apostles. He was present at the Transfiguration and the raising of Jairus’s daughter and took part in preparing the Last Supper. He appears in the Acts as one of the leaders of the early Church. According to tradition, he was exiled to Patmos, and then lived in Ephesus where he took charge of *Mary and died in extreme old age. Around 540, *Justinian built a great basilica on the supposed site of his grave. (It is now being restored.)

St John is the reputed author of the fourth Gospel, three Epistles and the Book of Revelation (the Apocalypse). The last has been the subject of endless debate, and the author was probably Greek. Of the Epistles, only the first can, with any degree of certainty, be ascribed on grounds of style to the author of the Gospel. From the 19th century, scriptural scholars assumed that John was the last written of the four canonical Gospels, composed in Greek and showing Hellenistic influence. John denies that Christianity provides just another field for abstract speculation: ‘The Word [Logos] became flesh.’ Throughout there is a much more developed theology than in the three synoptic Gospels.

John (1167–1216). King of England 1199–1216. Born at Oxford, youngest son of *Henry II and *Eleanor of Aquitaine, he succeeded his brother *Richard I, having already attempted to usurp the throne during Richard’s absence on crusade. This and the murder (1204) of his nephew Arthur, a possible dynastic rival, show unscrupulous ambition, but he was not quite the ogre that early historians portrayed; his misfortunes at least matched his crimes. The barons reproached him for losing Normandy, Anjou, Maine and Touraine, but they had done little to help him resist *Philip II, one of the ablest of all French kings. Moreover, in resisting the pope’s claim to enforce his choice of Stephen Langton as Archbishop of Canterbury, John was only making the same stand as the Emperor and his fellow monarchs were making all over Europe. Again, John’s failure to command the barons’ loyalty left him powerless against a pope as strong and determined as *Innocent III. After England had been placed under an interdict and John himself excommunicated he made abject surrender, even accepting (1213) the pope as overlord. This won him papal support, but Langton, the new archbishop, now headed the barons’ resistance to the king, who was compelled (June 1215) to accept Magna Carta at Runnymede beside the Thames. This famous document, though it aimed at preserving baronial privilege, proved ultimately to be a symbol of the achievement of popular liberties. John’s very virtues as an administrator, with his extension of the power of the royal courts and his reform of the machinery of government, had roused the fears of the barons. By curbing the powers of the king they confirmed their own. John, still struggling against the barons, died at Newark in the following year.

John (originally Jeromin, known as Don John of Austria or Don Juan de Austria) (1547–1578). Spanish soldier and prince, born in Regensburg. The illegitimate son of the emperor *Charles V and Barbara Blomberg, he was brought up in Spain and given princely rank by his half-brother *Philip II. His most notable exploit, when in command of the combined fleet, was to defeat the Turks at Lepanto (1571). In 1573 he captured Tunis. While Viceroy of the Spanish Netherlands (from 1576) he died suddenly, thus provoking an unfounded suspicion that he had been poisoned by Philip’s orders.

John (‘the Fearless’: Jean sans Peur/Jan zonder Vrees) (1371–1419). Duke of Burgundy 1404–19. He earned the name ‘Fearless’ by his courage at the siege of Nicopolis (1396) while on crusade. A struggle with Louis, Duke of Orléans, for control of the insane king of France, *Charles VI, ended when John had his rival murdered (1407). The heightened quarrel between the two factions, the Burgundians and the Orléanists (henceforward called Armagnacs, after Count Bernard of Armagnac, by whom they were
Dictionary of World Biography

reorganised), enabled *Henry V of England to enter France and win the battle of Agincourt (1415), from which Burgundy was pointedly absent. After the fall of Rouen (1419) Burgundy and the Dauphin (as head of the royalist or Armagnac faction) became ostensibly reconciled, but at a meeting on Montereau Bridge, Burgundy was murdered by the Dauphin's followers in revenge for his assassination of the Duke of Orléans 12 years before.

John XXIII, St (Angelo Giuseppe Roncalli) (1881–1963). Pope 1958–63. Born near Bergamo, in northern Italy, the son of a peasant, he was ordained in 1904. As apostolic visitor to Bulgaria 1925–35, apostolic delegate to Greece and Turkey 1935–44, papal nuncio to France 1944–53, and the Holy See's observer at UNESCO in Paris 1946–53, he was remote from the Roman Curia, acquiring knowledge of other faiths and a breadth of vision that proved essential later. He wrote an important biography of St Carlo *Borromeo (5 volumes, 1936–52). In 1953 he became a cardinal and Patriarch (Archbishop) of Venice. After the death of *Pius XII, Roncalli was elected as Pope on the twelfth ballot and – at 77 – apparently as a stop-gap. As pope, his greatest achievement was the calling of the Second Vatican Council which met in October 1962. (This was the first ecumenical council since Vatican I under *Pius IX in 1870.) The main aim of Vatican II was the promotion of Christian unity and the relationship of the Church with the modern world, including reforming the liturgy. Though by the simplicity and generosity of his character, Pope John became one of the best loved figures of his generation, he was a firm and shrewd administrator, deeply critical of the 7bureaucracy that surrounded him. He wrote an important biography of St Carlo Borromeo (5 volumes, 1936–52).

The title 'John XXIII' was also used by the Neopolitan 'anti-pope' Baldassarre Cossa. His election (1410) was recognised by France, England and some other countries but he was deposed by the Council of Constance (1415) for his excesses. In 2000 he was beatified by *John Paul II. In 2001 his remains were brought from the Vatican grotto and displayed near the papal altar at St Peter's. Pope *Francis declared him and inspired such large and colourful pictures as The Mumpers, but he was best known as a portrait painter. His vigour, vitality and personality are reflected in, e.g. his Bernard Shaw (1914), the cellist Madame Suggia (1927), and Dylan Thomas (1937). John's paintings display few contemporary trends and owe almost everything to his own intuitive talent. He was elected ARA in 1921, RA in 1928, and awarded the OM in 1942. His sister, Gwen John (1876–1939), the model for and mistress of *Rodin, was distinguished for delicate, sensitive paintings, many of cats. His sailor son, Sir Caspar John (1903–1984), was First Sea Lord at the Admiralty (1960–63).

John Chrysostom, St (347–407). Syrian prelate, born at Antioch. Ordained priest (386), he soon gained a great reputation as a preacher (Chrysostom = 'golden mouthed'). In 398 the emperor Arcadius secured his appointment as Patriarch of Constantinople. His outspoken preaching, however, which included attacks on the empress Eudoxia, earned the hostility of the court. He was temporarily exiled (403) and in 404 banished to Armenia. He died of exhaustion while walking to another place of exile in Pontus. Among his many works are On the Priesthood, an early treatise, and his Homilies, which give some idea of the eloquence for which he was famous. The liturgy of St Chrysostom has no authentic claim to the ascription. One of the four 'great Doctors of the Greek Church', he was a ferocious anti-Semite but had his admirers, including Cardinal *Newman.

John, Sir Elton Hercules (Reginald Kenneth Dwight) (1947– ). English singer and composer. He attempted to mix pop and rock styles, toured widely and made films and records. A version of his greatest hit, Candle in the Wind, was performed at the funeral of *Diana, Princess of Wales.

John of Gaunt (1340–1399). English prince, born in Ghent. Named for his birthplace, he was the fourth son of *Edward III and having acquired the vast Lancastrian estates through his first wife, Blanche, was created Duke of Lancaster in 1362. After his second marriage, to Constance of Castile, he assumed the title King of Castile (1372), but having failed to establish himself he abandoned his claim when his daughter married (1388) the Castilian heir. When Edward III's powers began to fail, John of Gaunt virtually ruled the kingdom and continued in power during part of *Richard II's minority. In 1390 he was created Duke of Aquitaine and again was unsuccessful in establishing control of an overseas territory. In 1396 he married his mistress Catherine *Swynford, and obtained from Richard legitimisation for her three sons, who took the name of Beaufort. A descendant, Margaret Beaufort, was the mother of *Henry VII. John of Gaunt gave, for a time, powerful support to John *Wyclif with the political aim of combating Church privilege. He was a patron of *Chaucer (his brother-in-law) (*Henry IV).

John of Leyden (Jan Beuckelzoon) (1509–1536). Dutch anabaptist. An innkeeper of Leyden, he became a wandering preacher and established (1533) in Munster a 'Kingdom of Zion' in which he instituted polygamy and community of goods.
Within a year the city was captured by the Bishop of Munster, and John and his chief supporters were tortured and killed.

John of Salisbury (c.1115–1180) English ecclesiastic, born in Salisbury. Educated in France and a pupil of *Abelard, he was secretary to Archbishop Theobald of Canterbury and went on missions to the Roman Curia. He wrote on Aristotle and was exiled to France by *Henry II in 1163. He wrote a life of *Becket, whose murder he witnessed, and pressed for his canonisation. John became Bishop of Chartres in 1176 and died there.

John of the Cross, St (San Juan de la Cruz) (1542–1591). Spanish mystic and monk. He joined St *Teresa in trying to restore a stricter discipline for the Carmelite monks and nuns. This involved him in much persecution and eventually led to a split between the reformed houses of 'discaled' (i.e. shoeless or barefoot) and 'calced' Carmelites. Throughout the many vagaries of fortune resulting from the quarrel John was writing, in language combining great beauty of expression with spiritual ecstasy, the three great poems, with commentaries on them, upon which his fame rests: Dark Night of the Soul, The Spiritual Canticle and The Living Flame of Love. Together they describe the full range and depth of the mystical experiences of a contemplative life. He was canonised in 1726.

John Paul I (Albino Luciani) (1912–1978). Pope 1978. The son of poor parents, he was ordained a priest in 1935, became Bishop of Vittorio Veneto 1946, he became a student chaplain and university teacher, writing many books and articles. Archbishop of Krakow 1963–78, created cardinal in 1967, he was elected Pope on the eighth ballot (24 Oct. 1978) after the sudden death of *Paul VI, becoming the first non-Italian pope since *Adrian VI (elected 1523) and the youngest since *Pius IX. He made 104 papal journeys to 129 countries, and was the first pope to visit a mosque or synagogue. He reaffirmed traditional Catholic principles to large and enthusiastic congregations. His strong support for Lech *Walesa and Solidarity was a major factor in the collapse of Communism in Poland and, ultimately, the USSR. In 1993 he visited Russia and issued the encyclical Veritatis Splendor, a condemnation of liberalism, contraception and the exercise of private moral judgment. In March 2000 he asked for forgiveness for past ‘errors and sins’ committed by the Church against women, indigenous peoples, non-Christians and Jews and visited Jordan and Israel, where he referred to the Holocaust. His pontificate was the second longest in Church history, after Pius IX, and he proclaimed a record 483 saints. In July 2013 his canonisation was announced by Pope *Francis.

Bernstein, C. and Politi, M., His Holiness. 1996.

John. Portuguese kings see João

Johns, Jasper (1930– ). American painter, sculptor and printmaker, born in Georgia. He grew up in South Carolina, and after army service moved to New York where he was influenced by Robert *Rauschenberg, his partner 1954–61, and held his first one-man exhibition in 1958. Johns used familiar, even banal, objects as the subjects of his paintings: numbers, alphabets, flags, maps, dart boards, cross-hatched patterns with subtle tonal and textural variations between each work in the series. He often painted in encaustic, wax paints which were then baked, and made sculptures of familiar objects such as bottles and brushes in a coffee can. His painting False Start (1959) sold for $US80 million in 2006. His Map (1961) is at the Museum of Modern Art (MoMA), New York. He was awarded the Presidential Medal of Freedom in 2011.

Johnson, Andrew (1808–1875). 17th President of the US 1865–69. Born in North Carolina, he was trained as a tailor and set up his own business in Greenville, Tennessee. He soon became active in local politics as the champion of the ‘little man’, and was eventually Governor of Tennessee 1853 and US Senator 1857–62. When the south seceded on the outbreak of the Civil War he declared for the Union, and after his appointment as a military governor (1862) even managed to bring his state back to its federal allegiance. In 1864 he was chosen Vice President of the US and after Abraham *Lincoln’s assassination (1865) assumed the presidency. To him fell the difficult task of reconstruction, which he felt should be left to the southerners themselves, and he held that only those who had taken an active part against the Union should be penalised. This
lenient policy incensed the Republican radicals: both Houses of Congress, over the President’s veto, passed a Reconstruction Bill, giving full civil rights, including the vote, to Negroes, and unleashed a campaign of vilification of unprecedented virulence against Johnson. His dismissal (1867) of Stanton, Secretary for War, gave his enemies the final excuse they needed for the president’s impeachment. He was acquitted in the Senate, a single vote short of the two thirds needed to convict (35–19). He did not seek re-election, but returned to the Senate in 1875.

Johnson, (Alexander) Boris (de Pfeffel) (1964– ). English journalist, historian and Conservative politician, born in New York City. Educated in Brussels and Eton, he read classics at Oxford. MP 2001–08, 2015–, he was Mayor of London 2008–16. He led the successful ‘Brexit’ campaign in the June 2016 referendum, hoped to secure the Prime Ministership after David Cameron resigned, but was scuttled by his former associates. Theresa May appointed him as Foreign Secretary 2016–.

Johnson, Hiram Warren (1866–1945). American Republican politician. A reforming Governor of California 1911–17, he ran as Progressive candidate for Vice President in 1912 with Theodore Roosevelt and was a US senator 1917–45. Johnson was a radical and an isolationist who opposed US entry to the League of Nations (1919) and United Nations (1945) but supported Franklin Roosevelt’s New Deal.

Johnson, Lyndon Baines (‘LBJ’) (1908–1973). 36th President of the US 1963–69. Born in Stonewall, Texas, son of a state legislator, he was educated at the South West State Teachers College, taught briefly, then became a congressman’s secretary. In 1934 he married Claudia Alta (‘Lady Bird’) Taylor (1912–2007), later a successful investor in communications. As a strong supporter of the ‘New Deal’, and protégé of Sam Rayburn, he directed the National Youth Administration in Texas 1935–37. He was a US Congressman 1937–49 and served briefly in the navy (1941–42), visiting Australia, New Zealand and New Guinea. US Senator 1949–61, and Democratic Leader 1953–60, during Eisenhower’s presidency, he was a master tactician who built coalitions of support across party lines to defeat or promote legislation. After being defeated for the Democratic presidential nomination in 1960 by John F. Kennedy, he agreed to take the vice presidential nomination, and served (unhappily) 1961–63. On Kennedy’s assassination in Dallas, in Johnson’s presence, he was immediately sworn in as President and pledged commitment to the ‘Great Society’.

The Civil Rights Act (July 1964) outlawed major forms of discrimination on the basis on race, ethnicity and gender. He also promoted the Economic Opportunity Act (‘war on poverty’, 1964). Despite the deep unpopularity of desegregation measures in the South, Johnson won the 1964 election overwhelmingly with 61.1 per cent of the popular vote. (Barry Goldwater won his own state of Arizona and five old Confederate states). The Voting Rights Act (August 1965) implemented, at last, the provisions of the 15th Amendment to the US Constitution (1870), guaranteeing equal voting rights for all citizens, but ignored in practice for nearly a century. Johnson also secured a measure of gun control (1968). Johnson’s courage on civil rights, which ran counter to his record as a Texas legislator, destroyed the Democratic Party’s iron grip on the South.

In his most difficult and continuing foreign problem, the war in Vietnam, he greatly increased the scale of American military participation. His credibility eroded over the Vietnam War and he became a symbol of national frustration and division. In March 1968 he withdrew from the presidential contest and secured the Democratic nomination for his Vice President, Hubert Humphrey. Humphrey was defeated by Richard Nixon, with George Wallace winning five southern states. Johnson retired to his ranch at Stonewall, wrote memoirs, *The Vantage Point* (1971) and died of heart disease.

Johnson, Philip Cortelyou (1906–2005). American architect, born in Ohio. Educated at Harvard, he directed the architecture department of New York’s Museum of Modern Art 1930–36 and 1946–54, and became an influential critic, patron and propagandist of the ‘International Style’ of Mies and *Gropius*. In the 1930s he was an open supporter of Hitler’s regime, a position he later recanted. As an architect he won recognition with a ‘glass house’ built for himself at New Canaan, Conn. (1949). Further buildings were added in his grounds (to 1965). Johnson’s designs, vehemently attacked as ‘frivolous’ or ‘neo-Fascist’, emphasised elegance and style. He saw architecture as primarily an art form and rejected functionalism, with its strong social concern. Among his major public buildings were the IDS Center at
Minneapolis (1973), extensions to the Boston Public Library (1973), the twin towers at Pennzoil Place, Houston (1976) and the Avery Fisher Hall interior, New York (1976), all with John Burgee.

**Johnson, Samuel** (1709–1784). English man of letters, born at Lichfield. Son of a bookseller, as a boy he suffered from scrofula, the ‘King’s evil’, for which he was taken to London to be ‘touched’ by Queen *Anne. He left Pembroke College, Oxford in 1729, without a degree, after a breakdown, compounded by poverty and his sense of isolation, but Oxford awarded him an Honorary MA in 1755 and a DCL in 1775. (He received an Honorary LL.D from Trinity College, Dublin in 1765.) He taught and wrote until his marriage in 1735 to *Elizabeth (‘Tetty’) Porter*, née Jervis (1689–1752), a widow, provided him with over £600, with which he set up a small school near Lichfield. When this failed he set out (1737) with one of his pupils, David *Garrick*, to seek his fortune in London. His first important poem *London* (1738) appeared anonymously and it was only after several years as a hack writer for the Gentleman’s Magazine, to which he contributed poems, essays and parliamentary reports, that he achieved some degree of fame with his life of his friend, Richard *Savage* (1744). The plan of his *Dictionary* appeared in 1749, addressed to Lord *Chesterfield*, who received it coolly and was later suitably snubbed. This great work was eventually published in 1755 and an abridgement in 1756. Meanwhile an old play of Johnson’s, *Irene*, was staged in 1749 at Drury Lane, through Garrick’s kindness, but only ran for nine nights. In the same year came *The Vanity of Human Wishes*, a satire modelled on one by *Juvenal. Shortly afterwards he began to edit *The Rambler* 1750–52, which was followed by *The Idler* 1758–60. The contents of both periodicals were written almost entirely by himself and consisted mainly of essays on literary and social themes. To pay for his mother’s funeral he also wrote, ‘in the evenings of a single week’ a most successful potboiler, *Rasselas, Prince of Abyssinia*, a novel of which the prince’s vain journey in quest of happiness provides the theme. In 1763 Johnson escaped for the first time ‘from the tyranny of writing for bread’ by the grant of a crown pension of £300 a year, and was at last able to enjoy what to him was the greatest pleasure in life, the company and conversation of congenial friends. At this time that most brilliant and sympathetic of recorders, James *Boswell*, entered his circle of friends – one of the happiest coincidences of literary history. Other members of the ‘Club’ included *Reynolds*, *Burke*, *Goldsmith*, *Garrick*, *Gibbon*, Adam *Smith* and Boswell’s rival biographer, Sir John Hawkins. Johnson’s wife had died in 1752. In the last 20 years of his life he found great pleasure in the friendship of the lively Mrs *Thrale*, in whose home he was welcomed as an almost perpetual guest.

During these later years Johnson’s literary works included a comprehensive edition of *Shakespeare’s plays* (1765), a notable critical achievement, *A Journey to the Western Islands of Scotland* (1775), a parallel account to one made by Boswell, his companion on the tour, and finally the work which showed his full maturity as a critic, *Lives of the Poets* (1779–81). A chronic melancholic, markedly eccentric in his mannerisms and probably suffering from Tourette’s Syndrome, he was always fearful of madness. Few writers have so dominated the literary scene as did Johnson in later life and his burial at Westminster Abbey was tribute not only to his work but to a character which, however rugged, was generous-hearted, virtuous, just and (mostly) marked by commonsense.

**Johnson, William Eugene** (known as ‘Pussyfoot’) (1862–1945). American temperance reformer. His nickname referred to his methods of suppressing illicit traffic in liquor in Indian territory where he served as a special officer (1908–11). He was the dominating figure of the Anti-Saloon League (1912–20). The passage of the 18th constitutional amendment (1920) made prohibition mandatory throughout the US until it was repealed (1933).

**Johnston, Sir Harry Hamilton** (1858–1927). British colonial administrator. A self-trained botanist, zoologist, linguist and journalist, he led the Royal Society’s expedition (1884) to Mount Kilimanjaro and became a protégé of Lord *Salisbury*, pushing hard for imperial expansion in Africa. As Consul-General in Mozambique 1889–91, he worked with Cecil *Rhodes and played a central role in the British acquisition of Malawi (formerly Nyasaland) and large parts of Zambia. He also served in Tunisia, Uganda and the Cameroons and wrote 30 books.

**Jokowi** (contraction of Joko Widodo) see Widodo, Joko

**Joliot-Curie, (Jean) Frédéric** (1900–1957). French physicist. He worked at the Radium Institute in Paris and in 1926 married his co-worker Irène *Curie* (daughter of Pierre and Marie *Curie*), adding her name to his. In 1933 he and his wife, by bombarding boron with accelerated alphaparticles, discovered that radioactivity could be artificially induced in non-radioactive substances. They later also discovered that there is a net emission of neutrons during nuclear fission. They were awarded the Nobel Prize for Chemistry (1935). Irène died (1956) of burns caused by radiation from radium. He built the first French atomic reactor (1948) and received the Stalin Peace Prize (1951).

Jolson, Al (originally Asa Yoelson) (1886–1950). American singer and entertainer, born in Russia. He emigrated to the US c.1895, began his career in the New York variety theatre in 1899 and became successful by bringing a powerful voice and melodramatic style to sentimental songs, including Mammy. His film The Jazz Singer (1927) was the first to use sound so that the plot could progress through dialogue.

Jonah (fl. c.760 BCE). Jewish prophet and missionary. The Book of Jonah relates, metaphorically, how he was summoned by God to go to Nineveh, the capital of Assyria, to preach repentance. To evade this mission he sailed for Tarshish, but a storm convinced the crew that a bearer of ill luck was among them. They established, by casting lots, that this was Jonah and threw him overboard. He was swallowed by a great fish which spewed him up three days later, alive, and he went to Nineveh, whose citizens he induced to repent.

Jones, David (1895–1974). English poet and artist. His major work In Parenthesis (1937) records, in a melange of blank verse and prose, his experiences and feelings during World War I.

Jones, Ernest (1879–1958). British neurologist and psychiatrist, born in Wales. He was *Freud's pupil, supporter and biographer.

Jones, Inigo (1573–1652). English architect, born in London. He was a carpenter and painter in London, then travelled extensively in Italy and became deeply impressed by the buildings of *Palladio, whose style, with its classical features, he introduced to England. Of his works his finest is held to be the Banqueting House at Whitehall (1619–22), the only part of the palace to survive. The elaborate plans he made (c.1638) for rebuilding the rest of the palace were never executed. Another masterpiece is the Queen's House, Greenwich, which reveals his liking for centrally planned cubic buildings, a characteristic of his work elsewhere; the famous double cube room at Wilton is his design. In addition to his architectural work he planned the layout of Lincoln's Inn Fields and Covent Garden. He was Surveyor-General of works 1615–43, but both *James I and *Charles I employed him to design elaborate sets for court masques as much as for building. As a theatrical designer he is said to have introduced the proscenium arch and movable scenery. Inigo Jones was the first in England to make a full-time profession of architecture.

Jones, Mary Harris (‘Mother Jones’) (1830–1930). American labour organiser, born in Ireland. After the deaths of her family, she began her 50–year career as a trade union organiser in 1867 and was a founder of the Industrial Workers of the World (IWW) in 1905.

Jones, Owen (1809–1874). English architect, writer and designer, born in London. Superintendent of works for the Great (London) Exhibition of 1851, he wrote The Grammar of Ornament (1856) which promoted design quality in mass produced articles, and created interest in Moorish architecture and decoration.

Jones, (John) Paul (1747–1792). American sailor, born in Scotland. His name was John Paul until he changed it, probably in 1773. Paul Jones, who had served in a slaver for five years, had already visited America several times before offering his services to the American colonists who, to aid their bid for independence, were in 1775 fitting out a small fleet. In 1778 in a brig of 18 guns he made several raids on the Scottish coast. He fired a ship and spiked 36 guns at Whitehaven in Cumberland and captured a sloop in Belfast Lough. In the following year, in command of a small French squadron in American service, he captured two British men-of-war in a fierce encounter off Flamborough Head, Yorkshire. For this he was awarded a congressional medal. In 1788 he served for a year in the Black Sea as a Rear Admiral in *Catherine the Great's navy, then at war with the Turks. He died in Paris, but in 1905 his remains were taken to the US, where he is regarded as a national hero.

Morrison, S. E., John Paul Jones. 1960.

Jones, Robert (Bobby) Tyre (1902–1971). American amateur golfer. He competed in the US amateur championship at the age of 14 and later won the US open championship four times and the British open championship three times. He was the outstanding golfer of the 1920–30 decade.

Jones, Sir William (1746–1794). English judge and comparative philologist, born in London. Son of a mathematician who promoted use of the symbol pi (π), educated at Harrow and Oxford, he mastered Latin, Greek, Persian, Arabic, Sanskrit and Bengali and became a judge in the Bengal Supreme Court 1783–94. He proposed the hypothesis, now
generally accepted, of a common origin for a group of languages, which Thomas Young later called Indo-European (1813). He died in Kolkata (Calcutta).

**Jonson, Ben** (1573–1637). English dramatist and poet. He had a good education at Westminster School, but was bricklayer, soldier and actor before taking to writing. Eighteen of about 30 of his plays survive. *Every Man in his Humour* (1598) was his first success (the word 'humour', as always in that period having a physical as well as a psychological connotation). In the same year he was imprisoned and his goods confiscated for killing an actor in a duel. *The Poetaster* (1601), though set in ancient Rome, was an attack on *Dekker* and *Marston* which caused offence. His first tragedy *Sejanus* was acted by Shakespeare's company in 1603, but neither this nor a later tragedy from Roman history, *Catiline* (1611), achieved much success. In collaboration with *Chapman* and *Marston* he wrote *The Alchemist* (1610), a lively study of gullibility, and one *The Famous Jury Case* (1606), a savage attack on human greed, *The Rivals* (1609). In 1616 he was fully acclaimed. His many beautiful lyrics include *Drink to me only with thine eyes*. Jonson was forthright and quick-tempered, but his generosity and sincerity endeared him to a wide circle of friends, including *Donne*, *Bacon* and Shakespeare and to his patrons, the *Sidneys*.

**Joplin, Scott** (1868–1917). American composer, born in Texarkana. He worked in St Louis, Chicago and New York, wrote *The Maple Leaf Rag* (1899) and a ragtime opera *A Guest of Honour* (1900). His second opera *Treemonisha* (1909) was never performed in his lifetime and his music was forgotten until the film *The Sting* (1973) revived interest in ragtime. His music was awarded a Pulitzer Prize in 1975.

**Jordaens, Jakob** (1593–1678). Flemish painter. He lived and worked in Antwerp at the same time as *Rubens*, whom he admired and assisted, and *van Dyck*. He did not equal these masters due to a certain harshness or crudity in his colour and technique. He peopled even religious and mythological paintings with the earthy, vigorous bourgeois or peasant types he encountered in everyday life.

**Joseph** (Yosef) (fl. c.1850 BCE). Hebrew patriarch. The elder son of *Jacob* and *Rachel*, he was his father's favourite and his jealous brothers sold him into slavery in Egypt. There he gained a position of trust in the household of his master *Potiphar*. Resisting the blandishments of Potiphar's wife he won the pharaoh's favour and rose to be chief administrator, established a great granary and when his brothers came to Egypt to buy grain in the years of famine forgave them and secured a home for the family in the land of Goshen. His sons Ephraim and Manasseh became the ancestors of two of the tribes of Israel.

**Joseph, St** (d. before 30 CE). Jewish carpenter. Born of the *Davidic line*, he was a carpenter (or builder?) in Nazareth and a widower when he married *Mary*, the mother of *Jesus*. He died before the crucifixion and is the patron saint of working men.

**Joseph I** (1678–1711). Holy Roman Emperor 1705–11. Son of *Leopold I*, he was King of Hungary from 1687, and, despite the victories of his general *Eugène of Savoy*, lost the War of the Spanish Succession to France.

**Joseph (Josef) II** (1741–1790). Holy Roman Emperor 1765–90, Archduke of Austria, King of Hungary and Bohemia 1780–90. Born in Vienna, he was the fourth child but first son of *Maria Theresa*, Archduchess of Austria and the Emperor *Franz I*. In 1765 he succeeded as Emperor and ruled the Habsburg domains with his mother, but until she died his authority was limited to military and foreign affairs. *After her death (1780) he showed himself as an ‘enlightened despot’ by attacking the power of the Church, reducing the clergy from 63,000 to 27,000 and issuing an edict (1781) granting complete religious toleration. He also abolished serfdom, greatly extended the facilities for general and scientific education, hospital treatment, care of orphans and the insane, and reformed taxation and the criminal law (abolishing the death penalty). He tried to establish German as a common language throughout his dominions. He was essentially a secular, utilitarian social engineer, anticipating *Bentham*, and his abolition of coffin burial (for entirely practical reasons) provoked a sense of outrage. To achieve these measures he centralised government in Vienna and extended in every direction the powers of the state, for which, however, he made it clear that he alone was entitled to speak. By this mixture of radicalism and despotism he antagonised many of his subjects, not only clergy, nobles and local administrators but all the inhabitants of the non-German lands. In 1787–88 there was an outright rebellion against Joseph's laws in the Austrian Netherlands (Belgium) and the beginning of the French Revolution weakened his position generally after 1789. Joseph saw little of his chancellor, Prince *Kaunitz*, and the Empire fared badly in war and foreign relations during his 10–year reign. He died deeply disillusioned.*

Joseph, Père (François Leclerc du Tremblay, known as ‘Eminence Grise’, ‘Grey Eminence’) (1577–1638). French Capuchin friar. Adviser and confidant of Cardinal *Richelieu, this position led to his nickname (from the colour of his habit), now applied to any unofficial power behind the throne. Richelieu used him from 1612 in all the most difficult negotiations of a critical period that included the Thirty Years’ War. Aldous *Huxley’s Grey Eminence gives a fascinating account of this somewhat mysterious personage.

Joseph of Arimathea (fl. 1st century CE). Samaritan merchant. He owned the tomb in which *Jesus was buried. According to legend he was founder of Glastonbury as a Christian shrine (where he is reputedly buried). The Glastonbury thorn which flowered at Christmas was believed to be his staff plunged into the ground.

Josephine (Marie Joséphe Rose Tascher de la Pagerie, later Bonaparte) (1763–1814). Empress of the French 1804–09. Daughter of a planter in Martinique, she married (1779) Alexandre, Vicomte de *Beauharnais, who was guillotined in 1794. After his death Josephine became one of the liveliest members of the gay society that came to the surface after the ending of the Terror. A member of the Directory, *Barras, whose mistress she had been, introduced her to *Napoleon Bonaparte. She married him in 1796 and during the Consulate and Empire she was the centre of his court. As she bore him no children, frustrating his dynastic ambitions, he divorced her (1809) to marry the Austrian archduchess *Marie Louise. Josephine retired to Malmaison. Children of her first marriage included Eugène *Beauharnais and Hortense (1783–1804–09. Daughter of a planter in Martinique, she married (1779) Alexandre, Vicomte de *Beauharnais, who was guillotined in 1794. After his death Josephine became one of the liveliest members of the gay society that came to the surface after the ending of the Terror. A member of the Directory, *Barras, whose mistress she had been, introduced her to *Napoleon Bonaparte. She married him in 1796 and during the Consulate and Empire she was the centre of his court. As she bore him no children, frustrating his dynastic ambitions, he divorced her (1809) to marry the Austrian archduchess *Marie Louise. Josephine retired to Malmaison. Children of her first marriage included Eugène *Beauharnais and Hortense (1783–1837) who married Louis *Bonaparte and was mother of *Napoléon III.

Josephus, Flavius (Yosef ben Mittatyahu) (c.37–c.100). Jewish priest, soldier and historian, born in Jerusalem. Descended from a royal and priestly line of the Maccabees, and a Pharisee, at first he took an active part in the Jewish revolt against the Romans (66) and was made Governor of Galilee. He fought valiantly but, after being captured, he sought and won the favour of *Vespasian (whose family name he adopted), and was with *Titus at the siege of Jerusalem. When the revolt was crushed he was rewarded by a grant of confiscated land, but spent the rest of his life in Rome. There he wrote in halting Greek his History of the Jewish War, the main authority for the events of Jewish history in the first century CE and of the Jewish war (66–70), and The Antiquities of the Jews (written in 93), a history of the Jews from the Creation up to the period covered by his earlier work. His Autobiography is mainly concerned to refute criticism of his own activities before and during the revolt. His knowledge of the country, its religion, politics and people, give the books a particular value except where self defence demands a biased account.

Joshua (fl. c.1300 BCE). Hebrew leader. Son of Nun of the tribe of Ephraim, he was an assistant to *Moses, one of 12 sent out by him to spy the promised land of Canaan. He succeeded Moses as leader of the tribes of Israel. The Book of Joshua, first in the Old Testament after the Pentateuch, describes the various episodes of the conquest of Canaan.

Josquin des Prez (c.1450–1521). French (or Burgundian) composer, born probably in Hainaut. A pupil of Johannes Ockeghem (c.1410–1497), a master of contrapuntal technique, he was a chorister in Milan, worked for the Sforzas, and sang in the Sistine Chapel in Rome 1486–95. Choirmaster at Cambrai Cathedral 1495–99, he served *Louis XII of France 1499–1516, and became canon of the collegiate church of St Quentin, Condé. He published 17 Masses, at least 100 motets (including Ave Maria, plena gratia …) and many secular songs. The first composer to benefit from the invention of printing, he was a celebrity in his lifetime, regarded as a genius in counterpoint and expressive melody. He was forgotten during the 17th century and partly rediscovered through Charles Burney’s History of Music (1776–89).

Jouhaux, Léon (1879–1954). French trade union leader. As General Secretary 1909–47 of the French General Confederation of Labour (CGT), he played the leading role in promoting the trade union movement in France. He was imprisoned by the Germans in World War II and won the Nobel Peace Prize (1951).

Joule, James Prescott (1818–1889). English physicist. Son of a Salford brewer, he had little formal training but was tutored by *Dalton and showed exceptional aptitude for experimental work. He investigated the transformation of heat into other forms of energy and was one of the first to establish the principle of the conservation of energy. He established (1840) the law concerning the relationship between the heat developed in an electrical circuit and the strength of the current and resistance. He discovered (1843) a method for measuring the mechanical equivalent of heat, and published (1851) the first calculation of the average velocity of a gas molecule. His theories were initially rejected by the Royal Society but in 1850 he was elected a Fellow and awarded its Royal (1852) and Copley (1856) Medals. He is commemorated by the unit of energy, the joule.

Jowett, Benjamin (1817–1893). English classical scholar. A Fellow of Balliol College, Oxford from 1838, and Master 1870–93, he managed to attract and influence a succession of brilliant undergraduates who, for a generation and more, came to exercise an intellectual domination in the academic and political worlds. His own reputation as a possessor of universal knowledge depended as much upon his personality as upon his excellent, but at times inexact, translations of *Plato, *Thucydides and *Aristotle.

Faber, G., Jowett: A Portrait with a Background. 2nd ed. 1958.

Joyce, James (Augustine Aloysius) (1882–1941). Irish novelist and poet, born in Dublin. He was one of 10 surviving children, from 15 births, in the family of a gregarious, hard drinking and profligate civil servant. His mother died in 1903. Educated in Jesuit schools and at University College, Dublin, Joyce became an expert linguist, mastering French, Italian, Latin, modern Greek, German, Norwegian, and some Hebrew, Sanskrit and Arabic. After graduating from UCD in 1903 he attempted to study medicine in Paris for a few months before returning to Dublin. On 16 June 1904 he met Nora Barnacle (1884–1951) and lived with her for the rest of his life. They married in London in 1931.

Joyce both loved and hated the life of Dublin which featured prominently in all his prose works. He lived abroad in self-imposed exile (apart from two brief return visits 1909–10; 1912–13) and distanced himself from the ‘Celtic Twilight’ of modern Irish letters. He lived in Trieste 1905–15, Zürich 1915–20; 1940–41 and Paris 1920–40. For much of his life he had to struggle with poverty, acute eye disease (cataracts and episcleritis) and the schizophrenia of his daughter Lucia.

A short collection of poems Chamber Music (1907), was followed by the short stories, Dubliners (1914: banned in Australia 1929–33), the semi-autobiographical novel A Portrait of the Artist as a Young Man (1916), in which the central character is Stephen Dedalus (named for the Greek craftsman Daedalus), and a play Exiles (1918). He had an early enthusiasm for *Ibsen.

An English patron of literature and political activist, Harriet Shaw Weaver (1876–1961), generously financed Joyce from 1917 until his death. He was strongly encouraged by Ezra *Pound. His other supporters included H. G. *Wells, W. B. *Yeats, Sean O’Casey and T. S. *Eliot; Bernard *Shaw, E. M.* Forster and D. H. *Lawrence were sceptics. He had one inconsequential meeting with *Proust.

Ulysses (1922) was his first masterpiece. Its 18 ‘episodes’, all named for chapters in *Homer’s Odyssey, describe in minute detail and unprecedented realism a day in the life of Dubliners from 8.00 am to past midnight on Thursday, 16 June 1904 (now celebrated as ‘Bloomsday’). The central characters are Leopold Bloom (parallel to Ulysses/Odysseus), a Hungarian Jew and unsuccessful advertisement canvasser in Dublin, his wife Molly Tweedy Bloom (Penelope), and, in a second coming, their scholarly friend Stephen Dedalus (Telemachus), representing Joyce himself. Joyce makes masterly use of the technique of ‘stream of consciousness’, words and sentences following one another by an automatic process of mental association. Some of the associations, such as similarity of sound (e.g. rhymes and puns) are fairly obvious; some derive from telescoping one or more words or ideas; others, springing from the width and depth of the author’s knowledge, are beyond the grasp of most readers. Ulysses abounds in symbolism. Much of Joyce’s writing has several simultaneous levels of meaning (e.g. ‘Sheashell ebb music wayriver she flows’). He expanded the scope of the modern novel by projecting his characters against the history of western civilisation, revealing his encyclopaedic knowledge of history, mythology, theology, literature, psychology and music.
Joyce, William (known as ‘Lord Haw-Haw’) (1906–1946). Irish-American propagandist, born in Brooklyn. After being a speaker and ‘storm trooper’ in Fascist organisations in the East End of London, he went to Germany (August 1939) and became the principal Nazi broadcaster in English during World War II, owing his nickname to his unpleasant sneering voice. After the war he was captured, being held subject to British jurisdiction on the tenuous grounds that he had secured a British passport, was tried, and hanged for treason.

Juan Carlos I (1938– ). King of Spain 1975–2014. Grandson of *Alfonso XIII, he was born in Rome. General *Franco nominated him as his successor in 1969, and he helped in the transition to democracy (‘Suárez’). In February 1981, he opposed a military coup which proposed to restore authoritarian rule and called for preservation of democracy. He abdicated in favour of his son *Philip (Felipe) VI.

Juarez, Benito Pablo (1806–1872). Mexican president. A Zapotec Indian, he came as a servant to Oaxaca where, having married his employer’s daughter and graduated in law, he eventually rose to be State Governor 1847–52. As minister of justice in a radical government he attempted to curb the power of the Church and the army. In 1857 the liberals declared him president but the conservatives rose against him and forced him to retire to Vera Cruz. He reentered Mexico City in 1860 and was confirmed as President by the election of 1861. Suspension of interest payments led to a French invasion and the establishment of *Maximilian of Austria as Emperor. After Maximilian’s execution (1867) Juarez was again elected President and resumed his program of reform, but when he was reelected (1871) he failed to quell a revolt by an unsuccessful candidate, Porfirio *Díaz, and shortly afterwards died.

**Judah** (fl. c.1850 BCE). Hebrew patriarch. Fourth son of *Jacob and Leah, he became the ancestor of the tribe that bears his name, to which the Royal House of *David belonged. The area in the south of Palestine occupied by the tribe and that of *Benjamin became, after the death of *Solomon, the separate Kingdom of Judah.

**Judas Iscariot** (d.c.30 CE). Christian apostle, betrayer of *Jesus Christ. The name Iscariot is of uncertain origin. Perhaps he came from Zeiroth or was a member of the Sicarii, a radical Jewish group. He was the treasurer of the apostles, and though no motive for his treachery is given in the Gospels it has been surmised that it was due to disappointment that Jesus had no plans to establish an earthly kingdom. After betraying Jesus for 30 pieces of silver he committed suicide.

**Judas Maccabaeus** see **Maccabaeus**

**Jude, St** (also known as Thaddaeus, Lebbaeus or 'Judas not Iscariot') (fl. 1st century CE). Christian apostle. He may have been a Zealot and, according to tradition, was martyred in Persia. Since the 18th century, Jude has been the patron saint of desperate causes.

**Judge, Igor, Baron Judge** (1941– ). British jurist, born in Malta. Educated at Cambridge, he was a judge from 1988 and, after the reorganisation of the courts, served as Lord Chief Justice 2008–13.

**Jugurtha** (c.160–104 BCE). King of Numidia (c.118–105 BCE). Having won control of Numidia (roughly modern Algeria) by murdering two co-rulers, he provoked the intervention of Rome by a massacre of Roman merchants. By going himself to Rome, he gained a respite, but war was soon resumed. Despite early success Jugurtha was forced to adopt guerrilla tactics by the systematic occupation of his bases by Metellus and *Marius. Finally he was betrayed by his ally, Bocchus of Mauritania, and died in prison at Rome.

**Juin, Alphonse Pierre** (1888–1967). French soldier. Having fought in World War I and in Morocco, he was taken prisoner during the battle for France (1940) of World War II. Released by the Germans, he was appointed by *Pétain's Vichy Government to command the French forces in North Africa. He continued in command under *Giraud and de *Gaulle, and subsequently commanded French troops in Italy. He was then successively Chief of the French General Staff 1944–47 and Resident General in Morocco 1947–51. From 1951 he filled important posts in NATO and commanded Allied forces in central Europe 1953–56. He opposed de Gaulle's policy of granting independence to Algeria. In 1952 he became the only (living) French marshal.

**Julia** (39 BCE–14 CE). Roman matron. Only child of the Roman emperor *Augustus, she married Marcellus (25 BCE), *Agrippa (21 BCE), and the future emperor *Tiberius (12 BCE). Her daughter by Agrippa was *Agrippina, mother of the emperor *Caligula. Julia's last marriage gave her no happiness, she gave way to profligacy and in 2 BCE was banished for adultery and scandalous behaviour. Eventually she starved herself to death.

**Julian** (Flavius Claudius Julianus, known as ‘the Apostate’) (c.331–363). Roman Emperor 361–63. Born in Constantinople, the nephew of *Constantine I, he and his half-brother Gallus were the only males of the Flavian line spared in the general massacre that took place (337) on Constantine's death. His education in philosophy in Nicomedia, Constantinople and Athens turned him away from Christianity and he secretly adopted paganism (351). In 335 he was given command on the Rhine by his cousin the emperor *Constantius and in the next five years succeeded in restoring the frontiers and purging the provincial government of dishonesty and corruption. He became highly popular with the army, and when the Emperor sought to transfer his troops to the East to restore the situation there, they mutinied and proclaimed him Emperor (360). In the same year he openly announced his paganism. He then moved eastwards, but Constantius's death (361) forestalled a conflict. Julian spent a year in Constantinople, introducing a number of reforms. Though he himself worshipped the pagan gods and deprived the Christian Church of its privileges, he exercised a wide tolerance. In 363 he began a war against Persia and was mortally wounded in a skirmish. Julian was one of the most accomplished of the emperors, and his writings – some philosophical and self-justificatory, some satires on the lives of his predecessors – are distinguished by the purity of their Greek.

**Juliana** (1909–2004). Queen of the Netherlands 1948–80. In 1937 she married Prince *Bernhard of Lippe-Biesterfeld by whom she had four daughters: *Beatrix, Irene, Margriet and Maria. She succeeded on the abdication of her mother, *Wilhelmina, and when the Emperor sought to transfer his troops to the East to restore the situation there, they mutinied and proclaimed him Emperor (360). In the same year he openly announced his paganism. He then moved eastwards, but Constantius's death (361) forestalled a conflict. Julian spent a year in Constantinople, introducing a number of reforms. Though he himself worshipped the pagan gods and deprived the Christian Church of its privileges, he exercised a wide tolerance. In 363 he began a war against Persia and was mortally wounded in a skirmish. Julian was one of the most accomplished of the emperors, and his writings – some philosophical and self-justificatory, some satires on the lives of his predecessors – are distinguished by the purity of their Greek.

**Julianus** (1443–1513). Pope 1503–13. Born near Genoa, his family was influential but not rich. However, the election of his uncle Francesco della Rovere as Pope *Sixtus
Jung, Carl Gustav (1875–1961). Swiss psychiatrist, born in Kesswil. He graduated in medicine at Basle and worked at the Burghölzli psychiatric clinic at Zürich until 1909. He became influenced by the Volkskisch (*Jahn) tradition, *Nietzsche, social Darwinianism and the occult. He coined the word 'complex' to describe memories or emotions which, though repressed by the conscious mind, still influence behaviour and may cause neuroses. He met *Freud in 1907 and worked closely with him in Vienna for several years. They quarrelled (1912–13) largely because of disagreement over the extent of the contribution of sexuality to the life force. Freud and Jung were fundamentally opposed in their approach. Jung rejected Freud's critical and sceptical analysis of religious experience and he may have seen himself as the founder of a redemptive transforming cult. He was probably anti-Semitic and had mixed feelings about *Hitler. Jung's system, called 'analytical psychology', was an attempt to effect classification by psychological analysis: he divided people into two main types, 'introverts' and 'extroverts'. Another concept of his work is the 'collective unconscious' which is assumed to spring from collective atavistic experiences rather than of individuals, and he promoted the concept of 'archetypes'. Other coinages were 'anima', 'animus' and 'persona'. Jung held chairs at Zürich 1933–41 and Basle 1941–48. His books include The Psychology of the Unconscious (1921), Modern Man in Search of a Soul (1933) and Answer to Job (1954).

Jünger, Ernst (1895–1998). German novelist. Wounded in World War I, his book Storms of Steel (1920) glorified battle and he became an ardent nationalist on the far right. Repelled by *Hitler, he retreated to study entymology, but served in World War II, wrote more vivid memoirs and became a cult figure in extreme old age.

Justin, St (known as 'the Martyr') (c.100–c.165). Greek theologian, born in Samaria. He studied philosophy and was converted (c.134) to Christianity. He spent a wandering life preaching the Gospel, founded a school of Christian philosophy at Rome, where with some of his proselytes he was martyred. In his Apologies (c.155) he tried to reconcile Greek philosophy, especially that of *Plato, with the teaching of Christ. The Dialogue with the Jew Trypho is the only other work indisputably his.

Justinian I (Flavius Anicius Justinianus) (c.482–565). Byzantine (or east Roman) Emperor 527–65. Born in Illyria, the son of a Macedonian peasant, his uncle, an imperial guardman made himself the Emperor
Justin I, had him educated in Constantinople, and eventually made him co-Emperor and heir. Justinian's wife, *Theodora, a former actor and courtesan, a talented and courageous woman, was a constant source of strength. As Emperor, Justinian's military aim was to restore the Roman Empire to its ancient limits. With the help of his generals *Belisarius and *Narses he nearly succeeded in the west by the re-conquest of North Africa, most of Italy and part of Spain, but at a crippling financial and material cost. He held off the Persians in two wars. On other frontiers, especially in the north where raids from Slavs and Huns were a constant menace, he strengthened and renewed the old lines of fortifications. In Constantinople the perpetual feud between the supporters of the 'Blues' and 'Greens', rival teams in the chariot races in the Hippodrome, had spread into the streets. Gang warfare became political faction and after the extraordinarily destructive Nika Revolt (January 532), Belisarius massacred a crowd of 30,000. Justinian's political reforms were directed at removing corruption and at centralising the regime by breaking up the large self-governing departments and making more ministers directly responsible to himself. He was a strictly orthodox Christian and worked hard to bring unity both of doctrine and discipline into Church affairs. He employed Anthemios of Tralles and Isidore of Miletus to build Hagia Sophia (Aya Sofya – 532–37). He ordered construction of many important churches and the great cisterns in Constantinople. Justinian is best remembered for the codification of Roman law. This work, in which his minister Tribonius was his principal assistant, resulted in a revision, known as the Codex Justinianus (529, revised 535) of the Theodosian code of 438; the Pandeotae or Digesta (533) gave a selection from the writings of earlier jurists. The Institutiones provided elementary instruction mainly for use in schools. New laws made from time to time were known as Novella, and these, with the Institutiones, Digesta and Codex, make up the Corpus Juris Civilis, the Roman civil law that provided the pattern for many later codes. There are outstanding mosaics of Justinian and Theodora, and their courtiers, in St Vitale, Ravenna.

Juvenal (Decimus Junius Juvenalis) (c.60–c.130). Roman satirical poet. Little is known of his life except that he lived most of it in poverty, the client of mean though wealthy men. He wrote 16 surviving satires in which he denounced the vicious Roman society of the time of *Trajan and *Hadrian and aired his venomous view of Jews and women. He is regarded as one of the greatest masters of the 'satire of indignation', *Dryden and *Johnson (in London and The Vanity of Human Wishes) wrote versions of some of his works.

K

Kaczyński, Jarosław (1949–) and Lech Aleksander Kaczyński (1949–2010). Polish conservative politicians, identical twins, born in Warsaw. Jarosław broke away from Solidarity in 1990 and became Leader of the Law and Justice Party. He organised the election of Lech as President 2005–10, becoming Prime Minister himself 2006–07. Jarosław’s sexuality became a controversial issue, using homophobic language while believed to be homosexual himself. Lech Kaczyński was killed in an air crash at Smolensk while visiting Russia for a commemoration of the Katyn massacre (1940). In the presidential election (July 2010), Jarosław Kaczyński failed to win.

Kadar, Janos (1912–1989). Hungarian politician. He joined the Communist Party, then illegal, in 1932. In 1948 when the party took control he became Minister for Home Affairs. After three years’ imprisonment, accused of Titoism, he became Prime Minister and First Secretary of the Hungarian CP 1956–88. In the October 1956 rising, at first he joined the anti-Stalinist revolutionaries, then in November he set up an opposing, pro-Soviet government and with Soviet military help crushed the revolt. He later followed pro-Moscow policies while allowing some liberal measures until his deposition in 1988.

Kafka, Franz (1883–1924). Czech-Jewish novelist, writing in German, born in Prague. Son of an overbearing retailer and a withdrawn mother, he gained a doctorate in law and worked as a senior (and well-paid) public servant in the Workers’ Accident Insurance Institute in Prague 1908–22. Between 1912 and 1917, he had a relationship with Felice Bauer (1887–1960). They were twice engaged but never married. (He wrote her 500 letters but they only met 17 times.) Kafka had the smallest output of any major writer, three short novels (all unfinished), one novella, 23 short stories, diaries and five collections of letters, almost all published posthumously. He lived briefly with two unhappily married women.

The novella Metamorphosis (Die Verwandlung), published in 1915, is famous for the image of the central character Gregor Samsa waking to find himself transformed into ‘a monstrous vermin’, which is usually rendered in English as an insect or beetle. Kafka does not explain why the transformation occurred.

He suffered from tuberculosis of the larynx, died – essentially of starvation – in a sanatorium at Klosterneuburg, near Vienna, and was buried in Prague. He left instructions that his literary works be burnt, unread, but his friend and executor Max Brod (1882–1968) ignored the direction and published his novels Der Prozes (The Trial,1925), Der Schloss (The Castle, 1926) and Amerika (The Man Who Disappeared, 1927), as well as collections of short stories and letters. The first English translation, of The Castle, by Willa and Edwin *Muir, appeared in 1930.

Another fiancée, Julie Wohryzek, and his three sisters died in the Holocaust, Only after 1945 did Kafka gain full recognition for his extraordinary prophecy of totalitarianism and alienation. (The word Kafkaesque describes an individual oppressed by institutions or forces he is not able to understand). His introspective and symbolic novels are marked by a disconcerting sense of spiritual oppression and frustration, their strange events seeming the more uncanny because of the clarity of the author’s style. Some interpreters suggest that a hidden theme is humanity’s vain struggle to establish a relationship with God. There is an enormous critical literature about Kafka. The Castle and The Trial were both filmed twice, the best known version being Orson *Welles’ The Trial (1962).

Kaganovich, Lazar Moiseivich (1893–1991). Russian Communist politician. Of Jewish origin, he became a shoemaker and joined the Bolsheviks in 1911. He worked for *Stalin in the CP apparatus, was a Politburo member 1930–57, ran the Moscow party machine 1930–35 and created the Moscow Metro (underground). His sister Rosa became Stalin’s third wife. He became Commissar for Transport 1935–37, Heavy Industry 1937–42 and Oil 1940–42, ran all Soviet transport during World War II and was Deputy Premier 1938–46, 1947–53. He joined the ‘anti-party group’ against his former protégé *Khrushchev and was sacked. The last of the Old Bolsheviks, he remained an undeviating Stalinist to the end.

Kahlo, Frida (1907–1954). Mexican painter. Permanently damaged by a road accident in 1925, she twice married Diego *Rivera (1929, 1940), and was a lover of *Trotsky. She developed her own surrealist treatment of Mexican folk and colonial art, marked
by intense colour and strong figures and painted many powerful self-portraits. Her house in Coyoacan became an important museum of pre-Columbian art.

Kahn, Louis Isadore (1901–1974). American architect, born in Estonia. Educated at the University of Pennsylvania, but particularly influenced by buildings in Rome, Greece and Karnak, he was a relatively late developer whose first major project, the Yale Art Gallery, dates from 1947. Professor of architecture at Yale 1947–57 and Pennsylvania 1957–74, he broke away from the sleek, bland ‘International Style’ with his monumental buildings, including the Kimbell Art Museum, Fort Worth, the Salk Institute at La Jolla, the capitol in Dacca, Bangladesh and government offices in Ahmadabad, India.

Kahneman, Daniel (1934– ). Israeli-American psychologist, born in Tel Aviv. His parents came from Lithuania; they moved to Palestine, then France. He survived the war with his mother. Educated in Israel and at Berkeley, he taught in Jerusalem, Vancouver, Berkeley and was professor of psychology at Princeton 1993–2007. With Amos Tversky (1937–1996) he developed ‘prospect theory’, which analyses rational and irrational factors in decision making. For this Kahneman received the Nobel Prize in Economic Science in 2002. In prospect theory, individuals use ‘heuristics’ (familiar short cuts) to make intuitive judgments, and are not always rational actors. He became the outstanding authority on behavioural economics and social psychology. His *Thinking Fast and Slow* (2011), a bestseller, described ‘cognitive ease’ in which people accepted ideas they were comfortable with and rejected facts that made their brains work harder. *Obama* awarded him the Presidential Medal of Freedom in 2013.

Kaiser, Georg (1878–1945). German dramatist, born at Magdeburg. He was known as the playwright of Expressionism, because his style in some of his best known plays, e.g., *The Burghers of Calais* (1914), *From Morning to Midnight* (1916), and *Gas* (1918) was analogous to that of the Expressionists in art, but his range of subjects was wide enough to include social comedies, problem plays, and to take up many other themes, to each of which he adapted his style.

Kalecki, Michal (1889–1970). Polish economist. Trained as an engineer, he worked as a journalist and economic analyst, and in 1935 published (in Polish) *Essays in Business Cycle Theory* which largely anticipated J. M. *Keynes’* theories on demand management and employment. (His priority was not recognised until after Keynes’ death.) He worked in England 1936–45, then with the UN 1946–55, returning to Poland in 1955 in an attempt to provide a theoretical framework for growth in a socialist economy.

Kalinin, Mikhail Ivanovich (1875–1946). Russian Communist politician. A sheet metal worker, he joined the RSDLP in 1897, adhered to the Bolsheviks after 1905 and was a candidate member 1919–25, then a full member of the Politburo of the CPSU 1925–46. As Chairman of the Executive Committee of the Russian Soviet Socialist Republic, he succeeded *Sverdlov* as head of state (1919) and retained this position until his death, from 1938 as Chairman of the Presidium of the Supreme Soviet. *Stalin* imprisoned his wife 1937–46.

Kamehameha. Five kings of Hawaii. Kamehameha I (1758–1819) was King of Hawaii 1795–1819. As a young chief he negotiated with James *Cook* in 1779 and united the warring islands under his sole rule 1782–1810. He was friendly towards traders and encouraged western influences. Kamehameha II (1797–1824), King 1819–24, continued his father’s policies. His brother Kamehameha III (1814–1854), King 1824–54, developed the islands into a modern monarchy of a constitutional kind, and obtained recognition of their independence by France, Britain and the US. Kamehameha V (1831–1872) succeeded his brother in 1863, abrogated the constitution and tried to restore tribalism and monarchial rule. However, he died without heir and the Kamehameha dynasty ended.

Kamenev (originally Rosenfeld), Lev Borisovich (1883–1936). Russian politician. He adhered to the Bolshevik wing of the Social Democratic Party. Banished to Siberia (1915) he became a member of the first Communist Politburo (1917), and, when *Lenin* died, he, *Stalin* and *Zinoviev* formed the triumvirate opposed to *Trotsky* (1924). Outmanoeuvred by Stalin (1925) he rallied to Trotsky and was expelled from the Communist Party (1927). In 1936 he was tried in the first big ‘purge trial’ and executed for treason.

Kamerlingh Onnes, Heike (1853–1926). Dutch physicist. Professor of physics at the University of Leyden 1888–1926, and a pioneer of low-temperature research, he was the first to achieve temperatures within 1° of absolute zero and to liquefy hydrogen (1906) and helium (1908). During his studies of the properties of materials at low temperatures, he discovered the phenomenon of super conductivity, the disappearance of electrical resistance of some metals (e.g. lead) at temperatures near absolute zero. He won the Nobel Prize for Physics (1913).
Franz Marc formed (1911) a group that came to be taking up art. He studied in Munich where he and
years old and had been a lawyer and economist before
Russian artist, born in Moscow. He was already 30
Kandinsky, Wassily Wassilyevich
2000 for his work on the physiology of memory.
Canal, travelled extensively, read voraciously and
Kamprad, Ingvar Feodor (1926– ). Swedish
industrialist. He was a trader in matches, fish, pens
and Christmas decorations as a teenager and in
1943 founded the furniture and fittings retailer
IKEA. The name is an acronym of his initials and
two places associated with his childhood (Einmaryd
and Agunnaryd). He had a youthful enthusiasm
for Fascism and later was a reformed alcoholic. The
philosophy of IKEA is based on frugality, high quality,
relatively low cost, and encouraging its customers.
IKEA stores spread throughout the world. Kamprad
created the INGKA Foundation which owns IKEA
and, with capital of about $US40 billion, is one of the
world’s largest charities.
Kandel, Eric Richard (1929– ). American biologist,
born in Vienna. In the US from 1939, he held a chair
at Columbia University. He worked on the neural
system of Aplysia, a sea slug with very large nerve
cells, and shared the Nobel Prize for Medicine in
2000 for his work on the physiology of memory.
Kandinsky, Wassily Wassilyevich (1866–1944).
Russian artist, born in Moscow. He was already 30
years old and had been a lawyer and economist before
taking up art. He studied in Munich where he and
Franz Marc formed (1911) a group that came to be
called (after one of Kandinsky’s pictures) the Blaue
Reiter (Blue Rider), pioneers of abstract painting
and theory. Kandinsky had painted his first abstract
picture in 1910 and had begun to write Concerning
the Spiritual in Art (1912). From 1914 to 1921 he was
in Russia, where he played a part in re-establishing
the arts after the revolution. He left to join the Bauhaus,
a school of design and architecture at Weimar in
Germany and from 1933 he lived in Paris. Features of
his painting which have attracted particular attention
have been the calligraphic brush strokes of his earlier
period and afterwards his use of geometric symbols.
His later pictures reveal a softening of mood and with
it a less severe use of geometric forms.
Kangxi (K'ang-Hsi: personal name Xuan Yeh)
(1654–1722). Chinese Emperor 1662–1722, of the
*Qing dynasty. He took control from the eunuchs of
the Thirteen Offices at the age of 15, defeated three
feudal kingdoms (1681), annexed Outer Mongolia
and Tibet, settled the border with Russia, opened four
ports to foreign trade, encouraged introduction of
Western arts and science and (until 1717) allowed
the Jesuits to preach Christianity. He dredged the Grand
Canal, travelled extensively, read voraciously and
commissioned a great dictionary and an atlas. He was
a good poet and wrote a fascinating autobiography.
His grandson *Qianlong abdicated so that their
reigns would be of equal length.
Spence, J. D., Emperor of China: Self Portrait of K'ang-
Hsi. 1974.
Kang Yuwei (1858–1927). Chinese scholar and
political philosopher. He was a leader of the ‘Hundred
Days’ Reform movement of 1898, aimed at creating
a constitutional monarchy. This was crushed by the
dowager empress *T’zu Hsi and he fled to Japan with
his disciple *Liang Qichao. He returned in 1914 and
opposed *Sun Yat sen. Kang, a voluminous writer
and a great calligrapher, remained a Confucian and
constitutional monarchist.
Kanishka I (d.151 CE). Kushan ruler in India 127–
51. He ruled originally from Turpan in Xinjiang but
his tribes were probably Indo-European and he used an
Iran dialect (Bactrian) and absorbed cultural contact
as appropriate. (His coins sometimes used Greek
lettering.) His empire extended to Afghanistan, parts
of Iran and Northern India-Pakistan, and his capital
Purushpura is the modern Peshawar. He promoted
the introduction of Buddhism in China.
Kant, Immanuel (1724–1804). German philosopher,
born in Königsberg. Son of a saddler, he was educated
and eventually became professor of philosophy in
his birthplace. He travelled hardly at all and did not
marry. Barely 1.5 metres high, his health was good
and his brilliant conversation enlivened prolonged
luncheons with friends and the social gatherings of
his younger days. Interested in politics, approving
both the French and American revolutions, he lived
a quiet life devoted to philosophy, the course of
which he greatly influenced. He also was a student
of physics and mathematics, and is known for the
Kant-*Laplace theory of the origin of the solar
system. In his philosophy, Kant argues that human
knowledge is the result of our own ordering of sense
experience, which by itself would be unintelligible. In
the Critique of Pure Reason (1781), he sets out the
a priori categories that we impose upon experience,
e.g. the categories of space, time and relation. They
are, it is sometimes said, the spectacles through which
we are always looking. Without them, he claims,
there could be no understanding of our experience.
Since knowledge derives from and depends upon
both experience and categories, there can be no
knowledge of that which is beyond our experience.
Kant thus denies the possibility of metaphysics, when
conceived as the study of any reality beyond our
actual experience. He thus also denies the possibility
of proof of the existence of God, which remains a
matter of faith. Supplementary to this great work
were his Critique of Practical Reason (1788) and
Critique of Judgement (1790), the latter containing
his widely influential views on taste. In his writings
on ethics, he enunciates the supreme moral principle
that he called the Categorical Imperative. It has several formulations, of which the final one is that the will is completely autonomous in laying down laws that are to be applied universally and in accordance with which it is its duty to act.

**Kapell, William** (1922–1953). American pianist, born in New York City. His father was of Russian-Spanish-Jewish ancestry, his mother Polish. He developed a phenomenal technique and died in a plane crash on returning from a concert tour in Australia, giving his last concert in Geelong.

**Kapitza, Pyotr Leonidovich** (1894–1984). Russian physicist. Educated at Leningrad and at Cambridge (under *Rutherford*), he was assistant director of research in magnetism at the Cavendish Laboratory 1924–32 and Messel research professor at the Royal Society's Mond Laboratory 1932–35. He did important work on the magnetic and electrical properties of substances at low temperatures, and also designed an improved plant for the liquefaction of hydrogen and helium. Kapitza was detained in the USSR in 1935, and later became Director of the Institute for Physical Problems at the Academy of Sciences, Moscow. He was awarded the Stalin Prize for Physics (1941, 1943), held the Order of Lenin, many foreign honours and shared the 1978 Nobel Prize for Physics.

**Kapoor, Sir Anish** (1954– ). British-Indian sculptor, born in Mumbai. With a Hindu father and Jewish mother, he lived in Israel, then in Britain from 1973. He worked in a diversity of forms, stone, wax, stainless steel, with effective use of mirrors, both smooth and multi-faceted, creating disturbing distortions, and with vibrant colour. Large installations of his work are found in Britain, France, Spain, Israel, Italy, Japan and the United States.

**Kapteyn, Jacobus Cornelius** (1851–1922). Dutch astronomer. While professor of astronomy at the University of Groningen 1878–1921, he established that there are two streams of stars moving in opposite directions in the plane of the Milky Way, and made considerable contributions to the knowledge of star distribution and the structure of the universe. He also pioneered the use of photographic methods for determining stellar parallax. His last student was J. H. *Oort.*

**Karadžić, Radovan** (1945– ). Bosnian-Serb politician. A psychiatrist, educated at Columbia University after the break-up of Yugoslavia, he led a government in Bosnia-Herzegovina 1990–96 that imposed 'ethnic cleansing' on Muslims, including the murder of 7,000 at Srebrenica in July 1995. In 1995 the UN indicted him and his military commander Ratko Mladić for the killing of civilians but he remained at large until his capture in July 2008. An international criminal trial began in the Netherlands in October 2009; Karadžić's defence began in October 2012. In March 2016 he was convicted and sentenced to 40 years jail.

**Karageorgević** (Serbian: *Karadardević*). Serbian dynasty, founded by *Dorde* (George) *Petrović* (1768–1817), nicknamed by the Turks Kara ('black') George. A cattle-keeper in his youth, he worked at a monastery in Smyrna, then fought with Habsburg forces against the Ottoman rulers of Serbia. He led the 1804 revolt against the Turks. For 10 years he waged guerilla warfare, striking terror in the Turks and gaining adherents amongst the Serbs by his gigantic size, ruthless discipline and immense courage. In 1808 the Serbs swore allegiance to him as their hereditary leader. Defeated at last, he took refuge in Austria but returned (1817) only to be assassinated by a member of the rival Obrenović dynasty. He was highly praised by Napoléon as a guerrilla leader. Kara George's son *Alexander* (1806–1885) succeeded (1842) Michael Obrenović and reigned as Prince of Serbia until deposed (1858). After the murder (1903) of *Alexander* (Obrenović), the dynasty returned to power under Alexander's son, *Peter I, who was succeeded by his son, *Alexander I (of Yugoslavia), and his grandson, *Peter II.*

**Karajan, Herbert von** (1908–1989). Austrian conductor, born in Salzburg. Of Greek-Slovak descent, he studied piano and conducting in Vienna and became an opera conductor at Ulm 1927–33, Aachen 1933–40 and Berlin 1938–42. He joined the Nazi Party in 1933, received *Goebbels*' patronage and was promoted as a rival to *Furtwängler* (supported by *Goering*). After World War II he was plucked from obscurity by the English recording producer Walter Legge (*Schwarzkopf*) and made his international reputation through the gramophone. He conducted in London with the Philharmonia Orchestra 1947–55, at the La Scala Opera, Milan 1948–52 and directed the Vienna State Opera 1956–64 and 1976–89, the Berlin Philharmonic Orchestra 1958–89, and the Salzburg Festival 1964–89. He made almost 900 records, and several films, leaving an estate of 500 million DM.

Karl XIV Johan, King of Sweden see Bernadotte, Jean Baptiste Jules

Karlfeldt, Erik Axel (1864–1931). Swedish lyric poet. He worked as a schoolteacher and librarian. His themes are drawn from the countryside, its moods and seasons, and the loves, lives and deaths of country people. Secretary of the Swedish Academy, he declined a Nobel Prize for Literature, but it was awarded to him posthumously (1931).

Karsavina, Tamara (1885–1978). Russian ballet dancer. After being prima ballerina of the Mariinsky Theatre, St Petersburg, from 1902, she starred (1909–22) in Diaghilev’s Ballets Russes. She scored a particular triumph with Nijinsky in the Spectre de la Rose.

Kaufmann, Janos (1908–2002). Canadian photographer, born in Armenian Turkey. He lived in Canada from 1925, studied in Boston and achieved international recognition with a famous portrait (1941) of Winston Churchill. He published several volumes of portraits, held many international exhibitions and was awarded the CC (1968).

Karzai, Hamid (1957– ). Afghani politician, born near Kandahar. An ethnic Pashtun, and a Sunni, he was educated in India and worked with the CIA in supporting the mujahideen against the Taliban. He was provisional President 2001–04, then won popular elections in 2004 and 2009, despite strong accusations of electoral fraud. In 2003 the UK awarded him a Hon. GCMG.

Kasavubu, Joseph (c.1910–1969). Zairean (Congoles) politician. A member of the Bakongo tribe, he was a teacher and a civil servant under the Belgian administration. In the struggle for power that followed independence (1960) Kasavubu obtained UN recognition and, in the civil war that followed, his supporters gained ascendency over his main rival, Patrice Lumumba. Throughout the disturbances of the following years Kasavubu retained office until deposed (1965) by General Mobutu, the Commander-in-Chief.

Kasiem, Abdul Karim (Abd al-Karim al-Qasim) (1914–1963). Iraqi soldier and politician. Having led the revolt during which King Faisal was murdered (1958), he made himself President and Commander-in-Chief of the new republic. The failure of his attempt to establish an Iraqi claim (1961) to Kuwait lowered his prestige and he was assassinated during a coup d’état.

Katherine (or Katharine) of Aragon see Catherine of Aragon

Katherine Howard see Catherine Howard

Kaufman, Angelica (1741–1807). Swiss painter. Having gained a reputation as a child artist in Rome she spent the years 1766–81 in England, where she was befriended by Reynolds and achieved success with portraits and mythological scenes; she was an original member of the Royal Academy (1768). She undertook decorative paintings for several houses designed by the Adam brothers, e.g. Syon House, Harewood House.

Kaufmann, Janos (1969– ). German tenor, born in Munich. He combined exceptional technique, excellent diction, a ringing tone and a memorable dramatic gift with a large repertoire, including Schubert, Wagner, Verdi, Puccini and Strauss.

Kaunda, (David) Kenneth (1924– ). Zambian politician. A schoolteacher, he entered politics in Northern Rhodesia (now Zambia) in 1948. He founded (1958) the Zambia African National Congress, which was re-formed (1961) after being banned; Kaunda meanwhile having spent a short time in prison. When his party came to power (1964) – after the first election to be held under a system of universal adult suffrage – he became Prime Minister.
and, when independence was achieved, first president of the new republic of Zambia 1964–91. He lost power in a free election. He was Chairman of the Organisation of African Unity 1970–71, 1987–88. In December 1997 he was arrested and charged with organising a coup but by 1999 his political standing had been restored.

Kaunitz (-Rietberg), Wenzel Anton, Prince of (1711–1794). Austrian diplomat. He gained a reputation for statesmanship as a negotiator of the Treaty of Aix-la-Chapelle (1748), which brought the War of the Austrian Succession to an end. Afterwards he convinced his sovereign, *Maria Theresa, that as Prussia had become the real enemy the traditional hostility to France had become an anachronism. He was thus able, as Ambassador to Paris 1751–53 and then as State Chancellor 1753–92, to bring about the famous ‘diplomatic revolution’, as a result of which France entered (1756) the Seven Years’ War as Austria’s ally against *Friedrich II (‘the Great’). Kaunitz controlled Austria’s foreign policy for 40 years and survived *Joseph II.*

Kautsky, Karl (1854–1938). German socialist. A supporter of *Marx, he worked closely with *Engels in London (1881–83). He was best known for his violent controversies with *Lenin over the interpretation of Marxist doctrines. Eventually the opinions of Lenin held the field and after the Russian revolution Kautsky refused to join the German Communist Party. Shortly after the end of World War I he settled in Vienna, where he rejoined the Social Democrats. After *Hitler’s annexation of Austria he fled to Amsterdam.

Kay, John (1704–1778). English inventor, born near Bury, Lancashire. His trade as a clockmaker brought him into contact with the cotton-weaving industry. The most important of his inventions, the flying shuttle (patented 1733), greatly increased speed of manufacture and possible widths of finished fabrics. His invention was hated as a threat to unemployment, he was attacked and his model destroyed. For 10 years from 1747 he lived in France, where he introduced his invention. On his return to England, lawsuits to protect his patents seem to have brought about his ruin, and it is thought that he went back to France (1774) and there in 1778 received a pension. The date of his death is uncertain.

Kaye, Danny (Daniel Kaminsky) (1913–1987). American film comedian, born in New York. He began work on the variety stage but achieved his main popularity in films, of which the most successful was *The Secret Life of Walter Mitty* (1946). His early success arose from a talent for clowning, a direct contrast to the sophisticated situation comedy prevalent in Hollywood at the time. Later films include *Five Pennies* (1959) and *The Madwoman of Chaillot* (1968). He was Ambassador-at-Large for UNICEF.

Kaye-Shuttleworth, Sir James Phillips, 1st Baronet (1804–1877). English educationist. As a medical practitioner in Manchester and as an assistant poor-law commissioner in East Anglia, he became acutely aware of the educational needs of the poor. He introduced teachers into workhouses, where he developed what was to become the pupil-teacher system of teacher training. He became (1839) secretary of the government committee for education and introduced the system of school inspection with the aim, not of control, but of seeing that knowledge of improved methods was spread as widely as possible. Having failed to obtain a state grant for a teachers’ training college, he founded one on his own initiative (later called St John’s College, Battersea). On his retirement (1850) he received a baronetcy. He was a member of various social and scientific commissions and wrote extensively on educational issues.

Kean, Edmund (1789–1833). English actor. He learnt his craft as a strolling player before making his debut (1814) as Shylock at Drury Lane. His success was immediate and his fame steadily increased. He was one of the greatest tragic and emotional actors in the history of the English stage. *Coleridge remarked that to see Kean was like reading ‘Shakespeare by flashes of lightning’. Macbeth and Richard III were among his greatest parts. He collapsed while playing *Othello* and died a few weeks later. He was a heavy drinker, extravagant and overgenerous. His son, Charles Kean (1811–1868), also a leading actor, was playing Othello on this occasion. Edmund Kean’s private life was as tempestuous as his stage appearances. Jealous, passionate and violently intemperate, he shocked London by his excesses and was almost forced to retire when his involvement with an alderman’s wife led to

Kean, Edmund
a cause celebre. Edmund's wife, Ellen Kean (1805–1830), also excelled in Shakespearian roles, notably Viola and Gertrude.

Keating, Paul John (1944–). Australian Labor politician, born in Sydney. He left school early, worked in a union office and won preselection for the House of Representatives at the age of 24. He was a Federal MP 1969–96, served briefly in the Whitlam Government (1975) and, as Treasurer 1983–91 under Bob "Hawke, sought to make the Australian economy less protected, by breaking down tariffs and encouraging deregulation. After defeating Hawke in a Caucus ballot he became Prime Minister, December 1991 and promoted new national objectives, including the republican cause, and Aboriginal native title. Keating won the March 1993 election comfortably but was defeated heavily by John "Howard in March 1996.

Keaton, Buster (Joseph Francis Keaton), (1895–1966). American film actor and director, born in Piqua, Kansas. He worked mainly in silent comedy playing the small, frail protagonist against overwhelming odds, which he defeated singlehanded without the smallest change of expression. Considered one of the greatest comedians of American silent film, they include *The Navigator* (1924), *The General* (1926) and *Steamboat Bill Jr* (1927).

Keats, John (1795–1821). English poet, born in London. Son of a well-to-do livery-stable keeper, he went to Clarke's School, Enfield, then well known, where, though athletic and pugnacious, he was already marked upon for his sensitiveness and tenderness. When his father died, John, then aged 16, became the ward of a merchant named Richard Abbey, by whom he was apprenticed to an apothecary at Edmonton. Being near Enfield he was able to keep in touch with his former headmaster who lent him books ("Spenser's Faerie Queene particularly inspired him) and eventually introduced him to the circle of Leigh "Hunt. Thus he came to know "Haydon," Shelley, and others as well as Charles Brown, a retired merchant, who enjoyed helping young men of promise; with him he shared a double house in Hampstead, now a Keats museum. Meanwhile he had passed his examination at the Apothecaries Hall and had 'walked' the hospitals, but by 1817 he had recoiled from (pre anaesthesia) surgery and abandoned the profession.

His first book of poems (1817), which included the famous sonnet *On First Looking into Chapman's Homer*, created little stir, but already he was working on *Endymion* (1819), with its familiar opening line 'A thing of beauty is a joy for ever'. A great but uneven poem in four books, it provoked savage criticism and some discerning praise. In 1818 he had lost both his dearly loved brothers; George emigrated to America, Tom died of tuberculosis. To the period that immediately followed belong some of his finest poems, which appeared in *Lamia and Other Poems* (1820). This included Lamia, the odes *To a Nightingale, To Psyche, To Autumn, On Melancholy and On a Grecian Urn, The Eve of St Agnes, La Belle Dame Sans Merci*, and the unfinished *Hyperion*. To the same period belongs his love for Fanny Brawne, lively, kind and loyal, who tended him when ill but with little understanding of the poet's emotional needs. Early in 1820 with the coughing up of blood came signs of serious illness; he steadily got worse and became dependent on the charity of friends. In September he went to Italy with the artist Joseph Severn, who left a faithful record of the last days. In the following February he died in Rome. 'Here lies one whose name was writ in water' was inscribed (at his own request) on the nameless gravestone under the words 'Young English Poet'. Shelley's *Adonais* was written in lament for his friend.

Keble, John (1792–1866). English clergyman and poet. Elected to a fellowship at Oriel College, Oxford (1811), he became tutor (1817), but from 1823 spent some years in parish work. His very popular book of poems *The Christian Year* appeared in 1827, and he was professor of poetry at Oxford (1831–41). His sermon on National Apostasy (1833) was afterwards held to have initiated the Tractarian (or Oxford) Movement in the Church of England which advocated the restoration of some of the forms of worship and practices, e.g. use of incense, vestments, intoning, which had fallen into disuse since the Reformation. He wrote seven of the Tracts for the Times but, unlike John Henry *Newman, remained loyal to the Anglican Church. He left Oxford (1836) after his marriage and later translated parts of the early Christian Fathers and wrote or edited several religious works. Keble College, Oxford, was built in his memory (1870).

Keitel, Wilhelm Bodewin Johann (1882–1946). German soldier. An artillery officer during World War I, he became a devoted Nazi. In February 1938, *Hitler dismissed the high command of the Reichswehr, made himself supreme and appointed Keitel as Chief of Staff. During World War II,
Kekulé von Stradonitz, Friedrich August (1829–1896). German chemist. Professor of chemistry at Ghent 1858–67 and Bonn 1867–96, he laid the foundations of structural organic chemistry with his discovery (1858) of the quadrivalence of carbon and of the ability of carbon atoms to link with one another in chains. He was thus able to systematise the chemistry of the aliphatic compounds. He did the same for aromatic compounds when he devised (1865) the now familiar ring formula for benzene: the resolution of this problem came in a dream as he was dozing on a bus and he saw the elements dancing. He convened the First International Chemical Congress at Karlsruhe in 1860, and received the Copley Medal in 1885.

Keller, Gottfried (1819–1890). Swiss author. He went to Munich to study art but soon turned to literature, remaining in Germany, latterly in Berlin, until 1855, when he returned to Switzerland. His long, vivid and partly autobiographical novel, Der Grüne Heinrich (1854), achieved little popularity until it was revised and given a happy ending. He achieved most success with his humorous short stories of Swiss life: *Delius's opera A Village Romeo and Juliet* was based on one of them.

Kellogg, Frank Billings (1856–1937). American Republican politician. A successful corporation lawyer, he served as US Senator from Minnesota 1917–23, and was US Ambassador in Great Britain 1924–25 and Secretary of State 1925–29. He worked for the Pact of Paris (Briand-Kellogg Pact, 1928) by which 15 nations renounced war as an instrument of policy. He was awarded the Nobel Peace Prize (1929) and became an associate judge of the Permanent Court of International Justice 1930–36.

Corn flakes soon followed. Kellogg's principal rival, General Foods, was founded by C(harles) W(illiam) Post (1854–1914) who also produced Postum (a coffee substitute), Grape-Nuts and Post Toasties at Battle Creek.

Kelly, Ned (Edward) (1854?–1880). Australian bushranger. Son of a transported Irish convict, he took to the hills with his brother Dan and two other mates after several clashes with the law. He killed three policemen in a shootout (October 1878) and was captured at Glenrowan after 18 months of flamboyant outlawry. He was tried and hanged in Melbourne. A film, The Story of the Kelly Gang, was made in 1906. Kelly has become a central figure in Australian mythology, the subject of many books, at least nine films, and 27 paintings by Sidney *Nolan.

Kelvin of Largs, 1st Baron, William Thomson (1824–1907). Scottish mathematician and physicist, born in Belfast. Son of a professor of mathematics, after showing brilliance in mathematics at Cambridge he became, when only 22, professor of natural philosophy at the University of Glasgow, a position he held 1846–99. In 1848 he proposed the adoption of an absolute temperature scale (later named for him) in which absolute zero (–273°C) is 0°K (or Kelvin), and the boiling point of water (100°C) is 373°K. One of the founders of thermodynamics, he expanded *Joule's findings and enunciated the Second Law of Thermodynamics in 1851, just after *Clausius. Kelvin invented many instruments, mainly electrical, e.g. the mirror galvanometer, a magnetically shielded ship's compass, the dynamometer, tide gauges, and the quadrant electrometer. He was consultant to the company that laid the first transatlantic cable (1858). Knighted in 1866, he received the Copley Medal in 1883, served as President of the Royal Society 1890–94, became Lord Kelvin in 1892 and one of the original members of the OM in 1902. After 1880 he became increasingly rigid in his attitudes and rejected new discoveries in physics, e.g. radioactivity, atomic structure and X-rays.

Kemal Atatürk see Atatürk, (Mustafa) Kemal

Kemble, John Philip (1757–1823). English actor. Leading member of a famous English stage family, after some years in the provinces he was given the chance to come to London through the success of his sister Sarah *Siddons. Hamlet (1783) was the first of many tragic roles that he played with great distinction at Drury Lane. In keeping with his character, his approach was intellectual. In contrast with his successor Edmund *Kean, he was at his best in parts requiring dignity and nobility, Brutus and Coriolanus providing outstanding examples. He was appointed manager of Drury Lane by *Sheridan (1788), but in 1802 he bought a share in Covent Garden Theatre, which he managed and where he performed. The theatre was burnt down (1808), and the price of seats in the rebuilt theatre (1809) caused riots. He retired (1817) to live in Lausanne.

His brother Charles Kemble (1775–1854), whose grace and charm fitted him more especially for comedy, was the father of Fanny Kemble (1809–1893) who unwillingly followed the family tradition and in 1829 made a triumphant debut as Juliet at Covent Garden.

Kemp, Roger (1908–1987). Australian painter. A symbolic expressionist, his large canvasses express deep philosophical convictions about man's role in time, space and the universe. It took decades of persistence before his work was recognised.

Kempse, Margery (née Brunham) (c.1373–c.1440). English mystic and traveller, born in Lynn (now King's Lynn), Norfolk. She married John Kempe c.1393 and bore 14 children. She experienced
religious ecstasies, marked by prolonged shrieking and sobbing, and narrowly escaped charges of Lollardry. From 1413 she went on three pilgrimages, to Jerusalem (via Constance, Venice, Assisi and Rome), to Santiago de Compostela (Spain), and to Wilsnack (now in Poland), via Norway and Danzig, returning through Aachen. Illiterate, she dictated The Booke of Margery Kempe, the first English autobiography, to two clerks (c.1432–36). Extracts were printed by Wynkyn de *Worde (1501) but the complete work was not published until 1490.

Ken, Thomas (1637–1711). English prelate and hymn writer. He was appointed Bishop of Bath and Wells (1684 despite his refusal to accommodate Nell *Gwyn during *Charles II's visit to Winchester 1683). Under *James II, he was one of seven bishops who refused to sign the Declaration of Indulgence. He lost his bishopric (1691) for refusing to take an oath of allegiance to *William and *Mary. Later he was given a pension by Queen *Anne and lived at Longleat until his death. His hymns include Praise God from whom all blessings flow and Awake, my soul.

Kennedy, Edward Moore ("Ted") (1932–2009). American Democratic politician, born in Boston. Educated at Harvard (where he was suspended) and the Virginia Law School, he succeeded to John F. *Kennedy's seat as US Senator from Massachusetts 1962–2009, winning a special election at the minimum age, after a temporary appointee obligingly stepped down. His presidential prospects were damaged by an incident at Chappaquiddick Island, Mass. (July 1969) when he failed to report the death of a woman passenger after he drove off a bridge. In 1980 he challenged Jimmy *Carter for the Democratic nomination. His supporters pointed to his courageous advocacy of unpopular, liberal causes, his detractors to his playboy lifestyle and heavy drinking. He was a vehement opponent of the Iraq war and campaigner for universal health care. In 2008 he strongly endorsed Barack *Obama for the Democratic nomination for president. Awarded an honorary KBE (2009), he died a year after being diagnosed with a brain tumour.

Kennedy, John Fitzgerald (1917–1963). 35th President of the US 1961–63. Born in Brookline, Mass., son of Joseph *Kennedy, he was educated at the Choate School, (briefly) the London School of Economics, Harvard and the Stanford Business School. He interrupted his Harvard course to accompany his father on his London Embassy position and graduated in 1940 with a thesis later published as Why England Slept. In World War II he served in the US Navy and was decorated for heroic rescues of crew members after PT-109 was rammed off the Solomon Islands. This aggravated an acute spinal injury which caused him great pain and led to near-fatal operations (1954–55) and to Addison's disease. He served in the US Congress 1947–53 and as a senator from Massachusetts 1953–60. In 1953 he married Jacqueline Lee Bouvier (1929–1994) a beautiful journalist and photographer who later married Aristotle *Onassis and became a successful book editor. In 1957 he won the Pulitzer Prize for history with his (ghost-written) Profiles in Courage, accounts

Kennan, George Frost (1904–2005). American historian, diplomat and foreign policy theorist. He served as a diplomat in Moscow (1933–38, 1945–46, 1952–53) and devised the policy of 'containment' of the USSR adopted by *Truman after World War II. He was the BBC's Reith Lecturer (1957), a professor at the Institute for Advanced Study at Princeton 1956–74, Ambassador to Yugoslavia 1961–63, and won the Pulitzer Prize (1968) for his Memoirs.
of courageous senators. Oddly, his own senate record was equivocal and he failed to speak out against Joseph 
*McCarthy. After failing to secure the Democratic vice-presidential nomination in 1956, he began his campaign for the presidency in 1957. In 1960 he defeated Richard M. *Nixon in the closest race since 1916; Lyndon B. *Johnson became Vice President. He was the youngest president ever elected and the first Roman Catholic (although far from devout). As President, he pursued the liberal policies to which he had pledged himself, civil rights for blacks, aid for underdeveloped countries, and setting up the Peace Corps. However, much of his domestic ‘New Frontier’ legislation was blocked by Congress. The abortive ‘Bay of Pigs’ invasion of Cuba (April 1961) showed a major error of judgment, redeemed by his coolness in the October 1962 confrontation with *Khrushchev over proposed establishment of Soviet missile bases in Cuba. The Nuclear Test Ban Treaty (1963) indicated a thaw in the Cold War. Kennedy's role in Vietnam was ambiguous at best: he increased US troops to 17,000 but expressed doubts privately about South Vietnam’s defensibility. On 22 November 1963, on a political tour of Texas, he was shot in Dallas by Lee Harvey *Oswald and died in hospital barely 30 minutes later. The assassination caused widespread grief and shock internationally and in the US. The *Warren Commission concluded that Oswald was a lone assassin but the incident has generated continuing controversy with books and films proposing a variety of conspiracy theories. Kennedy's reputation has been subject to some revisionism, mostly relating to his private life, e.g. his alleged relationship with Marilyn *Monroe.

Kenneth I (MacAlpin) (d.858). King of the Picts and Scots 843–58. Regarded as the first Scots King, he united the kingdoms of Dalriada and the Picts.

Kenny, Elizabeth (1886–1952). Australian nurse. She developed the ‘Kenny method’ of treating poliomyelitis by stimulating the muscles. Although it was denounced by many physicians, some clinics using the treatment were established in Australia and the US.

Kent and Strathearn, Edward Augustus, Duke of (1767–1820). British prince. Born in London, fourth son of *George III, he pursued a military career, serving in Canada (1791–93, 1796 and 1799–1802). He was the first prince to visit the United States after independence (1794) and the first to use the generic term ‘Canadian’. Governor of Gibraltar 1802–05, he became a field marshal in 1805 and was the first army commander to dispense with flogging. To help secure the royal succession, he left his mistress of 20 years and in 1818 married Victoria of Saxe-Coburg (1786–1861). Their only child became Queen *Victoria. His great-grandson, George Edward Alexander Edmund, Duke of Kent (1902–1942), was the fourth son of *George V. He married (1934) Princess Marina of Greece, was appointed Governor-General of Australia in 1938, to take office in November 1939, but due to the outbreak of war remained in Britain. He was killed in an RAF air crash in Scotland.

Kent, William (1685–1748). English architect, interior decorator and landscapist, born in Yorkshire. Apprenticed to a coach-builder, he was helped by rich well-wishers to go to Rome to study painting, at which, however, he never excelled. In Rome he met (1719) Lord *Burlington, whose enthusiasm for Palladian architecture he shared. Back in England he decorated a suite for Kensington Palace (1723), turned to architecture after 1730 and designed the Horse Guards (1750–58), the Treasury (1734) and several London houses. In the country, where Holkham Hall and Stowe were among his creations, he was a pioneer in the art of treating buildings and their surroundings as a single artistic conception; temples and pavilions in the grounds for example taking their appropriate place in a composition that included the house and gardens. This art of landscaping was carried further by his pupil, ‘Capability’ *Brown.

Kenyatta, Jomo (originally Kamau) (c.1893–1978). Kenyan politician. A Kikuyu, he became a government clerk and journalist, and was away from Kenya 1929–46, living mostly in England where he studied anthropology at the London School of Economics, and twice visited the USSR. Returning home, he became President of the Kenya African Union in 1947. He was imprisoned 1953–61 for his part in the Mau Mau rebellion. Within two months of his release (1961) he was re-elected President of the Kenya African National Union (KANU). He became the first Prime Minister 1963–64 and, after proclaiming a republic, first

Kepler, Johannes (1571–1630). German astronomer, born in Weil der Stadt (now part of Stuttgart). At the University of Tübingen he first studied for the Lutheran ministry but became absorbed in scientific studies and in 1594 was appointed professor of mathematics at Graz. In 1600 he went to Prague and became assistant to Tycho Brahe. After Brahe’s death Kepler succeeded him as astronomer and mathematician (1601–30) to the emperor Rudolf II, and inherited his valuable papers and records. As he received no salary he suffered great poverty. In 1612 he obtained a mathematical appointment at Linz and in 1627 became astrologer to Wallenstein, the imperial general in the Thirty Years’ War. Kepler was an adherent of the Copernican system and is regarded as one of the founders of modern astronomy. He enunciated the three fundamental laws of planetary motion now known as Kepler’s Laws (1609): (1) each planet moves along an elliptical orbit of which the sun is the focus, (2) an imaginary line joining a planet to the sun will sweep out equal areas in equal times, (3) the square of the planet’s orbit around the sun is proportional to the cube of its mean distance. Sixty years later these laws helped Newton to formulate his universal law of gravitation. Kepler also suggested that tides are caused by the moon’s gravitational pull on large bodies of water. His Rudolphine Tables (1627) giving the positions of sun, moon and planets, remained standard for about a century. He corresponded with Galileo but they never met.

In 1611 he proposed an improved refracting telescope using two convex lenses and suggested the principle of the reflecting telescope later developed by Newton.

Kerensky, Aleksandr Feodorovich (1881–1970). Russian lawyer and politician. He made his name as a brave and eloquent opponent of the tsarist government in the Duma of 1912, and during World War I, after the revolution (March 1917), Kerensky, as a leader of the Social Revolutionary party, became Minister of Justice, then Minister of War, and in July head of the provisional government. His decision to pursue the war against Germany undermined his popularity and in November he was overthrown by the Bolsheviks. He spent a life of exile and propaganda in Paris, then in the US 1920–45, 1946–70; and Australia 1945–46. His son, Oleg Aleksandrovich Kerensky (1905–1984), civil engineer and bridge designer in England, worked on the Sydney Harbour Bridge.

Kern, Jerome David (1885–1945). American composer. He studied piano, harmony and music theory in New York and Heidelberg, and wrote about 1000 songs, including Smoke Gets in Your Eyes and The last time I saw Paris, many interpolated into other productions. He composed 41 musicals. The most successful was Showboat (1927), based on Edna Ferber’s novel, to lyrics by Oscar Hammerstein, including the song Ol’ man river. Other collaborators included P. G. Wodehouse and Guy Bolton. He was a discriminating collector of antique manuscripts and documents.

Charters, A., Kerouac. 1974

Kéroualle, Louise de see Portsmouth, Duchess of

**Kesselring, Albert** (1885–1960). German soldier and airman. Having transferred (1935) from the artillery to the Luftwaffe (air force) he commanded air fleets in the early offensives of World War II, including the Battle of Britain. He became Supreme Commander of the Axis forces in Italy (1943) and conducted a series of delaying actions with remarkable skill. In April 1945, when all was already lost, he superseded von Rundstedt as Commander-in-Chief on the western front. He received a death sentence (commuted to life imprisonment) for war crimes in 1947 but was released in 1952.

**Kettering, Charles Franklin** (1876–1968). American engineer and inventor. His inventions included the electric cash register (1908), the electric self-starter for cars (1912), quick drying lacquer and anti-knock petrol. He was Vice President and Director of Research at General Motors 1920–47. The Sloan-Kettering Institute for cancer research in New York was named for him and Alfred P. *Sloan, chairman of GM.

**Key, Francis Scott** (1779–1843). American lawyer and poet. He wrote the words of *The Star-Spangled Banner*, which became the American national anthem by an act of Congress (1931).

**Keynes, (John) Maynard, 1st Baron Keynes of Tilton** (1883–1946). British economist, born in Cambridge. Son of a professor of political economy, he was educated at Eton, studied under A.C. Pigou and Alfred Marshall at Cambridge and was influenced by the philosopher G. E. Moore. He joined the civil service in 1906 and was active in the ‘Bloomsbury set’. Fellow and lecturer at King’s College, Cambridge, from 1909, he worked during World War I at the Treasury, of which he was the principal representative at the negotiations preparatory to the Treaty of Versailles. Having shown, by his resignation, disapproval of the financial proposals, especially those relating to reparations, he predicted trenchantly, in *The Economic Consequences of the Peace* (1919), the results of imposing obligations that a defeated Germany would be unable to meet. The book made Keynes the centre of immediate controversy and ensured his fame when his worst fears were realised. He was equally critical of Britain’s return to the gold standard (1925) and predicted the rapid increase in unemployment that would arise from its deflationary effects. The direction in which his mind was working was shown by the proposals he made for dealing with unemployment in the 1929 election manifesto of the Liberal Party (to which he belonged), a large program of public works being among the chief recommendations. Keynes’s broad approach was adopted in *Roosevelt’s ‘New Deal’ after 1934. His matured ideas for regulating the economy as well as his new conclusions on monetary theory were elaborated with great skill and persuasive power in *The General Theory of Employment, Interest, and Money* (1936). The general acceptance of its main tenets in many countries after World War II constituted what is known as the Keynesian revolution. It marked the end of the classical economists’ belief in the self-regulating economy; aggregate demand was to be adjusted to available supply, consciously using such financial techniques as enlarging or reducing the credit base or varying the rates of interest. Government expenditure, too, should be adjusted as necessary so as either to stimulate or to discourage public demand. Keynes himself modified some of his prescriptions in later years. It is clear from the ‘stop-go’ tactics enforced upon governments in Britain and elsewhere that the full answers have not been found, but the great overall postwar rise in prosperity in the developed countries and the absence of catastrophic unemployment is largely due to Keynes.

He was one of the few theoretical economists who had the opportunity or skill to bring his ideas into practice. In World War II he was adviser to the Chancellor of the Exchequer, having become a member of the Bank of England Board (1941) and a peer (1942). The years from 1943 on were mainly spent on financial missions to America. He was the chief British delegate at the Bretton Woods Conference (1944), and it was his plan, welded with similar American proposals, that became the basis of discussion and agreement there on the foundation of the International Monetary Fund and the World Bank. Keynes was a lover and patron of several arts, built and endowed the Cambridge Arts Theatre, chaired the Council for Encouragement of Music and the Arts (CEMA) 1942–45 and was the first Chairman of the Arts Council of Great Britain 1945–46. Despite his homosexuality, he married (1925) the Russian ballerina, Lydia Lopokova (1892–1988). He died just before the announcement that he had been awarded the OM.

Khachaturian, Aram Ilyich (1903–1978). Russian composer, born in Tiflis, Georgia. Of poor parentage, he studied at the Moscow Conservatoire (1923–34). His compositions were influenced by the Armenian, Georgian and other folk tunes that he collected. He wrote three virtuoso concertos (for piano, cello and violin) in addition to three symphonies, the popular Masquerade, a number of songs (some of them for the Red Army), and incidental music for films and plays. He was awarded the Order of Lenin (1939) and composed the national anthem for Soviet Armenia (1945).

Khatami, Muhammad (1943– ). Iranian cleric, theologian and politician. Formerly Minister for Culture 1982–92, regarded as a moderate, he was elected as President in 1997 and 2001 (serving 1997–2005) after a high turnout of women voters.

Khomeini, Ruhollah (1900–1989). Iranian ayatollah and political leader. A Shi’ite, he taught theology at Qom, opposed attempts to westernise and secularise Iran by Shah *Mohammed Reza Pahlevi and was exiled in Turkey, Iraq and France 1964–79. In February 1979 he returned to Iran, the Shah’s government collapsed and Khomeini nominated a new ministry. He became virtual head of state with the support of his Islamic Revolution Party. Under the new constitution, accepted by plebiscite, Iran returned to the shariat, strict observance of Islamic principles, traditions and punishments including stoning and amputation. Iran instigated international terrorist acts, held US embassy staff hostage for 444 days (1979–80), effectively destroying *Carter’s presidency, and declared war on Iraq. Khomeini sentenced the novelist Salman *Rushdie to death (fatwah) for his novel Satanic Verses which satirised the ayatollah. His funeral was marked by extraordinary outbursts of grief and violence.

Khorana, Har Gobind (1922– ). Indian-American organic chemist. Educated at the Punjab and Liverpool Universities, he worked in Britain, Switzerland, Canada and the US and held chairs at Wisconsin, Cornell and MIT. He shared the 1968 Nobel Prize for Medicine for the interpretation of the genetic code and its function in protein synthesis.

Khrushchev, Nikita Sergeyevich (1894–1971). Russian politician, born in Kalinkova, Kursk Province. The son of a miner and shepherd, he first worked on a farm, then became a plumber and a locksmith. He joined the Communist Party in 1918 and after training began his career as party organiser at the age of 35. He was a member of the Central Committee of the party (1934), Secretary of the Moscow District Party Committee 1934–38, General Secretary of the Ukrainian 1938–46, 1947–53, and held the rank of Lieutenant General when the Ukraine was occupied by Germany. As Premier of the Ukraine 1944–47 he purged the anti-Stalinists there after the war. Elected to the Politburo in 1939, he was also secretary of the Moscow Province Communist Party 1949–53. On *Stalin’s death he acted as a liaison between the ‘collective leadership’ (*Malenkov, *Molotov, *Beria) and the party machine. As First Secretary of the Communist Party March 1953–October 1964 he steadily eliminated the top echelon of leadership. At the 20th Congress of the CPSU (February 1956), he denounced Stalin for his ‘capricious and despotic’ rule and for promoting the ‘cult of personality’. With the support of *Zhukov in June 1957 he defeated an attempted coup by the ‘anti-party group’ (*Malenkov, *Kaganovich, *Molotov). He replaced his nominee N. A. *Bulganin as Premier of the USSR 1958–64, visiting the US in 1959, India and China in 1960. Forced out of office in October 1964, he passed into obscurity. A volume of his autobiography, Khrushchev Remembers, was published in the West in 1970. He denied its authorship, but the materials used were authentic.

Khufu (or Cheops, the Greek form) (d.c.2700 BCE). Egyptian king. The second ruler of the IVth dynasty, he succeeded his father Snefru and built the Great Pyramid of Cheops (or Khufu), at Giza, near Cairo. He was succeeded by his sons Djedefre and Khafre.

Kidd, William (1645–1701). Scottish privateer. After successful operations against the French, he was provided (1696) by London merchants with a ship of 30 guns to destroy pirates in the Indian Ocean. In 1698 rumours began to trickle through that Kidd had turned pirate himself. Two years later he returned to American waters but when he landed at Boston, which had been his home for some years, he was arrested, despite a half-promise of a safe conduct. He was sent to London, tried, condemned and hanged. Hoards of treasure said to have been his were found in Long Island and elsewhere, but the exploits that have made him notorious as a pirate chief are mostly legendary and he may even have been innocent, as he claimed to the end.

Kido Koin (1834–1877) Japanese samurai. From Choshu, he was a prime mover in the Meiji Restoration (*Mutshoito) and drew up the Charter Oath of April 1868. He travelled abroad 1871–73, opposed an aggressive foreign policy and was the first minister of Education 1873–75.
Kiefel, Susan Mary (1954– ). Australian jurist, born in Cairns. She left school at 15, became a secretary, receptionist, then a legal clerk, studying at night and was admitted to the bar in 1975. She was a justice of the Supreme Court of Queensland 1993–94, of the Federal Court 1994–2007, of the High Court 2007–17 and became the first woman Chief Justice of Australia 2017–.

Kiefer, Anselm (1945– ). German painter and sculptor. Originally a photographer, influenced by Joseph *Beuys, and the historic impact of the Holocaust, living in Paris, he produced dark, powerful works, often using shattered glass, lead sheets, broken concrete and metal frames. He was widely exhibited and critically praised. He also painted works inspired by *Wagner's *Ring of the Nibelungs.

Kierkegaard, Soren Aabye (1813–1855). Danish philosopher and theologian. Though influenced strongly by the philosophy of *Hegel, he then reacted against the Hegelian notion that through the ultimate reality, the Absolute, nature exists rationally and systematically. In his revolt against reason he stressed that the great problems of men, which he identified chiefly as dread (Angst) and anxiety, could only be resolved by an individual search for God, whom he saw as infinitely different in quality from man. He rejected, therefore, all conventional, communal and ethical religion and indeed the Christian dogma of a historical incarnation. His major works include *Either/Or (1843), *Concluding *Unscientific Postscript (1846) and his *Journals. His theme that *truth is subjectivity and his anti-Hegelian *existential dialectic, at first scarcely known outside Denmark, profoundly influenced 20th-century thought and led directly to existentialism.

Kildare, Earls of. Irish earldom, held (from 1316) by the head of the FitzGerald family, Gerald FitzGerald (Gearóid Óg in Irish), 8th Earl (known as 'The Great') (d.1513), took advantage of English preoccupation with the Wars of the Roses to build, by marriage alliances and conquest, an all but independent domain. Though he supported the pretender Lambert *Simnel he managed to effect a reconciliation with *Henry VII. His son Gerald FitzGerald, 9th Earl (1487–1534), for some time maintained much of his power in face of *Henry VIII's centralising policy, until forced to obey a summons to London where he was imprisoned.

Kilvert, Francis (1840–1879). English cleric and diarist. His *Diary was discovered in 1937 and edited by William Plomer in three volumes, 1938–40. It describes his life and environment in graphic and sometimes humorous detail and is an important document of social history.

Kim II Sung (1912–1994). Korean Communist politician and soldier. Son of a school teacher, he probably studied in China. He founded the Fatherland Restoration Association (1936), led guerrilla forces against Japan in Manchuria and may have served as a colonel at Stalingrad. After Korea's partitioning in 1945, Russian troops occupied the North, and Kim, Secretary-General of the Korean Workers' Party, became chairman of the provisional government. On the Russian withdrawal, the Democratic Peoples' Republic of Korea was founded and Kim was Premier 1948–72 and President 1972–94. During the Korean war (1950–53) he commanded the armed forces of the North and became a marshal. The DPRK attempted an ambitious industrialisation program after the war and Kim's philosophy of *Juche' had the force of law. His son Kim Jong il (1942–2011) was Supreme Commander of the Korean Peoples' Army 1991–2011 but did not take his father's title as President, although confirmed as Secretary-General of the Korean Workers' Party in 1998. He was succeeded by Kim Jong-un (1983/4– ), the third generation in the family to take supreme power, hailed as a master tactician, military leader and golfer. He held the titles of *Supreme Leader 2011–, *Supreme Commander of the Armed Forces 2011– and First Secretary of the Korean Workers' Party 2012–.

Dictionary of World Biography
King, Cecil see Harmsworth

King, Ernest Joseph (1878–1956). American fleet admiral. After serving in the Spanish American War and World War I, he became Vice Admiral commanding the aircraft battle force 1938–39. This experience was of great value for the air sea battles of World War II, when he was Commander-in-Chief of the Atlantic Fleet 1941, Commander-in-Chief of the US Navy and Chief of Naval Operations 1942–45. His mastery of strategy and supply was a major factor in Japan's defeat.

King, Martin Luther, Jr (1929–1968). American clergyman and reformer, born in Atlanta, Georgia. A Baptist clergyman, he became the most successful and powerful of American black leaders in campaigning for civil rights. He adopted *Gandhi's tactics of 'passive resistance', organised a boycott of segregated buses in Montgomery, Alabama in 1956 and won national recognition. Imprisoned briefly 12 times and constantly harassed by the FBI, he led black moderates and opposed violence and the 'Black Muslim' movement. He organised vast civil rights rallies and his famous 'I have a dream' speech in Washington (August 1963) is of enduring significance. He won the 1964 Nobel Peace Prize and was assassinated in Memphis, Tennessee on 4 April 1968 by James Earl Ray. His work was continued by his widow, Coretta Scott King (née Scott) (1927–2006), a singer, lecturer and writer.

King, Philip Gidley (1758–1808). English officer and administrator, born in Launceston, Cornwall. He joined the Royal Navy as a servant in 1771. Responsible for settling Norfolk Island as a convict settlement, he was lieutenant-governor there 1788–90. 1791–96. Supported by *Phillip and * Banks, he was appointed Governor of New South Wales 1800–06. Hot tempered but an able administrator, he clashed with the New South Wales Corps, worked diligently to create an economic base for the colony, promoting flax, wool, whaling, sealing and coal mining and encouraged the exploration of Port Phillip. He retreated into self-pity (not without reason), became ill and died, barely 50.

King, Sir (Frederick) Truby (1858–1938). New Zealand physician. He founded many 'mothercraft' and infant welfare clinics and helped to make New Zealand's infant mortality rate the lowest in the world.

King, William Lyon Mackenzie (1874–1950). Canadian Liberal politician. Grandson of William Lyon *Mackenzie, he gained a PhD in industrial sociology at Harvard, was Deputy Minister of Labour 1900–08 and a member of the Canadian House of Commons 1908–11 and 1919–48. On Sir Wilfred * Laurier's death in 1919, King (then out of parliament) was elected Liberal Party leader. Prime Minister of Canada for a record period, over three terms 1921–26, 1926–30 and 1935–48 and also Foreign Minister 1926–30 and 1935–46, he secured a degree of national unity by persuading French Canadians that the Liberal party would protect their interests. However, his free trade policies led to the increasing dominance of the Canadian economy by US commercial interests, creating many social and political problems. His view that the relationship between each dominion and Britain should be completely equal was embodied in the Statute of Westminster (1931), based on the 1926 Westminster Conference where he had played a leading role. Externally he insisted on Canada's complete freedom of action and shunned all alliances, nevertheless he brought Canada into World War II on the side of Britain. On his retirement (1948), Louis *St Laurent became Prime Minister and Liberal Leader, and King received the OM. He was unmarried and an introverted mystic.

Kinglake, Alexander William (1808–1891). English historian. He wrote an account of his travels in the east in *Eothen (1844). In 1854 he followed the British army to the Crimea and wrote *History of the War in the Crimea (8 volumes, 1863–87), a brilliant and detailed narrative based upon the papers of the Commander-in-Chief, Lord *Raglan. He was a Liberal MP 1857–68.

Kingsford-Smith, Sir Charles Edward (1897–1935). Australian aviator, born in Brisbane. Originally an engineering apprentice, he was a pilot in World War I, winning an MC in 1917. In the three-engined Fokker monoplane *Southern Cross he flew (with Charles *Ulm) from Los Angeles to Brisbane in June (1928), from Sydney to London (1929) and from Ireland to New York (1930). By 1931 he was the first airman to have flown around the world. He was lost off the coast of Burma, trying to break the England–Australia record.

Kingsley, Charles (1819–1875). English clergyman and author. One of the founders of the Christian Socialist movement, he became rector (1844) of Eversley, Hampshire, a living he held for the rest of his life. His social doctrines are most clearly expressed in his novels *Yeast (1850), *Alton Locke (1851) and *Two Years Ago (1857). His historical romances include *Westward Ho! (1855), *Hypatia (1853) and *Hereward the Wake (1866) and he also wrote the children's books *The Heroes (1856, stories from Greek mythology) and *The Water Babies (1863). He was professor of modern history at Cambridge 1860–69. His brother, Henry Kingsley (1830–1876), also a novelist, is best remembered for *Ravenshoe (1861). His niece Mary Kingsley (1862–1900), wrote with unusual insight about native problems in West Africa, where she travelled extensively.

Kinsey, Alfred C(charles) (1894–1956). American zoologist and social scientist. The publication of his Sexual Behaviour of the Human Male (1948) and Sexual Behaviour of the Human Female (1953) roused considerable controversy, caused partly by the nature of the theme but more particularly because his conclusions were reached mainly from answers (not necessarily truthful) to standard questionnaires.

Kinski, Klaus (Nikolaus Gunther Nakszniski) (1926–1991). Polish-German film actor, born in Gdansk. He began to act as a prisoner of war, appeared in 200 German films, then attracted international attention with his intense, often fanatical, performances in Aguirre, Wrath of God (1973), Wayezck (1979), Nosferatu (1979), Fitzcarraldo (1982) and The Little Drummer Girl (1984). His daughter was the actor Nastassja Kinski (Werner *Herzog).

Kipling, (Joseph) Rudyard (1865–1936). English writer, born in Bombay. He was the son of John Lockwood Kipling (1837–1911), author-artist of Beast and Man in India (1892). Educated in England, he returned to India to become (1882) assistant editor of the Civil and Military Gazette, Lahore. He first achieved fame with Departmental Ditties (1886) and two books of short stories (1888), Soldiers Three and Plain Tales from the Hills. He returned to England (1889) and published a novel, The Light that Failed (1890). He visited South Africa, New Zealand and Australia in 1891. Collaboration with the American Wolcot Balestier on The Naulahka (1892) led to his marriage to Balestier’s sister, Caroline. After living in America for a time the Kiplings returned to England in 1899. The intervening years had produced Barrack Room Ballads (1892), another book of poems, including the chilling Danny Deever, more short stories and a novel Captains Courageous (1897). In the two Jungle Books (1894–95) his skill as a writer for children was revealed, to be shown again in Just So Stories (1902), Puck of Pook’s Hill (1906) and Rewards and Fairies (1910). Stalky and Co. (1899) recalls his schooldays in the form of a novel, but even more popular is Kim (1901), the story of the vagabond boy who grows to adventurous manhood in India, which, in all its variety and detail, magnificence and squalor, he vividly and lovingly recalls. He settled in Sussex after the Boer War and concentrated on poems and short stories, some of the best of which appeared in e.g. Actions and Reactions (1909). He was the first English winner of the Nobel Prize for Literature (1907) but declined the OM. Kipling’s belief in the imperial mission of his countrymen to protect, serve and administer the subject multitudes with devotion, altruism and justice gave him a not fully deserved reputation for jingoism. His attitude towards the British Empire was to stress, not the rewards it offered, but the duties it imposed:

The tumult and the shouting dies:
The Captains and the Kings depart:
Still stands Thine ancient sacrifice,
An humble and a contrite heart.

The centenary of his birth saw a revival of interest in Kipling and a more favourable assessment of his work.

Kirchhoff, Gustav Robert (1824–1887). German physicist, born and educated at Königsberg. He became professor of physics at Breslau (1850), Heidelberg (1854) and Berlin (1857). Working with *Bunsen, he developed the spectroscope and the technique of spectrum analysis by which they discovered caesium (1860) and rubidium (1861). Kirchhoff enunciated two basic laws (Kirchhoff’s Laws of Electricity) that are used to calculate current and voltage in complex electrical circuits, and a law of radiation (Kirchhoff’s Law) that relates emissive and absorptive power. He was the first to explain the Fraunhofer lines in the solar spectrum (1859). Elected FRS, he won the Rumford Medal (1862).

Kirchner, Ernst Ludwig (1880–1938). German Expressionist painter. He was a leading member of Die Brücke (The Bridge) group, based in Dresden, then in Berlin. His works were intense, violent and reflect a deep interest in primitive art.

Kirchner Ostoić, Néstor Carlos (1950–2010). Argentinian politician, born in Rio Gallegos, Patagonia. A lawyer, he became active in the Justicialist (formerly Peronista) Party, and was Governor of Santa Cruz 1991–2003 and President of Argentina

Kitasato Shibasaburo (1852–1931). Japanese bacteriologist. A pupil of *Koch, he was noted for his independent discoveries of the bacilli of anthrax (1889), diphtheria (1890) and bubonic plague (1894).

Kitchener of Khartoum, 1st Earl, Herbert Horatio Kitchener (1850–1916). British Field Marshal, born in County Kerry. While still a cadet at the Royal Military Academy, he served with the French army in the Franco-Prussian War. As an engineer officer, with a knowledge of Arabic and Hebrew, he proved his ability in Palestine survey work, in Cyprus, and (from 1882) in Egypt. He was deeply involved in the events leading up to and following the death of *Gordon and as a result of the skill and thoroughness with which he performed all the tasks assigned him, he was made (1890) Sirdar (i.e. Egyptian Commander-in-Chief). He spent the following years in training men and building up resources to avenge Gordon and restore British rule. He won the decisive Battle of Omdurman (1898), was created a baron and made Governor-General of the Sudan, in which office he planned the modern city of Khartoum. In the Boer War he was appointed (1899) Chief of Staff to Lord Roberts, succeeding him as Commander-in-Chief 1900–02. Following the Spanish model in Cuba, he established concentration camps for civilians in which 20,000 people died, burned farms and applied collective punishments. However, he brought the war to an end, received a viscountcy, £50,000 and became a foundation member of the Order of Merit (1902). His tenure of the post of Commander-in-Chief in India 1902–09 was famous for his quarrel with the viceroy, Lord *Curzon, concerning spheres of authority, but it was also notable for many reforms, e.g. hygiene, sanitation. Kitchener was Commander-in-Chief in the Mediterranean 1910–11, then returned to Egypt as British Consul-General and Minister Plenipotentiary 1911–14. On the outbreak of war he became Secretary of State for War 1914–16. His administration has been criticised as rigid and overcentralised. Nevertheless, his achievement was prodigious and his judgment sound. (Alone of the generals he predicted a long war of attrition.) He dismissed Gallipoli as a tragic irrelevance. As a result of his immense prestige, 3,000,000 men (*Kitchener’s Army*) responded voluntarily to his call to arms, and some 70 infantry divisions were formed. In June 1916 Kitchener was drowned off Orkney when HMS Hampshire, taking him to Russia on an urgent mission, was sunk by a mine. A national memorial fund of over £500,000 was raised for higher education for boys, and a medical school at Khartoum.

Kissinger, Henry Alfred (1923– ). American academic and official, born in Fuerth, Germany. He emigrated to the US in 1938, studied at Harvard and served in the US Army. He established a reputation as an expert on international relations and defence. In 1969 he was appointed President *Nixon’s assistant responsible for national security. US Secretary of State 1973–77, he negotiated the ceasefire between Egypt and Israel. Under the Constitution, he received the office of war he became Secretary of State for War 1914–16. His administration has been criticised as rigid and overcentralised. Nevertheless, his achievement was prodigious and his judgment sound. (Alone of the generals he predicted a long war of attrition.) He dismissed Gallipoli as a tragic irrelevance. As a result of his immense prestige, 3,000,000 men (*Kitchener’s Army*) responded voluntarily to his call to arms, and some 70 infantry divisions were formed. In June 1916 Kitchener was drowned off Orkney when HMS Hampshire, taking him to Russia on an urgent mission, was sunk by a mine. A national memorial fund of over £500,000 was raised for higher education for boys, and a medical school at Khartoum.

Kirov, Sergey Mironovich (1888–1934). Russian Communist politician. He was a close associate of *Stalin and, from 1926, Secretary of the Communist Party in the Leningrad area and a Politburo member 1930–34. His assassination was followed by a witch hunt and the judicial execution of over 100 suspected opponents of Stalin’s regime.

Kishi Nobusuke (1896–1987). Japanese politician. An elder brother of *Sato Eisaku and nephew of Matsuoko Yousaka, he was adopted by an uncle’s family, became a civil servant and directed Japanese economic investment in Manchuria (Manchukuo) 1936–39. He served under General *Tojo as a Vice Minister and Minister of State 1943–44, was held as a war criminal 1945–48 but never tried. A Member of the Diet 1942–45, 1953–79, he was Foreign Minister 1956–57 and Prime Minister 1957–60, seeking close economic ties with the US and the right to re-arm. He remained a powerful conservative force in the Liberal Democratic Party. *Abe Shinzō was his grandson.

Kitaj, R. B. (Ronald Brooks) (1932–2007). American painter and graphic artist. He was a merchant seaman and soldier who studied in London and lived in England, evolving a striking figurative art, working
Cross-eyed, huge, moustachioed and unmarried, Kitchener was an enigmatic figure, a master of colonial warfare but with vivid insights into the nature of World War I.

Kléber, Jean Baptiste (1753–1800). French marshal, born in Alsace. Having fought with distinction in the French Revolutionary campaigns, he went (1798) to Egypt as a divisional commander under *Napoléon. He was left in command in 1799 when Napoléon returned to Paris. On the refusal by the higher British authorities to ratify an agreement with the local commander, Sidney Smith, for the evacuation of his troops, he reopened hostilities, defeated the Turks at Heliopolis but was assassinated by a fanatic in Cairo shortly afterwards.

Klee, Paul (1879–1940). German-Swiss painter, born in Berne. Undecided at first whether to pursue art or music, he eventually went to Munich to study and joined the Blaue Reiter group (*Kandinsky). His eyes were opened to the use of colour during a visit to Tunis (1914), and henceforth his colour harmonies and contrasts were as much a feature of his work as his brilliant draughtsmanship. In 1920 he joined the Bauhaus in Weimar, but soon after *Hitler came to power he was dismissed (1933) from an appointment at the Düsseldorf Academy, on the grounds that his art or music, he eventually went to Munich to study

Kleiber, Erich (1890–1956). Austrian conductor, born in Vienna. He worked in Germany until 1934, performing the work of *Bartók, *Berg, *Mahler and *Schoenberg and directed the Teatro Colón opera in Buenos Aires 1939–43. He made superb recordings of *Mozart and *Beethoven. His son Carlos Kleiber (1930–2004) was also a notable operatic and symphonic conductor, concentrating on a very small repertoire.

Kleist, (Bernd) Heinrich (Wilhelm) von (1777–1811). German writer. He followed family tradition by serving in the Prussian army (1792–99), then became absorbed in mathematics, philosophy, travel and writing. Much of his writing was inspired by a misinterpretation of *Kant, whom he believed to say that human beings are marionettes helplessly and hopelessly in the toils of inscrutable powers. He wrote the verse tragedy Penthesilea (1808). His masterpiece, the drama Prinz Friedrich von Homburg (1811) is, however, in lighter vein. As well as novels and plays he also wrote poems and short stories, e.g. Michael Kohlhaas (1808), of originality and and power. He shot an incurably ill woman, Henriette Vogel, and himself on the banks of the Wannsee. *Goethe disliked Kleist but he was a major influence on *Rilke.

Klemperer, Otto (1885–1973). German conductor. A protégé of Gustav *Mahler, he was an early champion of modern composers. He held various posts, mainly as operatic conductor, in Germany and then directed the Los Angeles Philharmonic Orchestra 1933–39. After years of illness, he conducted the Budapest Opera 1947–50 and from 1954 conducted regularly in England, where he was known chiefly as an interpreter of the German classics. In 1955 he was appointed Principal Conductor of the Philharmonia Orchestra, and after its disbanding in 1964 became President of the New Philharmonia Orchestra and Chorus.

Klimt, Gustav (1862–1918). Austrian painter. A co-founder of the Vienna Sezessionist school (1897), he was a leader in the Art Nouveau (Jugendstil) movement. His sumptuous and erotic style concealed a deep pessimism. He died in the influenza epidemic. His portrait of Adele Bloch-Bauer (1907) sold for $US135 million in 2006, setting the world's highest auction price for any art work.

Kline, Franz (1910–1962) American painter. A leading abstract expressionist in New York, associated with Jackson *Pollock and Willem *de Kooning, his works are characterised by huge dynamic calligraphy in black paint on a white background, although he later experimented with colour.

Klopstock, Friedrich Gottlieb (1724–1803). German poet. While still at school he read a translation of Milton's Paradise Lost and determined to create a German epic on an even more magnificent theme. The Messiah, resulting from this decision, took over 20 years to write (1746–73). It is an epic on the grand scale, written in hexameters, in 20 books, and its admirers and detractors have waged literary war over the years. For most, Klopstock is more accessible through his shorter poems. By using the lyric as a means of self-revelation and by his adaptation of the
classical metres based on ‘quantity’ to a language like German based on stress, he influenced many later writers, even “Goethe himself.”

Kluck, Alexander von (1846–1934). German soldier. As Commander of the German 1st Army at the outbreak of World War I he directed the drive through Belgium and France. In September 1914, Joffre counter-attacked at the Marne and gained a crucial victory.

Kneller, Sir Godfrey, 1st Baronet (1646–1723). English painter, born in Germany. Already well known as a portraitist on the Continent before he settled in England, he was appointed (1678) principal painter by *Charles II, and reached the height of his fame as a court painter under *William and *Mary and *Queen *Anne. He received a knighthood in 1692 and in 1715 a baronetcy from *George I. His portraits, which provide a magnificent series of illustrations for the book or fame, are of greater social than artistic interest, but his best pictures achieve their effect not only by assured technique and dignity of treatment but also by colour subtlety and psychological insight. His most famous pictures include the great equestrian portrait of William III and striking likenesses of *Louis XIV and *Peter the Great. Other well known portraits are the Beauties at Hampton Court, the Kit Cat club series in the National Portrait Gallery and the Admirals at Greenwich. His brother, John Zacharias Kneller (1644–1702), was also a painter. He, too, settled in England and painted portraits and architectural scenes.

Knigwarreye, Emily Kame (1910–1996). Australian painter, born in Alhalkere, Northern Territory. An Anmatyerre elder, she began to work with batik in 1978, but was nearly 80 before she began to paint, producing almost 3000 works over eight years, acrylics on canvas. Supported by Janet and Robert Holmes à Court, her works soon gained national recognition. Her Big Yam Dreaming (1995), 8m x 3m, is in the National Gallery of Victoria. She was still painting weeks before she died.

Knox, John (1513–1572). Scottish religious reformer, born in East Lothian. Though from 1530 he had been a Roman Catholic priest, he became a close friend of the reformer George Wishart who was burned at the stake for heresy (1546). Knox then joined the reforming party, but was captured (1548) by French troops (serving the cause of Mary of Guise, Scotland’s queen dowager) in St Andrew’s Castle, the refuge of many reformers fearing reprisals of the murder of Cardinal *Beaton. Knox was taken to France and toiled as a galley-slug, until released at the request of England’s *Edward VI, who made him a royal chaplain. On *Mary I’s accession he fled to Geneva where he worked for three years with *Calvin. He briefly returned to Scotland (1555–56), a visit during which the oppression suffered by his co-religionists at the hands of Mary of Guise, acting as regent for her daughter *Mary Queen of Scots, inspired his famous First Blast of the Trumpet Against the Monstrous Regiment (i.e. ‘regimen’ or rule) of Women (1558), which offended Queen *Elizabeth, at whom it was not aimed. Knox returned to Scotland again (1559) after the lords of the congregation (the leading lay reformers) had established an organised ‘kirk’ with churches in Dundee and elsewhere and ministers assisted by elders. Despite the regent’s retaliatory ban, Knox rallied the reformers by his preaching, and secured acceptance of the doctrine that ‘the regent’s commands must be disobeyed if contrary to God’s’. With civil war imminent, the English government intervened by sending troops to occupy Edinburgh. This marked the triumph of the Protestant cause. The Scottish Parliament abolished papal authority, voted for reform, and later approved the Confessions of Faith prepared by Knox and five others. The General Assembly of the Church first met in 1560 and adopted the Book of Common Order (sometimes called Knox’ Liturgy), thus ensuring that the Church of Scotland, based on *Calvin’s teaching, should develop as a Presbyterian community. When Mary Queen of Scots returned (1561) from France with the idea of restoring Catholicism, she tried in vain to dazzle and charm Knox, and the murder of *Darnley, her flight with *Bothwell, and finally her imprisonment in England (from 1567) soon removed her from the scene. Knox, who had become minister of St Giles, Edinburgh’s largest church, remained in the forefront of events except in the year 1566–67 when he withdrew into seclusion to complete his History of the Reformation in Scotland. That the Church of Scotland took the form it did was due almost entirely to the work of Knox. From his two marriages Knox had two sons and three daughters, but his many public activities left little time for family life.

Knox, Ronald Arbuthnot (1888–1957). English scholar and priest. Son of an Anglican bishop, he became a chaplain at Oxford University, where he worked all his life. In 1917 he became a Roman Catholic and entered the priesthood. From 1939 he
devoted himself to the great task of retranslating the Vulgate (which finally appeared complete in 1954). He also engaged in theological controversy and wrote essays and novels. He was one of the wittiest men of his generation.

His brother, Edmund Valpy Knox (1881–1971), known by his nom de plume 'Evoe', was a regular contributor to Punch, and editor 1933–49.

Knudsen, Oliver (1952– ). English composer and conductor. His works included three symphonies, an opera, songs, settings of Whitman and Rilke, and piano pieces.

Koch, Robert (1843–1910). German bacteriologist, born near Hanover. Having qualified at Göttingen and served as a surgeon in the Franco-Prussian War, he became a medical officer at Wöllstein, where he devoted himself to the microscopic study of bacteria. He isolated (1876) the anthrax bacillus and perfected the method of inoculation against it; two years later his studies of wound infection appeared. In 1880 he moved to Berlin where he was successively a member of the Imperial Health Office, a professor of hygiene at the university and Director of the Institute for Infectious Diseases. He discovered (1882) the bacillus causing tuberculous; the discovery of the one causing cholera followed his appointment (1883) to preside over a commission to study this disease in Egypt and India. During the decade 1897–1906 visits to New Guinea, South Africa, India and Uganda enabled him to do valuable work on malaria, rinderpest, bubonic plague and trypanosomiasis (sleeping sickness). He received the Nobel Prize for Medicine (1905).

Köchel, Ludwig (Alois Ferdinand) (1800–1877). Austrian bibliographer. An amateur botanist and mineralogist, in 1862 he published a chronological-thematic catalogue of Mozart’s compositions. His name is immortalised by the K. (Köchel) number.

Kodály, Zoltán (1882–1967). Hungarian and teacher, born in Kecsemét. He studied under Hans Koessler at the Budapest Conservatoire, where he later became professor. With Bartók he started to collect and study Hungarian folk music. His best known works are the Cello Sonata (1915), the choral works Psalmus Hungaricus (1923) and Te Deum (1936), the comic opera Hary Janos (1926), Dances of Marossék (1930), Dances of Galanta (1933) and Concerto for Orchestra (1940). He was an outstanding teacher and textbook writer: ‘Kodály method’ encouraged basic musical literacy in Hungary and was adopted abroad.

Eosze, L., Kodály, his Life and Work. 1962.

Koenig, Pierre Joseph (1898–1970). French soldier. He worked closely with de Gaulle, held off Rommel’s Afrika Korps at Bir Hakeim (1942), led French forces at the Normandy invasion (1944), was military Governor in Germany 1945–49 and Minister for Defence 1954–55. He was posthumously created marshal in 1984.

Koestler, Arthur (1905–1983). British Hungarian author, born in Budapest. After dropping out of science, he went to Palestine in 1926 as a Zionist activist, working on a collective farm in Palestine, then became a reporter for a German newspaper and travelled in the Soviet Union. Later while reporting the Spanish Civil War for an English newspaper he was sentenced to death as a spy by Franco’s forces, but was released and went to France, here he was arrested and imprisoned after the fall of France but escaped to England. In 1938 he left the Communist Party – his disillusionment is described in The God that Failed (1950). Koestler first wrote in Hungarian but for his later writing mastered German, French and English. His first novel in England was Arrival and Departure (1943). Darkness at Noon (1941), regarded as his masterpiece, is a great political novel. He wrote works, e.g. The Yogi and the Commissar (1945) and the autobiographical Arrow in the Blue (1952). The Sleepwalkers (1959), The Act of Creation (1964) and The Roots of Coincidence (1972), on scientific themes, were controversial. A passionate opponent of capital punishment, he wrote Reflections on Hanging (1956) and Hanged by the Neck (with C. H. Rolph, 1961). Koestler, an advocate of euthanasia, committed suicide with his wife Cynthia Jefferies after long suffering from Parkinson’s disease.

Kohl, Helmut Michael (1930– ). German politician. Educated at Frankfurt and Heidelberg universities, he was a member of the Rhineland Palatinate legislature 1959–76 and Minister-President 1969–76. He became Chairman of the National Christian Democratic Union in 1976 and defeated Helmut Schmidt to become Chancellor 1982–98. He played a central role in the reunification of Germany when the Federal and Democratic Republics combined in 1990. In November 1996 he became the longest serving German Chancellor since Bismarck. Defeated in September 1998, in December 1999 his party was investigated for taking illegal donations. Kohl suffered from a long period of ill health after 2008.

Kohlrusch, Friedrich Wilhelm (1840–1910). German physicist. He was best known for the accurate measuring methods he introduced into many branches of physics and for his pioneer investigations into the conductivity of electrolytes. His improved
techniques and his statement of the principle now known as Kohlrausch's Law put the measurement of conductivity on a sound quantitative basis for the first time.

Koivisto, Mauno Henrik (1923– ). Finnish politician. A carpenter at a dockyard who gained a doctorate in economics, he led the Social Democrats and was Prime Minister 1968–70 and 1979–82, succeeding U. K. *Kekkonen as President of Finland 1982–94.

Kokoshka, Oskar (1886–1980). Austrian painter. He developed a very personal and imaginative Expressionist style: vivid colouring is combined with a sense of movement in the town scenes, landscapes and portraits for which, apart from his stage settings, he was best known. He was the lover of Alma *Mahler 1912–15. Unlike many of his contemporaries, he maintained traditional links with the old masters and preserved with penetrating insight the individual characteristics of the scenery and personalities he portrayed. In 1919 he became a professor at Dresden, then lived in Vienna (1931–34), Prague (1934–38), London (1938–53) and Switzerland. He became a British subject in 1947. He also wrote several plays.

Kolakowski, Leszek (1927–2009). Polish political philosopher. Professor of Philosophy at Warsaw University 1959–68, he was expelled for his incisive criticisms of Marxism. He became a senior Fellow at All Souls, Oxford, 1970–2009 and also taught in the US and Canada. His books include *Main Currents of Marxism (1976–78), *Metaphysical Horror (1988), *My Correct Views on Everything (2005) and *Why is Something Better than Nothing? (2007). He argued that 'We learn history not in order to know how to behave or how to succeed, but to know who we are.'

Kolchak, Aleksandr Vasilyevich (1874?–1920). Russian sailor. He reorganised the navy after the Russo-Japanese War (1904–05), in which he had taken part. In World War I he commanded the Black Sea fleet from 1916, and after the Bolsheviks seized power (1917) headed a counter-revolutionary government in Siberia. Despite early successes on his westward march he was checked by the Bolsheviks and forced to retreat. Eventually, he was captured and shot.

Kollontay, Aleksandra Mikhailovna (1872–1952). Russian revolutionary, feminist and politician. The daughter of a tsarist general, she joined the Bolsheviks in 1905, and after a Menshevik deviation, devoted herself to pacifism. She was *Lenin's Commissar for Public Welfare 1917–18, advocated free love and was dismissed for neglect of duties. She became Ambassador to Norway 1923–25 and 1927–30, Mexico 1925–27 and Sweden 1930–45.

Kollwitz, Käthe (1867–1945). German graphic artist, born in East Prussia. She lived from 1891 in Berlin where both her life and art were a constant protest against poverty and oppression. Her artistic protest was made through representations of historic scenes, e.g. *The Peasants' Revolt, realistic studies of working-class life, and illustrations to books, e.g. *Zola's *Germinal, that expressed compassion for and indignation at the miseries of the poor. Her versatility allowed her to be expert at all the graphic arts, and even as a sculptor she managed by a rough-hewn technique to convey the same message as in her other works.

Kondratiev, Nikolai Dimitrievich (1892–1938). Russian economist. After examining statistics of prices, wages, interest and consumption in Europe and North America since the 1780s, Kondratiev identified 'long waves of cyclical character' which Joseph *Schumpeter named for him. If his cycles are extended to the future (which he did not attempt) 1970–95 would be an era of downswing. He was imprisoned under *Stalin, shot and never rehabilitated.

Konev, Ivan Stepanovich (1897–1973). Russian soldier. After serving as a private in World War I he rose rapidly under the Soviet regime. He distinguished himself in World War II as an army commander in the 1941 counter-offensive to the northwest of Moscow, and later in command of an army group during the Ukrainian campaigns, and the subsequent great offensive that ended with his advance to Berlin in March 1945. In May he liberated Prague. He was made a marshal and commanded the Warsaw Pact armies 1955–60.

Königsmark, Philipp Christoph, Count of (1665–1694). Swedish adventurer. While in the service of Ernst August of Hanover he became aware of the unhappy plight of Sophia Dorothea, wife of Elector Georg Ludwig (later *George I of Great Britain). Whether he was her lover or whether his motives were those of pure chivalry, he tried and failed to aid her to escape. He was arrested, disappeared and was almost certainly put to death, the unfortunate Sophia Dorothea being secluded at Ahlden Castle for the rest of her life.

Kooning, Willem de see *de Kooning, Willem

Koons, Jeff (1955– ). American artist, born in Pennsylvania. His sculptures emphasised and reproduced the banal, and were completely out of scale, such as the huge *Puppy, executed in flowers, which is now at the Guggenheim Museum in Bilbao. His *Balloon Dog (Orange) sold for US$58.4 million in 2013.
Kościuszko, (Andrzej) Tadeusz (1746–1817). Polish patriot. He received military training in France. Being devoted to the cause of national freedom, he offered his services to the revolutionary forces in America (1777), and served with distinction in the War of Independence. In 1786 he returned to Poland, which had made a remarkable recovery from the effects of the first partition between Russia, Prussia and Austria, but his attempts to introduce democratic government as a means of reviving the national spirit frightened the nobles. After a second partition (1793) Kościuszko inspired a national uprising against the tsar. At first he achieved striking success and freed Warsaw, but with the Prussians threatening in the rear he was defeated and captured. Released two years later by the tsar he went to Paris. Though he continued to work for the national cause, he refused overtures made (1806) by *Napoleón, whom he distrusted, to cooperate with him in the achievement of Polish freedom. He attended the Congress of Vienna (1814) and vainly pleaded his country’s cause with the tsar *Aleksandr. He died after a riding accident in Switzerland. He was buried in Kraków and is revered as one of the greatest Polish patriots.

Kossuth, (Ferencz) Lajos (Akos) (1802–1894). Hungarian revolutionary leader. An advocate, he was a member of the Hungarian Diet 1825–27 and won fame and popularity with his newspaper campaigns to free Hungary from Austrian control. For these attacks upon the Habsburg regime he suffered two terms of imprisonment, but he weakened his cause by insisting on Magyar supremacy and so alienating the Slav peoples, Slovenes and Croats, who had come under Hungarian rule. He sat again in the Diet 1832–36, 1847–49. In 1848, the 'year of revolutions' throughout Europe, he was mainly instrumental in passing the 'March laws' which abolished the privileges of the nobles, freed the peasants, and created a ministry responsible to the legislature. He became Minister of Finance. In 1849 the final step was taken: the Hungarian parliament declared Hungary independent, and Kossuth became President of the Hungarian Republic. The Russians intervened to support the Austrian Government, the combined Austrian and Russian forces were too strong for the Hungarian army and the short-lived republic was overcome. Kossuth fled to Turkey and lived as an exile in London (1852–59) and Turin (1859–94). He wrote Memories of My Exile (1880).

Kornfeld, Erich Wolfgang (1897–1957). Austrian-Jewish-American composer, born in Brno. A prodigy, his opera Die Tote Stadt (The Dead City) (1920), set in Bruges, was an instant success. In the US from 1934 (naturalised 1943) he wrote scores for 21 films, winning two Oscars and he composed a violin concerto (1945) for Jascha *Heifetz.

Korngold, Erich Wolfgang (1897–1957). Austrian-British film composer, born in Brno. A prodigy, he was appointed Commander-in-Chief but attempted to establish a military dictatorship. Kerensky's refusal to satisfy his demands for the restoration of army discipline provoked him to a vain attempt to override. Kossuth fled to Turkey and lived as an exile in London (1852–59) and Turin (1859–94). He wrote Memories of My Exile (1880).

Koster (or Coster), Laurens Janszoon (c.1370–1440). Dutch craftsman. Some authorities credit him with the invention of printing with movable type (using first wooden and then tin letters). He is said to have gone to Mainz, the presumption being that Gutenberg learned from him, thus not deserving the credit that posterity has bestowed.

Kotelawala, Sir John Lionel (1897?–1980). Ceylonese politician. He played an important part in politics during the first years of Ceylon’s independence after World War II and was Prime Minister 1952–56. He was a prominent participant in the Asian Prime Ministers’ conference at Colombo (1954) and the Afro-Asian conference (1955) at Bandung, Indonesia.
Kotzebue, August Friedrich Ferdinand von (1761–1819), born in Weimar. German dramatist. As a young man he held various offices in the Russian civil service. In Estonia where he was posted (1785–95) he established an amateur theatre for which he wrote Menschenhass und Rene (Misanthropy and Repentance, 1789). Its fame rapidly spread, *Sheridan produced it (1789) at Covent Garden as The Stranger. In the same year Sheridan produced Kind der Liebe as Lovers' Vous and in 1799 Der Spanier in Peru as Pizarro. Kotzebue wrote some 200 plays as well as tales, historical works and satires. His admirers included *Beethoven and Jane *Austen and he wrote many satires against *Napoleon. In the last years of his life he was the tsar’s representative at Weimar, where a new German constitution was being developed. He was stabbed to death in Mannheim by a member of the Burschenschaften, a nationalist student society.

Bonford, W. H., Theatre, Drama and Audience in Goethe’s Germany. 1950.

Koussevitzky, Sergei Aleksandrovich (1874–1951). Russian-American conductor. He played double-bass in the Bolshoi Orchestra, was soon hailed as a virtuoso and in 1905 married a tea heiress. In 1909 he founded his own orchestra which toured Russia and he also conducted orchestras in Berlin, London and Paris. He left Russia after the 1917 Revolution, settling in Paris where he created another orchestra in 1921. As conductor of the Boston Symphony Orchestra 1924–49, he made many recordings and raised it to the highest rank. He commissioned *Ravel’s orchestration of *Mussorgsky’s Pictures at an Exhibition, *Bartók’s Concerto for Orchestra, *Britten’s opera Peter Grimes and works by *Stravinsky, *Hindemith, *Harris, *Copland and *Barber. Leonard *Bernstein was his disciple. He created the Tanglewood Festival and the Koussevitzky Foundation.

Kovalevskya, Sofya Vasilyevna (née Krukovskaya) (1850–1891). Russian mathematician and novelist. She studied in Germany, taught in Sweden, wrote an important novel Vena Vorontzoff (1893) and contributed to the theory of differential equations.

Kozintsev, Grigori Mikhailovich (1905–1973). Russian-Jewish film director, born in Kiev. Some of his films have been lost and his reputation depends on powerful versions of Don Quixote (1957), Hamlet (1964) and King Lear (1971).

Kraepelin, Emil (1856–1926). German psychiatrist. Having studied medicine, he filled a number of clinical and academic posts before holding professorships of psychiatry at Heidelberg 1890–1903, and Munich 1904–22. He claimed that the basic cause of mental disorders was physiological and that many problems of insanity would be solved by clinical observations made throughout the patient’s lifetime. A research institute was founded (1917) in accordance with his plans. His Textbook of Psychiatry (first published 1883) was enlarged and modified in successive editions. He visited India, the East Indies and Mexico to pursue comparative psychology.

Krafft-Ebing, Richard, Baron von (1840–1902). German neurologist. He held several chairs of psychiatry in Strasbourg, Graz and Vienna. His case studies Psychopathia Sexualis (1886) were a notable contribution to the study of sexual perversion.

Kraft (or Krafft), Adam (c.1455–1508/9). German sculptor. One of the most prolific and popular of the Nuremberg sculptors, his development makes him a link between the Gothic and Renaissance styles. His most famous work is the 1.6 metre high tabernacle in St Laurence’s, Nuremberg, especially remarkably for its tracery and reliefs and for the self-portrait statue on one knee before it.

Kraft, James L. (1875–1953). American cheese manufacturer, born in Canada. Of Mennonite origin, he began manufacturing low cost cheese in Chicago and his brand became the world’s biggest seller.

Kraus, Karl (1874–1936). Austrian-Jewish satirist, journalist and poet. In his journal Die Fackel (‘The Torch’), founded in 1899 and running for 922 issues until his death, he was an insistent, but not totally consistent, critic of corruption, sexual hypocrisy, militarism and the misuse of language, e.g. in propaganda. His public readings were enormously successful and his admirers included *Schoenberg, *Wittgenstein and *Canetti.

Kravchuk, Leonid Makarovich (1934– ). Ukrainian politician. He worked as an apparatchik for the Communist Party of the Soviet Union from 1958, rising to the Politburo. However, he recognised the growing power of Ukrainian nationalism and on the dissolution of the USSR won election as the first president of Ukraine 1991–94, with separate currency, defence forces and treaty arrangements.

Krebs, Sir Hans Adolf (1900–1981). German British biochemist. He worked with O. H. *Warburg (whose biography he wrote) and F. G. *Hopkins, sharing the 1953 Nobel Prize for Medicine for elucidating the ‘Krebs cycle’, the major energy producer in living organisms, a series of chemical changes in which acids exchange carbon atoms.

Kreisler, Fritz (1875–1962). Austrian violinist and composer, born in Vienna. He became a Catholic convert in 1887, studied in Vienna, attending classes by *Bruckner, and in Paris under Massart. His playing, though often flawless, could be variable in
quality, and it was chiefly for his warm and sensuous tone that he became one of the most popular virtuoso soloists in Europe and in the US, where he lived 1914–24, 1939–62. He wrote effective cadenzas for concertos by *Mozart, *Beethoven and *Brahms. In 1935 he revealed that he had composed works which he performed as by *Vivaldi, *Couperin, *Tartini, Martini and other pre-Romantic composers.

Kleneck, Ernst (1900–1991). Austrian composer. A disciple of *Schoenberg, he married *Mahler's daughter Anna briefly, wrote the popular opera Jonny spielt auf (Johnny Strikes Up!, 1927), and worked in the US from 1938. He wrote prolifically in the 12–tone mode and experimented with electronic music.

Kreuger, Ivar (1880–1932). Swedish financier. Using his family firm of Kreuger and Toll as a base for his operations, he became head of the Swedish Match Company, which he developed into a vast international trust and financial agency by lending money to a dozen or more countries impoverished by World War I, in return for match monopolies and contracts. When he committed suicide in Paris, it was discovered to the surprise and consternation of the financial world that he had tried to avert the collapse of his enterprises by a huge and complex conspiracy of forgery and falsification.

Krishna Menon, Vengalil Krishnan (1897–1974). Indian politician and diplomat. He lived in England from 1924, studied at the London School of Economics, became a lawyer, was a St Pancras borough councillor 1934–47 and the first editor of Pelican Books (1936). A left-wing member of the Indian National Congress, he was strongly anti-British. After India gained independence (1947), he became the first high commissioner in Great Britain. From 1952 to 1956 he was India's representative at the United Nations and a strong advocate of non-alignment. Back in Indian politics, he represented the left wing in *Nehru's Congress Government. In 1957 he was appointed Defence Minister. He was forced to resign when the Chinese aggression (1962) revealed the inadequacy of India's military preparedness. In the elections of 1966 he was defeated.

Krishnamurti, jiddu (1895–1986). Indian mystic, born near Madras. Sponsored by the theosophist Annie *Besant, who believed him a messiah, he was proclaimed by devotees as leader of the Order of the Star of the East (1911). He disbanded the order in 1929.

Kropotkin, Pyotr Alekseivich, [Prince] (1842–1921). Russian geographer, explorer and anarchist. After investigating glaciation in Finland, Siberia and Manchuria 1871–73, he became attracted to anarchism and renounced his title. After two years' imprisonment in Russia (1874–76) for his iconoclastic opinions, he escaped to England, Switzerland (until expelled in 1881) and France (being imprisoned on a trumped up sedition charge 1883–86). He lived in England 1886–1917, twice visiting the US, and publication of his ideas (e.g. in The Nineteenth Century and The Atlantic Monthly) caused no problems. He wrote Memoirs of a Revolutionist (1899) and Mutual Aid (1902), the latter a critique of *Darwin's concept of the survival of the fittest, arguing that mutual cooperation works in sparsely occupied environments, such as Siberia. He returned to Russia after the 1917 Revolution and, although opposed to Lenin's dictatorship, was allowed to write and publish. The moral basis of his anarchism was set out in Ethics (1924).

Kroto, Sir Harold (Harry) Walter (1939–2016). British chemist. Of Silesian descent, he studied at Sheffield University and held research chairs at Sussex and at the Royal Society. He shared the 1996 Nobel Prize for Chemistry for his work on carbon chains and their bonding, then worked in nanotechnology. An effective science advocate, he was co-author of the education report chaired by Sir Ken *Robinson.

Kruger, (Stephanus Johannes) Paulus (1825–1904). South African (Boer) politician, born in Cape Colony. His parents were Voortrekkers who took him northwards to the Transvaal, territory outside British control (1839). Prominent as farmer, soldier and politician, after the British annexation of the Transvaal (1877), Kruger was one of the leaders of the revolt (1880) by which independence was regained. Kruger was President of the South African Republic – Transvaal 1883–1902 and had to face the political and social problems raised by the influx of *Uitlanders (non-Boer settlers) after the discovery of gold in the Rand. He refused to grant civil rights to the *Uitlanders, fearing that they would support *Rhodes' expansionist policies and dominate the Transvaal. This, coupled with the provocation of the *Jameson Raid were basic causes of the Boer War. Kruger took some part in the early phase of the war but in 1900 sailed to Europe on a Dutch warship in the vain hope of obtaining support for the Boers. He did not return to Africa and died in Switzerland. Kruger, who belonged to a puritanical sect known as Dopers, had honesty, shrewdness and common sense, but lacked any adaptability for conciliation. Known to the Boers as 'Oom [Uncle] Paul', he was revered as the exemplar of resistance to the British. In 1898 he created the Sable Game Reserve, the world’s first, renamed as the Kruger National Park in 1926 and later expanded to 19,500 square kilometres.

Krugman, Paul Robin (1953– ). American economist. Educated at Yale and MIT, he was Professor of Economics at Princeton 2000– and an influential columnist for the New York Times. He won the 2008 Nobel Prize for Economics for his work ‘explaining the patterns of international trade and the geographic concentration of wealth, by examining the effects of economies of scale and of consumer preferences for diverse goods and services’.

Krupp, Alfried (1812–1887). German steel and armament manufacturer. After taking over his father's metal foundry at Essen (1848) he developed a process for making cast steel, and introduced (1862) the Bessemer steel process. The manufacture of guns started in 1861 and Bismarck's frequent wars hastened a vast expansion. Coal and iron mines were added in 1876. His paternalistic relationship to his large labour force became traditional in the firm and he offered the best wages and welfare conditions of any in Germany. Under his son Friedrich Alfried Krupp (1854–1902), who added armour plating (1890) and shipbuilding (1902), expansion continued and the number of employees had risen to 43,000 when the firm was taken over by his daughter Bertha (1886–1957). On her marriage (1906) she transferred administrative power to her husband, Gustav von Bohlen und Halbach (1870–1950) known as Krupp von Bohlen. Under his régime gun manufacture reached a culmination in World War I with the vast 17in. howitzers that smashed the Belgian forts, and with ‘Big Bertha’ which shelled Paris at a range of 70 miles. German defeat meant a temporary decline in Krupp's fortunes and a switch to the manufacture of locomotives and agricultural machinery. However, an ever greater degree of prosperity was attained when *Hitler, whom Krupp partly financed, began rearmament. He was senile at the end of World War II and never tried. His son Alfried Krupp (1907–1967), tried at Nuremberg and sentenced to 12 years' prison, released in 1951, soon resumed control of his vast industrial empire. In 1968 the company became a public corporation and the family relinquished control.

Krupskaya, Nadezhda Konstantinovna (1869–1939). Russian revolutionary. She married V. I. Lenin in 1898, shared his exile and became a powerful influence in education after the Revolution.

Krushchev, N. S. see Khrushchev, N. S.

Krylov, Ivan Andreyevich (1768–1844). Russian writer. Though he also edited satirical journals and wrote plays, his fame rests on his racy and humorous fables. He had translated *La Fontaine, but drew his material largely from peasants met during his years (1793–1806) of wandering through Russia. He has been called ‘the Russian La Fontaine’.

Kubitschek de Oliveira, Juscelino (1902–1976). Brazilian politician. Of Czech descent, he became a physician, was Governor of Minas Gerais 1950–54 and secured election as President of Brazil 1956–61. The political heir of *Vargas, he inaugurated Brasilia as the new capital (1960). He was blamed for high rates of inflation and increased foreign debt.

Kublai Khan (1216–1294). First Mongol (Yuan) Emperor of China 1271–94. Grandson of *Genghis Khan, when he became great khan (1259) he gained nominal suzerainty over a territory stretching from the Black Sea to the Pacific. But it was China that stirred his imagination and absorbed his energies. He proclaimed himself Emperor of China to become the first of a new Yuan dynasty and ruled from his capital of Dadu (or Khanbaliq, called Cambaluc by Marco *Polo: the modern Beijing) which he made splendid. Hangzhou, then China's biggest city, capital of the Sung dynasty, was taken in 1276 but another 15 years elapsed before all China was conquered. During his reign he also sent expeditions to Tibet. Further south he subdued Burma but failed to achieve success against Japan. Unlike his ferocious ancestors, Kublai Khan was a liberal-minded ruler: he welcomed foreigners and fostered the arts and commerce, he established lamaistic Buddhism as the state religion but was tolerant of other faiths. He improved the civil service, and many great public works were carried out during his reign.

Kuhn, Thomas (1922–1996). American historian and philosopher of science. Educated at Harvard, he became a physicist and taught at Harvard, Princeton and MIT. In *The Structure of Scientific Revolutions (1962 revised 1970) he argued that revolutionary changes occurred when it was
recognised (often on inadequate evidence) that the conventional patterns (‘paradigms’) of explanation were no longer adequate: transitions from Ptolemaic to Galilean cosmology, or Newtonian to Einsteinian physics were rapid and demolitionist, not evolutionary and incrementalist.

Kun, Béla (1886–1939). Hungarian politician of Jewish origin. He was captured by the Russians in World War I and returned to set up a short-lived Soviet republic in Hungary (March–August 1919). After the counter revolution he escaped to Vienna and thence to Russia where he died or was put to death.

Kurosawa, Akira (1910–1998). Japanese film director, born in Tokyo. Trained in Western art, he became a scriptwriter, working for the director Yamamoto Kajiro. A neo-realist, he combined humanist, radical and traditional elements in his powerful films, emphasising moral and ethical choices, but was also admired for discriminating use of colour, and was generally regarded as the greatest Japanese film maker (certainly the one most admired in the West. His first film was Sugata Sanshino (1943) followed by Rashomon (1951), The Idiot (after *Dostoevsky, 1951), The Seven Samurai (1954), The Throne of Blood (an adaption of Macbeth, 1957), The Lower Depths (after *Gorki, 1957), Red Beard (1965), Derzu Uzala (1976) and Ran (a Samurai version of King Lear, 1985). He won three Oscars.

Kutuzov, Mikhail Ilarionovich, Prince (1745–1813). Russian marshal, born in St Petersburg. He joined the army at 14, lost an eye fighting the Turks (1774) and learnt about strategy from *Suvarov. He fought against the Turks again 1788–91, became an administrator and diplomat and retired in disfavour in 1802. When Russia joined the coalition against *Napoleon, *Aleksandr I recalled Kutuzov and forced him to engage at Austerlitz (December 1805) against his advice. He lost heavily and was retired again. When Napoléon invaded Russia (1812) Kutuzov replaced *Barklay de Tolly as Commander-in-Chief. He at first continued Barklay’s strategy in avoiding a pitched battle until just before Moscow, at Borodino where, after fearful carnage on both sides, the Russians withdrew. Napoléon occupied Moscow but the advent of winter and the threat of Kutuzov’s undestroyed army decided him to begin his disastrous retreat. Kutuzov won a great victory over *Davout and *Ney at Smolensk and harassed the Grand Army continuously as it struggled homewards. He is revered by the Russians as one of their greatest generals. He plays a significant role in *Tolstoy’s War and Peace.

Kuyper, Abraham (1837–1920). Dutch theologian and politician. Founder of the Anti-Revolutionary Party (1878), he was Prime Minister 1901–05 and helped to negotiate an end to the Boer War (1902). His Calvinist theology had a profound influence on Afrikaner thinking (D. F. *Malan).

Kwaśniewski, Aleksander (1954– ). Polish socialist politician. A former apparatchik and security informer under the United Workers’ Party (i.e. Communist) regime, he was Minister for Sport and Youth Affairs. He founded the Democratic Left Alliance in 1993 and after a very professional electoral campaign defeated Lech *Walesa to become President of Poland 1995–2005. He was a great collector of foreign honours, and went to teach in the United States.

Kyd, Thomas (1558–1594). English dramatist. Little is known of his life except that he was educated at Merchant Taylors’ School, that he was an associate of *Marlowe and that he died intestate. His fame rests on a single play The Spanish Tragedy (presented 1585–89 and printed before 1594). It tells of a father driven almost mad by the murder of his son, a situation exactly opposite to that in Hamlet, of which Kyd is believed to have written an earlier version. Of other attributions to Kyd, none is certain except Cornelis (1594), a play of no special interest translated from the French.

La Bruyère, Jean de (1645–1696). French essayist and moralist. He studied law but disliked it and eventually (1684) became tutor to Louis de Bourbon, grandson of the Prince de Condé. In 1688 appeared the work for which he is renowned: *Les Caractères ou les Mœurs de ce Siècle*, containing disguised and satirical pen-portraits of contemporaries, accompanied by moral maxims. Originally a pendant to a translation of the *Characters of Theophrastus*, it gradually developed as a separate work and the number of ‘Characters’ steadily increased with each edition. The fitting of the right cap to the right anonymous head became a social relaxation and several keys were published, the authenticity of all being denied by the author. The ‘maxims’ are scathing about not only human wickedness and folly but also the inequalities and harshness of the social system. Yet he was no revolutionary and seems to have accepted in a disillusioned spirit the inevitability of human ills.

Lacan, Jacques (1901–1981). French psychoanalyst, psychologist and literary critic. In an important collection * Ecrits* (1966, translated into English 1977), using the techniques of structural linguistics, he proposed a radical revision of *Freud’s theories and methodology*, arguing that the whole structure of language was to be found in the unconscious, as revealed by psychoanalysis.

La Condamine, Charles Marie de (1701–1774). French geographer. Sent to Peru on an expedition (1735–43) to measure the meridional arc there, he also explored the Amazon. He obtained positive evidence concerning india-rubber and brought back the poisonous plant curare. His journal of the expedition was published in 1751.

Lacoste, René (1904–1996). French lawn-tennis player. With Jean Borotra and Henri Cochet he was one of the famous ‘Three Musketeers’ who monopolised the Wimbledon singles championship from 1924 to 1929. Lacoste won in 1925 and 1928. He manufactured sportswear with the familiar alligator logo.

Lafayette, (Marie Joseph Paul Yves Roch) Gilbert du Motier, Marquis de (1757–1834). French soldier and politician. A liberal-minded member of a rich aristocratic family, he went to America (1777) to fight for its independence, became a friend of Washington and returned to France to urge his country to go to war with Great Britain on America’s behalf. Successful in this he was back in America in time to take part in the events that led to the capitulation of Yorktown (1781). With a hero’s reputation and his liberal principles he was elected to the Estates-General of 1789 and became Commander of the National Guard. A constitutionalist rather than a violent revolutionary he tried to restrain mob rule in Paris and, after the failure of Louis XVI’s flight to Varennes, to protect the king. Courageous but mediocre, avid for praise and easily manipulated, Mirabeau called him ‘Gilles the king. Courageous but mediocre, avid for praise and easily manipulated, Mirabeau called him ‘Gilles the simpleton’ César’. Forced to give up his post in Paris he became commander of the army of the east, but a final effort (1792) to avert the danger to the king’s life by a march on Paris failed. Lafayette sought refuge across the Rhine and was held in prison until the peace of 1797. Under Napoléon he lived quietly, but after the emperor’s fall he served in the Chamber of Deputies 1815, 1818–24. He made a triumphant return to the US (1824–25) where he was made an honorary citizen and is still regarded as a symbol of Franco-American friendship. In the 1830 Revolution he commanded the National Guard which overthrew Charles X and replaced him with Louis Philippe. He was offered the Belgian throne in 1830.

La Fayette, Marie Madeleine Pioche de la Vergne, Comtesse de (1634–1693). French novelist. She was the first French writer to publish a novel of psychological insight and sincere observation. *La Princesse de Clèves* (1678) deals with a married woman’s renunciation of a love affair – a theme probably inspired by her own unsatisfactory marriage.

Ladislaus see Wladislaw

Laënnec, René Théophile Hyacinthe (1781–1826). French physician, born in Brittany. As a hospital physician he made important contributions to research on tuberculosis, peritonitis, parasitic complaints etc. His greatest contribution was to devise the stethoscope and the method of auscultation for diagnosis of diseases of the chest. He developed the disease from which he died (probably tuberculosis) four years after becoming professor of medicine at the Collège de France.

In 1667 she became an intimate of the Duc de la *Rochefoucauld – an attachment that lasted until his death in 1680 – who may have helped her with her novels.

La Follette, Robert Marion (1855–1925). American politician. He played a notable part in the politics of his native state, Wisconsin, and as Governor 1901–06, carried out a program of reform (the Wisconsin idea) which gained him a national reputation. As US Senator 1906–25 he continued to fight for progressive causes and in 1924 stood as an independent Progressive candidate for the presidency and polled 4,800,000 votes.

La Fontaine, Jean de (1621–1695). French poet. His marriage was early dissolved and he later frequented numerous patrons, including Madame de La Sablière and Nicolas *Fouquet. He wrote a variety of forms of poetry but his enduring masterpiece was his 12 books of *Fables (1668–94) (240 in all), many of them adaptations of *Aesop’s fables, often concealing under their childish appeal a biting satire of the foibles and weaknesses of French society in particular and human nature in general. He was elected to the Académie Française in 1683, despite the king’s objections.

Lagerkvist, Pär (Fabian) (1891–1974). Swedish novelist, dramatist and poet. He was concerned with destructive forces in society. Two poems in expressionist style, *Angst and Kaos, were written during World War I to emphasise its horrors. He later widened his scope to attack all political and social extremism and its destructive power. He won the Nobel Prize for Literature for the novel *Barabbas (1951).

Lagerlöf, Selma Ottiniana Lovisa (1858–1940). Swedish novelist and poet. Crippled from girlhood, she was a schoolteacher for many years and wrote a series of popular children’s stories, e.g. *The Wonderful Adventures of Nils (1907), and religious stories, e.g. *Legends of Christ (1904). Her greatest work was the romantic story of peasant life in Sweden, *Gosta Berlings Saga (1891). Nominated 28 times, she became the first woman to win the Nobel Prize for Literature (1909) and to be elected to the Swedish Academy.

La Guardia, Fiorello H(enrico) (1882–1947). American Republican politician. He served in the US House of Representatives 1917–21, 1923–33, then became an immensely popular mayor of New York City 1933–45. Here he initiated housing and labour schemes, was Civil Defence Director and an early opponent of *Hitler’s anti-Semitic policies. He was the first Director General of the UN Relief and Rehabilitation Administration (UNRRA) (1946).

Laing, R(onald) D(avid) (1927–1989). British psychiatrist. Influenced by existentialism, he argued in *Sanity, Madness and the Family (1964) that madness is a reflexive reaction to the stresses of family life, rather than having biological causes. His controversial views, rejected by mainstream psychiatrists, were the subject of continuous media interest.

Lakatos, Imre (1922–1974). Hungarian mathematician and philosopher of science. He lived in Britain from 1956, teaching at the London School of Economics, and editing the *British Journal for the Philosophy of Science (1971–74). He urged far more rigorous analysis of decision-making in science policy, for example the comparative evaluation of research programs.

Lalande, Joseph Jerome Le Français de (1732–1807). French astronomer, he was professor of astronomy in the Collège de France (1762–1807) and (from 1768) Director of the Paris Observatory. His *Histoire céleste (1801) gave the positions of nearly 50,000 stars. His *Traité d’Astronomie (1764) was his principal work. The Lalande Prize was instituted by him (1802) for the most important observation or book of the year.

Lalor, Peter (1827–1889). Irish-Australian activist and politician, born in Raheen, Co. Laois. Born to a well-connected family, he migrated to Victoria in 1852 and, perhaps surprisingly, because he was neither Chartist nor republican, became a leader of protests by 12,000 diggers at Ballarat against the imposition of a ‘poll tax’ (licence fee), arbitrary interference by police and officials, and denial of the right to vote. Appointed Commander-in-Chief, Lalor led 1500 miners (plus a few spies and informers) to Eureka where a stockade was improvised as protection against what appeared to be inevitable attack and
Lamartine, Alphonse Marie Louis de (1790–1869). French poet and politician. He achieved his first great success with the Romantic Méditations poétiques (1820) in which the influence of *Byron is evident. He had minor diplomatic appointments in Italy until 1828 where, in 1820, he married an English woman Maria-Ann Birch. His religious orthodoxy was given lyrical expression in his Hymnes religieuses. Later works include the epic in 15 visions La Chute d’un Ange (1838), and La Vigne et la Maison (1856), which has been described as ‘his finest individual poem’. As a politician, Lamartine was a moderate and he won a great reputation as an orator in the parliaments of *Louis Philippe. After the latter's fall he was briefly Foreign Minister but the election of his rival Louis Napoléon (later *Napoléon III) as President closed his political career. Later he wrote historical and autobiographical works in a vain effort to pay off a vast accumulation of debt.

Lamb, Lady Caroline (née Ponsonby) (1785–1828). English writer. Daughter of the 3rd Earl of Bessborough, she married William Lamb, later 2nd Viscount Melbourne in 1805 and he tolerated her hysteria and alcoholism. Her passionate pursuit of Lord Byron (whom she described as ‘mad, bad and dangerous to know’), made her ridiculous and embarrassed him. After their rupture she caricatured him in Glenarvon, published anonymously in 1816. This, the first of three not very distinguished novels, was republished (1865) as *The Fatal Passion. She died of dropsy.

Lamb, Charles (1775–1834). English essayist, known as ‘Elia’. Educated at Christ's Hospital London, where he formed a lifelong friendship with S. T. *Coleridge, at the age of 17 he went to work as a clerk at the London office of the East India Company, where he remained for 33 years. In 1796 his sister Mary killed their mother in one of the fits of recurring insanity to which she was subject, Lamb declared himself her guardian and devoted his life to her care, which was repaid with deep affection. Together they wrote Tales from Shakespeare (1807) and *Poetry for Children (1809). During the next decade Charles wrote little of importance except the criticism that appeared (from 1812) in Leigh *Hunt's paper the Reflector, but in 1820 he began the famous series of essays in the London Magazine under the pen name 'Elia'. A considerable depth of thought, concealed by a style of infinitely varied harmonies and a persuasively whimsical charm have made these essays (collected 1823 and 1833) one of the most abidingly popular books in the field of belles-lettres. All the qualities that give delight in his essays are present though less formally presented, in his letters, published in several collections after his death. He also wrote poetry throughout his life. Despite his circumstances Lamb was a man of many friends, deeply loved for his genial companionship, generosity and courage. His sister Mary survived him for 13 years.

Lambert, Constant (1905–1951). English composer and conductor. Son of the artist *George Washington Lambert (1873–1930), he studied at the Royal College of Music with *Vaughan Williams, became friends with the *Sitwells and *Walton and at 20 was commissioned by *Diaghilev to write the ballet Romeo and Juliet (1926). *The Rio Grande (1929), for piano, orchestra and chorus, to words by Sacheverell *Sitwell, used jazz idioms successfully. He was music director for the innovative Carmago Society 1930–33 and the Vic-Wells, later Sadler’s Wells, Ballet 1931–47. His polemic *Music Ho! (1934) still reads well, although many of his judgments (e.g. his dismissal of
between sin and sickness. He also wrote four medical treatises, on venereal disease, vertigo, dysentery and asthma. His *Observations de médecine pratique* (1743) indicates his clinical practice, in which he gives specially important place to autopsies.

**Lancaster, House of.** English dynasty, a branch of the *Plantagenets*. *John of Gaunt*, fourth son of Edward III, created Duke of Lancaster after the death of the 1st Duke whose daughter and heiress he had married. The Lancastrian kings were *John* of *Gaunt’s son* Henry IV, followed by his son *Henry V* and grandson *Henry VI*.

**Lancaster, Joseph** (1778–1838). English educationist. He is remembered for the monitorial system, which is described in his *Improvement in Education* (1803). It was similar to one introduced in Madras by *Brougham*, *Wilberforce* and *Mill*, but in time it quelled with his backers, quit their organisation (the Royal Lancasterian Institution) and emigrated to New York in 1818. He worked with *Bolivar* in Venezuela (1825–27) but quarrelled with him too.

He worked with *Bolivar* in Venezuela (1825–27) but quarrelled with him too.

Lancret, Nicolas (1690–1745). French painter. Under Watteau’s influence he painted *fêtes galantes* and other gay court occasions. Despite the artificial nature of his subjects and the fastidious elegance of his style his keen observation gave life and realism both to characters and to the background details in his scenes.

Land, Edwin Herbert (1909–1991). American inventor. He dropped out of Harvard to work on inventions including the Polaroid – a plastic sheet incorporating many tiny crystals that polarised light. This was used in Polaroid sunglasses and the Polaroid Land camera, which provided immediate prints.

Landor, Walter Savage (1775–1864). English writer, born in Warwick. The consequences of an irascible nature which caused him to be removed from Rugby and rusticated from Oxford, pursued Landor throughout his life. Although both physically and intellectually impressive, his life was a series of quarrels and lonely wanderings. From 1815 to 1835, the year in which they had their decisive quarrel, he lived in Italy with his wife. Despite his pugnacity his impulses were nearly always generous. Much of his inherited wealth was used to equip volunteers for the Peninsular War, more went into a scheme of agricultural and social reform at Llanthony. He turned over his property to his children only to be rewarded by ingratitude and he would have died in extreme poverty had not Robert and Elizabeth *Browning rallied his brothers to his support and enabled him to spend his last years in Florence in a comparative tranquillity. Except for a few his literary work was never highly esteemed: his best known book is *Imaginary Conversations* (1824–29).

Landowska, Wanda Louise (1879–1959). Polish pianist, harpsichordist and musicologist, born in Warsaw. She lived in France 1900–40 and in the US from 1940 onwards, becoming famous for her energetic interpretations of *Händel, *Bach, *Scarlatti and other 17th- and 18th-century composers. She was responsible for the modern revival of the harpsichord, and concertos were written for her by *Falla and *Poulenc.

Landseer, Sir Edwin Henry (1802–1873). English painter. He gained immense popularity with his animal pictures, especially of deer and dogs which, in the excellent engravings made by his brother, Thomas Landseer, appeared in countless Victorian homes. Despite a certain sentimentality of subject, his animals are natural and realistic and his drawings reveal a much wider and less conventional talent. The lions of Trafalgar Square, London, were modelled by him. He was Queen *Victoria’s drawing teacher, declined election as President of the Royal Academy, and became a melancholy alcoholic in his last years.

Landsteiner, Karl (1868–1943). Austrian-American pathologist, born in Vienna. Working at the University of Vienna, he became famous for his discovery (1901) of the four main human blood groups, A, B, AB and O. He won the Nobel Prize for Medicine in 1930 for this. He worked for the Rockefeller Institute in New York from 1922 until his death. He also discovered, in collaboration with A. S. Wiener, the Rh factor, so called because it was first found in the Rhesus monkey.

Lane (originally Williams), Sir Allen (1902–1970). English publisher. With his brothers Richard Grenville Lane (1905–1982) and John Lane (1908–1942) he founded Penguin Books which grew from modest beginnings (1935) into one of Britain’s major publishing houses within a few years, pioneering the paperback book. His uncle John Lane (1854–1925), of the Bodley Head, published the famous *Yellow Book*, the art quarterly which with Aubrey *Beardsley’s illustrations was a succès de scandale in the 1890s.

Lanfranc (1005?–1089). Italian prelate in England. He left Italy (c.1039) and founded a law school at Avranches which became famous. Later he became prior (1045) of the Abbey of Bec in Normandy. He came to the notice of Duke *William, whose gratitude he earned by obtaining papal dispensation for his marriage. Thus when William conquered England, Lanfranc was rewarded (1070) with the archbishopric of Canterbury. He reorganised the English Church to meet the changes caused by the conquest and showed his legal talent and diplomatic skill in reconciling the demands of a reforming pope (*Gregory VII*) and an autocratic king.

Lang of Lambeth, Cosmo Gordon Lang, 1st Baron (1864–1945). Scottish Anglican prelate, born in Fyvie. Educated at Glasgow and Oxford universities, and originally a Presbyterian, he became an Anglican priest in 1890. He made his mark by his demeanour, eloquence and social work, and became suffragan Bishop of Stepney 1901–08, then, in a meteoric rise, Archbishop of York 1908–28 and Archbishop of Canterbury 1928–42. His vehement opposition to *Edward VIII’s proposed marriage to Mrs Simpson was a decisive factor in the King’s abdication (December 1936). Unmarried, he developed an embarrasing passion for the actress Anne Todd.

Lang, Fritz (1890–1976), German film director, born in Vienna. Originally an architect, his early films were important examples of Expressionism, including *Dr Mabuse*, the gambler (1922), *Nibelungen* (1925), *Metropolis* (1926), and *M* (1932). He worked in the US 1933–58, directing a variety of films including Westerns, thrillers and psychological dramas.

Lang, Jack (John Thomas) (1876–1975). Australian Labor politician, born in Sydney. A member of the New South Wales Parliament 1913–46, he was ALP State leader 1923–39. As Premier of NSW 1925–27 and 1930–32, he introduced welfare state measures and promoted construction of the Sydney Harbour Bridge. During the Depression he adopted deflationary policies later advocated by J. M. *Keynes, repudiating payments on foreign debts and to the Commonwealth Government. He controlled the party machine in NSW and his supporters in the Australian Parliament contributed to the defeat of the *Scullin government in 1931. The semi-fascist 'New Guard' had been formed (1930) to work for his overthrow and in May 1932 the New South Wales Governor, Sir Philip Game, dismissed him. He was replaced as ALP leader in 1939 by William *McKell, was expelled from the ALP in 1943, formed the Lang Labor Party and sat in the House of Representatives 1946–49 as a bitter opponent of the Labor Government led by J. B. *Chifley, an old enemy. He had iconic status in his last years and was admired by Paul *Keating who secured his readmission to the ALP in 1971.

Lang, John Dunmore (1799–1878). Australian clergyman, politician and educator, born in Greenock. Educated at Glasgow, he became a Presbyterian clergyman, arriving in Sydney in 1823. He founded schools, campaigned against transportation, for free immigration and disestablishment of the Church of England, advocated self-government for Victoria and Queensland and (from 1850) proposed that Australia should become a republic.

Langevin, Paul (1872–1946). French physicist. He worked on X-rays and magnetic theory, was an intimate of Marie *Curie and an active campaigner against Fascism.

Langland, William (c.1330–c.1400). English poet, probably born in or near Worcestershire. All that is known of his life is deduced from his work. He was educated at a monastery at Great Malvern, later went to London and seems to have acquired some knowledge of law. He is now remembered only as the author of the *Vision of Piers Plowman* an allegorical and didactic poem in alliterative verse. The survival of 50 manuscripts shows its popularity in medieval times but its later influence was small. The fact that the poem survives in three versions (c.1362, 1377 and 1393–98), the two later ones being nearly three times as long as the first, has suggested multiple authorship, but critical opinion has veered to the acceptance of the first two at least, as the work of a single hand. The subject of the poem is the salvation of souls, but its chief interest for modern readers lies in its descriptions of the scenes (roads, inns, law courts etc.) and characters of medieval life.

Langley, Samuel Pierpont (1834–1906). American astronomer and physicist. He was professor of the observatory at the Western University of Pennsylvania (now Pittsburgh University) 1867–87, and secretary of the Smithsonian Institution, Washington 1887–1906. He made important studies of solar radiation and with the aid of a sensitive instrument called a bolometer mapped the infra-red region of the solar spectrum. He was a pioneer in aerodynamics (*Cayley) and carried out two experiments in aviation. In 1896 he built two model airplanes, both powered with small steam engines: the second, weighing 9.7 kg, flew 1280 m. In December 1903 (nine days before the *Wright Brothers succeeded), a piloted aircraft weighing 386 kg, with a 14.6 m wingspan, crashed on take-off.

Langmuir, Irving (1881–1957). American physical chemist. He joined the General Electric Company (1909) and was its Director of Research 1932–50. He was much concerned with the handling of high vacua and developed a number of inventions, e.g. the gas-filled tungsten lamp, the mercury vapour lamp and the atomic hydrogen welding torch. In the course of his work on surface chemistry he derived the equation (now known as the Langmuir absorption isotherm) relating the pressure to the extent of absorption of a gas on a solid surface at constant temperature, for this he won the Nobel Prize for Chemistry (1932).

Langton, Stephen (c.1150–1228). English prelate. A fellow student in Paris of the future Pope *Innocent III, he was later given a place in the papal household and (1206) made a cardinal. King *John's refusal (1207) to accept him as Archbishop of Canterbury led to a prolonged struggle between the king and the papacy and Langton was not able to enter his see until after John's submission to the pope (1213).
Langton sided with the barons in their struggle with the king, and played an important part in drafting Magna Carta.

**Langtry, Lillie** (née Emilie Charlotte Le Breton) (1852–1929). British actor, born in Jersey. Famed for her beauty, she was for some years the mistress of *Edward VII. After Edward Langtry’s death she married (1899) Sir Hugo de Bathe. She appeared in *Shakespeare and *Goldsmith, becoming a successful theatre manager and racehorse owner.

**Lanier, Sidney** (1842–1881). American poet, born in Georgia. He fought with the Confederate army in the American Civil War which was the subject of his novel *Tiger Lilies* (1867). Later he became a flautist in a symphony orchestra in Baltimore, in a series of lectures at Johns Hopkins University. He advocated a scientific approach to poetry, which he regarded as a kind of verbal music. Such a definition permitted the discarding of metrical restrictions replaced by more flexible musical rhythms. The best of his own poems include *Corn, The Symphony* and *The Song of The Chattahoochee.*

**Lansbury, George** (1859–1940). British Labour politician. A pacifist and supporter of women’s rights, he was on the Poplar Borough Council (from 1903) MP for Bromley and Bow 1910–12 and 1922–40 and editor 1912–22 of the *Daily Herald*, the organ of the Labour Party. He led the Labour Opposition from 1931 but resigned during the Abyssinian crisis (1935), feeling unable as a pacifist to support a policy of sanctions against Italy that might lead to war. His granddaughter, Angela Lansbury (1925– ) was a popular film, television and stage actor in the US.

**Lansdowne, 1st Marquess of see Shelburne, 2nd Earl of**

**Lansdowne, Henry Charles Keith Petty Fitzmaurice, 5th Marquess of** (1845–1927). English politician and administrator, born in London. He held a minor office under Gladstone, then became a Conservative. He was Governor-General of Canada 1883–88, Viceroy of India 1888–93, War Secretary 1895–1900 and Foreign Secretary 1900–05, being responsible for the negotiations leading to the Anglo-Japanese Alliance (1904) and the Anglo-French Entente (1910). A minister briefly in World War I, he was out of office when he wrote the famous ‘Lansdowne letter’ (1917) to the *Daily Telegraph* advocating a negotiated peace with Germany.

**Lao Zi** (or Lao-Tzu) (fl. c.604 BCE). Chinese philosopher, perhaps legendary. He is said to have been born in Honan, to have held office at court and to have been visited by *Confucius. Lao Zi was the traditional author of *Dao de jing*, which sets out the ideas and practice that came to be known as Daoism (Taoism). A unity (dao) underlying the apparently conflicting phenomena of the universe is perceived, the attitude to the fundamental laws of the universe should be unconditional acceptance, the achievement of such acceptance being helped by quietist techniques, complete relaxation ‘sitting with a blank mind’ (tso wang) etc. The other book of early Daoism, *Chuang Tzu*, may have been written by a pupil of that name.

**La Pérouse, Jean François de Galaup, Comte de** (1741–1788). French sailor and explorer. He was put in command (1785) of an expedition of exploration, and from the northwest coast of America crossed the Pacific with two ships. He explored the northeast coasts of Asia and in particular, while sailing to investigate the possibility of a northeast passage, found the strait (named after him) between Sakhalin and Hokkaido (Yezo), thus proving both to be islands. By 1788 he was in Australia and in February his two ships sailed from Botany Bay never to be seen again. They foundered on a coral reef to the north of the New Hebrides.

**Laplace, Pierre Simon, Marquis de** (1749–1827). French astronomer and mathematician, born in Normandy. His origins are uncertain but he became a raging snob and political opportunist. He attracted the attention of d’*Alembert and worked with *Lavoisier and *LaGrange. He made an important contribution to the theory of capillarity and corrected *Newton’s equation for the velocity of sound in a gas. He developed a calculus of probabilities which he applied to the theory of gravitation. His major work was in astronomy. In his *Exposition du système du monde* (1796) he put forward his well known ‘nebular hypothesis’ suggesting that the solar system originated from the gradual contraction of a rotating sphere of nebulous material. Although this theory has now been superseded, it acted as a powerful stimulant to 19th-century astronomical thought. In his greatest work, the five-volume *Mécanique celeste* (1799–1825), Laplace worked out a generalised statement of the laws governing movement throughout the whole solar system. Sometimes called ‘the French Newton’, he also foreshadowed thermochemistry and developed the ‘Laplace transform’ for solving partial differential equations. In addition to his academic work he took part in public life. After *Bonaparte’s coup d’état* (1799), he was briefly Minister of the Interior, and
in the same year became a senator. Under the Empire he was made a count and eventually, under Louis XVIII a marquess. In 1817 he became President of the Académie Française.

**Lardner, Ring** (gold Wilmer) (1885–1933). American author. A sports writer for many years, he became famous for his short stories which displayed remarkable powers in the use of colloquial dialogue and a bitter contempt for average Americans, especially those connected with sport and the theatre, with which he was well acquainted. His How to Write Short Stories (1924) is typical of several volumes in this vein.

**Largo Caballero, Francisco** (1869–1964). Spanish politician. Prime Minister 1936–37 for the first part of the Civil War, as Madrid was threatened by the nationalist insurgents his government operated first from Valencia, then from Barcelona. Juan Negrín succeeded him. Arrested by the Germans in 1940 he was held until 1945.

**Larkin, James** (1876–1947). Irish labour leader, born in Liverpool. He formed (1909) the Irish Transport and General Workers’ Union in Dublin and became famous when a lockout (1913) of his members by employers was followed by an eight-month strike ending in a partial victory for Larkin. He lived in the US 1914–23 until deported for Communist activities. In 1924 he was expelled from his former union and founded the more extremist Workers’ Union of Ireland.

during in a partial victory for Larkin. He lived in the US 1914–23 until deported for Communist activities. In 1924 he was expelled from his former union and founded the more extremist Workers’ Union of Ireland.

**Larousse, Pierre Athanase** (1817–1875). French lexicographer and encyclopaedist. Largely self-educated, he was a radical, obsessed with the use of knowledge to transform society and produced a series of grammars, dictionaries and textbooks. He founded his own publishing house in 1852. His Grand Dictionnaire universel du XIXe siècle (15 volumes, 1866–76) is of lasting value, republished on DVD in 2001.

**La Salle, René Robert Cavelier, Sieur de** (1643–1687). French explorer. He settled in Canada (1666) and in 1670 began the descent of the Ohio River, which he believed to flow into the Pacific. Having found out his mistake he decided to follow the Mississippi, of which the Ohio is a tributary, down to the sea, a voyage which lasted several years and entailed many hardships. The vast area of the Mississippi Basin he named Louisiana in honour of the French King. In 1684 he led an expedition from France to establish a permanent settlement but failed to find the Mississippi from the seaward side. Having entered Matagorda Bay (Texas) in mistake for one of the mouths of the Mississippi, he and his men landed and spent two years in a vain search for the great river. The hardships endured provoked a mutiny amongst his men in which La Salle was murdered.

**Las Casas, Bartolomé de** (1476–1566). Spanish colonial reformer. He went (1502) to the West Indies where he became a priest (c.1510) and started to work to improve the position of all Indians under Spanish rule, in particular to abolish the system by which grants of Indian serfs were made to settlers. Visits to Spain won him the support of King Ferdinand and his successor Charles I (the emperor Charles V) but having failed to make the reforms effective he assented to a proposal to introduce African labour, a decision he bitterly regretted as it encouraged the growth of
the slave trade. Another disappointment came when a settlement, which he had started (1520) in Venezuela to prove the advantages of free colonisation over slave-run estates was destroyed by the Indians, who distrusted all Spaniards. Before the conquest of Peru (1531) he again visited Spain and returned with royal instructions for the protection of the Indians. He became Bishop of Chiapas in Mexico (1542) and continued to struggle for the enforcement of the laws against Indian serfdom. In 1547 he finally returned to Spain. His books bear witness to his compassion and zeal.

Hanke, L., *Bartholomé de Las Casas: An Interpretation of his Life and Writings*. 1951.

**Lasker, Emanuel** (1868–1941). German chess-master and mathematician. He was world chess champion from 1894 until 1921 when *Capablanca defeated him in a great contest at Havana.

**Laski, Harold Joseph** (1893–1950). British socialist, born in Manchester. He was a lecturer at Yale University in the US and McGill University in Canada before joining (1920) the London School of Economics, where he was professor of political science 1926–50. He was Chairman of the British Labour Party 1945–46. Through his lectures and books, e.g. *Parliamentary Government in England* (1938) and *Reflectionson the Revolution of Our Time* (1943), he exercised considerable influence over the intellectuals of his party but his academic Marxism did not attract the rank and file.

**Laski, Marghanita** (1915–1988). English writer, critic and broadcaster. Her first novel, *Love on the Supertax* appeared in 1944. She wrote extensively for newspapers and magazines and broadcast regularly as a critic. Her best known novel was probably *The Victorian Chaise-Longue* (1953), a time-travel fantasy in which Victorian repressive attitudes are equated with death.

**Laslett, (Thomas) Peter** (Ruffell) (1915–2001). English social historian. He worked at the BBC, edited *Locke's Two Treatises of Government* (1960), directed the Cambridge Group for the History of Population and Social Structure and demonstrated the emergence of a new demographic group – ‘the Third Age’, who lived to an advanced age after retirement. He was a co-founder of the Open University and the Universities of the Third Age (U3A) and wrote *The World We Have Lost* (1965) and *A Fresh Map of Life* (1989).

**Lassalle, Ferdinand** (1825–1864). German socialist, born in Breslau (now Wroclaw). Son of a rich Jewish silk merchant, he abandoned his religion as a young man and devoted several years at the universities to the study of *Hegel. He gained notoriety by conducting a protracted law suit (1846–57) on behalf of the Countess Sophie von Hatzfeldt whose estate had been seized by her estranged husband; gratitude and an annuity were the rewards of his success. He was imprisoned for six months during the revolution of 1848, by which time he was a confirmed socialist. He came to know Karl *Marx, but differed from him in his nationalist approach and in advocating state intervention rather than revolution to secure social reform. Later, when Marx was living in poverty in London, Lassalle gave him generous help. When *Bismarck came to power (1862) Lassalle, as a rationalist, gave him reluctant admiration. He founded (1863) the General Workingmen's Association, which later developed into the Social Democratic Party. The main feature of its program was universal suffrage, which Lassalle thought would place the power of the state at the service of the working population. He died from wounds received in a duel for the hand of Helene von Dönniges, which he fought outside Geneva with a rival favoured by her parents.

**Lasso, Orlando di** (Orlandus Lassus) (1532–1594). Flemish composer, born in Mons (now in Belgium). He became choirmaster at St John Lateran in Rome but for most of his life was court composer of the Duke of Bavaria (1556–94). His works (reputed to number 1183) include Mass motets, psalms (especially the *Seven Penitential Psalms*) and hymns, in addition to many secular pieces. His madrigals and songs, set to German, Italian and French words are still highly regarded for their melodic beauty. His work is more varied and adventurous, if less profound, than *Palestrina, with whom he is often compared.

Latimer, Hugh (1485–1555). English Protestant martyr, born near Leicester. A yeoman's son, he was educated at Cambridge University and there became a university preacher. For his support of the annulment of *Henry VIII's marriage to *Catherine of Aragon he was taken into royal favour and became (1535) Bishop of Worcester but resigned (1539) when it was clear that his reforming zeal had outpaced that of the king, and he was in prison for most of the remainder of Henry's reign. After *Edward VI's accession (1547) Latimer's influence as a preacher denouncing the evils of the day reached its zenith, but under Queen *Mary, persecution of Protestants was resumed. Latimer was taken to Oxford and there, after confrontation with Roman Catholic divines had failed to induce him to recant, he was burned at the stake. His last words, to his fellow martyr Bishop *Ridley were 'We shall this day light such a candle by God's grace in England as I trust shall never be put out'.

Latre de Tassigny, Jean Joseph Marie Gabriel de (1889–1952). French soldier. He opposed the Vichy regime, escaped from prison in 1943, led the French First Army from the invasion of southern France in 1944 to the crossing of the Rhine in 1945 and signed the instrument of surrender at Berlin (1945) on behalf of France. He commanded the French armies in Indochina 1950–51, died of cancer and was posthumously created a marshal.

Salisbury-Jones, G., So Full a Glory. 1954.

La Tour, Georges de (1593–1652). French painter. Little is known of him except that he lived in Lorraine. Popular in his lifetime (and often copied), he was forgotten after his death and his paintings attributed to other artists until Herman Voss (1884–1969), German art historian, published an important study (1915) re-establishing his importance. The influence of *Caravaggio is especially noticeable in his groups of figures by candlelight. In his use of colour, especially of crimson and lilac, he shows marked individuality. About 40 of his works survive including, St Joseph the Carpenter, Nativity with Shepherds, Mary Magdalenuith oil lamp and Cardsharps.

Bloch, V., Georges de la Tour. 1950; Thuillier, J., Georges de la Tour. 1993; Conisbee, P., Georges de La Tour and His World. 1996.

Laud, William (1573–1645). English prelate, born at Reading. Son of a wealthy clothier, he was educated at Oxford and ordained in 1601. Despite, or because of, his opposition to the prevalent Puritanism, his industry, administrative ability and religious sincerity won him powerful patrons. He became Bishop of Bath and Wells (1626), of London (1628) and Archbishop of Canterbury (1633). In the period that followed the murder of Buckingham (1628) he tried, with *Strafford and King *Charles I himself, to impose authoritarian rule on Church and State alike. Laud was determined to free England of Calvinism and Scotland of Presbyterianism. Many English Puritans were deprived of their livings, ritual was reintroduced, the doctrine of the Real Presence reasserted and among other contentious measures, the Communion table was removed from the centre of the church to the east end. His attempt to Anglicise the Church of Scotland however, led to riots, to the signing of the Covenant to the Bishops War between the two countries, and eventually (to meet the costs of the war) to the summoning of the Long Parliament, which impeached Laud of high treason, He was found guilty by the House of Lords on several counts, none of which however, amounted to treason and it was on a bill of attainder that he was beheaded on Tower Hill.

Lauder, Sir Harry (Harold MacLennan) (1870–1950). Scottish singer. With such famous songs as Roamin in the Gloamin, I Love a Lassie and A Wee Deoch-an-doris, he was for two generations one of the most famous and popular of music-hall stars. He was knighted (1919) for services in World War I.

Lauderdale, John Maitland, 1st Duke of (1616–1682). Scottish politician. During the Civil War he acted as agent for Scottish Presbyterians at the court of *Charles I and later established a similar connexion with the exiled Prince Charles and became a close friend. When Charles crossed to Scotland to make a bid for the crown, Lauderdale went with him but was captured at Worcester (1651) and held prisoner for nine years. Under the Restoration he was Secretary for Scotland 1660–80 and tried to make the Crown absolute there. After the fall of *Clarendon, from 1667 to 1673 he was the 'L' of the famous 'Cabal' ministry (*Buckingham). In Scotland he tried to work in harmony with the Presbyterians but this became increasingly difficult. Disillusion, combined with the corruption of power, made him harsh and intractable. Once a supporter of the Convenanters, he suppressed them with great brutality (1666–79). He inherited the earldom of Lauderdale (1645), was created duke in 1672 and dismissed from all offices in 1680.

Laue, Max von (1879–1960). German physicist. Director of the Institute for Theoretical Physics, Berlin 1919–50, he was a pioneer in X-ray analysis using the pattern of diffracted X-rays to determine crystal structure. He won the Nobel Prize for Physics (1914).

Laurel, Stan (Arthur Stanley Jefferson) (1890–1965) and Hardy, Oliver (1892–1957), American film comedians. Stan Laurel, born in Lancashire, began work in circuses and music halls as a slapstick comedian. In 1916 he joined the American Oliver Hardy who had begun his career in vaudeville but who had worked in silent film comedy since 1913. Together they made over 100 films in which they combined slapstick with clashes of personality: Laurel the bumbling innocent, Hardy the self-assured blunderer.

Laurier, Sir Wilfrid (1841–1919). Canadian Liberal politician, born in Québec. He made his name as a lawyer and entered the provincial legislature 1871 and the Canadian parliament in 1873. In 1887 he became leader of the Liberals and Prime Minister 1896–1911, being the first French-Canadian to lead a national government. His period of office was one of prosperity and expansion, especially in the wheat-growing provinces in the west. The issue on which he finally fell, in the election of 1911, was his support for commercial reciprocity with the US. He led the anti-conscriptionist wing of his party in World War I. His political (and legal) heir was W. L. Mackenzie King.

Lautrec, Henri Toulouse see Toulouse Lautrec, Henri

La Vallière, Louise Françoise de la Beaume le Blanc, Duchesse de (1644–1710). French mistress. She was only 17 when Louis XIV first saw her and fell in love. By her sweetness and sincerity, coupled with a lack of ambition or greed, she won – to everyone's surprise – the admiration of the court. When supplanted by Madame de Montespan (1674), she departed without rancour to the Carmelite convent where she spent the rest of her life. Only one of her three children by Louis survived her.

Laval, Pierre (1883–1945). French politician, born in the Auvergne. Possibly of Moorish descent, he was largely self-educated but won academic degrees, and became a lawyer, small businessman and publisher. He was a member of the Chamber of Deputies 1914–19, originally a radical, pacifist and socialist then an independent deputy 1924–27 and Senator 1927–44. He became a premier 1931–32, 1935–36 and as Foreign Minister 1934–36 negotiated the Hoare-Laval Pact (1935), accepting Italy's occupation of Ethiopia. He advocated friendship with Italy and Germany. After the collapse of France he took a leading part in the establishment of Marshal Pétain's Vichy regime, was Premier briefly (1940) until forced out by Pétain who detested him. In April 1942 he became Prime Minister again in active collaboration with the Germans: he set up the notorious French milicia with its Gestapo-like activities and supplied conscript labour for German factories. After the liberation of France he fled to Germany and then to Spain. He was repatriated, tried, condemned and executed for treason. Laval was ambitious, persuasive and subtle. He may have deluded himself that by his appeasement he preserved some degree of independence for Vichy France; in fact, he went further than the Germans expected.

Laveran, (Charles Louis) Alphonse (1845–1922). French parasitologist. He served as a military surgeon in Algeria and in 1880 discovered the parasite that causes malaria. He established the laboratory of tropical diseases at the Pasteur Institute, Paris, in 1907, won the Nobel Prize for Medicine (1907) and published 600 research papers.

Lavergne, Charles Martial Allemand (1825–1892). French cardinal. After teaching at the Sorbonne, he became Archbishop of Algiers 1867, and also of Carthage (now Tunis) in 1884, and took a leading role in organising international opposition to slavery in central Africa.

Lavoisier, Antoine-Laurent (1743–1794). French chemist, born in Paris. In 1768 he invested heavily in the ‘Ferme générale’, a private syndicate that collected taxes on behalf of the crown, retaining a percentage, and this provided him with funds to pursue scientific research. Elected to the Académie des Sciences (1768), he directed the Gunpowder Office 1776–91. He also made practical use of his scientific knowledge in agriculture and acquired an estate for experimental purposes. Lavoisier has been called the father of modern chemistry. By his experimental work he not only made many new discoveries but refuted the long-held belief that water could be converted into earth and the current theory that the existence of an invisible, inflammable gas, phlogiston, explained many of the problems of combustion. His own experiments showed that air was composed of two gases, which he called oxygen and ‘azote’ (later known as nitrogen), and that oxygen played an essential role in the respiration of animals and plants. In 1783, almost simultaneously with Cavendish and Priestley, he announced that water is a combination of hydrogen and oxygen. He wrote the important Opuscules physiques et chimiques (1774) and constructed the first table of elements. Methods of Chemical Nomenclature (1787), written with the assistance of Berthollet and Fourcroy, coined about 30 names still in use for elements. In 1789, he proposed the law of the conservation of mass – essentially that matter is neither created nor destroyed, but is transformed in the course of chemical changes. By burning, for example, coal is converted into carbon dioxide, other gases and particulates, but the total mass is conserved. Although mass cannot be created or destroyed, it may be rearranged in space and changed into different types of particles. (This is a central premise in the argument for anthropogenic global warming.) By burning objects in a sealed chamber he established that combustion was accompanied by the
chopped combination of oxygen with the substance burned (creating what became known as oxides). After the Revolution he played a leading part in the establishment of the metric system. He was a liberal constitutionalist, believed in social reform, and played his part in the various Revolutionary assemblies, but he had made powerful scientific enemies, including *Marat. His previous role as tax farmer led to his arrest and condemnation during the Terror. Appeals to delay his guillotining met with the chilling (but authentic) response: 'The Revolution has no need of scientists.'

Law, Andrew Bonar (1858–1923). British Conservative politician, born in New Brunswick, Canada. A successful iron merchant in Glasgow, he served as Member of Parliament 1900–06, 1906–10, 1911–23, being twice defeated, and was Parliamentary Secretary to the Board of Trade 1902–06 until the Liberals swept into office. When *Balfour retired as Conservative leader, Law was unexpectedly elected (as a compromise candidate) to succeed him, marking an end to the tradition of aristocratic leadership. His principal target was *Asquith's Home Rule Bill. When World War I broke out (1914) he supported the government and in 1915 served as Colonial Secretary in the coalition formed by *Asquith. Law's close friend (and fellow Canadian) Max Aitken (*Beaverbrook) played a central role in dislodging Asquith as Prime Minister and as *Lloyd George. Law then became Chancellor of the Exchequer 1916–18 and Lord Privy Seal 1919–21, until his resignation due to illness. In October 1922 a Conservative revolt ended the coalition, Lloyd George had to resign and Law succeeded as Prime Minister for six months until inoperable cancer forced his resignation (May 1923); he died in October. He had a mastery of detail and could deliver long, intricate speeches without notes.

Blake, R., The Unknown Prime Minister. 1955.

Law (of Lauriston), John (1671–1729). Scottish financier, born in Edinburgh. He narrowly escaped execution in London (1694), for killing a man in a duel, escaped to the Netherlands, then Venice, and finally, France. He wrote Money and Trade Considered (1705), founded a private bank in Paris, attracted interest through his adventurous ideas on how governments could trade out of bankruptcy and served, improbably, as Controller General of Finances 1720. He was responsible for 'the Mississippi Bubble', selling stocks for a company to exploit France's colonies in North America which then collapsed. He died in Venice.

Law, William (1686–1761). English clergyman. Forced to give up his Cambridge fellowship for refusing to swear an oath of allegiance to *George I, he spent most of his life in controversial and devotional writings, which, however, sparkle with epigrammatic wit. His books, especially A Serious Call to a Devout Way of Life (1729), in which he asserted that Christianity is not mere obedience to a moral code but a complete pattern of life, had great influence on Dr *Johnson and, amongst others, the *Wesleys, and thus on the whole Evangelical movement.

Lawes, Sir John Bennet, 1st Baronet (1814–1900), English agricultural chemist. Educated at Eton and Oxford, he inherited his birthplace Rothamsted Manor, Harpenden, Hertfordshire and in 1843 established the Rothamsted Experimental Station, England's first agricultural laboratory. He followed *Liebig's experiments and developed the first superphosphate, which revolutionised Australian farming. He worked with Sir Joseph Henry Gilbert (1817–1901) and also conducted experiments in animal nutrition.

Lawrence, St (d.258). Christian martyr. He was one of seven deacons of Pope Sixtus II, who were beheaded in Rome during the persecution in the reign of the emperor Valerian. The tradition that he was tortured on a gridiron is not accepted by scholars, though it has formed the subject of many classical paintings.

Lawrence, Carmen Mary (1948– ). Australian politician and psychologist. She was an academic psychologist in Perth and Melbourne, a State MP 1986–94 and Premier of Western Australia 1990–93, the first female Premier in Australian history. In the Commonwealth Parliament 1994–2007, she served as *Keating's Minister for Human Services and Health 1994–96. The first National President of the ALP directly elected (2003) by branch members, she served 2004–05. She was outspoken about asylum seekers and the environment.

Lawrence, D(avid) H(erbert) (1885–1930). English novelist, poet and essayist, born in Eastwood, Nottinghamshire. His father was a drunken and almost illiterate coal-miner, his mother a former school teacher with Puritan values. His early years were squalid. Frail but studious, he left high school at 16, working first as a clerk, then as a teacher in Nottingham and London. His youth was troubled by an obsessive relationship with his mother and by tuberculosis symptoms which made him increasingly irritable. The publication of The White Peacock
(1911) pointed to his future career; it was followed by the semi-autobiographical *Sons and Lovers* (1913). Meanwhile he had fallen in love and eloped with Frieda von Richthofen, the German wife of an English scholar, Ernest Weekley, whom he married in 1914. Such a marriage in wartime, added to his bitter class-consciousness, heightened the persecution mania from which he had always suffered. Expelled from Cornwall in 1917 as a suspected German spy, he became a restless traveller after the war, living in Italy, Germany, Ceylon, Australia, the US (New Mexico) and Mexico. Books from this period include *Sea and Sardinia* (1921), *Kangaroo* (1923), and *Mornings in Mexico* (1927). He finally settled on the French Riviera and died near Nice. The novels reflect the often contradictory emotional and intellectual impulses stirred by the circumstances of his life and the theories he formed in an attempt to build up a personal philosophy that would enable him to cope with them. Thus the mother-son relationship becomes the basis of a theory that the instincts of the blood are superior to the reasonings of the mind; he wrote: ‘My religion is in the blood, the flesh, as being wiser than the intellect.’ In rebellion against his Puritan background he stands for sexual freedom and frankness, but though in the long-banned *Lady Chatterley’s Lover* (1928) the language of the gamekeeper-lover is wilfully coarse, the main impression left by the lovemaking scenes is one of deep tenderness. To be set against this attitude to sex is his vision of woman as an inert consumer of man’s vitality, keeping him earthbound and preventing his spirit and intellect from taking wing. Lawrence was torn and almost destroyed by these inner conflicts.

Among his other novels were *Women in Love* (1921), *Aaron’s Rod* (1922) and *The Plumed Serpent* (1927). His short stories, in such collections as *The Woman Who Rode Away* (1928), range over many countries and many themes, including the macabre, his poetry (collected 1932) is vivid and sensitive. He remains one of the most important and controversial influences in 20th-century literature. He disliked and dismissed Joyce, and the feeling was mutual. *The Plumed Serpent* (1926) suggests some affinity to Fascism.

**Lawrence, Ernest Orlando** (1901–1958). American physicist. Professor of physics at the University of California 1928–58, in 1930 he proposed a machine that could accelerate atomic particles to enormous speeds and then use them to bombard atoms. He constructed (1931) the first model of such a machine, which he called the cyclotron and used it to carry out transmutation of elements and to produce artificial radioactivity. He was awarded the Nobel Prize for Physics (1939).

**Lawrence, John Laird Mair Lawrence, 1st Baron** (1811–1879). British administrator, born in Yorkshire. He joined the East India Co. in 1830, serving for almost 30 years as an administrator, judge and tax collector in Calcutta, Delhi and the Punjab. As a moderate reformer, he curbed the power of Indian chiefs and was able to raise an army of 60,000 during the Indian Mutiny. Direct Crown rule was imposed from 1858 and Lawrence returned to London to organise the new administrative system. As Viceroy of India 1863–69, he built railways, irrigation and sanitation systems.

**Lawrence, Sir Thomas** (1769–1830). English painter, born in Bristol. Son of an innkeeper, he entered the Royal Academy Schools in 1787 and in 1789 achieved instant fame with a picture of Queen Charlotte (now in the National Gallery, London). He became ARA (1791), court painter (1792), RA (1794), and President of the Royal Academy 1820–30. He was the most prolific and fashionable portrait painter of his time, and, though with so large an output he is often slick and over-facile, a masterly sense of character is shown in many of his portraits of royalty and celebrities, notably of the delegates to the Congress of Vienna (1814–15), now at Windsor Castle. His best portrait was of Lady Peel, now in the Frick Gallery, New York. He was a connoisseur who helped acquire the Elgin Marbles and works by Michelangelo and Raphael for the new National Gallery.

**Lawrence, T(homas) E(dward) (known as Lawrence of Arabia)** (1888–1935). British archaeologist, soldier and writer, born in Tremadoc, North Wales. Son of Sir Thomas Chapman, Baronet, he became interested in medieval studies at Oxford and visited (1910) Palestine and Syria to study the castles of the crusaders, which he subsequently vividly described. From 1911 to 1914 he was in Syria engaged in archaeology and surveying. When Turkey entered World War I, Lawrence, with his intimate knowledge of Arabs and their language, was sent by Military Intelligence in Egypt to organise Arab resistance behind the Turkish lines. In this, he worked closely with the emir Faisal, later King of Iraq, whose close friend he became. He later described his exploits and experiences in *The Seven Pillars of Wisdom* (1926) and its shortened form *Revolt in the Desert* (1927). He declined the award of a KCB (1918), and suggestions that an OM was offered are implausible. At the Paris Peace Conference (1919) he championed the Arab claim to independence. He regarded its refusal as a betrayal, and in consequence, after brief service in the Colonial Office 1921–22, he sought anonymity in the RAF as Aircraftsman Ross. He was a friend of Shaw, *Hardy* and *Forster*. Publicity caused him to disappear once more, but he returned to the RAF under the name of Shaw and served in India 1927–29 in a clerical post. He published a colloquial prose
translation of *Homer's *The Odyssey* (1932). He was killed in a motorcycling accident. The complex character of this scholar-hero has been a constant subject of speculation and controversy in books, plays and films.

**Lawson, Henry** (Hertzberg) (1867–1922). Australian writer. Of Norwegian descent, he spent his boyhood moving from job to job throughout Australia. His first verses appeared (1887) in the Sydney *Bulletin*, and thereafter, though his travels continued, he gave his life to authorship and became one of the most important figures in the Australian literary tradition. His books of prose and verse, e.g. *While the Billy Boils* (1896), *On the Track and Over the Sliprails* (1900), provide an episodic panorama humorous, sentimental or tragic of Australian life in city and bush.

**Laxness, Halldor Kiljan** (original name Gudjonsson) (1902–1998). Icelandic novelist. Influenced successively by German expressionism, Roman Catholicism and Communism, he returned to introspective passivity. Some of his novels, all written in Icelandic, were translated into 30 languages, and include *Independent People* (1935), *The Fish Can Sing* (1957) and *Paradise Reclaimed* (1962). He was awarded the Nobel Prize for Literature (1955).

**Layard, Sir (Austen) Henry** (1817–1894). British archaeologist and diplomat, born in Paris. He worked in a solicitor's office 1833–39, then travelled through Turkey, Syria and Persia. Stratford Canning (later *Stratford de Redcliffe) used him as an unofficial diplomat agent (i.e. spy) from 1842 and also sent him to make archaeological investigations of Assyrian sites. At Nineveh (Mosul) and Babylon (1845–47 and 1849–51) he unearthed a great mass of sculptured material and cuneiform tablets (now in the British Museum), from which the history of Assyria has been largely deduced. In 1849 he found 12 tablets in Nineveh containing the Epic of *Gilgamesh*. Liberal MP 1852–57; 1860–89, he served as Under Secretary for Foreign Affairs 1852; 1861–66 and First Commissioner (i.e. Minister) for Works 1868–69. Ambassador to Spain 1869–77 and to the Ottoman Empire 1877–80, he assisted *Disraeli at the 1878 Congress of Berlin. He was an early enthusiast for *Piero della Francesca and Venetian glass, and published very successful volumes of autobiography.

**Leach, Bernard Howell** (1887–1979). British potter. The main influence on 20th-century ceramics in Britain, from 1909 he studied as a potter in Japan, and also visited artist potters in Korea and China. In 1920 he returned to England and with Shoji Hamada founded the Leach Pottery at St Ives. He subsequently practised and taught the Japanese tradition, bringing back into English ceramics a close relationship between artist and raw material, which had almost been lost. He received the CH in 1973.

**Leacock, Stephen** (Butler) (1869–1944). Canadian humorist and political scientist, born in Hampshire. His family migrated to Canada in 1875. He studied in Toronto and Chicago, was professor of economics and political science at McGill University, Montréal 1908–36 but is best remembered for his humorous essays and stories, e.g. *Literary Lapses* (1910), *Nonsense Novels* (1911), and *Sunshine Sketches of a Little Town* (1912). It was a fresh vein of humour that he discovered and one that brought him sudden and immense popularity. Later he turned to more general literature, e.g. *My Discovery of England* (1922).

**Leahy, William Daniel** (1875–1959). American Fleet Admiral. Close to Franklin D. *Roosevelt from 1913, he became Chief of Naval Operations 1937–39. As Ambassador to France 1940–42 he was sympathetic to *Pétain and hostile to de *Gaulle, returning to serve as Roosevelt's Chief of Staff 1942–45. In December 1944 he was promoted to Fleet Admiral, the first in US history. He opposed the use of the atomic bomb against Japan but continued under *Truman until 1949, pushing a hard line in the Cold War.

**Leakey, Louis Seymour Bazett** (1903–1972). English archaeologist. Son of a Kenya missionary, Leakey went to England to study at Cambridge taking a PhD in African prehistory. He was much influenced by the anthropologist, A. C. Haddon. In 1924 he took part in an archaeological research expedition to Tanganyika (Tanzania) and from 1926 led his own expeditions to East Africa. Palaeontological work with his wife *Mary Douglas, (née Nicol) (1913–1996), on the Miocene deposits of western Kenya led him to discover the skull of *Proconsul africanus, the earliest ape skull then found. His archaeological investigations led him to the Acheulian site of Olduvai, in the Rift Valley where the skull of *Australopithecus boisei, and the first remains of *Homo habilis, a hominid dated at some 1.7 million years, were found. Leakey's archaeological work on the early hominids was set out in many books of which the most important are *The Stone Age Cultures of Kenya* (1931) and *The Miocene Hominidae of East Africa* (1951). Other skulls have since been discovered of the founders of Acheulian culture at Olduvai, dubbed *Homo erectus. Leakey's son Richard Erskine* (1944– ) discovered hominid remains in tufas dating back perhaps 2.5 million years. He directed the National Museum of Kenya 1974–89, broke with President *Moi and formed his own political party, the Safina, in 1995. He lost both legs in an aircraft crash.

Lear, Edward (1812–1888). English artist and humorist. He worked for the Zoological Society, making ornithological drawings, and was then engaged by the 15th Earl of Derby to provide plates for *The Knowlesy Menagerie* (1846). It was for his grandchildren that he wrote the immortal *Book of Nonsense* (1846) which contains the ever popular 'The Owl and the Pussy-Cat went to sea/In a beautiful peagreen boat'. His travels in Greece, Italy and elsewhere are described in books illustrated by his own delightful line and tone drawings.

Leavitt, Henrietta Swan (1868–1921). American astronomer, born in Massachusetts. She worked as a stellar photographer at the Harvard Observatory, and developed new techniques for determining the magnitude of stars. She discovered 4 novas and 2,400 stars. In 1912 she discovered that in the Cepheid variable stars there is a highly regular cycle of fluctuation in brightness determined by the star's luminosity. This had a profound influence on Edwin *Hubble*.

Lebrun, Albert François (1871–1950). French politician. A Left Republican Deputy 1900–20, Minister for the Colonies 1911–13, 1913–14, Minister for Liberated Regions 1917–19, Senator 1920–32 and President of the Senate 1931–32, he was elected President of the Republic in 1932 and re-elected in 1939. On France's collapse (1940) in World War II, unable to assert any authority, he was dismissed by Marshal *Pétain*.

Lebrun, Charles (1619–1690). French artist. He first studied in Rome and was much influenced by *Poussin*. With the support of *Colbert* he became something akin to an artistic dictator in the reign of *Louis XIV*. He was a leading light in the newly founded Académie Royale and was appointed director of the tapestry factory of Les Gobelins. With these positions he was able to direct and combine the works of artists in different fields into a single decorative scheme. He can be regarded as the virtual creator of the Louis XIV style and it is against this setting that his vast and rather overpowering pictures must be judged. Much of his work is in the Palace of Versailles, where he decorated the state apartments (1679–84).

Le Brun, (Marie) Elisabeth Louise (née Vigée) see *Vigée Le Brun*, (Marie) Elisabeth Louise

Lecky, William Edward Hartpole (1838–1903). Anglo-Irish historian, born near Dublin. Educated at Trinity College, Dublin he had independent means and devoted himself to research. He wrote *Rationalism in Europe* (1865) and *A History of European Morals* (1869), but his great work was *A History of England in the Eighteenth Century* (8 volumes, 1878–90) in which ideas and institutions are given as much prominence as political events. Secular, sceptical and conservative, progressive but pessimistic, and an opponent of Home Rule for Ireland, he was Unionist MP for Trinity College Dublin 1895–1902 and received the OM (1902).

Leclerc de Hautecloque, Philippe François Marie (1902–1947). French general. He dropped the title Vicomte when, after the collapse of France (1940), he joined the Free French forces under de *Gaulle*. He showed his brilliance when (1942) he led an expeditionary force from the Chad for 2,400 km across the Sahara to join the British in the Western desert. Later he was a divisional commander in Tunisia (1943) and in the campaign (1944) for...
the liberation of France. Commander-in-Chief in Indochina 1945–46, he was killed in an air crash and posthumously created a marshal.

**Le Clézio, Jean-Marie Gustave** (1940–). French-Mauritian novelist, born in Nice. Educated in Britain and France, he worked in the US, Thailand, Panama and Mexico. He wrote in a variety of forms and his themes turn on exile, migration, childhood and ecology. *Les Géants* (*The Giants* – 1973), published by Vintage Classics is an attractive introduction. Like *Sterne and *Perec, he experiments with form, inserting diagrams and even advertisements in his text. He won the 2008 Nobel Prize for Literature as an 'author of new departures, poetic adventure and sensual ecstasy, explorer of a humanity beyond and below the reigning civilization' but little of his work has been translated into English.

**Le Corbusier**, Charles-Édouard Jeanneret (1887–1965). Swiss-French architect, town planner and writer, born in La Chaux-de-Fonds, Switzerland. Son of a planter, he went to Brittany (1837) to study law which he abandoned for literature. His family recalled him but by 1845 he was again in France struggling to make a living by journalism. He took part in the revolution of 1848 but, disillusioned by its result, abandoned politics. His first work *Poèmes antiques* appeared in 1852; his *Poèmes barbares* (1862) attracted more attention. He became the recognised leader of the Parnassian group of poets who in a reaction from Romanticism and subjective emotionalism sought objectivity and perfect form. He also produced adaptations of the Greek dramatists and translations of classical authors from *Homer* to *Horace*; his *Poèmes tragiques* was published in 1884. But he was moved as much by hatred of the present as by love of the past. In his disillusion he saw history as a series of stands, in which one by one the upholders of strength and beauty perished. Apart from his poetry he published historical works anonymously or as 'Pierre Gosset'. In 1886 he was elected to the Académie Française.

**Le Corbusier** (Charles-Édouard Jeanneret) (1887–1965). Swiss-French architect, town planner and writer, born in La Chaux-de-Fonds, Switzerland. Son of a craftsman in enamel, he was trained at a local art school and tried his hand at Art Nouveau in Italy and Vienna, before he went in 1908 to Paris where he achieved some success among the modern artists who followed *Cézanne. From 1916, however, he turned almost exclusively to architecture. His aim, expressed in print in *Towards a New Architecture* (1922), being to make use of engineering techniques (steel frameworks, concrete etc.) not merely functionally but to give artistic freedom to the architect in his endeavour to provide brighter living in terms of air, sunlight and space. Rooms leading into one another with movable partitions were among his methods for achieving this. He designed many interesting buildings in France and elsewhere, but perhaps the most impressive illustration of his ideas is the Unité d'Habitation (1952) at Marseille, a great block of two-storey maisonettes with shops, recreation facilities etc., making a complete community – vertical living as it was called. Though much of the work of his imitators is merely monumental, in Le Corbusier himself the artist is always uppermost. His Swiss House (1932) in the Cité Universitaire, Paris, has been described as ‘a precise and monumental interplay of form within light’ and the chapel Notre-Dame-du-Haut at Ronchamp, France (1950–55) as a ‘tense dynamic rhythm of plastic forms’. Le Corbusier was chosen to design (1951–56) Chandigarh, the new capital of the Punjab. Through his writings and his drawings, despite his comparatively few finished works, he was one of the most important influences on modern architecture.

**Lederberg, Joshua** (1925–). American geneticist. Educated at Columbia and Yale, he shared the Nobel Prize for Medicine with G. W. Beadle, and E. L. Tatum for their work on the sexual recombination of bacteria.

**Ledoux, Claude Nicolas** (1736–1806). French neoclassical architect, born in Champagne. He studied in Paris and reacted against the prevailing Baroque style. A Utopian, he planned an ideal city at Chaux, reflecting visionary Enlightenment concepts. His masterpiece, the Royal Saltworks at Arc-et-Senans, near Besançon, built 1775–80, is a large semi-circular complex, magnificently restored, inscribed on the World Heritage List in 2009. He designed many elegant toll-gates which were demolished during the Revolution.

**Le Duan** (1908–1986). Vietnamese politician. Born to an Annamese peasant family, he worked on the railways, became an effective guerrilla and was jailed (1930–36 and 1940–45). General-Secretary of *Ho's Lao Dong party* (1960–86), he was regarded as a pragmatist.

**Lee**, (Nelle) Harper (1926–2016). American novelist, born in Alabama. *To Kill a Mockingbird* (1960) won the Pulitzer Prize and was a successful film. She received the Presidential Medal of Freedom in 2007. *Go Set a Watchman*, written before *Mockingbird*, but describing events 20 years later, was published in 2015 when the author was disabled by illness.
Lee Kuan Yew (1923–2015). Singaporean politician. Educated at Raffles College, Singapore, and Fitzwilliam College, Cambridge, he was called to the bar in London (1950), and returned to Singapore as a trade union adviser. He founded the People's Action Party (PAP) in 1954, originally accepting Communist support. He was elected to the Legislative Council in 1954 and took a leading role in the negotiations that led to the granting of full self-government for Singapore (1959). The PAP defeated David Marshall's Labour Front in 1959. As Prime Minister 1959–90 he followed pro-Western and moderately authoritarian rule, encouraged economic growth and technological development. His left-wing associates broke away shortly after his appointment, but their efforts against him were defeated by a referendum in 1962. His only major mistake was taking Singapore into the new Federation of Malaysia in 1963. He underestimated the strength of Malay-Chinese hostility and was forced to withdraw in 1964. Politically, he moved steadily from Left to Right. His approach combined Confucian philosophy, the puritan work ethic and Hobbesian pessimism about human nature, and was an enthusiast for capital and corporal punishment. He was an enthusiast for intimidating opponents, controlling the media, short hair, clean streets and high execution rates. Made an honorary CH (1970) and GCMG (1972) in 1990 he was succeeded by *Goh Chok Tong, but remained in the government as Senior Minister 1990–2004 and Minister Mentor 2004–11. His son Lee Hsien Loong (1952– ), educated at Cambridge and Harvard, became a soldier, Deputy Prime Minister 1990–2004 and Prime Minister 2004–

Josey, A., Lee Kuan Yew. 1968.

Lee, Robert E(dward) (1807–1870). American Confederate general, born in Stratford, Virginia. He was the son of *Henry Lee (1756–1818), a brilliant cavalry commander in the War of Independence, known as ‘Light Horse Harry’, friend of *Washington and Governor of Virginia 1792–95. Robert E. Lee served in the Mexican War (1846–48) and gained rapid promotion. He was superintendent (1852–55) of the military school at West Point, and in 1859 led the force that suppressed John *Brown's anti-slavery rising at Harper's Ferry. When the Civil War broke out (1861), although personally opposed both to slavery and secession, as a Virginian he supported the Confederacy, and in 1862 was given supreme command in Virginia. Though in the Richmond campaign of that year he was outnumbered, he manoeuvred to gain local superiority at decisive points and thus discomfited McClellan, the Union commander. Having disposed of Pope by a threat to his rear, he boldly invaded Maryland. Though he had a narrow escape at Sharpsburg was able to retire almost without loss. In 1862 and 1863 the tactical and strategic skill which enabled him to see the enemy's move was nearly always apparent. Gettysburg, Pa. (July 1863) was the turning point of the war, the most northerly battle and the one with the greatest loss of life, both sides fighting to the point of exhaustion. But *Meade won the day. By 1864 the disparity in numbers was having its effect, but Lee still held his opponent, *Grant, at bay by a clever use of field fortifications. The long postponement of the inevitable ended with the surrender at Appomattax Courthouse (April 1865). Lee, with his modesty, generosity and superb skill, has become almost a legendary hero to southerners and northerners alike. Lee became President of Washington College (now Washington and Lee University), Lexington, Va. 1865–70.

Lee, Sir Sidney (Solomon Lazarus) (1859–1926), English editor. He succeeded Sir Leslie *Stephen and was Editor in Chief (1891–1917) of the Dictionary of National Biography. His own numerous books included biographies of *Shakespeare, Queen *Victoria and *Edward VII.

Leeds, 1st Duke of see Danby, Thomas Osborne, Earl of

Leeuwenhoek, Antoni van (1632–1723). Dutch naturalist, born at Delft. Apprenticed to a draper, he often used a lens to examine the texture of cloth and developed a method of grinding optical lenses to give greater magnification. He made many simple single lens microscopes and became a self-taught student of anatomy and biology. He observed bacteria and protozoa and described spermatozoa. He demonstrated the blood circulation through the capillaries, was the first to describe blood corpuscles accurately and made important observations of the structure of muscle, hair, teeth, skin and eye. His equally valuable zoological work revealed the Infusoria and Rotifera and disproved the idea of spontaneous generation. He was *Vermeer's executor (1675) and secured election as FRS (1680).

Dobell, C., Antony van Leeuwenhoek and His Little Animals. rev. 1958.

Legendre, Adrien Marie (1752–1833). French mathematician. Through the influence of *d'Alembert he became (1777) professor of mathematics at the École Militaire, Paris, transferring (1795) to the École Normale. He carried out important researches on the theory of elliptical function, and wrote a treatise on the theory of numbers.

Léger, Fernand (1881–1955). French painter, born in Argenton, Normandy. Son of a farmer, he went to Paris (1905) to follow art. Influenced at first by Impressionism and Cézanne, he began to develop his individual style from the time (1910) he met Picasso and Braque and joined in the first Cubist exhibition. Service in World War I drew his attention to the possibilities inherent in mechanical contrivances of all kinds, wheels, cogs, shining surfaces etc. which he introduced into his paintings with his broad
planes and bright colours. As his art developed, his pictures became warmer and more human, acrobats began to appear, boys with bicycles, and suggestions of landscape. His versatility was shown in murals, tapestries, stained-glass windows (at Audincourt) and mosaics.

Delevoy, R., Léger. 1962.

**Lehár, Franz** (Ferenc) (1870–1948). Hungarian composer. After studying music he went to Vienna as a conductor of military bands. He then turned to composing operettas which won great popularity, e.g. *The Merry Widow* (1905).

**Lehmann, Lotte** (1888–1976). German soprano. In Vienna 1916–38, then in the US, she achieved early success in Strauss operas, and between 1924 and 1946 was the outstanding Marschallin in *Strauss's Rosenkavalier*. She also excelled in *Mozart*, *Wagner* and as Leonora in *Fidelio* and was an accomplished lieder singer and teacher.

**Leibniz, Gottfried Wilhelm, Baron von** (1646–1716). German philosopher and mathematician, born in Leipzig. Son of a professor at Leipzig University, he studied law and philosophy there, and then entered the service of the Archbishop-Elector of Mainz. A diplomatic mission to Paris gave him the opportunity of four years' (1672–76) intensive study and contact with other leading scientists. He then became librarian to the Duke of Brunswick, on his return journey visiting England, where he was made a fellow of the Royal Society (1673) for his invention of the calculating machine.

One of Leibniz's fundamental beliefs was that the search for truth should be the common task of men of all nations. To this end he tried to invent a universal language and at the same time worked on a system of symbols, like those of algebra, to be used in logic so as to give it a mathematical basis. It was this work that led to his discoveries relating to the differential and integral calculus, for which he invented the notation still used. The accusation that his system was stolen from *Newton* was completely unfounded.

As a philosopher, Leibniz was influenced by *Descartes* and also by *Spinoza*, whom he met. His metaphysical system, which has interested later philosophers (notably Bertrand *Russell*), grew out of a dissatisfaction with existing doctrines, including the atomic view of the universe. He argued that everything consists of certain substances (monads) which are immaterial, have no extension whatever in space and do not interact in any way. To explain the fact that these independent monads do not seem to act in unison – go together to make up things – he supposed that God had instituted what he called a 'pre-established harmony', i.e. monads move in accordance with a built-in plan that gives rise to the world as we know it. Leibniz, whose versatility extended to religion (an attempt to reunite the Churches) history (publication of documents relating to the house of Brunswick), and codification of law, was satirised by *Voltaire* in *Candide* as Dr Pangloss, who believed that 'everything happens for the best in the best of all possible worlds'. Optimism is central to Leibniz's beliefs and is the subject matter of theodicy (*Essais de Theodicée sur la bonté de Dieu, la liberté de l'homme et l'origine du mal*, 1710). Nevertheless, he died alone and neglected: like Newton, he never married.

**Leicester of Holkham, 1st Earl of** see Coke, Thomas William, 1st Earl of Leicester of Holkham.

**Leicester, Robert Dudley, Earl of** (1532–1588). English courtier. Son of the Duke of *Northumberland*, he was sentenced to death with his father for their attempt to secure the crown for Lady Jane *Grey*. Pardoned and freed (1554) he came into court favour with the accession of Queen *Elizabeth*, his childhood friend at *Henry VIII's* court. Offices and emoluments were lavished upon him, and when (1560) his wife, Anne Robsart (married 1550), was found dead at the foot of the stairs at Cumnor Place near Abingdon, where she lived in seclusion, it was rumoured that Leicester (with or without Elizabeth's complicity) had contrived her death in order to be free to marry the Queen. But though Elizabeth stood by him and in 1564 created him Earl of Leicester, the prospect of their marriage became increasingly remote. His famous reception of her (1575) at Kenilworth (described in Scott's novel of that name) marked their reconciliation after her anger at the news of his secret marriage to the dowager Lady Sheffield. A bigamous union (1578) with Lettice, the widowed Countess of Essex, was his last essay in marriage. In 1585 he was given command of an English army to support the Dutch in their struggle for independence with the Spaniards, and, in spite of the military incapacity he then displayed, he was chosen in the Armada year (1588) to command the forces gathered at Tilbury to prevent a Spanish landing. The celebrations of her fleet's victory in October were clouded for Elizabeth by news of her favourite's death.

Jenkins, E., Elizabeth and Leicester. 1972.

**Leichhardt, Friedrich Wilhelm Ludwig** (1813–1848). Prussian explorer. He arrived in Sydney in 1841, and led an expedition 1843–45 from Moreton Bay near Brisbane to the Gulf of Carpentaria. In November 1847 he again started from Moreton Bay in an attempt to cross the Continent from east to west, but, last heard of in the following April, he disappeared without trace.
Leif Ericson (Eriksson) (c.970–1020). Norse explorer. Reputedly the first European to discover the American continent, and son of *Eric the Red, first coloniser of Greenland, he sailed along the North American coast about the year 1000, and after passing ‘Helluland’ (Baffin Island?), ‘Markland’ (almost certainly Labrador), he landed in ‘Vinland’ (Newfoundland), basing himself at L’Anse-aux-Meadows. A later attempt to settle Vinland failed.

Leigh, Vivien (Vivian Mary Hartley) (1913–1967). English actor, born in India. Remarkable for her delicate beauty, she made her film debut in 1934. She won Academy Awards as Scarlett O’Hara in Gone With the Wind (1939) and Blanche du Bois in Streetcar Named Desire (1951). Married (1940–60) to Laurence *Olivier, she appeared on stage with him in *Shakespeare, *Sheridan and *Shaw.

Leighton, Frederic Leighton, 1st Baron (1830–1896). English painter. After spending most of his early life in Italy, he studied in Dresden and Paris and became the leading neoclassical painter of the Victorian era. His nudes, refined almost to the point of sexlessness and elegantly posed in Grecian architectural settings, became immensely popular. He was President of the Royal Academy 1878–96. The first British artist to be made a peer, he died on the day his elevation was announced.

Lely, Sir Peter (Pieter van der Faes) (1618–1680). Dutch painter. He lived in England (from 1641 and became painter at court in succession to *Van Dyck. Although after the parliamentary victory in the Civil War he managed to adapt his style to the demands of his new patrons, he was happier at the Restoration to revert to court paintings. His most famous pictures are the Beauties of King *Charles II’s entourage (now at Hampton Court), and the more remarkable series, because more expressive of character (now at Greenwich), of the 12 British admirals in the Second Dutch War. Despite his large output, Lely, who amassed fame, property and a knighthood (1680), seldom became perfunctory.

Lemaître, Georges-Henri Joseph Édouard (1894–1966). Belgian astronomer and mathematician, born in Charleroi. He began to study engineering, served in World War I and was then ordained as a priest in 1923. He studied physics at Cambridge and MIT and became professor of astrophysics at Louvain in 1927. In that year in a Belgian scientific journal he proposed that the universe began with a small ‘cosmic egg’ which has been expanding ever since, and in 1929 this was confirmed by Edwin *Hubble’s observations. In 1948 George *Gamow called this the ‘big bang’. Lemaître became President of the Pontifical Academy of Science 1960–66. An asteroid (1565 Lemaître) was named for him.

Lemon, Mark (1809–1870). English author and journalist. He wrote many plays, novels and children’s stories, but is best remembered as the founder, with Henry Mayhew, of Punch, of which he was sole editor from 1843 until his death.

Lenard, Philipp Eduard Anton (1862–1947). German physicist, born in Bratislava (then in Hungary). He studied at Budapest and Heidelberg universities and held chairs in theoretical physics in Kiel 1898–1907 and Heidelberg 1907–31. He pioneered research into cathode rays. In 1894 he first obtained cathode rays outside a tube, by allowing them to pass from the tube through a window of aluminium foil; such rays became known as Lenard rays. His observations helped to prepare the way for *Rutherford’s first atomic model in 1911 – he had suggested a model of the structure of the atom as early as 1903. He also studied the ejection of electrons from metals by the action of ultraviolet light, and found that the energy of the emitted electrons is independent of the intensity of the incident radiation, and depends only upon its wavelength. He won the Nobel Prize for Physics in 1905. Under *Hitler he was an ardent proponent of ‘Aryan science’.

Lenclos, Anne (called Ninon de Lenclos) (1620–1705). French courtesan. She was a woman of intelligence and great beauty and amongst her many lovers (and friends) were distinguished men such as *La Rochefoucauld. Her salon in Paris was a meeting place for literary figures. In her last years she took a special interest in her lawyer Arouet’s son, who afterwards took the name *Voltaire.

Magne, E., Ninon de Lenclos. 1948.

L’Enfant, Pierre Charles (1754–1825). French architect. An engineer in the French army, he served on the American side in the War of Independence. He was commissioned (1791) by George *Washington to prepare the original plans for Washington, the new capital city. The central feature of his grandiose plan was the dome-surmounted Capitol, built upon a small hill and approached by four great converging avenues, thus dominating the city. The plans, clearly influenced by Versailles, were discarded as far too extravagant and he was dismissed (1792). His designs were later restudied and the existing city, built up over the years, follows his original plan fairly closely.

Lenglen, Suzanne (1899–1938). French lawn tennis player. She dominated women’s lawn tennis in the years following World War I and raised the standard of women’s play to a height far beyond any previously reached. She was women’s singles champion at Wimbledon 1919–23, 1925. In 1926 she turned professional.

Lenin, Vladimir Ilyich (V.I. Ulyanov) (1870–1924). Russian revolutionary and creator of the Soviet state, born in Simbirsk. Son of a school inspector, his mother was the daughter of a doctor and from this
middle-class family sprang two revolutionary sons. The elder, Aleksandr, took part in a revolutionary conspiracy to assassinate Tsar *Aleksandr III and was hanged in 1887. The younger, who was to take the name Lenin, studied law and was expelled from Kazan University for subversive activity. He abandoned the legal profession and after having studied Marx intensively went to St Petersburg where he organised the illegal League for the Liberation of the Working Class. Arrested in 1897 he was exiled for three years in Siberia, where he married a fellow revolutionary, Nadezhda *Krupskaia. He then left Russia to pursue his revolutionary activities abroad.

At a conference (1903) in London the Russian Social Democratic Labour party split into two factions the Mensheviks (‘minority’) and the more extreme Bolsheviks (‘majority’) dominated by Lenin. He was clandestinely in Russia for the abortive risings of 1905 but fled to Switzerland in 1907. From there and other places in Europe he continued, through his political writings and underground organisation, to control the revolutionary movement in Russia. In 1912 the Bolsheviks became in fact (though not formally until 1917) a separate party upon the expulsion of the Mensheviks from the RSDLP. During World War I Lenin stayed in Switzerland to await a chance to lead a revolution in Russia. On the outbreak of the first Russian Revolution (March 1917) the Germans, with the object of weakening Russian war efforts, brought Lenin and a group of supporters through Germany from Switzerland in a sealed train and sent them to Petrograd (as St Petersburg had been renamed) via Stockholm and Helsinki. He then set about overthrowing the provisional government of *Kerensky. Under the slogan ‘All power to the Soviets’ he seized power in a second revolution in November. He was President of the Council of People’s Commissars (in fact Premier) 1917–24 and Chairman of the Central Executive Committee of the USSR (i.e. President) 1919–24. He agreed to the severe terms of the Treaty of Brest-Litovsk to secure peace with Germany but the Red Army had to struggle until 1921 to overcome the various counter-revolutionary movements of the ‘white’ Russian leaders *Denikin and *Kolchak, who had some support from the Western Allies. Meanwhile as Chairman of the Communist Party and a Politburo (Political Bureau) member 1917–24, Lenin was effectively dictator. In 1919 he established the Comintern (Communist International) to foster world revolution. In the chaotic economic conditions then prevailing it was impossible to carry through his projected communist revolution (War Communism). There was a temporary retreat into the New Economic Policy, which was a partial return to private enterprise. His health deteriorated rapidly after a gunshot wound (1918) and he was incapacitated by a stroke in 1922. After 1922 he lived at his dacha in Gorki, an outer suburb of Moscow, now Leninskie Gorki, and died there. Shortly before his death Lenin wrote a warning that “Stalin should be removed from his post as Secretary-General of the Communist Party. This was suppressed, and in the struggle for power after Lenin’s death between his chief lieutenants, *Trotsky and Stalin, the latter triumphed. Although in his writings Lenin was the chief theoretician of Marxism he was most important as a skilful revolutionary and a master of political and party organisation. Aleksandr *Yakovlev estimated that 8 million died in the Civil War and terror 1918–22 and 5 million more in the 1921 famine.

Petrograd was renamed Leningrad five days after his death; the name St Petersburg was restored in 1991. Lenin’s embalmed body was displayed in a mausoleum in Red Square, Moscow, which became a national shrine visited by thousands daily. Though for a time Stalin enjoyed an equal place with him before the Soviet public (and shown at his side in the Lenin Mausoleum 1953–61), Lenin was restored to primacy after *Khrouchev denounced the ‘personality cult’ of Stalin and, even after the collapse of the USSR, he still evokes a wary respect.

Lenoir, Jean Joseph Étienne (1822–1900). Belgian French inventor. He built the first internal combustion engine in 1859 (fuelled by lighting gas) and the first ‘horseless carriage’ followed in 1860. However, Lenoir’s machine was much less efficient than *Otto’s and he died poor.

Le Nôtre, André (1613–1700). French landscape architect. He succeeded his father as Chief of the Royal Gardens. Later (1657) he became ‘controller’ of the royal buildings as a result of the impression he created by the park and grounds (1656–61) laid out at Vaux-le-Vicomte for Nicolas *Fouquet. Among his other parks were those of St Germain-en-Laye, St Cloud and Chantilly. His greatest achievement was the gardens of Versailles (1662–90).

Lenthal, William (1591–1662). English politician. He was Speaker of the House of Commons 1640–53, 1654 and 1659–60, famous for refusing *Charles I access to the Commons (1642) when he sought to arrest five members, and for being dragged from the chair when *Cromwell forcibly dissolved the Long Parliament (1653).

Lenya, Lotte (1898–1981). Austrian-American singer and actor. She married the composer Kurt *Weill in 1926, created the role of the prostitute Jenny in *Die Dreigroschenoper (1927), appeared on the Broadway stage and in films, e.g. *From Russia with Love.
Leo I, St (the Great) (c.390–461). Pope 440–61. Born in Rome of Tuscan parents, a noble character and distinguished theologian, he did much to establish the primacy of Rome. His exposition of the divine and human natures of Christ was accepted by the Council of Chalcedon (451). His resolute bearing persuaded *Attila the Hun to spare Rome but he could not save the city from sacking by the Vandals (455).

Leo III (known as *the Isaurian*) (c.680–740). Byzantine Emperor 717–40. He was a successful general who rebelled against the feeble Theodosius and usurped the throne. After saving Constantinople from the Saracens he stabilised Asia Minor, strengthening the administration by subdividing the Asiatic provinces. He is chiefly remembered for the pronouncement (726) by which he tried to suppress the use of religious pictures and images (icons) and so started the great iconoclast controversy.

Leo X (Giovanni de’ Medici) (1475–1521). Pope 1513–21. Second son of Lorenzo the Magnificent (*Medici*) of Florence, he was made a cardinal at the age of 13. He led a graceful, cultured life and used the opportunities provided by his position as Pope to become, in the tradition of the Medici, a munificent patron of the arts. The tapestries of the Sistine Chapel were executed by *Raphael* on his orders and he invited *Leonardo da Vinci* to Rome. He proved his skill in diplomacy by maintaining a balance in Italy between *François I* of France and the emperor *Charles V*. However, he underrated the influence of *Luther* and took no active steps to forestall him by initiating the necessary reforms.

Leo XIII (Vincenzo Gioacchino Raffaele Luigi Pecci) (1810–1903). Pope 1878–1903. Son of a nobleman, he studied law but became a priest in 1837, Apostolic Nuncio to Belgium 1843–48 and Bishop of Perugia 1848–78. Elected on the third ballot to succeed *Pius IX*, much of the credit for the modernisation of the papacy can be ascribed to him. In many encyclical letters he expounded his Church’s attitude to the social and political ideas of his day. He denounced both materialism and socialism but in his famous Rerum Novarum (1891) he analysed the conditions and problems of the working classes with generosity, understanding and realism, and in this and other letters, restated the Christian ideas in relation to the changing patterns of social life. In theology he asserted the pre-eminence of St Thomas *Aquinas* and directed that Thomism should be the basis of all priestly training. His attitude to primitive peoples was liberal and constructive and he encouraged a great increase of missionary activity. He achieved an important diplomatic success by bringing to an end the German Kulturkampf, *Bismarck*’s campaign to remove Catholic influence from education. In 1883 he opened the Vatican archives to scholars of all faiths and encouraged the study of astronomy and natural science. He published 86 encyclicals and is regarded as the most brilliant pope of recent times and also the oldest (dying at 93). His was the third longest pontificate (after Pius IX and *John Paul II*) and he became the first pope to be filmed, to record his voice, use a telephone or be driven in a motorcar.

Leonardo da Vinci see Fibonacci, Leonardo

Leonardo da Vinci (1452–1519). Italian artist, engineer and scientist, born at Vinci, near Empoli. He was the illegitimate son of a peasant woman and a Florentine notary who, being childless until 1476, treated him as a legitimate son. At 15 he was apprenticed to the Florentine painter and sculptor *Verrocchio*, in whose workshops he worked until 1481, having been accepted into the painters’ guild of Florence in 1472. Unique in the history of art because of the exceptional scope of his intellect, his powers of observation and the versatility and strength of his technique, his interest in natural science was sustained by a conviction that knowing how to see is the basis of understanding nature. His diverse talents led him to attempt an enormous variety of work, much of it never completed.

In 1482 he went to the court of Ludovico *Sforza*, Duke of Milan, as painter, sculptor designer of court entertainments and technical adviser on military buildings and engineering. During his stay in Milan he painted the great (but severely damaged) mural The Last Supper (c.1495–97) and a version of The Virgin of the Rocks. He also began to write down his own theories of art, and to record his scientific observations in books of drawings and explanatory text. In 1499–1500 he returned to Florence, leaving again in 1502 to work for a year as military adviser to Cesare *Borgia*. In 1503 he began work on the mural painting The Battle of the Anghiari, which he never finished. Before returning to Milan in 1506 he had also begun three paintings which he worked on in subsequent years – Leda and the Swan (now lost, c.1500), The Virgin and Child with St Anne (1500) and Mona Lisa (La Gioconda, 1503–06). Sforza had been overthrown by the King of France in 1499, but Leonardo nevertheless returned to Milan as the King’s adviser on architecture and engineering. In 1513 he went to Rome, possibly expecting papal commissions which he did not receive, and in 1516 left Italy for France, appointed painter, architect and engineer to *François I*. Most of the rest of his life was devoted to finishing St John the Baptist and to editing his scientific studies. He died, unmarried, at Amboise.

His surviving work consists of 17 paintings definitely attributable, studies for two ambitious monuments which he never completed, and extensive writings. Notes and diagrams are all that survive of his varied and sometimes enormous civic engineering schemes.
His notebooks covered painting, architecture, mechanics and natural science, including plans for a flying machine and parachute, detailed studies on anatomy, embryology, bird flight and vortices. 6500 pages of his notes (written in mirror script) survive – perhaps one third of his output. Leonardo was a man of great sensitivity and compassion and a vegetarian.

Leoncavallo, Ruggiero (1858–1919). Italian operatic composer. He achieved fame and wealth with Pagliacci (1892), one of the most widely performed of all operas. His other works include La Bohème (1897), overshadowed by Puccini’s more successful work, and Zaza (1900). He wrote his own librettos.

Leonidas (d.480 BCE). King of Sparta and national hero of Greece. With only 300 Spartans he held the pass of Thermopylae, north of Athens, against the invading army of the Persian king, Xerxes, but after two days of heroic resistance, a path leading to his rear was betrayed to the enemy. Fighting to the end, Leonidas and every one of his men were killed.

Leontieff, Wassily Wassilief (1906–1999). American economist, born in Russia. Educated in Leningrad and Berlin, he taught at Harvard from 1931. He won the 1973 Nobel Prize for Economics for his development of input–output analysis, a study of the relationship within an economy between total inputs (raw materials, labour, manufacturing and related services) and total demands for final goods and services.

Leopardi, Giacomo, Conte (1798–1837). Italian poet. Described by critics as the greatest Italian lyricist since the 14th century, he suffered greatly from constant ill health. His parents distrusted his liberal ideas and he fled as soon as he could from the reactionary atmosphere of his home. He prepared an edition of *Cicero’s works for a Milan publisher, settled later in Florence and spent his last years in Naples. Apart from his works of scholarship and philosophy, he found in lyric poetry an instrument that proved sensitive to all his moods, mainly of disillusion with life as he found it. The main collection of his poems, I Canti (1836) has been translated into English many times.

Leopold I (1640–1705). Holy Roman Emperor 1658–1705. Ruler of Austria, Hungary and Bohemia, most of his reign was spent in a prolonged struggle with the Turks. In 1683 Vienna was saved only by the intervention of the Poles under Jan *Sobieski. In 1701 he joined the coalition against France to secure the Spanish throne for his son Charles in whose favour he had renounced his own rights (*Philip V of Spain).

Leopold I (1790–1865). King of the Belgians 1831–65. Son of Franz, Duke of Saxe-Coburg-Saalfeld, he fought with the Russian armies in the later stages of the Napoleonic Wars. He married (1816) *Charlotte, daughter of the British prince-regent (*George IV), but she died in childbirth a year later. Created a field marshal, KG and GCB, his connections with Great Britain gave him some insight into its political system which he used to good effect. In 1830 he refused the Greek throne, but in the following year was chosen as the first King of the Belgians. He ruled with such constitutional prudence that his country escaped the revolutionary tumults of 1848. Leopold was a trusted adviser of his niece Queen *Victoria, who married one of his nephews, *Albert.

Leopold II (1747–1792). Holy Roman Emperor 1790–92. Third son of the empress *Maria Theresa and brother and successor of *Joseph II, as grand-duke of Tuscany (from 1765) he had, among other reforms, abolished the death penalty and torture. As Emperor, he had no time to display his qualities and died before he could give effective aid to his sister *Marie Antoinette in revolutionary France.

Leopold II (1835–1909). King of the Belgians 1865–1909. Son of *Leopold I, during his reign Belgium’s industrial and colonial activities expanded greatly. In 1876, in collaboration with H. M. *Stanley, he founded (in his private capacity, not as king) an association to explore and exploit the Congo. In 1884 a European International Congress on African affairs sanctioned the establishment, under Leopold’s personal control, of a ‘Congo Free State’, from which he gained an immense fortune. Forced labour and other inhumane practices used by the administrators caused a scandal, following which Leopold transferred the Congo to the Belgian Government. At home, industrialisation proceeded rapidly and the attendant deterioration in social conditions led to labour troubles and political unrest. Energetic, rapacious and hypocritical, his personal life was disapproved by his conservative Catholic subjects. He was succeeded by his nephew *Albert I.

Léopold III (1901–1983). King of the Belgians 1934–51. Son of *Albert I, in 1926 he married Astrid, Princess of Sweden (1905–1935) who was killed near Lucerne when a car driven by Léopold crashed. During World War II, he surrendered to the Germans (1940), despite the opposition of his Cabinet. In 1941 he married morganatically Mary Lilian Baels (1916–2002), who was created Princesse de Réthy, but not queen. Both actions aroused intense hostility. After liberation a regency was created under his brother Charles and Leopold remained in Switzerland. In 1950 a plebiscite voted 57 per cent in favour of his return but following strikes and demonstrations he abdicated in favour of his son *Baudouin I.
Le Pen, Jean-Marie (1928– ). French politician. He graduated in law, served as a parachutist in Indochina and Algeria, became a follower of Pierre *Poujade and a deputy 1956–62. He was leader of the National Front 1972–2011, using his oratory and organisational skills to build up strong national support by advocating forced repatriation of non-European immigrants. His party won no seats in the French elections of March 1993 despite 12 per cent of the vote. In June 2002 he was runner-up in the first round of the election for President, losing heavily to *Chirac in the second, and in 2007 became the oldest presidential candidate in French history. His daughter Marine Le Pen (1968– ), a lawyer, succeeded him as Leader of the National Front 2011–. In 2015 she excluded her father from any role in the National Front for his persistent denial of the Holocaust and justification of French collaboration in World War II.

Lepidus, Marcus Aemilius (d.13 BCE). Roman noble. A strong supporter of Julius *Caesar, after his murder he joined with Mark *Antony and Octavian (*Augustus) in forming (43) the Second Triumvirate. In 36 Lepidus, who had been assigned Africa as his sphere of command, left there to seize Sicily. Augustus then deprived him of office.

Lermontov, Mikhail Yuryevich (1814–1841). Russian poet. Of Scottish descent, he became a cavalry officer (1832) but was exiled to the Caucasus for a year for publishing a revolutionary poem on the death of *Pushkin (1837). He was again banished in 1840 for fighting a duel, and in another duel in the following year he was killed. His poems reveal him as a true romantic: they consist mainly of lyrics, many inspired by the wild beauties of the Caucasus. The Demon (1839), a supernatural narrative poem, shows Byronic influence (indeed Lermontov has been compared with *Byron both for his passionate praise of freedom and for his impulsive character). In another vein is The Song of the Merchant Kalashnikov, which is imbued with the spirit of Russian folklore. Masquerade is the best known of his verse plays. His finest work was the short novel A Hero of Our Times (1840) an isolated masterpiece, but the first of the long line of Russian psychological novels.

Le Roy Ladurie, Emmanuel Bernard (1929– ). French historian. A pupil of Fernand *Braudel, he taught at the Collège de France 1973–99. He worked within the Annales tradition but made effective use of econometrics and anthropology, e.g. in Montaillou (1978) the story of a French village 1294–1324, which became an international best seller. Director of the Bibliothèque Nationale Paris 1987–94, he was particularly interested in environmental factors (e.g. the impact of climate change) and micro-history.

Lerroux, Alejandro (1864–1949). Spanish politician. Originally an ardent republican, he was exiled several times before 1931 but served as Foreign Minister 1931–33 and 1934–36 and Prime Minister 1933–34, 1935. His opponents denounced him as an opportunist.

Lesage (Le Sage), Alain René (1668–1747). French dramatist and novelist, born in Brittany. He started his literary career with translations from Latin, Greek and Spanish. His early plays too, were adapted from the Spanish and it was not until 1707 that his first original work appeared. *Turcaret a satirical comedy about financiers and considered the best work of its kind since *Molière, was produced at the Comédie Française in 1708. Lesage gained a greater reputation as a novelist with Le Diable boîteux (The Devil on Two Sticks) published in 1707. This was followed by a picaresque novel, Gil Blas de Santillane (1715–35), in which the hero climbs the ladder of success from robber's servant to a ministerial post and encounters on the way a wonderful array of characters in almost every class of Spanish society. This great work, which influenced *Smollett (who translated it) and Fielding, marked the peak of Lesage's achievement. He married in 1694 and lived quietly and happily with his wife and three sons.

Leschetizky (Leszetycki), Theodor (1830–1915). Polish pianist and teacher. A pupil of *Czerny, he toured widely but became famous as a teacher in Vienna: his students included *Paderewski, *Schnabel and *Horszowski. He was also a conductor and composer.

Leskov, Nikolai Semyonovich (1831–1895). Russian writer. Having visited many parts of Russia and met people of all classes, he was able to cover a wider range of Russian society than his contemporaries *Turgenev and *Dostoevsky. He was clever at catching individual oddities of appearance and speech, but though he often writes with irony, optimism is the keynote of his mood. The best known of his novels is The Cathedral Folk (1872) about the provincial clergy.

Lesseps, Ferdinand Marie, Vicomte de (1805–1894). French diplomat, born in Versailles. After resigning from the diplomatic service (1851), he revived his interest in the project he had conceived, during a visit to Egypt (1832), of constructing a canal across the isthmus of Suez. His opportunity came in 1854, when an old friend, Mohammed Said, became khedive. Funds were raised by loan and in 1860 work began. On the canal's completion (1869) international honours were showered upon de Lesseps, the hero of the hour. A grandiose plan to repeat his success, this time at Panama, was launched in 1879.

Work on a sea-level canal without locks began in 1881, but fever and the difficulties of the task exhausted the funds, and so caused the financial jugglery that brought disaster to the scheme and
disgrace to de Lesseps. Though his sentence of five years' imprisonment for fraud was quashed on technical grounds, he was a ruined man.

**Lessing, Gotthold Ephraim** (1729–1781). German dramatist and critic, born in Saxony. He studied theology at Leipzig University, went to Berlin (1748) and with a friend started a theatrical journal to which he contributed several articles including one on *Plautus*. A second journal of the same type followed (1754–58), and he resumed university studies in Wittenberg. Back in Berlin he formed a close friendship with the philosopher Moses Mendelsohn. In discussion and correspondence at this time he formulated his ideas that the natural drama of *Shakespeare* and his English successors was to be greatly preferred to the classical tragedies of *Corneille*, against which he waged incessant critical warfare. His own *Miss Sara Sampson* (1755) a tragedy of common life – a new type in Germany – exemplified his viewpoint, as does his second tragedy *Emilia Galotti* (1772). In between came one of the best German comedies, *Minna von Barnhelm* (1767), in which the influence of English writers is clear. In *Laokoon* (1776), an influential work on aesthetics, he assigns limitations to the various arts (unacceptable nowadays), e.g. that only static treatment of subjects should be attempted by the plastic arts. Lessing was secretary to the Governor of Breslau (1760–65) and was then (until 1769) occupied at Hamburg with another journal of theatrical criticism and comment. Eventually (1770) he settled permanently in Wolfenbüttel. Lessing was a great fighter for intellectual liberty and religious toleration to which subject his poem *Nathan der Weise* (1779) was devoted.

**Leszczyński, Stanislaw** (1677–1766). King of Poland 1704–09 and 1733–35. Son of a Count of the Holy Roman Empire, he became a protégé of *Charles XII of Sweden, who forced (and bribed) his election as king by the Polish Diet. When the Russians, under *Peter the Great, defeated Charles at Poltava (1709), Stanisław was deposed and went into exile in Pomerania, then Alsace. In 1725 his daughter Marie was married to *Louis XV of France but his son-in-law gave him little effective support in the War of the Polish Succession, which followed the second election (1733) of Stanisław as King of Poland, and he once more lost his throne. In compensation, he was made Duke of Lorraine and Bar 1738–66. An enlightened ruler and patron of the arts, his treatises on government reveal the influence of *Montesquieu*. His capital at Nancy became a model of city planning, with the superb Place Stanislas, Place de la Carrière and Place d'Alliance. He died at Lunéville, his second capital.

**Le Tellier, François Michel** see *Louveois, François Michel Le Tellier, Marquis de*.

**Lettow-Vorbeck, Paul Emil von** (1870–1964). German soldier. During World War I he defended German East Africa (now Tanzania) against General *Smuts in one of the most brilliant campaigns of colonial military history. He became active in right-wing politics, was a Reichstag member 1929–30, and an opponent of *Hitler.*

**Leverhulme, William Hesketh Lever, 1st Viscount** (1851–1925). British industrialist. He began his business career in his father's grocery at Bolton, Lancashire. In partnership with his brother he started the manufacture of soap from vegetable oils (instead of tallow). This product – Sunlight soap – proved to be the starting-point of one of the greatest industrial enterprises of the century. Port Sunlight on the Mersey (begun in 1888) was among the first factory centres to combine the needs of industry with model housing for the workers. By mergers and purchase the business continued to expand and, linked with its Dutch counterparts, came to form the great international combination, Unilever. Lever, who became a baronet (1911), a baron (1917) and a viscount (1922), devoted much of his wealth to public and private benefactions.

**Leverrier, Urbain Jean Joseph** (1811–1877). French astronomer. He taught astronomy at the École Polytechnique from 1839 and in 1846 was admitted to the Académie. In the turmoil that followed the revolution of 1848 he played a political role, was made a senator by Louis Napoléon (*Napoléon III) in 1852 and director of the Paris Observatory. From his study of the irregularities of the motions of the planet Uranus he was able to predict the position (independently predicted by J. C. *Adams) of the previously unidentified planet Neptune. Later he found the theoretical solutions that permitted him to construct more accurate tables of the movements of the sun and the more important planets.

Lévesque, René (1922–1987). Canadian politician. He was a journalist, foreign correspondent and broadcaster and a Liberal MP in the Quebec legislature 1960–70 when he founded the Parti Québécois. In 1976 he became Premier of Quebec, retiring in 1985.

Levi, Primo (1919–1987). Italian novelist, born in Turin. Trained as a chemist, he was a Partisan during World War II and survived Auschwitz. The experience haunted him and he committed suicide. His books include If this is a Man (1947), The Periodic Table (1975) and If Not Now, When? (1982).

Levi ben Gershon (Levi Gersonides of Avignon, also known as Ralbag) (c.1228–1344). Jewish philosopher, astronomer and Biblical commentator. His chief work, Wars of the Lord deals with the immortality of the soul, the nature of prophecy, God’s omniscience, divine providence, the nature of the celestial sphere and the eternity of matter. He wrote a notable commentary on *Euclid.

Levi-Montalcini, Rita (1909–2012). Italian neurologist, born in Turin. She worked with refugees, conducted research at St Louis 1947–77 and Rome (from 1969) and shared the 1986 Nobel Prize for Medicine for her work in isolating the nerve growth factor (NGF) in cells. She became a Senator for Life in 2001 and, in 2009, the first Nobel centenarian.

Lévi-Strauss, Claude (1908–2009). French social anthropologist, born in Brussels. He taught at the University of Sao Paulo, Brazil 1935–39, worked in New York as an academic and diplomat 1942–47, returning to France in 1949 as director of studies at the École Pratique des Hautes Études 1950–74, and then as a professor of the Collège de France 1959–82. In Structural Anthropology (1958) he attacked the prevailing functionalist (*Malinowski) school of sociology, proposing, along Hegelian lines, that a universal primitive logic imposed patterns of meaning on natural phenomena, i.e. that totemism is not a reflex reaction to mysterious natural forces but a conscious imposition of symbolism to preserve complex divisions in tribal society. He was elected to the Académie Française in 1973.

Lewes, George Henry (1817–1878). English writer. Editor of the Fortnightly Review (1865–66), he wrote many popular philosophical works and a biography of *Goethe, and lived with Mary Ann Evans (George *Eliot) from 1854 until his death. He wrote Problems of Life and Mind (5 vols, 1873–79).

Lewis, Cecil Day see Day Lewis, Cecil

Lewis, C(live) S(taples) (1898–1963). English scholar and writer. He was a fellow and tutor at Magdalen College, Oxford 1925–54 and professor of medieval and Renaissance English at Cambridge 1954–63. He wrote on medieval courtly love in The Allegory of Love (1936) and on Christian belief in a number of popular works, especially the well known Screwtape Letters (1942). He also wrote science-fiction allegories, e.g. Out of the Silent Planet (1938) and children's books, The Chronicles of Narnia. One of the 'Narnia' series, The Lion, the Witch and the Wardrobe (1950), was translated into 47 languages and sales are estimated at 65 million copies. His late finding of love was the basis of the film Shadowlands (1993).

Lewis, Essington (1881–1961). Australian industrialist. He became a mining engineer, joined Broken Hill Proprietary (BHP) in 1904, rising to become General Manager 1921–38, then Chief General Manager 1938–50 and a central figure in Australia's mineral and industrial development. He was Director-General of Munitions and Aircraft Production 1941–45, receiving the CH in 1943.

Lewis, Gilbert Newton (1875–1946). American physical chemist, born in Massachusetts. As Dean of the College of Chemistry at Berkeley, California 1912–40, he turned the department into one of the leading centres for chemistry in the United States. Lewis's career was a series of endeavours to unite chemistry and physics, theoretical and experimental approaches. He first worked in the field of thermodynamics, attempting to apply *Gibbs' and Duhem's ideas of free energy to chemistry via the concept of the 'escaping tendency' (or 'fugacity') of gases, the tendency of a substance to pass from one chemical stage to another. He was, however, more successful with his work on valence theory. In 1916 he proposed his theory that the chemical bond was a pair of electrons shared jointly by two atoms. This idea was successfully taken by Irving *Langmuir, who took most of the credit. In his later years, Lewis did important work in photochemistry. In the late 1930s and early 1940s he produced important experimental papers on fluorescence and phosphorescence spectra.

Lewis, John L(ewellyn) (1880–1969). American trade union leader. Having worked as a miner from the age of 12, he became (1920) President of the United Mineworkers of America, an office he held until 1960. In 1935 he broke away from the American Federation of Labor (AFL) and formed the Congress of Industrial Organisations (CIO), a more political and aggressive body of which he became president.
In 1942 he led his union out of the CIO. It rejoined the CIO in 1946, but withdrew once more in 1947. Lewis was successful in obtaining better conditions and wages for coal miners. He accepted mechanisation with the inevitable consequence of massive reductions in the numbers of coal miners employed.

**Lewis, Matthew Gregory** (1775–1818). English novelist. His sobriquet ‘Monk’ Lewis derived from his famous ‘Gothic’ romance, *Ambrosia, or the Monk* (1795), a tale of horror that won him the friendship of Sir Walter *Scott*, *Byron* and the Prince Regent. Other novels and poems followed in the same vein. He died from yellow fever, caught during a visit to the West Indies to improve the lot of the slaves on estates he had inherited.

**Lewis, Meriwether** (1774–1809). American explorer. A soldier with strong scientific knowledge, he became private secretary to Thomas *Jefferson* who chose him to lead an expedition to find a northwest passage to the Pacific. His co-leader was William *Clark*. With a party of 40 (‘the Corps of Discovery’), Lewis and Clark left Wood River, near Missouri (May 1804), sailed up the Missouri River, crossed the Rocky Mountains, reached the Pacific via the Columbia River, returning to St Louis (September 1806), having travelled 12,800 kilometres. He became Governor of Louisiana Territory and died of an unexplained gunshot wound in Washington (*Sacagawea*).

**Lewis, (Henry) Sinclair** (1885–1951). American novelist, born in Sauk Center, Minnesota. Son of a doctor, he became a journalist and wrote several minor works before beginning, at 35, the series of penetrating social satires on American life for which he is now remembered. In *Main Street* (1920) he pilloried the narrow-mindedness of small-town life in the Midwest; *Babbitt* (1922) described the spiritual vulgarity of the business classes; *Arrowsmith* (1925) dealt with the fight of an honest physician against the inroads of commercialism; *Elmer Gantry* (1927) was an attack on a hypocritical evangelist. In 1930 Lewis became the first American to win the Nobel Prize for Literature. His later novels include *It Can’t Happen Here* (1935), an attack on Nazism, *Cass Timberlane* (1945), and *Kingsblood Royal* (1947), a study of racial bigotry.

**Lewis, (Percy) Wyndham** (1884–1957). English painter and novelist, born in New York. Trained at the Slade School, London, he was a pioneer of modernism in English art. The Vorticist group, which he led and of whose periodical *Blas* he was co-editor with Ezra *Pound*, derived some of its ideas from Futurism and Cubism, but in his own paintings Wyndham Lewis never restricted himself to a single style. He was a founder member of the London Group. Outside his art he had a separate reputation as a satirical novelist, his works including *Time and the Western Man* (1918) and *The Apes of God* (1930). *Rude Assignment* (1950) is his autobiography.

**Ley, Robert** (1890–1945). German politician. A chemist, he joined the Nazi Party in 1924 and was notorious for his anti-Semitism in the Rhineland district. Ley was the head of the German labour front 1933–45, suppressed trade unions and recruited slave labourers. He committed suicide during the Nuremberg trials.

**Li Bo** (Li T’ai-po) (c.700–762). Chinese poet of the T’ang dynasty. Whenever he was not wandering in disgrace because of his dissipated life, Li Bo appears to have lived at the emperor’s court. His 2000–odd surviving poems – seldom more than 12 lines long – treat of the pleasures of life, and are famous for their delicate imagery and lyrical quality. Li Bo is said to have been drowned while trying (drunkenly) to embrace the reflection of the moon. Arthur *Waley* translated many of his verses into English.

**Li Hongzhang** (Li Hung-Chang) (1823–1901). Chinese minister and mandarin, born in Anhwei. He supported General *Gordon* and the ‘Ever Victorious Army’ in suppressing the Taiping Revolt (1864) and became Viceroy of Zhili 1870–94, 1900–01 under the Manchus. He tried to introduce reforms along more modest lines than those of the Meiji restoration in Japan but found the Manchu dynasty and the Confucian system were resistant to change. Chinese influence in Vietnam was replaced by France...
(1883–85) and China was beaten in the Japanese war (1894–95) and humiliated in the Boxer Rebellion (1900–01). He tried to urge reform on the Dowager Empress "T'zu Hsi. The first railway was built and the services were reformed during his term as Prime Minister 1895–98. He was often called 'the Asian *Bismarck'.

Li Lisan (1896–1967). Chinese Communist politician. Educated in France, he founded a French branch of the Chinese Communist Party in 1921 and led the party in China from 1929 until the failure of his policy of trying to organise a proletarian revolution in the cities. He retreated to Moscow in 1931 and was imprisoned there as a Trotskyist in 1936, returning to China in 1945. He served under *Mao as Minister of Labour 1949–54 and for a time was a political adviser to *Lin Biao until he confessed to 'leftist opportunism' in September 1956. While unseen by the public, his name remained on several important party committees until 1967.

Li Po see Li Bo

Li Ssu (280–208 BCE). Chinese statesman. He worked with the emperor *Qin Shi Huang in unifying China, promoting the concept of the 'mandate of heaven', creating the structure of centralised government, punishing dissent and executing the 'burning of the books'.

Li Xiannian (1905–1992). Chinese Communist politician. He joined the CP in 1927, was a veteran of the Long March and served as Vice Premier and Finance Minister 1954–76. He was appointed President of the Peoples' Republic 1983–88 after the office had been left vacant for 15 years.

Liang Qichao (1873–1929). Chinese teacher and publicist. He founded the first Chinese newspaper in Peking (1898) and was associated with *Kang Yuwei in the 'Hundred Days of Reform' and fled to Japan when the movement was crushed. He supported attempts to set up a constitutional monarchy but then collaborated with *Sun Yatsen and held several government administrative and diplomatic posts. He translated and popularised *Darwin and *Spencer, and became "Mao Zedong's favourite author.

Libby, Willard Frank (1908–1980). American chemist. He worked on the atomic bomb during World War II, then taught at Chicago and UCLA, winning the 1960 Nobel Prize in Chemistry for developing a technique using the radioactive isotope carbon-14 to date materials such as trees, parchments and fabrics. This has been an indispensable tool in archaeology and earth science. He was a member of the US Atomic Energy Commission 1954–59.

Lichtenstein, Roy (1923–1997). American painter and sculptor, born in New York. He worked as a product designer, taught at New York State and Rutgers universities and held his first one-man exhibition in New York in 1962. He was a pioneer in pop art and his most famous works involved blowing up the kitsch images found in comic strips and advertising; later he transformed familiar art images into comic strip form. He was also an accomplished sculptor in metal. *Ohhh … Alright (sic) was sold for $US42.6 million in 2010 and 'Woman with Flowered Hat' for $US56 million in 2013.

Liddell Hart, Sir Basil Henry (1895–1970). British military expert. He served in World War I and retired from the army (1927) to become military correspondent for The Times and the Telegraph. He advocated mechanised forces and a strategy of movement. His theories were closely studied in Germany and greatly influenced the organisation of the rejuvenated German army under *Hitler. He wrote many books on the history of strategy and tactics and on military leaders, e.g. The Future of Infantry (1933), The German Generals Talk (1948), and The Tanks (1959).

Lidgett, John Scott (1854–1953). English clergyman, a theologian and Progressive on the LCC 1908–28, he led the successful campaign for the uniting of the separated branches of the Methodist Church in Britain and was first president of the United Church 1932–33. Lidgett became Vice Chancellor of London University 1930–32 and received a CH (1933). He was joint editor (with G. P. *Gooch) of the Contemporary Review 1911–53.
Lie, Trygve Halvdan (1896–1968). Norwegian lawyer, politician and UN administrator, born in Oslo. He was legal adviser to the Norwegian trade union movement 1922–35, a Socialist member of the Storting 1935–46, Minister for Justice 1935–39, Minister for Trade 1939–40 and Foreign Minister 1940–46, in the wartime government in exile. He chaired the commission that drafted the United Nations Charter and was elected as the first Secretary-General of the United Nations 1946–53. He took initiatives in resolving deadlocks, at first with Soviet support, and sought China's admission to the UN, but after backing UN intervention in Korea (1950) was denounced as being under State Department influence. He compromised UN independence by collaborating with the FBI to purge American left-wingers from its secretariat during the *McCarthy period. He wrote In the Cause of Peace (1954) and returned to Norway (1955) as Governor of Oslo.

Liebermann, Max (1847–1935). German painter. He studied in Weimar and (1872–79) in Paris, where he came under the influence of *Millet and *Courbet. His early pictures were realistic, many of them genre scenes (e.g. Women Plucking Geese), but after moving to Berlin (1884) he painted from a much brighter palette, and from 1890, under the influence of the French Impressionists, his subjects, e.g. bathing scenes on the Wannsee, became full of light. He became leader (1899) of the newly founded Berlin movement known as the Sezession.

Scheffler, K., Max Liebermann. 1953.

Liebig, Justus, Baron von (1803–1873). German chemist. He first studied under *Gay-Lussac in Paris, and became professor of chemistry at Giessen 1834–52 and Munich 1852–73. He was an important contributor to organic chemistry and its application to agriculture. He especially studied plant and nutrition processes. He also isolated chloroform (1832).

Liebknecht, Wilhelm (1826–1900). German journalist and politician. With his friend Karl *Marx, he was founder of the Social Democratic Party (1869), served in the Reichstag and edited Forwards. His son, Karl Liebknecht (1871–1919), as a member of the extremist left wing of the Social Democratic party in the Reichstag (1912–16), assailed his party's acquiescent attitudes to World War I and was imprisoned (1916–18) for incitement to treason. He formed with Rosa *Luxemburg, the Communist body known as Spartacists and in 1919 led their rising in Berlin. Arrested after its defeat, he was killed while being taken to prison.

Lij Yasu (1896–1935?). Emperor of Ethiopia 1913–16. In 1916 he was converted from Christianity to Islam, whereupon the Ethiopian nobles, led by his cousin the future *Haile Selassie, revolted. Lij Yasu was deposed and imprisoned.

Lilburne, John (c.1614–1657). English political agitator. Having already been imprisoned as an anti-Church pamphleteer, he rose during the civil war to be Lieutenant Colonel in the parliamentary army, and there became leader of a Puritan and Republican sect whose adherents were known as Levellers, since their demands included extreme egalitarian social reforms. *Cromwell, whose arbitrary methods they had denounced, easily defeated a mutiny in 1649 and the movement and its leader suffered temporary exile and soon lost importance.

Lilienthal, David Eli (1899–1981). American administrator. He was a director (from 1931) and chairman (1941–46) of the Tennessee Valley Authority (TVA) and later first Chairman of the Atomic Energy Commission (1946–50).

Lilienthal, Otto (1848–1896). German engineer. A pioneer in aeronautics and keen student of the flight of birds, he designed successful gliders and he made more than 2000 flights before he was killed in a glider accident.

Lillie, Beatrice (Lady Peel) (1894–1989). British revue artist and comedian, born in Canada. She began as a straight ballad singer, with little success, and turned to comic singing in 1914. During the 1920s she achieved international fame as a singer and comedian in revue.

Liluokalani (1838–1917). Queen of Hawaii 1891–93. The last sovereign and only reigning queen, she succeeded her brother David Kalakaua, a moderately liberal ruler, and tried to impose an older style of
autocratic monarchy. In 1893 she stepped down at the request of the Missionary Party, but appealed to the US to reinstate her. When this failed she finally abdicated in 1895. When the US proposed annexation in 1898 she opposed it bitterly and supported a nationalistic independence movement. She wrote the popular song *Aloha Oe* in 1898.

**Linacre, Thomas** (1460?–1524). English humanist and physician. After becoming a Fellow of All Souls, Oxford (1484), he travelled in Italy and felt the invigorating impact of the new learning upon continental scholarship. He obtained degrees in medicine at Padua and at Oxford. He became Greek tutor to *Erasmus and More*, and from 1509 was one of the royal physicians. He founded the Royal College of Physicians (1518) but abandoned the practice of medicine on becoming a priest (1520). He wrote a Latin grammar for Princess *Mary* (1523), followed by a much larger work on the same subject. He also made Latin translations from the Greek medical works of *Galen* and parts of *Aristotle*.

**Lin Biao** (also Lin Piao) (1907–1971). Chinese soldier and politician, born in Hubei. He joined the Socialist Youth League in 1925, the year he began his military career at the Huangpu Academy. He took part in *Chiang Kai-shek’s Nationalist uprising* but, when the Communist and Socialist groups abandoned Chiang in 1927, he went with the Communists and joined *Mao Zedong* in Jiangxi Province. He became a commander with Mao’s Red Army in 1928 and a corps commander in 1934. As such he helped to lead the ‘Long March’ north when Jiangxi was overrun by Nationalist Forces.

In 1937–38 (when the civil war in China was halted in order to fight the Japanese) he served as a divisional commander. He was in Russia for medical treatment 1939–42. The civil war began again in 1946, when Lin Biao’s victories in Manchuria were largely responsible for the fall of Chiang. In the People’s Republic (established in 1949) he became Vice Premier of the State Council in 1954 and Minister of Defence in 1959. His reorganisation of the army, combining military skill with political consciousness, was the main spur to the Great Cultural Revolution of 1966–69. He became Vice Chairman of the party in 1969 and Mao’s designated successor. However, in September 1971, he appears to have led an abortive coup against Mao and tried to reach Moscow but his plane crashed in Mongolia.

**Lincoln, Abraham** (1809–1865). 16th President of the US 1861–65. He was born in a log cabin near Hodgenville, Kentucky, the son of Thomas Lincoln (1778–1851), a farmer of restless temperament from Virginia who moved on first to Indiana and, when Abraham was 21, to Illinois. In 1819, a year after his first wife’s death, Thomas married Sarah Bush Johnston, a widow with three children who brought order into the household and introduced her stepson to the delights of reading with such books as *Pilgrim’s Progress* and *Robinson Crusoe*, so providing the spur to a remarkable feat of self-education. Meanwhile Abraham helped the family income with odd jobs such as operating a ferry on the Ohio River. It was a river journey to New Orleans (1828) that gave the awkward, lanky youth, 1.93m in height, his first view of the greater world and the shock of seeing slavery in action. Soon afterwards he left home, he worked in New Salem, Illinois, as clerk, store-keeper and (in 1833) postmaster, and was captain of the local volunteers, becoming well known for his racy anecdotes and homespun humour. He was elected to the Illinois State Legislature in 1834, serving until 1841. His romance with Anne Rutledge who died of fever in August 1835 has passed into American folklore but rests on very slender foundations. In 1837 the year he moved to Springfield, he was admitted to the bar after having virtually taught himself law. His marriage (1842) to Mary Todd (1818–1882) to whom he was temperamentally unsuited probably led him to pursue his political interests more single-mindedly. The Lincolns had four sons, two died before 1865. Lincoln was a very successful advocate who acted in many railroad and criminal cases. He was a Whig member of the US House of Representatives (1847–1849) where he took an unpopular stand against the Mexican War and began to campaign against the extension of Negro slavery to the northwestern territories. His reputation was still largely local. He failed to secure appointment as US Commissioner for Lands in Illinois (1849), declining an offer of the secretarship of Oregon Territory in the same year. In 1854 the Kansas-Nebraska Act, promoted by Stephen A. *Douglas*, had abolished the ‘Missouri Compromise’ of 1820 which had prohibited slavery north of 36°30’, and left the issue of slavery to the vote of settlers in each new state. When ‘bleeding Kansas’ became a battle ground over slavery, this led to the formation of the Republican Party (1854). Lincoln did not join until 1856 but soon became a leading member, although he failed to win nomination for the Senate or as Vice President. He was not an abolitionist – he saw slavery as an economic question that threatened the status of white labourers in the new states and territories of the west, and his moral objections to the ‘peculiar institution’ only developed later. In 1858 he campaigned against Douglas for US Senator and in seven great debates (published in book form soon after) the rivals argued the implications of the slavery issue. Lincoln declared ‘‘A house divided against itself cannot stand’’. I believe this government cannot endure permanently, half slave and half free.’ He won the debates and the popular vote but lost the election which was decided by the Illinois legislature. In February 1860, a powerful speech at the Cooper Union, New York, attracted national interest and won him support outside the mid-West. At the Republican Convention held at Chicago in May 1860 he gained the presidential nomination on the third ballot, defeating his better known rivals.
W. H. *Seward and S. P*Chase. Douglas, his 1858 rival for the Senate, won the Democratic nomination for president. Lincoln made no campaign speeches but his policies were well known from his debates with Douglas and the Cooper Union address. In November he won the election with 40 per cent of the votes because the Democrats were split between three candidates (Douglas, Breckinridge of Kentucky, Bell of Tennessee). Six weeks later South Carolina led a secession from the Union of the southern slave-owning states; in February 1861 the Southern Confederacy was formed and in April an attack on the federal Fort Sumter at Charleston, SC, sparked off the Civil War on the issues, not only of slavery but of the right to secede. (Many Southerners referred to the War of Southern Independence.) It was not until 1863 that a proclamation emancipating slaves (but only in the states in arms against the Union) was issued. Lincoln had to contend with a divided Cabinet and blundering and miscalculation in the conduct of the war. But his firmness and wisdom enabled the weight of numbers, equipment and wealth, which lay with the North, to have decisive effect. The Gettysburg Address, at the dedication of a war cemetery (November 1863), only 272 words long, defined democracy as ‘government of the people, by the people, for the people’, emphasising the concept of ‘nation’ rather than ‘union’. Re-elected President by defeating General George *McClellan (1843–1864), in his second inaugural address he proposed a policy of conciliation: ‘With malice toward none; with charity for all … let us strive on to finish the work we are in; to bind up the nation’s wounds … to do all which may achieve a just and lasting peace …’ Only Lincoln, perhaps, was brave, generous and strong enough to give reality to his own vision and to him the opportunity was denied. Five days after Lee’s surrender (April 1865) at Appomattox had brought the Civil War to an end, Lincoln was shot in Ford’s Theatre, Washington by the fanatic actor John Wilkes *Booth. It is perhaps true that no nobler, more discerning or humane man ever guided a great nation in a supreme crisis of its destiny. Superficially he seemed a simple and straightforward character – but closer examination reveals his great depth and complexity. Underlying his cheerful whimsy was a vein of deep mysticism and melancholy, intensified by his unhappy marriage. His law partner and biographer W. H. Herndon wrote, ‘That man who thinks that Lincoln calmly gathered his robes about him, waiting for the people to call him, has a very erroneous knowledge of Lincoln. He was always calculating and planning ahead. His ambition was a little engine that he knew no rest.’ Not a great administrator but an outstanding moulder of public opinion, he was devout in the manner of an 18th-century deist and had little sympathy for the religion of the Churches. Lincoln had a high-pitched, penetrating voice, awkward hands and movements, and his feet hurt. He was the first bearded president and may have suffered from Marfan’s syndrome (a hereditary heart and bone disease). He left an estate of $90,000. Overwhelmingly, American historians have voted him as the greatest of all US presidents. The Lincoln Memorial in Washington, with its huge statue by Daniel Chester French, was dedicated in 1922.

His son Robert Todd Lincoln (1843–1926) was Secretary of War under *Garfield and *Arthur 1881–85, Ambassador to London 1889–93 and President of the Pullman Railway Company 1897–1911.

Lind, Jenny (Johanna Maria Lind-Goldschmidt) (1820–1887). Swedish soprano. Long resident in Britain, famed for her brilliant coloratura singing, she was known as the ‘Swedish nightingale’. She performed until 1849 mainly in opera, and later in concerts and oratorios. She married the German conductor and composer Otto Goldschmidt. Her kindness and generosity added to her popularity.

Lindbergh, Charles A(ugustus) (1902–1974). American aviator, born in Detroit. His Swedish-born father was a US Congressman 1907–17. He achieved unprecedented international fame when he flew The Spirit of St Louis, a 220 hp monoplane, built by the Ryan Co. of San Diego to his own design, on the first solo non-stop flight across the Atlantic, from Roosevelt Field, New York to Le Bourget, Paris (5,809 km – 3,610 miles, 33½ hours), 20–21 May 1927. The ‘Lone Eagle’ received the Congressional Medal of Honor and decorations from Britain, France and Belgium. He worked (1936–38) with Alexis *Carrel on devising an artificial heart. In 1936 he inspected European air forces, met *Hitler and *Goering in 1938, expressed strong views about German military superiority and joined the ‘America First’ movement which campaigned for US neutrality in the event of a European war. He advised the Ford Motor Company and United Airlines during World War II but flew (unofficially) on 50 combat missions in the Pacific. A consultant to Pan American Airways after the war, he received the Pulitzer Prize for The Spirit of St Louis (1953) and was made a brigadier in the USAF reserve by President *Eisenhower (1954). He married Anne Morrow (1906–2001), daughter of US Senator Dwight Morrow. In 1932 their infant son was murdered (1932), a crime for which Bruno Richard Hauptmann was convicted and executed (1936). She wrote books about aviation, including Listen! The Wind (1938), essays and novels. After 1957, Lindbergh adroitly managed to maintain and conceal three families in Germany simultaneously,
and to sire seven children. He became actively involved in conservation issues, especially whales and eagles, retired to Hawaii and died there.

Lindemann, Frederick Alexander see Cherwell, 1st Viscount

Lindsay, Norman (Alfred William) (1879–1969). Australian artist and author, born in Creswick, Victoria. He joined the Sydney Bulletin in 1901 and became its chief cartoonist, sharing its racist and ultra-nationalist views. His voluptuous nudes, in water colour, oil, pencil and etching, were deeply controversial. His novels, including A Curate in Bohemia (1913), Redheap (1930), Saturday (1932) and Age of Consent (1935) challenged middle-class morality. The children’s book The Magic Pudding (1918) was his most admired work. His brothers (Sir) Lionel and (Sir) Daryl and sister Ruby were also well known artists.

Linklater, Eric (1889–1974). Scottish author. The best known of his humorous novels include Poet’s Pub (1929), Juan in America (1931), Juan in China (1937) and Private Angelo (1946).

Linlithgow, John Adrian Louis Hope, 1st Marquess of (1860–1908). Scottish nobleman. As 7th Earl of Hopetoun, he was a youthful governor of Victoria 1889–95. Appointed first Governor-General of the Commonwealth of Australia 1901–03, he blundered in nominating the New South Wales Premier, Sir William Lyne, as first Prime Minister (1901) instead of Edmund *Barton, leader of the federation campaign. The youngest Governor-General ever appointed, created marquess in 1902, he became the youngest to die. He served briefly as Secretary of State for Scotland 1905. His son, Victor Alexander John Hope, 2nd Marquess of Linlithgow (1887–1952), having declined appointment as Governor-General of Australia (1935), became an unexpected choice as Viceroy of India 1936–43, the longest term ever served. He faced growing civil disobedience, World War II and *Gandhi’s ‘Quit India’ campaign (1942).

Linnaeus, Carolus (Carl von Linné) (1707–1778). Swedish botanist and taxonomist, born in Småland. He studied medicine at the universities of Lund, Uppsala (Sweden) and Harderwijk (Netherlands), but became preoccupied with natural history, botany and classification. In 1732, in a 2,000 km exploration of Lapland, he discovered and classified many new plants. Linnaeus was the founder of modern taxonomy, the systematic classification of plants and animals, demonstrating the interconnectedness in a virtual tree of life.

He developed a binomial system (generic name + specific name) for plants and animals and published the first edition of Systema Naturae in the Netherlands in 1735. His methodology enabled accurate definitions of species, and was applied to zoology and mineralogy. Although later modified, it brought order to scientific nomenclature. Later editions of Systema Naturae expanded, and in the 10th edition (1758) he classified humans as homo sapiens and whales as mammals (blue whale = *Balaenoptera musculus). He was the first to use symbols for male ♂ and female ♀.

He visited England in 1736 and made influential converts. He was professor of medicine and botany at Uppsala University 1742–62 and rector 1762–72.

Linnaeus, ennobled in 1761, was much admired by *Rousseau, *Goethe and *Darwin. Despite his opposition to the concept of evolution (he thought that, once created, species were unchanging), his work laid the basis for it. His favoured students, or ‘apostles’, included Daniel Solander who sailed to Australia with *Cook. Other ‘apostles’ sent Linnaeus specimens from North America and Japan.

After Joseph *Banks declined an offer, James Edward Smith bought Linnaeus’ collection of books, papers, letters and specimens in 1784, brought them to London and founded the Linnean Society in 1788.

Lin Piao see Lin Biao

Linus (d.c.79 CE). Bishop of Rome (i.e. Pope) after St Peter (from 67?). Some historians regard him as the first Roman Bishop and he is thought to be the Linus referred to in II Timothy iv:21.

Lipatti, Dinu (Constantin) (1917–1950). Romanian pianist. He studied in Bucharest, then in Paris with *Cortot, *Boulanger and *Dukas. In his brief career he acquired a unique reputation as virtuoso and poetic interpreter. He died of leukaemia, leaving a legacy of magnificent recordings.
Lipchitz, Jaques (1891–1973). French sculptor, born in Latvia. Of Polish-Jewish parentage, he worked in Paris from 1909 and was the first to produce Cubist sculpture. Later works were based on Biblical or mythological themes.

Lipperscheij, Hans (c.1570–1619). Dutch inventor. A spectacle maker in Middelburg, he is usually credited with inventing the first telescope (c.1608), traditionally after inadvertently watching a child playing with a lens. *Galileo soon improved Lipperscheij's crude instrument.

Lippi, Filippino (1457–1504). Italian painter. Son of Filippo *Lippi, he was a pupil of *Botticelli whose influence (as well as that of his father) is reflected in his works. He skilfully finished (1484–85) Masaccio's frescoes in the Brancacci Chapel, Florence, and most of his subsequent work was done in Florence or Rome. At his best he can be compared with the greatest, but some of his work is pretentious, fussy and even vulgar. Among his best known pictures are the *Madonna kneeling before the Child (Uffizi, Florence) and the *Madonna and Child with St Jerome and St Francis (National Gallery, London).

Lippi, Fra Filippo (c.1406–1469). Italian painter. He was sent to a Carmelite monastery (1421) but in 1431 was allowed to leave the cloister. Some of the romantic incidents of his career are probably exaggerated or even invented. Whether he was captured by pirates is uncertain, but he seems to have been accused of forgery (1450) and to have abducted a nun who became the mother of Filippino *Lippi. His earlier work was strongly influenced by Masaccio, but later he freed himself and developed a more lively and dramatic style. Like Fra Angelico he painted mostly *Madonnas and angels, but despite the radiance of their innocence he portrayed them with a closer approach to realism. His frescoes at Prato and Spoleto are considered his finest work.

Lippmann, (Jonas Ferdinand) Gabriel (1845–1921). French-Jewish-Luxembourgish physicist. He held a chair of physics at the Sorbonne 1883–1921 and in 1891 demonstrated a method for photographing in colour, producing a faithful picture of the spectrum. He was awarded the 1908 Nobel Prize for Physics. Lippmann also predicted the nature of the ‘piezo-electric’ effect later discovered by Pierre *Curie. During World War I he worked out a primitive type of radar that was used for detecting the presence of submarines.

Lippmann, Walter (1899–1974). American editor and author. His articles on political affairs, which appeared in the New York Herald Tribune (1931–66), were syndicated throughout the world. They were influential in the formation of public opinion in the US. He coined the phrase ‘cold war’ and acquired an enormous reputation as a pundit with a sound grasp of US and European affairs, but showed little interest in the ‘third world’.

Lipton, Sir Thomas Johnstone, 1st Baronet (1850–1931). British merchant and sportsman, born in Glasgow. Of Irish parentage, after spending five years in various jobs in America he returned to Glasgow and in 1871 opened his first small grocery. Gradually, he built up a chain of shops throughout Great Britain, supplied by the tea, coffee and cocoa plantations he had acquired overseas. As his wealth grew, Lipton became a friend of *Edward VII and a noted yachtsman. His five attempts (1899–1930) to win the America’s Cup in Shamrock and its similarly named successors made him one of the best known sportsmen of his time.

Lister, Joseph Lister, 1st Baron (1827–1912). English surgeon, born in Essex. He was the son of Joseph Jackson Lister (1786–1869) a Quaker wine merchant and amateur microscopist whose researches on the structure of red corpuscles gained him an FRS. The young Joseph studied medicine at London University and, having become MD and FRCS (1852), joined the famous Edinburgh surgeon, James Syme (whose daughter he married), as assistant. From 1855, when he was appointed assistant surgeon at the Edinburgh Royal Infirmary, and especially after his appointment as professor of surgery at Glasgow University (1860) and as surgeon to the Glasgow Royal Infirmary (1861), his reputation steadily mounted. It was not only for his surgical skill but for his investigations, which shed important new light on the involuntary muscles of eye and skin, on the causes of inflammation, on pigmentation and on coagulation of the blood. The major problem in surgery at the time was the high rate (25–60 per cent) of deaths from post-operative sepsis (partly a result of the introduction of anaesthesia, which had greatly increased the number of major operations performed, and had also lessened the need for speed). In the light of Pasteur’s discoveries, Lister rejected the theory that the introduction of air was harmful. He concluded that the blood poisoning and suppuration that occur in a wound surgically or otherwise inflicted are due to micro-organisms (loosely called germs). To destroy these he used a spray of carbolic acid with such success that in his wards the post-operative mortality rate fell almost at once from 43 to 15 per cent. He found means to overcome the difficulty that carbolic acid is itself a tissue-irritant. He also introduced catgut, which is absorbed by the body, for ligatures instead of silk or hemp, the removal of which often caused renewed haemorrhage.

He was greater as a teacher and innovator than surgeon, designed special operating tables and surgical tools, introduced the use of white operating costumes instead of street dress, emphasised aseptic (excluding germs) rather than antiseptic (killing germs) measures, and used drainage tubes for wounds...
and incisions. Liszt’s successes were followed by further distinctions: he became a professor of surgery at Edinburgh (1869) and at King’s College, London (1879), and was President (1895–1900) of the Royal Society. A baronetcy was awarded in 1883, in 1897 a peerage and in 1902 the OM and the Copley Medal. The Lister Institute of Preventive Medicine (founded 1903) preserves his name.

Liszt, Franz (Ferencz) (1811–1886). Hungarian composer and pianist, born in Raiding. Son of a steward on Prince Esterhazy’s estate, he studied music under his father, a keen amateur, and gave his first public performance as a pianist at the age of nine. With money provided by a group of Hungarian noblemen, he went to Vienna, where he studied under *Czerny and *Salieri, and won praise from *Beethoven. From 1823 his tours, which included three visits to England, won him widespread admiration but after the death (1827) of his father, who had accompanied him, Liszt taught in Paris and came under the musical influence of *Berlioz. *Paganini (whose works he transcribed for the piano) and *Chopin. His thought and way of life were affected by a friendship with the romantic novelist George *Sand, coincident (from 1833) with a love affair with the Comtesse d’Agoult, who bore him a son and two daughters, the younger of whom, Cosima, became the second wife of Richard *Wagner. Liszt parted from his mistress in 1839 and spent the next eight years making concert tours throughout Europe, in the course of which he reached the pinnacle of his fame as a virtuoso pianist. In 1847 he met the Princess Caroline zu Sayn-Wittgenstein, with whom he lived until 1865, when he entered the Franciscan Order and was known as ‘Abbé Liszt’. Liszt became conductor of the ducal opera at Weimar in 1848 and thereafter ceased to play the piano professionally. In his new post he was a generous patron of many artists, producing several operas by Wagner, whom he supported financially, and helping Berlioz and *Schumann. After his resignation (1858) he spent his remaining years mainly in teaching at Weimar, Budapest and Rome. He composed about 1300 works. Almost half are transcriptions. The finest of the 400 original compositions include the symphonic poems Tasso, Orpheus, Mazeppa and Prometheus, two piano concertos (1857 and 1863), the Dante Symphony (1856), the Faust Symphony (1853–56) and the Piano Sonata (1854). He wrote many ‘Transcendental Studies’ for piano, transcribed many songs and violin works as display pieces, and composed organ pieces and several major religious works including the oratorio Christus (1866). Liszt was one of the most important pioneers of the Romantic school in music. His invention of the one-movement symphonic poem influenced composers such as *Tchaikovsky and Richard *Strauss, while Wagner learned from his principle of thematic transformation. His bold harmonic innovations affected composers even in the 20th century. Contemporary critics considered Liszt the greatest virtuoso pianist of all time. By giving a complete solo recital for the first time and playing a whole program from memory he gave the concert pianist a status he had never before enjoyed. Moreover, through his pupils, many of whom he taught without payment, his new pianoforte techniques shaped those of future generations.

Littleton, Sir Thomas (1402–1481). English jurist. He was recorder of Coventry (1450), King’s Sergeant (from 1455) and a judge of Common Pleas (from 1466). He wrote a notable textbook on land tenure (originally in legal French), on which Sir Edward *Coke later published a famous commentary, Coke upon Littleton (1628).

Littlewood, Joan (Maud) (1914–2002). British theatrical producer. With her repertory company, founded in 1945 and established (1953) at the Theatre Royal, Stratford, in East London, she became known for advanced ideas and techniques which included much improvisation and, in the manner of *Brecht, audience participation. Among the young playwrights who achieved success under her auspices were Brendan *Behan (The Quare Fellow) and Sheelagh Delaney (A Taste of Honey). Oh What a Lovely War! produced in 1963 after a short retirement, was an original and controversial treatment of World War I, later filmed.

Litvinov, Maksim Maksimovich (real name M. M. Vallakh) (1876–1951). Russian diplomat. An early Bolshevik and friend of *Lenin, he worked in London from 1907, married an English woman, and was appointed diplomatic agent to Britain after the 1917 Revolution. As Deputy Foreign Commissar 1921–30, 1939–46 and Foreign Commissar 1930–39 he had little authority in directing foreign policy, but attempted to make it more palatable. By leading Russia into the League of Nations (1934) and championing the cause of collective security, especially against Nazi Germany, he made Soviet policies more generally acceptable.

Liu Shaoqi (Liu Shao-chi) (c.1898–1979). Chinese Communist politician, born in Hunan. Little is known of his early life, but he apparently studied in Moscow, became a spy at Guomintang headquarters and was an official in the Communist Government of Jiangxi 1932–35. He suffered from tuberculosis and did not take part in the Long March, a significant omission. Regarded as one of the leading theoreticians of the Chinese Communist Party, he wrote the pamphlets How to be a good Communist and On the Party Struggle. He was Deputy Premier 1949–59 and succeeded *Mao as President of China 1959–68 until his expulsion from the party and denunciation as ‘China’s *Khrushchev … a lackey of imperialism, modern revisionism and Kuomintang reactionaries … a Renegade, Traitor and Scab’. Liu stood for a
scientifically controlled urban industrial China against Mao's vision of 'revolutionary romanticism' and the spontaneity of the masses. He was imprisoned from 1967 and died in horrible conditions.

Liu Xiaobo (1955– ). Chinese writer, critic and human rights activist, born in Changchun, Jilin. He taught at Beijing University, was imprisoned four times and was awarded the Nobel Peace Prize for 2010 'for his long and non-violent struggle for fundamental human rights in China.'

Liverpool, Robert Banks Jenkinson, 2nd Earl of (1770–1828). English Tory politician. Son of Charles Jenkinson, 1st Earl of Liverpool (1729–1808), leader of the 'King's friends', he was educated at Charterhouse School and Oxford. Elected MP 1790–1803, he only took his seat in 1792. Pitt appointed him to the Indian Board of Control 1793–96 and under his successor *Addington, he had a sudden promotion as Foreign Secretary 1801–04. He was responsible for the Treaty of Amiens (1802) and was created Lord Hawkesbury in 1803. Home Secretary 1804–06, 1807–08, on Pitt's death he declined to become Prime Minister. In 1808 he succeeded his father as Earl of Liverpool. In the most critical stage of the Peninsular War he was Secretary of State for War and the Colonies 1809–12. On Spencer *Perceval's assassination, he became Prime Minister 1812–27, holding office, despite only moderate ability, for 15 years until he had a stroke. He had some able ministers, including *Canning and *Castlereagh, keeping difficult teams together by tact, experience and common sense. He guided his country through the last stages of the Napoleonic wars, the period of repression that followed and its more liberal aftermath.

Livia (Livia Drusilla, also known as Livia Augusta) (58 BCE–29 CE). Roman patrician. Daughter of a senator, she married first a cousin, Tiberius Claudius Nero, and had two sons, *Tiberius, the future emperor, and Drusus. Her father and husband were opponents of Julius *Caesar, and after his assassination the family was exiled in Greece. Octavian, later known as *Augustus, met her, fell in love, divorced his own wife and persuaded Livia to divorce her husband and marry him (38 BCE). Their marriage lasted for 51 years but was childless. Livia cultivated an image of domestic simplicity, spinning her own wool, but was suspected of involvement in intrigue and even murder. She was an important influence on Augustus, who adopted his stepson as heir. When Augustus died, the Senate gave Livia the title 'Augusta'. Tiberius soon resented his mother's interventions but she was posthumously deified in 42 CE by her grandson *Claudius, son of Drusus.

Livingstone, David (1813–1873). Scottish explorer and missionary, born at Blantyre, Lanarkshire. From the age of 10 he worked for 16 years in a local cotton mill. He read the missionary journals that his devout father received and also learnt Latin at evening classes. In 1832 he left the Church of Scotland to become a Congregationalist and was attracted by American revivalism. He studied science at Anderson's College, theology and Greek at Glasgow University and had some medical training at the Charing Cross Hospital, London (1838–40).

Having joined the London Missionary Society he was sent (1840) to the settlement in BechuanaLand created by Robert Moffat, and married his daughter Mary (1821–1862) in 1845. He began to explore and to carry the Christian message northwards and discovered Lake Ngami, now in Botswana in 1849. Having sent his wife and children to England in 1852, he started from Cape Town on a journey across Central Africa that ended (1856) at Quelimane at the mouth of the Zambezi River. In November 1855 he was the first European to see the great waterfall Mosi-oa-Tunya ('the smoke that thunders') which he named Victoria Falls.

On his return to England and the publication of Missionary Travels (1857), he was acclaimed by the public, but the London Missionary Society felt that he spent too much of his time in exploration. His next expedition (1858–64) was sponsored by the government. During this period his wife, and many helpers, died. He explored Lake Shirwa and much of the Lake Nyasa area, which he thought suitable for a mission and commercial centre, but the steamers sent out to him proved defective, and he found, to his indignant horror, that slave traders were using his discoveries to extend their activities. He published The Zambezi and its Tributaries (1865) on his return, and in March 1866 set out again, hoping to combine missionary work with settling the dispute concerning the sources of the Nile. He discovered Lakes Moero and Bangweulu (1867–68) and, after returning for rest to Ujiji, again struck westward and reached the River Lualaba, uncertain whether it was the Nile or, as it afterwards proved, the Congo. Meanwhile nothing had been heard of him at home until, in October 1871, he was discovered ('Dr Livingstone, I presume?'), once more in Ujiji, by H. M. *Stanley at the head of a relief expedition. Together they proved that Lake Tanganyika had no northern outlet, but, though ill, Livingstone refused to return with Stanley until he had made one more attempt to solve the Nile problem. He went back to Lake Bangweulu, but having reached the village of Chief Chetambo, was found dead one morning by his followers, aged 60. Despite all dangers, his embalmed body was carried to the coast and then taken to London for burial in Westminster Abbey.

Livy (Titus Livius) (59 BCE–17 CE). Roman historian, born in Padua. He became a member of the literary circle of the emperor *Augustus. His greatest work, which took 40 years, was a history of the Roman people in 142 books, 35 of which...
survive. Books 1–10 (to 293 BCE) and Books 21–45 (218–167 BCE), which include the struggle with *Hannibal in the Second Punic War, Livy wrote with the patriotic purpose of glorifying Rome. He consulted the earlier annalists and the Greek historian *Polybius but though he does not wilfully distort, he does not bring to bear any critical faculty. His narrative, however, seldom flags and his reputation as a writer has been maintained.

**Llewellyn, Richard** (Richard Dafydd Vivian Llewellyn Lloyd) (1907–1983). Welsh novelist, born in Pembroke shire, writing in English. His novel *How Green Was My Valley* (1939), a romantic chronicle of a 19th-century mining community, was an immediate success. Later books, moderately successful, did not have the background of the mining valleys with their strong character.

**Llewelyn (Llywelyn) ap Iorwerth** (known as ‘the Great’) (d.1240). Welsh noble. By first consolidating his ancestral lordships in North Wales and then gradually extending his power over rival princes to the south, he did more than any other single man to create the possibility of a Welsh national state. Moreover, by taking advantage of the difficulties of the English king *John, whose daughter he married, he was able to stem further Anglo-Norman aggression.

**Llewelyn ap Gruffydd** (d.1282). Trying to emulate his grandfather’s achievements, he overcame his brothers and exacted homage from other princes. He even obtained from *Henry III, fully occupied with his problems in England, recognition (1267) as Prince of Wales, but he overreached himself by refusing homage on *Edward I’s accession (1272). War followed (1277) in which Llewelyn lost his title and all lands except Anglesey and Snowdonia. In 1281 he was goaded again into rebellion. His death in a skirmish in the following year facilitated Edward’s conquest of Wales.

**Llosa, Mario Vargas** see Vargas Llosa, Mario

**Lloyd, Harold** (1893–1971). American film comedian. From 1912 he appeared in a long series of comic films and by the 1920s rivalled *Chaplin and *Keaton. He failed to make the transition to talkies but his films were successfully revived on television and he left a fortune.

**Lloyd, John Selwyn Brooke, Baron Selwyn Lloyd** (1904–1978). British Conservative politician. A barrister, he rose to be a brigadier in World War II and in 1945 entered parliament. He served in a succession of Conservative governments from 1951: as *Eden’s Foreign Secretary 1955–60, he was the principal defender of the Suez campaign, then Chancellor of the Exchequer 1960–62, and Speaker of the House of Commons 1971–76.

**Lloyd George, David, 1st Earl Lloyd George of Dwyfor** (1863–1945). British (Welsh) Liberal politician, born in Manchester. After his father, William George, a teacher, died he was brought up in Wales by his mother and her brother, Richard Lloyd, a bootmaker. Educated at a village school, he became a solicitor, local councillor, and organiser of a rural union. Liberal MP for Carnarvon Boroughs 1890–1945, he was a Welsh nationalist, ardent Gladstonian, fierce opponent of the Boer War and the object of Conservative hatred. Under *Campbell-Bannerman he became President of the Board of Trade 1905–08. As *Asquith’s Chancellor of the Exchequer 1908–15 he was architect of the ‘welfare state’, introducing the Old Age Pensions Act (1908) and the National Insurance Act (1911). His Budget of 1909, providing for a graduated income tax, was rejected by the House of Lords, leading to a constitutional crisis resolved by the Parliament Act of 1911, which ended the veto power of the Lords over legislation. Originally opposed to World War I, he became the most vehement activist in the coalition Cabinet as Minister for Munitions 1915–16 and, after *Kitchener was drowned, Secretary of State for War 1916. He intrigued with Conservatives to overthrow Asquith, whose talents were ill-suited for war, and became Prime Minister, December 1916, holding office until October 1922. He had an uneasy relationship with his generals but worked closely with *Clemenceau and backed *Foch as Generalissimo. After the ‘khaki’ election of November 1918, called to capitalise on patriotic fervour, he won decisively but was incensing dependency on Conservative support in the House of Commons. He led the British delegation to the Versailles Peace Conference in 1919, and was at the peak of his influence. Personally mistrusted, he became increasingly notorious for his sexual exploits and amassed a fortune by selling knighthoods, baronetcies and peerages. In October 1922 he was forced from power when Tory MPs voted by majority to withdraw from the coalition. In the November 1922 election, won by Bonar *Law, the Liberals fell to third place, behind Labour, and the party never recovered. He attempted a reconciliation with Asquith, led the Liberal Party 1926–29, and (advised by *Keynes) proposed a vigorous economic program in the 1929 election.

A passionate orator, he was known as ‘the Welsh wizard’. He published *War Memories* (1933–36) and *The Truth about the Peace Treaty* (1938). He received the OM in 1919 and an earldom in 1945. J. M. Keynes called him ‘the most intellectually subtle’ of the World War I leaders. In 1936 he visited *Hitler and was impressed, but he became an opponent of appeasement, helped to eject *Chamberlain in 1940, declined *Churchill’s offer of a seat in the War Cabinet and may have hoped for a return to leadership himself. His second son Gwilym (1894–1967) was first elected as a Liberal MP; then became a Conservative, rising to be Home Secretary and Minister for Welsh
Viscount Tenby, which the lessons of sense-experience are subsequently
every mind is initially a tabula rasa or blank slate upon
knowledge, he claims, derives from sense-experience.
All point for empirical theories of philosophy, was his
basis for Whig doctrine. His greatest work, the starting
became eminent as the provider of a philosophical
accession of *William III and Mary and eventually
years in Holland. He returned to England after the
Shaftesbury's final disgrace (1682) Locke lived for five
interested in science and began to practise medicine.
Oxford, where he was later a tutor. He also became
educated at Westminster School and Christ Church,
written. This experience, in Locke's language, is of
written. This experience, in Locke's language, is of
ideas, both those that result from sense impressions or
sense-data, and those introspective ones that refer to
operation of the mind. The world, indeed, which
gives rise to these ideas does not, in fact, reflect them
in every way, some ideas (those of primary qualities,
e.g. solidity and extension) having counterparts
in the actual world, but others (those of secondary
qualities, e.g. colour and taste) being dependent on
our own perceptual equipment and not existing in
the actual world. Locke's theory of knowledge and
metaphysics, as has been pointed out, is in essence
the 17th-century scientific view. His political ideas,
as set out particularly in his treatise Civil Government
(1690) are similarly tied to his age. He argues that
the ruler of a state is to be regarded as one party to
contract, the other party being those over whom he
rules. If the ruler breaks his contract by not serving
the good end of society he may be deposed. Locke's
contemporary influence was enormous and he
became known throughout Europe as the philosopher
of freedom. From 1691 Locke, already in ill health,
found a home and tranquillity (except for four years
from 1696 as Commissioner of the Board of Trade)
with Sir Francis and Lady Masham at Otis, their
house at High Laver, near Epping. His literary activity
was mainly concerned with successive editions of
his Essay and replies to criticism. In the anonymous
Reasonableness of Christianity (1695) he brought
to religion the same spirit of tolerance that he had
already brought to politics, and sought to recall the
Churches to scriptural simplicity from their obsession
with dogma.

Lobachevsky, Nikolai Ivanovich (1793–1856). Russian mathematician. Professor of mathematics at the University of Kazan 1822–46, he proposed, in Principles of Geometry (1829–30), the first complete system of non-Euclidean geometry. He was dismissed from the university in 1846 and died in poverty.

Lobengula, (c.1833–1894). Matabele chief (from 1870). A section of the Zulu people, escaping (c.1820)
from the tyranny of King *Shaka, had subdued the Mashonas and settled in what became known as
Matabeleland. Here Lobengula was chief when he was persuaded (1888) to grant Cecil *Rhodes mining
rights in his territory (which later became part of Rhodesia, now Zimbabwe). He died a fugitive after
being defeated by white settlers with whom he came
into conflict.

Locke, John (1632–1704). English philosopher,
born in Wrington, Somerset. Son of a lawyer, he was
educated at Westminster School and Christ Church,
Oxford, where he was later a tutor. He also became
interested in science and began to practise medicine.
Through his practice he met Lord Ashley, later 1st
Earl of *Shaftesbury (with whose political ideas he
was closely in tune), and became his secretary. After
Shaftesbury's final disgrace (1682) Locke lived for five
years in Holland. He returned to England after the
accession of *William III and Mary and eventually
became eminent as the provider of a philosophical
basis for Whig doctrine. His greatest work, the starting
point for empirical theories of philosophy, was his
Essay Concerning Human Understanding (1690). All
knowledge, he claims, derives from sense-experience.
Every mind is initially a tabula rasa or blank slate upon
which the lessons of sense-experience are subsequently

Lodge, Sir Oliver Joseph (1851–1940). English physicist. After helping in his father's business as a boy, he gained an exhibition at the Royal College of Science and was later a demonstrator at University College, London. In 1881 he became professor of physics at Liverpool University and was principal of Birmingham University 1900–19. He did pioneer work on wireless telegraphy, and invented the coherer, a tube loosely filled with iron filings, that could be used as a simple detector for electromagnetic signals. Later he devised the system of radio 'tuning' that became generally used. In later life Lodge became a convinced spiritualist and wrote widely on the subject. Among many academic and professional honours he was awarded (1887) the Rumford Medal of the Royal Society and a knighthood (1902).

Lombaerde, Peter (c.1100–1160). Italian theologian. He studied at Bologna and in Paris, where he eventually became bishop (1159). He was known as the 'master of sentences' from his four books, in which sentences culled from *Augustine and other early Christian Fathers were accompanied by comments from other religious writers, the whole providing a systematic discussion of various aspects of Christian faith.

Lombroso, Cesare (1836–1909). Italian criminologist. After studying mental diseases he became professor of forensic medicine at Turin. He evolved the theories, set out in his books *The Delinquent Man* (1876) and *The Man of Genius* (1888), that criminals belong to a distinct anthropological type and that genius springs from some form of physical or mental illness. His theories have been largely rejected, but his vast collection of anthropometric data on criminals was of the greatest value to *Bertillon and other criminologists. His observation, that when in the course of interrogation a person tells a lie his blood pressure changes, significantly anticipated the modern lie-detector.

Lomonosov, Mikhail Vasileivich (1711–1765). Russian scientist, born in Archangel. Son of a shipowner, he studied in many places, including Kiev, St Petersburg, Moscow, and Marburg (with Christian Wolff). He first showed talent as a linguist and philosopher, but increasingly inclined towards chemistry and mathematics. Mining and mineralogy then caught his interest, and he studied at Freiberg under Johann Henckel. He returned to St Petersburg in 1741, and spent the rest of his life there. He was imprisoned (1743–44) for the vehemence of his protests against corruption in society. Much of his work in physics consisted of attempts to find, within the framework of corpuscularian matter theory, adequate theoretical explanations of heat, gravity and weight. He also performed mineralogical experiments, attempted to provide a theory of electricity, and kept tables of the weather. He was the first to lecture about science in Russian. He took keen interest in the mineral resources of Russia, wrote about Russian geography, and speculated on the Arctic regions.
A man of great culture, he wrote a large body of poetry, much of it religious, and made compilations of Russian history and antiquities. He also wrote a grammar and a rhetoric textbook, made the first accurate maps of Russia and became the virtual founder of Moscow University, later named for him. He was buried as a public hero, but *Catherine the Great destroyed his political writings.

**London, Jack** (John Griffith) (1876–1916). American novelist, born in San Francisco. Largely self-educated, he gathered material for his highly successful adventure stories from his early experiences as (among other occupations) a sailor, a gold prospector and a tramp. His novels, several of which are set in Alaska include *The Call of the Wild* (1903), *The Sea Wolf* (1904) and *The Iron Heel* (1907). *Martin Eden* (1909) and *John Barleycorn* (1913) are autobiographical. He also wrote socialist tracts and never lost his revolutionary fervour. He committed suicide during a bout of depression. His works were widely read in Russia.

**Long, Crawford Williamson** (1815–1878). American surgeon. In 1842 he used ether while removing a tumour from a boy's neck, but as this and subsequent cases were unpublicised for many years, he had no effect on the development of anaesthesia.

**Long, Huey Pierce** (1893–1935). American politician. A farmer's son, he became a lawyer, gained control of the Democratic party machine in his native Louisiana and built it up to sustain his personal power. He was elected Governor of the state 1928–31 and US Senator 1931–35. His 'Share the Wealth' campaign, which he pursued with all the arts of a demagogue, gained him considerable popularity and the nickname 'the Kingfish', derived from his slogan 'Every man a king'. He also became famous for the prolonged 'filibusters' by which he held up the business of the Senate. In Louisiana his dictatorial rule, secured by intimidation and falsification of election results, ended only with his assassination. His son *Russell Billiu Long* (1918–2003) was US Senator 1948–87 (elected at the minimum constitutional age of 30). His second wife Frances Elizabeth Appleton, by whom he had six children, was burned to death.

**Longford, Earl and Countess of see Pakenham**

**Longman, Thomas** (1699–1755). English bookseller and publisher. The son of a merchant from Bristol, he bought a bookseller's shop in Paternoster Row, London, in 1724. One of his best-known projects was a share in the publication of Samuel *Johnson's Dictionary*. He was followed by a nephew, also *Thomas* (1730–1797), and then by *Thomas Norton Longman* (1771–1842) and his son *Thomas* (1804–1879). The company published works by *Wordsworth*, *Southey*, *Coleridge*, *Scott* and *Macauly*.

**Longstreet, James** (1821–1904). American soldier. One of the heading Confederate generals, he fought at the battle of Bull Run, Antietam, and Gettysburg. Later he supported the US Government during the 'Reconstruction' period and became Minister to Turkey 1880–81.

**Lonsdale, Frederick** (Leonard) (1881–1954). English playwright. Son of a tobacconist, he wrote witty and fast-moving comedies of upper class life, with a swift repartee in the tradition perfected later by Noel *Coward*. His best known plays are *The Last of Mrs Cheyney* (1925) and *On Approval* (1927).

**Lonsdale, Dame Kathleen** (née Yardley) (1903–1971). English crystallographer. She worked with W. H. *Bragg in developing X-ray analysis of crystals, was elected as the first woman fellow of the Royal Society (1945) and became professor of chemistry at University College, London 1946–68.
Loos, Adolf (1870–1933). Austrian architect, born at Brno. He studied in Germany and the US and became an admirer of the American architect Louis Sullivan, returning to Europe to head the attack on ‘Art Nouveau’ and excessive decoration, designing buildings of uncompromising severity. His ideas were published in his Ornament and Crime (1908). He pioneered the use of reinforced concrete in building municipal housing in Vienna. In 1923 he settled in Paris.

Lope de Vega see Vega Carpio, Lope Félix de

Lorca, Federico García (1899–1936). Spanish poet, born near Granada. Much of his poetry was inspired by the cave-dwelling granadinos of the Granada area. This became apparent in his Poema de Cante Fondo (1931), his first important work, and in Romancero Gitano which fully established his fame. Here he sees the endless fight of the gypsy against the world around him as a kind of symbolic struggle. The poem Oda del Rey de Harlem with its suggestion of jazz rhythms is one of several recalling a visit to America (1929–31). On his return he made a new reputation as a playwright with Blood Wedding Yerma and The House of Bernarda Alba. Though he belonged to no political party Lorca was shot by the Falangists at the outbreak of the Civil War.

Lord, Thomas (1755–1832). English sportsman, born in Yorkshire. He was noted as the founder of Lord’s cricket ground in St John’s Wood, the home of the Marylebone Cricket Club since 1787.

Lorentz, Hendrik Antoon (1853–1928). Dutch physicist. Professor of mathematical physics at Leyden 1878–1912, he was an authority on Planck’s quantum theory, to which he made important contributions. His studies on the application to moving bodies of Maxwell’s theory of electromagnetism helped to prepare the way for Einstein’s formulation of the theory of relativity. Lorentz attempted to unify the mathematical treatment of light, electricity and magnetism. One of the results of his work was his explanation of the Zeeman effect. He shared, with Zeeman, the Nobel Prize for Physics (1902).

Lorenz, Konrad (Zacharias) (1903–1989). Austrian ethologist, born in Vienna. Son of a surgeon, he was educated at the University of Vienna and later lectured there in comparative anatomy and animal psychology. Working from the family home at Aithenberg in the 1930s, he made comprehensive studies of how animals behave in natural environments and became known as the ‘father of ethology’. He wrote both scholarly and popular books, e.g. King Solomon’s Ring (1949, English translation 1952), Man Meets Dog (1950, 1954) and On Aggression (1963, 1966). In 1973 he shared the Nobel Prize for Physiology or Medicine with Karl von Frisch and Nikolaas Tinbergen. Lorenz was sometimes criticised for undue emphasis on genetically fixed (innate) action patterns and for extrapolating animal behaviour to humans.

Lorenzo the Magnificent see Medici

Lorrain(e), Claude see Claude Lorrain(e)

Lothair I (799–855). King of the Franks 843–55, Roman Emperor 817–855. Son of the emperor Louis I, and grandson of Charlemagne, he was made co-Emperor in 817 but his father’s arrangements in the following year for the partition of the Frankish empire between his sons after his death, was followed by feuds and fighting between the members of his family which continued almost without intermission for the rest of the reign. Lothair’s claim to be sole emperor on his father’s death (840) was followed by renewed fighting with his brothers Louis and Charles which ended with the partition set out in the Treaty of Verdun (843), by which Lothair retained the imperial title but only that portion of imperial territory bounded by the rivers Rhine, Meuse, Saône and Rhône. This area, named Lotharingia after him and steadily reduced by the encroachment of its neighbours, was the Lorraine of future history. This partition marked the end of the Carolingian Empire.

Loti, Pierre (pseudonym of Louis Marie Julien Viaud) (1850–1923). French writer. He served as a naval officer for most of his adult life and spent some years in the South Seas, Indochina, Japan and China during the Boxer Rising. He retired as captain in 1910 but returned to fight in World War I. He wrote memoirs, descriptions of his voyages, and a number of very popular novels that are notable for their sensuous descriptions, their vein of romantic melancholy and their power of evoking the exotic places and peoples among whom he had lived so long. His novels include Pêcheur d’Islande (1886) Madame Chrysanthème (1887), Ramuntcho (1897) and Désenchantées (1906). He was a member of the Académie Française from 1891.

Lotka, Alfred James (1880–1949). American mathematician. After years of teaching and government work, he became an actuary with the Metropolitan Life Insurance Co. and published major studies on the mathematical implications of
biological and societal change, e.g. ageing, population growth and distribution, demographic movement and anthropogenic climate change.

**Lotto, Lorenzo** (c.1480–c.1556). Italian painter, born in Venice. Influenced by *Bellini, he was an acute observer, a prolific painter of altarpieces and portraits, and retired to a monastery in 1554.

**Louis I and II. Kings of Bavaria see Ludwig I and II**

**Louis** (Ludwig) I (known as ‘the Pious’) (778–840). King of the West Franks (Francia, later France) and Emperor of the West 814–40. Born in Aquitaine, the third son of *Charlemagne, his father made him co-Emperor in 813 and he succeeded to the throne the following year. In 816 the Pope went to Rheims and placed the crown upon his head, an assertion of papal supremacy which pointed to the controversies of the future. Louis’ first acts were aimed at cleansing the court of profligacy, even his own sisters were sent to convents. As a ruler, however, he was quite inadequate and his attempts (818) to arrange for the partition of the empire after his death between his three sons, *Lothair, Pepin and Louis (the German) opened a period of strife that outlasted his reign. Matters became worse when his second wife, Judith of Bavaria, gave birth to the future *Charles the Bald: that he should have a kingdom of his own, and her character, which enabled her to dominate her husband, introduced new and even more disruptive elements into the family struggle, which was still raging when Louis died, worn out and broken hearted.

**Louis II (the Stammerer)** (846–879). King of France 877–79. Nephew of the Emperor *Charles II (the Pious) (c 862–882), who reigned 879–882 and defeated the *Louis III (b’Outremer, i.e. the foreigner) (921–954), was exiled in England until installed as King by nobles at a time of civil war, and reigned 936–54. His grandson *Louis V (‘le Fainéant’, i.e. Do-nothing) (967–987), the last of the Carolingians, reigned 986–87, died childless and was succeeded by Hugues *Capet.

**Louis VI (the Fat)** (1081–1137). King of France 1108–37, of the Capetian dynasty, faced constant attack from *Henry I of England and the Holy Roman Emperor *Heinrich V, but strengthened royal control of his kingdom. His son Louis VII (the Young) (1120–1180), reigned 1137–80. He married *Eleanor of Aquitaine but this was annulled and she married the future *Henry II of England. He fought (1147–49) in the unsuccessful Second Crusade.

**Louis VIII** (1187–1226). King of France 1223–26. Son and successor of *Philip II, before he came to the throne he was offered the English crown by a group of barons who wished to depose King *John. He arrived in England (1216) and was proclaimed King, but was forced to withdraw when John’s death deprived him of baronial support. As King, Louis took over the campaign against the Albigensian heretics and made important gains in Languedoc.

**Louis IX, St** (1214–1270). King of France 1226–70, canonised (1297). During his minority, his mother, Queen Blanche, widow of *Louis VIII and a remarkable woman in her own right, was regent and brought the Albigensian war to an end, ensuring a tranquil opening to his period of personal rule. The first disturbance resulted from his investment (1241) of his brother with the government of Poitou. The feudatories rose in rebellion and invoked the aid of *Henry III of England, who crossed to France in their support. Louis’ victory enabled him to acquire the north of Aquitaine at English expense. In 1244 he fell ill, and was inspired by gratitude for his apparently miraculous recovery to lead the 6th Crusade (1248–54) against Egypt, where he was captured by the Saracens (1250). When ransomed, he spent two years in the Holy Land, to return (1254) on the death of his mother, whom he had left as regent. Back in France, Louis ruled with wisdom and firmness, improving the administration of law and taxes. Architecture flourished in his reign during which the cathedrals of Chartres, Amiens and Beauvais took shape and the beautiful Sainte Chapelle, Paris was built (1246–48) by *Pierre de Montreuil, at his direction, to house relics acquired in the Crusades. He was regarded as the ideal medieval king, religious but not bigoted nor unduly subservient to the Church, simple in habits, friendly and popular. In 1270 he embarked upon another crusade but the odd decision to invade North Africa exposed his army to plague and he died at Carthage, near Tunis.

**Louis X** (le Hutin) (1289–1316). King of France 1314–16. Son of *Philip IV, he was dominated by his uncle Charles of Valois and gave important concessions to the barons.

**Louis XI** (1423–1483). King of France 1461–83. Even as a young man he showed his untrustworthy nature and was twice exiled for rebelling against his father, *Charles VII. As King he saw as his main task the strengthening of the monarchy, a course that brought conflict with the great feudal lords. The chief of these was *Charles the Bold, from 1467 Duke of Burgundy, and the struggle between these two and the combinations of power allied with each lasted throughout his reign. Louis’ principal weapons,
Louis XII (1462–1515). King of France 1498–1515. He succeeded his brother-in-law, *Charles VIII, and his first aim was to retain Brittany by marrying Charles's widow *Anne, who would otherwise inherit. The obstacle, his own wife Jeanne, daughter of *Louis XI, was removed by dissolution of the marriage with the Pope's connivance, gained by the bestowal of a dukedom and a pension upon the latter's son Cesare *Borgia. Married to Anne, Louis pursued his dynastic claims in Italy, he succeeded in ousting Lodovico *Sforza from Milan, and, by coming to a bargain with his rival, *Ferdinand of Spain, was able to expel the king of Naples and share the spoils. The unnatural partners soon fell out and a catastrophic French defeat on the Garigliano led to the expulsion of the French. Louis' subsequent attempts to maintain and enlarge his hold on northern Italy led to a bewildering series of shifting alliances and even more confusing campaigns, but by the end of his reign French power in Italy was broken. Despite his disastrous foreign policy, Louis was popular in France and the country was prosperous. On the death (1514) of Anne, he married the English princess Mary, sister of *Henry VIII, but almost immediately the accompanying festivities brought about the death of the ailing king.

Louis XIII (1601–1643). King of France 1610–43. Son and successor of *Henri IV, his personal part in the events of his reign was small. Under the regency of his mother *Marie de Médicis the early years saw the Huguenots in rebellion and the nobles competing for power. When he was 16, Louis tried to assert himself by entrusting power to his favourite, Charles Albert de Luynes, whose incompetence and unpopularity provoked renewed civil war. Fortunately his death (1621) paved the way for the rise to power of *Richelieu who entered the council in 1622 and from 1624 exercised almost supreme power. The years of his rule were marked by France's skillful intervention in the Thirty Years' War, the prelude to a long period of greatness. Not the least of Richelieu's triumphs was the reconciliation, after a long estrangement, of Louis and his wife Anne of Austria, with the result that in 1638 a dauphin, the future *Louis XIV, was born.

Louis XIV (known as le Grand Monarque or le Roi Soleil) (1638–1715). King of France 1643–1715. Born at St Germain-en-Laye, under the will of his father, *Louis XIII, his mother Anne of Austria became regent for the boy king, but the substance of power she confided to *Richelieu's successor Cardinal *Mazarin. The Thirty Years' War, ended triumphantly for France by the Treaty of Westphalia (1648), was followed by the civil war known as the Fronde (after the frondeurs or stone-slingers in Paris street brawls). This began as a constitutional struggle by the Paris parlement and developed into an attempt to gain power by sections of the nobility, mortified at Mazarin's exclusion of them from the tasks and perquisites of office. The insurrection failed, helped though it was by Spain, which in 1659 came to terms cemented by Louis' marriage (1660) with *Maria Theresa, daughter of *Philip IV. It was thus a peaceful and united country over which, on the cardinal's death (1661), Louis began his personal rule. From the first he was determined that neither an over-powerful minister nor factions of the nobility should share in the function of government, he became his own prime minister and with unremitting industry and unfailing regularity presided over the daily meetings of his council. He chose his ministers carefully and they were seldom changed. The best known were Colbert, who restored financial stability, encouraged industry and created a strong navy, and *Louvois, who was responsible for creating the strongest army in Europe. The main weakness of a system by which every aspect of government centred on the king and his small ministerial entourage was that as the king grew older the machinery of government also showed down. Ministers were replaced by lesser men and the brilliant successes of the early years were later dimmed by setbacks.
Since the monarchy was the centre of power, Louis proceeded to glorify it. He built the palace of Versailles, Europe’s largest, between 1661 and 1710, using the architect *Mansart and the landscape designer *Le Nôtre and lived there from 1682. Versailles not only reflected the King’s love of grandeur but was deliberately intended to impress the world with the greatness of the monarchy and the glory of France. There gathered round him at Versailles not only ministers, functionaries and courtiers but men of every kind of genius, e.g. *Molière, *Racine, *Poussin, *Lully. Louis’ foreign policy matched his grandiose taste in architecture. His first efforts to seize the Netherlands and the Franche Comté (on behalf of his wife after the death of *Philip IV of Spain) were partially foiled, but as his diplomatic skill and the strength of the army grew so did his ambitions. He failed to subdue Holland in the long war which opened in 1672, but gained considerable successes over his Habsburg opponents, the Emperor and the King of Spain. The peace of Nijmegen (1678) left France with the Franche Comté and the frontier towns of Flanders, turned by *Vauban into almost impregnable fortresses. Louis at once used these gains as bases for further encroachments but Europe was now fully alarmed. William of Orange, infinitely strengthened when (1689) he became *William III of Great Britain, impatiently built up coalitions against Louis, resulting in the War of the League of Augsburg (1689–97), which marked a decline in French power, for though Louis lost only minor territories (chiefly Luxembourg) he had to disown *James II and recognise William.

France might have suffered only temporary exhaustion had not Louis been unable to resist the temptation to accept, on behalf of his grandson Philip, the legacy of Spain bequeathed by the childless *Charles II. In the War of Spanish Succession (1702–13), of which *Marlborough was the hero, he met with a series of defeats. He lost, thanks to diplomacy, little territory, and that mainly colonial, and *Philip V continued to rule in Spain, but Louis’ glory was irretrievably tarnished and the country’s finances were in ruins. During this long period of fighting, the Edict of Nantes, which gave security and privileges to the Huguenots, was repealed (1685). Louis’ motives were partly religious but mainly sprang from his desire for administrative unity. The consequent emigration of many of the most skilled workers and merchants was a great loss. The king’s private life seldom interfered with his task of kingship. His three important mistresses were Louise de la Vallière, Madame de *Montespan, and Madame de *Maintenon, and he secretly married the last after the death (1683) of Maria Theresa. In the latter part of his reign, public misfortunes were matched by private grief. One after another members of the royal family died and it was his great-grandson who succeeded as *Louis XV.

Louis XV (known as le bien-aimé) (1710–1774), King of France 1715–74. Born at Versailles, son of Louis, Duke of Burgundy (d 1712), he succeeded his great-grandfather *Louis XIV at the age of five. France was then ruled by a regency for the third successive period, but neither the regent, the indolent, dissolute Duke of Orléans, nor his creature, the infamous Guillaume Dubois, showed talent for government. The main events were a useless war against Spain and the financial scandal caused by William *Law. Louis came of age in 1723 and in 1725 married Marie, daughter of Stanislas *Leszczynski, the deposed King of Poland. In 1726 the government came into the capable hands of Cardinal Fleury and there followed a long period of tranquillity (broken only by the War of Polish Succession), in which France was at last able to rebuild its shattered economy and regain prosperity. Fleury died soon after the opening of the War of Austrian Succession (1741–48), to which he had reluctantly assented. In this war France supported *Friedrich II (‘the Great’) of Prussia against Austria and England, but a change of alliances was organised by the Marquise de Pompadour, the mistress now in control of the king’s will, and her chosen minister, the Duc de Choiseul, and in the Seven Years’ War (1756–63) France was allied against England and Prussia. The expense of these two wars, in which Canada and many other colonial possessions were lost by France, accelerated the coming of the Revolution. At Versailles, the king, intelligent and good-natured, with his mistresses (La *Pompadour, *du Barry and many more) lived amidst an extravagant court.

Louis XVI (Louis-Augustus) (1754–1793). King of France 1774–92. Born at Versailles, son of the Dauphin Louis (1729–1765) and grandson of *Louis XV, he was 20 when crowned and had already been married for four years to *Marie Antoinette, youngest daughter of *Maria Theresa. Until his phimosis was relieved by an operation he was unable to consummate his marriage for seven years. To his wife he remained devoted, but her frivolity and extravagance and her ingrained opposition to political changes were constantly harmful to her husband’s popularity.

The early part of the reign witnessed valiant efforts by ministers such as *Turgot and *Necker to sort out the financial tangles, but as soon as a serious attempt was made to tax the nobles and the privileged classes the court party, encouraged by the queen, forced their dismissal. Matters had become worse owing to France’s intervention on the American side in the War of Independence for, though the result assuaged French pride after the losses of the Seven Years’ War, it increased the burden of debt and popularised the ideas of constitutional liberty favoured by the colonists. Financial controllers, *Calonne and Brienne, failed in turn and at last in 1788 Necker, recalled, demanded the summoning
of the Estates-General. In May 1789, at Versailles, this body met for the first time since 1614. The tiers-état (third estate or commons), representing the merchant classes and more liberal elements, decided to sit as a 'national assembly', in which members of the other estates, the nobility and the clergy could (though in fact few did) take part. This was the first revolutionary act. In July the Bastille was taken by the Paris mob and in October the royal family was brought by a triumphant crowd to Paris. Louis, well-meaning but slow witted, became progressively less able to control events. In April 1791, *Mirabeau, who might have guided him to constitutional safety, died. In June the royal family, under the queen's influence, made a ludicrous attempt to flee the country but were caught at Varennes and ignominiously brought back. The king was soon at loggerheads with his legislative assembly, at the queen's instigation, he and she wrote secretly to their fellow monarchs for aid.

In June 1792 the newly elected National Convention deposed Louis and proclaimed the republic. He was brought to trial, sentenced on 20 January and guillotined the following day a brave, revolutionary act. In July the Bastille was taken by the mob. The royal family, which had taken refuge in the Assembly, was imprisoned. In September 1792 the newly elected National Convention deposed Louis and proclaimed the republic. He was brought to trial, sentenced on 20 January and guillotined the following day a brave, bewildered, unfortunate man. His son Louis (1785–1795), proclaimed by the monarchists as Louis XVII, was said to have died in prison (June 1795), but there were persistent claims that he was smuggled out of France. Many pretenders later came forward. Pierre Poiret (d 1856) who lived in the Seychelles had some advocates, so did J. J. *Audubon. Louis XVI's other child, Marie Thérèse (1778–1851), married her cousin, son of Charles X, to become Duchess d'Angoulême and a figure of some importance in the days of the revived monarchy after Napoléon's fall.

Louis XVIII (Louis-Stanislas-Xavier) (1755–1824). French minister. He succeeded his father from whom he learned how to organise an efficient army as Minister of War 1677–91 under Louis XIV. The introduction of better weapons, an aggressive approach, made the French army a highly effective force. Louvois aided and encouraged Louis in his aggressive ambitions.

Louvois, (Français) Michel le Tellier, Marquis de (1641–1691). French minister. He succeeded his father from whom he learned how to organise an efficient army as Minister of War 1677–91 under Louis XIV. The introduction of better weapons, a quarter-master organisation and a professional approach, made the French army a highly effective force. Louvois aided and encouraged Louis in his aggressive ambitions.

Louys, Pierre (1870–1925). French writer, born in Ghent. He started (1891) a literary review, La Conque, which supported the Parnassian school. His lyric poetry (e.g., Astarré, 1891), based on Greek forms, is stylistically much admired. His novel Aphrodite (1896) was extremely successful.

Lovat, Simon Fraser, 11th Baron (c.1665–1747). Scottish chiefman and intriguer. To escape the consequences of his failure to carry off the child heiress of the previous Lord Lovat, followed by his forcible
marriage to her mother, he took refuge in France. He returned to Scotland as a double agent, helping to prepare for a Jacobite invasion but communicating the plans to the British Government. After a period of imprisonment in France he was in Scotland again to offer his services to the government in the 1715 rising. In the later rising (1745) he sent his son to head his clansmen in support of the Jacobites, while he himself stayed at home expressing loyalty to *George II. After Prince *Charles Edward’s defeat at Culloden, Lovat was taken to London and beheaded, aged more than 80, being the last peer executed for treason.

Lovell, Countess of, (Augusta) Ada King (née Byron) (1815–1852). English noblewoman. Only child of Lord *Byron, she studied mathematics, became a friend of Charles *Babbage, wrote an early account of computing but was not ‘the world’s first programmer’.

Lovelace, Richard (1618–1658). English Cavalier poet. Heir to large estates in Kent, in 1649 he published the collection *Lucasta*, which includes his most famous poems: *To Althea, From Prison* (‘Stone walls do not a prison make/Nor iron bars a cage’) and *To Lucasta, going to the Wars* (‘I could not love thee (Dear) so much,/Lov’d I not honour more’). Both reflect episodes in his career, the first a term of imprisonment (1642) after he had presented a ‘Kentish Petition’ to parliament, the second (probably) his departure to join the French army at Dunkirk, where he was wounded (1646). Back in England he was again in prison (1648–49) and died in poverty.

Low, Sir David Alexander Cecil (1891–1963). British cartoonist, born in New Zealand. He made his reputation on *The Bulletin* in Sydney, and worked in England from 1919 as cartoonist for the *London Star* (1919–27), *Evening Standard* (1927–50) *Daily Herald* (1950–53) and finally for the *Manchester Guardian*. Though his viewpoint was in general anti-Conservative (especially during the appeasement era), pretentious stupidity, rather than party affiliation, was his real target. Some of the most effective of his cartoons featured ‘Colonel Blimp’.

Lowe, Sir Hudson (1769–1844). British soldier. He became a lieutenant general in the French wars and after Waterloo was made Governor of St Helena. He was accused of undue severity towards Napoléon, especially by *O’Meara, the latter’s surgeon, yet it seems though his manner was stiff and he refused to address his prisoner by his imperial rank, his conduct was formally correct. He was Commander-in-Chief in Ceylon (1824–31).

Lowell, James Russell (1819–1891). American writer, editor and diplomat. He came from a distinguished Massachusetts family and was grandson of John Lowell (1743–1802), a noted judge. J. R. Lowell abandoned law for a literary career, he was first editor (1857–61) of the *Atlantic Monthly* and joint editor (1864–72) of the *North American Review* and had succeeded (1855) Longfellow as professor of modern languages at Harvard. Gradually his poetry, essays and critical studies won him an unchallenged leadership in literature. His best known verse was contained in the satirical *Biglow Papers* (1848), written to oppose the Mexican War and the annexation of Texas. Of his later prose works *Among My Books* (1870–76) and *My Study Windows* (1871) are well known. Lowell served as Minister to Spain 1877–80 and to Great Britain 1880–85. Among other members of the great Lowell clan were: Percival Lowell (1855–1916), an orientalist and astronomer who founded the Lowell Observatory, Flagstaff, Arizona (1894), was an ardent proponent of canals on Mars, and hypothesised (from 1905) a trans-Neptunic ‘planet X’. Pluto was identified in 1930 by Clyde *Tombaugh and its name begins with Lowell’s initials; Amy Lawrence Lowell (1874–1925), his sister, was a poet who succeeded Ezra *Pound as leader of the Imagist group. Her collections of poems include *Pictures of the Floating World* (1919), and she also wrote critical essays and a biography of *Keats* (1925) and Robert *Lowell*.

Lowell, Robert Traill Spence (1917–1977). American poet. Educated at Harvard, he became a Catholic in 1940 and served a short jail sentence during World War II as a conscientious objector. His first book of poetry was *The Land of Unlikeness* (1944) and he won the Pulitzer Prize for poetry with his second *Lord Weary’s Castle* (1957). Other volumes...
include The Mills of the Kavanaughs (1952), The Old Glory (1964), For the Union Dead (1965) and Near the Ocean (1967). He became a leader in the anti-Vietnam movement in the US. In addition to his powerful and pessimistic verse, he published much-praised translations, e.g. of *Aeschylus’s Prometheus Bound (1967) and of *Baudelaire.

Lowry, Laurence Stephen (1887–1976). English painter, born in Manchester. He worked as a rent collector, and slowly gained recognition for his spare, deceptively simple, industrial landscapes (peopled by matchstick figures) and seaside scenes and was elected RA in 1962. He declined honours five times – probably a record.

Lowry, (Clarence) Malcolm (1909–1957). British novelist. Educated at Cambridge, he became an alcoholic whose life was marked by a long series of personal disasters and constant movement (Mexico, Canada, Haiti, the US). His masterpiece is Under the Volcano (1947), a richly textured account of cultural and personal tensions in Mexico in the 1930s. All his other works were published posthumously.

Loyola, St Ignatius [of] (Iñigo López de Recalde) (1491–1556). Spanish-Basque founder of the Jesuit order although not designed as such, became almost at times it has concentrated on education and missionary work. Ignatius was canonised in 1622.

Dudon, P., St Ignace de Loyola. 1949.

Lucan (Marcus Annaeus Lucanus) (39–65 CE). Roman poet, born in Córdoba. A nephew of *Seneca, he was educated in Rome and Athens. A favourite of *Nero for some years, he later joined in a conspiracy against him, was betrayed and committed suicide. His greatest work is the epic Pharsalia (10 books of which survive), describing the civil war between *Caesar and *Pompey. It is factually unreliable, being especially unfair to Caesar, and reveals in gruesome details of the battle scenes, but it is eminently readable and was long popular.

Lucan, George Charles Bingham, 3rd Earl of (1800–1888). British soldier. He commanded the cavalry in the Crimean War when the jealous hostility between him and his subordinate, the Earl of *Cardigan, Commander of the Light Brigade, caused the misunderstanding that resulted in the famous and heroic charge up the ‘valley of death’ at Balaclava (October 1854) from which less than 300 out of nearly 700 men returned. He became a field marshal in 1887. His great-great-grandson, (Richard) John Bingham, 7th Earl of Lucan (1934–1974?), a charismatic figure once considered for the film role of James Bond, became an unsuccessful professional gambler. With the murder of his children’s nanny and an attack on his estranged wife in 1974, Lord Lucan was the immediate suspect. His role and disappearance became the subject of intense interest for decades. He was officially declared dead in 2016, presumably as a suicide, although it was speculated that he may have been fed to a tiger.

Luce, Henry Robinson (1898–1967). American journalist and publisher. In 1923 he founded and edited the weekly news magazine Time followed by Fortune (1930) a business magazine, and Life (1936). His wife, Clare Boothe Luce (1903–1987) wrote successful plays, e.g. The Women (1937) and was a Republican Member of the House of Representatives 1943–47 and US Ambassador to Italy 1953–56.
Lucian (c.120–c.190). Greek satirical writer, born in Syria. After being a rhetorician in Antioch, he travelled in Italy, Greece and Gaul. He was already about 40 when he studied in Athens and learned enough about philosophy to be able to satirise the dogmas of almost every school, including Christianity. Later he held a government post in Egypt. All his writing shows his talent for satire and parody. In verse there are mock tragedies such as *Tragedopodagra (Tragic Gout), in prose such amusing works as True History, a parody of travellers’ tales, which is said to have influenced *Rabelais, *Swift and *Voltaire. He uses the savagery of his wit in Dialogues of the Dead and his powers of burlesque in Dialogues of the Gods. Zeus Cross-examined is a title that suggests its contents.

Lucretius (Titus Lucretius Carus) (99–55 BCE). Roman philosophical poet. Almost nothing is known of his life. His fame rests on his great work De rerum natura (The nature of things), one of the greatest of all didactic poems. It is an epic in six books, written in hexameters, and contains the clearest exposition that we have of the philosophic system of *Epicurus. Books I and 2 describe the atomic system of *Democritus as adapted by *Epicurus; Book 3 deals with the nature of the soul; Book 4 with the doctrine of perception and with sexual emotions; Book 5 is devoted to the theories of Epicurus concerning the evolutionary development of mankind, the earth and the universe; Book 6 covers a variety of topics and includes a description of the great plague of Athens. He denounced all forms of religion and superstition and considered that since death means annihilation it should present no terrors.

Lucullus, Lucius Licinius (c.110–c.57 BCE). Roman soldier and administrator. Of noble birth, he first became prominent under *Sulla in the war (88–85) against *Mithridates, King of Pontus in Asia Minor. His later campaigns (from 74) were waged against Mithridates and his ally Tigranes of Armenia, but though Lucullus gained many successes and did much, by his financial measures, to restore prosperity to the Asian province, he was unable to bring the wars to a decisive conclusion before he was superseded by *Pompey. After his return to Italy his great wealth enabled him to lead a life of luxury in Rome, where his gardens were renowned, or in his villas at Naples and Tusculum. The banquets for which he was famous were distinguished for the conversation as well as for their splendour.

Ludendorff, Erich Friedrich Wilhelm (1865–1937). German soldier. Son of a railway official, he had a staff officer’s training. The deployment of the armies at the outbreak of World War I was largely due to his planning. When the Russians achieved their early successes in East Prussia, Ludendorff and *Hindenburg, to whom he was Chief of Staff 1914–18, turned the tide by the Battle of Tannenberg and other victories. This partnership – Ludendorff, the brains, and Hindenburg, the character, personality and prestige – remained in being until the end of the war. He was Quartermaster General 1916–18 and virtually ruled Germany through Hindenburg and puppet chancellors. He allowed *Lenin’s return to Russia via Germany (1917). Transferred to the Western Front in 1916, they restored the German line’s stability, shaken by the Battle of the Somme, and planned the great offensive of spring 1918 which so nearly achieved a complete breakthrough. Ludendorff’s defects of character showed, however, when the situation was once more reversed and the Allies again pressed forward. He lost his nerve and left it to Hindenburg, whom he despised, to bring the army back to Germany. After Germany’s defeat, which he attributed to ‘a stab in the back’, he fled to Sweden and did not return to Germany until 1920. Associated with the Kapp putsch (1920), he marched with *Hitler in the attempted Munich putsch of 1923, was tried for treason but acquitted. He contested the German presidency in 1925, polled badly and founded the Tannenberg League, a mystical-religious sect, anti-Christian and anti-Jewish, which tried to revive the old Teutonic religion. In his last years he became a pacifist.

Ludwig I (1786–1868). King of Bavaria 1825–45. His artistic taste led him to enrich Munich, his capital, with many buildings and paintings. The cost of these extravagances, and the money Ludwig lavished upon the object of his infatuation, the dancer Lola *Montez, exacerbated the indignation caused by his increasingly arbitrary rule and he was forced to abdicate (1848). His tastes were shared in an exaggerated form and to the point of eventual madness, by Ludwig II (1845–1886) who succeeded to the throne in 1864. He was the patron of *Wagner, for whom he built the theatre at Bayreuth. His mania for fantastic castles endowed Bavaria with buildings, Neuschwanstein the most famous, which have become tourist attractions. In 1886 he was declared insane, and shortly after drowned his physician and himself in Lake Stainberg.

Ludwig, Karl Friedrich Wilhelm (1816–1895). German physiologist. He held chairs at Marburg 1846–49, Zürich 1849–55, Vienna 1855–65 and Leipzig 1865–95. He was able to keep animal organs alive in vitro (1856) and invented important instruments, such as the mercurial blood pump (1859) and the flowmeter (1867) for measuring the rate of blood flow. His own research concentrated mainly on the kidneys and their secretions. The problem of how secretion takes place through membranes was a lifelong preoccupation and the secretion of the saliva via the glandular nerves was another field in which he worked. The circulation of the blood also attracted his
attention. He investigated how blood pressure related to heart activity, and the role of muscles in the fluidity of the blood.

**Lugard, Frederick John Deahtly Lugard, 1st Baron** (1858–1945). British colonial administrator. He had a varied career as soldier and administrator in India, Burma, the Sudan, Central and West Africa before he was appointed the first high commissioner of Northern Nigeria 1900–06. Here he put into practice his principles of ‘indirect rule’ through native rulers and institutions, for which he became famous. He left Africa (1906) to become Governor of Hong Kong 1907–12 but returned to govern North and South Nigeria (amalgamated 1914) and was Governor-General of Nigeria 1914–19. He wrote *The Dual Mandate in British Tropical Africa* (1922) and received a peerage in 1928.

Perham, M., *Lugard, the Years of Authority.* 1960.

**Lukacs, Georg** (Gyorgy Szegedy von Lukacs) (1885–1971). Hungarian philosopher and literary critic. The most influential of 20th-century Marxist scholars, he revived interest in the Hegelian background of Marx’s work and emphasised the concepts of ‘alienation’ and ‘reification’. He took an active, but not always consistent, role in politics and served as minister of culture in two revolutionary governments (1919 and 1956). He was an advocate of ‘cultural realism’, opposing both Modernism and *Brecht,* and appears as Naphtha in Thomas *Mann’s* *The Magic Mountain.*

**Luke, St** (Loukas in Greek) (d.c.90 CE). Christian apostle, one of the four evangelists. Regarded as the author of the third Gospel and of the Acts of the Apostles, the only known facts of his life are contained in three passages in the epistles of St Paul, which describe him as a Gentile, a physician and a close associate of St Paul, and his companion in imprisonment in Rome.

The strong tradition that he was the author of the Gospel attributed to him and of the Acts dates from the late 2nd century and there seems little reason to dispute it. Critical examination of the texts suggests that the two books were almost certainly by one hand and it is clear that much of the Acts must have been written by someone in the closest touch with St Paul. The Gospel was probably written for Greek-speaking Christians at Antioch in the years before Paul’s death (c.67 CE). It is clear that the author consulted St Mark’s Gospel and had access, as did the author of St Matthew’s Gospel, to the source known as ‘Q’. Other sources must have also been available as there are discrepancies in detail and some incidents not found elsewhere. For example the incidents concerning the Virgin Mary are elaborated, and several women are mentioned who are not referred to elsewhere. He may have died at Ephesus (or Antioch).

**Lula da Silva, Luís Inácio** (1945– ). Brazilian politician, born in Pernambuco. He had very little formal schooling, learning to read at the age of 10, growing up in São Paulo where his father had two households, becoming a street vendor, then an assembly line worker in a motor parts factory. A co-founder of the Workers’ Party (PT – *Partido dos Trabalhadores*) in 1980, he ran unsuccessfully for the presidency in 1989, 1994 and 1998. He won in 2002 and 2006, serving as President 2003–11. He introduced a series of domestic reforms, reducing poverty and promoting education, pursued an activist foreign policy, seeking international cooperation on disarmament and climate change issues.

**Lully, Jean Baptiste** (Giovanni Battiste Lulli) (1632–1687). French composer, born in Florence. As a child he was taken to France and when his musical talents were discovered he was a scullion in the service of a cousin of the king. An appointment in the royal orchestra quickly followed and soon he was presiding over his own players and composing ballets (some of them as divertissements in *Molière’s* plays) in which *Louis XIV* himself liked to dance. Both in ballet and in opera (from 1652) he so transformed the musical techniques as almost to create a new art, and he defined the form of the French overture. He also introduced female dancers to the stage. Among his 15 operas are *Alceste* (1674), *Ays* (1676) and *Aes et Galathée* (1686). He died from blood poisoning resulting from striking his foot with a heavy baton while keeping time during a performance of his *Te Deum.*

**Lully, Raymond** (Ramon Lull) (1232/5–1315). Spanish theologian and mystic, born in Majorca. After a life of ease in his youth, he was converted by a vision and fired with the desire to convert all Moslems to Christianity. He became an Arabic scholar and also wrote *Ars Generalis sive Magna* which was to be the intellectual instrument of his mission. Having spent some 30 years in travelling Europe in the hope of getting support for his plan, he himself made a direct attempt to convert the Moslems of Tunis (1292) and Bougie (1306). Imprisonment and banishment were the only results. In a third mission he was stoned, and died on shipboard in sight of his native Majorca. In *Llibre de Contemplació,* which reveals the mystical side of his complex personality, he was a pioneer in the use of the Catalan language for serious works of this kind.

**Lumière, Louis Jean** (1864–1948). French industrial chemist and pioneer photographer. With his brother *Auguste Lumière* (1862–1954) he constructed (1895) a practical motion-picture camera and a
projector that incorporated what have since become the standard devices for photographing and projecting motion pictures.

Lumumba, Patrice (1925–1961). Congolese politician, born in the province of Kasai. He was a post-office clerk before setting up in business in Leopoldville. In 1958 he founded the Mouvement National Congolais, and on independence (June 1960) became first Prime Minister of the Congo republic. His anti-Belgian extremism led to a breakdown of authority and by September he had lost control of the central government, though he still governed in Stanleyville, with Communist support. In December he was arrested by troops sent by the central government and flown to Katanga, where he mysteriously died. Part of the University of Moscow reserved for African students was named after him.

Lunacharski, Anatoli Vasilievich (1875–1933). Russian educationist and Communist politician. A brilliant orator and propagandist, he supported the Bolsheviks from 1903 and lived in Italy until the October Revolution of 1917 brought *Lenin to power in Russia. He became Comissar for Education 1917–29 and introduced many important reforms in public education. He wrote 14 plays and a successful producer.

Lunt, Alfred (1893–1977). American actor and producer. With his wife, Lynn *Fontanne, he appeared in many plays, e.g. Amphitryon 38, Love in Idleness etc., in the US and Britain, and was also a successful producer.

Lupescu, Magda (1904–1977). Romanian adventurer. Mistress and (from 1947) wife of *Carol II of Rumania, whose exile she shared, she was created Princess Elena.

Lurçat, Jean (1892–1966). French artist. His great contribution as a tapestry designer of striking designs and flamboyant colour gave a new lease of life to the tapestry industry of France.

Luther, Martin (1483–1546). German Protestant leader, born in Eisleben, Saxony. From a modest family, after schooling in Magdeburg and Eisenach he went to Erfurt University, where he studied law. The death of a friend turned him towards religion, he became an Augustinian friar and was ordained priest (1507). In 1508 he moved to Wittenberg in Saxony to teach philosophy and theology at the university. On a mission to Rome (1511) he was shocked by the luxury and corruption of the papal court, but for several years he remained faithful to the Church, attracting thousands by his lectures and sermons and working out a personal theology based on the Augustinian doctrines of faith and grace and the study of St *Paul, rather than on the writings of *Erasmus and the humanists.

The arrival (1517) of Johann Tetzel, a Dominican friar sent by the Archbishop of Mainz to raise money for the rebuilding of St Peter's, Rome, by the sale of indulgences (i.e. remission of the penalties of sin), a practice against which Luther had already preached, caused him to take the momentous step of fixing to the church door an announcement of 95 theses attacking the sale of indulgences. Luther refused to withdraw his theses before a papal legate at Augsburg (1518) and in disputations especially in one with the theologian Johann Eck (1519) he was goaded to take a more extreme position and even challenged the condemnation of Jan *Hus as a heretic. Luther next published his address To the Christian Nobility of Germany (a call to resistance and reform), The Liberty of a Christian Man (on the doctrine of justification by faith alone, not by good works), and The Babylonish Captivity of the Church (on the Sacraments, especially rejecting transubstantiation). To these attacks on the Church the pope replied by a Bull of excommunication, which Luther burned publicly.

The printing press was a central factor in the Reformation, both as cause and effect, because it had enabled the production of indulgences on an almost industrial scale, the rapid dissemination of Luther's writings, accessibility to his German translation of the Bible, and the familiarisation of his image by his supporter Lucas *Cranach.

An attempt at conciliation was made by the emperor *Charles V who summoned Luther, under safe conduct, to the Diet of Worms (1521), but Luther withdrew nothing. (Here I stand, I can do no other, so help me, God.) He was allowed to depart but, with the issue of an imperial ban, the Elector of Saxony placed him under protection in the Castle of Wartburg. He risked leaving his security (1522), however, as his deputies were unable to control the fast growing movement. Luther still hoped that separation from Rome would be only temporary but the issue of the Augsburg Confession (1530), mainly the work of *Melanchthon, and still the basic statement of Lutheran belief, was tantamount to creating a new Church. Meanwhile, in 1525, Luther had married (a decisive step for a former priest), Katharina von Bora, herself a former Cistercian nun, and she bore him three sons and two daughters. Their happy home became a meeting place for his friends and admirers.

The Peasants' Revolt (1523–25) partly the result of the example set by his own rebellion and the ensuing violence, so shocked Luther that he urged its repression with extreme ferocity but the political result was that the Reformation ceased to be a largely
popular movement and came to rely on the support of the princes. The compromise finally established by the religious peace of Augsburg (1555) cujus regio ejus religio (i.e. that the religion of the state should follow that of the ruler) set a limit on the extent of the Lutheran reformation. Luther was extremely intolerant of other Protestant groups: he despised the English reformers and Catholic moderates such as Erasmus, joined with the Catholic Bishop of Munster in suppressing the Anabaptists, and quarrelled bitterly with *Zwingli and *Carlstadt over the doctrine of the Lord’s supper. He was deeply pessimistic, superstitious (firmly believing in demon possession) and anti-Jewish. He insisted that Scripture is ‘the sole rule of faith alone’, believing mankind to be totally depraved and vehemently rejecting reason.

Luther’s greatest literary achievement was the translation of the Bible, started at the Wartburg. His New Testament, published in 1522, was translated directly from *Erasmus’s Greek edition. The Old Testament, translated from Hebrew, was completed in 1534. Luther’s Bible had a unique influence on the development of literary German. Throughout his life he was engaged in writing and expanding his theories – controversies with such contrasting opponents as *Henry VIII and Erasmus were innumerable – and his sermons, letters and theses all show the vigour and *Henry VIII and Erasmus were innumerable – and his sermons, letters and theses all show the vigour and clarity of his mind.

Todd, J. M. Martin Luther. 1964; Oberman, H. A. Luther. 1989; Pettegree, A., Brand Luther. 2015.

Luxembourg, Rosa (1870–1919). German revolutionary leader, born in Russian Poland. She was imprisoned (1915–18) for opposing World War I, but after the German defeat she founded, with Karl *Liebknecht, the Communist group known as Spartacists, whose revolt in January 1919 she organised. She was a brilliant orator and political writer and is regarded by Communists as one of their great heroes. Both she and Liebknecht were murdered by officers who arrested them.

Lu Xun (real name Zhou Xujen) (1881–1936). Chinese author. Trained as a physician, his sardonic and incisive short stories and essays, e.g. The True Story of Ah Q (1921) and Call to Arms (1923), were derisive of Chinese traditionalism and fatalism. He refused to join the Communist Party but was an active fellow traveller, hailed as a revolutionary hero by *Mao Zedong. He is the most widely read author in modern China.
Lvov, Georgy Vevgenyevich, Prince (1861–1925). Russian statesman. A leading liberal member of the Duma 1905–17, he was prominent in developing a system of local government (zemstvo). As Chairman of the all-Russian Union of Zemstvos it devoted upon him to head the provisional government in the first months of the Russian Revolution (1917). His moderation and dislike of violence made him unsuited for a revolutionary situation and he resigned later in the year in favour of *Kerensky. When the Bolsheviks came to power he escaped to France.

Lyadov, Anatoly Konstantinovich (1855–1914). Russian composer. One of the most brilliant of Rimsky-Korsakov's pupils, he wrote a number of symphonic poems, national in spirit, including The Enchanted Lake Kikimora and Baba-Yaga.

Lyautey, Louis Hubert Gonzalve (1854–1934). French soldier and administrator, born in Nancy. He joined the army in 1872 and, although a conservative royalist, developed an enthusiasm for social reform and education. He served in Indo-China, Madagascar and Algeria and was Resident-General in Morocco 1912–16, 1917–25 where he created a relatively modern infrastructure. He was Minister for War 1916–17. Elected to the Académie Française in 1912, he became a marshal of France in 1921. In Morocco he faced a revolt by *Abd el-Krim, who was finally defeated by *Pétain in 1926.

Lycurgus (9th century BCE?). Spartan lawgiver. Traditionally he was the author of the rigid social code by which the Spartiate aristocracy was kept apart from the other inhabitants, and of the system of military education by which, from the ages of six to 20, the strictest obedience, self-discipline and rigorous training were imposed on all Spartan boys. (These institutions almost certainly belong to a later date and the very existence of Lycurgus may be mythical.)

Lydgate, John (c.1370–c.1450). English poet. Almost certainly born at and called after Lydgate in Suffolk, he was a monk of Bury St Edmunds. He produced long narrative poems, mostly adapted or translated, e.g. Troy-Book (from a Latin work), The Siege of Thebes (from Boccaccio), The Siege of Thebes (intended to be a supplement to The Canterbury Tales by Chaucer, his acknowledged master), and a drearily prolix allegory, The Pilgrimage of Man (translated from the French). The satirical London Lickpenny, a shorter poem, gives a lively picture of the contemporary scene.

Lydia of Thyatira (fl. c.50 CE). Greek merchant and convert. A trader in purple, she met Paul and Silas in Philippi, offered them hospitality and was the first named Christian convert in Europe (Acts 16:14–15).

Lyell, Sir Charles, 1st Baronet (1797–1875). Scottish geologist. A barrister, from 1827 he devoted himself to geology. After investigatory tours in Europe (1824 and 1828–30), he published Principles of Geology (3 volumes, 1830–33), which had immense influence on the development of the science. Equally important was The Geological Evidences of the Antiquity of Man (1863) which gave powerful support, from the evidence of a different science, to Darwin's evolutionary theories. Further publications (1845 and 1849) resulted from travels in North America. Lyell was professor of geology at King's College, London 1832–33, President of the Geological Society 1836, 1850 and President of the British Association 1864.

Lyly, John (1553–1606). English dramatist and novelist. His best known work is Euphues a romantic 'novel' in two parts (1578 and 1580). It is written in an amusing but rather affected (euphuistic) style, which Shakespeare both adopted and parodied in several of his plays. His comedies were mostly written for troupes of boy players and probably for this reason have more delicacy and a gentler wit than others of the time.

Lysander (d.395 BCE). Spartan leader. He won a crushing victory over the Athenian fleet at Aegospotami (405), and in 404 took Athens, thus ending the Peloponnesian War. By imposing oligarchic regimes in the Greek city states, he secured Spartan domination throughout Greece. He died fighting in Boeotia, which had become restive under the assertion of Spartan power.
Lysenko, Trofim Denisovich (1898–1976). Russian biologist. He claimed that his experiments showed that acquired characteristics could be inherited and bolstered his presentation with 'Marxist' argument, hoodwinking both *Stalin and *Khrushchev. He persecuted the geneticist N.I. *Vavilov and was attacked by J.B.S. *Haldane. His theory is at variance with the genetics of *Mendel, and never found support outside the Soviet Union. Even there it was discredited after 1953, with some revival 1957–64.

Lysimachus (c.662 BCE–281 BCE). Macedonian general. One of the Diadoche ('Successors'), generals who fought for control of *Alexander the Great's empire on his death, he became King of Thrace, Asia Minor and Macedonia. He was killed in the battle of Corupedium by the forces of *Seleucus.

Lytton, Edward George Bulwer-Lytton, 1st Baron (1803–1873). English author and politician. Son of a general, educated at Cambridge, he inherited the Lytton estate, Knebworth, from his mother (1843) and added her name to his father's. He wrote furiously, lived extravagantly, made many enemies, including *Tennyson and *Thackeray, but was admired by *Dickens and *Disraeli. He wrote 30 novels, mostly on historical themes, including *Eugene Aram (1832), *The Last Days of Pompeii (1834) and *The Last of the Barons (1843). MP 1831–41, 1852–66, he was Colonial Secretary 1858–59.

His only son, Edward Robert Bulwer Lytton, 1st Earl of Lytton (1831–1891), educated at Harrow and Bonn, had an unremarkable career as a diplomat, becoming Minister to Portugal 1872–76 until unexpectedly chosen by Disraeli to be Viceroy of India 1876–80. The unpopular Afghan War, which he helped to provoke, led to Disraeli's defeat (1880) and his own removal. He became Ambassador to France 1887–91. He wrote copious poetry, now forgotten, under the name of 'Owen Meredith'. He called himself 'a sensitive second rate poet' (but he was even less).

Mabuse (Gossaert), Jan (c.1478–1533/5). Flemish painter. His early work was done in Antwerp where he became a master in 1503. Although often described as a ‘Flemish Romanist’, a visit to Rome in 1508 had little effect on his style except perhaps in his use of light. The influence of *Dürer (not only on his woodcuts and engravings) was much stronger. The nudes Hercules and Dætiana (Birmingham) and Neptune and Amphitrite (Berlin) may have been painted (1516–17) as part of a project by Philip, prince bishop of Utrecht, to decorate his castle of Soubreg. The earlier Adoration of the Kings (National Gallery, London) is more typically Flemish.

McAdams, John Loudon (1756–1836). Scottish engineer and road-maker, born at Ayr. He went to New York at the age of 14 and returned to Britain in 1783 with a fortune made in commerce. From 1810 his interest in road-making became dominant and the building of experimental stretches of road absorbed most of his fortune. His road-making technique built on a cambered base for better drainage, paved by two layers of broken stone: the lower level, 200 mm thick, used stones of less than 75 mm in diameter, the upper was limited to 20 mm. The stones were held together by natural interlock. Although later bitumen/mastic was applied for a smoother surface McAdams’s pavements had twice *Telford’s carrying capacity. In 1827 he received a government grant of £10,000 and was appointed surveyor-general of metropolitan roads. ‘Macadamised’ roads had been introduced to France, Russia, North America and Australia by 1830.

McAdoo, William Gibbs (1863–1941). American politician, born in Georgia. He became a lawyer in Tennessee, then entered business in railway and tunnel construction in New York. Regarded as a progressive on social issues, he was campaign director for Woodrow *Wilson’s campaign for President in 1912. US Secretary of the Treasury 1913–18, in 1914 he married Wilson’s daughter, Eleanor. He introduced the Federal Reserve system as a central bank. *A ‘Dry’ on prohibition, McAdoo twice sought the Democratic nomination for President. In 1920 he led on 21 ballots at the Convention but failed to win the required two-thirds majority. In 1924, endorsed both by the Ku Klux Klan and organised labour, he led on 77 ballots, but failed again. He lived in California from 1922 and was a US Senator 1933–39.

McAleese, Mary Patricia (née Leneghan) (1951– ). Irish lawyer, academic and politician, born in Belfast. A barrister and professor of criminal law at the Queen’s University, Belfast, she was elected as President of Ireland 1997–2011, as a political independent. In 2011 she hosted a state visit to the Republic by Queen *Elizabeth II.

MacArthur, Douglas (1880–1964). American General of the Army, born in Little Rock, Arkansas. His father, Lieutenant-General Arthur MacArthur (1845–1912), won the Medal of Honor (1863) in the Civil War, served as Military Governor of the Philippines 1901–05 and as an observer of the Russo-Japanese war. Douglas MacArthur graduated from West Point in 1903 at the head of the class and won a brilliant reputation in France as Commander of the 42nd (‘Rainbow’) division 1918–19. He became Superintendent of the West Point Military Academy 1919–22 and saw further service in the Philippines. As Chief of Staff of the US Army 1930–35, he led troops in Washington (1932) to break up demonstrations by the unemployed. The Filipino Government appointed him as Director of National Defence 1935–37 and he lived in Manila after retirement. The US recalled him to active service in July 1941 and after Pearl Harbor he became General Commanding US Forces in the Far East 1941–42. Ironically, his scheme for defending the Philippines led to a major US defeat, despite skilful delaying actions at Bataan and Corregidor. He was awarded the Medal of Honor in 1942. This was the first time a father and son had been so recognised. President *Roosevelt ordered him to leave the Philippines for Australia. As Supreme Commander, Allied Forces in the South West Pacific 1942–45, he directed US and Australian troops, working closely with *Curtin and *Blamey. The Japanese advance was stopped in New Guinea by Australian soldiers. With Admiral Chester *Nimitz, MacArthur devised an ‘island hopping’ strategy for the recovery of the Pacific. In October 1944, US troops landed on the island of Leyte, fulfilling MacArthur’s pledge: ‘I will return.’ He was promoted five-star General of the Army in 1944 and received a GCB (UK) in 1945. (Lord *Alanbrooke considered him the greatest general of World War II.) MacArthur formally accepted the Japanese surrender (August–September 1945), and as Supreme Commander of Allied Forces in Japan 1945–51, virtually revived the Shogunate, ruling with Emperor *Hirohito’s cooperation. A democratic constitution was adopted, trade unions legalised, the armed forces abolished and war crimes trials held. MacArthur became Commander-in-Chief of UN Forces in Korea 1950–51, checked the invasion from North Korea, backed by China, and proposed to bomb Chinese bases north of the Yalu. President

Macarthy, John (1767–1834). Australian pioneer, born near Plymouth. He joined the army and in 1789 was posted to the New South Wales Corps, arriving in Sydney with his wife Elizabeth MacArthur (née Veale) (1766–1850) in June 1790. Ambitious, with a flair for publicity and making enemies, he remained in the army but became a landowner at Elizabeth Farm, Parramatta and Camden Park. By breeding merino sheep for wool rather than meat he pioneered the industry that became an Australian mainstay. He clashed with successive governors of New South Wales, and was active in the Rum Rebellion (January 1808), which overthrew William *Bligh. He was in England 1809–17 and his wife managed his sheep flocks with great success. Macarthur became an ultra-conservative in the Legislative Council 1825–32.

Macartney, 1st Earl, George Macartney (1737–1806). Anglo-Irish diplomat and administrator. Educated at Trinity College, Dublin, he became envoy to St Petersburg 1765–67, Governor of the Caribee Islands 1775–79, of Madras 1780–86 and the Cape of Good Hope 1796–98. He led an important but unsuccessful mission to China 1792–94, during the reign of *Qianlong.

Macaulay, Dame Rose (1881–1958). English novelist. She first won success with Potterism (1920). Among the best known of her many novels are Orphan Island (1924) and, almost at the end of her life, The Towers of Trebizond (1956) for which she was awarded the James Tait Black Memorial Prize. Her astringent and ironic style was much admired. In 1958 she was made a DBE.

Macaulay, Thomas Babington Macaulay, 1st Baron (1800–1859). English historian, poet and politician. A precocious child with a prodigious memory, he abandoned law for literature and politics soon after leaving Cambridge. His essays began to appear in the Edinburgh Review in 1825. Their pretext was always a recently published book but in reality they were Macaulay's own assessments of the subject. First collected in 1843 they give a magnificent impression of brilliance sustained over nearly 20 years, those on *Chatham and *Clive are among the best, that on Warren *Hastings among the most unfair. As a Whig MP 1830–34, 1839–47 and 1852–56, Macaulay displayed his talent in parliament in oratory rather than debate. He went to India (1834) as legal adviser to the supreme council and there he wrote a famous 'minute' on education and played the leading part in drawing up a new criminal code. On his return he was Secretary for War 1839–41 and Paymaster General 1846–47. His History of England from the Accession of James II (5 vols, 1848–61, incomplete) was passionate advocacy written from the Whig perspective, with great narrative skill but flawed by an incapacity to understand other points of view.

Macbeth (c.1005–1057). King of Scots 1040–57. Son of the Mórmaer (sub-king) of Moray, he married Gruoch, granddaughter of Kenneth III. He killed *Duncan I, seized his throne and ruled until defeated and killed in battle by Duncan's son *Malcolm III. His reign seems to have been relatively prosperous. He is said to have made a pilgrimage to Rome (1050). *Shakespeare's tragedy is based on the account in *Holinshed's Chronicle but the characters are largely fictional.

MacBride, Sean (1904–1988). Irish politician and lawyer, born in Paris. His father, John MacBride (1868–1916), was executed by the British after the Easter rising and his mother Maud Gonne (née Veale) (1766–1850) in June 1790. Ambitious, with a flair for publicity and making enemies, he remained in the army but became a landowner at Elizabeth Farm, Parramatta and Camden Park. By breeding merino sheep for wool rather than meat he pioneered the industry that became an Australian mainstay. He clashed with successive governors of New South Wales, and was active in the Rum Rebellion (January 1808), which overthrew William *Bligh. He was in England 1809–17 and his wife managed his sheep flocks with great success. Macarthur became an ultra-conservative in the Legislative Council 1825–32.

Ellis, M. H., John Macarthur. 1955.

Ellis, M. H., John Macarthur. 1955.
McCahon, Colin (1919–1987). New Zealand painter. Largely self-taught, he worked through landscapes and religious subjects to word paintings, powerful and disturbing works in which messages, often Biblical or Maori texts, conveyed a desperate need to communicate an inner anguish, e.g. *Will he save him?* (1959).

McCain, John Sidney III (1936– ). American Republican politician, born in Panama. Son of an admiral, he served as a naval pilot, became a prisoner of war in Vietnam 1967–73, then entered politics as Congressman 1983–87 and US Senator from Arizona 1987–. He was a candidate for Republican nomination for president 2000, losing to George W. *Bush. In 2008 he had a spectacular series of wins in the Republican primaries, was unopposed for the presidential nomination at the convention, but lost to Barack *Obama in November.

McCall Smith, Alexander (1948– ). Scottish novelist and lawyer, born in Zimbabwe. Educated in Botswana and Scotland, McCall Smith became Professor of Medical Law at Edinburgh University, an authority on bioethics and an amateur bassoonist. An astonishingly prolific writer of academic texts, he wrote more than 100 novels and children's books, including *The No. 1 Ladies' Detective Agency* series (1999ff) and the 44 Scotland Street series (2005ff).

McCarthy, Eugene Joseph (1916–2005). American politician, born in Minnesota. He studied for the priesthood, but became a social science teacher, first at high schools, then at colleges in Minnesota. He was a US Congressman 1949–59 and a senator from Minnesota 1959–71. He became closely identified with the political cause of Adlai *Stevenson and was recognised as a witty and fastidious man with a distaste for the vulgarities of the political routine. In 1968 he campaigned against President *Johnson's renomination and fought for the Democratic nomination against Hubert *Humphrey and Robert *Kennedy. He sought the nomination again in 1972, ran for president as an Independent in 1976, endorsing Ronald *Reagan in 1980 and Ralph *Nader in 2000. He wrote essays and columns, published volumes of poetry and worked as an editor.

McCarthy, Mary (Therese) (1912–1989). American novelist and critic, born in Seattle. A satirist of the intellectual's attempts to come to terms with modern urban life and human relationships, she is best known for *Memories of a Catholic Girlhood* (1957), *The Groves of Academe* (1952) and *The Group* (1963), the last drawn from her own education at Vassar College. She married four times, once to Edmund *Wilson.

McClellan, George Brinton (1826–1885). American soldier. He served as an engineer in the Mexican War (1846–48) and in 1855 was sent as an observer to the Crimean War. He was recalled from retirement when the Civil War broke out (1861) to reorganise the army of the Potomac, of which he was made Commander-in-Chief. Government impatience forced a premature offensive directed towards Richmond, the Confederate capital, but he skilfully extricated himself and in 1862 fought a brilliant campaign to repulse a Confederate invasion of Maryland. He followed up his advantage by moving into Virginia but the pace was too slow to satisfy the impatient Cabinet at Washington and he was dismissed. In the 1864 election he was the Democrat candidate for the presidency against *Lincoln. He then became a railroad executive and Governor of New Jersey 1877–81.

McClintock, Barbara (1902–1992). US geneticist. Educated at Cornell University, she devoted herself to plant breeding, working at the Cold Spring Harbor Laboratory of the Carnegie Institute from 1942. Her decades of work on maize led to the identification of 'jumping genes', mobile elements in chromosomes which helped to explain mutability in hereditary traits in some plants. The importance of her research was not recognised until after the revolution in molecular biology promoted by F. H. C. *Crick and J. D. *Watson. She won the 1983 Nobel Prize for Medicine.

McCormick, Cyrus Hall (1809–1884). American inventor. He was the son of Robert McCormick, a Virginian farmer, who invented (1809) a successful
but crude reaping machine. Young McCormick patented a greatly improved model in 1839 and in 1848 arranged for the manufacture of a more advanced version in Chicago. It was exhibited at the Hyde Park Exhibition in London (1851). On his election (1879) to the French Académie des Sciences, McCormick was acclaimed as having done ‘more for science than any living man’. Under the presidency of his son and namesake, also Cyrus Hall McCormick (1859–1936), the firm became the International Harvester Company, one of the greatest firms in the US.

McCullers, Carson (1917–1967). American novelist. She achieved consistent success with her novels, several of which were filmed, including *The Heart is a Lonely Hunter* (1940), *The Member of the Wedding* (1946) and *Clock without Hands* (1961).

MacDiarmid, Hugh (pen name of Christopher Murray Grieve) (1892–1978). Scottish nationalist leader and poet. Written mostly in Scots, the best of his poems give lyrical expression to his feelings for his native land. He became both a Communist and a Scots Nationalist, and his later works, reflecting his social and philosophical concerns which could not be adequately written in Scots, were published in English.

MacDonald, J(ames) Ramsay (1866–1937). British Labour politician, born at Lossiemouth. Educated at the village school where he later became a pupil teacher, he went to London (1884) but, after a breakdown of health, abandoned his studies in science for political journalism. A determined propagandist for socialism, he joined the Independent Labour Party (1893) and became Secretary (1900) of the newly formed Labour Party. Elected MP for Leicester (1906), he became leader of the party in the House of Commons (1911). His pacifist attitude during World War I, however, cost him the leadership of the party in 1914 and his seat in parliament in the 1918 election.

After the 1922 election he was again MP and chosen to lead the parliamentary opposition of 140 Labour members. In a snap election (December 1923) called by *Baldwin on the protection issue, Labour and the Liberals won a majority for free trade. MacDonald became the first Labour Prime Minister (and foreign minister) January–November 1924, with Liberal support. The *Zinoviev letter incident led to press allegations of Communist influence on Labour. The Liberals withdrew their support and the elections of November 1924 resulted in a Conservative victory. (The heaviest losers were the Liberals.) MacDonald was Labour Prime Minister again 1929–31 but lacked any clear idea of how to deal with the Great Depression and his chancellor, *Snowden, was ultra-cautious, rejecting *Mosley’s alternative program. When a majority of Labour ministers refused to accept Budget cuts, MacDonald resigned, then continued as Prime Minister of a National Government 1931–35 with the Conservatives and some Liberals, and was expelled from the Labour Party. He came under increasing Conservative domination and in declining health, became vague and forgetful. He served as Lord President of the Council under Baldwin 1935–37, refused all honours, and died on a holiday voyage to South America.

MacDonald, Sir John A(lexander) (1815–1891). Canadian Conservative politician, born in Glasgow. He emigrated with his parents to Canada when he was five and became a lawyer in Kingston, Ontario. In 1844 he became a Conservative member of the Legislature of Upper Canada and from 1847 held Cabinet offices. From 1856, as leader of the government, he played the principal part in the discussions and negotiations leading to the formation of the dominion of Canada, of which he became first Prime Minister 1867–73 and 1878–91. One of the great benefits he conferred upon Canada was encouraging the building of railways, as a means of linking the widely separated areas of the vast country and providing a secure basis for unity. He also introduced tariff protection of industry. Following the ‘Pacific scandal’, charges that he accepted campaign funds from a railroad contractor, Sir Hugh Allan, he resigned (1873) and was beaten in the ensuing
elections. Alexander *Mackenzie then became Prime Minister, but MacDonald returned to office at the 1878 election, remaining in office until his death from a stroke.

**McDougall, William** (1871–1938). British psychologist. After holding academic appointments in England he went to America, where he was professor of psychology at Harvard (1920–27) and then at Duke University, North Carolina. His championship of *Lamarck's theory of biological inheritance, although based on laboratory work, was not conclusive: his reputation is mainly based on his Introduction to Social Psychology (1908). He also became interested in psychical research or ‘parapsychology’ as he termed it.

**McGovern, George Stanley** (1922–2012). US politician. The son of a clergyman, he was trained for the Methodist ministry, served as a bomber pilot in World War II, then took a PhD in history. He served as a congressman from South Dakota 1957–61, foundation Director of the Peace Corps 1961–62 and US Senator 1963–81. In 1972 he won the Democratic nomination for president as an anti-war candidate, losing heavily to Richard *Nixon.

**McGuffey, William Holmes** (1800–1873). American educator, born in Pennsylvania. He taught in Ohio, after picking up a sporadic education, and was appointed to the chair of mental and moral philosophy at the University of Virginia in 1845. His name was immortalised by his five volumes known as McGuffey's Eclectic Readers (1836–44) of which 122,000,000 copies were sold between 1836 and 1920. These became the model for school readers throughout the world and had an extraordinary influence in the US, especially where reading material was scarce. They contained extracts from the Bible, *Shakespeare, Samuel *Johnson and *Dickens and proclaimed a philosophy based on Alexander *Hamilton's concept of democracy, *Calvin's theology, and *Blackstone's view of property.

**McGuinness, (James) Martin** (Pacelli). (Séamus Máirtín Pacelli Mag Aonghusa) (1950–2017). Irish politician. After being active with the Provisional IRA, he worked with Sinn Féin, was elected to the UK House of Commons 1997–2013, but never sat. Following a peace agreement in Ulster, he served as Deputy First Minister 2007–17, working with Ian *Paisley.

**Mach, Ernst** (1838–1916). Austrian physicist and philosopher. He was professor of mathematics at Graz 1864–67, of physics at Prague 1867–95 and at Vienna 1895–1901. He investigated the behaviour of projectiles at high speeds and thus provided valuable data on the phenomena of supersonic flight, the ratio of the airspeed on an aircraft to the speed of sound was named, after him, the ‘Mach number’. His theoretical studies of mechanics and thermodynamics led him to a reassessment of Newtonian concepts and influenced Einstein in his development of the relativity theory. As a philosopher, Mach held that the laws of physics should be divorced from metaphysical speculation and should be pure descriptions of observed data. In that sense he can be described as a phenomenalist.

**Machado de Assis, Joaquim Maria** (1839–1908). Brazilian novelist and poet, born in Rio de Janeiro. Of mixed Negro and Portuguese descent, he suffered from epilepsy and poverty as a youth. He became a typesetter, then a journalist. Regarded as the most important Brazilian writer, his novels include The Posthumous Memoirs of Brás Cubas (1881 translated as Epitaph of a Small Winner 1952) and Dom Casmurro.
(1900, 1953). His work combined cynicism, urbanity, irony, wit and pessimism. Machado was the first president of the Brazilian Academy of Letters 1896–1908.

Machaut, Guillaume de (1300–1377). French composer and poet. A priest in the service of *Charles V, he is credited with the first complete Mass by one composer and his Messe de Nostre Dame was one of the greatest works of the 14th century.

Machiavelli, Niccolò (1469–1527). Italian diplomat and writer, born in Florence. Son of a lawyer, he held office as Secretary of the Council of Ten in charge of Florentine foreign affairs from 1498 until 1512 when the republic fell and the *Medici regained power. During those years he was sent on diplomatic missions to *Louis XII of France and the emperor *Maximilian, and while in attendance upon Cesare *Borgia was able to study the practices and motives of the ambitious prince. Back in Florence he organised the citizen army that captured Pisa (1509). When the Medici returned, Machiavelli was imprisoned for a time and had to retire from public life. He occupied himself by writing not only to instruct but to amuse, as in the lively, satirical and bawdy play La Mandragola. His serious works include Discourses on *Livy, The Art of War, a History of Florence and the book upon which his fame and his sinister reputation rest, *Il Principe (The Prince, 1513), largely based on his observations of Cesare *Borgia. Originally dedicated to the younger Lorenzo de' *Medici (1492–1519), grandson of 'the Magnificent', by whom Machiavelli may have hoped that Italy might be saved from foreign intervention and united under a single rule, the book was not actually published until 1532. *Il Principe sets out to give precise and practical information concerning the qualities and practices necessary for a prince to achieve these worthy ends in a corrupt age. It is thus a work not of moral precept but of practical instruction, and in so far as it is held to reflect Machiavelli's personal character, it defames him. The view of *Spinoza and *Rousseau is now generally accepted: that *The Prince is a savage satire against tyranny by a man of profoundly pessimistic insight who recognised that the methods he detested (and scrupulously refrained from in his own life) were likelier to be successful than policies of restraint and conciliation. He bases the argument of *The Prince on the contention that in an age where everyone is self-seeking the only hope lies in a single ruler whose sole interest would be his people's welfare, but that in order to obtain that position and achieve that aim it is necessary to rule despotically, to cast all moral principles aside and concentrate entirely on the end in view. The cynical dictum 'the end justifies the means' had long been approved in practice. The odium that was attached to Machiavelli's name was due to the fact that he seemed to give it theoretical justification. In Elizabethan and Jacobean England, Machiavelli and their perception of machiavellian politics were so execrated that his works and possibly his name (Old Nick) became synonymous with the devil. Machiavelli returned to public life in his later years and performed some services for Pope *Clement VII.

McKell, Sir William John (1891–1985). Australian Labor politician. Originally a boiler-maker, he entered the New South Wales State Parliament in 1917, studied law and became a KC and was Premier 1941–47, retiring on his controversial appointment as the second native-born Governor-General of Australia 1947–53.

McKellen, Sir Ian Murray (1939– ). English actor. He excelled in *Shakespeare and *Chekhov and was a memorable *Salieri in Amadeus. He starred in Richard Locraine's film Richard III (1996) and as Gandalf in *Strindberg's The Dance of Death, Lear in *Shakespeare and *Chekhov and was a memorable *Salieri in Amadeus. He starred in Richard Locraine's film Richard III (1996) and as Gandalf in *Strindberg's The Dance of Death, Lear in The Lord of the Rings (2001). He was an outstanding Edgar in *Strindberg's The Dance of Death, Lear in *Beckett's Waiting for Godot, and received a CH in 2008.

Mackensen, Anton Ludwig Friedrich August von (1849–1945). German field marshal. One of the most successful commanders of World War I, he drove the Russians from Galicia, overran Serbia 1915, and conquered Romania 1916–17.

Mackenzie, Sir Alexander (1764–1820). Scottish explorer of Canada. His interest in a fur-trading company provided opportunities for journeys of exploration. He reached (1789) the mouth of what is now called the Mackenzie River and (1792–93) made the first expedition across the Rockies to the Pacific. He was knighted in 1802.

Mackenzie, Alexander (1822–1892). Canadian politician, born in Scotland. He emigrated (1842) to Canada and led the Liberal opposition to Sir John *MacDonald in the dominion parliament 1867–73. He became the first Liberal Prime Minister 1873–78, serving as Opposition Leader again 1878–80.

Mackenzie, Sir (Edward Montague) Compton (1883–1972). English novelist and editor, born in Durham. Educated at Oxford, his earlier novels, include The Passionate Elopement (1911), Carnival (1912), Sinister Street (1913–14), perhaps his greatest achievement, and Sylvia Scarlett (1918). During World War I he served in the Gallipoli campaign and in military intelligence in the Near East. In 1923 he founded The Gramophone the first magazine of its type, and remained its editor until 1961. An ardent Scottish nationalist, he was elected as Lord Rector of Glasgow University (1931–34) and in 1938 published The Windsor Tapestry a study of Edward VIII’s abdication. Four Kinds of Love (1937–45), a
somewhat pretentious novel about the inter-war years, followed. He lived on the island of Barra 1939–45 and his Scottish experiences led to the very funny novels Monarch of the Glen (1941) and Whisky Galore (1947: also a successful film). Mackenzie was also a poet, essayist, journalist, and television lecturer. His autobiography My Life and Times appeared, in 10 ‘octaves’ between 1963 and 1971.

Mackenzie, William Lyon (1795–1861). Canadian politician. An emigrant from Scotland (1820) he founded in York (now Toronto) a newspaper, the Colonial Advocate in which he demanded self-government for Upper Canada. Several times he was elected to the assembly and as often expelled. In 1837 he led an armed rebellion that proved a complete fiasco. Mackenzie took refuge in the US but returned (1849) under an amnesty and served (1850–58) in the legislature. His main achievement was to bring home to the British Government the urgency of constitutional reform. His grandson was W. L. Mackenzie *King.

MacKillop, Mary Helen (St Mary of the Cross MacKillop) (1842–1909). Australian Catholic religious, born in Melbourne. Of Scottish descent, in 1866 in Penola, South Australia, she founded the Order of the Josephites (Congregation of the Sisters of St Joseph of the Sacred Heart), devoted to Aboriginals and the poor. She had a turbulent relationship with superiors and was briefly excommunicated (1871). Her beatification was proclaimed in Sydney in 1995 by *John Paul II and canonisation occurred in Rome in October 2010.

Mackinder, Sir Halford John (1861–1947). English geographer. His appointment as reader in geography at Oxford (1887) marked a belated English recognition of the subject as an academic discipline. In 1899 he made the first recorded ascent of Mt Kenya. He directed the London School of Economics 1903–08, and a Conservative MP 1910–22. His application of geography to political questions was borrow from Karl *Haushofer, associated with the ‘Eurasian Heartland’ theory. Mackinder’s books include Britain and the British Seas (1902).

McKinley, William (1843–1901). 25th President of the US 1897–1901. He served in the Union army during the Civil War, studied law and served as a Republican in Congress 1877–83 and 1885–91. Throughout his political career he supported the high tariff policy of the industrialists and it was with their support that, after serving as Governor of Ohio 1892–96, he was elected President (1896), defeating William Jennings *Bryan, and again in 1900. His administration was notable for the successful Spanish-American War by which the US gained control of the Philippines and Cuba. McKinley, re-elected (1900) as a champion of imperialism, was shot at Buffalo station by an anarchist, Leon Czolgosz, and died eight days later. Theodore *Roosevelt succeeded.

Mackintosh, Charles Rennie (1868–1928). Scottish architect and designer, born in Glasgow. A pioneer of the ‘Modern Movement’, Mackintosh discarded historicism in his buildings and became the centre of a group in Glasgow which, having aroused Continental interest, was asked to exhibit in Vienna (1901) and Turin (1902). His Glasgow School of Art (1896–99), designed when he was 28, is, with its great area of window glass, remarkably advanced for its time.

MacLeish, Archibald (1892–1982). American poet and dramatist. In his earlier lyrics, e.g. Frescoes for Mr Rockefeller’s City (1933), he showed himself to be a social critic but was better known for his long poem, Conquistador which won the Pulitzer Prize (1932). He lived in France for many years and his poetry was deeply influenced by *Eliot and *Pound. As Librarian of Congress 1939–44 and Assistant Secretary of State 1944–45, he took an active role in preparing war propaganda and was a founder of UNESCO (1945). He won a second Pulitzer Prize (1953) for his Collected Poems. His play, J. B., a religious parable based on the story of Job, was produced in 1958 and won a third Pulitzer. Edmund *Wilson despised him as an opportunistic mediocrity.

MacLeod, George Fielden, Baron MacLeod of Fuinary (1895–1991). Scottish clergyman. Educated at Winchester and Oxford, he won an MC in World War I and in 1938 founded the Iona Community which attracted international interest. He was Moderator of the Church of Scotland 1957–58. A notable broadcaster and preacher, he called himself ‘uncomfortable socialist and a reluctant pacifist’. He inherited a baronetcy but refused to use the title, but accepted a life peerage in 1967 and later joined the Greens.

McLuhan, (Herbert) Marshall (1911–1980). Canadian media analyst, born in Alberta. Educated at Manitoba and Cambridge, he taught in the US and Canada, directing the centre for culture and
technology at Toronto University 1964–76. His work examined the impact of mass media and advertising. His controversial books include The Mechanical Bride (1951), The Gutenberg Galaxy (1962), Understanding Media (1964), The Medium is the Massage (1967), War and Peace in the Global Village (1968), Take Today: Executive as Drop-Out (1972) and City as Classroom (1977). He defined 'media' as extensions of human capacity and included electric light, vehicles and tools as well as newspapers, telephones, radio and television. He described television as a 'cool' (low definition) medium aimed at group (or family) viewing, favouring low intensity subjects or events (e.g. J. F. Kennedy not R. M. Nixon, sports programs not war reportage, variety not intensity), while 'hot' (high definition) media such as film or radio were better suited for propaganda aimed at an isolated individual. He argued that 'the medium is the message (or massage)', i.e. communication environments influence total response rather than specific program content: literacy or television availability alters lifestyle more than individual books or programs.

**MacMahon, Marie Edmé Patrice Maurice de** (1808–1893). French marshal. Of Irish descent, he served in the Crimea, was made a marshal and given the title Duke of Magenta for his part in the North Italian campaign (1859), and was Governor-General of Algeria 1864–70. In the Franco-Prussian War he commanded the 1st Army Corps and was captured at Sedan. In 1871 he suppressed the revolt of the Paris commune. Though a monarchist, he was elected as President of the Third French Republic in 1873, but resigned in 1879.

**McMahon, Sir William** (1908–1988). Australian Liberal politician. A Sydney solicitor, he was a member of the Commonwealth Parliament 1949–82, a minister from 1951, Treasurer 1966–69 and Foreign Minister 1969–71. He displaced John *Gorton as Liberal Leader and was Prime Minister 1971–72. He lacked gravitas and by 1972 he, and the Coalition, had run out of ideas. His surprisingly narrow defeat by Gough *Whitlam ended 23 years of Coalition rule. His reputation for deviousness meant that he had no defenders, in or out of his Party. He was created CH in 1972 and GCMG in 1977.

**Macmillan, Daniel** (1813–1896), and **Alexander** (1818–1896). British publishers. Sons of a Scottish crofter, they made their way to England, had a small bookshop in Aldersgate St, London, and borrowed money to buy a larger one in Cambridge (1844). Among their most successful early publications were Westward Ho! by Charles *Kingsley and Tom Brown's Schooldays by Thomas Hughes. They set up a London branch in 1858 and soon based the firm there.

**McMillan, Edwin Mattison** (1907–1991). American physicist. He worked at the University of California, Berkeley, with E. O. *Lawrence, and in 1940 produced the transuranic element Neptunium (Np). During World War II he worked on radar, sonar and the 'Manhattan Project'. He shared the 1951 Nobel Prize for Physics with Glenn *Seaborg.

**Macmillan, (Maurice) Harold, 1st Earl of Stockton** (1894–1986). British Conservative politician, born in London. A member of the famous publishing family, he was educated at Eton and Balliol College, Oxford, and was five times wounded as a Guards officer in World War I. He returned to publishing in 1920 and was a Conservative MP 1924–29, 1931–45, 1945–64. He gained some reputation (even notoriety, with his colleagues) as an independent minded politician with sympathy for the unemployed and a supporter of the interventionist economics of his friend J. M. *Keynes. He was 46 when *Churchill first appointed him as an Undersecretary (1940), and his service as Minister Resident in North Africa 1942–45, based in Algiers, helped to develop a working relationship with General Charles de *Gaulle and General Dwight *Eisenhower. He lost his seat in the 1945 election but soon returned through a by-election and was active in the Opposition front bench. After Churchill's return to office in 1951 he was an energetic and successful Minister for Housing 1951–54, exceeding a Party promise to increase the total number of houses built to 300,000 per annum. Minister of Defence 1954–55, he succeeded Anthony *Eden as Foreign Secretary April–December 1955 and became Chancellor of the Exchequer 1955–57. His role in the political crisis over the British-French invasion of Suez was ambiguous: his rival 'Butler said he was 'first in and first out'. When Eden resigned after the Suez adventure failed, complicated by his ill-health (January 1957), Macmillan was appointed Prime Minister, serving until October 1963, the longest single term since *Asquith. He rapidly restored the party image blurred by the Egyptian adventure and for a time (marked by his election triumph in 1959) seemed to have the magic touch that brought prosperity and success. But as the years went by the administration seemed to lose momentum and the government's popularity began to decline. His important 'wind of change' speech (February 1960) to the South African Parliament gave strong support for decolonisation and democratic rule in Africa. Elected as Chancellor of Oxford University in March 1960, defeating Oliver *Franks, he served until his death. Macmillan drastically reconstructed his government in 1962. In January 1963 de Gaulle's refusal to admit Britain to the Common Market, and later the *Profumo affair were major failures. Macmillan's future resolved itself when in October a diagnosis of prostate cancer, wrongly thought to be inoperable, led to his resignation. He ensured that *Butler did not succeed and the prime ministership went unexpectedly to the 13th Earl of Home (Sir Alec Douglas *Home). Macmillan married (1920) *Lady Dorothy Cavendish (1900–1966), daughter of the 9th Duke of Devonshire, and the marriage was deeply unhappy: she loved another MP, Robert Boothby, and he continued to mourn. His six volumes of autobiography (1966–73) were surprisingly...
dull: Enoch "Powell wrote that reading them was like 'chewing on cardboard'. His languid Edwardian demeanour was deceptive, concealing a conflicted interior. Like "Churchill, he had an American mother (from Indiana); with "Atlee he was the only British Prime Minister in three centuries wounded in action; he had the unhappiest prime ministerial marriage since Lord *Melbourne; and was the best-read prime minister since "Gladstone. Awarded an OM in 1976, he received an earldom on his 90th birthday. He outlived his son, Maurice Victor Macmillan (1921–1984), who followed him into publishing and politics as a Conservative MP and was Chief Secretary of the Treasury 1970–72, Secretary of State for Employment 1972–73 and Paymaster-General 1973–74.

MacMillan, Margaret (1860–1931). Scottish educationist, born in New York. Her special interest and that of her sister Rachel McMillan (1859–1917) was the physical education and health of small children. A Christian Socialist and active Fabian, she founded several clinics on her own initiative, that at Deptford (1910) being the largest. She wrote *The Child and the State* (1911) and was created CH in 1927.

McNaughton, Andrew George Latta (1887–1966). Canadian soldier, born in Saskatchewan. Educated as an engineer at McGill, after serving as an artillery officer in World War I he was Canada’s Chief of the General Staff 1929–35, President of the National Research Council 1935–39 and commanded Canadian forces in Britain in World War II 1939–43. He had good relations with *Churchill, bad with *Alanbrooke. Mackenzie *King wanted McNaughton as the first Canadian national to be Governor-General but he made the mistake of entering politics as Minister for National Defence 1944–45, then failed to win a seat in Parliament. Appointed CH in 1946, he became Chairman of the United Nations Atomic Energy Commission 1946–48 and Ambassador to the UN 1948–49.

MacNeice, Louis (1907–1963). Anglo-Irish poet, born in Belfast. Educated at Oxford, he was associated with *Auden, *Day Lewis and *Spender in the ‘Oxford Group’ in the 1930s. He lectured in classics at Birmingham and London, joining the BBC in 1941. His *Collected Poems* appeared in 1949. Apart from translations from the Greek and critical works, e.g. on *Yeats (1941), he wrote Christopher Columbus (1944) one of several radio plays, and *The Dark Tower* (1947) a collection of scripts.

McNeile, Herman Cyril (‘Sapper’) (1888–1937). English author. He achieved bestseller status with a series of novels (several of them filmed) based on the character ‘Bulldog’ Drummond.

Macpherson, James (1738–1796). Scottish author. From 1760 he published a series of poems he claimed were translations from the Gaelic of a 3rd-century CE bard named Ossian. These poems were widely admired, by *Jefferson, *Goethe, *Napoléon, *Ingres and others, and were an important influence behind the Romantic revival. But their genuineness was soon suspect, with Samuel *Johnson conspicuous among the doubters. Challenged to produce his sources, Macpherson fabricated Gaelic originals. After his death a commission considered that the works (Fingal, an epic in six books, is the best known) were free adaptations, with passages of Macpherson’s own inserted, of traditional Gaelic poems. This is still the general view. He was London agent to the Nabob of Arcot and an MP 1780–96.

McPherson, Aimée Semple (née Aimée Elizabeth Kennedy) (1890–1944). American Christian revivalist, born in Canada. She toured in the US, China and Europe, and was the founder of the Angelus Temple in Los Angeles (1921) and the International Church of the Foursquare Gospel (1930), which soon had several hundred churches in America and many missions abroad. Three marriages and a claim to have been kidnapped (1926) were among the episodes of her colourful career. She died of an overdose of barbiturates, probably accidental.

Macquarie, Lachlan (1761–1824). Scottish soldier. Army service took him to Canada, India, the East Indies and Egypt before he came to Australia as Governor of New South Wales 1810–21. By encouraging the construction of roads, bridges and public buildings, by founding the first bank (1817) he changed a penal settlement into a flourishing embryo colony, and founded civilian society in Australia.
He believed that ex-prisoners (‘emancipists’) should have equal rights with free settlers. He met opposition on this and resigned (1821).

**Macready, William Charles** (1793–1873). British actor. He came from a theatrical family and made his debut in Birmingham in 1816. After the death (1833) of *Kean, Macready became the leading actor of his time and his management (1837–43) at Covent Garden and Drury Lane, during which he was both producer and actor, was famous. During a visit to New York (1849), 20 lives were lost when a mob, incited by an envious American actor, Edwin *Forrest, supported by Nativists, tried to break into the theatre where Macready was performing. His most famous parts included Macbeth, Lear, Iago and King John and it is said that he tried ‘to combine the dignity of the Kembles with the naturalness of Kean’.

**Macron, Emmanuel Jean-Michel Frédéric** (1797– ). French politician. Minister for the Economy 2014–16, he founded ‘En Marche!’ and was a candidate for President in 2017.

**MacSwiney, Terence** (1880–1920). Irish nationalist. He took part in the Easter Rising (1916) and after revolutionary activity in the Irish Republican Army became Lord Mayor of Cork in 1920. In August he was arrested on a sedition charge and his death in October after a 74–day hunger strike provoked worldwide sympathy and protest.

**McVeigh, Timothy J.** (1968–2001). American terrorist. A Gulf War veteran, he was convicted of murder for the Oklahoma City bombing of April 1995, in which 168 people died, and was executed by lethal injection.

**Madariaga y Rojo, Salvador** (1886–1978). Spanish author. He served as Director of Disarmament for the League of Nations 1922–27. He was professor of Spanish studies at Oxford University 1928–31 and, after the establishment of the Republic, Ambassador to the US 1931–32 and to France 1932–36. He stood aloof from the Spanish Civil War but in England after 1950 he was a frequent and outspoken critic of the *Franco regime. Amongst his extensive literary works are books on *Bolívar, *Columbus, Don Quixote, Hamlet and *Shelley, and he also wrote on historical and political topics.

**Madero, Francisco** (1873–1913). Mexican politician. Educated abroad, he returned with liberal and humanitarian ideas to become (1909) the principal opponent of the re-election of the dictatorial president *Díaz. When Díaz declared himself re-elected, a local rising in response to Madero’s agitation caused the administration suddenly to collapse and Díaz fled (May 1911). Madero was elected President with popular acclaim but, when his incompetence provoked rebellions, he was induced to resign and then murdered by his own Commander-in-Chief, General *Huerta.

**Madison, James** (1751–1836). 4th President of the US 1809–17. Born at Port Conway, Virginia, son of a landowner from a prominent family, he studied at New Jersey College (later Princeton University) and at a precocious age helped to draft the Virginia State Constitution (1776), serving in the Continental Congress 1780–83 and the Virginia Legislature 1784–86. At the Federal Constitutional Convention (1787) held at Philadelphia he was, despite his youth, the major intellectual force in shaping the US Constitution (although Gouverneur *Morris was the principal draftsman). He contributed to the *Federalist Papers (1787–88) with *Hamilton and *Jay, showing remarkable prescience about the problems of large government, the development of factions, information flow and oligopoly. As a Member of the US House of Representatives 1789–97, he campaigned for the adoption of the Bill of Rights and against Hamilton’s financial policies. He was *Jefferson’s Secretary of State 1801–09, arranged the ‘Louisiana purchase’ from France, and succeeded as Leader of the Democratic-Republicans. Elected as President in 1808 (defeating C.C. *Pinckney) and 1812 (De Witt *Clinton), his second term was marked by the unpopular war with Britain (1812–14), known as *Madison’s war, in which Washington was captured and the White House burned. His wife Dolley Madison (née Payne) (1768–1849) was White House hostess for Jefferson (a widower) and himself. He was rector of the University of Virginia 1826–36 and died at his home in Montpelier.

**Maecenas, Gaius Cilnius** (c.70–8 BCE). Roman statesman. Friend and counsellor of the Roman emperor *Augustus, though without specific office, he acted as the Emperor’s chief minister and had great influence over him. He was renowned for his wealth and luxury and for his patronage of writers, e.g. *Virgil and *Horace.

**Maeterlinck, Maurice (Mooris) Polorid Marie Bernhard, Comte** (1862–1949). Belgian poet and dramatist, born in Ghent. He studied law at Ghent but went to Paris (1887) and soon came under the
influence of the French’ symbolists’ as seen, notably, in his metaphysical dramas, e.g. *Pelleas and Melisande* (1892) later the basis of an opera by *Debussy*, and *The Bluebird* (1909) a children’s favourite despite its mysticism. Maeterlinck also wrote a series of popular works on natural history, e.g. *The Life of the Bee* (1901) and *The Intelligence of Flowers* (1907). After being nominated eight times, in 1911 he won the Nobel Prize for Literature and in 1932 was created a count.

Halls, W. D., *Maurice Maeterlinck*. 1960

**Magellanes, Ferdinand** (Fernão de Magalhães) (c.1480–1521). Portuguese explorer. While on service in Morocco he was accused of theft and made an unauthorised return to Portugal to appeal against the charge. Unable to gain satisfaction, he offered his services to Spain and obtained acceptance of a scheme to sail to the Moluccas (East Indies) from the west. He sailed (1519) with five ships and rounded South America through the straits that now bear his name into the Pacific (the name of which was suggested to him by the fine weather he encountered there). He reached the Philippines where he was killed in a skirmish with natives. His ship was sailed back to Spain by his second in command, Sebastian del Cano, who then completed (1522) the first circumnavigation of the world, which also established that the Americas were a separate continent.

**Magendie, François** (1783–1855). French physician. Considered a founder of experimental physiology, he investigated the relationship of the nervous system with the spinal chord and the effects and uses of strychnine, iodine, morphine and various other drugs. He demonstrated the stomach’s passive role in vomiting and studied emetics. He did much work on the nerves of the skull and a canal leading from the fourth ventricle is named after him the ‘foramen of Magendie’. He was elected a member of the Académie des Sciences (1821) and was its president (1837). In 1831 he became professor of medicine at the Collège de France.

**Maginot, André** (1877–1932). French politician. As Minister of War 1922–24 and 1929–32, he ordered the construction of the ’Maginot line’, a series of immense fortifications, concealed weapons, underground storehouses and living quarters on the Franco-German frontier. In World War II it was outflanked by the German advance through Belgium and its defensive strength was never put to the test.

**Magritte, René François Ghislain** (1898–1967). Belgian artist. An important member of the Surrealist movement, he trained at the Brussels Academy from 1916 and began his career as a wallpaper designer. He became a full-time painter in 1926 and held his first one-man exhibition 10 years later. His pictures are realistic, even mundane, but they are put together in composite images that are bizarre, sinister, comic or nightmarish.

**Magsaysay, Ramon** (1907–1957). Filipino politician. A mechanic by trade, he became famous for his exploits in the anti-Japanese underground movement. Afterwards he was equally successful against the revolutionary Communists. Secretary of National Defence 1950–53 and President 1953–57, he was killed in an air crash.

**Mahdi, El (=’the expected one’).** Title used by Shi’ite Muslims for a hidden imam who will reveal himself as a deliverer, especially claimed by *Mohammed Ahmed ibn Abdullah* (c.1841–1885), a Sudanese tribesman who proclaimed himself in 1881 and led a revolt against Egyptian rule. He controlled the Sudan by 1883. General *Gordon*, sent to evacuate foreigners (1884), was killed at Khartoum after a long siege. *Wolseley* arrived too late to save *Gordon*. Within weeks, El Mahdī had died of typhus. The Mahdists controlled the Sudan until their final defeat at Omdurman (1898) by *Kitchener*, who desecrated El Mahdī’s tomb.

**Mahan, Alfred Thayer** (1840–1914). American naval historian. He served in the navy (1856–96), retired as Captain but was promoted to Rear Admiral in 1906. His great work, *The Influence of Sea Power upon History 1660–1783* (1890) proved a powerful stimulant to political thought on this subject, its thesis based on, and strikingly confirmed by, British imperial growth. He also wrote a life of *Nelson* (1897).

**Mahfouz, Naguib** (1911–2006). Egyptian novelist, playwright and screenwriter, born in Cairo. Educated at Cairo University, he worked in the cultural section of the civil service 1934–71. He wrote 40 novels and 30 screenplays, some of which were banned because of his political and social views. His novels include *The Cairo Trilogy* (1956–57), *Chatting on the Nile* (1966) and *Miramar* (1967). He was the first writer in Arabic to receive the Nobel Prize for Literature (1988).
Mahler, Gustav (1860–1911). Austrian composer and conductor, born in Kaliste, Bohemia. Son of a distiller and tavern owner, he was the second of 14 children, only six of whom survived infancy. He studied at the Vienna Conservatoire and the University, and attended *Bruckner's lectures (which he sometimes denied). In 1897 he converted from Judaism to Catholicism. Regarded as the greatest conductor of his era, he directed the Budapest Opera 1888–91, the Hamburg Opera 1891–97, the Vienna Court Opera 1897–1907, the Metropolitan Opera, New York 1908–10 and the New York Philharmonic Orchestra 1909–11. (In 1892 he had premiered *Wagner's Ring cycle in London.)

As a composer, he was greatly influenced by *Bach, *Schubert, *Wagner, Bruckner and, later, *Britten. He wrote 10 symphonies. Symphonies No. 1 (*The Titan, 1888), 5 (1902), 6 (1904), 7 (1909) and 9 (1910) are for orchestra. Nos. 2 (*Resurrection, 1894), 3 (1896), 4 (1900), 8 (*Symphony of a Thousand, 1907) include movements for solo voice, soli and chorus, with orchestra. The unfinished Symphony No. 10 was performed in 1964 in a version partly reconstructed from Mahler's notes by Deryck Cooke. He wrote four important song cycles for voice and orchestra: *Lieder eines fahrenden *Webernren (Songs of a Wayfarer, 1883–85), *Des Knaben Wunderhorn (Youth's Magic Horn, 1892–98), *Kindertotenlieder (Songs on the Death of Children, 1901–04) and *Das Lied von der Erde (The Song of the Earth, 1908–09).

Mahler's music, in its proximity (most of the works, including all the symphonies, are unusually long), its emotionalism, its sudden and extreme changes of mood, its programmatic content and its use of large orchestral and vocal forces, represents in many ways the culmination of the Romantic movement in music. Mahler commented to *Sibelius that ‘the symphony should be like the world: it must embrace everything’. Resemblances between Mahler and Bruckner are only superficial (length, complex texture, much repetition, heavy orchestral palette). Bruckner's world is religious – nature as a revelation of God's glory. Mahler's world is secular, fuelled by angst, mitigated by understanding and release. Bruckner seems to be contemplating a mountain range or a cathedral nave, Mahler seems to be gazing into an abyss, or anticipating the Holocaust, *Beethoven's world (Antiquity), *Schubert's (Romanticism), *Wagner's (modernism), *Brahms' (classicism), *Rimsky-Korsakov's (orientalism), *Igor Stravinsky's (primitive music). Mahler's world is *Mahomet's (asserted, then denied). He converted from Judaism to Catholicism. Regarded as the greatest conductor of his era, he directed the Budapest Opera 1888–91, the Hamburg Opera 1891–97, the Vienna Court Opera 1897–1907, the Metropolitan Opera, New York 1908–10 and the New York Philharmonic Orchestra 1909–11. (In 1892 he had premiered *Wagner's Ring cycle in London.)

As a composer, he was greatly influenced by *Beethoven, *Schubert, *Wagner, Bruckner and, later, *Bach. He wrote 10 symphonies. Symphonies No. 1 (*The Titan, 1888), 5 (1902), 6 (1904), 7 (1909) and 9 (1910) are for orchestra. The unfinished Symphony No. 10 was performed in 1964 in a version partly reconstructed from Mahler's notes by Deryck Cooke. He wrote four important song cycles for voice and orchestra: *Lieder eines fahrenden *Webernren (Songs of a Wayfarer, 1883–85), *Des Knaben Wunderhorn (Youth's Magic Horn, 1892–98), *Kindertotenlieder (Songs on the Death of Children, 1901–04) and *Das Lied von der Erde (The Song of the Earth, 1908–09).

Mahler's music, in its proximity (most of the works, including all the symphonies, are unusually long), its emotionalism, its sudden and extreme changes of mood, its programmatic content and its use of large orchestral and vocal forces, represents in many ways the culmination of the Romantic movement in music. Mahler commented to *Sibelius that ‘the symphony should be like the world: it must embrace everything’. Resemblances between Mahler and Bruckner are only superficial (length, complex texture, much repetition, heavy orchestral palette). Bruckner's world is religious – nature as a revelation of God's glory. Mahler's world is secular, fuelled by angst, mitigated by understanding and release. Bruckner seems to be contemplating a mountain range or a cathedral nave, Mahler seems to be gazing into an abyss, or anticipating the Holocaust, which occurred barely 30 years after his death.

While Mahler had outstanding early advocates including *Mengelberg, *Walter, *Klemperer and *Stokowski, there were notable sceptics, *Toscanini being the most important. Since the 1950s Mahler has been regarded as a master, and 15 complete sets of his symphonies were available on CD in 2013.

The fluctuating quality of the musical material and the uncertainty of taste which are the obverse of its positive qualities have led to critical division as to its worth, but Mahler's originality and inventiveness have been widely recognised, and influenced *Shostakovich and (notably in his use of the orchestral song cycle) *Britten. He died in Vienna of infective endocarditis which destroyed his heart valves.

His widow Alma (Maria) Mahler, née Schindler (1879–1964) composed impressive songs, of which 17 survive. When she married Mahler (1902) he forbade her to compose. They had two daughters: one died in 1907. In 1910 she began an affair with the architect Walter *Gropius, but stayed with Mahler until his death. She was married to Gropius 1915–20, and to Franz *Welser 1929–45. Her lovers included Oskar *Kokoschka and Gustav *Klimt. She lived in the United States from 1940, published an autobiography *And the bridge is love (1958) and died in New York City. Although two of her husbands (and some lovers) were Jewish, she was virulently anti-Semitic.

Mahomet see Muhammad

Maillol, Aristide (1861–1944). French sculptor. He turned from painting to tapestry designing and then, owing to failing sight, to monumental sculpture (c.1900). Nearly all his works are nudes, realistic in conception but idealised to some extent in execution. He made a special study of the proper use of his materials, clay, bronze and marble.

Maimonides (also known as RaMBaM, acronym for Rabbi Moishe ben Maimon) (1135–1204). Jewish philosopher, jurist and physician, born in Córdoba, Spain. The fundamentalist Almohads seized power in Córdoba in 1148 and in 1159 Maimonides and his family moved to Fez, Morocco, then in 1165 to Palestine. He received orthodox Jewish training, and in addition studied philosophy and law. In 1166 he settled in Egypt, where he became head of the Jewish community and physician to *Saladin. A polymath,
he wrote works of popular Jewish religious devotion, a major codification of the Jewish law, a philosophical-religious work, called The Guide for the Perplexed and a number of medical works. He is the leading exponent of the school of Jewish Aristotelianism. Like *Aristotle, Maimonides asserts the rationality of God, and man's duty through the use of his reason to comprehend the Divine Mind. But Maimonides also emphasised the limits of human reason, which was unable to know the Divine attributes directly and positively. This secured a place for faith, and for positive revelation, both of which played central roles in Maimonides' beliefs. This religious vision informed his scientific studies. He did not believe that science had achieved certain knowledge of nature. As a physician, Maimonides was a close follower of *Galen, though he accused Galen of ignorance in theological matters. Maimonides' writings became canonical for Jewish philosophy for the next few centuries, and also exercised considerable influence over Thomas *Aquinas and other Scholastics.

Maine, Sir Henry James Sumner (1822–1888). English legal historian. After showing academic brilliance he became Regius professor of civil law at Cambridge University 1847–54, being called to the bar in 1850. The remainder of his career was divided between academic legal appointments and positions in India and the Indian Office at home, which enabled him to reform and shape the legal system of that country. He is most famous, however, for his classic studies of the evolution of legal and social institutions, e.g. Ancient Law (1861), Early History of Institutions (1879) and Early Law and Custom (1883).

Maintenon, Françoise d'Aubigné, Marquise de (1635–1719). French morganatic wife of *Louis XIV. She lived in Martinique with her Huguenot father until his death, when she returned to France, was converted to Roman Catholicism and was in great poverty when she married the poet *Scarron (1652). In 1669, by then a widow, she was chosen as governess to the king's sons by Madame de *Montespan whom she succeeded in the king's affections (1680). In 1684 the king married her secretly. She was an informed his scientific studies. He did not believe that science had achieved certain knowledge of nature. As a physician, Maimonides was a close follower of *Galen, though he accused Galen of ignorance in theological matters. Maimonides' writings became canonical for Jewish philosophy for the next few centuries, and also exercised considerable influence over Thomas *Aquinas and other Scholastics.

Malala (Malala Yousafzai) (1997– ). Pakistani feminist, peace and education activist, born in Mingora. She grew up in the Swat Valley in north-western Pakistan, an area which came under Taliban influence, and from the age of 12 published a blog advocating education for women and girls, which led to threats to her life. In October 2012 she was shot in the head by a Taliban gunman, and after several operations in Pakistan was flown to England for treatment. On recovery, she resumed her studies in Birmingham. She spoke eloquently to the United Nations, received the Sakharov Prize (2013) and the World Children’s Prize (2014).

At the age of 17, she was awarded the 2014 Nobel Prize for Peace, making her the youngest Laureate by far. She shared the prize with Kailash *Satyarthi, an Indian campaigner for children’s rights.

Malan, Daniel François (1874–1959). South African Nationalist politician, born in Cape Colony (now Cape Province). He was a preacher and journalist before entering political life as a member of the Union House of Assembly 1919–54. Under *Hertzog, as Minister of the Interior, Public Health and Education 1924–33, he legislated for a national flag and recognition of Afrikaans as an official language. He led the Nationalists 1936–54 and urged neutrality in World War I. In 1948 his party defeated *Smuts’ Unionists and instituted the policy of apartheid, complete social and political segregation of the races, although he seemed mild compared with his successors *Strijdom and *Verwoerd.

Malaparte, Curzio (real name Kurt Erich Suckert) (1898–1957). Italian journalist, playwright and novelist. After war service, he was an enthusiastic propagandist not only for Fascism but also for avant-garde literature and wrote on revolutionary violence in his Coop d’etat (1932). He was expelled from the Party in 1941 and imprisoned. He wrote two powerful war novels, Kaputt (1944) and The Skin (1949).

Malatesta, Sigismondo Pandolfo (1417–1468). Italian soldier. He succeeded his uncle as lord of Rimini in 1432. Though he was a condottiere or mercenary captain, cruel, profligate and described by Pope *Pius II as ‘the enemy of God and man’ he was a scholar and friend of scholars: on his orders the cathedral of Rimini was converted into a temple of the arts.

Malcolm III (Canmore) (c.1031–1093). King of Scots 1058–93. Son of *Duncan I, after his father was killed and the throne usurped by *Macbeth he took refuge in England. In 1054, with the help of his uncle Siward, Earl of Northumbria, he recovered southern Scotland and in 1057 he defeated and killed Macbeth in battle. After the Norman conquest of England he supported the claims of *Edgar the Aetheling (brother of his wife, *St Margaret) but was forced by *William I to pay tribute. When *William Rufus succeeded, Malcolm was trapped and killed during a raid on Northumbria.

Malcolm X (Malcolm Little) (1925–1965). African-American political and religious leader, born in Omaha. Imprisoned for robbery (1946–52), he joined Elijah Muhammad’s Black Muslims, became its leading spokesman and advocated black violence to redress the history of white violence against Negroes. Expelled from the Black Muslims, he formed the Organisation of Afro-American Unity (1964), began urging closer racial harmony and was murdered in Harlem.

Malebranche, Nicolas (1638–1715). French philosopher. His philosophical ideas brought him a contemporary esteem second only to that of *Descartes, many of whose views he shared. Dismissing the information provided by the senses as confused, Malebranche taught that truth could only be apprehended through what he termed ‘clear ideas’ and that the seat of such ‘clear ideas’ (though not in a vocational sense) was God. He denied that there was a direct causal relation between mind and matter. Sensation on the one hand, and the physical activity that follows an act of willing on the other, he explained as occasional acts of God in creating new mental images to correspond with items in the physical order or in creating new physical conditions to correspond with a mental picture. His De la Recherche de la vérité (1674) contains the best exposition of his philosophy. Apart from philosophy Malebranche was well known as a physicist, especially for his work in optics.
Malenkov, Georgi Maksimilianovich (1902–1988). Russian Communist politician. He rose quickly in the Communist Party organisation and as head of the party secret service was closely associated with the purges of 1936–39. During World War II he reorganised industrial production and railway transport. As Deputy Premier 1946–53 and a Politburo member 1946–55, he was Stalin’s closest associate and on his death (March 1953) succeeded him as Premier and (for eight days, until he lost that position to *Khruushchev), General Secretary of the CPSU. Forced out as Premier in 1955, in favour of Khruushchev’s nominee *Bulganin, he became Minister for Electric Power Stations 1955–57.

Malherbe, François de (1555–1628). French poet and grammarian. His early life was spent mostly in Provence but in 1605 he obtained a post at court and the patronage of *Henri IV, *Louis XIII and Cardinal *Richelieu. His importance lay not so much in his own verse, which consisted mainly of conventional accounts of noble deeds or adaptations of poems by ancient or contemporary writers, as in his achievements as a grammarian. He was largely responsible for creating a clear and easily understandable literary language, free of the archaisms, pedantries and foreign influences that had made the work of his predecessors obscure. Moreover he laid down firm rules for the various verse forms and showed how to combine euphony with sense.

Fromillhagne, R., Malherbe. 1954.

Malibran, Maria (Felicitas) (née Garcia) (1808–1836). French mezzo-soprano, born in Paris. Daughter of Manuel *Garcia and sister of Pauline *Viardot, she studied with her father, but performed under her husband’s name. In 1825 she sang in London and New York, specialising in *Rossini’s operas, but appeared as Leonora in Fidelio. Malibran could sing as soprano and contralto and her extraordinary range made her a sensation in London, New York, Paris and Milan. She created the role of Maria Stuarda in *Donizetti’s opera (Milan, 1835) and died after a riding accident.

Malinovsky, Rodion Yakovlevich (1898–1967). Russian marshal. He served with the French army in World War I, and in World War II he was one of the most successful Russian commanders. After a fighting retreat in the Ukraine (1941) he commanded one of the armies which in 1942 surrounded and enforced the surrender of General Paulus at Stalingrad. Thenceforward on the offensive, he retook Odessa (April 1944) and by the end of that year was advancing through Romania and Hungary. In the next year he liberated Czechoslovakia. He succeeded *Zhukov as Minister of Defence 1957–67.

Malinowski, Bronislaw Kaspar (1884–1942). Polish anthropologist. In 1914 he accompanied an anthropological expedition to New Guinea and continued to Australia, where he worked with Baldwin *Spencer. On his return he joined the teaching staff at London University and became (1927) professor in social anthropology. He introduced the method of investigation by functional comparison of the activities of different peoples. Among his books were Crime and Custom in Savage Society (1926) and Sex and Repression in Savage Society (1927).

Malipiero, Gian Francesco (1882–1973). Italian composer. Musicologist, teacher and (from 1934) Director of the Liceo Marcello at Venice, he edited the works of Monteverdi and Vivaldi, and composed songs, orchestral and choral works, and operas, e.g. Julius Caesar (1936) and Antony and Cleopatra (1938).

Mallarmé, Stéphane (1842–1898). French symbolist poet, born in Paris. Having decided to learn English in order to read and translate Edgar Allan *Poe, he was in London for that purpose (1862–63) and spent the rest of his active life teaching English in various French towns and eventually in Paris. There he came to admire the Impressionists and especially Manet, whose close friend he became. He tried to bring light and movement into his creations with words as the Impressionists had done with paint, thus the sound and rhythm of the words, as in music conveyed their meaning directly to the senses of the reader. Moreover, as a follower of Baudelaire, he gave to certain key words the quality of symbols which evoke picture patterns in the mind that go far beyond a purely linguistic interpretation. Mallarmé was not prolific and was at his best in short pieces such as L’Après midi d’un faune (1875), which inspired Debussy’s prelude. Mallarmé also had a talent for gay, witty but, alas, unrecorded talk, and the gatherings on his “Tuesday evenings” became famous.

Malmesbury, William of see William of Malmesbury

Malone, Edmund (1741–1812). Irish editor and critic. He abandoned the law for literature and moved to London, where he became a friend of Samuel *Johnson. His great edition of Shakespeare appeared in 1790, and the revised edition published after his death in 1821 was by far the best up to that time. He also exposed the literary forgeries of William
Henry Ireland and Thomas Chatterton. He is commemorated by the Malone Society (founded 1907) which prints texts and documents relating to the study of Elizabethan drama.

Malory, Sir Thomas (d.c.1470). English writer of Arthurian romances. Little is known with certainty about his life, the most probable identification is with a Warwickshire knight in the service of the Earl of Beauchamp. If so, most of his writing must have been done in prison, where he spent a large part of his life charged with a number of violent crimes. His eight Arthurian romances were published by Caxton in 1485 (though the text found at Winchester College in 1934 is held to be more authentic). The work consists almost entirely of adaptations from the French 13th-century versions, written to idealise the medieval code of chivalry. Malory, writing two centuries later in English prose, is no nearer than his originals to creating a realistic historical picture. Arthur is no Romano-British chieftain, and both he and his companions dress as 12th-century knights and their exploits are those about which the troubadours sang, but Malory’s approach to character is more realistic and he writes with directness and vigour. Two main themes compose the story that runs through the eight romances: (a) the tragic end of Arthur’s reign and the breakup of the knightly brotherhood that gathered at the Round Table; (b) Launcelot’s failure, through sin, to find the Holy Grail (the cup used at the Last Supper) and Galahad’s success. Almost all later versions of the legends, e.g. Tennyson’s Idylls of the King, are based on Malory (*Geoffrey of Monmouth).

Reiss, E., Sir Thomas Malory. 1966.

Malpighi, Marcello (1628–1694). Italian anatomist and microscopist. He studied and (from 1666) was a professor at Bologna University. Malpighi virtually founded histology (including that of plants) and is noted for his studies of the structure of the brain, lungs, glands and liver and especially for extending Harvey’s work on the circulation of the blood, by discovering the capillaries. He also investigated muscular cells and wrote a treatise on the silkworm.

Malraux, André (1901–1976). French writer and politician. Having studied oriental languages he accompanied an archaeological expedition to Indo-China 1923–25, where, as a Communist, he claimed to have played an important part in Chinese politics 1925–27. He used his varied experiences in his novels, e.g. Les Conquérants (1928) and La Condition humaine (1933, winner of the Prix Goncourt) and L’Espoir (1937). He commanded the foreign air corps fighting against Franco in the Spanish Civil War, and during World War II became a leader of the French resistance movement. As a friend and admirer of de Gaulle, he was Minister for Information 1945–46, 1958 and an energetic and imaginative minister for cultural affairs 1958–69. His works on the psychology and history of art include The Voices of Silence (1951, translated 1953) and Museum without Walls (1952–54, 1967).

Malthus, Thomas Robert (1766–1834). English population theorist, born near Dorking. He distinguished himself in mathematics at Cambridge, where he became (1797) a Fellow of Jesus College. Meanwhile he had taken holy orders and led a county clergyman’s life in Surrey until (1805) he became a teacher at Haileybury College, where he worked for the rest of his life. In his famous Essay on the Principle of Population (published anonymously in 1798 and revised in 1803) he argued that population tends to increase at a geometric ratio (each generation can double up) while the means of subsistence only increases incrementally (at an arithmetic ratio), and that the only constraints to population growth were famine, war, disease, celibacy, infanticide and the ‘vicious practice’ of contraception. When Malthus wrote, world population was 800 million. (By March 2012 it was 7.0 billion, most living far longer and consuming more than people of Malthus’s time.) Marxists and Catholics both attacked Malthus for his complacent acceptance of high death rates for the poor. He ignored the impact of technology in agriculture, although the problems of water supply and inadequate soil for farming are increasingly serious. ‘Darwin’s concept of ’the survival of the fittest’ was influenced by his reading of Malthus.

Malvern, Godfrey Martin Huggins, 1st Viscount (1883–1971). Rhodesian politician, born in Bexley, Kent. He practised as a doctor in Rhodesia from 1911, both before and after his service in the RAMC during World War I, and became a Member of the Legislative Assembly of Southern Rhodesia in 1923. He was Prime Minister of Southern Rhodesia 1933–53 and then of the newly formed Federation of Rhodesia and Nyasaland 1953–56.

Mamum (Abul Abbas Abdallah al Mamum) (786–833). Abbasid caliph of Baghdad 809–33. Son of Harun-al-Raschid, politically his reign was troubled, but it was a time of great intellectual distinction as Mamum encouraged learning, especially the study of Greek science. Many Greek works were preserved
through their translation into Arabic in his ‘House of Wisdom’ (founded 830), where he gathered together the leading scholars of his day.

Mandela, Nelson Rolihlahia (1918–2013). South African political leader, born in Mvezo, Cape Province. A Xhosa, and a chief of the Tembu clan, he rejected tribal life, but was often called Mandiba, his Xhosa name. Educated at the University College of Fort Hare and the University of Witwatersrand, he became a lawyer in Johannesburg (1952) and national organiser of the African National Congress (ANC). In 1958 he married Winnie (Nomzano Zaniewe) Madikizela (1936– ). After a long trial for treason (1956–61) he was acquitted in 1961. He was sentenced to five years’ jail in 1962 for ‘incitement’ and leaving South Africa without permission. In 1964 he was sentenced to life imprisonment, after a long trial at Rivonia, on a charge of sabotage and conspiracy. He survived 27 years in prison, (14 at Robben Island) without deterioration, renounced thoughts of retribution and assumed the moral leadership of the ANC while Oliver Tambo (1917–1993) ran the organisation from London. Following the election of F. W. *de Klerk as President, Mandela was released in February 1990 and was National President of the ANC 1991–97. He toured extensively and received many international awards. He wrote the autobiography Long Walk to Freedom (1994). Winnie Mandela was convicted of kidnapping in June 1992, sentenced to six years’ jail but after an appeal this was reduced to a fine. The Mandelas separated in 1992 and divorced in 1996. He shared the 1993 Nobel Peace Prize with de Klerk. In May 1994 he was elected President of the Republic of South Africa in a Government of National Unity, after the ANC won 62.6 per cent of the vote in the first election based on universal suffrage. Winnie became Deputy Minister for Arts, Culture, Science and Technology 1994–95. He received the British OM (1995), a Canadian CC (1998), an Australian AC (1999), a British QC (2000), the US Presidential Medal of Freedom (2002), and many foreign citizenships and honorary degrees. He married Graça Macel, widow of the President of Mozambique, on his 80th birthday, and retired in June 1999, but was active in campaigning about HIV-AIDS and for world peace. He died of a lung infection in 2013. His memorial service in Johannesburg was attended by four US Presidents and he was acclaimed as a hero of our times.

Mandelbrot, Benoît (1924–2010). French-American mathematician, born in Warsaw. Educated in Paris and at CalTech, he taught at Geneva, Lille, Paris, and Harvard universities, worked for IBM in New York 1958–93, then, at 80, became Sterling professor of mathematical sciences at Yale (2004). From 1967 he worked on ‘chaos’ theory, an attempt to describe the operation of persistently unstable systems e.g. weather, traffic, erosion, turbulence. In 1975 he introduced ‘fractal geometry’ as a new branch of mathematics, describing the extreme complexity of three-dimensional natural shapes, in contrast to Euclidian geometry in which objects are represented as flat and straight lines are typical. He coined the word ‘fractal’ (i.e. broken) to describe the edging of clouds, trees, mountains or seacoasts characterised by ‘scale invariant’ repetition of shape, demonstrating order in systems that appear to be chaotic. ‘Mandelbrot sets’, with their spectacular imagery generated by algorithms, have become an increasingly familiar form of computer graphics. Fractal theory is being applied in many areas, including pollution control, coastal management, meteorology, astronomy, physiology and designer drugs. His books include Fractals: Form, Chance and Dimension (1977) and The Fractal Geometry of Nature (1982). Asteroid 27500 was named for him. He was awarded the Wolf Prize for Physics in 1993 and the Japan Prize in 2003.

Mandelstam, Osip Emilievich (1891–1938). Russian poet, born in Warsaw. Educated in the West, he became a leader of the Acmeist (*Akhmatova) movement. He saw poetry as an instinctive recognition of cultural order and continuity in contrast to the chaos and fragmentation of man in nature, and published the collections Kamen (1913) and Tristiya (1922). In 1934 he was exiled and later died in a labour camp. Forgotten until the 1960s, he is now regarded as a poet of the first rank. His widow, Nadezhda Yakovlevna Mandelstam (née Khazina) (1899–1980) memorised his poetry to preserve it and wrote two remarkable memoirs, Hope against Hope (1971) and Hope Abandoned (1973).

Mandeville, Sir John (fl. 14th century?). English travel writer, ostensible author of a popular medieval travel book. In the preface the alleged author claims to have been born at St Albans and in the epilogue states that the memoirs were written in 1357 and that his journeys had begun 35 years previously. The earliest MS, which probably contains the original text, is the French (translations into English and many other languages exist) and dates from 1371. The first part, which takes the reader to the Holy Land and neighbouring countries, is possibly the genuine record of some traveller, but the second part describing journeys in Asia extending to China is merely a compilation from other writers.

Manet, Édouard (1832–1883). French painter, born in Paris. From an affluent family, he was able to pursue his vocation and enjoy travel without hardship. Among early influences were *Goya and *Velázquez, and even in later life his paintings reflect what he had learnt from their work. The period
which later made him recognised as a forerunner of the Impressionists began when (1863) his *Déjeuner sur l’herbe* was rejected by the Salon. The subject, in which two women – one naked and one half-naked – are at a picnic with two fully dressed men, was an assertion in paint that the only point of view that should count is the pictorial one. But though to some such an explanation only added to the offence, the young men (*Monet, *Renoir, *Pissarro etc.) who were later to be dubbed ‘Impressionists’ found inspiration in the picture. His *Olympia* (1865) was attacked as indecent with even more venom. Like the Impressionists, Manet began (1870) to paint in the open air, but he was less concerned with landscape and the effects of sunlight than with the portrayal of the gay and lively scenes around him, e.g. racecourse scenes (1872) and at the end of his life famous *Bar aux Folies Bergère* (1882, National Gallery, London). Some of his portraits, e.g. of Zola, are important. His *Execution of Emperor Maximilian* (two versions, 1867, 1869) was influenced by *Goya*. He died after surgery to remove his left, gangrenous, foot.

**Mani** (c.216–c.276). Persian mystic. Founder of the Manichean sect, he spent the last 30 years of his life on missionary journeys throughout the Persian empire and even reached the borderlands of India and China. He was put to death at the instigation of the Zoroastrian priesthood. In his teaching Mani speaks of the two ‘roots’, God and matter, equated with good and evil, light and darkness. Mani’s teaching was intended to produce a synthesis of Christianity, Zoroastrianism and Buddhism; at first the sect grew rapidly but wilted under persecution, and by the 10th century was virtually extinct. Traces of its teaching, however, survived among the Albigenese of medieval France and the Bogomilites of the Balkans.

**Manin, Daniele** (1804–1857). Italian lawyer and politician, born in Venice. An ardent liberal and nationalist, he was imprisoned for his outspoken denunciation of Austrian rule in northern Italy but was released by the populace during the 1848 revolts and was subsequently elected President of the new Venetian republic. When the Austrians besieged the city he inspired a heroic defence (April–August 1849) ending in capitulation enforced by starvation and disease. Manin, excluded from an amnesty, died in Paris.

**Mann, (Luis) Heinrich** (1871–1950). German novelist. After an early period as a romantic monarchist, he was attracted by French liberal philosophy and adopted a utopian progressivism, breaking with his younger brother Thomas *Mann* because of his passionate opposition to World War I. His books include *Professor Unrat* (1905) filmed by Fritz Lang as *The Blue Angel* (1928), *Der Untertan* (*The Man of Straw*, 1918) and the Henri Quatre novels (1935, 1938). He left Germany in 1933 lived in France until 1940, then in the US. He was recognised as leader of the German literary left.

**Mann, Thomas** (1875–1955). German novelist and critic, born in Lübeck. From an old Hansa family, he was working in an insurance office at Munich when he wrote his first novel *Buddenbrooks* (1901). In this and other works he illustrates the opposition between the extrovert life of the ordinary bourgeois and that of the intellectual and artist. It is the emergence of the traits of the latter that he regards as a sign of decay, remarking, too, on the affinity of genius with disease and the ‘fascination of death’. Mann described himself as ‘primarily a humorist’ but it is with such psychological problems that he is most deeply concerned and in probing them he reveals the particular influence of *Schopenhauer* and *Wagner*. The short novels *Death in Venice* (1912), *Tristan* (1913) and *Tonio Kröger* (1914) were all successful but because of World War I, during which he wrote *Reflections of a Nonpolitical Man* (1916) it was not until 1924 that his next major work, *The Magic Mountain* (*Der Zaubergarten*), appeared. Here life in a tuberculosis sanatorium symbolises the disintegrating civilisation of Europe.

Later works include *Children and Fools* (1928), *Mario and the Magician* (1930) and the biblical tetralogy (1934–44) on Joseph and his brethren, in which he stresses the mutual dependence of God and man. He won the Nobel Prize for Literature (1929) but left Germany when *Hitler* came to power and eventually (1938) settled in the US, of which he became a citizen in 1944. Among novels of his last period were *Dr Faustus* (1948), *The Black Swan* (1955) and the posthumously published comic novel *The Confessions of Felix Krull*. He also wrote many essays on literary subjects and contemporary themes. His diaries, largely homoerotic, were published between 1979 and 1995.

**Mannerheim, Carl Gustav Emil, Baron** (1867–1951). Finnish marshal and politician, born in Villnas. Of Swedish descent, he joined the Russian Army in 1889, explored Central Asia on horseback (1906–08) and became a lieutenant general in World War I. When Finland declared its independence from Russia after the November 1917 Revolution,
he commanded the Finnish 'White' forces which (with German help) defeated the Bolshevik 'Reds' in a bitter four-month war. Regent of Finland 1918–19, he was defeated for the presidency in 1919 and retired until recalled as Chairman of the National Defence Council 1931–39, when he built the Mannerheim Line as a defence against the USSR. He commanded Finnish forces against Russia 1939–41, then became an ally of *Hitler's Germany, 1941–44 but refused to cooperate in persecuting Jews or gypsies. Elected President of Finland (1944), he negotiated peace with *Stalin and retired in 1946.

**Manning, Henry Edward** (1808–1892). English cardinal. After a distinguished academic career at Oxford he was ordained (1832) an Anglican clergyman and became Archdeacon of Chichester (1841). A widower, in 1851 he became a Roman Catholic priest and soon rose to prominence. He established (1857) the Congregation of St Charles (Borromeo) in London and in 1865, after being provost of the metropolitan chapter of Westminster, succeeded Cardinal *Wiseman as Archbishop. Created cardinal in 1875, he was a strong supporter of the dogma of papal infallibility as defined at the Vatican Council (1870) and in social affairs was identified with prison reform, education and help for the poor. He had an uncomfortable relationship with Cardinal *Newman.

**Mannix, Daniel** (1864–1963). Australian Catholic prelate, born in County Cork, Ireland. He was President of Maynooth Theological College 1903–12, then went to Australia as coadjutor Archbishop of Melbourne (1913) succeeding as Archbishop 1917–63. He had been a strong supporter of Home Rule for Ireland and attacked World War I as a trade war. He assumed virtual leadership of Australian Catholics for more than 40 years. He fought for state aid for Catholic schools, against W. M. *Hughes over conscription in 1916 and 1917, and supported first the Australian Labor Party, then (from 1955) the anti-Communist Democratic Labor Party.

**Manoel I** (known as 'the Fortunate') (1469–1521). King of Portugal 1495–1521. He succeeded his elder brother, *João II, who was assassinated. His nickname was due more to events and circumstances than to his own abilities. He did, however, encourage the great revival of arts and letters that marked his reign and the term 'Manoeline style' applied to the architecture of the period was not merely an empty compliment. Moreover the 'Manoeline Ordinances' were an important revision of the first systematic collection of laws made by Alfonso V. Manoel's reign. Marred by the expulsion of Moors and Jews, his reign saw the rounding of the Cape of Good Hope by *Dias, the voyage of Vasco da *Gama to India, the discovery of Brazil and finally the start of *Magellan on his last and greatest voyage.

**Manoel II** (1889–1932). Last King of Portugal 1908–10. He became king when his father, King Carlos, and his elder brother were assassinated, but abdicated on the outbreak of the 1910 revolution. He lived in Twickenham from 1910 and became known as an antiquarian and bibliophile.

**Mansart, Jules Hardouin** (1598–1666), the architect who developed the mansard (attic) roof, named for him. A lifelong favourite of *Louis XIV, he rose in a short time to the position of Architect to the King (1675) and became Surveyor of the Royal Works in 1699. He was responsible for the Grand Trianon and other buildings at Versailles and for the Dôme des Invalides (1716), Paris. As a town planner, he created in Paris the Place des Victoires (1684–86) and the Place Vendôme (1699).

**Mansfield, Pieter Ernst, Graf von** (c.1580–1626). German military commander. In the early stages of the Thirty Years' War (from 1618) he played a leading part in securing *Frederick V's (temporary) position as King of Bohemia. After Frederick's expulsion he waged an independent campaign against the emperor *Ferdinand II. In 1624 with the aid of French and English subsidies he again took the field, but in 1626 he was defeated by the imperialists under *Wallenstein at Dessau and died in the same year.

**Mansfield, Katherine** (Kathleen Mansfield Beauchamp) (1888–1923). New Zealand short story writer, born in Wellington. She arrived in London at the age of 20 and wrote a series of sensitive and sometimes ironic short stories that soon proved her meticulous craftsmanship and mastery of that difficult form. Her volumes include In a German Pension (1911), written while recovering in Bavaria from a miscarriage, Bliss and Other Stories (1920), which established her fame, and The Garden Party (1922) containing 'The Daughters of the Late Colonel' and 'The Voyage'. She married (1918) John Middleton *Murry and died of tuberculosis in France.

**Mansfield, William Murray, 1st Earl of** (1705–1793). British lawyer, born in Scotland. Fourth son of David, Viscount Stormont, he was called to the bar (1731) and after 10 years of successful practice he entered parliament. He became Attorney-General in 1754 and Lord Chief Justice 1756–88. Raised to the peerage (1756) as Baron Mansfield, contrary to precedent he continued in politics not only as a
Member of the House of Lords but also of the Cabinet. This link with an unpopular administration caused him to be virulently assailed by the pamphleteer 'Junius' and during the Gordon riots (1780) his house was burnt down. In fact, as a judge, he was tolerant and impartial. He received his earldom in 1776.

Manson, Sir Patrick (1844–1922). Scottish physician and parasitologist, born in Aberdeen. From a wealthy family, he graduated in medicine from Aberdeen University and worked in China for 24 years. He specialised in elephantiasis, blackwater fever, leprosy and a heart disease he identified as beriberi. He determined that the transmission of elephantiasis was via the mosquito. His researches suggested that the worm that caused the disease developed in the common brown mosquito. Manson's understanding of the role of the mosquito as a parasite became fundamental for the diagnosis and treatment of a host of tropical illnesses. Manson, however, was mistaken in some of his ideas. He thought that mosquitoes bit only once, and that man became infected by ingesting the larvae in water. Manson later pioneered the understanding of the transmission of malaria by mosquitoes. By 1898 he had developed a sophisticated understanding of the life cycle of the parasite, and had grasped the importance of protecting humans against mosquitoes at night. He was largely instrumental in setting up the London School of Tropical Medicine in 1899, and was a tireless teacher.

Manstein, Fritz Erich von (1887–1973). German soldier. After serving as Chief of Staff in Poland and France in the early stages of World War II he held commands on the Russian front. In the great southern campaigns he showed, both in advance and retreat, superb skill in coordinating the movements of military formations of the largest scale, and retreat, superb skill in coordinating the movements of military formations of the largest scale, and was generally considered the ablest of German generals during the war. He was ordered to retire in 1944 by *Hitler, whose policy of clinging to untenable positions until they were overwhelmed he resolutely opposed. Sentenced in 1949 to 18 years' imprisonment for war crimes, he was freed in 1953. Manstein, F. E. von, *Lost Victories*. 1959.

Mantegna, Andrea (c.1431–1506). Italian painter, born in Isola di Carturo. The founder of the Paduan school, *Francesco Squarcione*, adopted him when he was orphaned, but by 1458 when he painted a series of frescoes on the life of St James (destroyed in World War II) he was working independently. The most important influence on his work was derived from his study of archaeology, stimulated by the drawings of his father-in-law Jacopo *Bellini. He went to Rome to study classical buildings and was a collector of coins and fragments. Even in biblical subjects, e.g. the *Agony in the Garden* (National Gallery, London), he

betrays his zeal to introduce classical details into his composition. His knowledge of perspective was profound and he used it, e.g. in the *Lamentation of the Dead Christ* (at Milan), in an astonishingly bold manner. In the early 1460s Mantegna was called to Mantua to decorate the Camera d'egli Sposi in the palace with scenes from the lives of the Gonzagas, the ruling House, with which he remained, with intervals, for the rest of his life. While there he painted the pictures representing the *Triumph of Julius Caesar* (c.1486–94), bought by *Charles I of England and now, much damaged and restored, at Hampton Court.

Mantel, Dame Hilary Mary (née Thompson) (1952– ). English novelist, born in Derbyshire. Educated at Sheffield University, she was a social worker and retailer, lived in Botswana and Saudi Arabia and suffered debilitating illness. Her first novel was *Every Day is Mother's Day* (1985). *A Place of Greater Safety* (1985). *A Place

Every Day is Mother's Day* (1985). *The Mirror and the Light*. She also wrote a memoir and critical essays.

Mantoux, Charles (1877–1947). French physician. He devised the Mantoux test for tuberculosis and investigated the formation of tubercular cavities in the lungs.

Manutius, Aldus (Teobaldo Pio Manuzio or Mannucci) (1450–1515). Italian scholar and printer. He founded (1490) the press in Venice now known as the Aldine, and he was the first to print and publish the works of such classical authors as *Aristotle, Sophocles, Plato* and *Xenophon*. He devised *italic* printing and designed the first font of Greek type. Manutius was a friend of *Erasmus* and other enthusiasts for the ‘new learning’. His work was continued by his son *Paolo Manutius* (1512–1574) and grandson *Aldus Manutius the Younger* (1547–1597).

Manzoni, Alessandro (1785–1873). Italian writer, born in Milan. Grandson of Cesare *Beccaria, he spent his early manhood in Paris where he was influenced by the prevailing scepticism until he reconverted to Catholicism (c.1810) soon after his first marriage. All his work shows a liberal outlook and deep moral purpose. He worked very slowly: the two well known odes on the death of *Napoléon and the Piedmontese rising* (1812) against the Austrians, together with a few hymns, comprise almost his entire poetic output. Two tragedies with stories derived from the early Middle Ages reflect a mood of pessimism caused by the failure of liberal movements in the
Mao Zedong (also Mao Tse-tung) (1893–1976). Chinese Communist leader, born in Shaoashan, Hunan province. Son of a small landowner, he returned to school after a brief child marriage, and became a voracious reader (*Rousseau, *Darwin, *Spencer and *Mill), later turning to *Marx. He served in *Sun Yatsen's revolutionary army (1911) and studied at Changsha teachers' training school. Unlike *Li Lisan, *Zhu De and *Zhou Enlai, he did not study abroad. Mao worked as a laundry man in Shanghai (1919), then as a teacher, trade union secretary and library assistant at Peking National University. He was one of the 12 foundation members of the Chinese Communist Party in Shanghai (July 1921, *Chen Du-xiu). As CCP secretary in Hunan 1921–25, he organised trades unions and worked closely with the Guomindang. He set up more than 50 peasant unions 1925–27. After the risings of 1927 were defeated in the cities, he founded a workers' and peasants' army in Hunan with Zhu De and was a political commissar of the Red Army 1930–31. In 1930 his second wife Yang Kaihui and his sister were executed by a Guomindang warlord. Ultimately he won major support from the Central Committee for his view that revolution must be based on the peasantry rather than the proletariat which barely existed in China. Mao was Chairman of the Soviet Republic in Jiangxi Province 1931–34. Chairman of the CCP from January 1935 until his death in September 1976, he was only recognised as the dominant leader after the ‘Long March’ (October 1934 – October 1935, with the rear guard arriving in January 1936). After repeated Guomindang attacks, 80,000 people walked 9,650 kilometres, fighting 15 major battles on the way; from Jiangxi to the caves in Yan'an, Shaanxi Province: only 20,000 survived and Mao's three children were lost on the way. From 1937 to 1945 Mao collaborated with *Chiang Kai-shek against the Japanese. By 1945 the Red Army had 1,000,000 soldiers and controlled the northwest. Civil war resumed in 1946. On the Guomindang's defeat and withdrawal to Taiwan, Mao proclaimed the foundation of the Chinese People's Republic (1 October 1949) and served as Chairman (i.e. President) 1949–59, retiring as head of state to devote himself to party organisation and ideological formation. He visited the USSR Dec. 1949–Feb. 1950, for his first and only meeting with *Stalin, who resented Mao's success and had failed to support the resumption of civil war in China in 1945. The outbreak of the Korean War in June 1950 surprised Mao, who saw it as a Soviet operation. The US, however, was convinced that China had instigated the war. When *MacArthur proposed to bomb Chinese bases north of the Yalu River in October 1950, China sent volunteers to Korea. Stalin then reduced his commitment to *Kim Il Sung, putting China in jeopardy. Mao returned to Moscow in 1953 (for Stalin's funeral) and in 1957 to meet *Khrushchev. After a brief period of liberalism ('Let a Hundred Flowers Bloom') in 1956–57, came the Great Leap Forward (1958–61), a period of forced collectivisation in agriculture, mass mobilisation of labour and the introduction of small scale industrialisation. Food supply collapsed and deaths due to starvation have been estimated at 30 million. China occupied Tibet in 1959 and exploded its first atom bomb in 1964. The Great Proletarian Cultural Revolution was launched in 1965, as an attack on bureaucracy and privilege, but also on China's history, culture and tradition. Western cultural influence was also denounced. *Zhou Enlai was abused but survived as Premier. *Deng was publicly humiliated, *Liu Shaoqi disgraced and imprisoned. Mao's Communism was highly moralistic, decentralised and ostensibly anti-bureaucratic. Unlike the Soviet CP, Mao used rival forces (e.g. the army, Red Guards) to discipline the party organisation. He wrote many works on ideology and strategy and was a gifted lyric poet and 'grass' (i.e. vernacular) calligrapher. His precepts ('Mao Zedong thought'), as contained in the 'little red book', had the force of moral law. The Red Guards were especially destructive. In the Cultural Revolution some of the worst outrages were attributable to Kang Sheng (c.1900–1975), chief of the secret police and Chen Boda, one of Mao's secretaries. Perhaps four million people were killed in the terror. In 1968 the army stepped in and imposed some degree of military rule, which weakened Mao's position. After the defection of his chosen successor *Lin Biao in 1971, Mao's direct power declined even further. From 1973 he was virtually blind and helpless until his death in Beijing. His third wife Jiang Qing (1914–1991), formerly called Lan Ping, was a film actor before her marriage in 1938. In 1966 she emerged as a public figure, took a leading role in the Cultural Revolution, rose to fourth place in the Politburo and was a fierce opponent of Zhou. Demoted at the 1973 Congress, she was denounced as one of the ‘Gang of Four’ and given a suspended death sentence in 1981 after a show trial. She died in prison, probably by suicide.
Marat, Jean Paul (1743–1793). French revolutionary journalist. A physician, especially interested in optics, he had travelled much and spent many years in England before returning to France and becoming physician to the Duke of Artois’ household troops. After the outbreak of the Revolution he founded (1789) an extremist newspaper L'Ami du peuple which in 1793 played a considerable part in rousing public opinion against the Girondists. Charlotte "Corday, a member of that party, came from Normandy to assassinate him, found him in his bath where, as a sufferer from a skin disease (probably dermatitis herpetiformis), he transacted much business, and stabbed him to death.

Marchand, Jean Baptiste (1863–1934). French soldier and explorer. Having successfully led an expedition from Senegal to the sources of the Niger he was ordered to extend the area of French interest by an advance across Central Africa. When he reached Fashoda in the southern Sudan (1898) he refused the demands of "Kirchener to evacuate that area and thus caused such tension between France and Britain that a threat of war was averted only by the French Government’s order to Captain Marchand to withdraw.

Marco Polo see Polo, Marco

Marconi, Guglielmo, Marchese (1874–1937). Italian physicist and inventor, born in Bologna. From an affluent family, with an Irish mother, he was privately tutored, studied at Livorno (Leghorn) under Prof. Vincenzo Rosa but did not attend a university. He experimented with primitive wireless equipment based on the work of "Hertz and "Maxwell and is credited with the first practical system using radio for signalling in Morse code, although several others, particularly the Russian scientist Aleksandr Stepanovich Popov (1859–1905), had paralleled his work to some degree. By 1895 he could transmit signals between points a mile (1.6 km) apart. By 1896, attracting no interest in Italy, he went to England and enlisted support from the British Post Office: he transmitted Morse over 9 miles (14.5 km) and took out the world’s first radio patent. By 1898 he could send messages from England to France, and on 12 December 1901 successfully transmitted across the Atlantic from Poldhu, Cornwall, to St Johns, Newfoundland. He had assumed (correctly) that radio signals would follow the curvature of the earth, and not travel in a straight line. (The explanation was later proved by "Heaviside.) The Marconi Telegraph Company which he founded in 1897 played a major part in the development of radio, television and electronics. In 1905 he married the Hon. Beatrice O’Brien and had three children. They divorced and he remarried in 1927. Marconi shared the 1909 Nobel Prize for Physics with Karl Ferdinand Braun (1850–1918), the developer of crystals as radio detectors. He became a senator 1915–37, delegate to the Paris Peace Conference (1919), a strong supporter of "Mussolini, an anti-Semite and President of the Royal Italian Academy 1930–37. Britain gave him a GCVO in 1914 and he was created Marchese (Marquis) in 1929.

Marcos, Ferdinand Edralin (1917–1989) Filipino politician. He claimed to be the most highly decorated Filipino war hero, became a lawyer and a congressman 1949–65, serving as President of the Philippines 1966–86. The constitution was changed to allow him to rule for a record term and martial law imposed 1973–81. After a fraudulent election in 1986, pressure from the US, the Church and the military forced him into affluent exile and Mrs Corazon "Aquino took office. He died in Hawaii and was buried in the Philippines in 1993. His wife, Imelda Romualdez Marcos (1931–), was appointed Governor of Metro Manila 1975–86, and Secretary of the Department of Ecology and Human Settlements 1978–86. In 1993 she was sentenced to 18 years’ jail for corruption, but was released pending appeals.

Marcus Aurelius Antoninus (121–180). Roman Emperor 161–80. Born in Rome to a noble family, he took the additional name Antoninus when he was adopted (138) by "Antoninus Pius, whom "Hadrian chose as his successor and whose daughter, Faustina, Marcus married (145). When Marcus succeeded Antoninus as Emperor, he shared the government with Lucius Aurelius Verus, adopted by Antoninus at the same time as himself. From 162 to 165 the armies of Verus (d 169) fought the Parthians successfully in Armenia, where a puppet ruler was installed, and in Mesopotamia where Ctesiphon was taken by Avidius Cassius, whose subsequent rebellion (175) Marcus easily overcame. Meanwhile the Germanic tribes, the Marcomanni and Quadi, had broken through the northern frontiers and were threatening Italy and the Balkans. Marcus had fought two successful campaigns against them when he died at Vindabona (modern Vienna). A successful general, a wise and patient ruler, Marcus Aurelius is perhaps best known as a Stoic philosopher and his introspective Meditations, written in Greek, has been one of the most influential books ever composed by a ruler. He reveals himself, without arrogance, as an instrument used for a time by providence to guide the Roman Empire towards its destiny of becoming part of a dimly perceived world order. The virtues he espoused were those usually regarded as Christian, but he saw Christianity as an emotional, tolerant and disruptive sect that sought the empire's protection while refusing or avoiding
military service and other duties. Such persecution as he practised was on public not religious grounds. His reign was looked back on by later Romans as a Golden Age. His son *Commodus succeeded.

Marcuse, Herbert (1898–1979). German American philosopher, born in Berlin. Educated at Freiburg, he became Martin *Heidegger's assistant, left Germany in 1933 and worked in the US for the State Department and the Office of Strategic Services, later holding professorships at Brandeis University 1954–65 and the University of California at San Diego 1965–76. His books became enormously influential with the ‘New Left’ and the students in revolt during the late 1960s. Although deeply influenced by *Marx and *Freud, Marcuse was primarily a disciple of *Hegel and advanced a complete body of philosophical doctrine, being sharply critical of logical positivism, scientific attitudes or analysis. He denounced the ‘hell of the affluent society’, argued that sexual freedom was an anti-revolutionary device and (in his *Critique of Pure Tolerance, 1966) contended that tolerance was an anti-revolutionary device and (in his *Critique of Pure Tolerance, 1966) contended that tolerance was outmoded when it served subtle enslavement of the people. He called for ‘selective intolerance’ and ‘counter-indoctrination’ where necessary. His books include *Eros and Civilization (1955) and *One-Dimensional Man (1964).

Margaret (known as ‘the Maid of Norway’) (1283–1290). Queen of Scotland 1286–90. Daughter of Eric II of Norway, she was granddaughter of the Scottish king *Alexander III whose death (1286) left her as sole heir to the throne. *Edward I of England intended that she should marry his son (afterwards *Edward II) and so effect the union of the two crowns, but the scheme came to nothing as she died aboard the ship that was carrying her to Scotland, and union came only several centuries later.

Margaret (1353–1412). Queen of Norway. Daughter of King Valdemar of Denmark and wife of Haakon VI of Norway she became, on her father's death (1376), regent for her son Olaf, infant King of Denmark and (1380) of Norway. A tribute to her qualities was paid when on Olaf's sudden death (1387) she was permitted to continue her rule of both countries. In 1389 at the request of dissident nobles in Sweden she defeated King Albrecht and added that country (nominally on behalf of her grand-nephew, Eric of Pomerania) to the area under her control. By the Union of Kalmar (1397) Eric became King of all three countries but Margaret maintained her strong personal rule until her death.

Margaret of Anjou (1430–1482). English queen consort 1445–61, 1470–71. She married *Henry VI in 1445. A cousin of the French king and daughter of René, Duke of Anjou, titular king of Sicily and Jerusalem, her French birth made her very unpopular in England. When the Wars of the Roses broke out and her saintly husband began to show mental incapacity, she was, with her courage and strength of character, the life and soul of the Lancastrian cause. She was finally captured after the Battle of Tewkesbury (1471), where her son Edward was killed, and she was imprisoned until ransomed by *Louis XI of France.

Margaret (Marguerite) of Navarre (1492–1549). French author, Queen of Navarre. Sister of *François I of France, through her marriage to *Henri II of Navarre she became the grandmother of *Henri IV of France and the ancestress of the Bourbon kings. She was learned and pious but also gay and tolerant; her courts became centres of humanist culture and places of refuge for persecuted scholars. In the *Heptameron, following the pattern set by *Boccaccio's *Decameron, five gentlemen and ladies held up by the floods beguile the time with stories, but though ribaldry is present in her stories, Margaret, unlike Boccaccio, treats love as a serious, and often tragic passion.

Margaret (Rose) (1930–2002). British princess. Younger daughter of King *George VI and sister of Queen *Elizabeth II, she was born at Glamis Castle in Scotland, the seat of her mother's family. She married (1960) Antony Armstrong-Jones, a London photographer, afterwards created Earl of *Snowdon; they divorced in 1978.

Margaret (Tudor) (1489–1541). Scottish queen consort 1503–13. Daughter of *Henry VII of England, her marriage (1503) to *James IV of Scotland provided the link between the Tudor and Stewart (Stuart) dynasties, upon which depended the union of the crowns of the two countries under *James VI and I, the first king of Great Britain. After her husband's death at Flodden, she married Archibald Douglas, 6th Earl of Angus, who headed the English faction at the Scottish court.

Margrethe II (1940– ). Queen of Denmark 1972–. Daughter of King *Frederick IX, she travelled extensively, illustrated *Tolkien's *Lord of the Rings and became a British LG.

Maria Theresa (Maria Theresia) (1717–1780). Archduchess of Austria, Queen of Hungary and Bohemia 1740–80, Empress consort 1745–65. Daughter and heiress of the emperor *Charles VI she became Empress when her husband *Franz of Lorraine (married 1736) was elected Emperor (1745). By the Pragmatic Sanction, Charles VI had sought to guarantee his daughter's succession to all Habsburg lands but on his death (1740) *Friedrich II (the Great) of Prussia invaded Silesia and provoked the War of the Austrian Succession, as a result of which he retained the province but recognised the Pragmatic Sanction in other respects. By making an
Dictionary of World Biography

alliance with France, Maria Theresa hoped to regain Silesia but failed to achieve her purpose in the Seven Years’ War (1756–63). She was an unwilling partner in the partition of Poland (1772), from which she acquired Galicia. In the administration of her many territories, Maria Theresa proved herself a wise and prudent practitioner of the system of paternal government then in vogue. She freed the peasants from many feudal burdens, abolished torture and did much to foster education, trade and industry and to reform the legal and taxation systems. She associated her son *Joseph II with herself as ruler when he was elected Emperor on his father’s death (1765). Her 15 other children included the emperor *Leopold II and *Marie Antoinette, Queen of France.

Pick, R., Empress Maria Theresa. 1966.

Marie Antoinette (1755–1793). Queen consort of France 1774–92. Daughter of *Maria Theresa of Austria, she married the future *Louis XVI of France in 1770, four years before he became King. She retained his complete devotion throughout his life. Her frivolity and extravagance made her unpopular but she was not unkind. She was further discredited by an obscure confidence trick by which Cardinal de Rohan was induced to promise payment for a diamond necklace of great value allegedly for the queen. Marie Antoinette was almost certainly ignorant of the entire affair. In the Revolution, Marie Antoinette inspired the court partly by her firmness and courage but her course of action, e.g. the mismanaged flight of the royal family to Varennes (1791) and her secret correspondence (especially with her brother the emperor *Leopold II) asking for intervention, did much to bring about the deposition of her husband (1792), her death on the guillotine (January 1793) and her own in the following October. Her son (*Louis XVII) died in prison. Her daughter Marie Thérèse Charlotte (1778–1851) became Duchess of Angoulême.

Marie de Medicis (1573–1642). Queen of France. Daughter of Grandduke Francis I of Tuscany, she became (1600) the second wife of *Henri IV of France. As regent after his assassination (1610), she dismissed the experienced minister *Sully and squandered wealth on her favourite, Concino Concini. Her son Louis *XIII had Concini murdered but was content to let power pass to *Richelieu. Having failed to displace him, she retired to live in exile, mainly in the Low Countries.

Marie Louise (1791–1847). Empress of the French. Daughter of *Franz II, last Holy Roman emperor and first emperor of Austria, she was forced to marry (1810) *Napoléon I, and became the mother of his son (1811), known later as the Duke of Reichstadt (*Napoléon II), who, after his father’s abdication, was brought up by his Austrian grandfather. Marie Louise, who refused to accompany her husband into exile, was given the duchies of Parma, Piacenza and Guastalla. She became the mistress of the Austrian general, Adam Adalbert Neipperg, whom she secretly married (1821) after Napoléon’s death. In 1834 she married Charles-René, Comte de Bombelles.

Marin, John (1870–1953). American painter, born in New Jersey. Most of his paintings depict scenes on the coasts of Maine. His composition shows the influence of *Cézanne, and he used expressionist and abstract painting techniques to achieve representational results. He is best known for his watercolours but used oils more freely in later life.

Williams, W. C., John Marin. 1956.

Marinetti, Filippo Tommaso (1876–1944). Italian writer, born in Alexandria. After studying in France he developed his theory of ‘Futurism’, which rejected the past and exalted present and future, glorifying machinery and war (seen as a cleansing mechanism). He joined the Fascists, hailed *Mussolini as an embodiment of Futurist aims and was a prolific writer of poetry, plays and novels.

Maritain, Jacques (1882–1973). French philosopher. After being a pupil of *Bergson, he was converted to Catholicism (1906) and became an exponent of the philosophy of St Thomas *Aquinas, seeing in it a solution of modern problems of the mind, of society and of culture. He became a professor of the Institut Catholique in Paris and from 1933 taught at Toronto. After World War II he was French Ambassador to the Vatican 1945–48 and then a professor at Princeton, NJ 1948–52.

Marius, Gaius (157–86 BCE). Roman soldier and politician. Seven times elected consul, his first campaign was in Spain (134–133) where he later served as praetor. He took part (109–108) in the war in Numidia against *Jugurtha under Metellus to whose command he succeeded (107). As Consul in that year he abolished the property qualification for military service and thus founded a virtually professional and more efficient army. He brought the war in Africa to an end (107–105), though it was actually *Sulla, soon to be his deadly rival, who captured Jugurtha. He was again elected Consul for the five successive years 104 to 100, during which he trained his army and eventually crushed the Teutoni (at Aquae Sextiae in 102) and the Cimbri (at Vercellae in 101), who were invading Italy from the north. These successes were followed by a period of eclipse after he had let himself become the tool of the demagogue Saturnius during his consulship of 100. He took part in the Social War (91–88) which was followed by enfranchisement of the Italians as Roman citizens, but in 88 the new electorate were organised to vote for the super-session of the consul Sulla by Marius in the war against Mithridates. Sulla responded by marching his
legions back to Rome, getting the legislation repealed and Marius exiled. But as soon as Sulla was in the East the new consul Cinna brought Marius back and for Sulla's supporters a reign of terror followed (87), for which vengeance came only after Marius's death. Meanwhile it had been shown how easily a successful general could usurp civil power, an example that inspired many similar events.

**Mark Antony** see Antony, Mark

**Mark**, St (also called John Mark, Yohan’an to the Jews, Marcus to the Romans) (c.10–70 CE). Christian apostle, one of the four evangelists. The earliest Christians met at the house of his mother, Mary, and he met *Paul through his cousin *Barnabas. Mark accompanied them on their first missionary journey, but at Perga left them to return to Jerusalem, which led Paul to refuse to take him on his second journey. The result was a split, with Barnabas taking Mark to his native Cyprus. The friendly references in Paul’s Epistles indicate a reconciliation, and Mark is mentioned as sharing Paul’s imprisonment, probably in Rome. He then worked closely with *Peter (‘my son Mark’, I Peter v:13) and, according to Papias and Irenaeus, his Gospel was written after the martyrdom of Peter and Paul but probably before the destruction of Jerusalem. St Mark’s Gospel is the shortest of the synoptics, with a dramatic, abrupt narrative and is thought to be the earliest. Written in Greek, it is addressed to a Roman audience, somewhat anti-Jewish in tone and with a shaky grasp of Palestinian geography (curious in a work thought to embody Peter’s recollections). According to tradition, Mark became the first bishop of Alexandria and died there, but in 828 his remains were stolen and transferred to Venice.

**Mark Twain** see Twain, Mark

**Markova, Dame Alicia** (Alice Marks) (1910–2004). English ballerina. She joined the *Diaghilev company in 1924, her work with them being the strongest influence on her future career. She danced with the Sadler’s Wells Ballet (1933–35), toured with her own Markova-Dolin Ballet (1935–38), joined the Ballets Russes de Monte Carlo (1938) and danced with the New York Metropolitan Opera Ballet during World War II. She was a founder and prima ballerina (1950–52) of the London Festival Ballet. Her dancing, particularly in partnership with Anton *Dolin, was probably the nearest approximation to the Russian tradition and she did much to raise technical and artistic standards. In 1963 she was made a DBE, retired from dancing and began a new career as producer and teacher. She was Director of the New York Metropolitan Opera Ballet (1963–69), professor of ballet at Cincinnati University Conservatory of Music (1970), and Governor of the Royal Ballet (1973).

**Marlborough, John Churchill, 1st Duke of** (1650–1722). English general, born in Ashe, Devon. His father, Sir Winston Churchill, a royalist, forced to sell his property to pay a fine for his part in the Civil War, was recalled to court in 1663. John was sent to St Paul’s School; his sister Arabella became the mistress of the Duke of York (later *James II), who obtained for her brother a commission in the guards. Churchill served in Tangiers (1668–70) and in the third Dutch War, at first with the fleet (1672) and then (from 1673) with a British contingent under the French commander *Turenne, from whom he learnt much of the art of war. In the winter of 1677–78 he married one of the Duchess of York’s ladies-in-waiting, the dominating and ambitious *Sarah Jennings* (1660–1744), who commanded his lifelong devotion and did much to steer his fortunes.

Under James II, Churchill played a leading part against *Monmouth at Sedgemoor, but joined *William of Orange when he landed (1688) and was created Earl of Marlborough. Commander-in-Chief in England during William’s absence in Ireland (1690), in 1692 he was suddenly dismissed from all his posts and for a time imprisoned in the Tower of London on forged evidence that he was plotting to restore James. Restored to favour in 1698, when the War of the Spanish Succession broke out (1701) he was appointed to command the British forces in Holland. On the accession of *Anne (1702), over whom the influence of Marlborough’s wife Sarah was complete, he was made Captain General of all British forces at home and abroad, and with Dutch consent, Supreme Commander of all allied forces against France. Further to safeguard his power, his friend *Godolphin, whose son was married to Marlborough’s daughter, was Lord Treasurer. Marlborough’s first great victory at Blenheim (1704) resulted from a march to the Danube and the effective support of the imperial commander Prince *Eugènè. The chain of victories was continued by Ramillies (1706), Oudenarde (1708), which led to the fall of Lille, and Malplaquet (1709) which opened the way (1710–11) to the capture, one by one, of the great fortresses protecting the French frontier. But at home, from Marlborough’s point of view, catastrophe had occurred. His wife was replaced in the royal affections by Mrs Abigail Masham, and as head of the government, the Whig Godolphin was succeeded by the Tory, *Harley. In the autumn of 1711 Marlborough was dismissed from all his offices and the war was hurried to a close (1713). After Anne’s death (1714) Marlborough was reinstated by *George I, and he had to console him with the ducal title (1702) and the parliamentary vote, earned by his first great victory, which resulted in the construction of *Vanbrugh’s magnificent Blenheim Palace. Sarah, his duchess, fruitfully spent the 22 years by which she survived him in embellishing the mighty domain and haggling over the necessary funds; she left £3 million. Marlborough was among the greatest captains of his own or any
time. He was avaricious and his political loyalties sometimes wavered, but his care for the welfare of his troops won their love and he had a generosity of mind and a greatness of spirit that matched his deeds. Later dukes of Marlborough (and Sir Winston Spencer *Churchill) were descended from the 1st Duke's daughter, Anne Spencer, Countess of Sunderland.

**Marlowe, Christopher** (1564–1593). English dramatist and poet, born in Canterbury. Two months older than *Shakespeare, he was the son of a shoemaker, went to King's School, Canterbury, and graduated BA (1584) at Corpus Christi College, Cambridge. (Following intervention by the Privy Council he was promoted MA in 1587.) After moving to London (1587?), he seems to have lived, despite his almost immediate fame as a playwright, a dangerous underground existence linked in some sort of way with secret service work. An active homosexual and religious sceptic, a warrant for his arrest on charges of atheism and sedition was issued three weeks before he died. He was stabbed to death, probably murdered, by *Ingram Frizer* in a tavern brawl in Deptford. Frizer was quickly pardoned.

The subject of his first play *Tamburlaine the Great* (1587) is the life of the great Mongol conqueror *Timur the Lame.* It was followed by *The Tragic History of Dr Faustus* (1588), relating the story of the German necromancer who sold his soul to the devil, *The Jew of Malta* (1589), an almost fantastic tale of revenge and murder, and *Edward II* (1592). Lesser works are *The Massacre of Paris* (1593) and *Dido Queen of Carthage* (c.1593, written in collaboration with Thomas *Nash). Marlowe was the first to realise the full potentialities (both rhetorical and dramatic) of blank verse for tragedy and thus paved the way for *Shakespeare, with whom he may have collaborated in the writing of *Titus Andronicus and Henry VI.* He also introduced the tragedy of character (e.g. the effects of power) as opposed to the tragedy of events, though he does this with less subtlety than Shakespeare and his minor characters are often sketchily drawn. In addition to his dramatic work Marlowe translated from *Ovid and *Lucan and wrote much poetry; *Hero and Leander* (1598), completed by George *Chapman, is his best known poem. The song *Come live with me and be my love* was published in *The Passionate Pilgrim* (1599).

**Marquet, Albert** (1857–1947). French painter. One of the Fauves, closely associated with *Matisse, his later landscapes were naturalistic.

**Marquez, Gabriel Garcia** *see* *Garcia Marquez, Gabriel*

**Marquis, Don(ald Robert Perry)** (1878–1937). American journalist and humorist. As a journalist he worked in Atlanta with Joel Chandler *Harris, creator of Uncle Remus. In archy and mehitabel* (1927), and later collections, he published the stories of archy the cockroach and mehitabel (‘toujours gai’) the cat.

**Marryat, Frederick** (1792–1848). English sailor and novelist. After many years in the navy, during which he fought in the Napoléonic Wars and in Burma, he retired to write popular adventure stories, e.g. *Peter Simple* (1834), *Mr Midshipman Easy* (1836), *Masteman Ready* (1841) and *The Children of the New Forest* (1847).

**Marsh, Dame (Edith) Ngaio** (1899–1982). New Zealand novelist and theatre director. She was second only to Agatha *Christie as a prolific writer of detective stories and superior as a stylist.
Marsh, George Perkins (1801–1882). American writer, born in Woodstock, Vermont. He was a lawyer, philologist (said to have mastered 20 languages), US Congressman 1843–49, art collector and diplomat, who served as Minister Resident to the Ottoman Empire 1850–53 and Minister to Italy 1861–82. He was buried in Rome. Profoundly influenced by *Humboldt, his book, Man and Nature (1864, revised and retitled in 1874 as The Earth as Modified by Human Action) developed the concepts of resource management and anticipated ecology as a major study. He warned that ‘climatic excess’, compounded by deforestation, might lead to ‘extinction of the [human] species’.

Marshal, William, 1st Earl of Pembroke (second creation) (1147?–1219). Anglo-Norman knight and administrator, born in Caversham. Son of a minor landowner, he became famous for his success in tournaments and as a warrior. His marriage to Isobel, daughter of ‘Strongbow’, Earl of ‘Pembroke, brought him wealth and a recreation of the earldom. Joint-marshal and justiciar to *Richard I, he was consistently faithful to King *John but played a major role in the adoption of Magna Carta (1215). As Regent for the young *Henry III (1216–19), he expelled a French invasion and resisted papal influence. He became a Templar and was buried in the Temple Church in London. Regarded as a paragon of chivalry, he was the subject of a very early biography (in French) and appears as a character in books and films about medieval England.

Marshall, Alfred (1842–1924). English economist. From the time he became an undergraduate at Cambridge his whole life was spent in academic circles. After resigning (1881) for health reasons as principal of the new University College at Bristol he returned to Cambridge as professor of political economy 1885–1908. He was the last of the line of the great classical economists and his Principles of Economics (1890) became a standard work used by generations of students. Though some of its conclusions are now disputed or outmoded it remains a basic work. He also wrote Industry and Trade (1919) and Money, Credit and Commerce (1923).

Marshall, George C(atlett) (1880–1959). American general, born in Uniontown, Pa. He entered the Virginia Military Institute in 1897 and was commissioned in 1902. He served in the Philippines (1902–03) and France (1917–19), became ADC to General J. J. *Pershing 1919–24, was a military observer in China (1924–27) and Assistant Commandant of the Ft. Benning, Ga. Infantry School 1927–33. President *Roosevelt appointed him as Chief of Staff of the US Army 1939–45, promoting him over 200 senior officers (many of them younger). The US Army increased from 200,000 soldiers to 8,300,000 under his direction. He attended the important wartime conferences at Casablanca, Quebec, Cairo, Teheran and Yalta and played a vital role in determining the ‘beat *Hitler first’ strategy. He was the original choice as Supreme Commander for the allied invasion of Europe, but when Roosevelt preferred to keep Marshall in the US the job went to *Eisenhower. He became a five-star general of the army in 1944 and the British gave him a GCB. *Truman appointed him as Special Ambassador to China 1945–47, hoping that he could mediate in the civil war between *Chiang and *Mao. As US Secretary of State 1947–49, he proposed the European Recovery Plan (the Marshall Plan), providing US$12 billion in economic aid in the period 1948–51 for the reconstruction of Europe. (The USSR was invited to participate in Marshall aid but refused.) After the outbreak of the Korean War, Marshall became US Secretary of Defence 1950–51 and supported Truman’s dismissal (1951) of Douglas *MacArthur. He received the Nobel Prize for Peace in 1953 and refused to write memoirs. Truman considered him the greatest contemporary American. (British observers were less generous and thought that his slowness just indicated slowness.)

Marshall, John (1755–1835). American lawyer and judge, born in Midland, Virginia. He served in the War of Independence, was called to the bar and from 1783 practised in Richmond where he soon rose to be head of the Virginian bar. He served in the state legislature 1782–88 and 1795–97 and led the Federalist Party in Virginia. Wider fame came when he was sent to Paris to negotiate with the Directory. The exposure in the famous XYZ letters of “Talleyrand’s” unsuccessful attempt to bribe the delegates made Marshall a popular hero. He was elected to the US Congress in 1799 and President *Adams made him Secretary of State 1800–01 and Chief Justice of the Supreme Court 1801–35. Marshall used his powers of interpreting the Constitution to strengthen the Federal Government and issued several judgments invalidating acts of state legislatures that aimed at or tended to nullify acts of Congress. However, he tried to protect the individual from state oppression.

Marshall, Thomas Riley (1854–1925). American Democratic politician, born in Indiana. A lawyer and mild progressive, he was Governor of Indiana 1909–13, and served two terms as Woodrow *Wilson’s Vice President 1913–21. They disagreed about policy and the Vice President’s role in the administration. When Wilson suffered strokes in 1919, senior officials urged Marshall to assume the role of Acting President but he refused to set a precedent, despite the executive appearing to be paralysed.

Marsiglio of Padua (c.1280–c.1342). Italian scholar. He was the author (or co-author) of *Defensor Pacis*, an exposition of political ideas, based on the constitutions of some of the city states of northern Italy, that (a) the source of political power should be the people (i.e. all adult citizens); but (b) executive action should be delegated either to a council or to a single despot; and (c) the Church should be a solely spiritual body and papal supremacy was unjustified. These views were immediately condemned as heretical (1327) and Marsiglio fled to Paris. Later he was to see his persecutor, Pope John XXII, deposed, and an emperor elected by an assembly in Rome. Though this development proved ephemeral, *Defensor Pacis* guided much subsequent political thinking.

Marston, John (1576–1634). English dramatist. He wrote coarse, vigorous satire and a number of tragedies, some of them in collaboration with other dramatists. He started the campaign of mutual satire (1599–1601), the ‘war of the theatres’, with Ben *Jonson, but later became his friend and collaborator.

Martial (Marcus Valerius Martialis) (c.40–c.104). Latin poet and epigrammatist, born in Spain. He went to Rome where the wit and topicality of his verses won the approval of the emperors Titus and Domitian and widespread support. He wrote 15 books, containing several hundred epigrams, polished, cunningly twisted and frequently indecent, which became the models for the epigram in post-Renaissance Europe. He spent his last years at his native Bilbilis.

Martin, Frank (1890–1974). Swiss composer, born in Geneva. He was a prolific producer with an eclectic style, including the passionate Mass for double choir (1922–26), ballets and operas, a concerto for seven wind instruments (1949), *Polyptich* for violin and two string orchestras (1973), concertos for cello, violin, piano and saxophone, much chamber music and the familiar *Petite symphonie concertante* (1945). The conductor Ernest *Ansermet* premiered much of his work.

Martin, George R (aymond) R(ichard) (1948– ). American novelist, born in New Jersey. Originally a science fiction writer, he turned to vampire and horror stories. His incomplete historical series *A Song of Ice and Fire* (1996ff) sold 60 million copies and was the basis of the *Game of Thrones* series on television.

Martin, John (1789–1854). English painter of the Romantic school. For a time hailed as a rival to Turner, his vast canvases, e.g. *Belshazzar’s Feast* (1821) and *The Deluge* (1826), teem with people and incident and brought him a great, but transient, popularity.

**Martin of Tours, St** (c.316–397). Roman prelate in Gaul, born in Pannonia (now Hungary). Son of a military tribune, he served in the Roman army. Converted to Christianity, he studied under Hilary of Poitiers, founded a convent nearby, sharing with the monks a life of seclusion and great austerity. As Bishop of Tours (c.371–397), to avoid the distraction of the crowds attracted by his reputation for saintliness and miracles, he founded and lived in the monastery of Marmoutier. His feast day (11 November) became associated with a period of warm weather which often occurs about that time known as a St Martin's Summer.

**Martineau, Harriet** (1802–1876). English writer, born in Norwich. Daughter of a manufacturer, in her time her books were very popular. They included *Illustrations of Political Economy* (1832–34), *Poor Law and Paupers Illustrated* (1833), *Society in America* (1837), written after a visit to America, and *Letters on Mesmerism* (1845), a result of her belief that she owed recovery from serious illness to hypnotic treatment. Her aim in each case was to present a simplification (sometimes in fictional disguise) of serious themes. Her other work, historical, philosophic and autobiographical, much of it quite ephemeral, includes a novel, *Deerbrook* (1839), and books for children. She was a model for *Dickens' Mrs Jellyby in Bleak House.*

**Martinet, Jean** (d.1672). French military engineer. His severe system of drill made his name a synonym for a harsh disciplinarian.

**Martini, Carlo Maria** (1927–2012). Italian cardinal, born in Turin. Ordained in 1952, and a Jesuit, he was Archbishop of Milan 1980–2002. He criticised the organisation of the Church as being '200 years out of date'.

**Martini, Simone** (c.1284–1344). Italian painter, born in Siena. Regarded as second only to *Giotto of the late Gothic painters, he returned to Siena (1321) after working at Naples for the Angevin court, at Orvieto and at Pisa. Except for intervals at Assisi to work on the scenes from the life of St Martin in the lower church of St Francis, he stayed at Siena until 1339, when on the summons of Pope Benedict XII he went to Avignon, where his work included the small panel (now at Liverpool) of the Holy Family, and where he died. Of his work at Siena, the fresco (1328) of Guidoriccio da Fogliano, destined for the council chamber, and the altarpiece of the Annunciation for the cathedral (now in the Uffizi, Florence) are among the best known. The two saints at the outside of the latter are probably the work of Lippo Memmi, but the work as a whole, with its graceful figures harmoniously posed against a gold back ground shows his treatment of his subjects at its best.

**Martin, Bohuslav** (1890–1959). Czech composer. A pupil of *Suk and *Roussel, he became a teacher and orchestral violinst, living in Paris 1923–40, the US 1941–53 and dying in Switzerland. His works include six symphonies, 11 concertos, 16 operas, including *Julietta* (1937), the oratorio *The Epic of Gilgamesh* (1954), and vast quantities of chamber music.

**Martov, Yulie Osipovich** (originally Zederbaum) (1873–1923). Russian-Jewish politician. Once *Lenin's closest friend, he led the Mensheviks from 1903, opposed the Bolshevik dictatorship in 1917 and was consigned to 'the garbage can of history' by *Trotsky. He died in exile in Germany.

**Marvell, Andrew** (1621–1678). English poet. Son of a Yorkshire clergyman, he held a number of posts as tutor, notably to Lord *Fairfax's daughter at Nun Appleton where some of his best work, poems of wit and grace in praise of gardens and country life, was written. Politically a follower of *Cromwell, he could not withhold admiration for *Charles I's bearing on the scaffold:

He nothing common did or mean
Upon that memorable scene.

Later he worked with *Milton in government service, was Latin secretary 1657–60 and went with an embassy to Russia 1663–65. He was MP for Hull 1659–78. Marvell did not marry and his love poems seldom carry conviction, though occasional lines such as

But at my back I always hear
Time's winged Chariot hurrying near

have earned immortality. In later life he became a satirist of an arbitrary government which he deplored. He died of malaria.

**Marx, Karl Heinrich** (1818–1883). German political philosopher, born at Trier. His father, a lawyer, converted to Christianity from Judaism. Educated at the universities of Bonn and Berlin, he abandoned law for history and philosophy. His comic novel *Scorpion and Felix* (1837), influenced by *Sterne, was unpublished. (Sterne and *Swift were major stylistic influences.) He edited the *Rheinische Zeitung* from 1842 to 1843, when the Prussian government suppressed it for its radicalism. In 1843 he married *Jenny von Westphalen* (1814–1881) and moved to Paris, where he came to know Friedrich *Engels. Expelled from France (1845), he moved to Brussels where, with Engels, he reorganised the Communist League, for which they wrote the famous *Communist Manifesto* (1848). This, though it contained a preformulation of the views later worked out in detail, was essentially a call to revolutionary action, ending with the exhortation *The proletarians have..."**
nothing to lose but their chains. They have a world to gain. Workers of the world unite.’ Marx took part in the revolutionary risings in the Rhineland in 1848 and after their failure, settled (1849) in London for the rest of his life. After 15 years of research he wrote Grundrisse (‘Outlines’) at great speed in 1857–58. This was the framework of a vast incomplete work of which Das Kapital was only a part. Grundrisse included material on alienation, the impact of technology, the economies of time and his utopian vision. His writing was passionate and often ironic. Karl *Kautsky published excerpts in 1903, but the complete Grundrisse did not appear until 1939–41 in Moscow, and in English translation until 1973.

He resumed active political work as founder and secretary of the International Working Men’s Association (later known as the First International) 1864–72. Here he had to contend with the views of rival leaders, especially the anarchist *Bakunin, whose withdrawal he forced in 1869. After the death of *Lassalle, Marx’s influence became predominant in the German Social Democratic Party, and Marxist parties were founded in France and Russia during his lifetime. For more than 12 hours each day he worked in the reading room of the British Museum on Das Kapital. Volume I was published in Hamburg in 1867 (in Russian translation in 1872, French 1872–75 and English 1887). Volume II, edited by Engels, appeared in 1885 and Volume III, completed by Engels from Marx’s notes and private papers, in 1894. Marx was often in extreme poverty and from 1868 depended on an annual allowance of £350 from Engels. His application for British citizenship (1874) was refused. He died in Kentish Town in March 1883 and was buried in Highgate Cemetery.

Marx’s philosophical basis is an adaptation of *Hegel’s dialectical system. With Marx it becomes dialectical materialism: historical stages succeed one another by way of conflict; the economic basis of one phase provokes its antithesis and the two then merge into a third. Thus the bourgeoisie displaced feudal society and the stage was then set for the final struggle between the bourgeoisie and the working classes. On the theoretical economic side Marx followed the classical economists in their concept of the labour theory of value. A capitalist society depended, in his view, on ‘surplus value’, i.e. that part of the amount received for the product of labour in excess of the amount paid for labour. Moreover, as the larger capitalist devoured the smaller, so its members would become fewer and richer, while the proletariat, its bargaining power reduced as the means by which labour can be employed (hand, factories, machines etc.) became concentrated in fewer and fewer hands, would become relatively poorer. That being so, a clash of interests would be inevitable and the Communist’s part therefore must be to educate the proletariat in the role it must play both to hasten events and to bring about the desired future, in which production would be carried out for the good of all in a classless society.

Since a capitalist state is the instrument by which the exploitation of the proletariat is carried out political action must be revolutionary. If successful, the next stage (from which no Communist state has yet emerged) must, as Marx foresaw, be a dictatorship of the proletariat, necessary to prevent counter-revolution. This would be eventually followed by the third stage, the withering away of the state and the emergence of a classless society living and working in the perfectionist conditions referred to above. Marx developed his theories against the background of capitalist development as it existed in England in the middle of the 19th century. He claimed to have done for economics and history what Charles *Darwin had achieved in biology.

The influence of Marx’s writings, though often misinterpreted, has been immense. His theories form the intellectual basis of almost all socialist parties, irrespective of the means they envisage to put them into effect. Even in his own time Marx could say ‘I am not a Marxist myself’. His youngest child Eleanor (‘Tussy’) Marx (1855–1898) was her father’s closest companion and secretary. She made the first English translation (1892) of Flaubert’s Madame Bovary, translated five plays by *Ibsen and works by *Bernstein and *Plehanov. From 1884 she lived with Edward Aveling, who had been a translator of Das Kapital. Together they wrote The Woman Question (1886), toured the US in 1886 (with Wilhelm *Liebknecht) raising money for the SDP. She had unfulfilled ambitions as an actor, and committed suicide after discovering that Aveling had betrayed her.

**Mary** (Hebrew: Miriam) (fl 1st century CE). Mother of *Jesus Christ, known also as the Blessed Virgin. According to apocryphal gospels, she was the daughter of St Anne and Joachim. The narratives of the Annunciation, the miraculous conception and the birth of Jesus Christ at Bethlehem are told with varying details in the Gospels of St *Matthew and St *Luke, where also it is recorded that her husband Joseph was a carpenter of Nazareth in Galilee. The most
important of the very few other biblical references is in St John’s Gospel which relates that she stood by the cross at the Crucifixion and that Jesus entrusted her to the care of that unnamed ‘beloved disciple’, who took her to his own home. According to tradition, she lived at Ephesus in the care of St ‘John the Divine’; in Catholic teaching she was ‘bodily assumed’.

The doctrine of her Perpetual Virginity (i.e. that she had no natural children) was adopted by the Council of Chalcedon in 451. Her Immaculate Conception (i.e. that she was the subject of a virgin birth) was proclaimed in 1854 by Pope ‘Pius IX, followed by the doctrine of the Bodily Assumption (1950) and the title Queen of Heaven (1954).

Mary I (1516–1558). Queen of England 1553–58. Daughter of *Henry VIII by his first wife *Catherine of Aragon, Mary’s prospects were at first brilliant and negotiations for marriage were pressed forward with royal suitors (including the emperor *Charles V) from her childhood days. But all was changed when Henry and her mother became estranged and the marriage was annulled (1533). Mary had to live in retirement and even acknowledged herself to be illegitimate. She was restored to the line of succession by her father’s will but her way of life was hardly changed while her Protestant brother *Edward VI was on the throne. On his death, however, she foiled with general public support the Duke of Northumberland’s bold attempt to transfer the crown to his own family by establishing the claim of his daughter-in-law Lady Jane “Grey. Unfortunately Mary, who began her reign with the avowed aim of restoring the supremacy of the Roman Catholic Church, was already a frustrated and embittered woman and, though she at first acted with caution, her proposed marriage to Philip (later Philip II) of Spain deprived her of much of her popularity and provoked a rebellion by Sir Thomas “Wyatt. This was suppressed, but the marriage (1554) brought her no joy, as Philip, who left the country in 1555, could not conceal his indifference and the false pregnancies which deluded her into making all preparations for an expected child deprived him of his political hopes. She may have suffered from a pituitary gland disorder, accounting for her infertility, deep voice and dry skin. Meanwhile Roman supremacy was restored (1554) and Cardinal *Pole, the papal legate and later Archbishop of Canterbury, became Mary’s chief adviser. The persecutions which were to make the queen remembered as ‘Bloody Mary’ began in 1555. The first to die were *Ridley and *Latimer, and *Cranmer (1556) and almost 300 followed, 60 of them women, for which she bears the main responsibility. She became hated and even Philip was appalled by her severity. In 1557 the English were dragged into the Spanish war against France, the only result being the loss (1558) of their last Continental possession, Calais, the name said to be written on Mary’s heart when, tormented in mind and body and almost un lamented, she died. She was succeeded by her half-sister *Elizabeth.

Mary II (1662–1694). Queen of Great Britain 1689–94. The elder daughter of James, Duke of York (*James II), by his first wife Anne Hyde, she married (1677) her first cousin William, Prince of Orange (later *William III). After her father’s deposition, she and her husband were invited to become joint sovereigns. Mary was much loved and after her early death, from smallpox, deeply mourned.

Mary, Queen of Scots (1542–1587). Queen of Scotland 1542–67. Born in Linlithgow Palace, daughter of *James V of Scotland and Mary of Guise, she was half French, one quarter Scots, one quarter English. She became Queen of Scotland, the eighth of the *Stewart dynasty, when her father died six days after her birth. To keep her out of the hands of the Protestant or ‘English’ party who wished her to marry the future *Edward VI, she was sent to France, her mother remaining in Scotland as regent. On her return in August 1561, while remaining a Catholic, she was able to negotiate a political-religious settlement with the nobility and supporters of John *Knox. She married three times: (1) in 1558 to the French dauphin who became *François II and died in 1560, (2) in 1565 to her cousin, Henry Stuart, Lord *Darnley, who fathered her only child *James VI of Scotland (and I of England), murdered her confidante David *Rizzio and was blown up in February 1567, and (3) in May 1567 to James Hepburn, Earl of *Bothwell, who had murdered Darnley. Her last marriage was politically disastrous and she lost all support: the army deserted, Bothwell fled to Denmark and in June 1567 she was deposed in favour of her son. After an attempt to regain power failed in June 1568, she sought asylum in England. Her grandmother *Margaret (Tudor) had been *Henry VIII’s sister and if *Elizabeth I died without issue Mary was next in line for the English throne: Catholics considered Elizabeth to be illegitimate which would make Mary the rightful queen already. Elizabeth kept her as a prisoner until her death because she was a rallying point for English Catholics. Elizabeth believed that she was part of a series of conspiracies (the evidence is not completely convincing) and after the *Babington plot, Mary was tried for treason at Fotheringay Castle (October 1586), convicted and beheaded (February 1587) and buried at Peterborough Cathedral. On Elizabeth’s death in 1603, Mary’s son James succeeded as King of England. In 1612 Mary was exhumed and reinterred in Westminster Abbey, parallel to Elizabeth. Mary was a romantic figure, the subject of books, plays, films and *Donizetti’s opera Maria Stuarda.

Fraser, A., Mary Queen of Scots. 1969.
Mary (Victoria Mary Augusta Louise Olga Pauline Claudine Agnes) (1867–1953). Queen consort of the United Kingdom 1910–36. Daughter of Francis, Duke of Teck, and a great-granddaughter of *George III, in 1891 she became engaged to **Albert Victor, Duke of Clarence** (d.1892), eldest son of the future *Edward VII. In 1893 she married his brother, the Duke of York, who ascended the throne (1910) as *George V. The grace and dignity as well as the unwearying thoroughness with which she performed her royal duties and the particular interest she showed in the work of women's organisations won wide respect. In the pursuit of her main hobby, the collection of antiques, she showed enthusiasm and flair. She was the principal architect of the mystique of the modern British monarchy.

Pope-Hennessy, J., *Queen Mary* 1959.

Mary Magdalen, St (or Mary of Magdala) (fl. 1st century CE). Christian disciple. The Gospels relate that *Jesus cast out seven devils from her, that she became a devoted disciple and that she was the first to whom Jesus appeared after the Resurrection. Tradition also links her with a penitent, unnamed sinner mentioned by St *Luke. Her name has come to symbolise the harlot restored to purity by faith and penitence. In Eastern tradition she died in Ephesus, in French tradition in Provence. Some legends describe her as the wife of *John the Divine, others as the wife of Jesus (assuming that he survived the crucifixion). Sometimes identified with Mary of Bethany, sister of Martha and Lazarus, her name is commemorated by churches or colleges bearing the name Madeleine or Magdalen. In religious art she is often depicted as weeping, hence the word 'maudlin'.

Mary of Modena (Maria Beatrice Anna Margherita Isabella d’Este) (1658–1718). Queen consort of England, Scotland and Ireland 1685–88. Born in Modena, daughter of Duke Alfonso IV, she married James, Duke of York (later *James II) in 1673. Birth (1688) of a son, James Edward *Stuart, an event that seemed likely to perpetuate a Roman Catholic dynasty, was one of the causes of the revolution that deposed James. The story that the baby was not hers but had been smuggled into the palace in a warming pan may be discarded.

Masaccio (‘clumsy’, nickname of Tommaso Guidi) (1401?–1428). Italian painter, born in San Giovanni Valdarno. He lived and worked mostly in Florence until he went (1427) to Rome where he died. He probably derived from his contemporary *Brunelleschi much of the knowledge of space and space revealed in his pictures. In particular he mastered tonal perspective, by which an appearance of depth is achieved by gradations of colour. He is also said to have been the first to light his pictures at a constant angle from a single point of origin. The figures are solidly and realistically conceived and belong naturally to their surroundings. His finest work is generally held to be the frescoes in the Brancacci Chapel of the Carmelite Church, Florence, but the fact that he worked in collaboration with Masolino has caused an acute artistic controversy as to the part played by each. The finest of Masaccio's undisputed works include the *Expulsion from Paradise* and *Tribute to Caesar*. Masaccio is ranked as one of the greatest figures in Renaissance art between Giotto and Leonardo da Vinci.

Masaryk, Tomáš Garrigue (1850–1937). Czechoslovakian politician, writer and academic. Son of a Slovak coachman, he studied sociology and philosophy at Vienna University and in 1882 took up a professorship at the re-established Czech University at Prague, and wrote several books on philosophy, sociology and Slav nationalism. Meanwhile, in Brooklyn (1878) he married an American, Charlotte Garrigue, whose name he adopted. In 1891 he was first elected to the Reichsrat and though he resigned in 1893 he gradually became recognised as the spokesman of all the Slav minorities in the Austro-Hungarian Empire. He was re-elected to parliament in 1907 but when World War I broke out (1914) he at once saw it as an opportunity to obtain independence for the subject peoples. In December 1914 he escaped to Italy and in one country after another, Switzerland, France, Britain, Russia and the US, pressed his cause. He organised a Czech national council in Paris (1916) and in May 1917 went to Russia to build up a Czech Legion (mainly from prisoners of war). After the Bolshevik Revolution the Legion reached the Pacific via Siberia and reached America where Masaryk awaited it.

At last (June 1918) the governments of Great Britain, France and the US recognised Czechoslovakia as an independent ally, with Masaryk as the government's provisional head. In December with the Austro-Hungarian regime collapsed around him, Masaryk returned triumphantly as President Liberator of the new state of Czechoslovakia. As President 1918–35, his wisdom and liberality of mind inspired the growth of Czechoslovakia as the most prosperous and progressive country of the new Europe. He retired at the age of 85 and was succeeded by Eduard *Beneš.

The shadow of *Hitler was already looming when he died but it was upon his son **Jan Masaryk** (1886–1948) that the darkness fell. He was Czechoslovak Minister in London from 1925 until 1938, when he resigned after the Munich agreement. In World War II he was Foreign Minister in the government in exile established in England and was still holding that office when, after Germany's defeat (1945), the government returned to France. A fortnight after the Communists (February 1948) seized control, Jan Masaryk allegedly committed suicide in a fall from a window of the Foreign Office.

Mascagni, Pietro (1863–1945). Italian composer. After abandoning law he became famous with the one-act opera Cavalleria Rusticana (1890). This, a brutal and melodramatic treatment of a subject drawn from working-class life, established the style of Italian opera known as verismo. None of his later operas, e.g. L'Amico Fritz (1891) and La Maschera (1901), won the same celebrity.

Masefield, John Edward (1878–1967). English poet and novelist, born in Herefordshire. After an unhappy childhood, he was a merchant seaman 1889–97, discovered poetry and after intense reading (and marriage to a teacher) began composing poetry himself. Some of his finest poems and stories are concerned with the sea. Salt Water Ballads (1902) was followed by the long narrative poem The Everlasting Mercy (1911), Reynard the Fox (1919) and Right Royal (1920). His prose works include a memoir of the Gallipoli campaign, several novels, e.g. Sard Harker (1924) and literary studies. He succeeded Robert Bridges as Poet Laureate 1930–67 and received the OM (1935).

Masinissa (Massinissa) (c.238–149 BCE). King of Numidia. His state (roughly modern Algeria) was a vassal of Carthage. He transferred his allegiance to Rome during the Second Punic War (206) and his cavalry carried out the decisive charge at the Battle of Zama when *Hannibal was defeated. His kingdom grew strong and prosperous. In 150 a Carthaginian attack on Numidia, then the ally of Rome, led to the Third Punic War.

Masolino da Panicale (c.1383–1447). Italian painter. He assisted *Ghiberti and may have taught *Masaccio, with whom he collaborated and by whose techniques he was much influenced. His most important works are the frescoes rediscovered (1843) under whitewash at Castiglione d’Olona. The frescoes in San Clemente at Rome have also been attributed to him.

Mason, Charles (1730–1787). American surveyor. Employed with Jeremiah Dixon to mark out (1763–67) the boundary between the American colonies Pennsylvania and Maryland, this Mason-Dixon line came to be regarded as the frontier between North and South in the US.

Maspero, Gaston Camille Charles (1846–1916). French Egyptologist. While in Egypt (1880–86) as director of excavations and curator of the museum at Cairo, he discovered 40 royal mummies (including *Seti I and *Rameses II) at Deir el Bahri. He returned (1886) to Paris to take up a professorship, but was appointed Director of the Department of Antiquities in Cairo 1889–1914 and was awarded a KCMG. He reorganised with an efficiency that earned him a KCMG.

Masséna, André, Duke of Rivoli, Prince of Essling (1758–1817). French marshal, born in Nice (then in the kingdom of Sardinia). He became a soldier, but during the Revolution he volunteered for the French army and by the end of 1793 was a divisional general. He made a name for himself in the Italian campaigns against the Austrians where the Rivoli (1797), from which he took his title, was his most striking success and against the Russian general Suvarov in Switzerland (1799). Thereafter he fought in nearly all *Napoléon's campaigns in central Europe and won his princely title by his heroic covering of the Danube crossing (1809) at Aspen or Essling. Sent to Spain in 1810 he drove *Wellington right back to the lines of Torres Vedras but, on finding the position impregnable, extricated himself by a masterly retreat. Napoléon chose to make him a scapegoat, refused to employ him on his Russian campaign and himself received no reply when he called for Massena's aid after the escape from Elba.

Massenet, Jules Emile Frédéric (1842–1912). French composer. He won the Prix de Rome (1866) and taught at the Paris Conservatoire 1878–96. *Ravel was a pupil. He wrote 26 staged operas, unfailingly melodious, strikingly orchestrated, deeply romantic and psychologically astute. (*Debussy called him ‘the musical historian of the female soul’.*) His most performed operas are Manon (1881), Esclarmonde (1889), Werther (1892) and Thais (1894). He also wrote 281 songs and orchestral, choral and piano works.

Massey, (Charles) Vincent (1887–1967). Canadian diplomat and administrator. The grandson of Hart Massey (1823–1896), founder of an agricultural machinery company (later named Massey-Harris, then Massey-Ferguson), he served as Minister to the US 1926–30 (Canada’s first diplomatic posting), High Commissioner in London 1935–46 and the first native-born Governor-General of Canada 1952–59. He received a CH in 1946. His brother, Raymond Massey (1896–1983), was a character actor on stage and screen in Britain and the US. Raymond’s son Daniel (1933–1998) and daughter Anna (1937–2011) were distinguished stage, screen and television actors in England.

Massine, Léonide (Feodorovich) (1895–1979). Russian ballet dancer and choreographer. He was principal dancer (1914–20) of Diaghilev's Ballets Russes in Paris and was chief choreographer (from 1915). He created several new ballets including La Boutique Fantasque (music by Rossini) and Le Sacre du printemps (music by Stravinsky). He worked with the Ballets Russes de Monte Carlo 1932–41 and with Martha *Graham in New York 1942–47.

Massinger, Philip (1583–1639/40). English dramatist, born at Salisbury. He collaborated with other dramatists, notably John *Fletcher and Thomas *Dekker, plays which are probably independent include dramas, often on religious and political themes, which to his audience suggested contemporary parallels. Among them are The Duke of Milan (1623), The Maid of Honour (c.1625) and The Roman Actor (1626). He is better known for his satirical comedies, The City Madam (acted 1632) and A New Way to Pay Old Debts (published 1633). Psychological interest and constructive power are Massinger's main assets.

Massys, Quentin see Matsys, Quentin

Mata Hari (Margarethe Gertrude Zelle, later MacLeod) (1871–1917). Dutch dancer and courtesan. She lived in Java and Sumatra (hence her Malay stage name, 'eye of the day'), and danced in Paris from 1905. In World War I, by consorting with officers, she was able to obtain information and allegedly pass it to the Germans. Tried and shot as a spy by the French, MI 5 documents released in 1999 indicate that Mata Hari was guilty only of being a fantasist, who blew kisses at the firing squad.

Matanzima, Kaiser Daliwonga (1915–2003). South African politician. Chief of the Xhosa people and a qualified lawyer, he was elected (1963) by his fellow chiefs to head the government of the Transkei, the first of the ostensibly self-governing ‘Bantustan’ areas, reserved for Africans, set up under the apartheid policy, and President 1979–85.

Mather, Increase (1639–1723). American Congregationalist minister. After taking his degree at Harvard, he spent some time preaching in England and Guernsey before returning to America as minister of the Second Church, Boston 1664–1723. He was Acting President of Harvard from 1685, and a largely absentee President 1692–1701. During the Salem witch trials, he urged the judges to be careful, but failed to condemn them. He wrote Causes of Conscience concerning Witchcraft (1693). His son, Cotton Mather (1662–1727), a theologian, was responsible above others for fanning the flames of the Salem witchcraft mania by his many books on the subject of possession by evil spirits.

Mathew, Theobald (1790–1856). Irish friar. His work amongst the poor in Cork 1812–38 convinced him that drink aggravated their misery and he led a great temperance crusade that had astonishing success. In 1848 he went to America, where he achieved similar results. On his return to Ireland (1851) he declined a bishopric. Temperance advocates still hold Father Mathew festivals.

Matilda (or Maud) (1102–1167). Queen of England 1141. Daughter of *Henry I, at the age of 10 she married the Holy Roman Emperor *Heinrich V. By her second husband Geoffrey, Count of Anjou (*Plantagenet), she became the mother of the future *Henry II. When *Henry I died (1135) many of the barons, despite oaths to the late king, refused to recognise her as queen, and her cousin *Stephen of Blois seized the throne. Civil war ensued, but though Stephen was captured (1141) Matilda’s arrogance soon alienated support and she eventually gave up her claim in favour of her son, whom *Stephen accepted as his heir.

Matilda of Tuscany (or Matilde di Canossa) (1046–1115). Italian ruler, born in Lucca. She inherited Tuscany, and acquired lands in Lorraine and Bavaria through her two marriages, ruling from her castle at Canossa. In his war against the Emperor *Heinrich IV about Imperial power in church affairs she supported Pope *Gregory VII. He took refuge in Canossa. Widely read, she is said to have donned armour and fought in battle. Her tomb was relocated to St Peter’s, Rome, by *Urban VIII, with a statue by *Bernini.
Matisse, Henri (1869–1954). French painter, born in Picardy. He studied art in Paris, copied pictures in the Louvre and was influenced by the Impressionists, *Cézanne and *Gauguin. In 1905 he became the leader of a revolutionary group of artists, labelled ‘Les Fauves’ (‘wild beasts’). To them colour was end in itself and its use was unconnected with the colour of the subject portrayed. Matisse covered large unbroken areas with colour, disregarding perspective and the distortion its absence produced, but discovering new decorative effects by the vibrancy and luminosity of the colour itself, yet though the effect of his work was to hasten the arrival of abstract art, he himself was not an abstract painter. Similarly, though his colour patterns often took geometrical shapes he was never a Cubist. In fact as the years went by he reduced the element of violence, and ‘balance, purity and moderation’ became his aims. Just as fruit and flowers supplied him with decorative themes so did women – his *Odalisques adorn and delight but convey no sensual message. After a period in which his pictures became smaller and less spontaneous, he was again, in the 1930s, seeking bolder effects. A commission for the *Barnes Foundation (Pennsylvania) allowed him to undertake murals. His last years were mainly devoted to designing and decorating with murals and stained glass a Dominican chapel at Venice near Nice, but even when he was over 80 he showed his versatility in a new way by using decorative collages (paper cutouts) as an art form.

Matsushita Konosuke (1896–1989). Japanese industrialist, born near Osaka. From a peasant family, he started (1918) a manufacturing firm on a very small scale for the production of electrical appliances. World War II gave a tremendous impetus to his business and he emerged from the war period as a leader in the field of electronic equipment and quickly became the undisputed giant. His mass production of electrical household accessories eased and simplified the traditional domestic duties of Japanese women and his brand name, National, soon became a leader, followed by the brand names Panasonic and JVC.

Matsys (or Massys), Quentin (c.1465–1530). Flemish painter. His early altar pieces followed the tradition of the Van *Eycks, though with almost life-sized figures, but his later religious pictures, e.g. the Magdalen at Antwerp, reveal a softer modelling and patterns often took geometrical shapes he was never a Cubist. In fact as the years went by he reduced the element of violence, and ‘balance, purity and moderation’ became his aims. Just as fruit and flowers supplied him with decorative themes so did women – his *Odalisques adorn and delight but convey no sensual message. After a period in which his pictures became smaller and less spontaneous, he was again, in the 1930s, seeking bolder effects. A commission for the *Barnes Foundation (Pennsylvania) allowed him to undertake murals. His last years were mainly devoted to designing and decorating with murals and stained glass a Dominican chapel at Venice near Nice, but even when he was over 80 he showed his versatility in a new way by using decorative collages (paper cutouts) as an art form.

Maudling, Reginald (1917–1979). British Conservative politician. He was called to the bar (1940), served in RAF intelligence, and was an MP 1950–79. A minister from 1955 to 1964 and Chancellor of the Exchequer 1962–64, he contested the Conservative leadership in 1965, losing to *Heath. He became Deputy Leader and was Home Secretary 1970–72.

Maudsley, Henry (1835–1918). English psychiatrist, born in Yorkshire. He settled in London and exercised important influence on the treatment of mental illness, notably through his book *The Pathology of Mind* (1867). Believing that insanity was a disease of
the brain, he stressed the need for treating it as such and not merely controlling the symptoms, he gave special attention to hereditary factors. In the hope of securing systematic research into mental disease and early treatment for sufferers he gave a large sum to the London County Council for a psychiatric hospital to be linked with London University. The Maudsley Hospital opened shortly after his death.

Maugham, W(illiam) Somerset (1874–1965). British author, born in Paris. Trained in medicine at St Thomas’s Hospital, London, he drew on his experience as a physician in the London slums in his first novel, *Lisa of Lambeth* (1903). But it was as a playwright that he first attained fame and wealth in the years preceding World War I: a succession of plays with a sharp flavour and astringent wit, e.g. *Lady Frederick*, filled the theatres. After the war the plays became more sophisticated and satirical, e.g. *The Circle* (1921), *Our Betters* (1923) and *The Letter* (1927). During the war he did secret service work, reflected in the spy stories in *Ashenden* (1928). Meanwhile he had continued writing novels: *Of Human Bondage* (1915) is discursive and partly autobiographical; the character of Strickland in *The Moon and Sixpence* (1919) is based on that of *Gauguin; Cakes and Ale* (1930) contains thinly veiled portraits (not always kind) of literary friends, e.g. Hugh Walpole. Maugham was, however, at his best as a writer of short stories, material for many of which he found during travels in Malaysia and the East. Though the plots were often melodramatic, his gift for economy of phrase, his scepticism and his narrative skill found their most effective use in this genre. In the story *Rain, set in the South Seas*, later made into a play and a film, he displays something of a quality often lacking in his work – warmth. Several other stories were filmed with an introduction by himself, e.g. *Quarter* (1948). Other books include the autobiographical *Strictly Personal* (1941), *A Writer’s Notebook* (1949) and *Ten Novels and Their Authors* (1954). Actively bisexual, he lived in the French Riviera from 1928 (apart from World War II) and received a CH in 1954.

Maupassant, Guy de (1850–1893). French author, born in Normandy. His father was a profligate aristocrat, his mother artistic and sensitive. All these traits were visible in their son. He served briefly in the army during the Franco-Prussian War and then became a civil servant. In the following years he was a friend, protégé and pupil of *Flaubert, who introduced him to *Zola. The immediate success of the well known story *Boule de Suif*, Maupassant’s contribution to an anthology edited by Zola (1880), decided him to devote his whole time to writing. In the remaining years of his short life he wrote six naturalistic novels, e.g. *Une Vie* (1883) and *Bel Ami* (1885), travel books inspired by frequent journeys for his health (which had begun to deteriorate in 1876), and some 300 short stories upon which his fame rests. He writes as an observer not an analyst, letting his characters be judged by their actions, not their thoughts and feelings, and the actions he observes are those of sensual, self-seeking but never spiritual human beings. He views the consequences of these actions with some pity but he neither condemns, condones nor even examines their cause. For this limited end he mastered, with the guidance of Flaubert, a superb technique: his style is taut and his economy of phrase exactly suits the brevity of his tales, his construction is skilful and he uses the trick of the surprise ending effectively. In his last years Maupassant’s illness developed into insanity and he died after 18 months in an institution.

Maupertuis, Pierre Louis Moreau de (1698–1759). French mathematician and astronomer. He led an expedition to Lapland to measure the length of a degree of the meridian and as a result was able to confirm *Newton’s assertion that the earth is slightly flattened at the poles. He published his conclusions in *Sur la Figure de la Terre* (1738). He entered (1740) the service of *Friedrich II ('the Great') of Prussia and became (1745) President of the Academy at Berlin.

Maupin, Armistead (1944–). American writer, born in Washington, DC. He grew up in North Carolina and after US Navy service became a journalist. In the San Francisco *Chronicle* from 1983 he wrote *Tales of the City*, accounts of gay life, which appeared in book form and as a television series.

Mauriac, François (1885–1970). French novelist and dramatist. An ardent Roman Catholic, he was preoccupied with the conflict of Christian morality with human passions and temptations. His novels include *Le Baiser au lépreux, Le Désert de l’amour, Thérèse Desqueyroux, Le Neud de vipers* written between 1922 and 1932, and *La Pharisienne* (1941). His most successful plays were *Asmodée* (1937) and *Les Mal-Aimés* (written 1939, first performed 1945). Mauriac was elected to the Académie Française (1933) and won the Nobel Prize for Literature (1952).

Maurice, Prince of Orange, Count of Nassau (1567–1625). Stadtholder of Holland. After the assassination (1584) of his father *William the Silent he continued (with the help for a time of the Earl of *Leicester and an English contingent) the struggle against the Spaniards. As a result of his series of brilliant successes the United Provinces were recognised (1609) by Spain as a free republic. In the following years, Maurice and the Orange party were involved in a quarrel with domestic opponents, but he emerged victorious and renewed the war with Spain (1621).
Maurois, André (pen name of Emile Herzog) (1885–1967). French writer. His first book *Les Silences du Colonel Bramble* (1918), draws on his experience as a liaison officer with the British army in World War I. His preoccupation with the English is shown in the list of his biographies, which includes *Shelley (Ariel), 1923*, *Disraeli, Byron and Dickens as well as such French writers as Voltaire,* Proust and George *Sand (Léia), 1952*. He also wrote novels, essays, and histories of England (1937) and the US (1947). He was elected (1938) to the Académie Française. His autobiography, *I Remember, I Remember,* was published in 1942.

Maurras, Charles (1868–1952). French political writer, born in Provence. A classical scholar and poet, he became stone deaf in early life, lost his religious faith but, as a despairing conservative, became convinced that only a union of Church and monarchy could save Europe from anarchy. He became a passionate opponent of *Dreyfus, Jews and foreigners.* In 1899 he founded Action Française and wrote for the paper of that name 1908–40. Imprisoned several times, his election to the Académie Française (1938) was controversial and he was expelled in 1945. He disliked *Hitler and Mussolini* but supported *Pétain.* Tried as a collaborator (the evidence being no stronger than the case against Dreyfus had been), he was imprisoned 1945–52, released because of illness and age, and became a Catholic convert on his deathbed.

Mauser, Paul von (1838–1914). German inventor and gunsmith. The Mauser pistol, was named for him and his brother Wilhelm. He also developed an improved needlegun, a breechloading cannon and (in 1897) the first magazine rifle.

Mausolus (d.353/352 BCE). Persian satrap of Caria (Asia Minor) 377–353/352 BCE. He was commemorated by the magnificent memorial (one of the Seven Wonders of the Ancient World) erected by his widow Artemesia at Halicarnassus, which gave rise to the word mausoleum.

Mawson, Sir Douglas (1882–1958). Australian geologist and Antarctic explorer, born in Shipley, Yorkshire. His family emigrated to Australia in 1884 and he graduated from Sydney University. After geological work in the New Hebrides (1903) he joined the staff of Adelaide University (1905). In 1907 he was among the members of *Shackleton's expedition* which reached the South Magnetic Pole. He led the Australasian Antarctic Expedition (AAE) 1911–14 in which much of the coast of Queen Mary Land was explored. After a 600-mile sledge journey he returned ill and alone after losing his two companions, Belgrave Ninnis and Xavier Mertz. He was knighted in 1914, served in Russia during World War I and became professor of geology at Adelaide 1921–52. He led the British, Australian and New Zealand Antarctic Research Expedition (BANZARE) 1929–30, 1930–31 when 2,500 km of coast was mapped for the first time. Elected FRS in 1923, he was a foundation Fellow of the Australian Academy of Science (FAA) in 1954. He published *The Home of the Blizzard* (1930) and is depicted on the Australian $100 note.

Maxentius (Marcus Aurelius Valerius) (d.312). Roman Emperor 306–312. Son of *Maximian,* he was made caesar by the Roman praetorian guard, quarrelled with his father and fought with *Constantine.* At the Milvian Bridge, near Rome, Constantine defeated Maxentius who was drowned trying to escape.

Maxim, Sir Hiram Stevens (1840–1916). Anglo-American inventor, born in Maine. He settled in England in 1883, became naturalised in 1884 and was knighted in 1901. The best known of his many inventions – he took out over 100 patents – is the Maxim (recoil-operated) machine gun (1884), later lightened and simplified as the ‘Vickers’, which continued to prove its outstanding merits in both world wars. ‘Maximite’, a smokeless powder, was among his other inventions.

Maximian (Marcus Aurelius Valerius Maximianus) (d.310). Roman Emperor 286–305, 306–308. He was chosen by *Diocletian to be co-Emperor* (i.e. Augustus) with himself, with two junior emperors (Caesars) under them. Maximian, in charge of the West, pacified Gaul and drove back the Germanic tribesmen on the Rhine frontiers until in 305, by arrangement with Diocletian, both senior emperors retired in favour of *Constantius (West)* and *Galerius (East)* with two new Caesars. On the death of Constantius (306), however, his son *Constantine and Maximian’s son Maxentius,* notorious for cruelty and greed, combined to dethrone *Severus II,* the new Western emperor. Maximian emerged from retirement to help his son, but they soon fell and he went to Gaul to the court of *Constantine,* his son-in-law. However, unable to endure a subordinate role, he took advantage of Constantine’s absence on campaign by seizing power. Constantine’s vengeance was swift and Maximian found himself besieged in Marseille. He was handed over by the citizens and committed suicide.

Maximilian I (1459–1519). Holy Roman Emperor 1493–1519. Son of Emperor *Friedrich III,* he added greatly to his inheritance by marrying Mary, the heiress of *Charles the Bold of Burgundy,* though in fact he found it necessary to relinquish the French provinces while retaining the Netherlands for his son *Philip.* His policy of consolidating the Habsburg dominions by marriage and conquest was on the
whole successful, though it involved a number of indecisive wars in France and Italy, but his dream, in accordance with medieval thought, of reviving a universal empire in the west (he even conceived the idea of also becoming pope) inevitably failed. The administrative reforms he achieved were minor, but the enforced acceptance of a committee of princes as a supreme executive would have rendered him impotent had he not succeeded in finding a means to frustrate its efforts. Maximilian had the courage and many of the virtues of a medieval knight, he was a patron and connoisseur of arts and letters, and won wide popularity with a gracious and conciliatory manner. He was succeeded by his grandson Charles V.

Maximilian (1832–1867). Emperor of Mexico 1864–1867. Younger brother of the Emperor *Franz Josef of Austria, he was married to *Carlota, daughter of *Leopold I of the Belgians. This liberal-minded, well-meaning man, whose short experience of administration (1857–59) had been as Governor of the Austrian-controlled Lombardo Venetian territory in Italy, acceded to *Napoléon III’s request to found a new kingdom in Mexico. After defeating the conservatives in the war of 1857–60, the Mexican ‘liberals’ under Benito *Juarez had found themselves unable to meet foreign debts. France being a principal creditor, Napoléon decided to send a French army primarily to collect debts. His forces soon held most of the country and the enthronement of Maximilian was the French Emperor’s solution to the problem of what to do next. While Maximilian was planning freedom for Indians, education and social justice for all, the republican forces were gathering strength, and when the French (on US insistence) departed, Maximilian was helpless. Defeated and betrayed, he was given a pretence of trial and shot. The empress *Carlota, who had returned to Europe on a vain quest for help, became insane.

Maxton, James (1885–1946). Scottish Socialist politician. He was imprisoned during World War I for inciting munition workers to strike. He represented the Independent Labour party in parliament 1922–46 and in 1926 became the party’s chairman. He was affectionately regarded by supporters and opponents alike.

McNair, J., *James Maxton, the Beloved Rebel. 1955.

Maxwell, James Clerk (1831–1879). Scottish physicist, born in Edinburgh. Educated at the Edinburgh Academy and at Edinburgh University and Trinity College, Cambridge, while still a schoolboy of 15 he communicated his first paper to the Royal Society of Edinburgh. He was a professor at Aberdeen 1856–60 and King’s College, London 1860–65, and the first Cavendish professor of experimental physics at Cambridge 1871–79. Maxwell showed (1859), on mechanical principles, that the rings of Saturn could consist only of separate small particles revolving like satellites. Later he worked on the kinetic theory of gases and deduced many of the laws governing their behaviour. His major work, however, was on electricity and magnetism. He evolved the electromagnetic theory of light and showed that there should be electromagnetic waves travelling at the speed of light; these were observed (1887) by *Hertz. Maxwell redetermined the speed of light with great precision and pointed out the fundamental nature of this natural constant. He also evolved many of the theoretical relationships which contributed to the development of electricity. His books include *Treatise on Electricity and Magnetism (1873) and *Matter in Motion (1876).

May, Philip (William) (1864–1903). English humorous draughtsman. After early struggles he went to Australia (1884) and worked on the Sydney *Bulletin. On his return (1892) he began to work for *Punch and later, as a regular member of the staff, became one of the best known humorous artists with a great economy of line.

May, Robert McCredie, Baron May of Oxford (1936– ). Australian theoretical ecologist, born in Sydney. He took a PhD in theoretical physics at Sydney University, taught at Harvard and held chairs at Sydney and Princeton. Professor of Theoretical Ecology at Oxford 1988–95, he was chief scientific adviser to the UK Government 1995–2000 and President of the Royal Society 2000–05. He received the OM in 2002 and the Copley Medal in 2007.

May, Theresa Mary (née Brasier) (1956– ). English Conservative politician, born in Sussex. A vicar’s daughter, she mostly attended government schools, read geography at Oxford, worked in the Bank of England and as a financial consultant, and was elected to a council. MP 1997–, she was a Shadow Minister 1998–2010 and Home Secretary 2010–16. May had been a low key supporter of the UK remaining in the EU, but after the Referendum of June 2016 voted
to leave, David *Cameron resigned, May was elected as Conservative Party leader and became Prime Minister 2016–.

Mayakovský, Vladimir Vladimirovich (1894–1930). Russian futurist poet. He came to prominence as the poet of the 1917 revolution with such works as 150,000,000 (1920), in which President *Wilson personifies capitalism. He also wrote satirical plays, of which The Bed Bug (1921) is the best known. Mayakovský later fell from official favour and committed suicide. Much of his work is crudely propagandist but it has pathos and sincerity and shows original ideas.

Mayer, Julius Robert von (1814–1878). German physicist and physician. After serving as a ship's doctor, he carried out research on the transfer of heat energy by working horses, which led to the first hypothesis (1842) of the law of the conservation of energy. Credit was given to *Joule and *Helmholtz who independently provided (1847) more detailed proofs. A forgotten figure who spent years in an asylum and was assumed dead, Mayer received belated recognition, including ennoblement and the Copley Medal of the Royal Society (1871).

Mayer, Sir Robert (1879–1985). British philanthropist, born in Germany. He made a fortune in metal trading and became a notable promoter of music, especially concerts for children. He received a CH on his 100th birthday.

Mayo, Charles Horace (1865–1939). American surgeon. With his father and brother he founded (1889) the Mayo Clinic at Rochester, Minnesota. His researches into goitre cut the US death rate from this disease by 50 per cent.

Mayo, Richard Southwell Bourke, 6th Earl of (1822–1872). Irish politician, born in Dublin. Educated at Trinity College, he was a Conservative MP 1847–67, Chief Secretary for Ireland 1852, 1858–59 and 1866–68, and *Gladstone's surprising choice as Viceroy of India 1869–72, proving to be an effective reformer, especially in education and irrigation. He was assassinated in the Andaman Islands.

Mayor Zaragoza, Federico (1934–). Spanish (Catalan) biologist, politician and administrator, born in Barcelona. Rector of the University of Granada 1968–72, he served in the Cortes and the European Parliament, was Minister for Education and Science 1981–82 and Director-General of UNESCO 1987–99. He was a gifted poet and orator in three languages.

Mayr, Ernst (1904–2005). American biologist and taxonomist, born in Germany. Educated in Greifswald and Berlin, he lived in the US from 1932, working at the American Museum of Natural History 1932–53 and was Agassiz professor of zoology at Harvard 1953–75. Regarded as the world's greatest authority on the classification and naming of species, he wrote extensively on systematic zoology and evolutionary synthesis.

Mazarin, Jules (Giulio Mazarini) (1602–1661). French statesman and cardinal, born in Italy. Educated by the Jesuits in Rome and Spain, he entered the Church and was Papal Nuncio in France 1634–36 and in 1639 assumed French nationality. Meanwhile he had come to the notice of Cardinal *Richelieu, who took him as his assistant and, having secured his cardinalate (1641), recommended him as his successor to *Louis XIII. Mazarin retained his power when the boy-king *Louis XIV came to the throne, largely through the affection of the widowed queen, now regent, *Anne of Austria, to whom Mazarin may have been secretly married. Mazarin brought the Thirty Years' War to a successful end (1648) with the acquisition for France of Alsace and the bishoprics of Toul, Metz and Verdun, but was immediately involved in the civil wars of the Fronde, a last attempt by the nobles and legalists to avert a centralised autocracy. Again successful he made an advantageous peace with Spain (1659) and prepared France for its great role under Louis XIV. In other respects he was less admirable. He amassed a vast fortune with part of which he provided large dowries to enable his several pretty nieces to marry well. His valuable collection of books and manuscripts was left to the royal library.

Mazeppa, Ivan Stepanovich (c.1645–1709). Cossack leader. After an adventurous early life he was elected hetman (military leader) of the Cossacks (1688), served Peter the Great as soldier and diplomat but later, in the hope of acquiring a semi-independent kingdom in the Ukraine, joined the invading army of *Charles XII of Sweden. After Charles's defeat at Poltava (1709) Mazeppa took refuge in Turkey.*Byron's poem Mazeppa relates how, detected in a love affair with a magnate's wife, the Cossack hero was bound naked to a wild horse which was lashed to madness and galloped across country from Poland to the Ukraine before dropping dead.

Mazzini, Giuseppe (1805–1872). Italian patriot, born in Genoa. Deeply angered by the absorption (1815) of the Genoese republic into the kingdom of Sardinia, he joined the revolutionary elements among the university students and in 1829 became a member of the Carbonari, a secret republican society. He soon
abandoned it, however, disliking its elaborate ritual and formed at Marseilles (1832) his own society, 'Young Italy', for which he edited a periodical of the same name, his aims being a united, free, republican Italy. After a first ineffective invasion (1834) he lived as an exile in Switzerland and in England (1836–48). His writing and correspondence kept him in touch with revolutionary movements abroad and in England he formed a warm friendship with Thomas * Carlyle and his wife. The year of revolutions, 1848, created the conditions for his return to Italy, where he was greeted as a hero. But by 1849 Austrian power had asserted itself and only the republics of Venice and Rome, whence the Pope had fled, survived. Mazzini became a triumvir of the republic of Rome but after the intervention of French troops had to return to London. When the liberation and unity of Italy were finally achieved (1859–60) it was carried out by statesmen such as * Cavour and men of action such as * Garibaldi. It might never have happened at all had not the ferment been started by Mazzini, the political idealist and persistent propagandist whose hopes in the end were but half fulfilled. He was much admired by Woodrow * Wilson, * Lloyd George and * Gandhi.

Mack Smith, D., Mazzini. 1995.

Mbeki, Thabo (1942– ) South African politician. Son of an African National Congress veteran, he studied in Britain and Russia, went into exile until 1990, becoming the ANC’s international spokesman. He was first deputy president of the Republic 1994–99 and President of the ANC 1997–2007. He succeeded Nelson * Mandela as President of South Africa 1999–2008. His insistence that HIV-AIDS is essentially caused by poverty rather than the sexual transmission of a virus caused concern to health professionals internationally. He insisted that only African pressure against Robert * Mugabe’s regime in Zimbabwe was legitimate and achieved a compromise power-sharing arrangement after the 2008 elections.

Mboya, Tom (1930–1969). Kenyan trade unionist and politician. From 1953 he was Secretary of the Kenya Local Government Workers’ Union (later the Federation of Labour). He was among the first African members to be elected (1957) to the Kenya Legislative Council and became one of the most important members of the Kenya African National Union (KANU), the leading political party before and after independence. From 1962, when he entered the coalition government, his influence increased. Minister of Economic Planning and Development 1964–69, he was assassinated.

Mead, Margaret (1901–1978). American anthropologist and social psychologist. She worked in Samoa and New Guinea and made an intensive (but not always accurate) study of tribal customs and marriage laws. She noted the difficulty that exceptional characters find in primitive societies, closely regulated by custom, in coming to terms with the norm. Her books include Coming of Age in Samoa (1928), Growing up in New Guinea (1930) and Male and Female (1949).

Freeman, D., Margaret Mead and Samoa. 1983.

Meade, George Gordon (1815–1872). American soldier. As an engineer officer he fought in the Mexican War (1848) and was then employed on survey and construction duties until the outbreak of the Civil War. Having distinguished himself as a divisional commander he was given command of the army of the Potomac (1863–65), almost at once winning the great victory over * Lee at Gettysburg, Pa. (July 1863), the turning point of the war.

Meany, (William) George (1894–1980). American trade union official. A plumber by trade he made his career in the trade union movement and as President 1952–55 of the American Federation of Labor (AFL). He was in office at the time of its amalgamation with the Congress of Industrial Organisations (CIO). He was the first president of the combined AFL-CIO 1955–79, retiring at the age of 84.

Mechnikov, Ilya Ilyich (1845–1916). Russian biologist. After studying in Germany he was professor of zoology at Odessa University 1870–82, worked with * Pasteur in Paris (from 1888) and became Deputy Director of the Pasteur Institute 1904–16. In a study of the digestion processes of invertebrates he discovered phagocytosis (the engulfing of solid particles by amoeboid cells). Later he showed that the white blood corpuscles of vertebrates play a part in defence against disease by engulfing bacteria in the blood stream. He won the Copley Medal in 1906 and shared the 1908 Nobel Prize for Medicine with Paul* Ehrlich (1908) for their work in explaining immunity and developing vaccines.

Medawar, Sir Peter Brian (1915–1987). British biologist, born in Rio de Janeiro, of Lebanese descent. Educated at Oxford where he worked with * Florey, he was professor of zoology at Birmingham 1947–51 and professor of zoology and comparative anatomy at University College, London 1951–62, then worked for the Medical Research Council. He gave the BBC Reith Lectures (1959) on The Future of Man. He shared the Nobel Prize for Physiology and Medicine (1960) with Sir Macfarlane * Burnet for their studies of ‘acquired immunological tolerance’. He also wrote The Uniqueness of the Individual (1957), The Hope of Progress (1972) and Advice to a Young Scientist (1979). He was knighted in 1965, received the Copley Medal (1969), the CH in 1972 and the OM in 1981. He was seriously disabled by a stroke in 1969. He published
Medicci. Florentine ruling family. The power of the family was founded upon the huge fortune amassed as a banker by Giovanni de’Medici (1360–1429). His son Cosimo (1389–1464) was exiled as a popular rival by the ruling oligarchy but returned (1434) and, though preserving republican forms succeeded in suppressing faction and was virtual ruler for the rest of his life, he was the generous patron of *Brunelleschi, Ghiberti, *Donatello, Filippo *Lippi, Fra Angelico etc. Cosimo was succeeded in power by his son Piero (1416–1469) and his grandson Lorenzo (1449–1492), known as ‘the Magnificent’. The failure of a conspiracy in which his brother Giuliano (1453–1478) was killed, enhanced Lorenzo’s popularity and enabled him to increase his powers. Like his grandfather he patronised artists and beautified the city. After his death the invasion of Italy by *Charles VIII of France in search of a Neapolitan crown led to the temporary exile of the Medici and though they came back (1512), power was mainly exercised from Rome where Leo X, a grandson of Lorenzo, was Pope. When the Medici were again deposed (1527) a second Medici pope *Clement VII once more brought back the family (1530), but it was a collateral Cosimo (1519–1574) who restored it to greatness. Having been granted Siena by the Emperor, he was created (1569) the first grand-duke of Tuscany by the Pope and thus started a line that did not become extinct until the death of the seventh grand-duke (1737), when the duchy passed to the House of Lorraine (*Catherine de’Medici, *Marie de Medicis). Brion, M., The Medici: A Great Florentine Family. 1969.

Medina-Sidonia, Alonso Perez de Gúzman, Duque de (1550–1619). Spanish nobleman. Owing to the sudden death of Admiral Santa Cruz, a last-minute decision was taken to give the command of the Armada against England (1588) to Medina Sidonia, a tuna-fish magnate who protested that he had no fighting experience and was a victim of seasickness. He shares blame for the disaster with those who forced him to take a role for which he was completely unsuited.

Medtner, Nikolai Karlovich (1880–1951). Russian composer and pianist. He wrote three piano concertos, 13 sonatas, and many songs, and lived in England from 1936.

Medvedev, Dimitri Anatolievich (1965– ). Russian politician, born in Leningrad. A lawyer, he worked for Anatoli *Sobchak, then transferred his allegiance to Vladimir *Putin. He was First Deputy Prime Minister 2005–08, President of Russia 2008–12 and Prime Minister 2012–

Meegeren, Hans van (1889–1947). Dutch artist. One of the most famous fakers in art history, having failed to find a regular market for pictures under his own name, he started painting in the style of *Vermeer and from 1937 sold six pictures as genuine works of the master, although on even a superficial examination it is hard to see why. His career reached a fantastic climax during World War II when he succeeded in selling them at inflated prices to the German occupation authorities and even to Marshal *Goering. He was tried after the war and sentenced to a year’s imprisonment but died soon afterwards.

Megawati Soekarnoputri (1947– ). Indonesian politician. Daughter of *Soekarno, she led the opposition to *Soeharto. In the June 1999 elections, her Indonesian Democratic Party of Struggle outpolled the Government’s Golkar Party, but in October 1999 Abdurrahman *Wahid was elected President, and Megawati became Vice President. In July 2001, following Wahid’s impeachment by the People’s Consultative Assembly, she became President of Indonesia. In September 2004 she was defeated in Indonesia’s first popular presidential election by Susilo Bambang *Yudhoyono.

Mehemet Ali (Mohammed Ali Pasha) (1769–1849). Egyptian ruler, born in Albania. Orphaned early, he was brought up in the household of an officer of janissaries, with whom he gained some military experience. After fighting with Turkish troops in Egypt against the French army of occupation, he remained there in command of Albanian troops and emerged from a confused struggle for power as pasha or Viceroy 1805–49, at first confronted by the Mamluk beys, descendants of the Mamluk sultans who, though conquered by the Turks in 1517, still retained semi-independence. By organising their treacherous massacre (1811) Mehemet became supreme and, though nominally under Turkish suzerainty, built up Egypt into a virtually independent state. Immediately after the massacre he invaded Arabia where an extremist Mohammedan sect, the Walabis (*Ibn Sa’ud), had seized the holy cities of Mecca and Medina. The war was ended (1818) by Mehemet’s son *Ibrahim, and the Walabi prince Abdullah was sent to Constantinople for execution.

Meher, Nagina (1925–2017). Indian singer. Her voice was one of the most sought-after in India and she was especially popular among the Muslim community. She was known for her versatility, singing in a wide range of languages and genres such as Hindi, Marathi, Bengali and Urdu. Her career spanned over six decades and she was awarded several prestigious awards for her contributions to the Indian music industry. She was also known for her charity work and was the founder of the Meher Foundation, which supports education and healthcare for underprivileged children in India.
Mehemet now proceeded to create some aspects of a modern state, deriving revenues from monopolies for the sale of agricultural produce and from new industries that he established. He was thus able to raise new armies with which he conquered the Sudan (1820–30) and aided the Turks against the Greek independence movement (1824–27). The Turks were, however, made restive by the increasing power of their overgrown subject and when Ibrahim conquered Syria they enlisted British aid to make him withdraw—a major setback for Mehemet who was, however, compensated by having his office made hereditary and was thus enabled to found the khedival dynasty. In 1848 Mehemet became insane; Ibrahim, who succeeded, died in the same year. His dynasty ruled Egypt, at least in name, until *Farouk’s abdication in 1952.

Mehmed V (Resad) (1844–1918). Ottoman sultan and caliph 1909–18. He succeeded his brother *Abdulhamid II, and after 1913 surrendered his authority to leaders of the Young Turk movement, *Enver Pasha and Talaat Pasha. His brother Mehmed VI (Wahid al-Din) (1861–1926), 37th and last Ottoman sultan 1918–22, and also caliph, collaborated with the Allies after World War I, tried to suppress the nationalists, and was deposed and exiled by *Kemal Ataturk. He died in San Remo. His feeble-minded brother Abdul Mecid II (1868–1944) was the last caliph 1922–24.

Mehmed Aga (d.1618) Turkish architect. A pupil of *Sinan, he designed the magnificent Blue Mosque (Sultan Ahmed Cami) in Istanbul (1609–16).

Mehmet II Fatih (Muhammad II ‘the Conqueror’) (1430–1481). Turkish sultan 1451–81. At the time of his accession the Ottoman Empire already included most of Asia Minor and much of the Balkans, but he conquered (1453) Constantinople, ending the Eastern Roman (Byzantine) Empire, a feat that transformed the history of Europe. His forces occupied much of the Balkan peninsula, including Greece, and a war with Venice (1463–79) added to his possessions in the Adriatic and Aegean. He was the effective founder of the Ottoman Empire.

Meighen, Arthur (1874–1960). Canadian Conservative politician. A Manitoba lawyer, he was a member of the House of Commons 1908–21 and 1922–26 and a senator 1932–60. He served as a minister under *Borden 1913–20 and led the Conservatives 1920–26 and 1941. He was Prime Minister 1920–21 and 1922–26, defeated by Mackenzie *King both times, and advocated protective tariffs against US economic penetration of Canada.

Meir, Golda (Goldie Mabovitch) (1898–1978). Israeli politician, born in Kiev. She grew up in Milwaukee and emigrated to Palestine in 1921 to work on a collective farm. She had already been involved in Zionism in America and she became active in local political life in 1928, through the Labour movement. She served on the Executive and Secretariat of the Federation of Labour 1929–46. She sat on the War Economic Advisory Council from 1939 and, after the war, became head of the Political Department of the Jewish Agency for Palestine. After independence, her first Cabinet appointment in the Knesset was as Minister of Labour and Social Insurance 1949–56, then Foreign Minister 1956–66 and Prime Minister 1969–74. She worked for support from the US and from the non-aligned countries, particularly in Africa. She was a co-founder of the Israeli Labour Party (1967).

Meissonier, Jean Louis Ernest (1815–1891). French artist. His historical pictures, especially those relating to the Napoléonic campaigns, realised large prices in his lifetime but are now largely forgotten.

Meitner, Lise (1878–1968). Austrian physicist. Until she emigrated to Denmark (1938) she carried out research in radio-chemistry and nuclear physics at Berlin University and the Kaiser Wilhelm Institute for Chemistry. In 1938, with Otto *Hahn and her nephew O. R. *Frisch, she played an important part in the discovery of the nuclear fission process for the liberation of atomic energy. She settled in Sweden (1940), became a Swedish citizen (1949) and retired to England in 1960.

Melanchthon, Philipp (1497–1560). German Protestant reformer and scholar. (His name was a Greek translation of his German name Schwarzerde, ‘black earth’). From 1518 he was professor of Greek at Wittenberg University, where he became an early adherent of *Luther, helping him also with his translation of the New Testament from the Greek. He issued the first systematic formulation of the Protestant dogma (1521) and the Augsburg Confession (1530). He was much more tolerant and conciliatory than Luther, and when he succeeded to the leadership he lost the confidence of many Protestants by the concessions he made to the Catholics in his quest for peace.

Melba, Dame Nellie (Helen Porter Armstrong, née Mitchell) (1861–1931). Australian soprano, born in Melbourne. After a brilliant operatic debut in Brussels (1887) she became prima donna at Covent Garden (1888) and sang throughout Europe and America until her retirement (1926). Her greatest successes were in lyric and coloratura roles in the operas of Verdi and Puccini. (She sang no Mozart roles.) She was created DBE in 1918 and promoted GBE in 1927. Pêche Melba, the sweet dish invented in her honour, is evidence of her contemporary reputation.

Radic, T., Melba. 1986.
Melville, Herman (1819–1891). American novelist, born in New York. Forced to leave school at the age of 15 by his father's bankruptcy, he worked as a bank clerk and taught at country schools before working his passage to Europe (1839). In 1841 he joined the whaler Acushnet bound for the Pacific. Because of harsh treatment he deserted the ship and lived for some months among the cannibals of the Marquesas Islands (1842). After being rescued by an Australian whaler, he was delayed in Tahiti by a mutiny and was eventually shipped home in a US frigate (1844). On his return Melville began a series of novels, based on his adventures, e.g. Typee (1846), Omoo (1847) and White Jacket (1850), the first two especially popular for their exuberant descriptions of native life. After his marriage to Elizabeth Shaw (1847) he bought a farm in Massachusetts where among his neighbours was Nathaniel *Hawthorne to whom Melville dedicated his masterpiece, *Moby Dick; or, the Whale (1851). *Moby Dick is the story of the fatal voyage of the Pequod under Captain Ahab whose obsession it is to track down and kill 'the great white whale' which had crippled him in a previous encounter. Although Melville denied that Moby Dick was an allegory, critics have regarded the book as expressing man's struggle with nature or even with God. Even more puzzling to critics was Pierre (1852), a strange and morbid story about incestuous passion. The harsh welcome it received is said to have induced the melancholia into which Melville sank; however, he continued to write, e.g. *The ConfidenceMan (1857). Billy Budd, the novel on which Benjamin *Britten's opera (1951) is based, was left unfinished and not published until 1924. Melville's style is rhetorical, his vocabulary eccentric, rich and varied, but the note of 'oddity' bewildered the critics and for a time repelled the public. He was almost forgotten until revival and reassessment in the 1920s gave him a very exalted position among American writers.

Memling (or Memlinc), Hans (c.1440–1494). Flemish painter, born near Frankfurt. Almost certainly a pupil of Rogier van der *Weyden, he lived in Bruges from 1465, became rich and is commemorated there by a museum in the old hospital. His best works include the Donne Triptych (1468, once at Chatsworth and now at the National Gallery, London), *The Man of Sorrows in the Arms of the Virgin (1475, National Gallery, Melbourne), *The Betrothal of St Catherine (1479, for an altar at Bruges), *Compassion for the Dead Christ, with a Donor (1485?, Rome) and *The Legend of St Ursula (1489, Bruges). His portraits show originality and he is said to have introduced the practice of setting a three-quarter bust against a scenic background.

Menander (c.343–291 BCE). Athenian poet. Principal dramatist of the 'New Comedy', his innovations included the disappearance of the chorus (except as a 'turn' between the acts) and the presentation of humorous situations of everyday life (in contrast to the fantasies of Aristophanes). Here are the slave or servant with a taste for intrigue, the jealous husband, lover, wife or mistress, the long-lost child...
suddenly restored, the shrew, the cheat all to reappear in the Latin plays of *Plautus and *Terence, and in *Shakespeare, *Molière and many lesser writers. Until large portions of several of Menander’s plays were discovered in the 20th century, it was thought that only fragments of his work had survived.

**Menchú** (Tum), Rigoberta (1959– ). Guatemalan human rights worker. A Mayan, whose language was Quiché, she claimed that her parents and brother were tortured and murdered by the army. She went to Mexico, then Europe, and was assisted to write an autobiography *I, Rigoberta Menchú* (1983) which illustrated the plight of indigenous peoples generally. She was awarded the 1992 Nobel Peace Prize as a gesture of protest against persecution of Indians in Central America. In 1999 she admitted that some experiences in her book had not been personal, but justified publication as having directed international attention to appalling cruelties.

**Mencius** (Latinised form of Meng-tzu) (c.370–c.290 BCE). Chinese Confucian philosopher, born in Shantung province. Sometimes called ‘second sage’ (‘Ya sheng’), he founded a school devoted to the study of the works of *Confucius. After wandering through China for over 20 years attempting to persuade princes and administrators to rule in a moral rather than opportunist way, he retired to teach and write.

**Mencken, H(enry) Louis** (1880–1956). American author and critic, born in Baltimore. He was on the staff of the *Baltimore Sun* (1906–41) and his greatest work is the monumental *The American Language* (4 volumes, 1919–48). As editor of the *American Mercury* (1925–33) he helped to gain public recognition for Theodore Dreiser and Sinclair Lewis. He was an outspoken critic who denounced religion, intellectuals, politicians, sentimentalis and foreigners. Although violently prejudiced, his attacks on complacency and conformity did much to raise the standards of US writing. He also wrote books on *Shaw, *Nietzsche and *Ibsen.

**Mendel, Gregor Johann** (1822–1884). Austrian botanist, born in Heinzendorf (now in the Czech Republic). Discoverer of the Mendelian laws of inheritance, he became a monk at Brunn (Brno) and was ordained in 1847. His scientific studies at Vienna University were encouraged and paid for by the monastery, of which he later became abbot (1869). Many of his experiments on the breeding and hybridisation of plants were carried out in the garden there. He kept (1857–68) systematic records of the pedigrees of many generations of plants, closely examining the effects of heredity on the characteristics of individual plants and discovering the statistical laws governing the transmission from parent to offspring of unit hereditary factors (now called genes). His results were only published (1865 and 1869) in a local journal. His work, dismissed by Nägeli, was not appreciated until its rediscovery c.1900 by de Vries. Complicating factors have since been discovered but Mendel’s fundamental principles remain undisturbed by later research.

**Mendeleyev, Dimitri Ivanovich** (1834–1907), Russian chemist, born in Tobolsk. The youngest of a large family, son of a school principal, he was educated at Heidelberg and St Petersburg, becoming professor of chemistry at St Petersburg University 1867–90. In 1869 he published his first periodic table of the chemical elements, a complete classification of the relation between the properties and the atomic weights of the chemical elements. His classification of the elements in the periodic table enabled him to predict correctly the existence and properties of several elements, later discovered, for which there were gaps in the table. He received the Copley Medal in 1905 but was denied a Nobel Prize. Mendeleyev was an outspoken liberal in politics.

**Mendelsohn, Erich** (1887–1953). German architect. An exponent of Expressionism, his early work is characterised by an exuberant plasticity which was first realised in his Einstein Tower (Potsdam Observatory). He became a leading architect in Germany, but was forced to leave (1933) on the advent of Nazism. After a short stay in England, he spent some years in practice in Palestine before finally settling in the US. He specialised in factories and department stores but his designs were less purely functional than those of *Gropius.

**Mendelsohn (Bartholdy), (Jakob Ludwig) Felix** (1809–1847). German-Jewish composer, conductor and pianist, born in Hamburg. Son of a rich banker and grandson of Moses Mendelssohn, his family adopted the double name Mendelssohn-Bartholdy on conversion to Christianity. He began to compose when only about 10 years old, and between the ages of 16 and 21 reached the height of his powers. His String Octet Op. 20 (1825), a vivacious work of Mozartian inventiveness, was followed by the overture to *A Midsummer Night’s Dream* (1826), the incidental music, including the famous Wedding March, dates from 1842). The overture *The Hebrides* (1829, also known as Fingal’s Cave) was inspired by a visit to Fingal’s Cave on the island of Staffa during a study tour, organised by his father, to Britain (1829) – the first of 10 visits. Travel also inspired Symphony No. 3 (Scottish, 1830–42) and No. 4 (Italian, 1833). Other important works include the
two piano concertos (1831, 1837), two piano trios (1839, 1847), the deeply romantic Violin Concerto in E Minor (1838–44) and the oratorio Elijah (1846). Mendelssohn played a central role in the *Bach revival and in Berlin (1829) directed the first performance of the St Matthew Passion since 1750. He conducted the Leipzig Gewandhaus Orchestra from 1835, raising it to new standards, and premiered Schubert's Symphony No. 9 (in 1839). He also performed *Beethoven's piano concertos in London and was a gifted organist. He married (1837) Cecile Jeanrenaud and, with his family wealth, escaped the struggles and hardships with which so many artists have had to contend. However, he died early, of an aneurism in the brain, after the death of his much-loved sister Fanny.

Werner, E., Mendelssohn. 1963.

Mendelssohn, Moses (1729–1786). German-Jewish philosopher. Grandfather of Felix *Mendelssohn-Bartholdy, he was a noted propagandist for the social and legal emancipation of the Jewish people and at the same time tried to break down the prejudiced isolation of the Jews from those who did not share their faith. He was a close friend of the writer and critic *Lessing and collaborated with him on a book on the philosophy of *Pope. He also wrote popular explanations of the sensations and metaphysics. In the dialogue Phaedon (1767) he discusses in Socratic manner the immortality of the soul, in jerusalem (1783) he defends Judaism as a religion.

Menderes, Adnan (1899–1961). Turkish politician. He helped to found (1945) the Democratic party, led it in opposition and, when it came to power (1950), became Prime Minister. He brought Turkey into full membership of NATO (1951) and helped to bring about the Baghdad Pact (1955). He was re-elected in 1957, but the extravagance of his social and economic policies and the allegedly corrupt practices of his administration provoked (1960) a successful military revolt. In May 1961 Menderes, found guilty of a number of personal and political offences, was hanged.

Mendès, Catulle (1831–1907). French poet, novelist and playwright, born in Bordeaux. Son of a Jewish banker, he lived in Paris from 1859. As co-founder of Le Parnasse contemporain (1866) he helped to give cohesion to the Parnassian group led by *Lecointe de Lisle. He wrote a history of the movement (1884). His own poems owed more to facility of expression than to literary distinction.

Mendès France, Pierre (1907–1982). French Radical Socialist politician. A lawyer by profession, he gained a reputation through his books as a financial analyst before becoming a deputy (1932). He joined the air force in World War II, and eventually reached Algiers, later joining de *Gaulle and becoming Commissioner of Finance in the provisional government 1943–44. He was Minister of National Economy 1944–45 and, as Prime Minister 1954–55 played a leading part in bringing the war in Indo-China to an end. He became a powerful opponent of de Gaulle during the Fifth Republic. His autobiography, Pursuit of Freedom, was published in 1955.

Menelik II (1843–1913). Emperor of Ethiopia 1889–1913. He was King of Shoa province 1865–89 and, although nominally subject to the emperor Yohannes IV, greatly extended his dominions. Having subdued his rivals he was able to succeed when the emperor died. His relations with the Italians, who invaded Eritrea in 1885 and whose interests were extensive throughout the country, were at first friendly but difficulties of the interpretation of the Treaty of Ucciali (1889) led to war and Italy's calamitous defeat at Adowa (1896). Thus fortified, Menelik did much to modernise the administration and, by skilful bargaining with European powers, increased Ethiopia's economic strength. His grandson, *Lij Yasu, converted to Islam and was deposed (*Haile Selassie).

Menem, Carlos Saul (1935– ). Argentinian politician. Of Syrian descent, he became active in the Peron Youth Group, graduated in law from Cordoba University and worked for trade unions in the La Rioja province. Governor of La Rioja 1973–76, 1983–89, he was imprisoned and then sent into internal exile by the military regime 1976–81. President of Argentina 1989–99, elected on the Peronista ticket, he amazed his supporters by repudiating his party's platform and instituted rigorous economic reform. In 1994 the constitution was changed to allow for a second presidential term (reduced to four years), and in 1995 Menem was re-elected, with 50 per cent of the vote, retiring in 1999. In 2001 he was charged with corruption over arms sales.

Mengelberg, (Josef) Willem (1871–1951). Dutch conductor. As conductor of the Amsterdam Concertgebouw Orchestra 1895–1945 he raised this ensemble to the first rank in Europe. His intensely romantic interpretations of *Bach, *Beethoven, *Tchaikovsky, *Mahler and Richard *Strauss were successfully recorded. He was co-conductor of the New York Philharmonic 1921–29. He collaborated with the Germans during World War II and died in Switzerland as an exile.

Menken, Adah Isaacs (Dolores Adios Fuertes) (1835–1868). American actor and dancer. She created a sensation in London when she appeared (1864) bound and scantily clothed on a horse in a stage version of *Byron's Mazeppa. She was the 'Dolores' of *Swinburne's poem:

O splendid and sterile Dolores,
Menno Simons (1492–1559). Dutch religious leader. After the suppression of the Anabaptists he organised the less fanatical remnants into a religious group known as Mennonites. From Holland and north Germany colonies were introduced by ‘Catherine the Great into Russia, but when, in 1871, their privileges, including exemption from military service, were withdrawn, many emigrated to America where colonies had been established from 1683. Mennonites are more concerned with a Christian life than with dogma. Among their tenets are adult baptism and refusal to bear arms, to take oaths or to serve in public office.

Menon, V. K. Krishna see Krishna Menon, V. K.

Menotti, Gian Carlo (1911–2007). Italian-American composer, born in Cadegliano. After studying at the Milan Conservatory, he emigrated to the US in 1927 and studied at the Curtis Institute, Philadelphia. He composed and wrote the libretti for a number of short incisive operas, e.g. The Consul (1950), an effective treatment of a modern theme that achieved great success, The Medium (1946), Amahl and the Night Visitors (1951, first performed on television) and The Saint of Bleecker Street (1955). He won the Pulitzer Prize in 1950 and 1955.

Menshikov, Aleksandr Danilovich, Prince (c.1660–1729). Russian soldier and politician. The son of a groom, he was a guardsman in attendance on *Peter the Great and became his close friend and adviser. He served with distinction against Sweden, and after the victory of Poltava (1709) was made a field marshal. On Peter’s death (1725) Menshikov placed his widow *Catherine I (his own former mistress whom he had introduced to the tsar) on the throne, and, during her brief reign of two years, virtually ruled the kingdom. His last days were spent in exile.

Menuhin, Yehudi, Baron Menuhin (1916–1999). American-British violinist, born in New York. Of Russian-Jewish parentage, he made his debut at seven. His precocious talent was shared by his pianist sister Hephzibah Menuhin (1922–1981). He developed into a brilliant virtuoso and a thoughtful interpreter of the concertos of *Bach, *Beethoven, *Brahms, *Elgar and *Bartók. He toured the world with a triumphant success for many years but lived mainly in England, where he founded (1959) a music festival in England, where he founded (1959) a music festival in

Menzies, Sir Robert Gordon (1894–1978). Australian Liberal politician, born in Jeparit, Victoria. Educated at Melbourne University, he became a barrister and KC (1929), served in the Victorian Parliament 1928–34 and was Deputy Premier 1932–34. A member of the Commonwealth House of Representatives 1934–66 and Attorney-General 1934–39, on the death of J. A. *Lyons he succeeded as Leader of the United Australia Party and (after a brief interregnum) Prime Minister 1939–41. Bitter political divisions led to Menzies’ resignation, the UAP broke up and he created a new anti-Labor coalition, the Liberal Party, which he led 1944–66. Prime Minister again 1949–66, for a record term, he maintained a strong political commitment to the British connexion and to closer economic and military alliance with the US. His political dominance was assisted by the split in the Labor Party over attitudes towards Communism. A persuasive orator, he was awarded the CH (1951), a KT (1963), AK (1976) and succeeded Winston *Churchill as Lord Warden of the Cinque Ports 1965–78.

Mercator, Gerhardus (Gerhard Kremer) (1512–1594). Flemish geographer and cartographer, born in Rupelmonde (now in Belgium). He graduated from Louvain University where he worked as a map-maker and instrument designer until, as a Protestant, he emigrated to Germany (1552). Originally a follower of *Ptolemy, he devised the familiar ‘Mercator projection’ which represents the world, in effect, as a cylinder, not a globe, in which the meridians of longitude remain parallel without converging to a point at each pole. He used this projection for his world chart of 1569 (18 sheets). His maps facilitated sailing by dead reckoning and became useful and popular, since few sailors ventured beyond 50° N or S. He also constructed globes. Two parts of his great atlas (107 maps in all) were published in 1585 and 1589; his son published the third part (1595) after his death. He first applied the name ‘Americae’ to both continents of the New World.

Mercer, John (1791–1866). English calico printer. He discovered that cotton fibres could be made stronger and more receptive to dyes if treated with a solution of caustic alkali, a process known as ‘mercerising’.

Mercer, (Heinrich) Emanuel (1794–1855). German pharmacist. Working in the family business in Darmstadt, in 1827 he isolated alkaloids (common factors in morphine, cocaine, quinine, caffeine, nicotine) and produced them in large volume.

Meredith, George (1828–1909). English novelist and poet, born in Portsmouth. He contributed to periodicals, published much poetry and wrote an oriental fantasy The Shaving of Shagpat (1856) before the appearance of his first novel, The Ordeal of Richard Feverel (1859). He shared rooms with *Swinburne.
and *Rossetti 1861–62. In 1862 he published his tragic poem *Modern Love and became a reader to the publishers Chapman & Hall (until 1894). In 1876 he settled at Flint Cottage, Box Hill, Surrey, his home for the rest of his life. Among his best known novels are *Rhoda Fleming (1865), *Beauchamp's Career (1876), *The Egoist (1879), *The Tragic Comedians (1880), based on the love story of Ferdinand *Lassalle, and *Diana of the Crossways (1885), the only one to achieve real popularity. Meredith combined intellectual clarity, a hatred of the commonplace and an impressionistic technique. From this emerged a style so difficult and convoluted that Oscar *Wilde commented 'As a writer he mastered everything but language'. Meredith was twice married, in 1849 to a daughter of Thomas Love *Peacock, who left him in 1858 and died in 1861, and (1864) to Marie Vulliamy (d.1885), who lived with him at Box Hill. He received the OM in 1905.

Mérimée, Prosper (1803–1870). French novelist, born in Paris. He studied law, language and literature, was inspired by his friend *Stendhal, and by the works of *Scott and *Pushkin and first gained attention with the publication of fake translations (actually original compositions). In 1833 he became Inspector-General of Historical Monuments and initiated the restoration and conservation of the abbey church at Vézelay, Notre Dame and many other decaying structures (*Violet-Le-Duc). He had a great knowledge of archaeology and travelled widely. He was a friend of the future empress *Eugénie and became a member of the Académie Française in 1844 and a senator in 1853. He wrote many historical novels, but his best remembered works were *Mateo Falcone (1833), a short story, *Colomba (1840) and *Carmen (1846), used as the basis of *Bizet's opera. His letters, published posthumously, were a critical appraisal of the Second Empire. He died in Cannes.

Merkel, Angela Dorothea (1954– ). German Christian Democratic politician, born in Hamburg. She represented Leipzig in the Bundestag 1990– and was Minister for Women and Young People 1991–94 and for the Environment 1994–98. In November 2005, she became Chancellor of Germany, the first woman to hold the office and the first from the former East German Republic.

Merleau-Ponty, Maurice (1908–1961). French philosopher. He taught at Lyon, the Sorbonne and the Collège de France, and worked with *Sartre in editing *Les Temps Modernes (1945–52) and defending Stalinist terror. He wrote *The Phenomenology of Perception (1945, English translation 1962).

Merrick, Joseph Carey (1862–1890). English patient. He suffered from neurofibromatosis, a disease that caused grotesque malformation of the skull and he was exhibited in fairs and sideshows as ‘The Elephant Man’ until given sensitive treatment by the surgeon Sir Frederick Treves. In the film *The Elephant Man (1980), Merrick’s role was played by John Hurt. An alternative diagnosis was Proteus disease.

Merriman, Henry Seton (pen name of Hugh Stowell Scott) (1863–1903). English novelist. He was a businessman who took to writing novels with exciting plots, exotic settings and characters including memorable ‘strong, silent men’. The best of his books include *With Edged Tools (1894), *The Sowers (1896) and *In Kedar's Tents (1897).

Mersenne, Marin (1588–1648). French scientist. Educated by the Jesuits, in 1611 he joined the Minim Order, and lived at the Minim Convent in Paris until his death. Mersenne’s major contribution to European intellectual life lay in his vast correspondence. He acted as a kind of clearing house for all the great contemporary intellects in the fields of philosophy and science. He supported the modern, mechanistic philosophy against the science of the Ancients, and defended the right to pursue scientific knowledge against theological bigots. But he was also violently opposed to what he saw as ‘atheistic’ and ‘materialistic’ currents in the thinking of *Bruno, Campanella, and *Fludd. Mersenne’s own scientific research was largely concerned with the physics of sound. He experimented with pitch and harmonies counting the vibrations of long strings against time: he succeeded in formulating quantified explanations of consonance, resonance and dissonance. He was interested in the effect of music on the human emotions, which he sought to attribute to entirely rational and mechanical forces. Mersenne emphasised that languages were merely combinations of signs invented by men for the sake of convenience in communication. Like many 17th-century scholars he was eager to develop a perfect, universal language, based on scientific principles. Mersenne dedicated himself to scientific explanations. His dying wish was for an autopsy to discover the cause of his own death.

Mesmer, Franz Anton (1734–1815). Austrian physician. The word ‘mesmerism’ is derived from his name. His theories concerning the influence of planets on the human body and the existence of an all-pervasive ‘magnetic fluid’ that affected the nervous system naturally did not commend themselves to the medical profession. It was even less attracted by the healing sessions in Paris in which he appeared dressed in purple silk with an iron rod in his hand. A commission set up by the Académie des Sciences rejected (1784) his magnetic theories and thereafter his popularity waned. He owed his successes partly to the effects of his mumbo jumbo upon the imaginations of his patients, and partly to amelioration produced by hypnotism which he had the power to induce without being able to comprehend it.
Messager, André Charles Prosper (1853–1929). French composer. A pupil of *Saint-Saëns, he first won wide acclaim with a comic opera, La Basoche (1890). He was artistic director 1901–06 of Covent Garden Opera in London. Monsieur Beaucouer (1919) was the best known of his many operettas.

Ferner, H., André Messager. 1948.

Messalina, Valeria (24–48 CE). Roman Empress. Wife of *Claudius, she was only 15 when she married, and as the beautiful young mother of his son Britannicus held Claudius completely enthralled, though notorious in Rome for her lasciviousness, amorality and the murders she instigated. Her downfall and execution was due to her ‘marriage’ in public to her favourite lover, Silius.

Messerschmitt, Willy (1898–1978). German aircraft designer and manufacturer. He produced his first aeroplane in 1916 and, a few years later, founded his own firm for their manufacture. His fighters and fighter bombers, Me. 109, 110, 210 and 410, were among the most successful German aircraft of World War II.

Messiaen, Olivier (Eugène Prosper Charles) (1908–1992). French composer, born in Avignon. Son of a professor of English and a poet, he taught himself the piano, then studied organ with Marcel Dupré and composition at the Sorbonne 1942–88: Pierre *Boulez, Yannis *Xenakis and Karlheinz *Stockhausen were pupils. After army service, he was a prisoner of war at Görlitz (1940–41). Primarily a melodist, he used innovative tone-colouring influenced by his studies of Greek chants, Hindu ragas, bird songs, plainsong and microtonality. He wrote on musical theory and his philosophy was imbued with his Catholic faith. His major pieces include La Nativité du Seigneur (1935, organ solo), Quatuor pour la fin du temps (1941, piano, clarinet, violin, cello), Visions de l’Amen (1943, two pianos), Vingt Regards sur l’Enfant-Jésus (Twenty contemplations on the infant Jesus; 1944, piano, long, complex and mesmerising), Turangalîla-Symphonie (1946–48, a luxuriantly romantic work, probably his most accessible), Chronochromie (1960, ‘The Colour of Time’ for large orchestra), Couleurs de la Cité Celeste (1963) and Et Exspecto Resurrectionem Mortuorum (1964). His second wife, Yvonne Loriod (1924–2010) was a magnificent pianist and teacher who premiered works by her husband and Boulez.

Mestrovic, Ivan (1883–1962). Yugoslav sculptor, born in Dalmatia. He studied in Vienna and Paris and between the two world wars became widely known for the vigorous monumental style and emotional intensity he applied to the many war memorials for which he was commissioned. In his own country his best known works include the great Yugoslav national temple at Kosovo and the immense statue of Bishop Gregory outside the walls of Split. He became a US citizen in 1954.

Metaxas, Ioannis (1870–1941). Greek soldier and dictator, born in Ithaca. He trained in Germany, and in the Balkan Wars 1912–13 secured Macedonia and Thrace for Greece. Chief of the General Staff 1913–17, he was close to King *Constantine and opposed involvement in World War I. When *Venizelos seized power in 1917 and Greece joined the Allies, Metaxas was exiled to Corsica. He returned, and in 1922 founded the ultra-royalist Freethinkers Party. After the monarchy was restored, under *George II he became Minister for War and for the Interior 1935–36. Prime Minister and Foreign Minister 1936–41, he ruled as a dictator until his death. He urged neutrality in World War II but his hand was forced when *Mussolini’s forces invaded Greece, and Metaxas organised resistance, which succeeded until the Germans took over.

Methodius, St see Cyril, St

Metsu, Gabriel (1653–1722). Dutch genre painter, born at Leyden. He lived in Amsterdam from about 1650. His early work was religious, but, influenced by *Rembrandt and *Steen, he turned to subjects of domestic or urban life. His cheerful, robust paintings reveal a skilled handling of colour, and the effects of sunlight on dress and furniture.

Metternich (-Winneburg), Clemens Wenzel Lothar, Prince (1773–1859). Austrian statesman, born in Coblenz. Some experience of revolutionary methods gained as a student at Strasbourg University is said to have implanted his hatred of democracy but, as son of a diplomat and as a creator and expositor of Habsburg policy all his life, he could hardly have been otherwise. His diplomatic heritage was enlarged and his social and material standing greatly increased when he married the granddaughter and heiress of the Prince of *Kaunitz-Rietberg. He became Austrian Minister to Saxony 1801–03, and Ambassador to Prussia 1803–05, Russia 1805–06 and France 1806–09. He was Austrian Chancellor and Foreign Minister 1809–48. His task was to provide a breathing space in which Austria could recover from successive defeats at the hands of the French. To achieve this he played a double game with great caution and skill. He negotiated the marriage of the Austrian archduchess Marie Louise with *Napoléon, and when the latter quarrelled with Russia provided him with a small Austrian contingent while secretly informing the tsar that he had nothing more to fear. Thus, though he expected a French victory he was well placed to steer Austria to the winning side after the Moscow retreat of 1812, and as the princecy host (his title was conferred in 1814) at the Congress of Vienna, to play a dominating part in the reshaping
of Europe after Napoléon's fall. The final settlement, for which Metternich found allies in *Castlereagh for Britain and *Talleyrand, now acting for the restored monarchy of France, was a cleverly contrived balance of power, with Austria left at the head of a confederation of sovereign German states. Sustained by the 'Holy Alliance' of the rulers of Russia, Prussia and Austria, Metternich's Europe' survived for some 30 years. He controlled Austria throughout, not so blind to the need for reforms as is often supposed, but so underestimating the forces of nationalism that the revolutions of 1848 took him by surprise. He was forced to resign and, after spending 18 months of the intervening period in England, returned to Vienna in 1851 after the revolution had been suppressed.

**Meyer, Julius Lothar** (1830–1895). German chemist. Professor of chemistry 1868–76 at Karlsruhe Polytechnic and then at Tübingen University, in *Die modernen Theorien der Chemie* (1864) he discussed the relation between the atomic weights and the properties, in particular the atomic volumes, of the chemical elements. In 1870 he put forward a periodic classification of the elements independently of, and a little later than, *Mendeleev, but he did not see the important consequences of this relationship as clearly.

**Meyerbeer, Giacomo** (Jakob Liebmann Beer) (1791–1864). German-Jewish composer. Originally a boy pianist, he studied opera in Italy and there composed several works now forgotten. Once settled in Paris he developed a grandiloquent style, to which *Wagner, whom he befriended, owed much. This he successfully applied to such operas as *Robert le Diable* (1831), *Les Huguenots* (1836) and *L'Africaine* (produced 1865). Meyerbeer was immensely self-critical and rewrote many passages time after time. He was known especially for his magnificent stage effects and choral climaxes.

**Miaskovsky, Nikolai Yakovlevich** (1881–1950). Russian composer. A pupil of *Glière and *Rimsky-Korsakov, he wrote 27 symphonies, other orchestral works, and chamber and piano music.

**Michael** (Mihai) I (1921–). King of Romania 1927–30 and 1940–47. He succeeded his grandfather, *Ferdinand, as King. His father (later *Carol II) having renounced his rights, Carol seized power in 1930 but in 1940 was again forced to abdicate. Michael, once more King, attempted to resist German encroachments in World War II and organised (1944) the coup d'état that took his country out of the war. In 1947 he was forced by Communist pressure to abdicate. A year later he married Princess Anne of Bourbon-Parma.

**Michelangelo Buonarroti** (1475–1564). Italian painter, sculptor, artist and poet, born at Caprese, near Florence. Son of an official, *Lodovico di Buonarroti Simoni (1444–1531) and Francesca Ruccellai (1455–1481), as a boy of 13 he was apprenticed to *Ghirlandaio in Florence. In 1489 he came to the notice of *Lorenzo de'Medici who admitted him to his sculpture school in the Medici Gardens and took him into his house, where he met and was influenced by the poet *Politian and many humanist scholars. *The Madonna of the Steps* (in low relief) and the *Battle of the Centaurs* (in high relief and already showing the strength and energy of his maturity) belong to this period. In the confused years following Lorenzo's death (1492), Michelangelo left Florence for Bologna (1495–96) and in 1496 went to Rome, where he created the *Bacchus* (now in Florence) and the *Pietà* (1499) in St Peter's, showing the crucified Christ lying in the arms of the Virgin (perhaps a portrait of the artist's mother: she looks younger than her son). In Florence, 1501–04, he executed the colossal (4.34 m) marble statue *David* (now in the Accademia in Florence), in which the use of distortion and tension create the illusion of a perfect male form. Already contemporaries referred to his *terribilità* – the quality that inspired awe – although his famous outbursts of rage probably contributed. Michelangelo returned to Rome (1505) commissioned by Pope *Julius II to design and work on his tomb. The scheme was constantly reduced by the pope and his heirs, and Michelangelo completed only after years of intermittent work, the great statue of *Moses* (c.1513–15) and the figures of four slaves now in St Pietro in Vincoli. Many of his most powerful works were unfinished, including the *Slaves* in the Louvre and the Accademia. From 1508 to 1512 Michelangelo was again in Rome occupied with one of his greatest tasks, the decoration of the ceiling of the Sistine Chapel, a huge area of 340 sq. m. He painted 28 Old Testament subjects (Genesis, Prophets, Scenes of Salvation, Ancestors of Jesus) and five Sibyls, more than 300 figures. The outstanding central sections are Creation of Adam, Creation of Eve and *The Fall of Man. Technically the work presented immense difficulties, partly of perspective, partly because the painting was awkward to execute. The figures depicted, e.g. those in the Creation of Adam and the nudes surrounding the main panels, illustrate the neo-Platonist theory that the beauty of the human body symbolises divine beauty. This idea, derived from his studies and colloquies with the scholars in Lorenzo's garden, permeates all Michelangelo's work. From 1521 he devoted 14 years (with interruptions) to the Medici Chapel in the Church of St Lorenzo, Florence. The wall decorations and the tombs of Lorenzo and Giuliano de'Medici were complete, or
Michelangelo devoted his last 20 years mainly to architecture. In reconstructing the Capitol in Rome he designed the first planned square of modern times, he made additions to the Palazzo Farnese, but most important he was chosen (1546) to succeed Antonio da Sangallo (1483–1546) as chief architect of St Peter's. Here he modified *Bramante's original plans for transepts and choir and designed the new higher, lantern topped dome which towers over the building. Michelangelo never married and his longest sustained friendship was for the noblewoman and poet Vittoria Colonna (1490–1547), to whom he wrote some of the 100 or so sonnets which place him high among the poets of his time. Among his last sculptures were the *Pietà (c.1556). Including a self-portrait (c.1548–49) and the (disputed) Palestrina Pietà (c.1556). In his 80s he devoted himself to solitary religious and despair and conscious of the dark abyss beneath mystical contemplation, between moods of ecstasy and despair and conscious of the dark abyss beneath mystical contemplation, between moods of ecstasy and despair and conscious of the dark abyss beneath mystical contemplation, between moods of ecstasy and despair and conscious of the dark abyss beneath mystical contemplation, between moods of ecstasy and despair and conscious of the thin layer of civilisation. Michelangelo was the first great Mannerist artist, imposing his conceptions on nature. Primarily a sculptor, his pictures have been described as sculptures in paint, but just as his works are monumental, so he is a colossus dominating all the arts, painting, sculpture and architecture during the Renaissance.

films in China. The greatest Japanese screen actor, he Mifune Toshiro (1920–1997). Japanese actor, born in Kyushu ('Mi dots'). Mieden style, known as sharp tongue, he evolved his own distinctive 'pointillist'

A high ranking official, famous for eccentricity and a calligrapher, poet and scholar, born in Kiangsu province. (Mi Fu) (1051–1107). Chinese painter, Mi Fei 1965. Blaser, W., Architecture 1946–58. the Illinois Institute of Technology's school of architecture 1930–33, at Dessau. In the US from 1929 it was rebuilt in 1986. He was the last director of it with glass and polished marble. Demolished in 1930, (1929) was a simple, elegant structure, a steel frame skyscraper. In 1927 he was put in charge of a housing development in Stuttgart where steel construction was first applied to domestic building. His German Pavilion for the Barcelona International Exposition (1929) was a simple, elegant structure, a steel frame with glass and polished marble. Demolished in 1930, it was rebuilt in 1986. He was the last director of the Bauhaus 1930–33, at Dessau. In the US from 1937, the best known of his later works include the Farnsworth house and the IBM Building in Chicago and the Seagram Building in New York. He directed the Illinois Institute of Technology's school of architecture 1946–58.

Mi Fei (Mi Fu) (1051–1107). Chinese painter, calligrapher, poet and scholar, born in Kiangsu province. A high ranking official, famous for eccentricity and a sharp tongue, he evolved his own distinctive 'pointillist' style, known as Mi dien ('Mi dots').

Mihailovich, Draga (1893–1946). Yugoslav soldier. In World War II, after the collapse of Yugoslav resistance of the German attack (1941), Mihailovich organised a resistance movement under the direction of the Yugoslav royal government in London. He was accused by *Tito, the Communist leader, of acting with more vigour against his rival partisans than against the Germans. After the war Mihailovich was charged with collaboration and shot.

Mikhail (Romanov) (1596–1645). Tsar of Russia (1613–45). Grandnephew of *Ivan IV's wife, Anastasia, he was a member of a noble boyar family, elected as tsar during the time of troubles', an era of political instability, civil war and the claims of several pretenders (*Dimitri, False). Mikhail’s father, the patriarch Philaret, dominated government until he died in 1633. During his reign the status of the peasantry deteriorated towards serfdom. The Romanov dynasty ruled until 1917.

Mikoyan, Anastas Ivanovich (1895–1978). Russian (Armenian) politician. After fighting in the revolutionary wars he rose quickly in the Communist ranks and from 1926, when he became Stalin’s Commissar of Trade, showed an extraordinary ability to survive all political upheavals. Most of his appointments were connected with internal and external trade, he was a Politburo member 1935–66, first deputy premier 1955–64, and the first non-Russian president of the USSR 1964–65.

Milanković, Milutin (1879–1958). Yugoslavian (Serbian) mathematician and geophysicist. He argued (1942) that very long term variability in climate was influenced by changes in axial tilt and the precession of Earth’s orbit around the sun in a 26,000 year cycle (explaining very long term climate variations). Another Milanković cycle, involving eccentricity in orbit, has a 100,000 year cycle.

Miles, Bernard Miles, Baron (1907–1989). English actor and director. A successful character actor (e.g. as Joe Gargery in the film Great Expectations), he founded the Mermaid Theatre in 1950, producing operas, repertory and musicals. He was knighted in 1969 and created a life peer in 1979.

Milford Haven, 1st Marquess of see Battenberg

Milhaud, Darius (1892–1974). French composer. One of ‘Les Six’, a group of French modernists who were active after World War I, and associated with important literary figures e.g. *Claudel and *Cocteau, he was both prolific and versatile. His works include the ballets Proces (1913–19), Le Bœuf sur le toit (1919), and Le Création du monde (1923), in which he uses jazz techniques, the operas Bolivar (1943) and Christophe Colombe (1928), the suite Scaramouche (1939) for two pianos, much chamber music and many symphonies, some of them only a few minutes long. Milhaud was professor of music at Mills College, California 1940–47, and then returned to Paris to teach at the Conservatoire. He published Notes sans Musique (1952).

Mill, James (1773–1836). Scottish philosopher and political scientist. Son of a shoemaker, intended for the ministry he studied Greek and philosophy at Edinburgh University, but went to London (1802) and became a close friend of Jeremy Bentham, who became a major influence. For some time he was editor of the Literary Journal and contributed articles to various other periodicals. In 1806 he began work on his History of British India, and its publication (1817–18) secured him a post at the London offices of the East India Company. He continued to write articles on political and economic subjects. His Elements of Political Economy (1821–22) was written primarily to educate his son John Stuart Mill. He also wrote Analysis of the Human Mind (1829).

Mill, John Stuart (1806–1873). British philosopher and economist, born in London. Rigorously educated by his father James Mill, he began to learn Greek at the age of three, showed prodigious gifts, experiencing an abnormal (but not unhappy) childhood. He joined his father in the London office of the East India Company, working there 1823–58. Bentham was a major influence, but Mill modified Utilitarianism’s goal of ‘the greatest happiness for the greatest number’ by adding idealism, ethics and the need for long-term satisfaction. In philosophy he was an advocate of Induction (‘Bacon’s scientific method) and was influenced by Locke’s Empiricism. He wrote A System of Logic (2 vols., 1843). His theory of Induction, arguing from the particular to the general, is now regarded as simplistic and overconfident. His Principles of Political Economy (1848) followed the general approach of Ricardo, but cautioned against harsh imposition of abstract reasoning. In On Liberty (1859), his greatest work, he warned against the danger of tyranny by majority, forcing conformity on minorities, emphasising the need to recognise and protect individual differences. He was also influenced and softened by his wife Harriet Taylor (née Hardy), the one romance in his life: he knew her from 1830, they married in 1851 and she died in 1858. As MP for Westminster 1865–68, he advocated votes for women, proportional representation, and sympathised with trade unions and farm cooperatives. He died in Avignon and his Autobiography (1873) was published posthumously. His ideas and analytical method influenced the Fabian Society (founded in 1884).

Millais, Sir John Everett, 1st Baronet (1829–1896). British painter, born in Southampton. From a Jersey family, he exhibited at the Royal Academy at the age of 17. In 1848 he joined with his friends Holman Hunt and Rossetti in the foundation of the Pre-Raphaelite Brotherhood. His first picture in the Brotherhood’s detailed manner, Christ in the House of his Parents (1850), caused controversy but such pictures as Ophelia, The Blind Girl and Autumn Leaves show the Pre-Raphaelites’ preoccupation with colour, detail and design combined with the artist’s own poetic vision. With the end (c.1859) of his Pre-Raphaelite period Millais lapsed into conventional sentimentality with such pictures as The Boyhood of Raleigh and the notorious Bubbles, a portrait of his grandson (Admiral Sir William James), which was bought as an advertisement for Pears’ Soap, one of the earliest examples of a picture by a famous artist being used for such a purpose. He married (1854) Ruskin’s former wife, Euphemia (Effie) Gray. After Leighton’s sudden death in January 1896, Millais was elected President of the Royal Academy, then died himself in August.

Millay, Edna St Vincent (Mrs E. J. Boissevain) (1892–1950). American poet and playwright, born in Maine. Educated at Vassar, her verses, often in sonnet form, are intensely lyrical and derive in spirit and technique from the Elizabethans. In 1923, although actively bisexual, she married E. J. Boissevain who supported her literary and social activism, and won the Pulitzer Prize for poetry. She also wrote short stories and plays, e.g. The Murder of Lidice (1942), and translated Baudelaire’s Flowers of Evil.

Miller, Arthur (1915–2005). American author. He wrote a number of powerful plays, some of which were filmed. They include All My Sons (1947), Death of a Salesman (which won the 1949 Pulitzer Prize), The Crucible (1953), based on the Salem witch trials, with uncomfortable parallels to McCarthyism (*McCarthy), filmed by a French company as Les Sorcières de Salem, and A View from the Bridge (1955). He also wrote the novel Focus (1945). He married (1956) the film actor Marilyn Monroe and following her death wrote After the Fall.

Miller, Glenn (1904–1944). American dance-band leader, trombonist and composer. He formed his own band in 1938 and became world famous for a sweet orchestral sound, mainly saxophones, which was unique. He was made leader of the US Air Force Band in Europe during World War II and disappeared on a flight from England to France. His posthumous popularity increased. His style and sound have been widely imitated and reproduced.

Miller, Henry (1891–1980). American writer, born in New York. He lived in Paris (1930–39) and later settled in California. His works are largely a passionate indictment of modern, especially American, civilisation, and an equally passionate affirmation of what is called the Bohemian life. His novels (largely works of heightened personal reminiscence) include Tropic of Cancer (1934) and Tropic of Capricorn (1938). Other works include The Colossus of Maroussi (1941), describing travels in Greece, and The Air-Conditioned Nightmare (1945). The early novels, first published in Paris, were banned as obscene in the US and Britain until 1961.

Miller, Jacques Francis Albert Pierre (1931– ). Australian medical scientist, born in Nice. He discovered the function of the thymus and received the 2001 Copley Medal.

Miller, Joaquin (Cincinnatus Heine Miller) (1841?–1913). American poet. His adventurous life among the Indians is reflected in his Songs of the Sierras (1871).

Marberry, M., Splendid Poseur. 1953.

Miller, Sir Jonathan Wolfe (1934– ). English director and physician. Educated at Cambridge and London, he appeared with Alan *Bennett, Peter Cook and Dudley Moore in the review Beyond the Fringe 1961–64. He was an outstanding director of plays and operas, while also teaching and pursuing research in neurophysiology. He wrote books on psychology and physiology and presented many television programs.

Miller, Joseph Irwin (1909–2004). American industrialist. Educated at Yale, he was a Rhodes Scholar at Oxford. He worked for the Cummins Diesel Engine Co. Inc in Columbus, Indiana, from 1934 and was Chief Executive 1944–77, making it an exemplary employer of women and blacks, promoting the arts, environment and civic improvement. He undertook many commissions for the US Government – on housing, urban affairs, trade, health, money and credit. A gifted linguist, musician and executive member of the World Council of Churches 1961–68, he refused to enter political life.

Miller, Stanley Lloyd (1930– ). American chemist. Educated at Chicago, he was a student of *Urey and became a professor at the University of California. He found that by creating a 'primordial' atmosphere of hydrogen, ammonia and methane, mixing this with distilled water, and exposing the combination to repeated electrical discharges, simple amino acids could be produced, suggesting a likely explanation for the development of life forms on Earth (A. I. *Oparin).

Millerand, (Etienne) Alexandre (1859–1943). French politician. A lawyer, he entered (1885) the Chamber of Deputies as a member of the extreme left and tried to unify the Socialist groups. From 1899 he held several ministerial offices including the Ministry of War at the beginning of World War I. After the war he reorganised the administration of Alsace and Lorraine, regained from the Germans. Elected President in 1920, he was forced to resign (1924) after the 'left' victory in the parliamentary elections, but became a senator 1925–40.

Millet, Jean François (1814–1875). French painter. The son of a Normandy peasant, he idealised the life of the labourer in such pictures as The Angelus and The Man With a Hoe, painted with a deep religious sense but with a sentimentality which has alienated later generations. He lived for many years (from 1849) at Barbizon, a small town near Fontainebleau which gave its name to the 'school' of landscape painters gathered there. He was a profound influence on van *Gogh.

Milligan, Spike (Terence Alan) see Goons, The

Millikan, Robert Andrews (1868–1953). American physicist. In a brilliant academic career he was professor of physics at the University of Chicago 1910–21 and then became Director of the Norman Bridge Laboratory, Pasadena, and Chairman of the California Institute of Technology 1921–46. He carried out much research into atomic structure and cosmic rays, but is best known for his accurate determinations (1909) of the charge on the electron from measurements of the charge picked up by oil drops exposed to X-rays. He won the Nobel Prize for Physics (1923).

Millin, Sarah Gertrude (née Leibson) (1889–1968). South African writer, born in Lithuania. She wrote 17 novels, including The Dark River (1919), God's Stepchildren (1924) and The Herr Witchdoctor (1941) and biographies of *Rhodes (1933) and *Smuts (1936). She became an increasingly anxious supporter of Apartheid.

Milne, A(lan) A(lexander) (1882–1956). British author, born in Scotland. He was assistant editor of Punch (1906–14) and later wrote successful comedies, e.g. Wurzel Flummery (1917), Mr Pim Passes By (1919), and The Dover Road (1922), but
he is best known as the author of children's books written originally for his son Christopher Robin: *When We Were Very Young* (1924), *Winnie the Pooh* (1926), *Now We Are Six* (1927) and *The House at Pooh Corner* (1928). He dramatised Kenneth *Grahame's Wind in the Willows as Toad of Toad Hall*.

**Milner, Alfred Milner, 1st Viscount** (1854–1923). British administrator and politician, born in Germany. Educated at Tübingen, London and Oxford, he became a journalist, edited *Toynbee's work The Industrial Revolution* and helped to found Toynbee Hall. Undersecretary of Finance in Egypt 1890–92, he returned as Chairman of the Board of Inland Revenue 1892–97. As High Commissioner for South Africa 1897–1905 and Governor of Cape Colony 1897–1901, he worked closely with *Rhodes and pushed *Kruger towards war (1899). With *Kitchener he negotiated the Treaty of Vereeniging which ended the Boer War (1902) and was created Viscount. He governed Transvaal and the Orange Free State until 1905, introduced Chinese indentured labour and with his 'Kindergarten' of young Oxford-trained advisers (including Lionel Curtis, Leo *Amery, John *Buchan, and Philip Kerr) attempted to set up representative institutions. He became the ideologist of a British Commonwealth which was to be an organic 'race-empire' with a prescribed constitution. In the House of Lords he led the 'die-hard' opposition to *Asquith and *Lloyd George (1909–11) and covertly supported a coup in Ulster against Home Rule proposals (1913). He served in *Lloyd George's Cabinet 1916–21, pushed for a unified command in France under *Foch and campaigned for Imperial Preference.

**Milner, Richard Monckton, 1st Baron Houghton** (1809–1885). British politician and literary patron. Having spent much of his early life in travel, he was MP 1837–63 for Pontefract (where he lived in a Danish household studied in preparation for his poetic vocation. There and at Cambridge he wrote many of his earliest works, e.g. the *Hymn on the Morning of Christ's Nativity* (1629), *Il Penseroso* and *L'Allegro* (both 1632), the masque *Comus* (1634), and the great pastoral elegy *Lycidas* (1637), written in memory of his friend Edward King, drowned in the Irish Sea. Milton travelled (1638–39) in Italy, where he met *Galileo in prison. After returning to England he virtually gave up writing poetry for 20 years (except sonnets, e.g. *On the late Masacre in Piedmont*), and
Milton, John (1608–1674). English poet, theologian, and polemicist. He was born in London on December 9, 1608, and died in London on November 8, 1674. His prolific productions in verse and prose include the great poems *Paradise Lost* (published 1667), *Paradise Regained* (1671), and *Samson Agonistes* (1671), and the prose works *Of Godliness* (1641), *Of the Causes of the Late Discontents* (1649), and *Areopagitica* (1644), the latter describing his pamphlet for the liberty of the Press. The *Areopagitica* was translated into Latin in 1645.

Milton's first works were devoted to parliamentary causes, writing pamphlets against episcopacy, e.g. *The Reason of Church Government* (1642). He married (1642) Mary Powell, who left him after a few months and died before returning. During her absence Milton wrote *The Doctrine and Discipline of Divorce*, which advocated the dissolution of unhappy marriages. Two other famous pamphlets are *Tractate on Education* and *Areopagitica* (both published 1644), the latter championing the liberty of the Press. A pamphlet defending the execution of Charles I was published in 1649. As Secretary for Foreign Tongues to the State Council 1649–59, he became an official propagandist for Cromwell. He suffered from glaucoma (or retinitis pigmentosa) from 1644 and became totally blind in 1654, continuing to work with the assistance of his daughter and several amanuenses, including Andrew Marvell. After his first wife died (1652), he married Catherine Woodcock in 1656, her death two years later prompting the famous sonnet *On His Deceased Wife*. On the fall of the Commonwealth in 1659, the blind poet was briefly imprisoned. After Charles II's restoration he went into hiding but was soon pardoned and in 1662 he married Elizabeth Minshull, who survived him.

*Paradise Lost* (published 1667), his great epic in blank verse, tells the story of Satan's rebellion against God, of the subsequent scenes in Eden and of the fall of Man. In 1671 the 12 books of *Paradise Lost* were followed by the four of *Paradise Regained*, which recounts Christ's victory over Satan after the temptation in the wilderness. It is an allegory on a much less ambitious scale, less highly coloured in style and language but with a distinctive subtlety of its own. *Samson Agonistes* (1671), constructed like a Greek tragedy, gives the biblical theme a pathos and inspirational power transcending the original. Milton's later prose works, e.g. the tract *Of True Religion* (1673), are of less interest. Because of the majesty and sublimity of his language Milton has generally been placed next to Shakespeare, but he has never moved the hearts of the masses. Some critics have even contended that he was a bad influence, especially on 18th-century poets, who imitated his solemn and sonorous verse without matching the grandeur and intensity of his thought.

Mindszenty, Jozsef (1892–1975). Hungarian prelate. Imprisoned (1944) by the Nazis, after World War II ended (1945) he was appointed Archbishop and Primate of Hungary and a cardinal in 1946. An ardent upholder of the Church’s rights and of the national cause, he was imprisoned by the Communists (1949). During the revolt of 1956 he was released but, when the Russians restored Communist power, he was forced to take refuge in the US embassy and lived there for 15 years. The pope retired him in 1974, against his will. His *Memoirs* were published in 1975.

Mintoff, Dom (inic) (1916–2012). Maltese politician. He trained as an architect and civil engineer, practising in Britain 1941–43 and later in Malta. He helped to reorganise the Maltese Labour Party in 1944. In 1945 he became a member of the Council of Government and Executive Council. He was elected to the Legislative Assembly in 1947, becoming at the same time Deputy Prime Minister responsible for works and reconstruction. Prime Minister 1955–58, he resigned to work for complete independence of British rule and the governor assumed direct rule. Mintoff became Prime Minister again 1971–84.

Minton, Thomas (1765–1836). English potter. After working for Josiah Spode he started his own factory (1796), produced earthenware and bone china, and became well known for his decorated vases and 'Parian' figures and groups. He was also a noted engraver.

Mirabeau, Honoré-Gabriel Victor Riqueti, Comte de (1749–1791). French politician and orator, born in Bignon. His father Victor Riqueti, Marquis de Mirabeau (1715–1789), soldier, agronomist and political economist, was associated with the Physicocrats. Wild and dissipated as a young man, he was imprisoned and exiled by his father for debt and sexual offences. He lived as a hired propagandist, by journalism and pamphleteering, including the famous *On Despotism* (1772). He interviewed Friedrich II (‘the Great’) in Potsdam and wrote *The Prussian Monarchy* (largely plagiarised, 1787). When Louis XVI summoned the Estates-General in 1789, Mirabeau was elected by the third estate for Aix and, by his virtue as an orator, soon became dominant. He proposed converting the Estates-General to the
National Assembly. The phase that followed the fall of the Bastille and the transference of the royal family (October 1789) from Versailles to Paris saw Mirabeau at the height of his power. On the one hand he led the Assembly in its debate on a new constitution, on the other he was acting as secret adviser to Louis XVI and accepting bribes for his help in preserving as much as he could of the royal prerogative. That he would have performed in the same way without bribes (for, despite the violence of his oratory, he was a cautious and moderate constitutionalist) is likely but irrelevant to the moral issue. Unfortunately neither Louis nor *Marie Antoinette (whom Mirabeau met only once) could overcome their aversion to his reputed character, and they withheld the trust that would have enabled Mirabeau to act with confidence on their behalf. After his sudden death at 42 there was no one to protect them from their own weakness and folly.

Miranda, Francisco de (1750–1816). Spanish American soldier, born in Venezuela. He served in the Spanish army against the British in Florida. Suspected of disloyalty to the Spanish crown he spent many years in the US and Europe (and fought for a time as a general in the French Revolutionary armies), trying to enlist support for freeing Venezuela from Spanish rule. He returned to London (1798) and finally gained British and American support for an expedition that sailed (1806) from New York. The result was a fiasco, but when a junta seized power in Venezuela (1810), he again left England to lend support. Eventually he became Commander-in-Chief of the Venezuelan forces but was forced to capitulate (1812). He died in prison.

Miro, Joan (1893–1983). Spanish (Catalan) artist, born in Barcelona. Son of a goldsmith, after some years as a clerk, he suffered a breakdown, then devoted himself to art, working as painter, sculptor, lithographer, engraver, ceramicist, costume designer and in stained glass. He worked with the French Dadaists for a time, later joined André Breton's Surrealist group and designed settings and costumes for *Diaghilev's Ballets Russes. His familiar style, internationally recognised from the 1940s, had a variety of influences ranging from Paleolithic cave art, *Bosch, van *Gogh, *Klee, the Fauves and Cubists, and the experiences of dreams and hallucinations (some induced by hunger). It was an art of hieroglyphs and symbols painted with strokes and spots in primary colours, red, blue, yellow, usually against a green or black background. He preferred to work on a large scale as in his *TheWall of the Moon and *The Wall of the Sun, in ceramic tiles, for the UNESCO building, Paris (1957) and a mural at Barcelona airport (1969). After 1945 he divided his time between Majorca, Barcelona and Paris.

Mirren, Dame Helen Lydia (originally Mironoff) (1945– ). English actor, born in Chiswick. Of Russian-English parentage, she joined the Royal Shakespeare Company in 1966 and played many roles by *Shakespeare, *Chekhov, *Strindberg and *O'Neill. From 1967 she acted in more than 75 films, including the title role in *Elizabeth I (2005) and as *Elizabeth II in *The Queen (2006, Academy Award) and in *The Tempest (2010), as Prospera. At the National Theatre she was a memorable Phèdre (2009). Her performance as Elizabeth II in *The Audience (2013) was also acclaimed.

Mishima Yukio (1925–1970). Japanese novelist, born in Tokyo. The son of a civil servant, he was rejected for war service, studied law and worked in the finance ministry. He devoted himself to writing after the success of his autobiographical *Confessions of a Mask (1948). His novels include *The Temple of the Golden Pavilion (1959) and *The Sea of Fertility (1970). He also directed and starred in the film *Yukoku (1966). Obsessed with the disappearance of the bushido tradition, he formed a small private army, attempted a coup and died by hara-kiri in the traditional manner.

Mistinguett (Jeanne-Marie Bourgeois) (1875–1956). French dancer, singer and comedian. One of the great stars of the Paris music-halls, she appeared in revue from about 1899 and in the 1920s her partnership with Maurice *Chevalier at the Folies Bergère and elsewhere made her world famous.

Mitsrál, Fréderic (Frédéric) (1830–1914). French poet, born near Avignon. He lived in Provence, and the Provençal language was both the object of his study and the instrument of his creative work. The rural epic *Mirèio (1859) was the most popular of his books but with *Nerto (1883), a novel in verse about Avignon in the years of papal residence, he achieved almost equal success in another field. In his longer works he showed narrative skill and a great sense of character, while his lyrics are often exquisite. After 14 nominations, he received the Nobel Prize for Literature in 1904.

Mitchell, Margaret (1900–1949). American novelist, born in Georgia. In 1936 she published *Gone with the Wind, which won her the Pulitzer Prize (1937) and sold 28 million copies. The film (1939), with Clark Gable, Vivien Leigh and Leslie Howard, produced by David O. *Selznick was even more successful.

Mitchell, Sir Thomas Livingstone (1792–1855). Scottish soldier, explorer and collector, born in Grangemouth. He served in the Peninsular War as a surveyor, arrived in Sydney in 1827 and became Surveyor-General of New South Wales 1828–55, leading four major expeditions to explore the interior, in 1831, 1835, 1836 and 1845–46.

Mitchell, William Lendrum (1879–1936). American soldier and airman. After World War I, in which he rose to be chief of air operations, he carried out a vigorous campaign against official failure to realise the importance of air power. When he attacked a superior for ‘almost treasonable incompetence’, he was court-martialled and had to resign. In one of his many books on air warfare he predicted the Japanese attack on Pearl Harbor. Nine years after his death he was vindicated by Congress, posthumously promoted to the rank of Major General and awarded the Medal of Honor.

Mitchell, R., My Brother Bill, the Life of General ‘Billy’ Mitchell. 1953.

Mitford, Nancy Freeman- (1904–1973). English novelist and biographer. Eldest of six daughters of David Bertram Ogilvy Freeman-Mitford, 2nd Baron Redesdale (1878–1958), she was educated at home. Her romantic comedies of upper class manners were widely popular and her historical biographies well regarded. In 1956 she edited Noblesse Oblige, a catalogue of class mannerisms which defined behaviour as ‘U’ (Upper class) or ‘Non-U’. Her best known novels are probably The Pursuit of Love (1945) and Love in a Cold Climate (1949). Her biographies include The Sun King (a study of *Louis XIV, 1966). Her sisters were celebrated in their own right: Diana (1910–2003) married Oswald *Mosley, Unity (1914–1948) had an unrequited passion for *Hitler, Jessica (1917–96), an investigative journalist in the US, was firmly identified with radical causes and Deborah Vivien (later Cavendish) (1920–2014) became Duchess of Devonshire and wrote extensively.

Mithradates VI (‘the Great’) (c.132–63 BCE). King of Pontus (c.120–63). Sixth ruler of a Hellenised state in Anatolia, bordering on the Black Sea, he succeeded his father and in 115 deposed his mother who had ruled as regent. He added Crimea and Colchis to his kingdom, but when he occupied Bithynia and Cappadocia he clashed with Rome and in 92 he was forced by *Sulla to withdraw and pay a large indemnity. When Rome became involved in civil war, Mithradates felt it safe to refuse to pay and so provoked the First Mithradatic War (89–84). He began it by overrunning Asia Minor and sending troops to Greece to raise that country against Rome. Sulla, victorious in the political struggle at home, went to Greece where he defeated Mithradates at Chaeronea and Orchomenos. Having crossed to Asia Minor he found that the Roman army sent by his opponents was already victorious, and was thus able to impose a settlement by which Mithradates renounced his conquests. The Second Mithradatic War (83–81), a minor affair provoked by an irresponsible act of aggression by the Roman legate left in command, made Mithradates angry and suspicious and he began to make preparations for a renewal of the struggle by forming alliances with Egypt, Cyprus and Roman malcontents. To anticipate him, Rome declared war (74). Mithradates won an early naval victory, but the Roman commander *Lucullus forced him to the defensive, and he took refuge with his son-in-law Tigranes of Armenia. A mutiny among the Roman troops allowed him to return to Pontus (67), but *Pompey completely defeated him. According to legend, Mithradates, from his youth, took increasing quantities of poison to render himself immune from murder: at his end, in the Crimea, he ordered a soldier to kill him.

Mitscherlich, Eilhardt (1794–1863). German chemist. A pioneer of crystallography, he recognised isomorphism, dimorphism, and stated (1819) the law of isomorphism which bears his name, i.e. that substances that crystallise in the same crystal form have similar chemical compositions. This law was of great value during the early 19th century in fixing the formulae of newly discovered compounds. Professor of chemistry at Berlin University 1822–63, elected FRS (1828), he synthesised and named benzene (1834) and recognised catalytic action.

Mitterrand, François Maurice Marie (1916–1996). French Socialist politician, born in Jarnac, Charente. Educated at the University of Paris, after a conservative youth and military service, he worked with the Vichy regime but also joined the Resistance. He was a deputy 1946–58, 1962–81 and a senator 1959–62, serving as a minister in 11 governments under the Fourth Republic. He contested the French presidency in 1965 and 1974, losing to Charles de Gaulle and Valéry *Giscard d’Estaing. He organised a coalition of all socialist parties (other than the Communists) and became first secretary of the unified French Socialist Party 1971–81. He served two terms as President of the French Republic 1981–95, defeating Giscard in 1981 and Jacques *Chirac in 1988. His foreign policies were essentially Gaullist and domestically his bold interventionist policies, especially in industry, were constrained by the impact of recession. He promoted the creation of great monuments in Paris, notably La Grande Arche (at La Defense), extensions to the Louvre (and l. M. *Pet’s glass pyramid), the Opera Bastille, and the science centre at La Villette. The longest serving
French head of state since *Napoléon III, he died 15 years after prostate cancer was diagnosed. The huge Bibliothèque National at Tolbiac was named for him (1996). He became an honorary British GCB and received the Royal Victorian Chain.

**Mizoguchi Kenji** (1898–1956). Japanese film maker. From 1922 he directed 87 films, very few seen in the West, the greatest probably being *Ugetsu Monogatari* (The Story of Ugetsu, 1953), *Sansho Dayu* (1953) and *The Street of Shame* (1957), eloquent and often beautiful expositions of universal values.

**Mo Yan** (‘Don’t speak’, personal name Guan Moye) (1955– ). Chinese novelist, born in Shandong province. During the Cultural Revolution, he left school at 12 to work in the fields. He served in the PLA, began to read widely and was influenced by *Lu Xun and translations of *Faulkner and *Garcia Marques. *Red Sorghum* (1987) was filmed by *Zhang Yimou. Other novels include *Life and Death Are Wearing Me Out* (2006), *Sandalwood Death* (2013), and *Pow!* (2013). He was awarded the Nobel Prize for Literature in 2012 for his work which ‘with hallucinatory realism merges folk tales, history and the contemporary’. Mo Yan was criticised by Salman Rushdie and others for failing to protest against the contemporary’. Mo Yan was criticised by Salman Rushdie and others for failing to protest against the treatment of dissidents in China (*Gao Xingjian*).

**Mobutu Sese Seko** (originally Joseph-Desiré Mobutu) (1930–1997). Zairean politician. Employed in the Belgian Congo Force Publique 1949–56, he became a member of Movement National Congolaise, and was a delegate to the Brussels conferences on independence, 1959–60. Following independence he became Secretary of State for National Defence in the Cabinet of Patrice *Lumumba in 1960, and he was also Commander-in-Chief of the army. In September 1960 Lumumba was overthrown and *Mobutu took power. As President of Zaire 1965–97, he established authoritarian rule, torturing and executing opponents and amassing great wealth, while shrewdly negotiating political alliances with foreign governments. He became a marshal in 1982 and was overthrown and exiled in May 1997, then died of cancer.

**Mocetzuma II** (or Xocoyotzin, the Spaniards called him Montezuma) (c.1468–1520). Mexican (Aztec) Emperor 1502–20. Son of the emperor Axayacatl (d.1481), he succeeded his uncle Ahuitzotl at the height of the Aztec empire, extending to Nicaragua, with a population of perhaps 8 million (estimates vary wildly, from 4 to 30 million). Originally trained for the priesthood, and deeply superstitious, he was not warlike by nature and when the Spanish conquistador *Cortés arrived in 1519 may have believed he was a reincarnation of the god Quetzalcoatl. He offered Cortés propitiatory gifts of gold and silver. These only whetted the Spanish appetite for plunder and when repeated embassies and an ambush also failed to stop Cortés he decided to give him a ceremonial welcome at Tenochtitlan, his lake-encompassed capital. Cortés managed to seize him as a hostage but, on returning from a temporary absence, he found that his men in sudden panic had started a massacre (the *Noche Triste*) and were now besieged with Mocetzuma. The Spanish explained that while Mocetzuma was trying to appeal to his own people from the walls, he was struck by many stones and died four days later. The Aztecs believed he had been strangled (or put to the sword).

**Modi, Narendra Damodardas** (1950– ). Indian politician. Chief Minister of Gujerat 2001–14, he led the Bharatiya Janata Party (BJP) to an overwhelming majority in the elections of May 2014, smashing the Congress Party and its allies, and became Prime Minister of India 2014–.

**Modiano, (Jean) Patrick** (1945– ). French novelist. He wrote the screenplay for *Lacome, Lucien* (1974). Sometimes described as the ‘Marcel Proust of our time’, he won the 2014 Nobel Prize in Literature ‘for the art of memory with which he has evoked the most ungraspable human destinies and uncovered the life-world of the occupation’ [of France by the Germans 1940–45]. Since winning the prize, 22 of his novels have been published in English.

**Modigliani, Amadeo** (1884–1920). Italian artist, born in Livorno. After an artistic education based on study of the old masters, he went to Paris (1906) and met several of the ‘Fauves’ group. He lived in great poverty and died of tuberculosis, complicated by drink. His portraits and melancholy nudes, which now command high prices, show the influence of *Cézanne and primitive African sculptors, but the melody of line produced by subtle linear distortion expresses his own individual genius. *La Belle Romaine* sold at auction for $US68.9 million in 2010, and *Reclining Nude* (No. 2) for $US140 million in 2015.

**Werner, A., Modigliani.** 1967.

**Modigliani, Franco** (1918–2003). Italian-American economist. In the US from 1940, he taught at the Massachusetts Institute of Technology and won the 1985 Nobel Prize for Economics.

**Mohammed see Muhammad**
Mohammed II ("the Conqueror") see Mehmet II Fatih

Mohammed V (Sidi Mohammed ben Yussuf) (1910–1961). King of Morocco 1956–61. He succeeded as sultan under French protection (1927) but in 1953 he put himself at the head of the nationalist movement until deposed and exiled by the French. Restored in 1955, when Morocco gained independence (1956) he became its first king, abandoning (1957) the title sultan. He was succeeded by his son *Hassan II.

Mohammed VI (1861–1926). Last sultan of Turkey 1918–22. The defeat of Turkey in World War I left him a helpless pawn in the hands of the Allies and he was unable to contend with the nationalist rising under Mustafa Kemal (*Atatürk). He was deposed and retired to the Italian Riviera, where he died.

Mohammed Ali see Mehmet Ali

Mohammed Reza (1919–1980). Shahanshah of Iran 1941–79. He succeeded his father *Reza Shah, forced to abdicate by the Allies in World War II. He made efforts to modernise his country, to reform economic inequalities, but he scorned western liberalism. From the 1970s onwards he was under increasing pressure from an Islamic fundamentalist revolution (*Khomeini). In January 1979 he left Iran with his family and stayed in Morocco, Mexico, the US and Panama. The religious leaders demanded his return to Iran to answer charges of corruption. In early 1980, he left Panama for Egypt where he died.

Moiseiwitsch, Benno (1890–1963). British pianist, born in Russia. He won the Rubinstein prize at nine, and later studied at the Imperial Academy of Music in Odessa. He first appeared in Britain in 1908 and was noted as an interpreter of the Romantic composers.

Moissan, Ferdinand Frédéric Henry (1852–1907). French chemist. He was best known for his success in isolating the elusive element fluorine (1886), and for his development of the electric arc furnace, with which he studied high-temperature reactions, preparing new compounds, e.g. the metal carbides and nitrides. He became (1889) a professor of chemistry in Paris and won the Nobel Prize for Chemistry (1906). Molière (Jean Baptiste Poquelin) (1622–1673). French playwright and actor, born in Paris. Son of the king's upholsterer, he received his education at a Jesuit college in Paris but more serious studies were abandoned when he formed a theatrical company (1643), adopting the stage-name, Molière. After touring the provinces for many years his company returned to Paris (1658) and gained the patronage of the king's brother and eventually (1665) of *Louis XIV himself. He was thus able to provide court entertainments, though, in fact, most of his greatest plays were performed at his own theatre at the Palais Royal. These plays, in most of which he himself played the leading part, range from slapstick farce to philosophical satires and many of them reveal the extent of his debt to *Plautus, *Terence and *Lope de Vega. Molière's motto was ‘No truth without comedy and no comedy without truth', and in his works he poked fun at hypocrites, quacks, extremists and all those ‘enslaved by a ruling passion'. He achieved his first big success with *Les Précieuses ridicules (1659), followed by a series of masterpieces, e.g. *L'école des femmes (1662), *Tartuffe (1665), an attack on religious hypocrisy which was banned for four years, *Le Misanthrope (1666), *Le Bourgeois gentilhomme (1671) and *Les Femmes savantes (1672). His last play was *Le Malade imaginaire (1673). While acting in it he suffered a haemorrhage and died later the same night. After his death his company joined with another to form the Comédie Française, where the traditions of the original performances are observed.

Mollet, Guy (1905–1975). French politician. A teacher and an active Socialist, he joined the army in World War II, was a prisoner of war 1940–42 and later joined the Resistance movement. He entered (1945) the Constituent Assembly and became (1946) Secretary-General of the Socialist Party. After a number of ministerial appointments he was Prime Minister 1956–57 and so directed French participation in the Suez attacks (November 1956). He supported de *Gaulle's return to power (1958) and served in his ministry until 1959.

Mollison, Amy and James see Johnson, Amy

Molnár, Ferenc (1878–1952). Hungarian playwright. He settled in the US in 1910, was a war correspondent in World War I, and both before and after wrote popular and successful comedies, e.g. *The Guardsman (1910), Liliom (1924), *The Glass Slipper (1924) and *The Good Fairy (1937).

Molotov (Scriabin), Vyacheslav Mikhailovich (1890–1986). Russian Communist politician, born in Vyatka province. From a middle-class family, he was a cousin of the composer Aleksandr *Scriabin. He joined the Bolsheviks in 1906 and later adopted the name Molotov (‘hammer’). He was a candidate member of the Politburo 1921–25, General-Secretary of the Communist Party 1921–22, and a full Politburo member 1925–57, working closely with...
of the Australian Corps. Montgomery named Monash as ‘the best general of the Western front’ and suggested that he should have replaced Haig in command. However, he was the victim of prejudice by the official Australian war historian C. E. W. Bean and only received promotion to full general in 1930, long after he had retired. He became Chairman of the Victorian State Electricity Commission 1920–31 and Vice Chancellor of Melbourne University 1923–31. Monash University, established in Melbourne in 1959, was named for him.

**Monboddio, Lord. James Burnett** (1714–1799). Scottish judge, pioneer anthropologist and comparative linguist. Educated in Aberdeen, Edinburgh and Groningen, he was a judge of the Court of Session 1767–99, a leading but eccentric figure in the Scottish Enlightenment, an enemy of David Hume, a rival of Lord Kames, but sympathetic to Robert Burns. In *Of the Origin and Progress of Languages* (6 volumes, 1773–92), he anticipated evolutionary theory in the development and complexity of language. His work was read closely by Erasmus and Charles Darwin.

**Monck** (or Monk), **George, 1st Duke of Albemarle** (1608–1670). English soldier. He gained military experience in the Thirty Years’ War. In the English Civil War he at first served with the Royalists, was captured, and gained Cromwell’s confidence. As a commander he distinguished himself at Dunbar and (at sea) with Blake. In 1654 Cromwell appointed him Governor of Scotland where he successfully restored order. Cromwell’s death gave him the opportunity to exercise judgment in political matters. On New Year’s Day 1660 he entered England with 6000 men, reached London unopposed, reinstated the Long Parliament and secured a new election. He worked skilfully to reconcile the army to the growing public desire for a restoration of the monarchy. Charles II, from whom he had obtained pledges of constitutional rule before inviting him to return, made him a duke on Dover beach.

**Moned, Ludwig** (1839–1909). German-British chemist. A pupil of Bunsen at Heidelberg, he invented processes for recovering sulphur from alkali waste, and ammonia from nitrogenous substances. He settled in England (1867) and formed (1873), with (Sir) John Brunner, the firm of Brunner, Mond & Co. (later merged with Imperial Chemicals) to produce soda from common salt by the Solvay process. One of Mond’s most valuable discoveries was the carbonyl process for extracting nickel from its ores. His son, Alfed Moritz Mond, 1st Baron Melchett (1868–1930), like his father a strong Zionist, was an MP 1906–22, 1924–28 (Liberal until 1926, then Conservative) and Minister for Health 1921–22.

Mondrian, Piet (1872–1944). Dutch painter. His earliest work was in landscape in the Dutch Romantic and Impressionism tradition. In Paris (1912–14) he was influenced by the ‘Fauves’. He went back to Holland (1914) and began his search for a formal purity without ‘content’ or reference and by 1922 his paintings had become geometric, rectilinear, in primary colours against a grey or ochre background. With Theo van Doesburg, Mondrian founded (1917) the magazine De Stijl, a name also given to the ‘school’ of painting that followed his lead. He himself called his work ‘Neo-plasticism’ and in the US (to which he emigrated in 1944 after living in Paris and London), it was held to be the purest, least literary expression of the age of technology. Some modification of the earlier stark severity was admitted in his last works.

Elgar, F., Mondrian. 1968.

Monet, (Oscar) Claude (1840–1926). French Impressionist painter, born in Paris. He grew up in Le Havre and acquired an early love for the Seine with its reflections of trees, buildings, boats and its scenic effects. He studied painting with *Boudin. When, in 1862, he settled in Paris, he met *Cézanne, *Renoir, *Sisley and others who were later to become the Impressionists, a name mockingly bestowed by a critic of Monet’s picture Impression, Soleil levant, shown at an exhibition organised by Monet, Berthe *Morisot and Sisley in 1874. The group’s greatest innovation was to take painting out of the studio into the open air. With Renoir, at first at Argenteuil on the Seine, Monet tried to achieve greater naturalism by exact analysis of tone and colour and to render the play of light on the surface of objects, using a flickering touch and paint applied in small bright dabs in a high key and with a lack of outline. His pictures were mostly landscapes, many with water or snow. Influences included *Turner and *Hokusai. He would paint the same objects, e.g. haystacks or cathedrals, at different times of the day to get different light effects, but in his later works the light patterns began to be used mainly for their aesthetic effect rather than as a means to describe form. He worked in England, the Netherlands and Norway. From 1883 he lived at Giverny where he created a great garden and painted irises, roses and the Japanese bridge there.

Monge, Gaspard (1746–1818). French scientist. His early work was concerned with improving teaching methods in military engineering. He made systematic advances in descriptive geometry, and modern engineering drawing owes much to him. While continuing his military studies (he was much concerned with logistic problems of moving materials for use in fortifications), he developed interests in fields of applied and pure mathematics. He developed new techniques for applying the calculus to curves and faces in three dimensions. After his election to the Academy in 1780, Monge spent more time in Paris, and his interests moved towards physics and chemistry. He aided *Lavoisier in the analysis and synthesis of water, and carried out experiments on the composition of iron, steel, and carbon dioxide. In the Revolutionary period, Monge played increasingly prominent roles in public life. He became Minister for the Navy in 1792, and then, in 1795, director of the newly founded École Polytechnique. He was closely involved in establishing the metric system of weights and measures. Monge’s substantial publications, including his Géometrie descriptive (1795) and Traité élémentaire de statique (1810) became key teaching texts.

Mongkut see Rama IV

Moniz, Antonio Caetano de Abreu Freire Egas (1874–1955). Portuguese neurologist. He held chairs at Coimbra and Lisbon, served as a deputy 1903–17 and Foreign Minister 1918. He shared the 1949 Nobel Prize for Medicine with Walter Hess for their development of prefrontal leucotomy (a technique now completely discredited.)

Monmouth, James Scott, Duke of (1649–1685). English rebel, born in Holland. Son of *Charles II of Great Britain and his mistress Lucy Walters, he went to England after the Restoration and was created (1663) Duke of Monmouth. On marrying Anne, Countess of Buccleuch, he adopted her surname, Scott, and was made Duke of Buccleuch. Spolt by his father and the adulation of the people, he was a ready tool of *Shaftesbury and those who put him forward as a candidate for succession to the throne to the exclusion of the Duke of York (*James II). It was even said that proofs of his legitimacy were contained in a mysterious black box. The discovery of the extremist Rye House plot to hasten Monmouth’s accession by assassinating King Charles forced him to flee to Holland (1683), but on James II’s accession (1685) he landed at Lyme Regis and claimed the throne. His little army, mostly peasants, was quickly defeated at Sedgemoor, and Monmouth was captured and executed.

Monnet, Jean (1888–1979). French bureaucrat. Pioneer of European unity and recognised as a founder of the European Community, he was the first deputy secretary-general of the League of Nations 1919–23. After World War II he originated the French Modernisation Plan and, later, the Schuman...
Plan for organising European resources. This led to the formation of the European Coal and Steel Community of which he became President 1952–55. Chairman of an action committee for a United States of Europe, he was awarded the Charlemagne Prize in 1953, the Schuman Prize (1966) and the title ‘Honorary Citizen of Europe’ (1976).

Monod, Jacques Lucien (1910–1976). French biochemist. Educated at the University of Paris and the California Institute of Technology, he was a colonel in the Resistance during World War II and worked at the Pasteur Institute 1945–76. He shared the 1965 Nobel Prize for Medicine with André Lwoff and François Jacob for work on the regulatory action of genes. Monod was a brilliant controversialist and debater, an excellent writer on the philosophy of science (Chance and Necessity, 1970) and a gifted cellist.

Monroe, James (1758–1831). 5th President of the US 1817–25. Born in Westmoreland County, Virginia to a prominent family, his education was cut short by the War of Independence in which he served with distinction. He entered Virginian politics (1782) and opposed the ratification of the US Constitution on the grounds that it would lead to excessive federal control of the individual states. Elected to the US Senate 1790–94 as a strong supporter of his friend Jefferson, then Secretary of State, he was appointed Minister to France 1794–96. He served as Governor of Virginia 1799–1802 and 1811. When Jefferson became President he sent Monroe to Europe on a series of diplomatic missions (from 1803), on the first of which he helped to negotiate the purchase from *Napoleon of a vast area of the Mississippi basin (the Louisiana Purchase). He was Minister to the United Kingdom 1803–08. Secretary of state 1811–17, he was Madison's natural successor as president. In 1816 he defeated the Federalist Rufus King (1755–1827). In 1820, the Federalists having collapsed, he was re-elected without opposition. He is best remembered for his promulgation of the Monroe Doctrine (1823), a declaration of US opposition to further European colonisation of the Americas and European interference with independent governments.

Monroe, Marilyn (Norma Jean Mortenson, later Baker) (1926–1962). American film actor, born in Los Angeles. After a tough childhood with an unstable mother, she became a model, and, in 1948, gained her first bit part in a film. Her blonde beauty and voluptuous body soon made her an international sex symbol and she achieved enormous popular success in a series of comedies, e.g. Seven Year Itch (1955), The Prince and the Showgirl (1957, with Laurence *Olivier), Some Like it Hot (1959) and The Misfits (1961, with Clark *Gable). She married the baseball star Joe *DiMaggio (1954) and the playwright Arthur *Miller (1956). She combined sensuality, humour and a certain mysterious quality. She had unfulfilled cultural and political ambitions, took up acting classes seriously and had close, if discreet, connections with John and Robert *Kennedy. She died of a drug overdose.

Monsarrat, Nicholas (John Turney) (1910–1979). British author. He began writing novels in 1934, but it was his wartime experience in the Royal Navy that inspired his instantly successful The Cruel Sea (1951). He later wrote other popular sea novels. His autobiography in two volumes, Life is a Four Letter Word, was published 1966 and 1970.

Montagnier, Luc (1932– ). French virologist. Director of Research at the Centre National de Recherche Scientifique (CNRS) 1974–98, and a professor at the Pasteur Institute 1985–2000, he was the leading French researcher on AIDS. In 1983 he identified the AIDS virus but proved unable to grow it in cells. He became involved in a bitter controversy with the American researcher Robert *Gallo who claimed to have isolated the virus independently. He shared the 2008 Nobel Prize for Medicine but became deeply controversial with his unverified claims that autism could be cured by antibiotics and by endorsing homeopathy.

Montagu, Lady Mary Wortley (1689–1762). English letter writer. Daughter of Evelyn Pierrepoint, later 1st Duke of Kingston, she accompanied her husband, Edward Wortley Montagu, on a diplomatic mission (1716–18) to Constantinople, whence she introduced the practice of vaccination into England. She had acquired considerable education and this, combined with her own lively intelligence, enabled her, on her return, to become the centre of a fashionable group of artists, writers and wits. From 1739 she lived mainly in Italy. Her letters, covering the years 1709–62, are her real claim to fame. In them she gives vivid descriptions of places, people and events, revealing herself as a woman of much worldly wisdom, of warm and compassionate affection and an engaging wit, spiced with malice.

Montaigne, Michel Eyquem, Seigneur de (1533–1592). French essayist, born at the Chateau de Montaigne, near St Emilion, in Périgord. His father had been Mayor of Bordeaux and his mother was a Huguenot of Jewish origin. After his father's death (1568), and that of his elder brothers, he inherited the family estate. He served as a 'councillor' of the Bordeaux parlement and eventually became Mayor...
1581–85. From 1571 he devoted most of his time to travel and to the writing of the famous Essais, a term he originated.

He worked for decades in his library in a tower on his estate at St Michel de Montaigne, in Périgord, essentially writing about himself, pursuing the question: ‘Que saî-je?’ (Old French spelling, ‘Que sais-je?’ in modern: ‘What do I know?’) The words were inscribed on his heraldic emblem. Montaigne’s starting point is his own experience and he writes on familiar subjects – his house, his tower, his library, his garden, his body, his mind, his travels, occasionally even his family – extracting from them a sense of the universal, but also the infinite and inexplicable, examining the unpredictable ways his mind worked, then projecting his thoughts into speculation about the universe, discussing in a detached, sceptical fashion philosophical, religious and moral questions with a tolerant awareness of the fallibility of reason. His Essays broke a long taboo against people writing at length about themselves, and it is the first great autobiographical work since St *Augustine’s Confessions, but broader, more open and speculative.

Books I and II appeared in 1580, Book III was included in an enlarged edition (1588), and a further edition was published (1595) after his death. He suffered agonies from kidney stones after 1578, and this influenced his meditations on illness, death and life’s brevity. His essays were first translated into English by John Florio (1603). Montaigne influenced many writers, including *Shakespeare, *Bacon, English by John Florio (1603). Montaigne influenced English by John Florio (1603). Montaigne influenced many writers, including *Shakespeare, *Bacon, *Burton, *Emerson, *Stendhal, *Tolstoy and *Proust.

Frame, D. M., Montaigne. 1965; Scholar, R., Montaigne and the Art of Free-Thinking. 2010; Bakewell, S., How to Live: Or A Life of Montaigne in One Question and Twenty Attempts at an Answer. 2011; Frampton, S., When I am playing with my cat, how do I know she is not playing with me? 2011; Green, F., Montaigne and the Life of Freedom. 2013; Desan, P., Montaigne. A Life. 2014/17.

Montefeltro, Federico Ubaldi da, Duke of Urbino (c.1420–1482). Italian nobleman. The last of the great condottieri, he ruled as Duke of Urbino 1444–82 and, because he often held the balance of power in northern Italy, was able to increase his duchy threefold. The pupil of Vittorino da Feltre, he owned the finest library in Italy, patronised humanist scholars, never lost a battle, was considered the greatest soldier of his era, became an honorary Knight of the Garter and the subject of a memorable double portrait (with his wife Battista Sforza) by *Piero della Francesca. His son Guidobaldo da Montefeltro (1472–1508) was the model for *Castiglione’s The Courtier.

Montefiore, Sir Moses Haim, 1st Baronet (1784–1885). Anglo-Jewish philanthropist, born in Livorno (Leghorn). He settled in England (1805), made a fortune on the London Stock Exchange and retired (1824) to devote his energies to philanthropic work to help Jews. He also negotiated agreements with Russia, Turkey and Egypt by which persecution in Poland, Syria and elsewhere was mitigated. He was knighted in 1837 and created a baronet in 1846.

Montesquieu, Charles Louis de Secondat, Baron de la Brède et de (1689–1755). French political philosopher, born in Bordeaux. Charles de la Brède studied law and in 1716 became President of the parlement of Bordeaux in succession to his uncle, whose wealth he inherited on condition that he also assume his name, de Montesquieu. For a time he was interested in science but abandoned it for letters and, with the publication of his Letters persanes (1721), he became famous. The book purports to contain the letters of two Persians visiting Paris, to each other and to their friends at home. Witty and frivolous comment is mingled with serious observations on the social and political institutions and the various influences (climate, religion etc.) on the people. In 1726 he gave up his official position at Bordeaux and settled in Paris with interludes of travel. He visited England (1729–31) and studied its constitutional procedures. In his next major work, Considerations sur les causes de la Grandeur des Romains et de leur décadence (1734) he tried to explain the greatness and the decline of the Roman Empire by giving full weight to economic, cultural, climatic and racial factors the first time that historic processes had been submitted to such a scientific examination. The monumental De l’Esprit des lois (2 volumes, 1748) occupied him for 20 years and summarised his life’s work. By the ‘spirit’ of the laws he meant the social and natural (e.g. climatic) conditions which have brought laws and constitutions into being. The English system of constitutional government is analysed in detail and the functions of legislature and executive assessed and presented for admiration and imitation (although he exaggerated the separation of powers). France’s rulers failed to heed the book’s message in time to avert revolution but its influence was profound in shaping the intellectual background to political life there and elsewhere. He coined the terms ‘separation of powers’, ‘checks and balances’ and ‘Byzantine Empire’.

Montessori, Maria (1870–1952). Italian educationist. She worked as a doctor in a Rome asylum teaching mentally handicapped children and applied this experience to the education of normal pupils. From 1911 she lectured throughout the world on the ‘Montessori method’, which emphasised that young children learn best through spontaneous activity and under minimal constraint.

Monteverdi, Claudio (1567–1643). Italian composer, born at Cremona. Little is known of his early years but he won fame by his nine books of madrigals, the first of which appeared in 1587 and the second in 1590, the year he joined as a player of the viol the service of Vincenzo Gonzaga of Mantua, with whom he stayed until the duke’s death (1612). In 1613 he became choirmaster of St Mark’s, Venice, then the most important musical post in Italy. In 1632 he was ordained. His first opera, *La Faveola d’Orfeo (The Legend of Orpheus)*, was produced at Mantua for the carnival of 1607. In this work, the first opera of importance, Monteverdi consolidated the experiments of the earliest opera composers, the far less accomplished Jacopo Peri and Giulio Caccini. He was the first composer to employ an orchestra and in his moving vocal music revealed the psychological possibilities of the operatic medium. Of the many other operas and ballets of this period the best is *Arianna* (1608). The operas of his Venetian period were destroyed during the sack of Mantua (1630), but two later works, *The Return of Ulysses* (1640) and *The Coronation of Poppea* (1642) remain. As the pioneer of opera (he also introduced opera techniques into Church music) and composer alike, he is among the greatest figures in musical history, not only of the Baroque.

Montez, Lola (Eliza James, née Gilbert) (1818–1861). Irish-American dancer and adventuress, born in Limerick. Claiming Spanish ancestry on her mother’s side, after a disastrous early marriage she became a dancer, making her London debut in 1843. She toured Europe and her lovers included *Dumas père* and *Liszt*. In 1846 she reached Munich where the eccentric Bavarian king *Ludwig I* became enthralled and created her Countess of Lansfeld. His obsession and her role in government contributed to his forced abdication in the revolution of 1848. She moved to New York in 1851 and toured Australia 1855–56.

Montezuma II see Moctezuma II

Montfort, Simon de, Earl of Leicester (c.1160–1218). French nobleman and soldier. He fought in the Fourth Crusade, led the campaign to exterminate the Albigensians (Cathars) (1209–15), captured Carcassone and became ruler of Toulouse. He claimed the Earldom of Leicester through his mother. His son, Simon de Montfort, Earl of Leicester (c.1208–1265), born in Montfort, married (1238) a sister of the English king *Henry III* against whom, ironically, he was to lead the baronial revolt. He was Henry’s capable deputy in Gascony (1248–63), but a grievance that he had not been given royal support when his actions had been called in question made him readier to side with his fellow nobles in their efforts for government reform. By the Provisions of Oxford (1258) and of Westminster (1259) it was held that the king should govern through a council of 15 magnates, but de Montfort’s contention that the barons themselves should be subject to the council caused a split in their ranks which enabled the king and his son *Edward* to repudiate the Provisions. Civil war followed, decided by de Montfort’s victory at Lewes (1264) which left him in command of the country with Henry and Edward prisoners in his hands. To regularise proceedings he summoned (1265) a ‘parliament’ (parlement or session of the magnates). The difference from earlier sessions was that to strengthen his position, since many hostile barons did not respond to the summons, he summoned also knights of the shire (i.e. the country gentry). By adding a more representative element (likely to give him support), the association of de Montfort’s name with the first English parliament (in the modern sense) can somewhat dubiously be justified. In the same year Prince Edward escaped from surveillance, rallied the royalist supporters and gained the decisive victory of Evesham, where de Montfort was killed.

Montgolfier, (Jacques) Etienne (1745–1799) and Joseph Michel (1740–1810). French inventors of a man-carrying balloon. The brothers, papermakers by profession, experimented first by filling paper bags with hot air, and later used a bag of silk with an open bottom under which paper was burnt to heat the air to lift the balloon. After an experiment with animals (September 1783) and captive flights, the first free manned ascent was made on 21 November when a balloon 15.7 m (48 ft) in diameter and 24.6 m (75 ft) high travelled for nine kilometres (nearly six miles) across Paris at a height of 100 m (328 ft.)

Montgomery of Alamein, Bernard Law Montgomery, 1st Viscount (1887–1976). British field marshal, born in London. Son of a bishop, he grew up in Tasmania, joined the Royal Warwickshire Regiment (1908) and fought on the western front throughout World War I. At the beginning of World War II he led the 3rd Division in France, his corps commander being the future Lord *Alanbrooke. After Dunkirk he served in England and was G.O.C. Southeastern Command when (August 1942) he was sent to Egypt to take over the 8th Army, which had already checked *Rommel on the Alamein position guarding Alexandria. After defeating a strong German attack (31 August) he planned, and the 8th Army achieved, a decisive breakthrough (October). The chase continued westwards across Africa: the 8th Army joined the American and British forces in Tunisia where early in 1943 the last German forces surrendered. Montgomery remained with the 8th Army for the invasions of Sicily and Italy but at the end of 1943 left to prepare for the liberation of France. He commanded all US, British and Canadian troops in the Normandy landings of June 1944 and later the 21st Army Group forming the left wing. Once the break out had been achieved the advance to the Dutch frontier was amazingly fast. After the German surrender (April 1945), Montgomery commanded the British Military Zone. Created viscount and given a KG in 1946, he became Chief of the Imperial General Staff 1946–48 and Deputy Commander, Supreme Headquarters, Allied Powers in Europe 1951–58. His *Memoirs (1958) made sharp criticisms of his former Commander-in-Chief *Eisenhower, for overruling his 1944 plan for a swift thrust on a narrow front direct to the Ruhr in favour of a slower and more systematic end of 1943 left to prepare for the liberation of France. He commanded all US, British and Canadian troops in the Normandy landings of June 1944 and later the 21st Army Group forming the left wing. Once the break out had been achieved the advance to the Dutch frontier was amazingly fast. After the German surrender (April 1945), Montgomery commanded the British Military Zone. Created viscount and given a KG in 1946, he became Chief of the Imperial General Staff 1946–48 and Deputy Commander, Supreme Headquarters, Allied Powers in Europe 1951–58. His *Memoirs (1958) made sharp criticisms of his former Commander-in-Chief *Eisenhower, for overruling his 1944 plan for a swift thrust on a narrow front direct to the Ruhr in favour of a slower and more systematic advance along the whole front. One of Montgomery’s most striking assets was his supreme self-confidence which he managed to transmit to his men.

Montgomery, L(ucey) M(aud) (1874–1942). Canadian author. She wrote an enormously successful series of eight novels beginning with *Anne of Green Gables (1908), ending with *Rilla of Ingleside (1921), short stories, poetry and an autobiography.

Montenlart, Henry Millon de (1896–1972). French novelist, poet and playwright. An aristocrat by birth, he was wounded in World War I, was a bullfighter in Spain for a time and lived in the Sahara (1925–32). His forceful and cynical novels, e.g. *Les Bestiaires (1925), *Les Célibataires (1934) and *Les Jeunes Filles (1939), reveal his contempt for bourgeois values. After World War II he wrote successful plays, including *Le Maître de Santiago (1947). Elected to the Académie Française in 1960, he committed suicide, fearing the onset of blindness.

Cruickshank, J., *Montenlart. 1964

Montpensier, Anne Marie Louise d’Orléans, Duchesse de (1627–1693). French princess. For her heroic conduct in support of *Condé during the French civil war called the Fronde, she became known as ‘la Grande Mademoiselle’.

Montreuil, Pierre de see Pierre de Montreuil

Montrose, James Graham, 1st Marquess of (1612–1650). Scottish leader. After returning from continental travels he joined the anti-royalists and helped to draw up the National Covenant, but, disgusted by the extremism of the Covenanters, he abandoned their party and was appointed (1644) Lieutenant General in Scotland by *Charles I. With an army mainly of Highlanders, he achieved an astonishing series of victories that made him virtually master of the country. In 1645, however, he was surprised at Philiphaugh and forced (1646) to take refuge in Holland. In 1650, determined to avenge Charles’s death, he invaded the north of Scotland from the Orkneys, but he found no support, was defeated at Invercarron, betrayed and hanged at Edinburgh. He was a chivalrous, romantic leader and gifted poet.

Moody, Dwight Lyman (1837–1899). American evangelist. After being a Boston salesman, he went to Chicago (1856) and began the missionary work for which he became famous. With the singer and hymn writer *Ira David Sankey (1840–1904), he made remarkably successful revivalist tours of the US and Great Britain.

Moody, Helen see Wills Moody, Helen

Moore, George (1852–1933). Irish writer. Life in Ireland, where his father was a landlord and racehorse owner, had little appeal to Moore as a youth. He went to London, joined a bohemian set and when aged 18, he inherited the family estate, went to Paris and studied art, with no great success. He returned to Ireland (1879) with an enthusiasm for the French Impressionists and the novelist *Zola, who became his model for a series of realistic novels culminating in *Esther Waters (1894), in which the humiliations and hardships that follow surrender to passion are, as in his other novels, the prevailing theme. Meanwhile Moore’s life was spent between Ireland and London, where he finally settled (1911). A new phase of his literary life, an autobiographical one, began in 1888 with the publication of *Confessions of a Young Man.
followed at intervals by portrayals of himself in later years, all written in an easy conversational style quite unlike that of his other works. In his final group of books the aesthete in George Moore predominates, the style, smooth and flowing, is everything, and human warmth almost lacking. He uses this style for the reconstruction of old stories and legends, e.g. *The Brook Kerith* (1916), *Héloïse and Abelard* (1921) and *Aphrodite in Aulis* (1930).

**Moore, George Edward** (1873–1958). English philosopher, born in London. Educated at Trinity College, Cambridge, he was a contemporary of *Russell on whom he had a significant (but unreciprocated) influence. Part of the ‘Bloomsbury set’ in London, he lectured at Cambridge from 1911, was professor of philosophy 1925–39 and editor of *Mind* 1921–47. Moore, who distinguished between knowing and analysing, asserted that what is commonly understood (appreciated by common sense) to be the meaning of a term was frequently at variance with the results achieved by those who analysed its meaning. He therefore used analysis not for demonstrating meaning but as a tool for discovering the component parts of a concept and its relationship to other concepts. Much of his work was in the field of ethics, and his principal books were *Principia Ethica* (1903) and *Philosophical Studies* (1922). He received the OM in 1951.

**Moore, Henry Spencer** (1898–1986). British sculptor and graphic artist, born in Castleford, Yorkshire. Son of a coal miner, he was educated at Castleford Grammar School, served in France 1917–19 and, after studying at Leeds School of Art and the Royal College of Art, won a travelling scholarship (1925). His style merged on the abstract but he was concerned with the aesthetic problems of the human figure, a major aim being the relation of sculpture to natural environment. Thus the anatomy of his ‘reclining figures’ was so disposed as to reflect natural landscape forms. Early influences were African, Mexican and Polynesian sculptures but any borrowings were adapted to suit his own aims. Moore showed a deep understanding of the nature of his material, the importance of the grain in his wood sculptures providing a striking example. His drawings of Londoners sheltering in the Underground during World War II were widely reproduced and he became a prolific and powerful lithographer and engraver. His sculptures won first prize at the Biennales at Venice 1948, São Paulo 1953–54 and Tokyo 1959. His *Atom Piece* (1964–65) was used as a model for *Nuclear Energy* (1964–66) at the University of Chicago. Generally regarded as the most important sculptor since *Rodin (and possibly since Michelangelo)*, Moore’s works were prominently displayed in public places in Britain, the US, Canada, Germany, Italy, Israel, Japan and Australia. He was awarded the CH in 1955 and the OM in 1963.

**Moore, Sir John** (1761–1809). British general. After serving in many parts of the world, including Corsica, St Lucia in the West Indies, the Helder campaign in Holland, and in Egypt, he won new fame at Shorncliffe Camp, Kent, where he proved himself (1803) one of the most remarkable trainers of troops in British army history. The rapidly moving light infantry regiments were his creation and his new drill system was a major factor in later British successes. In 1808 he was given command in the Peninsula and despite Spanish defeats, concealed his whereabouts from Napoléon and made a diversionary movement which delayed and disconcerted *Soul* while allowing time for the Spaniards to raise new armies. So much achieved, he retreated rapidly to the coast at Corunna, and his troops had already begun to embark when *Soul* attacked, but was soon repulsed with heavy losses. However, Moore was killed and his burial on the ramparts of Corunna was the subject of a famous poem by Charles Wolfe, ‘Not a drum was heard, not a funeral note …’

**Moore, Thomas** (1779–1825). Irish poet. He published several collections of graceful songs and verses, notably *Irish Melodies* (10 parts, 1808–34), for some of which he also wrote the tunes; among the most familiar of the lyrics are *Tis the Last Rose of Summer*, *The Minstrel Boy* and *The Harp that Once Through Tara’s Halls*. He gained a European reputation with *Lalla Rookh* (1817), a series of oriental verse tales linked by a prose narrative. From the time of his marriage (1811) to Bessy Dyke, an actor, he lived mostly at Slapton Cottage, Wiltshire.

**Moravia, Alberto** (Alberto Pincherle) (1907–1990). Italian novelist. His books deal with the frustrations of love in the modern world, they include *The Woman of Rome* (1947) and *The Empty Canvas* (1960).

Moray, James Stewart, 1st Earl of (1531–1570). Scots nobleman. Illegitimate son of *James V of Scotland and half-brother of *Mary Queen of Scots, he was a Protestant and in the early part of her reign gave Mary prudent advice about her dealings with the Reformed Church and other matters. Alienated by her follies, he turned against her but returned from France to act as regent after her abdication (1568). When she escaped he defeated her forces at Langside and subsequently maintained order, not without creating enemies among rival factions until his assassination.

More, Hannah (1745–1833). English writer, born near Bristol. Her sister kept a boarding school at which she was educated. After publishing a pastoral play (1773) she went to London (1774) where she became a friend of *Garrick, *Burke, *Reynolds, Horace *Walpole and Dr *Johnson and was prominent at the gatherings of intellectual women known as 'Blue Stockings' (she wrote a poem called Bas Bleu). Percy, the first of two tragedies, was produced successfully (1777) by Garrick but after his death her writings were nearly all concerned with religious and humanitarian subjects, her tracts being so successful that they led to the formation of the Religious Tract Society. Her novel Coelebs in Search of a Wife (1809) was popular at the time.

More, Henry (1614–1687). English philosopher. He cultivated interests in science, philosophy and theology, and was deeply concerned with their interconnexion. He became Doctor of Divinity in 1660, and a fellow of the Royal Society in 1664. In science, his early inclinations were towards the approach of *Descartes. He approved and helped to popularise the 'New Philosophy'. Descartes' attempted demonstration of the reality of the world of the spirit, of the existence of God, and of the separate existence of an immaterial mind from the body all underpinned More's attack upon the materialistic philosophy of *Hobbes, in his Antidote against Atheisme (1652). Later More worried, however, that Descartes' philosophy itself was too materialistic, and he helped develop a new approach to natural philosophy, known as Cambridge Platonism. This emphasised the reality of a wide range of spiritual and nonmaterial forces that helped to sustain nature. Witches and magical manifestations were evidence of this. He held that science and piety were compatible.

More, St [Sir] Thomas (1478–1535). English scholar, writer and lawyer, born in London. Son of *John More, a lawyer and judge, he was educated in London and at Oxford where he met *Colet and *Erasmus. He practised law with great success and in 1504 entered parliament. In the same year he married Jane Colt, and made a home at the 'Old Barge' in London, where he lived for 20 years, becoming undersheriff (1510). In 1515 he accompanied a trading mission to Flanders. Antwerp provided him with a setting for the introductory scene of Utopia (1516), the meeting with Raphael Hythlodae, who had discovered the island of Utopia, the ideally tolerant state, where possessions are shared and an education is available for men and women alike. The book, written in Latin, at once became popular and was widely translated (into English in 1551). Earlier More had written Praise of Folly (1510) and his History of Richard III (1513), the main authority for the story of the princes in the Tower. So brilliant a man could not escape the notice of *Henry VIII. More was present at the Field of the Cloth of Gold (1520), he became a privy councillor and was given a number of offices of growing importance until, after *Wolsey's downfall (1529), he unwillingly became Lord Chancellor. Meanwhile he was living in his new house built (1524) at Chelsea. His daughter Margaret and her husband, William *Roper, his future biographer, were living under the same roof; his other daughters married (1525). There are several accounts of a happy, devoted highly intellectual family group with many friends coming and going; of discussions both serious and gay and something of the atmosphere of a school.

Henry turned confidently to More to arrange for the dissolution of his marriage with *Catherine of Aragon, but More justly feared this would lead to a schism within the Church and offended the king by resigning his chancellorship (1532). In 1534 the Act of Supremacy was passed, by which Henry was declared Head of the Church in England. Though an intellectual and, to some extent a humanist, who recognised the need for some Church reforms, he was also a zealot, and could not tolerate apostasy and the denial of papal supremacy. He was arrested and after a year's imprisonment was convicted of treason and executed. Canonised by *Pius XI in 1935, he was named by *John Paul II as patron saint of politicians in 2000.

Moreau, (Jean) Victor Marie (1761–1813). French marshal, born in Morlaix. After becoming a divisional general under Dumouriez in Belgium (1794), he succeeded Pichegru on the Rhine (1796) and drove the Austrians back to the Danube. In 1798 he was given the command in Italy and saved the French army from destruction. After Jourdan's defeat at Novi he brought the army safely home to France. He supported *Napoléon Bonaparte's coup of 18 Brumaire (9 November 1799) and in 1800 gained a succession of victories over the Austrians, culminating in the decisive triumph of Hohenlinden. With Bonaparte's jealousy rapidly mounting, Moreau was given no further opportunities. Instead he was accused of connivance with plotters against Napoléon's life (1804) and a two-year sentence of imprisonment was commuted to banishment. He lived near Trenton,
The Flashing Stream
Among his other plays are River Line (1937), later successfully dramatised. (1936) and The Fountain Sparkenbrooke (1932), 1939–45. His polished and thoughtful novels include 1926–39 and worked for naval intelligence The Times officer, served in World War I, became drama critic for novelist and playwright. He was trained as a naval
Morgan, Charles Langbridge (1894–1958). English
Morgagni, Giovanni Battista (1682–1771). Italian anatomist. In 1711 he obtained a chair of medicine at Padua, where he stayed for the rest of his life. Morgagni devoted himself to the study of the mechanisms of the body. His investigations of the glands of the trachea, of the male urethra and of the female genitals broke new ground. Above all, he pioneered the study of morbid anatomy. He undertook 640 postmortems, and was careful to relate the diseased organs he dissected to the patient’s own life history and symptoms. Morgagni regarded each organ of the body as a complex of minute mechanisms, and the life of the whole was an index of its balanced functioning. His pioneering work in morbid anatomy was made specially valuable to later clinicians on account of his highly detailed case notes which he published in his De sedibus et causis morborum per anatomen indagatis (1761).

Morgan, Sir Henry (c.1635–1688). Welsh buccaneer. He was the most famous of the piratical adventurers who, like their Elizabethan prototypes, carried on a private and profitable war against the Spanish Empire in the West Indies and South America. Among his most daring exploits was his march (1681) across the isthmus of Panama to capture and plunder the city of that name. For the buccaneers this opened the way to the Pacific, which was to become one of their richest hunting grounds. In later life Morgan made peace with authority, he was knighted by *Charles II and then fruit flies (drosophila), tracing patterns of variation over many generations of breeding, and demonstrating that particular characteristics (e.g. eye colour) were inherited through the transmission of genetic material. He termed the particles that conveyed the messages for these characteristics in the chromosome, ‘genes’. Morgan’s work proved that heredity could be treated rigorously. His laboratory became the training ground for a generation of Mendelian geneticists Bridges, *Muller, Dobzhansky and *Monod. Morgan attempted to summarise his work in his 1934 volume, *Embryology and Genetics, which argued that because inherited characteristics were genetically coded, they produced the quite sharp variations needed by Darwin’s theory of evolution by natural selection. Thus modern genetics has come to lend support to Darwin’s theory of evolution by natural selection. For the British and French governments.

Morgan, Lewis Henry (1818–1881). American anthropologist. He lived among the Iroquois Indians for many years and wrote some important studies on kinship and the development of primitive societies. The classificatory system he deduced is contained in his *Systems of Consanguinity in the Human Family (1869).

Morgan, Thomas Hunt (1866–1945). American geneticist and embryologist, born in Kentucky. One of the founders of modern genetics, he was educated in Kentucky and Johns Hopkins, and taught at Bryn Mawr and Columbia. His academic career culminated in his becoming professor of biology at the California Institute of Technology from 1928. Morgan experimented on breeding mice and rats, and fruit flies (drosophila), tracing patterns of variation over many generations of breeding, and demonstrating that particular characteristics (e.g. eye colour) were inherited through the transmission of genetic material. He termed the particles that conveyed the messages for these characteristics in the chromosome, ‘genes’. Morgan’s work proved that heredity could be treated rigorously. His laboratory became the training ground for a generation of Mendelian geneticists Bridges, *Muller, Dobzhansky and *Monod. Morgan attempted to summarise his work in his 1934 volume, *Embryology and Genetics, which argued that because inherited characteristics were genetically coded, they produced the quite sharp variations needed by Darwin’s theory of evolution by natural selection. Thus modern genetics has come to lend support to Darwin’s theory of evolution by natural selection. For the British and French governments.

Morgan, John Pierpont (1837–1913). American financier. Son of Junius Spencer Morgan, who had built up a reputation and a fortune in international finance, J. P. Morgan expanded his financial interests into the industrial field, at first in partnerships with others and later through his own firm, J. P. Morgan & Co. (founded 1895). He had meanwhile taken over the London interests of George Peabody, whose firm eventually became (1910) Morgan, Grenfell & Co. Much of Morgan’s money was made by great industrial mergers especially of railway and shipping companies, for which the financial crisis of 1873 provided many opportunities. Even the US Government, faced with a run on gold (1895), turned to Morgan for help. His most spectacular achievement took place when he formed (1900) the United States Corporation. Although in 1912 his affairs were carefully scrutinised as a result of antitrust legislation, no charge could be brought against him. Like so many American millionaires he was a great collector, most of his pictures and works of art were eventually presented to the Metropolitan Museum of Art, New York. His library, containing many rare books and MSS, was endowed and made available to the public by his son, John Pierpont Morgan, Jr (1867–1943), who played an important role in World War I, acting as purchasing agent in the US in the financing of the Allied war effort for the British and French governments.

Morgan, Lewis Henry (1818–1881). American anthropologist. He lived among the Iroquois Indians for many years and wrote some important studies on kinship and the development of primitive societies. The classificatory system he deduced is contained in his *Systems of Consanguinity in the Human Family (1869).

a gentleman farmer and friend of Franklin D. *Roosevelt. He was Secretary of the US Treasury for a record term 1934–45. In 1943 he proposed that Germany be converted to an agricultural economy, and took a leading role at the Bretton Woods Conference (1944) which set up the International Monetary Fund (IMF) and the World Bank.

Morisot, Berthe (1841–1895). French artist. Granddaughter of *Fragonard, she was assisted by *Monet (whose brother she married), becoming one of the first and most important Impressionist painters. She was also a lithographer and etcher.

Morland, George (1763–1804). English painter. His paintings, influenced by Dutch genre pictures, present homely subjects, e.g. Interior of a Stable and The Alehouse Door (both in the National Gallery, London). Popular, too, were his drawings for engravings on moral subjects, e.g. The Effects of Extravagance and Idleness. Drink and dissipation accelerated his death.

Morley, Edward Williams (1838–1923). American chemist and physicist. He became (1869) a professor at the Western Reserve College, Hudson, with which he remained when it moved to Cleveland and became a university; he retired in 1906. He joined *Michelson in carrying out the Michelson-Morley experiment (1881). He is also known for his accurate determination (1895) of the ratio of combination by weight of hydrogen and oxygen (1: 7.9395), which allowed the atomic weight of oxygen to be accurately fixed on the hydrogen scale.

Morley, John, 1st Viscount Morley of Blackburn (1839–1923). English Liberal politician and writer, born in Blackburn. Educated at Oxford, influenced by *Mill and *Huxley, he became an agnostic and Positivist, working as a journalist. He wrote biographies of *Rousseau (1873), *Burke (1879), *Cobden (1881), *Walpole (1889) and *Cromwell (1900). As editor of the Fortnightly Review (1867–82) he promoted rationalist and anti-imperialist policies that influenced the left of the Liberal Party. A Liberal MP 1883–95, 1896–1908, *Gladstone made him Chief Secretary for Ireland 1886, 1892–95, responsible for Home Rule, unachieved until 1921. An original member of the Order of Merit (1902), he was nominated for the Nobel Prize for Literature 11 times over a decade. He wrote The Life of Gladstone (3 vols 1903) and served as Secretary of State for India 1905–10 and Lord President of the Council 1910–14. A pacifist, he resigned in protest at the outbreak of World War I.

Morley, Thomas (c.1557–1607/8). English composer. A pupil of William *Byrd, he was organist of St Paul’s, London (from 1592), and a member of the Chapel Royal. One of the greatest of English madrigal composers, he set a number of *Shakespeare’s songs (e.g. It was a lover and his lass) for voice and lute, composed Church music and works for viols and for virginals, and wrote the textbook A Plaine and Easie Introduction to Practical Musick.

Morny, Charles Auguste Louis Joseph de Morny, Duc de (1811–1865). French politician and businessman, born in Switzerland. Grandson of *Talleyrand and son of Hortense Beauharnais (wife of Louis *Bonaparte), he was an illegitimate half-brother of *Napoleon III. A shrewd and unscrupulous manipulator, he organised the coup-d’état of December 1851, became President of the Corps Legislatif 1854–65 and was a liberalising influence during the Second Empire.

Moroni, Giovanni Battista (c.1525–1578). Italian painter. His portraits of noblemen and tradesmen in and around Bergamo reveal skill and observation of character and they shed light on Italian provincial life in the 16th century. The Tailor in the National Gallery, London, is an excellent example of his work.

Morris, Gouverneur (1752–1816). American politician. Of partly Huguenot descent, he became prominent in New York politics and was a conservative at the Federal Constitutional Convention (1787), where he argued for a strong central government and became principal draftsman of the US Constitution (although *Madison and *Franklin contributed more substance). He was Minister to France 1792–94 at the time of the revolutionary ‘Terror’, of which his Diary gives a graphic firsthand account. He spent some years in travel before returning to the US. A senator from New York 1800–05, he retired to view the increasing egalitarianism of the times with aristocratic disdain.

Morris, William (1834–1896). English artist, writer, craftsman and social, born in London. Son of a prosperous city bill-broker, as a boy he lived in a large house on the borders of Epping Forest. As a pupil at Marlborough he already showed his architectural interests and at Oxford became friends with *Burne-Jones and later *Rossetti and the other Pre-Raphaelites: *Ruskin’s books guided his architectural taste at this time. After graduating he
trained as an architect, first in Oxford and then in London, where he shared rooms with Burne-Jones. His marriage (1859) to the lovely Jane Burden (1839–1914) (immortalised by her lover Rossetti), and the building for them of the famous Red House by Philip Webb, provided the incentive to found (1861) the firm of Morris, Marshall & Faulkner (later Morris & Co.) for the manufacture of carpets, wallpaper, furniture etc. This enterprise, of which his friends Ford Madox *Brown, Rossetti, Burne-Jones and Webb were all original members, enabled Morris to express his hatred of industrial civilisation and love of the medieval past, reflected also in his poetic works The Defence of Guinevere (1858) and The Earthly Paradise (1868–70). The Morris designs are now being restored to favour but it has been argued that the vogue for ‘handicrafts’ that they heralded delayed the evolution of good industrial design.

Morris's wish to revive the dignity and joy of work led him to a romantic form of socialism. He joined (1883) *Hyndman's Social Democratic Federation and founded (1884) The Socialist League. In The Dream of John Bull (1888) and News from Nowhere (1891) he presented his vision of a more human and joyful society. The last years of his life were occupied in the writing of prose romances partly inspired by his study of Icelandic sagas, and in founding the Kelmscott Press which, by reviving and improving the old standards of book binding and type design, had an important influence on the history of printing.

Morris, William Richard, 1st Viscount Nuffield (1877–1963). English motor manufacturer and philanthropist. Originally owner of a bicycle shop in Oxford, he started (1912), in an improvised works at Cowley just outside the city, to build motor cycles and then the first Morris Oxford and Morris Cowley cars. World War I intervened, but his 1925 output on 53,000 cars achieved a European record. He gave financial support to *Mosley's 'New Party' in 1931. A series of mergers (with Wolseley, Riley etc.), culminating with amalgamation (1952) with the Austin Motor Company, led to the formation of the vast British Motor Corporation under Nuffield's presidency. He was equally well known as a philanthropist, especially for the foundation of Nuffield College, Oxford (1937), and the Nuffield Foundation (1943), a charitable trust endowed with stock in Morris Motors Ltd valued at £10 million.

Morse, (Samuel) Finley (Breese) (1791–1872). American inventor, born near Boston. Educated at Yale, he studied art in England and became a successful portrait painter and pioneer photographer in the US. From 1832 he experimented with means of transmitting messages using either electricity or a system of flashing lights, adopting (without acknowledgement) the work of Joseph *Henry. He devised the ‘Morse Code’ and patented (1840) an electric telegraph. In 1844 he sent a telegraphic message from Washington, DC to Baltimore. He was politically active, deeply anti-Catholic and a strong supporter of slavery.

Morsi, Mohamed (1951– ). Egyptian politician and engineer. He gained a PhD in materials science at the University of Southern California, then became active in the Muslim Brotherhood and was a founder of the Freedom and Justice Party (2011). Described as a moderate, he expressed scepticism about al-Qaida links to the World Trade Centre attacks in 2001. After *Mubarak's fall, he was elected as President of Egypt in June 2012. In July 2013, after days of huge public demonstrations, there was an army coup, Morsi was deposed and arrested and a process of 'national reconciliation' was begun, aimed at restoring Egypt to being secular and pluralist. He was held for trial on charges of incitement to murder and espionage, and a death sentence was passed in May 2015.

Mortimer, Roger de, 1st Earl of March (1287–1330). English nobleman. He played a conspicuous part in the struggle for power in the reign of *Edward II. He allied himself with Queen Isabella, whose lover he became, in the conspiracy by which her husband
was deposed (1327) in favour of her son, the boy-
king Edward III, and soon murdered, presumably
on Mortimer's orders. Three years later the hatred
inspired by Mortimer's rule encouraged Edward
to have him seized and hanged at Tyburn without
trial. Another Roger Mortimer (1374–1398), his
descendant, became heir presumptive to Richard II
and (through the marriage of his daughter, Anne) the
source of the Yorkist claim to the throne.

Scottish nobleman. A Protestant, he was (from 1557)
at the centre of the plots and intrigues against Mary
Queen of Scots. He took part in Rizzio's murder and
was almost certainly privy to that of Darnley. It was
he who discovered the 'caislet letter' which, if genuine,
implied Mary. After the death of Moray he was
twice Regent of Scotland, 1572–78 and 1578–80, for
James VI and attempted to restore tranquillity to a
land torn by religious dissension and war. A party of
the nobles plotted to secure his dismissal. He seized
Stirling Castle and the young king, but a further plot
resulted in his execution for the murder of Darnley.

Morton, John (1423–1500). English ecclesiastic
and lawyer. After various turns of fortune during
the Wars of the Roses he became Henry VII's most
trusted adviser: he was Archbishop of Canterbury
1486–1500, Lord Chancellor 1487–1500, and
became a cardinal (1493). It is said (though the
story is probably apocryphal) that he assisted the
king's extortions by impaling potential victims on
the horns of a dilemma known as Morton's Fork, but
he certainly used his visits to nobles to assess their
wealth: if they had a costly retinue, he concluded they
were rich and able to pay heavy taxes; if modest, that
they were avaricious and equally able to pay.

American dentist. Famous for introducing ether as
an anaesthetic, he used it (1846) at Massachusetts
General Hospital, Boston, in the first successful major
operation using general anaesthesia.

English physicist. Educated at Eton and Oxford, he
worked with Ernest Rutherford in Manchester as a
research assistant 1910–13, studied the X-ray spectra
of many elements and discovered (1913) that the
frequency of the characteristic line in each spectrum
increases in regular sequence from one element to
the next in the periodic table. He thus showed the
fundamental importance of the atomic number of
an element, which defines the element and is directly
related to its atomic structure. He was killed at
Gallipoli.

Moses (Moshe, probably from the Egyptian mos,
'child') (c.14th–13th centuries BCE). Hebrew leader
and law-giver, born in Egypt. According to the
Pentateuch, he was a Levite, hidden in bulrushes to
avoid slaughter by the Egyptians, found and brought
up by Pharaoh's daughter, an account paralleling
birth legends in mythology. After killing an Egyptian
 overseer, he took refuge with the Midianites and
married Zipporah. After many years he received in
a vision an order from Jehovah to lead the Jewish
people from their captivity in Egypt to Palestine. The
10 plagues that afflicted Egypt are reputed to have
been among the reasons why Pharaoh allowed them
to depart. Moses and his brother Aaron led them to
Mount Sinai where the 'Ten Commandments' were
received. Moses led his people for many years in the
wilderness but died at the age of 120 on Mount Nebo
(Sinai) in sight of the 'Promised Land' of Palestine,
which he never reached. The Pentateuch took its
present form about 600 years after his time and he
was almost certainly a composite figure.

Freud, S., Moses and Monotheism 1939.

Moses, Grandma (Anna Mary Robertson) (1860–
1961). American painter. A farmer's wife, she took
up painting at the age of 77 and won fame for her gay
and spontaneous pictures of rural scenes.

Mosley, Sir Oswald Ernald, 6th Baronet (1896–
1980). British politician. His first wife, Lady Cynthia
Blanche Mosley (1898–1933), daughter of Lord
Curzon, was a Labour MP 1929–31. He became a
Conservative MP (1918) but joined the Labour Party
(1924) and was a member of Ramsay MacDonald's
Government 1929–30, resigning because of its failure
to cope with unemployment. He formed the New
Party (1931) and founded (1932) the British Union
of Fascists. The violence of his followers was a feature
of prewar politics. In World War II he was detained
under defence regulations. In 1948 he started a
new Union movement. His second wife was Diana
Mitford.

Mosley, N., Rules of the Game: Sir Oswald and Lady
Cynthia Mosley, 1896–1933; Beyond the Pale: Sir

actor, born in Brooklyn. A masterful mime, skilled in
drama and comedy, he starred in Ulysses in Nighttown
and created the role of Teyye in *Ionesco's
and created the role of Teyye in *Ionesco's
Rhinoceros (1958).
Mountbatten of Burma, 1st Earl of, Louis Francis Albert Victor Nicholas Mountbatten (1900–1979). British Admiral of the Fleet and administrator, born in Windsor. Son of the 1st Marquess of Milford Haven ("Battenberg") and great-grandson of Queen Victoria, he joined the Royal Navy in 1913 and became the ADC (and close friend) of his cousin, Edward, Prince of Wales ("Edward VIII"). In 1922 Lord Louis Mountbatten married Edwina (Cynthia Edward, Prince of Wales (*Edward VIII). In 1922 became the ADC (and close friend) of his cousin, Haven (*Battenberg) and great-grandson of Queen British Admiral of the Fleet and administrator, born (1900–1979).

two lucrative offers from J. P. *Salomon to work in London (1790). He died in December 1791 at his lodgings in the Rauhensteingasse (now demolished), probably from acute rheumatic fever complicated by broncho-pneumonia, a more likely cause than chronic renal (kidney) failure. His death certificate gave the cause as ‘heated military fever’ (essentially a symptom rather than a disease). His last work, appropriately, was the Requiem, left incomplete. He was buried in an unmarked communal grave in the St Marx cemetery, Vienna, in conformity with the burial laws of Joseph II.

Mozart’s works were catalogued in chronological order by Ludwig von *Köchel: the Requiem (1791) is K. 626. However, some lost works have since been found and the total number of compositions exceeds 670, about 400 surviving in Mozart’s autograph. There are 41 numbered symphonies, the most performed being Nos. 28, 31 (Paris), 35 (Haffner), 36 (Linz), 38 (Prague), 39, 40 and 41 (Jupiter); the last three were composed in six weeks (1788). Nine more juvenile symphonic works or fragments must be added. Mozart’s 27 piano concertos (and concertos for two and three pianos) are of extraordinary quality especially Nos. 9, 12, 15, 19, 20, 21, 23, 25 and 27. The 6 violin concertos, elegant salon pieces, are ressently divertimentos. He wrote a superb clarinet concerto (K. 622: 1791), four concertos for horn, concertos for flute, flute and harp, oboe and bassoon, and a Sinfonia Concertante for violin and viola (K. 364: 1779). The Serenade in B flat (Grant Parista) (K. 361: 1781–82) for 13 wind instruments, conceived on a huge scale, is a virtuoso work of unprecedented vitality. He wrote 17 Masses, of which 14 survive: the ‘Great’ Mass in C Minor (1782) and the Requiem have an astonishing power. The Requiem left incomplete, begins with a gut-wrenching introduction of 29 notes, barely 50 seconds long. Cellos and basses open, followed by the mournful sound of a bassoon, soon joined by the lowest register (chalumeau) of a clarinet, and ending with four notes, fortissimo, from three trombones. Those 29 notes, not one wasted, demonstrate exceptional economy and power.

His chamber works include 23 string quartets (the most important being six dedicated to Haydn, written 1782–85), 6 string quintets (K. 515 in C major and K. 516 in G Minor, both 1787, among his masterpieces), the serenade for strings Eine kleine Nachtmusik (K. 525: 1787), the String Trio (K. 563: 1788), seven piano trios, and the Clarinet Quintet (K. 581: 1789), the greatest in the repertoire. His 14 piano sonatas, notably transparent, are deceptively simple: as Artur *Schunck commented, ‘Too easy for amateurs: too hard for professionals’. He wrote about 30 songs.

Mozart wrote 22 dramatic works, some incomplete. 13 more or less complete operas survive. Le nozze di Figaro (The Marriage of Figaro, 1786, based on a comedy by Caron de "Beaumarchais), Don Giovanni (1787) and Cosi fan tutte (‘Thus do they all…’, 1790) have incomparable Italian librettos by Lorenzo da Ponte which contributes to rich characterisation. Mozart wrote the greatest scenes in the whole operatic repertoire, including the familiar trio from Cosi fan tutte (‘Soave sia il vento …’), the last scene of Don Giovanni, and from The Marriage of Figaro the exhilarating sextet (‘Riconosci in quest’amplesso’) in the third act. In Figaro’s sublime finale, the theme of reconciliation is compressed to a bare five lines. Psychologically and politically complex, the music and libretti reflect the social turbulence of his time.

Die Zauberflöte (The Magic Flute, 1791) is set to a German text by Emanuel *Schikaneder, a Viennese promoter: the work has many beautiful arias, but the characters lack depth and the story is more pantomime (deliberately) than drama. Mozart’s last opera was La clemenza di Tito (1791).

Bernard *Shaw argued that Mozart’s ‘voice’ was unique. After listening to only a few bars, even in an unfamiliar work, it is clear that the music can only be his. Characters in his operas have an individual sound. In The Marriage of Figaro, the Countess, Susannah and Cherubino sing in exactly the same register, as do the Count, Figaro and Dr Bartolo, and yet even with closed eyes audiences are never in doubt about who the character is. The Mozart operas are far more than elegant and witty costume dramas – with elements of violence and exploitation included with Don Giovanni. At the deepest level they raise central and disturbing questions about identity: ‘Who am I?’ and, the orchestra (especially the violas) sometimes tells a different story to what is being enacted on stage.

Peter *Shaffer’s play Amadeus (1979), later a successful film (1984), generated interest and controversy, emphasising the contrast between the sublimity of Mozart’s music and some childish and scatalogical elements in his behaviour. By the bicentennial of his death (1991) all of Mozart’s music was available on CD.

Mubarak, (Muhammad) Hosni (El-Sayad) (1928– ). Egyptian officer and politician. He joined the air force in 1950, and as Commander-in-Chief
1972–75 took a central role in the 1973 war with Israel. Vice President of Egypt 1975–81, after *Sadat's assassination, he succeeded as President 1981–2011. He maintained good relations with Israel and was heavily subsidised by the US as a reliable opponent of Islamic fundamentalism. His government became increasingly authoritarian and in February 2011, during the 'Arab Spring', after 18 days of huge demonstrations, he was forced to resign. Convicted of murder and sentenced to life imprisonment (2012), a retrial was ordered in 2013. The murder conviction was overturned but he and his sons were convicted of corruption and embezzlement.

Mueller, Baron Sir Ferdinand Jakob Heinrich von (1825–1896). German-Australian botanist. In Australia from 1847, he was an indefatigable explorer and botanical taxonomist, Government Botanist in Victoria 1853–96 and director of the Melbourne Botanic Gardens 1857–73. He discovered many new species, published exhaustively and received many awards, including FRS, KCMG and a barony from Württemberg.

Mugabe, Robert Gabriel (1925– ). Zimbabwean politician. After training as a teacher, he went to Northern Rhodesia (now Zambia) to teach and from there to Ghana in 1958. Later he became Secretary-General of the Zimbabwe African National Union (ZANU). After 10 years’ detention he left Rhodesia for Mozambique in 1974 and his party became guerrilla-based. It was this party that he led to the Lancaster House negotiations. His party having won 57 of the seats in the February 1980 elections he was invited by the Governor-General of Rhodesia to form a government. He was first Prime Minister of independent Zimbabwe 1980–88 and President 1988–. His regime became increasingly corrupt, dependent on army and police support, and agriculture collapsed. In 2006, WHO reported that Zimbabwe had the world’s shortest life expectancy. The presidential election of 2008 in which Mugabe defeated Morgan *Tsvangirai was generally regarded as fraudulent. Mugabe had been awarded an honorary GCB in 1994, but the honour was ‘annulled’ in 2008. Tsvangirai became Prime Minister in 2009, in an attempt to negotiate a unity government, but had little power. Mugabe was re-elected for a seventh term in August 2013, claiming 61 per cent of the vote on a disputed roll.

Muhammad (or Mohammad, Arab = praised) (Abu al-Qasim Muhammad ibn Abdulllah ibn ‘Abdu’l-Muttalib ibn Hashim) (c.570–632). Arab religious teacher, founder of Islam, born in Mecca. A member of the Quraysh clan which ruled Mecca, he was orphaned early and later adopted by an uncle, Abu Talib. When about 25, he was engaged by Khadijah (c.555–619), a wealthy woman, to accompany one of her caravans and he later married her. Despite the disparity in age the marriage was happy. Muhammad had two sons and four daughters by her, one of whom, *Fatimah, married his cousin *Ali – a union from which all the direct descendants of the prophet sprang.

From 610, when he was 40, Muhammad had a series of visions in which the archangel Gabriel dictated the text of what became known as the Qu’ran (Koran). Muhammad could not read or write but dictated the text from memory, either to *Ali (as Shi’ites believe) or to *Abu-Bakr (the favoured scribe of the Sunnis). The faith Muhammad preached was strict monotheism: while he accepted that Jews and Christians also worship the same god he felt that they had strayed from the strict monotheistic path. He denounced idols, proclaimed a single God, Allah, and promised true believers physical resurrection in Heaven. He preached complete submission to the will of God (this is the meaning of ‘Islam’) and the equality of all men (but perhaps not women) of every race. Christians and Jews he classed not as pagans but as Ahl al Kitab (people of the book), towards whom he extended toleration. At first only his wife believed in him and in the first 10 years he made less than a hundred converts, but this was enough to alarm the citizens of Mecca who had a vested interest in preserving the image of their city as a religious centre of all Arabs with the Kaaba and its many idols. To escape their animosity Muhammad and his followers moved unsubtly (622) to Yathrib (renamed Medina, ‘city of the prophet’), about 330 kilometres to the north which offered them security. This was the hegira (flight) from which the Muslim era dates (AH). In Medina he had greater success in winning adherents than in Mecca and he became the revered law-giver and ruler of the city. His followers organised attacks on caravans from Mecca and his fame spread and attracted support. In 623 the Muslims won a signal victory over the Meccans at Badr and in 630 Muhammad marched on Mecca, which surrendered. The Kaaba was cleared of its idols and became the shrine of Islam. Muhammad was recognised as a prophet and the new faith spread rapidly throughout Arabia. He returned to Medina, where he died. After his first wife’s death (probably in 619), Muhammad took several wives, of whom his favourite was *A’ishah (Ayesha), her father, Abu-Bakr, became Muhammad’s successor, as first caliph of Islam.
Muhammad was a unique combination of religious and secular leader, ruling central Arabia with a population of about two million. He has been described as the Islamic equivalent of a combination of *Jesus, St *Paul, the four evangelists and *Constantine, but no claim of divinity was made by or for him.

There is little about Muhammad’s life to explain those undoubted qualities that inspired such devotion among his followers, an inspiration which founded a great new world religion and carried the hitherto backward peoples of Arabia to the conquest of an empire which, at its peak, was greater in extent than that of the Romans. It also led to a flowering of arts and sciences that shone all the more brightly against the background of the Dark Ages in Europe.

Muir, Edwin (1887–1959). Scottish poet, born in Orkney. After working as a clerk in Glasgow, he became involved in left wing politics. He married Willa Anderson (1919) and went to Prague, where, with his wife, he translated the works of *Kafka and began to publish his own poetry. He worked for the British Council 1942–50, then became warden of Newbattle Abbey College. His *Collected Poems* appeared in 1952. His prose works include a study of John *Knox and his Autobiography* (1954).

Muir, John (1838–1914). American conservationist, born in Scotland. He lived in the Sierra Nevada from 1868, devoted himself to nature, travelled extensively in the west and Alaska and campaigned for forest conservation, national parks and the preservation of wilderness. The Sequoia and Yosemite National Parks were proclaimed in 1890 and he won the support of presidents *Cleveland and Theodore *Roosevelt. He was Founder-President of the Sierra Club and a prolific writer.

Mujibur Rahman, Sheikh (1920–1975). Bangladeshi politician. A lawyer, he was Secretary of the Awami League 1950–71 and campaigned for the succession of East Pakistan (Bengal). In 1970 the league won 151 of 153 Bengali seats. In March 1971 Mujibur proclaimed an independent Republic of Bangladesh with Indian support, while China backed Pakistan. Pakistan was defeated in open war (December 1971), Mujibur became Prime Minister 1972–75, and in 1975 ‘President for Life’. With the Bangladesh economy facing collapse, he established a one-party state, provoked violent opposition from the army and was soon assassinated.

Mulroney, (Martin) Brian (1939– ). Canadian lawyer and politician, born in Québec. He worked as an electrician, graduated in law from Université Laval, became a labour lawyer and gained a national reputation as President of the Iron Ore Co. 1976–83. Elected as Leader of the Progressive Conservative Party 1983, he was the first from Québec for 90 years and the first recruited directly from industry. He became Prime Minister in September 1984, negotiated a free trade agreement with the US and Mexico, lost popularity and retired in July 1993.

Muller, Hermann Joseph (1890–1967). American geneticist. Educated at Columbia University, and a student of T. H. *Morgan, he worked on the genetics of the fruit fly. In 1926 he produced an experimental induction of mutations by the use of X-rays and received the Nobel Prize for Medicine in 1946 for this work. He taught at the University of Texas 1920–32, in the USSR 1933–37 (leaving over a dispute with *Lysenko), Edinburgh 1937–40, Boston 1941–45 and Indiana 1945–67. He was among the first scientists to warn of the dangers of X-rays and nuclear fallout.

Müller, Johannes Peter (1801–1858). German physiologist. In 1833 he took the chair of physiology at Berlin University. His early researches were chiefly in two fields, embryology and the nervous system as it relates to vision. He experimented to determine whether the foetus breathes in the womb. He tried to establish the relations between the kidneys and the genitals. In optics, he investigated the capacity of the eye to respond not just to external but also to internal stimuli (whether organic malfunction, or simply the play of imagination). Müller’s physiological work was summarised in his *Handbuch der Physiologie* (1830–40). He argued that life was animated by some kind of life-force not reducible to the body, and that there was a soul separable from the body – ideas rejected by the next generation of German physiologists.

Müller, Paul Hermann (1889–1965). Swiss chemist. He synthesised (1939) DDT (dichloro diphenyl trichlorethane) and discovered its great power as an insecticide. He won the Nobel Prize for Medicine (1948).

Mullis, Kary B. (1944– ). American biochemist. He won his PhD at Berkeley, worked for the Cetus corporation 1979–86 and developed the technique of polymerase chain reaction (PCR), enabling the amplification and replication of fragments of DNA. He won the 1993 Japan Prize and shared the 1993 Nobel Prize for Chemistry with Michael Smith, but was subject to peer criticism for his scepticism about HIV-AIDS, which he doubted was spread by virus.

Baron Münchausen's Narrative of his Marvellous Travels (1785), by Rudolf Erich Raspe (1737–1794), a German friend who had fled to England to escape prosecution for theft.

Munthe, Axel (1857–1949). Swedish physician and author. After a successful professional career, for part of which he was physician to the Swedish royal family, he retired to the Italian island of Capri where he wrote the semi-autobiographical bestseller The Story of San Michele (1929) and where, largely through his influence, a sanctuary for migrating birds was established.

Munther, Thomas (c.1490–1525). German Anabaptist leader. He toured Germany preaching his communistic doctrines and eventually settled at Mühlhausen (1525): there he set up a communist theocracy which, despite *Luther's denunciations, won the support of large numbers of the peasantry. The movement was crushed by *Philip of Hesse and Münzer was captured and executed.
Genji Monogatari (usually called Lady Murasaki – 'purple') (978–1026?), Japanese novelist. A member of the Fujiwara clan, she was a court lady in Kyoto to the Empress Akiko during the Heian period. She wrote the long romance Genji Monogatari (Tale of Genji), generally regarded as the world's oldest surviving novel, a subtle and complex picture of aristocratic life built around the life of Prince Genji Hiraku. First translated (1925–33) by Arthur Waley, more recently (2001) by Royall Tyler, Genji Monogatari has often been compared with In Search of Lost Time by Marcel *Proust.

Murasaki Shikibu

Murasaki Shikibu (usually called Lady Murasaki = Murasaki, Lady of the Fujiwara clan, 19–30 October 978, Kyoto, Heian Period, Japan – 19 October 1018, Kyoto, Heian Period, Japan) was a court lady in Kyoto who wrote the longest surviving novel in Japanese history, Genji Monogatari (The Tale of Genji). She wrote it to the Empress Akiko during the Heian period, when she was a court lady in Kyoto. Murasaki Shikibu was a member of the Fujiwara clan, a prominent family of courtiers and scholars. She is known for her poetic style and her skill in describing the complex social and personal relationships of the Heian period. Genji Monogatari, a novel of over 100,000 lines, is a rich and detailed portrayal of the courtly life of Japan in the 11th century. It tells the story of Prince Genji, a courtier who is the central figure of the novel. The novel is notable for its mature and sophisticated treatment of love, politics, and the nature of human existence. Murasaki Shikibu's work was influential in the development of modern Japanese literature and has been translated into English and other languages. She is regarded as one of the most significant female authors in Japanese history.

Murat, Joachim

Joachim Murat (1767–1815) was a French military leader and marshal. He played a significant role in the Napoleonic Wars, serving under Napoleon as a cavalry commander and later as a field marshal. Murat was known for his aggressive and volatile nature, and his military career was marked by both success and setbacks. He was captured and executed in 1815 for his role in the failed invasion of Russia. Despite his military achievements, Murat is remembered for his arrogance and the role he played in the end of the Napoleonic era.

Maurtaya Tomichi

Maurtaya Tomichi (1924–2002) was a Japanese politician and a member of the Diet from 1972 until his death in 2002. He served as a representative of the Liberal Democratic Party and was known for his criticism of the Japanese government's handling of foreign policy and economic issues. After his death, he was posthumously awarded the Order of the Sacred Treasure, 3rd Class.

Maurtchison, Sir Roderick Impey

Roderick Impey Murchison (1792–1871) was a Scottish geologist, palaeontologist, and politician. He is best known for his work in the field of geology, particularly for his contributions to the study of the Earth's stratigraphy and the classification of rock strata. Murchison was a key figure in the development of the principle of superposition, which states that layers of rock are older the lower they are in the geological column. His work was instrumental in establishing the boundaries of the geological eras and periods, and he is credited with introducing the term 'Silurian' to describe a period of the Precambrian era. Murchison's contributions to geology were recognized with numerous awards and honours, including election to the Royal Society and receipt of the Copley Medal.
Murdock, William (1754–1839). Scottish inventor. He joined the Birmingham engineering firm of *Boulton and *Watt (1777), helped Watt with the development of his steam engine and invented a practical slide-valve (1799). His experiments with the production of gas from coal enabled the factory to be lit up with gas to celebrate the Treaty of Amiens (1802), a development that led to the widespread adoption of gas for internal and external lighting.

Murger, Henri (1822–1861). French novelist. His life in Paris among poverty-stricken artists provided the background for his famous Scènes de la vie de Bohème, which appeared serially (1847–49), was dramatised (1849) and was published in book form (1851). It inspired *Puccini's opera La Bohème. His later novels are of small account.

Murillo, Bartolomé Estebán (1617–1682). Spanish painter, born in Seville. He lived in his birthplace and was a friend of *Velázquez (who soon left). He was primarily a painter of religious subjects but his style, which at first displayed a rather hard naturalism, gradually became warmer and more charming and eventually over-sweet, tender and glamourised. He is best known for his representations of the Virgin, among the most famous being the Immaculate Conception (now in the Louvre). Perhaps even more appealing to modern taste are his realistic genre pictures of young fruit-sellers and beggar-boys.

Murray, George (1866–1957). British-Australian classical scholar, born in Sydney. While Regius professor of Greek at Oxford 1908–36 he became well known for his translations of the Greek dramatists, especially Euripides, which were used in many notable performances. He also did much to interpret the spirit of ancient Greece to the modern world by a series of books, including his last great work Hellenism and the Ancient World (1953). He was a keen Liberal, Chairman of the League of Nations Organisation for Intellectual Co-operation (OCI) 1928–40 and Executive of the League of Nations Union 1923–38. He received the OM in 1941. He was a member of the Committee for Intellectual Cooperation from 1922 and chaired it 1931–39. The CIC was a precursor of UNESCO.

Murray, Sir James Augustus Henry (1837–1915). British lexicographer and editor, born in Denholm, Roxburgh. Educated at secondary schools, he became a teacher in Roxburgh 1854–64 and London 1870–85, worked in a bank and graduated BA from London (1873). President of the London Philological Society 1878–80, 1882–84, he was appointed as editor of The Oxford English Dictionary (A New English Dictionary on Historical Principles) 1879–1915, planning and outlining the whole project. The first volume appeared in 1884. In 1885 he moved to Oxford and personally edited letters A–D, H–K, O, P and T. He also wrote on Scots language and literature. A man of vast erudition, although elected FBA in 1902 and knighted in 1908, he was grieved not to have been offered the OM, and Oxford was slow to grant him a doctorate.

Murray, K. M. E., Caught in the Web of Words. 1977.

Murray, John (1745–1793). British publisher, born in Edinburgh. Changing his name from MacMurray to Murray, he bought a small publishing business in London which continued to expand under his dynastic successors in the 19th and 20th centuries. John Murray II (1778–1843) founded the Quarterly Review and established links with *Scott and other famous authors, including *Byron, whose unpublished Memoirs he burned (1824) after the poet’s death. *Darwin’s Origin of Species (1859) was published by John Murray III (1808–1892).

Murray, Philip (1996). British-Australian classical scholar, born in Sydney. While Regius professor of Greek at Oxford 1908–36 he became well known for his translations of the Greek dramatists, especially Euripides, which were used in many notable performances. He also did much to interpret the spirit of ancient Greece to the modern world by a series of books, including his last great work Hellenism and the Ancient World (1953). He was a keen Liberal, Chairman of the League of Nations Organisation for Intellectual Co-operation (OCI) 1928–40 and Executive of the League of Nations Union 1923–38. He received the OM in 1941. He was a member of the Committee for Intellectual Cooperation from 1922 and chaired it 1931–39. The CIC was a precursor of UNESCO.

Murray, John Middleton (1889–1957). English writer and critic. As editor of various journals, including The Athenaeum (1919–21), and The Adelphi (1923–30) he had considerable influence on English intellectual life in the 1920s. He was a friend of D. H. *Lawrence and married (1918) Katherine *Mansfield, whose biography he wrote (1932). His books include studies of *Blake, *Keats, *Shakespeare and *Dostoevsky.

Murry, K. M., Beloved Quixote. 1986.

Musa I (c.1280–1337). Mansa (*King of Kings*) of Mali 1312–37. The 10th Mansa, he succeeded a distant kinsman. He accumulated vast wealth, estimated at about $US5400 billion (in current values), by exporting gold and salt and is claimed to have been the richest person in history.

Musharraf, Pervez (1943– ). Pakistani soldier and politician, born in New Delhi. He was Chairman of the Joint Chiefs of Staff 1998–2001, and in 1999 after public demonstrations against corruption he led a coup, took charge of the government and
Musil, Robert, Edler von (1880–1942). Austrian novelist, born at Klagenfurt. He trained to be a soldier (his Young Törless, 1906, gives an unforgettable picture of the military academy), then qualified as an engineer and took a PhD in Berlin (1908) for a study of the philosophy of Ernst *Mach. He worked as a librarian in Vienna so that he could devote himself to writing, served with the Austrian army during World War I, then spent some years in Berlin and acquired a modest reputation as a freelance writer. He returned to Vienna in 1933 and moved from there to Switzerland in 1938. He died in Geneva. His masterwork was The Man Without Qualities (Der Mann ohne Eigenschaften), a colossal work begun in 1920 and left incomplete at his death, worthy of ranking with *Joyce and *Proust. The central character Ulrich (a self-portrait), a man of scientific training unable to commit himself passionately to any aspect of life, is given the post of secretary (in 1913) of a committee charged with commemorating Franz Josef’s 70th anniversary as emperor by making 1918 ‘the Austrian year’. The novel was first published in English in 1953–60 in three volumes translated by Eithne Wilkins and Ernst Kaiser. A new translation by Sophie Wilkins appeared in 1995, with 635 pages of Posthumous Papers translated by Burton Pike.

Musk, Elon Reeve (1971– ). Canadian-American engineer and entrepreneur, born in South Africa. He dropped out of Stanford, but created PayPal, which he sold to eBay, then set up Space X, a commercial space exploration company, and Tesla Motors, which produced electric cars with radically improved battery capacity.

Muskie, Edmund S. (mund Sixtus) (1914–1996). American Democratic politician. Son of a Polish immigrant (the family name was Marciszewski) and educated at Cornell, he served in the navy during World War II, was Governor of Maine 1953–59 and a US senator 1959–80. He ran for Vice President in 1968 with Hubert *Humphrey, sought the presidential nomination in 1972 and served as Jimmy *Carter’s Secretary of State 1980–81.

Mussadiq, Mohammed (1876–1967). Iranian politician. During the earlier part of his career he was Minister of Finance and of Justice. He became Prime Minister in 1951, and almost his first act was the nationalisation of the oil industry in defiance of the 1933 convention with the Anglo-Iranian Oil Company. He rejected any compromise settlement, and this led to the evacuation of the Abadan refinery and breaking off Anglo-Iranian relations. His government fell in 1953 when General Zahedi led a royalist uprising. On the Shah’s return Mussadiq was tried and imprisoned. He was released in 1956.

Mussadig, Mohammed (1876–1967). Iranian politician. During the earlier part of his career he was Minister of Finance and of Justice. He became Prime Minister in 1951, and almost his first act was the nationalisation of the oil industry in defiance of the 1933 convention with the Anglo-Iranian Oil Company. He rejected any compromise settlement, and this led to the evacuation of the Abadan refinery and breaking off Anglo-Iranian relations. His government fell in 1953 when General Zahedi led a royalist uprising. On the Shah’s return Mussadiq was tried and imprisoned. He was released in 1956.

Mussert, Alfred de (1810–1857). French poet and dramatist, born in Paris. He dabbled in law and medicine and published, at the age of 18, a translation of *De Quincey’s Confessions of an English Opium Eater. As an aristocratic dandy he frequented the literary circle of Victor *Hugo, who praised his poems, Contes d’Espagne et d’Italie (1830). The influence of Hugo’s Romanticism is evident in La Nuit venitienne (1830), Mussert’s first play: its failure decided him to write plays for reading only. The hero who agreeably combined charm with debauchery, and the florid but tender heroine were popular at this period and A quoi rêvent les jeunes filles (1831) was a typical and revealing title. In 1833, the year in which appeared the witty and emotional prose plays André del Sarto and Les Caprices de Marianne, began his stormy love affair with George *Sand, described after its breakup in his series of poems, Les Nuits (1835–37). The autobiographical Confession d’un Enfant du siècle (1836) also reflects the pessimism induced by his sufferings. The play On ne badine pas avec l’amour ends tragically but Le Chandelier (1836) shows something of the old sparkle. Un Caprice (1837), had such success that his later plays were frequently played at the Comédie Française. Mussert was elected to the Académie Française in 1852.

 Mussolini, Benito (Amilcare Andrea) (1883–1945). Italian dictator, born at Predappio, near Forli. He early absorbed the socialist and revolutionary views of his blacksmith father. He started his career as a teacher (1901) but a year later went to Switzerland, where he lived as a revolutionary exile until 1904. In 1908 he served his first prison sentence for revolutionary activity and then took to journalism. Having joined a socialist paper at Trento (then in Austria) he became fired with nationalist zeal for recovering the lost provinces. Another term of imprisonment brought him increased prestige in his own party and secured him the editorship of the national socialist newspaper, Avanti (1912). World War I caused him to split with the socialists, who favoured neutrality. Mussolini saw that only by joining the Allies could Italy regain from Austria the unredeemed provinces, and in November 1914 he was editing his own paper Popolo d’Italia, a powerful voice in favour of intervention. When Italy entered the war (May 1915), he joined the army, but after being wounded (February 1917) he returned to his paper. After the war, with the Socialist Party closed nominally to serve the cause of the neglected ex-servicemen. This proved the starting point of ‘Fascism’. Mussolini took over the nationalist theme and the theatrical equipment (black shirts, banners etc.) from *d’Annunzio and was quick to realise that by turning his gangs against the communists he would win government toleration and much outside support. In 1921 Mussolini, already called Il Duce (‘the leader’) by his followers, was elected to the Chamber of Deputies and in October 1922 he
organised the celebrated 'march on Rome'. (Most Fascisti arrived by train.) There was no resistance, for Mussolini had already come to a tacit understanding with the Prime Minister, Facta. The armed forces, whose cause Mussolini had so consistently espoused, stood inactively by, and the ordinary citizen, weary of the anarchy of faction, favoured strong rule. King Vittorio Emanuele III decided therefore to put a constitutional gloss on the accomplished fact by making Mussolini Prime Minister. He held that office 1922–43 and his dictatorship was virtually unchallenged until the end. The economics of Fascism were based on the syndicalism of Georges Sorel, its political institutions were merely a background to Il Duce's personal rule. With his overbearing personality and bombastic oratory Mussolini deceived the Italians, deceived Europe and even deceived himself. He was made an honorary GCB by the UK. In spite of the completion of grandiose public works and road building, in terms of real wages the Italians were worse off after 10 years of his rule than before. Even such military successes as he achieved, the conquest of Ethiopia, the overrunning of Albania and support for Franco in Spain, involved quarrelling with all his natural allies and becoming entirely dependent on Nazi Germany. World War II revealed his weakness: though he delayed entry into the war (June 1940) until it seemed that Germany's victory was certain, Italy's war record was calamitous. Italian forces were everywhere defeated until German backing was received: Ethiopia, Eritrea and Somalia were lost. Mussolini was a puppet in Hitler's hands. When (July 1943), after the Allied landings in Sicily, the Fascist grand council turned against him, he was swept aside without a struggle. He was dramatically rescued from captivity by German paratroops and, already a pathetic figure without will or purpose, briefly headed a puppet government at Saló in northern Italy. When the Allied victory was achieved he tried, with his mistress Clara Petacci, to reach safety in Switzerland, but both were captured and summarily executed in Milan. In 1957 Petacci, to reach safety in Switzerland, but both were caught and summarily executed in Milan. In 1957. The opera broke sharply with musical convention and was soon withdrawn. Rimsky-Korsakov cut and orchestrated Boris and this 1896 version was staged internationally. However, much of its stark realism and rich characterisation was lost. The complete original score was not published until 1975. Other operatic fragments include The Marriage, Khovanshchina and Sorochintsy Fair. His piano suite Pictures at an Exhibition (1874), often performed in *Ravel's orchestration, has been frequently recorded. He wrote about 60 songs, including The Song of the Flea (*Goethe, 1879) and the song cycles The Nursery (his own poems, 1873) and Songs and Dances of Death (Arseni Golenischchev-Kutuzov, 1877). His music had a significant influence on *Debussy and Ravel.

Calvocoressi, M. D., Mussorgsky. rev. 1974.

Mustafa Kemal see Atatürk, Kemal

Mutesa II, Sir Edward (1924–1969). Kabaka of Buganda and first president of Uganda. He inherited (1939) the sovereignty of Buganda (which formed part of the protectorate of Uganda). In 1953 the British withdrew recognition because of his demand for Buganda's independence from Uganda, and he was deposed. He returned (1955) under a new constitution, when Uganda achieved independence he became (1963) its first president. In 1966 he was ousted in a coup led by Milton Obote, he escaped to Britain and died there.

Mutshoito (regnal name Meiji i.e. ‘enlightened’) (1852–1912). Emperor of Japan 1867–1912. Son of the emperor Otahito (1821–1867, regnal name Komei), born in Kyoto, he succeeded at the age of 15. The term Meiji Restoration refers to the period that began with the abdication of the last hereditary shogun of the *Tokugawa clan, Keiki (1837–1913) in January 1868, the transfer of his powers to the emperor and the imperial court's move from Kyoto to Tokyo. Mutshoito's advisers, mostly young and able
samurai (including *Iwakura, *Kido, Okubo, *Saigo, Arisugawa, *Ito, *Yamagata), investigated reforms in Europe and the US and, within a few years, primary schools were developed on American lines and a variation of the Code Napoléon and some elements of the British parliamentary system were adopted. Feudal land tenure and the samurai class were abolished. Railways and the telegraph, the Gregorian calendar and western dress were quickly accepted. Mutsuhito's reign was marked by suppression of the Satsuma revolt (1877), successful wars against China (1894–95), Russia (1904–05) and the annexation of Korea. Intelligent and sympathetic to reform, he took little direct part in administration. He was an amateur painter and poet, and modelled his uniform, hair and bearing on Napoléon III. He was succeeded by *Yoshihito, and *Hirohito was his grandson.

**Muybridge, Eadweard** (originally Edward John Muggeridge) (1830–1904). English photographer, in the US 1865–1900. His studies of 'animal locomotion' led to recognition of the phenomenon of persistence of vision. His 'Zoöpraxiscope' which showed human and animal movement was a direct forerunner of the cinema. In 1874 he was acquitted of murdering his wife's lover.

**Myer, Sidney** (Simcha Myer Baevski) (1878–1934). Jewish-Australian merchant and philanthropist, born in Belarus. He migrated to Victoria in 1899, became a draper in Bendigo, then established the Myer Emporium in Melbourne (1914) which became Australia's largest retailer. The Myer family were major philanthropists, supporting universities, medical research and the arts over three generations. His son **Kenneth Baillieu Myer** (1921–1992) was President of the Howard Florey Institute 1971–92, declined the Governor-Generalship in 1974, but became Chair of the National Library of Australia 1974–82 and the ABC (Australian Broadcasting Corporation) 1983–86. He died in a plane crash in Alaska.

**Myers, F(ederick) W(illiam) H(enry)** (1843–1901). English writer. Once known as a literary critic (e.g. *Wordsworth and Virgil), he is remembered as a pioneer in applying the methods of science to the investigation of apparently supernatural phenomena. A founder member of the Society for Physical Research, he wrote _Human Personality and its Survival of Bodily Death_ (1903).

**Myrdal, (Karl) Gunnar** (1898–1987). Swedish economist. One of the first economists to write on population pressure and world poverty, he was Minister for Commerce 1945–47, held chairs in Sweden and the US, wrote many books including _The Asian Drama_ (3 vols, 1968) and _The Challenge of World Poverty_ (1970), and shared the 1974 Nobel Prize for Economics with Friedrich von *Hayek (whose views were markedly different). His wife **Alva Myrdal**, née Reimer (1902–1986), worked for UNESCO and the ILO, conducted research into ‘futures’ scenarios and disarmament, and became Minister for Disarmament 1967–73. She was awarded the 1982 Nobel Prize for Peace.

**Mytens, Daniel** (c.1590–c.1642). Dutch artist. He possibly studied under Rubens before going to England, where he was settled 1618. He worked for James I, and under Charles I he held a court appointment. His portraits are mostly of members of the nobility, e.g. Charles I and the 1st Duke of Hamilton (both in the National Gallery, London), in a natural, informal style.
N

Nabokov, Vladimir Vladimirovich (1899–1977). Russian-American novelist, born in St Petersburg. Son of a rich liberal politician (murdered by Russian monarchists, probably by mistake, in Berlin in 1922), trilingual (Russian, English, French) from childhood, he left Russia in 1919, graduated from Trinity College, Cambridge, lived in France and Germany 1922–40, and migrated to the US in 1940. He was a research fellow in lepidoptera at Harvard, then taught literature at Wellesley, becoming professor of Russian literature at Cornell 1948–59. He translated Alice in Wonderland into Russian (1923) and had already made a name for himself by a brilliant series of novels in Russian (Machenka; King, Queen, Knave; Invitation to a Beheading, etc.), before publishing his first English novels: The Real Life of Sebastian Knight (1938) and Bend Sinister (1947). Lolita, a story of the infatuation of a middle-aged intellectual, Humbert Humbert, for a 12-year-old girl, and her sexual exploitation, was published in Paris in 1955, New York in 1958 and London in 1959. Lolita was filmed (1962) by Stanley * Kubrick. Nabokov lived in Montreux from 1959. Later novels included Pale Fire (1962), Ada (1969) and Transparent Things (1972). His memoir, Speak, Memory, was published in 1967. Nabokov never received a major literary award but his writing influenced later writers, including Thomas * Pynchon, Salman * Rushdie, Don * DeLillo and W. G. * Sebald.

Nader, Ralph (1934– ). American lawyer, born in Connecticut. Of Lebanese parentage, educated at Princeton and Harvard, he wrote Unsafe at Any Speed (1965), an attack on General Motors' Corvair: GM had to pay him $300,000 damages for personal harassment. Nader formed 'citizens action' groups to carry out research, raise levels of community awareness and put pressure on governments to strengthen laws on consumer protection, car and highway safety, pollution, pure food and access to information. In 2000 he contested the US presidency as a Green candidate, winning 3 per cent of the popular vote, a decisive factor in enabling * Bush to defeat * Gore. He ran for president in 2004, polling barely 1 per cent, and 0.6 per cent in 2008.

Nadir Khan (or Nadir Shah) (c.1880–1933). King of Afghanistan 1929–33. He was descended from a brother of * Dost Mohammed and as King Amanullah's Commander-in-Chief was prominent in the Third Afghan War with British India (1919). Having fallen into disfavour in 1924 he lived in exile in France, which he left in 1929 to make his successful bid for the Afghan throne. Assassination ended a brief reign in which he showed personal integrity as well as skill and moderation as an administrative reformer.

Nadir Shah (1688–1747). Shah of Persia 1736–47. By origin a Turcoman tribesman, he emerged as dominant figure from the period of confused fighting following the breakup of the Safavid dynasty. Soon after his proclamation as shah he made a pretext to invade India, marched through India to the plains below and met his first serious resistance only 100 miles from Delhi. Here he completely defeated the forces of the Mogul Emperor, who accompanied his conqueror to Delhi. A false report of Nadir's death provoked a rising in the city, which he punished with one of the most terrible massacres in history. Loaded with plunder, including the famous peacock throne, he returned home having annexed large areas west of the Indus. Nadir continued to fight with success against internal revolt, external enemies (especially the Ottoman Turks), but assassination, caused by disgust at his atrocities, brought his career to an end.

Nägeli, Karl Wilhelm von (1817–1891). Swiss botanist. Son of a physician, he chose to specialise in botanical studies, and took up the study of cells. Between 1845 and 1858 he was involved in brilliant researches into the formation of tissues in the roots and stems of vascular plants, particularly from the point of view of cell-division, for which he hoped to find quasi-mathematical laws. He correctly observed the distinction between formative tissues (ones multiplying) and structural tissues (those no longer multiplying). Later in his career, he became increasingly interested in the building blocks of plant life, especially starches and cellulose. But though this work took a more chemical turn, Nägeli always held to the somewhat teleological approach that his early training in Naturphilosophie had given him. He accepted organic evolution, but saw it as the fulfillment of an internal organic drive. He rejected * Mendel's work out of hand.

Nagy, Imre (1896–1958). Hungarian politician. A locksmith, he joined the Communists in 1918, lived in Moscow 1929–44, and was a minister 1945–48. Premier 1953–55, he was forced out because of his independent line and sympathy for peasant interests. In the October 1956 rising against Soviet rule,

Nakasone Yasuhiro (1918– ). Japanese politician. Trained as a lawyer, he served in the Japanese navy, was a Diet member 1947–2003 and held several portfolios, also rising rapidly through the Liberal Democratic Party machine. He was Prime Minister of Japan 1982–87.

Namier, Sir Lewis Bernstein (originally Ludwik Bernstein vel Niemirowski) (1888–1960). British historian, born in Poland. Of Jewish parentage, he was educated at Lausanne, the London School of Economics and Oxford, worked in the Foreign Office in World War I and was political secretary of the Jewish Agency for Palestine 1929–31. Professor of modern history at Manchester University 1931–55, he threw entirely new light on 18th-century political affiliations in his The Structure of Politics on the Accession of George III (1929). By probing the life, background and opinions as well as the voting records of individual MPs he showed how often personal considerations outweighed those of party alignment. With John Brooke he wrote the definitive The House of Commons 1754–90 3 vols (1964).

Nana Sahib (Dhondu Pant) (c.1820–c.1859). Indian sepoy leader. Adopted son of the last of the Mahratta ‘peshwas’, and swayed by a personal grievance about his pension he became a leader of the sepoys (Indian troops under British command) in the mutiny (1857). The isolated British garrison of Cawnpore capitulated on terms safeguarding the lives of the men and their dependants. Despite this pledge Nana Sahib ordered a general massacre of men, women and children alike. He fled after the defeat of the mutiny and presumably died in the hills of Nepal.

Nanak (1469–1538). Indian guru (‘preacher’). Founder (c.1505) of the Sikhs, he preached a puritanic, monotheistic, tolerant form of Hinduism, rejecting the caste system and the quest for power. Later, under persecution, the Sikhs became a militant sect.

Nancarrow, (Samuel) Conlon (1912–1997). American composer, born in Arizona. He fought in the Spanish Civil War and lived in Mexico City from 1940. On the fringes for most of his life, he wrote 51 ‘Studies for Player Piano’ (1948–93), employing techniques of unparalleled complexity that influenced Ligeti and Adès but intimidated mainstream music audiences. He received a MacArthur Award in 1982 and received international recognition. He also wrote three string quartets and works for small orchestra.

Nansen, Fridtjof (1861–1930). Norwegian explorer, scientist, diplomat and humanitarian, born in Oslo (Christiania). He studied zoology at Oslo University and was curator of zoology at the Bergen Museum 1881–87. In 1888 he crossed Greenland on skis and in 1893–97 carried out a daring project of forcing the Fram, a ship specially built to withstand ice pressure, into the pack-ice and letting it drift with the great northwest current. Entering the ice near the New Siberian Islands in the eastern Arctic, the Fram drifted with the current and reached Spitsbergen in just under three years. Meanwhile Nansen (with F. H. Johansen) had left the ship (March 1895) and on foot had reached a latitude of 86°14’. They wintered in Franz Josef Land, and were picked up in the spring. Professor of oceanography at Oslo University 1908–30, after Norway’s independence (1905) he was its first Ambassador to Great Britain 1906–08. After World War I he worked for the repatriation of prisoners of war, for famine relief in Russia, and (on behalf of the League of Nations) for refugees, particularly Armenians, to whom the issue of a ‘Nansen passport’ often meant a new life. Nansen won the Nobel Prize for Peace (1922).

Napier, John (1550–1617). Scottish mathematician and engineer. By introducing the comma (where we now use the decimal point), he simplified the notation of the decimal system. His most important contribution to mathematics was his invention (1594) of the number ratios which he called ‘logarithms’. He spent almost 20 years calculating the necessary tables, which he published in his *Mirifici Logarithmorum Canonis Descriptio* (1614). He also devised a simple calculating system made of rods (Napier’s bones), which he described in his *Rābdologiae* (1617). As an engineer, he invented a hydraulic screw for pumping water, and other devices. He was also interested in millenarianism and wrote a commentary on the Revelation of St John the Divine.

Napier of Magdala, Robert Cornelis Napier, 1st Baron (1810–1890). British field marshal. He commanded (1868) the expedition against King Theodore of Abyssinia, his march from the coast to the final storming of Magdala showing a remarkable combination of organisational, engineering and military skills. For this he was awarded a peerage and an annuity. He served as Commander-in-Chief in India 1870–76 and Governor of Gibraltar 1876–82.

Napoliòn I (Napóleon Bonaparte) (1769–1821). Emperor of the French 1804–14 and 1815. Born at Ajaccio in Corsica, the son of Carlo Buonaparte (*Bonaparte*) and his wife Letizia, Napoîleon left the island (1778) to learn French at Autun and to attend military schools at Brienne (1779–84) and at Paris (1784–86). He emerged as a lieutenant of artillery who devoted himself to study. On the outbreak of the Revolution he went to Corsica and took a leading part in overthrowing the royalist government, but when a quarrel developed between the followers of *Paoli who demanded Corsican independence and those, including the Bonapartes, who favoured union with revolutionary France, the whole family moved to the mainland. In 1793 Napoîlon was in charge of the artillery in the French republican army besieging Toulon, which had been seized by the British, and he was largely responsible for the city’s capture. For this he was made a brigadier general by *Robespierre but on the latter’s fall he was imprisoned briefly. His rise to power was resumed when Barras, shortly to become consuls and virtual ruler of France. At once he proved himself a great administrator: local government was centralised through prefects; the civil code of law (Code Napoléon) was issued; the Bank of France was created, and, with military needs in mind, roads (e.g. Mont Cenis pass), bridges etc. were built and ports re-equipped. Meanwhile victories over Austria (again at war) at Marengo and Hohenlinden (*Moreau*) enabled peace to be made with them at Luneville (1801) and at Amiens with Britain (1802); the latter enabling the army of Egypt to return. A referendum in May 1802 voted overwhelmingly (99 per cent) to make him Consul for life. In 1803 he sold Louisiana, acquired from Spain, to the United States. In 1804 a docile Senate proclaimed the conqueror Emperor of the French, and in December, Pope *Pius VII was brought to Paris for the coronation in Notre Dame. A court formed from some returned émigrés and a new aristocracy of talent achieved a somewhat artificial splendour. Titles of nobility were restored. In 1805 continental war was resumed after *Pitt organised a coalition of Britain, Austria, Russia, Sweden and Naples against France. Napoléon moved the army, assembled at Boulogne for the invasion of England, into central Europe: Austerlitz (1805), Jena (1806) and Friedland (1807) were the most important of the victories by which the coalition now including Prussia, was subdued. In 1806 he dissolved the Holy Roman Empire, simply by declaring that it no longer existed. After the Treaty of Tilsit (1807) Russia became his firm ally. A major purpose of his reorganisation of the Continent was to weaken Britain by shutting it off from European trade. During the next few years he made his brother *Louis King of Holland and created the Confederation of the Rhine (later the kingdom of Westphalia), for his brother *Jerome. He became King of Italy himself while his brother *Joseph (succeeded later by his brother-in-law *Murat) was made King of Naples. His greatest mistake was to invade Spain (1808), where he transferred Joseph as King, and Portugal, thus opening up a battleground for the British (the Peninsular War) where *Wellington’s army was a constant drain on his resources. Austria again took up arms (1809) but after the Battle of Wagram had to sue for peace. To satisfy his pride and prolong his dynasty, Napoléon divorced Josephine (1809) and married (1810) *Marie Louise, daughter of the Austrian emperor *Franz II. Their son, the future Duke of Reichstadt (*Napoléon II),
was born in 1811. Restiveness at the restrictions on trade caused by Napoléon's Continental System, directed against Britain, was the prime cause of the tsar's estrangement, which led to Napoléon's invasion of Russia (1812). The catastrophic winter retreat from Moscow after the burning of the city virtually destroyed the Grand Army, and though Napoléon raced ahead of his exhausted troops and raised new armies they were never of the quality of the old. In 1813 all his old enemies resumed the struggle, Napoléon's hold on Germany was lost and after his decisive defeat at the 'Battle of the Nations' at Leipzig in October he had to withdraw across the Rhine. In 1814, with Wellington's army advancing from Spain and the Allies breaking into France from Germany, Napoléon's skill could only delay the end. He abdicated at Fountainebleau in April and was granted sovereignty of the Italian island of Elba. From there, in March 1815, to the victors haggling over terms at the Congress of Vienna came the electrifying news that Napoléon had escaped to France. As though by magic the country rallied to his side, his old marshals, troops, the country at large. King *Louis XVIII fled and for a hundred days Napoléon was emperor once again. But Europe had had enough. The Prussians and British were first in the field, and though for a time it looked as if by dividing and defeating his opponents in turn Napoléon might achieve yet another miracle, his final defeat at Waterloo, south of Brussels (18 June 1815), by coalition forces under the command of *Wellington and *Blücher, ended the story. He abdicated once again and surrendered to the British. He was sent to the Atlantic island of St Helena where he spent his last years in creating, through his self-justificatory *Memorial, the Napoléonic legend, with such effect that in 1840 his body was reburied with pomp and splendour in Paris at the behest of Louis Philippe, a member of the royal line that Napoléon had consistently opposed.

Napoléon was a great commander and administrator and few men have had a greater gift for inspiring devotion. His legal codes and his centralised administrative system have endured in France, and several other countries of Europe. By sweeping away the feudal remnants of the Holy Roman Empire he enabled a new Germany to be born, and he showed that a united Italy could be more than a dream. But he was ambitious beyond measure, cynical, unscrupulous and ruthless.

Napoléon II (Napoléon François Charles Joseph Bonaparte), *Duke of Reichstadt* (1811–1832). Titular King of Rome 1811–14. Son of *Napoléon I and the empress *Marie Louise, he was known to the Bonapartists as Napoléon II. After his father's abdication he was brought up at the court of his grandfather, *Franz II of Austria, where he remained under strict supervision until his early death.

Napoléon III (Charles Louis Napoléon Bonaparte) (1808–1873). Emperor of the French 1852–70. His father, *Bonaparte, was the brother of *Napoléon I, who had made him King of Holland, his mother, Hortense de Beauharnais, was a daughter of the empress *Josephine. Brought up in Germany and Switzerland, he was fired as a young man by liberal causes, took part in a rising in the Romagna against the pope's temporal power and organised revolts against the French monarchy, including one at Strasbourg (1836) for which he was deported. In England (where he lived 1839–40) he published *Idées Napoléoniennes*, which interpreted his uncle's political thought and showed where his own ideas were heading. In 1840 he was sentenced to life imprisonment for trying to stir the troops in Boulogne to revolt, but after six years escaped from the castle of Ham and fled to London. After the deposition of King *Louis Philippe (1848) he was elected to the National Assembly, at once returned to Paris and in December was elected president of the new republic. As the result of a *coup d'état* (December 1851) he proclaimed himself Emperor, though his action was approved by plebiscite and he imitated his uncle's institutions. He tried to forestall future opposition by creating prosperity at home and pursuing a liberal policy abroad. Thus he opened up the country with railways, encouraged the formation of banks, created and protected new industries and, through Georges-Eugène *Haussmann, rebuilt the capital. Great exhibitions (1855 and 1867) displayed French achievements to the world. He avoided his uncle's mistake of quarrelling with Britain; both nations were allies in the Crimean War (1854–56). Without his help and the French victories over the Austrians (1859) at Magenta and Solferino the unification of Italy would have been impossible, but he lost much of the credit by exacting Savoy and Nice as the price of his support, and by using a French garrison to maintain papal rule in Rome, so keeping the Italians out of their natural capital. In doing this he was partly influenced by his beautiful Spanish wife, *Eugénie de Montijo (married 1853), an active supporter of the papal cause. A much worse loss of prestige resulted from sending an army into Mexico on a debt-collecting mission. Having gained control of the country and installed *Maximilian, an Austrian archduke, as Emperor, he withdrew his troops under American pressure, leaving Maximilian to his fate.

Meanwhile republican opposition had been growing and the Emperor had only halfhearted support when he allowed himself to be manoeuvred by Bismarck into the France-Prussian War. In the military debacle which followed, Napoléon was captured at Sedan (1870) and two days later a republic was declared. After the war Napoléon spent the last two years of
his life at Chislehurst, Kent, and died after a failed operation for kidney stones. He was reburied at Farnborough in 1888. His only son, Napoléon Eugène Louis (1856–1879), known as the Prince Imperial, was killed fighting for Britain in the Zulu War.

Narses (c.478–c.573). Armenian administrator and general. A eunuch, he rose to high office in the imperial household at Constantinople and proved his usefulness to the emperor *Justianin by suppressing (532) an insurrection in the city. He was sent to Italy (538) to assist (and perhaps spy upon) *Belisarius and to gain experience of command. He was soon brought back to Constantinople but after the Goths had taken advantage of the recall of Belisarius (548) to conquer most of the country, Narses was sent to Italy (552) with a large army to retrieve the situation. To the surprise of all he showed great military skill, defeated the Gothic leader Tortila in a decisive battle, recaptured Rome and by 554 had driven Tortila’s Frankish allies from northern Italy. He governed Italy until his recall in 567, after which date little certain about him is known.

Nash, Richard (known as ‘Beau’ Nash) (1674–1762). English fashion leader and dandy, born in Swansea. Educated at Oxford, he was a soldier and lawyer, but lived by his wits and as a gambler. He went to Bath in 1704 and soon became ‘master of ceremonies’ at the spa, with autocratic powers over dress and behaviour in the assembly rooms and other places of resort. He introduced gambling, duelling, and a dance band from London. Road improvements and even street lighting came under his control, and Bath became the most fashionable of English spas.

Nash, John (1752–1835). English architect. Having developed his professional skill while employed by Sir Robert Taylor, he used money inherited from an uncle for speculative building, a venture that led to bankruptcy. He then moved to Wales where he practised with success and formed a partnership with the landscape gardener Humphry *Repton, who may have brought him to the notice of the Prince of Wales (*George IV). The connexion brought him many commissions for country houses and when the prince became regent (1811), it was to Nash that he turned for the realisation of his ambitious scheme for developing London’s West End. Regent Street (now rebuilt) began the approach to the redesigned Marylebone Park (now Regent’s Park), round part of which were built the famous ‘Nash terraces’ of stucco houses that still survive. The planning of Trafalgar Square and its relationship to a redeveloped St James’s Park area were all part of the general scheme, and Buckingham House was reconstructed as Buckingham Palace. Nash also created the Brighton pavilion for his royal patron (1818–21). As a town planner he had few equals, as an architect he popularised the Regency style of stucco-covered houses in the classical idiom which, despite technical defects, had much dignity and charm and set the pattern (followed with little taste and understanding) for the monotonous Victorian developments of the next decades.

Nash, Paul (1889–1946). English painter. Trained at the Chelsea Polytechnic, he was a regular exhibitor at the New English Art Club and became known mainly for landscapes in a simplified geometric style influenced by Cubism. He was an official artist in both World Wars and was adept at investing with symbolism the debris of a battlefield. Some of the most striking of his war pictures are in the Imperial War Museum. From 1927 he introduced a note of surrealism and exhibited at the London surrealist exhibition (1936). He also designed, especially in his earlier career, textiles, book illustrations and stage settings. His brother, John Nash (1893–1977), was also a landscape painter.

Nash, Thomas (1567–1601). English pamphleteer and dramatist. Educated at Cambridge, he became one of the group of playwrights and pamphleteers known as 'university wits'. The Anatomy of Absurdities (1589) and Pierce Penilesse (1592) were satirical exposures of the evils of society in his day. He wrote the first picaresque novel in English, The Unfortunate Traveller (1594). His play The Isle of Dogs (1597), which attacked abuses of state power with such freedom that he was imprisoned, is lost.

Nasmyth, James (1808–1890). Scottish engineer. He invented the first successful steam hammer, which he patented in 1842. That the first one to be built was constructed in France was probably due to the pirating of his design. The hammer permitted the production of metal forgings of better quality and much greater size. He also invented the stop-valve and a steam pile-driver. The success of his foundry, established (1834) at Bridgewater, near Manchester, enabled him to retire with a fortune at the age of 48. His autobiography was edited by Samuel *Smiles (1883).

Nasser, Gamal Abdel (1918–1970). Egyptian soldier and politician, born in Alexandria. He had a successful military career and emerged with credit from the war with Israel (1948–49). He was the chief organiser of the revolt (1952) which under General *Naguib deposed King Farouk. Having supplanted Naguib, he was Prime Minister 1954–56 and President of Egypt 1956–70. His nationalisation of the Suez Canal (1956) provoked Anglo-French-Israeli military intervention. Egypt and Syria made a political union in 1958, as the United Arab Republic, under Nasser's presidency; despite Syria's withdrawal in 1961 the name was retained. His later attempts to form an Arab federation under Egyptian leadership were constantly foiled. He obtained much economic and military aid from Russia but remained doctrinally 'neutralist'.

Nathan, George Jean (1882–1958). American editor and dramatic critic. With H. L. *Mencken he edited Smart Set (1914–23) and founded the American Mercury (1924). He was for many years the leading American dramatic critic. His collection of criticisms included The House of Satan and The Morning after The First Knight.

Nation, Carry (Amelia) (née Moore) (1846–1911). American temperance advocate. Famous for her hatchet-wielding exploits in Kansas against bars and saloons, she also campaigned against foreign foods, pornography, tobacco and corsets and for female suffrage. She was jailed many times.

Nebuchadnezzar (or Nebuchadrezzar) II (d.562 BCE). King of Babylonia 605–562. He recovered many of the lost provinces of the empire and added more. In 597 he took Jerusalem and in 586, after a revolt, destroyed the city and took most of the people into captivity in Babylonia. He rebuilt the city of Babylon, where at his palace he constructed the famous 'hanging gardens', regarded as one of the Wonders of the Ancient World.

Nechayev, Sergei Gennadyevich (1847–1882). Russian anarchist. A professional revolutionary, he was the archetypical terrorist and died in prison.

Necker, Jacques (1732–1804). French-Swiss financier, born in Geneva. Having made a large fortune as a banker he represented Geneva in Paris, where his wife's salon attracted literary celebrities as well as businessmen. As French Director-General of Finance 1777–81, Necker made such an impression by his integrity and was so successful with his administrative economies that he was able to raise money without difficulty for the War of American Independence. Those who had suffered from his measures forced his retirement (1781) and he was not recalled until 1788, when France was on the brink of the Revolution. He advised *Louis XVI to summon the Estates-General but the consequence of this step lost him the King's confidence. He was dismissed (July 1789), only to be reinstated a few days later when the Bastille fell. Disillusioned by events, he finally retired to Switzerland in 1790. His daughter became famous as Madame de *Stael.

Nefertiti (or Nofretete) (fl. c.1460 BCE). Egyptian Queen. She was wife of *Akhenaton and aunt to *Tutankhamen. A beautiful limestone polychrome bust of her, one of the world's greatest art works, was found in Tel-el-Amarna (Akhetaton) 1912–13 and first displayed in Berlin in 1923.

Negrin, Juan (1891–1956). Spanish politician. As a professor at the University of Madrid he played an active role in the socialist party. On the outbreak of the Spanish Civil War Negrin's resolution singled him out as a leader and he was Premier 1937–39. He took refuge in France and England on the Republican defeat.

Neguib, Mohammed (1901–1984). Egyptian general. With *Nasser as his deputy, he led the revolt (1952) by which King Farouk was dethrown. After being Prime Minister 1952, and then President 1952–54 he was forced into retirement by Nasser.

Nehru, Jawaharlal (1889–1964). Indian politician, born in Allahabad. A Kashmiri Brahmin by descent, he was son of Motilal Nehru (1861–1931) a rich lawyer who had led the Swaraj (Home Rule) party. Educated at Harrow and Trinity College, Cambridge (where Bertrand *Russell was his tutor), he was admitted to the English bar and returned to India in 1916. From the moment he met *Gandhi his life was given to politics. He joined the Indian National Congress (1918) and was President in 1929 and four times subsequently. He was not a pacifist like Gandhi and did not share his economic views but his personal devotion was intense, and while agitation and propaganda were the main activities their differences lacked practical importance. Nehru's terms of imprisonment 1921, 1926–29, 1931–34, 1942–44 increased his influence. Complete independence was always his aim for India and after the failure of the *Cripps mission he was interned for his rebellious attitude. After the war, when the subcontinent was partitioned between India and Pakistan, Nehru's prestige inevitably made him the first Prime Minister of India 1947–64 (and also Foreign Minister 1946–64). Owing to the immense difficulties of his task his success was only partial. He kept his country within the Commonwealth, achieved some success with industrialisation and maintained democratic forms of government, with stability and order. But the Kashmir problem remained unsolved and he shocked world opinion by invading Goa. His policy of nonalignment with the eastern or western power blocs did not prevent the Chinese invasion of 1962. Nevertheless when he died the consensus was that a great influence for good had gone from the world. His daughter Indira *Gandhi became Prime Minister in 1966. He wrote an autobiography (1936) and several historical works including *Glimpses of World History (1939) written from an Asian perspective.

Nelson, Horatio Nelson, 1st Viscount (1758–1805). English sailor, born in Burnham Thorpe, Norfolk. Son of a clergyman, he joined the navy (1770) and served in the Arctic, North America, and the West Indies 1783–87, where he married a widow Frances Nisbet. He lived, unemployed, on half pay in Norfolk 1787–93 until recalled to service by war with France. He served in the Mediterranean (with spectacular actions in the North Atlantic) 1793–97, 1798–1800, 1803–05, gaining rapid promotion and a reputation as an outstanding leader. In the battle of Cape St Vincent, off Portugal (February 1797), as second-in-command to Sir John Jervis (later Earl of *St Vincent), he took a decisive role in defeating a larger Spanish squadron and received a knighthood. He lost the sight of his right eye in an assault on Calvi, Corsica (1794) and his right arm was shattered and amputated in a failed action at Tenerife in the Canary Islands to capture a treasure ship (1797). In the Battle of the Nile (August 1798), Nelson, having pursued the French Mediterranean Fleet to Aboukir (Abu Qir) Bay, off Alexandria, destroyed it and cut off Bonaparte's forces in Egypt. He was created a baron in 1798. In Naples in 1793 he had met Sir William and Lady (Emma) *Hamilton; five years later she became his mistress with her husband's apparent approval. They often travelled as a ménage à trois and Nelson was prominent in Neapolitan society. King *Ferdinand I appointed him commander of his fleet and created him Duke of Bronté (1799). The Admiralty disapproved of Nelson's Neapolitan involvements and made him deputy Commander-in-Chief of the North Sea and Baltic Fleet 1801–03. He won the Battle of Copenhagen (1801), inflicted heavy losses on the Danes, Napoléon's allies, and was promoted Viscount (1801) and Vice Admiral. Commander-in-Chief of the Mediterranean Fleet 1803–05, he kept watch on Toulon for two years but the French admiral *Villeneuve used bad weather as an opportunity to escape, planning to link up with the French Atlantic fleet as part of a proposed invasion of Britain. At Trafalgar (just west of Gibraltar), 21 October 1805, Nelson had his last and greatest victory, when his 27 ships defeated a French-Spanish fleet of 33, establishing British naval supremacy for a century. Fatally shot by a French sniper on his flagship HMS Victory, he was buried in St Paul's Cathedral after a great upsurge of national grief and patriotism, in the tomb designed for Cardinal *Wolsey. Nelson, subject of many legends, created a new leadership style, involving consultation with other officers and improving conditions at sea. He became extraordinarily popular with both sailors and public, although *Wellington (understandably envious) thought him absurdly vain. His brother William was created 1st Earl Nelson (1805).

Nenni, Pietro (1891–1980). Italian Socialist politician. Exiled by *Mussolini (1926), he fought for the Loyalists in the Spanish Civil War. After Mussolini’s fall (1943) he was able to resume political life in Italy and became President of the Socialist Party. In the postwar coalitions he was a Deputy Prime Minister 1945–46 and Foreign Minister 1946–47. His close association with the Communists caused a party split (1947) and a breakaway, under *Moro he was Vice President of the council.

Nennius (fl.c.800). Welsh historian. His Latin work *Historia Brittonum is now thought to be a translation and revision of a lost original. It describes the Anglo-Saxon invasions and gives the earliest account of King *Arthur and his knights of the round table.

Nepos, Cornelius (c.100–25 BCE). Roman historian. Of his lives of the famous (*De Viris Illustribus) some 25 survive. His lost writings include a universal history and letters to his friend Cicero.

Neri, St Philip (1515–1595). Italian religious reformer, born in Florence. He went to Rome (1533) as a tutor but from 1538 led an ascetic life, sleeping in the catacombs, visiting the sick and instructing the poor. He was ordained (1551) and while continuing his work among the poor he found a new vocation in making religion attractive to the young by holding informal meetings that combined religious instruction and discussion with social and musical entertainment. In 1575 with papal consent he founded the first Oratory in Rome, a brotherhood of secular priests, which to some extent formalised his earlier work. Remembered as one of the most vivacious, human and lovable of all saints, he was canonised in 1622.

Nernst, Walther Hermann (1864–1941). German physical chemist. A professor at Göttingen 1891–1905 and Berlin 1905–33, his many important contributions to structural chemistry included his ‘solution pressure’ theory (1889) to explain the production of electromotive force in electrical cells, the concept of solubility product (1889), which governs the precipitation of solids from solution, and the ‘Nernst heat theorem’ (1906) which later became known as the Third Law of Thermodynamics (that entropy falls towards zero at –273.15° C). For this he won the Nobel Prize for Chemistry (1920). He also described the phenomenon of chain reaction.

Nero (Nero Claudius Drusus Germanicus) (37–68 CE). Roman Emperor 54–68. Proclaimed Emperor at the instigation of his mother *Agrippina (a sister of *Caligula) on the death of her husband the emperor *Claudius, he began his reign with his tutor *Seneca, timid but wise, to guide his inexperience. Only too soon, however, his character showed itself. Claudius’s son Britannicus, the rival claimant, was poisoned, Agrippina and Nero’s own wife, Octavia, were also put to death. Nero instituted a fierce persecution of the Christians to provide scapegoats who could be blamed for the great fire (64) which destroyed much of Rome, for which he himself was the obvious suspect. His grandiose plans for rebuilding work, including his ‘golden palace’ on the Palatine Hill, demanded money that could only be obtained by exactions of every kind. Plots, real or imaginary, yielded victims such as *Seneca, *Lucan and a host of rich, distinguished men, whose property could be confiscated. Meanwhile the Emperor’s vanity led him to appear in public as a musician or charioteer; passion and cruelty caused him, one crime of many, to kick his wife Poppaea to death. Finally the legions of Gaul and Spain proclaimed *Galba Emperor in his place. The praetorian guards and senate also turned against him, and Nero, in desperate flight and already hearing the sounds of pursuit, nerved himself to take his own life. External events of the reign included Boadicea’s revolt in Britain and peace treaties with the Parthians.

Neruda, Pablo (Neftali Ricardo Reyes) (1904–1973). Chilean poet. Considered one of the most original modern Spanish poets, he began publishing his verse in Chile in 1923. He met the Spanish poet Federico Garcia *Lorca in 1933 and his work was introduced to Spain. Much of his strongest realist poetry was written in reaction to the Spanish Civil War and the outbreak of World War II. After the war he entered political life in Chile as a Communist but was forced out in 1948, went into hiding and wrote *Canto general (1950), an epic poem, set as an oratorio with the Parthians. *Galba Emperor in his place. The praetorian guards and senate also turned against him, and Nero, in desperate flight and already hearing the sounds of pursuit, nerved himself to take his own life. External events of the reign included Boadicea’s revolt in Britain and peace treaties with the Parthians.

Nerva, Marcus Cocceius (c.30–98 CE). Roman Emperor 96–98. He proved a humane and tolerant ruler when raised to the purple by the Senate after the assassination of *Domitian. He was, in fact, only a stop-gap and assured a vigorous successor by selecting *Trajan as his heir.

Nerval, Gérard de (Gérard Labrunie) (1808–1855). French Romantic writer. His translation of *Goethe’s Faust (1828) was praised by the poet and used by *Berlioz and *Gounod; he knew Victor *Hugo and collaborated with Alexandre *Dumas in a successful comic opera, *Piquillo (1837). *Theophile *Gautier was a lifelong friend. While living a self-consciously bohemian life in Paris (he is said to have led a lobster on a ribbon), he wrote essays, poems including the beautiful mysterious sonnets known as the *Chimères (1854) and travel sketches, resulting from his searches in Europe and the East for exotic backgrounds. The ecstasies and agonies of his love affair with Jenny *Colon are told in *Sylvie, one of his many short stories.
stories, which became increasingly fantastic in later years. After a schizophrenic breakdown (1841), he was eight times committed to a hospital. His ability to distinguish reality from dream became more and more intermittent and eventually he hanged himself. He was much admired by *Proust.

Nervi, Pier Luigi (1891–1979). Italian engineer. He was a pioneer in the application of 20th-century engineering techniques to the construction of large buildings, especially the use of steel mesh clad with concrete, and of prefabricated components. This enabled him to design and build vast and often intricate structures. Outstanding are the Exhibition Halls at Turin (1949–50) and his buildings for the Olympic Games in Rome (1956–59).

Nesbit, Edith (1858–1924). English writer. Her children’s stories were noted for their cheerful realism. Five Children and It (1902), The Railway Children (1906), The Magic City (1910) and a series about the Bastable children are still in print, and some have been filmed. She was a founder-member of the Fabian Society, married to the economist and philanthropist Hubert Bland (1856–1914).

Nestlé, Henri (1814–1890). Swiss manufacturer, born in Germany. An artisan and inventor, he experimented with supplementary milk products for babies and established a plant in Vevey for making condensed milk. He sold out his interest in 1875 but the name was retained. The Nestlé company did not enter the chocolate market until 1904, now it is the world’s largest manufacturer. It currently describes itself as a ‘nutrition, health and wellness company’.

Nestorius (d. after 451). Christian theologian. A member of a community of monks near Antioch he was chosen (428) to be patriarch of Constantinople by the emperor Theodosius II. His interpretation of the doctrines concerning the Godhead and Manhood of Jesus Christ were held to be heretical by the ecumenical synod of Ephesus (431) and Nestorius was deposed and (436) exiled to Egypt. The Nestorian Church came into being (c.500) under Persian protection, but it shrank under constant Mongol and Turkish persecution and only a remnant, now known as Assyrians, survives in the Middle East and the US.

Neumann, John von (1903–1957). Hungarian–American mathematician, born in Budapest. He studied chemistry in Zürich, received a PhD in mathematics from Budapest, published a classic definition of ordinal numbers at the age of 20, and taught at Göttingen. He migrated to the US in 1930, became a professor at Princeton University 1930–33 and at the Institute for Advanced Study (Princeton) 1933–57. He wrote more than 150 papers on quantum theory, pure mathematics, logic, meteorology, games theory and computer programming. During World War II he worked on designing the atomic bomb and later was a ‘Cold War’ hardliner. He turned *Turing’s concept of a ‘universal computing machine’ into reality. His Electronic Discrete Variable Automatic Computer (EDVAC), operational from 1947, was the first fully electronic computer, using binary notation and stored internal programming. Conventional computers are sometimes called ‘von Neumann machines’. He was a member of the US Atomic Energy Commission 1955–57. With Oskar *Morgenstern he wrote Theory of Games and Economic Behaviour (1944).

Neurath, Konstantin, Baron von (1873–1956). German diplomat and administrator. He was Ambassador to Italy in 1921 and to Britain in 1930. In 1932 he became Foreign Minister and remained so under *Hitler, until 1938. He was appointed Protector of Bohemia and Moravia in 1939. Sentenced at Nuremberg to 15 years, he was released in 1954.

Neveu, Ginette (1919–1949). French violinist. A pupil of Georges *Enescu and Carl Flesch, she played with passion and classical grace and was killed in an aircraft crash.

Neveu, Sir Henry (1562?–1615). English diplomat. Claimed (implausibly) as a possible author of *Shakespeare’s plays, he was an MP, widely travelled and Ambassador to France.

Newcastle, Thomas Pelham Holles, 1st Duke of (1693–1768). English politician. Son of the 1st Baron Pelham, he added the name Holles when, as adopted heir, he inherited the estates of his uncle, Duke of Newcastle-upon-Tyne of an earlier creation. Thus richly endowed and having married a daughter of Lord *Godolphin he began his political career with every advantage. He proved a superb party manager
and an adroit and indefatigable wielder of patronage. As a result, no Whig administration, for more than 40 years from 1717, could exist long without him. He was Prime Minister (i.e. First Lord of the Treasury) 1754–56, 1757–62. In the period 1757–61 the driving force was William "Pitt and many great victories were won in the Seven Years' War (1756–63). He worked closely with his brother Henry "Pelham.

Newcomb, Simon (1835–1909). American astronomer. He held an appointment at the Washington Naval Observatory and from 1884 a professorship of Johns Hopkins University. He studied the motions of the sun, moon and planets and tabulated those of the sun, Mercury, Mars and Venus. He also worked with A. A. "Michelson in determining the velocity of light. His popular books included "Astronomy for Everybody (1903), he also edited the US Nautical Almanac.

Newcomen, Thomas (1663–1729). English inventor, born in Devon. He invented the first practical steam engine, which he erected in 1712 after 10 years of experiment. Its main purpose was to pump water from mine shafts (e.g. of the tin mines of his native county). Its principles were later modified to achieve greater efficiency for wider use ("Watt). Owing to patenting difficulties, Newcomen made little or no financial profit from his invention.

Ne Win ('Brilliant as the Sun', originally Shu Maung) (1911–2002). During World War II, he collaborated with the Japanese, then began a guerrilla campaign against them. Premier 1958–60, 1962–74, he organised a military coup in 1962 and cut Burmese contacts with the outside world. President 1974–81, he remained the dominant influence under the State Law and Order Restoration Council (SLORC) military dictatorship. Although he retired from public life in 1988 he continued to exercise power behind the scenes.

Newman, John Henry (1801–1890). English theologian and cardinal, born in London. Educated in Ealing, he studied at Trinity College, Oxford and was elected a Fellow of Oriel in 1822. As rector of St Mary's, Oxford 1828–43, and in spiritual charge at Littlemore, he won an immense reputation as a preacher. In 1833 he heard a sermon on 'National Apostasy' by *Keble which he regarded as the starting point of the 'Tractarian (or Oxford) Movement, in which he played so pre-eminent a role. Its purpose was to reinvigorate the Anglican Church and, by turning back to the early Christian Fathers (of whose works Newman had made a profound study) as the custodians of doctrine, to reconcile the beliefs of the Roman and Anglican branches of the Catholic Church. Newman wrote many of the "Tracts for the Times, but the same logic that made many of the movement's supporters turn to the Roman Church led Newman eventually (1845) to take the same step. Ordained priest in 1847, shortly afterwards he founded an Oratory, a brotherhood of secular priests without vows (St Philip *Neri). Its branch in London came to be known as Brompton Oratory, the main body was at Edgbaston, Birmingham. Here Newman lived in seclusion, partly because of an estrangement between him and the more ultramontane Cardinal *Manning. Any suspicion of Vatican disapproval was, however, removed when Pope *Leo XIII made Newman a cardinal (1879).

As a writer Newman was a supreme stylist as can be seen in his "Apologia Pro Vita Sua (1864), a vivid and moving spiritual autobiography written in reply to Charles *Kingsley, who had challenged his integrity. His other works include The "Dream of Gerontius (1866), a dramatic poem on the flight of the soul from the body, which *Elgar set as an oratorio (1900). In 1852 he gave lectures on the nature of university education (emphasising the pursuit of truth rather than professional training or the dissemination of knowledge) which he expanded and published as The "Idea of a University Defined and Illustrated (1873). His tenure as rector of the proposed Catholic University of Dublin 1854–58 was deeply frustrating and he asked to be relieved. His major theological work was The Grammer of Assent (1870). Lead, Kindly Light, written before his conversion, is the best known of his many hymns. In the last years of his life Newman was revered by people of all denominations and his influence did much to encourage the progressive tolerance that has made possible the present-day search for a basis for Church reunion. He was beatified by Pope *Benedict XVI in September 2010. His brother Francis William Newman (1805–1897), a Latin scholar and missionary, also left the Anglicans but became a Unitarian.

Newton, Sir Isaac (1642–1727). English mathematician and physicist, born in Woolsthorpe, Lincolnshire. Posthumous son of a small landowner, he was brought up in his birthplace after his mother's remarriage (1645), by his maternal grandmother. Already, as a school boy, he had a reputation for making sundials and water clocks. He went in 1661 to Trinity College, Cambridge, where he graduated in 1665. When the college closed during the plague
he was back at Woolsthorpe (1665–66) where at the age of 23 he worked out practically the whole of his universal law of gravitation. He built upon the work of Galileo, but it was his genius to supply a generalised set of principles and provide a new and infinitely challenging conception of the universe. Moreover he devised the tools with which to give his concept mathematical expressions: by 1665 he had evolved the binomial theorem and devised the elements of the differential calculus, which he called fluxions. He also developed the integral calculus (inverse fluxions). Because of his inherent dislike of publications, these discoveries were not published until 1685 and this caused a bitter 'priority' controversy with *Leibniz. Yet another major discovery was made by this astonishing young man: he found (1666) that so-called white light is composed of many colours, which may be separated by a prism and then combined into white light again. Having returned to Cambridge in 1667 he was Lucasian professor of mathematics 1669–95. He constructed (1668) the first reflecting (Newtonian) telescope, in which he used a parabolic mirror to reflect and magnify the object observed. All of his discoveries were made by the age of 30. In 1672 he became a fellow of the Royal Society but more than 12 years elapsed before he published his findings, and even then it was only through the eager encouragement and help of the astronomer *Halley that his great Philosophiae Naturalis Principia Mathematica (1687), known as the Principia, appeared. In this he sought to explain all physical phenomena by a few generalised laws. The laws of motion and a systematised study of mechanics provide a starting point and he goes on to explain the action of the tides and the orbits of the planets. He ends by showing the philosophical conclusions to be deduced from the earlier sections of the work. In 1704 he published his Optics in which he advanced the corpuscular theory of light, later disproved by Thomas *Young. Newton was also a student of alchemy and biological chronology, to which he appears to have attached as much significance as to his scientific work.

Newton was President of the Royal Society 1703–27, MP for Cambridge 1689–90, 1701–02 and received a knighthood in 1705. His reports on the coinage (1717 and 1718) resulted from his appointment (1699) as Master of the Mint. He is buried in Westminster Abbey and is universally recognised as one of the greatest thinkers of all time. Newton was an isolate who never married and quarrelled bitterly with *Flamsteed, *Hooke and *Boyle.

Ney, Michel (1769–1815). French marshal. Called by *Napoléon ‘the bravest of the brave’ he was a non-commissioned officer when the Revolution broke out. He rose quickly and by 1796 was general of a brigade. He was given the title Duke of Elchingen by Napoléon for the heroism with which he stormed the entrenchments in that engagement (1805). He won further distinction at Jena, Eylau and especially Friedland, and for the part he played at Smolensk and Borodin during the advance into Russia (1812), he was created Prince of Moscow. As leader of the rear-guard during the disastrous retreat he saved the remnants of the Grand Army from annihilation. When Napoléon abdicated (1814) Ney was allowed by *Louis XVIII to retain a command but when the emperor again landed (1815) his marshal joined him with his troops. Ney showed his courage once more in the Waterloo campaign but was caught when trying to reach Switzerland after the defeat and, despite efforts by *Wellington and others to save him, shot as a traitor.

Ngo Dinh Diem (1901–1963). Vietnamese politician, born in Annam. Son of a mandarin, and a Roman Catholic, he became a civil servant and minister of the interior from 1933. He refused to cooperate with the Japanese, *Ho Chi Minh or *Bao Dai, and lived abroad as a virtual recluse 1950–54. He was Prime Minister of the ‘State of Vietnam’ (i.e. the South) 1954–55, engineered Bao’s deposition, succeeding him as President (1955–63), during the period of open war with the North. A bachelor, his family aroused great hostility, especially his brother Ngo Dinh Nhu and his wife. Although utterly dependent on US support, he refused advice, launched a campaign against the militant Buddhists and was murdered by army officers, together with Nhu (November 1963).

Nicholas I and II. Russian tsars see Nikolai I and II

Nicholas, St This semi-legendary figure, the ‘Santa Claus’ of nursery lore, seems to have derived his legends from two historical bishops of Lycia in Asia Minor: Nicholas of Myra (d.c.326) was venerated for miraculously saving three generals condemned to death by *Constantine; Nicholas of Sion (d.564) was revered throughout the Byzantine Empire and his cult spread to Russia, of which he became the patron saint. Whatever his origin, the cult of St Nicholas spread rapidly in the west. Nicholas of Myra was first buried on the island of Gemile, which became an important place of pilgrimage (rediscovered in 1993), then buried in Myra. Bari, where his alleged bones – rescued it is said from the Seljuk Turks – were brought from Myra, became one of the most important places of medieval pilgrimage. As well as being the patron saint of children and the bringer of gifts on the day of his festival (6 December) his identification with ‘Father Christmas’ came later. He was impartially the patron of judges and murderers, pawnbrokers, merchants and thieves and especially scholars and sailors.

Nicholas of Cusa (1401–1464). German theologian, mathematician and philosopher. Son of a Moselle boatman, he was nevertheless able to study at
Heidelberg and Padua universities and presented to the Council of Basle (1413) his ideas (contained in On Catholic Concord but afterwards abandoned) on reforming the Church by giving a general council supremacy over the Pope. He also presented calendar reforms derived from his mathematical studies, which he pursued with the aim of arriving at exact truth. He did not, as scholars once claimed, anticipate *Copernicus's conclusion that the earth revolves round the sun. After acting as papal legate in Germany 1440–47 he was made a cardinal (1448).

Nicholson, Ben (edict) (1894–1982). British abstract artist. Son of Sir William *Nicholson and husband (1938–51) of the sculptor Barbara *Hepworth, in the 1930s he was a member of the Unit One Group of British artists seeking a truly contemporary approach, and he developed a style allied to the Russian ‘constructivism’ and to *Mondrian. His work was first exhibited at the Venice Biennale in 1934, after which he exhibited widely and gained an international reputation. He was awarded the OM in 1968.

Nicholson, Sir William (Newzam Prior) (1872–1949). English painter and engraver. He won an international reputation with the posters executed (in collaboration with James Pryde) under the pseudonym ‘The Beggstaff Brothers’. He designed the first stage settings for Peter Pan and painted many cool still lives e.g. The Hundred Jugs (1916), Onions and soup pot (1923). He taught Winston *Churchill to paint.

Nicia (d.414 BCE). Athenian politician and general. Cautious, conservative and virtuous, he was, after the death of *Pericles, the most important of the ‘generals’ (popularly elected commanders) left to carry on the Peloponnesian War against Sparta. His efforts for peace and pleas for prudence were constantly thwarted by the demagogue Cleon and by the headstrong *Alcibiades, who with Lamachus was appointed to share with Nicia the command of an attack upon Syracuse in Sicily, then a Spartan colony. When Alcibiades was recalled for impiety and Lamachus killed, Nicia was left in sole command of an expedition in which he did not believe. In the event he delayed evacuation too long, the Athenians were all killed or captured and Nicia taken and put to death.

Nicolle, Charles Jules Henri (1866–1936). French bacteriologist. Director of the Pasteur Institute at Tunis, he discovered (1909) that the body louse transmits typhus fever, and he also claimed success for immunisation against trachoma. He won the Nobel Prize for Medicine (1928).

Nicolson, Sir Harold George (1886–1968). English author, born in Teheran. Son of Lord Carnock, educated at Oxford, he became a diplomat and in 1913 married the poet Vita *Sackville-West. He was a National Labour (virtually independent) MP 1935–45. He wrote lives of *Byron, *Curzon and the official biography of *George V (1952) for which he received a KCVO. Other books include Some People (1927), Public Faces (1932) and Good Behaviour (1955). His Diaries and Letters 1930–62 (3 vols. 1966–68), edited by his son Nigel Nicolson, are valuable source documents for the period.

Niebuhr, Barthold Georg (1776–1831). German historian. After many years spent in public service, culminating with a term as Prussian Ambassador in Rome 1816–23, he lectured at Bonn on ancient history. His great History of Rome (3 volumes, 1811, 1812, 1832) set new standards of scholarship by his critical examination of original sources. Many of his conclusions remain unchallenged.

Niebuhr, Reinhold (1892–1971). American theologian. Educated at Yale, he taught at the Union Theological Seminary, New York 1928–60 and wrote many books, including The Nature and Destiny of Man (1941–43), which promoted the concept of a ‘social gospel’ with a heavy political emphasis.

Nielsen, Carl August (1865–1931). Danish composer. His Symphony No. 1 (1892–94) shows the influence of *Brahms, but other works of the 1890s illustrate a tendency towards combining contradictory keys which, first asserted prominently in the Symphony No. 2 (1902), led Nielsen towards polytonality. In 1915 he became Director of the Copenhagen Conservatoire. His works include four more symphonies, the comic opera Maskarade (1906) and a violin concerto (1911).

Niemeyer, Oscar (in full, Oscar Ribeiro de Almeida Niemeyer Soares Filho) (1907–2012). Brazilian architect. Strongly influenced by *Le Corbusier’s functional architecture, he designed many strikingly original buildings in Rio de Janeiro and São Paulo and was commissioned to design (1956) the principal buildings for the city of Brasilia, the new capital of Brazil. He was awarded the Lenin Peace Prize in 1963 (Lúcio *Costa).
Niemöller, Martin (1892–1984). German Lutheran pastor. After being a submarine commander in World War I he was ordained in 1924. He at first supported but later actively opposed the Nazi regime and was held in a concentration camp from 1937 until the end of World War II. He was President of the World Council of Churches 1961–68.

Schmidt, D., Pastor Niemöller. 1959.

Niepce, Joseph Nicéphore (1765–1833). French inventor. He devised heliography, using sunlight to fix images on plates coated with Jericho pitch as early as 1822, and this was the precursor of photography. He later collaborated with *Daguerre who developed a much faster process for fixing sharper images.

Nietzsche, Friedrich Wilhelm (1844–1900). German philosopher, born in Röcken. Son of a pastor, he studied classical philology at Bonn and Leipzig and showed such ability that in 1869 even before graduation he was appointed to a professorship at Basel University. He served in the Franco-Prussian War (1870) and contracted dysentery and diphtheria which kept him in pain for much of his life. His earliest work, *The Birth of Tragedy …* (1871), was dedicated to *Wagner whose operas he clearly regarded as being in the line of descent from Greek dramas. The influence of Wagner again and of *Schopenhauer is apparent and acknowledged in a group of essays published 1873–76, in one of which he enunciates the principle, elaborated in his later work, that it is not the movements of masses that are historically significant but the deeds of the great. Here, in fact, is the genesis of the superman. He admired ‘paganism’ and the Renaissance and considered Christianity to be ‘slave morality’ and democracy (‘a mania for counting noses’), the machinery by which quantity (i.e. of ‘slave morality’ and democracy (‘a mania for counting noses’), the machinery by which quantity (i.e. of

Nietzsche despised nationalism and anti-Semitism. From 1889 he suffered from a brain tumour (not syphilis, as some writers concluded) and was confined to institutions. In summarising the last 2000 years of history as a conflict between Rome and Judaea he was using these nations primarily as symbols for his two contrasting types, the hero and the weakling slave. Nonetheless the works of Nietzsche have provided justificatory texts for nationalists and socialists in many countries. His sister, Elisabeth Förster-Nietzsche (1846–1935) was his secretary, nurse and biographer. She had been part of a failed Aryan colony in Paraguay and later became a great enthusiast for *Hitler and promoted the erroneous view that Nazism was directly influenced by Nietzsche’s philosophy.

Nightingale (originally Shore). Florence (1820–1910). English nurse, born in Florence. Daughter of a wealthy Hampshire landowner, she was named for the Italian city of her birth. Her parents were Unitarians and she was privately educated in languages and mathematics. Her interesting Letters from Egypt 1849–50, illustrated by herself, was published in 1887. Moved by a sense of vocation, she gradually wore down parental opposition to her taking up nursing, she visited and compared many hospitals at home and abroad and gained some nursing experience with the deaconesses of Kaiserswerth in Germany (1851–52) and training with nursing sisters in a convent in Paris. In 1853 she became superintendent of the London Hospital for Invalid Gentlewomen. On the outbreak of the Crimean War (1854) she agreed to take 38 nurses to Constantinople and run the military hospital at Scutari. Contrary to popular belief, the appalling death-rate did not fall, and was higher than in some other military hospitals. Nevertheless, the troops idolised her and as news of her work reached England she became an almost legendary hero as ‘the Lady of the Lamp’. Faced with the statistical evidence, she began a continuous battle against officialdom, medical jealousy, incompetence and inertia, but at last she managed to overcome the chaos and introduce cleanliness and sanitation, organise the provision of food as well as maintain the standards of nursing. (Nevertheless, she supported the miasma theory for the spreading of disease despite overwhelming evidence against it.) She used her own money and influence unsparingly and at last the appalling death-rate began to shrink to comparatively negligible proportions. A similar task was attempted at the hospitals at Balaclava in the Crimea. She returned in 1856 and with £50,000 raised by public subscription, she founded (1861) a nurses’ training school at St Thomas’s Hospital. A uniform for nurses and competitive examinations were among her other reforms that gave the nursing profession an entirely new status. She was an invalid 1858–80, but had a new burst of energy until 1896. She did not invent the piechart but used it effectively. Among the many other tasks to which she devoted herself were reform of the conditions under which soldiers lived in India, and this led her on to the much vaster problems of India itself. She gave much time in later life to religious study. From 1896 ill health confined her to her room, and very gradually her faculties began to fail. In 1907 she became the first woman to be awarded the OM.

Nijinsky, VACLAV FOMICH (1889–1950). Russian ballet dancer and choreographer. Trained at the Imperial school at St Petersburg, he became *Diaghilev’s lover and the leading dancer in his Ballets Russes in Paris (1909), where he enjoyed enormous popularity, especially in Le Spectre de la rose (1911). Later he created the leading roles in Petrushka, Scheherazade etc. His work as a choreographer, e.g. for *Debussy’s L’Après-midi d’un faune (1912) and Jeux (1913), and *Stravinsky’s Le Sacre du Printemps (1913), provoked both controversy and scandal. His health was undermined by a period of internment in Hungary during World War I and from 1919 he was schizophrenic. He is remembered as one of the greatest male dancers of all time and especially for his agility, lightness and grace of his prodigious leaps. Moreover his technical skill was matched by his interpretative powers and dramatic sense. His extraordinary diaries were published in a heavily expurgated form in 1922, in full in 1999. He died in London. His sister, Bronislava Nijinska (1891–1972), made a name for herself as a choreographer with such works as Les Noces (1923), Les Biches (1924) and Le Train bleu (1924). Buckle, R., *Nijinsky. 1971; Moore, L., *Nijinsky. 2013.

Nikolai I (1796–1855). Tsar of Russia 1825–55. After the death of his brother *Aleksandr I he came to the throne in place of his elder brother Constantine, who had renounced the succession but whose name was invoked by the so-called ‘Decembrist’ plotters who were demanding reforms. The movement was easily suppressed, and though Nikolai appointed a committee to investigate the state of the country it was clear that he would permit no reform not emanating from himself. A codification of the law was, however, a definite achievement of the reign. Meanwhile Nikolai maintained his autocracy with the aid of censorship and secret police, cruelly suppressed a Polish rising (1830–31) and in 1849 sent an army to help the Emperor of Austria in quelling the Hungarian revolt. His readiness, however, to champion Turkey’s Christian subjects against the sultan involved him in the humiliations of the Crimean War, during which he died.

Nikolai II (1868–1918). The last tsar of Russia 1894–1917. Eldest son of *Aleksandr III, he was an amiable weak man, failed to support any liberal movement and accepted the advice of reactionary ministers. The aftermath of the humiliating Russian defeat in the war with Japan (1904–05) forced him to accept an elected duma (parliament) but he quickly acquiesced in rendering it ineffectual. Socialist and revolutionary movements were driven underground, and, though for a time war with Germany temporarily relieved internal difficulties, defeats and governmental incompetence fanned discontent into open rebellion. Distrust of the tsarina, moreover, lost him the support of many of the aristocracy, his natural allies. Nikolai had married (1894) Princess Alix of Hesse Darmstadt (*Aleksandra). Of the five children of this happy marriage, only the youngest was a boy, Aleksei, who suffered from haemophilia. A charlatan monk *Rasputin, who seemed to have the power of relieving the boy’s illness, gained such complete power over the tsarina (and through her the tsar) that they were suspected of such reasonable acts as correspondence with the enemy. Thus when the Revolution broke out (March 1917) the tsar, lacking the determination or support to contest the issue, abdicated. In August with his wife and children he was taken to Siberia and in the following July the whole family was murdered by the Bolsheviks (*Anastasia), at Yekaterinberg. Nikolai was a kindly, well-meaning man but lacked the strength, ability and ruthlessness to be a successful autocrat. In 1993 the family’s remains were positively identified by DNA testing and interred in St Petersburg in July 1998.

Ninian, St (c.360–432). Scottish evangelist. While on a pilgrimage to Rome he was consecrated bishop (c.395) and, having visited St Martin at Tours on the way back, named after him the church of Whithorn in Galloway, which he founded. He succeeded in making many converts among the southern Picts.

Nivelle, Robert Georges (1858–1924). French General. He succeeded *Joffre as Commander-in-Chief of the French army in December 1916 and was dismissed in May 1917 when his major offensive failed to break through German lines.
Nixon, Richard Milhous (1913–1994). 37th President of the US 1969–74. Born in Yorba Linda, California, he was the son of a gas station owner who tried lemon growing, then became a grocer in Whittier; his mother was a Quaker. Educated at Duke University, he became an attorney, served in the US Navy in World War II and then entered politics. As a Republican Congressman 1947–51 he gained prominence for his zeal on the notorious House Committee on Un-American Activities, and especially in his pursuit of Alger *Hiss. Elected as a senator from California 1951–53, he served as *Eisenhower’s Vice President 1953–61, playing an active role (unusual in the holders of that office), and travelled widely, e.g. to Russia in 1959. He won the Republican nomination to succeed Eisenhower in 1960 but lost narrowly to John F. *Kennedy, partly due to a series of television debates which appeared to put him at a disadvantage. He lost a contest against Pat *Brown for Governor of California in 1962, moved to New York as a lawyer, and did not seek presidential nomination in 1964.

In 1968, with Democrats in disarray over Vietnam, he defeated Hubert *Humphrey narrowly to become President, with Spiro *Agnew as Vice President. Nixon visited China in February 1972 to meet *Mao (to the discomfort of his traditional supporters), began to ease the US out of Vietnam and attempted detente with the Soviet leadership. Nixon was the architect of the Republican Party’s successful ‘Southern Strategy’ in which states from the old Confederacy, which had voted Democrat since the Civil War, became strongly Republican, influenced by support for states’ rights, a conservative social agenda, gun ownership, patriotism, religious fundamentalism and silence on race. He pitched his political appeal to what he called ‘the silent majority’, citizens who accepted the status quo and avoided controversy.

Nixon’s obsessive but unfounded anxiety that the 1972 election would be another close result led the sabotaging of Democrat candidates and illegal acts by his staff, notoriously an attempt to steal material from Democratic headquarters at the Watergate Hotel, Washington. Nixon won a landslide victory in 1972 over George *McGovern, winning 49 of 50 states.

Evidence of links between the Watergate burglary and the White House seeped out through hearings of the Senate Watergate Enquiry, chaired by Senator Sam Ervin, resulting in an indictment for conspiracy of seven close associates, including the Attorney-General, John Mitchell, and strenuous attempts to cover up the Watergate scandal. The ‘Watergate tapes’, recordings of conversations in the presidential office, were compelling evidence, and attempts to persuade courts to suppress them failed. A grand jury found Nixon was an ‘unindicted co-conspirator’ and a House Committee recommended impeachment. In October 1973 Agnew had been forced to resign after conviction for receiving bribes from contractors as Governor of Maryland. In December Gerald *Ford was sworn in as Vice President after confirmation by the Senate and House of Representatives. Nixon became the first US president to resign (9 August 1974) and Ford succeeded him. He retired to San Clemente, California, published *RN: The Memoirs of Richard Nixon in 1978, relocated to New Jersey and died in New York after a stroke.

Ni Zan (or Ni Tsan) (1301–1374). Chinese painter, calligrapher and poet. With Huang Gongwang, Wu Zhen, and Wang Meng, he is described as one of the ‘Four Masters of the Yuan Dynasty’.

Kissinger, Henry (1923–). US diplomat. He held the key position of national security advisor to presidents *Nixon and *Ford, and in 1973 became US Secretary of State. He was awarded the Nobel Peace Prize (with  **Yasser Arafat** and **Jesse Jackson**) for his part in bringing peace to the Middle East. He became an influential US senator from New Hampshire 1979–89, and in 1993 was US Secretary of State again under President *Clinton.

Zhen, and Wang Meng, he is described as one of the 'Four Masters of the Yuan Dynasty'.

Nobel, Alfred Bernhard (1833–1896). Swedish chemist. His main interest, the development of explosives, was inspired by his father, a manufacturer of explosives at St Petersburg (Leningrad), where he was brought up. From 1859 he studied the subject in Stockholm, and while seeking an effective means of making nitroglycerine safe to handle he invented (1867) dynamite, in which the introglycerine was dispersed in an earthy material called Kieselguhr. He left most of the large fortune he had made from the manufacture of explosives (about £2 million) for the establishment of five prizes to be awarded annually for literature, medicine (or physiology), physics, chemistry and the promotion of peace. The first Nobel Prizes were awarded in 1901.

Nobile, Umberto (1885–1978). Italian airman and explorer. Having risen to the rank of general, he took the airship *Norge (with *Amundsen) across
the North Pole (1926). He was severely censured for the crash (1928) of his airship Italia from which he was rescued after 40 days on the ice, but cleared in 1945. Meanwhile he had served as an aeronautical consultant in the USSR and the US, returning to Italy after *Mussolini’s fall.

Noguchi, Isamu (1904–1988). Japanese-American sculptor. Son of Japanese and American writers, he studied in Paris with *Brancusi and was a prolific abstract artist who also designed furniture and stage sets.

Nolan, Sir Sidney Robert (1917–1992). Australian painter and lithographer, born in Melbourne. He studied at the Prahran Technical College and the National Gallery of Victoria Art School, and his early work, e.g. Ocean Grove (1938), reveals an individual style remote from mainstream Australian art. He became a voracious reader and, having deserted from the Australian Army, came to see himself as an outsider. From 1942 he was associated with the *Angry Penguins group of Australian modernists and enjoyed the patronage of John and Sunday Reed, at Heide, in Bulleen, near Melbourne. In 1946–47, at Heide, he painted 27 oils on the life of Ned *Kelly, iconic works in which the outlaw stares at the world through a helmet. His art attracted the interest of Kenneth *Clark. Later paintings develop themes from Australian history, e.g. the explorers *Burke and Wills, Mrs Fraser, the Eureka Stockade, and Gallipoli (a sequence of 252, from 1955, partly influenced by his reading of *Homer), as well as the Australian outback, flora, fauna, China, Africa, Antarctica, mythology, e.g. Leda and the Swan, and scenic designs for ballet (notably The Display, 1964, music by Malcolm Williamson, choreographed by Robert *Helpmann) and opera. He lived in England from 1951. Snake (1970–72), mixed media on 1620 panels, 46 m x 9 m, is displayed in a purpose-built gallery at the Museum of Old and New Art (MONA), Hobart. He engaged in a memorable feud with his former friend Patrick *White, received the OM in 1983, an AC in 1988 and became Australia’s first, and only, RA (1991). He was extraordinarily prolific, experimenting with a diversity of techniques.

Nolde, Emil (1867–1956). German painter and graphic artist. Originally a woodcarver, he joined the Brücke ('Bridge') group in Munich, became an Expressionist, travelled extensively and lived as a hermit. He is remembered for his landscape, flower and primitive paintings. Despite his brief enthusiasm for *Hitler, the Nazis denounced him as a degenerate artist. His First-Class Marksmen (1946) sold for $AU5.4 million in 2010.

Nollekens, Joseph (1737–1823). English sculptor. Of Dutch descent, he worked (1760–70) in Rome, where he made busts of *Garrick and *Sterne. On his return to London he quickly achieved success and became ARA (1771) and RA (1772). Though commissioned to execute many public monuments, often adorned with mythological figures, his most memorable works were busts of *George III, Samuel *Johnson, *Fox and *Pitt.

Nolot, Jean Antoine (1700–1770). French abbé and physicist. Professor of physics in the University of Paris, he was the first clearly to describe (1748) osmosis (the passage of a solvent through a semi-permeable membrane separating a weaker from a stronger solution).

Nono, Luigi (1924–1990). Italian composer, born in Venice. He married *Schoenberg’s daughter, joined the Communist Party, was deeply committed to the music of ‘struggle and ideas’ and wrote extensively on music theory. He composed concert music with and without electronics and stage works, including Intolleranza (1960).

Nora, Simon (1921–2006). French public servant. L’informatisation de la société (with Alain Minc, 5 volumes, 1978) was a seminal text on the information age.

Norman, Jessye (1945– ). American soprano, born in Georgia. Trained in the US, she developed a voice of extraordinary range and opulence, with excellent diction and command of languages. She made her operatic debut in Berlin, toured widely, appeared in many operas and recorded works by *Mozart, *Verdi, *Mahler, Richard *Strauss and *Berg.

Norman, Montagu Collet Norman, 1st Baron (1871–1950). British banker. His policies as Governor of the Bank of England 1920–44 were deeply controversial, especially during the inter-war period and the most vital years of World War II have been the subject of continuous controversy, especially the deflationary return to the gold standard (1925) and the devaluation of the pound (1931). Norman had much influence with the governments of the period. His reputation as an éminence grise was enhanced by his habit of crossing the Atlantic under the easily penetrable disguise of an assumed name.

Norodom Sihanouk (1922–2012). Cambodian prince and politician. Educated in Saigon and Paris, he succeeded his grandfather as King of Cambodia 1941–55, abdicating in favour of his father Norodom Suramarit to found the Popular Socialist Community Party. He was Prime Minister and Foreign Minister 1955–60 and, after his father's death, Chief of State 1960–70 until deposed by a military coup led by Lon Nol. He lived in Beijing 1970–75, returned briefly and had 16 more years in exile. He returned to Cambodia in November 1991, was elected President again but proved unable to exercise authority over a country bitterly divided between Chinese, Vietnamese and Khmer Rouge forces. Elections were held in July 1993. He became King of Cambodia again 1993–2004, this time as (in theory) a constitutional monarch. He composed and directed many films. He went into self-imposed exile in 2004, suffering from cancer, and died in Beijing.

North, Baron, Frederick North, 2nd Earl of Guildford (1732–1792). English politician, born in London. Educated at Eton, Oxford and Leipzig, he was MP 1754–90, originally Whig then Tory, with the courtesy title of Lord North until he succeeded (1790) his father as Earl of Guildford. Able and well liked, his reputation for idleness has been exaggerated. He served as Chancellor of the Exchequer 1767–82 and as Prime Minister 1770–82. Because of his appearance, it was speculated that he may have been a half-brother of *George III, whom while maintaining a parliamentary majority by royal patronage, he could exercise his influence over the government. Most of his term of office was occupied by the American colonies' struggle for independence. North's attempts at conciliation were constantly thwarted by royal obduracy. He remained in office only out of loyalty and gladly resigned in 1782; he returned briefly as Home Secretary (1783) in coalition with *Fox. Important legislation passed during his term of office included the Royal Marriage Act, an act submitting the East India Company's policies to parliamentary control, and the Quebec Act (1774), which guaranteed to French Canadians their traditional religion and laws. Chancellor of Oxford University 1772–92 and a patron of *Gibbon, he became blind in 1790.

North, Sir Thomas (1535?–1602). English translator. His fame rests on his English version (1579) of *Plutarch's Lives, translated not from the original Greek but from the French rendering (1559) by Jacques Amyot, Bishop of Auxerre, whom North may have met when accompanying a diplomatic mission to *Henri III of France. *Shakespeare borrowed freely from it for his classical dramas, sometimes using the actual words as well as reconstructing the scenes.

Northbrook, 1st Earl of, Thomas George Harmsworth, 1st Viscount (1865–1922). British journalist and newspaper proprietor. He began his journalistic career (1880) on the Hampstead and Highgate Gazette. The step which led to his future greatness was the launching (1888), with his brother Harold *Harmsworth, of Answers, a weekly magazine in which snippets of information and competitions with lavish prizes procured a success that enabled them to buy (1894) the London Evening News. Two years later they launched the Daily Mail, which sold at 1d, and with its bold headlines and brightly written features provided a quickly copied pattern for popular newspapers. In 1908 he bought The Times, but though he greatly increased its circulation and at one time reduced the price to 1 d., his touch was unsure when handling a national institution. In World War I his papers helped to expose the shell shortage and attacked *Haldane, *Asquith and *Kitchener with venom. He headed a war mission to the US (1917) and in 1918 was director of propaganda in enemy countries. Progressive illness produced signs of megalomania in his last years. He was made a baronet in 1903 (aged 38), became Baron Northcliffe in 1905, and a viscount in 1918.

Northumberland, John Dudley, 1st Duke of (1502–1553). English Lord Protector 1552–53. Son of Edmund *Dudley, *Henry VII's minister, he grew to importance under *Henry VIII and was an executor of his will. Made Earl of Warwick in recognition of his support of Edward Seymour, Duke of *Somerset, as Lord Protector during *Edward VI's minority, he at once intrigued against him, succeeded him (1552) and secured his execution. He tried to prolong his power by inducing the sickly Edward to exclude his sisters from the succession, and so leave the way clear for Lady Jane *Grey (whom he married to his son Guildford Dudley) to ascend the throne. The scheme failed when on Edward's death (1553) the
country rallied to Queen Mary. Northumberland was taken and executed. For his son Robert, Elizabeth's favourite, see Earl of *Leicester.

Norwich, 1st Viscount see Cooper, (Alfred) Duff

Nossal, Sir Gus (tav Joseph Victor) (1931– ). Australian immunologist, born in Austria. Educated in Sydney, he succeeded *Burnet as Director of the Walter and Eliza Hall Institute for Medical Research (in Melbourne) 1965–96 and was President of the Australian Academy of Science 1994–98.

Nostradamus (Michel de Nôtre Dame) (1503–1566). French astrologer and physician, born in Provence. From a Jewish family, with university qualifications in medicine, he gained much esteem for his devotion to duty during times of plague. He published two collections of prophecies, 948 in all, entitled Centuries (1555, 1558), written in rhyming quatrains. Although obscure and ambiguous, he attracted such notice that *Catherine de'Medici invited him to court and he became physician to *Charles IX.

Novalis (Friedrich, Baron von Hardenberg) (1772–1801). German lyric poet and novelist. His poetic works include *Hymns to the Night* (1800), inspired by his grief at the death of Sophie von Kuhn, whom he loved. His novel *Heinrich von Ofterdingen* (1802), the story of the development of a young poet, ranks high among the achievements of the German Romantic movement.

Noverre, Jean Georges (1727–1809). French choreographer. In 1747 he became maître de ballet at the Opéra Comique in Paris and in 1754 gained fame as a choreographer with *Fêtes chinoises* and *La Fontaine de jouvence* for which *Boucher did the décor.* The outbreak of the Seven Years' War (1756) interrupted a London season which he had undertaken for *Garrick, who called him 'the 'Shakespeare of the dance'. His *Lettres sur la danse et sur les ballets* (1759–60) established an aesthetic tradition that still influences choreography.

Noyes, Alfred (1880–1958). English poet. His poetry, e.g. *The Barrel Organ* and *The Highwayman* is firmly traditional. His most ambitious work *The Torchbearers* (3 volumes 1922–30), now forgotten, described the transmission of scientific knowledge. Professor of Literature at Princeton 1914–23, he campaigned vehemently, but mistakenly, to defend the posthumous moral character of Roger *Casement.

Nu, U (also Thakin U) (1907–1995). Burmese politician. Educated at Rangoon University, he joined *Aung San as a student leader, was jailed by the British and briefly served as Foreign Minister during the Japanese occupation. Prime Minister 1948–56, 1957–62, he was overthrown by a military coup led by *Ne Win.

Nuffield, 1st Viscount see Morris, William Richard, 1st Viscount Nuffield

Nureyev, Rudolf Hametovich (1938–1993). Russian ballet dancer, born in Siberia. Having become a leading dancer of the Russian Kirov ballet he defected while the company was in Paris (May 1961) and later came to England. There he won new fame in the Royal Ballet, especially when partnered by Margot *Fonteyn in e.g. Le Corsair, Marguerite and Armand, Giselle and Swan Lake. Of some ballets (e.g. *Raymonda*) he revised the choreography to satisfy the demands of his technical skill and the agility and strength that won him great acclaim. He appeared in the films *Don Quixote* (with Sir Robert *Helpmann and the Australian Ballet, 1973) and *Valentino* (1977). He directed the ballet at the Paris Opera 1983–89, died of AIDS and left a great fortune.

Nuri es-Said (1888–1958). Iraqi soldier, born in Baghdad. He served in the Ottoman army against the British, was captured in 1916, then joined the Sharifian army revolt against the Turks. On Iraq's creation in 1921, Nuri became a committed supporter of the Hashemite regime of *Faisal I and a permanent alliance with Britain. Between 1930 and 1958 he served as Prime Minister of Iraq 14 times and became first Prime Minister of the Arab Federation (Iraq and Jordan) May–July 1958. His pro-Western views were increasingly unpopular with Iraqis and he was murdered with *Faisal II.

Nurmi, Paavo (1897–1973). Finnish athlete. Known as 'the flying Finn', he won six individual Olympic gold medals, two each in 1920, 1924 and 1928, for the 1,500 metres, 10,000 metres and cross country events, and three more for team events. He also held the world record for the mile (4 min. 10.4 secs) 1923–31. As a professional, he was excluded from the 1932 Olympics.

Nurse, Sir Paul Maxime (1949– ). English geneticist and cell biologist, born in Norwich. Educated at Birmingham and East Anglia universities, he shared the Nobel Prize for Medicine in 2001 for his discoveries in cell cycle regulation, working primarily in yeast, received the Copley Medal in 2005 and was President of the Royal Society 2010–15. He became foundation director of the Francis *Crick Institute 2015– , the largest biomedical research institute in Europe.
Nyerere, Julius Kambarage (1921– ). Tanzanian politician. Son of a chief, he studied at Makerere College in Uganda and at Edinburgh University. In 1954 he founded the Tanganyika African National Union with a policy aimed at independence. In his successful pursuit of this aim he was successively Chief Minister (1960) of Tanganyika, Prime Minister when independence was granted (1961), and President (1962) when a republic was proclaimed. When Zanzibar, after the revolution of 1964, became linked with Tanganyika, Nyerere became President of the combined country, known thereafter as Tanzania, retiring in 1985. His publications include a Swahili translation of *The Merchant of Venice* (1969) and *Julius Caesar* (1969).

Nyman, Michael (1944– ). English composer. A critic and author, he wrote music for films by Peter Greenaway and Jane Campion, and concertos for trombone, saxophone and two pianos.
Oates, Lawrence Edward Grace (1880–1912). English soldier and explorer. He joined *Scott's Antarctic expedition in 1910, during the arduous return from the South Pole in 1912 he became convinced that with his frost bite injuries he would handicap his companions and lessen their chances of survival. He accordingly left camp and walked, 'a very gallant gentleman' as Scott recorded in his log, to his death in the blizzard.

Oates, Titus (c.1649–1705). English conspirator. After being dismissed as a naval chaplain, he claimed to have spent some time in the guise of a convert in Jesuit seminaries abroad in order to discover their secrets. In 1678 he reappeared in London and made a declaration on oath before Sir Edmund Berry Godfrey concerning an alleged 'Popish plot' for the murder of *Charles II and the massacre of Protestants. When Sir Edmund was found dead in a ditch (possibly murdered by Oates or his followers) the story of the plot, hitherto ridiculed, seemed to acquire some plausibility. Mass hysteria, fanned by *Shaftesbury for political reasons, followed. Oates poured forth his denunciations and some 35 Roman Catholics were executed for treason. Meanwhile the king was manipulating opinion in favour of sanity. A reaction set in and in 1685 Oates was found guilty of perjury and imprisoned for life. The revolution that expelled *James II brought him release and a pension, but he died destitute.

Lane, J., Titus Oates. 1949.

Obama, Barack Hussein (1961– ). 44th President of the US 2009–17. Born in Honolulu, the son of a Kenyan father and an American mother from Kansas, after living in Indonesia and Hawaii as a child, he was educated in Los Angeles and New York, graduating from Columbia and Harvard Law School. He worked as a community organiser and civil rights lawyer in Chicago and taught at the University of Chicago Law School. His books include Dreams from my Father (1995) and The Audacity of Hope (2006). He served in the Illinois State Senate 1997–2004 and the US Senate 2005–08. After defeating Hillary *Clinton narrowly in the Democratic primaries, he was nominated for president in Denver (August 2008) and elected in November, over the Republican candidate Senator John *McCain, winning a popular vote of 69.5 million. The award of the Nobel Peace Prize for 2009, disconcertingly early in his first term, perhaps reflected approval for aspirations rather than achievement. He was elected to a second term in November 2012, defeating Mitt *Romney, with a popular vote of 65.9 million and a decisive majority in the Electoral College (332–206).

Obregón, Alvaro (1880–1928). Mexican soldier and politician. His original family name was O’Brien. He joined forces with *Carranza and *Villa against *Huerta, but when the two fell out he supported Carranza and by his military skill overcame Villa. Obregón temporarily retired but, after the revolution in which Carranza was murdered while in flight, became President 1920–24. He achieved valuable reforms on behalf of organised labour and assisted education. By arrangement with his successor *Calles he was re-elected President in 1928 but assassinated before inauguration.

Obrenovic. Serbian dynasty in hereditary feud with the Karageorgevic line. The feud started when Milos (1761–1860), a guerrilla leader, allegedly murdered (1817) Kara George, under whom he served. His son Michael, prince of Serbia, was murdered by a member of the Karageorgevic clan (1868). The latter's adopted son Milan proclaimed himself King of Serbia (1882) but abdicated (1889) as a result of domestic scandals. His son Alexander succeeded, but, with his notorious wife, Draga, was murdered by a group of officers (1903). Peter Karageorgevic, the father and grandfather of the future Yugoslav kings, succeeded.

O’Brien, Flann (Brian O’Nolan) (1911–1966). Irish novelist. He was a civil servant and morose alcoholic who wrote a weekly satirical column in the Irish Times under the name Myles na Gopaleen. His masterpiece At Swim-Two-Birds failed on its first publication in September 1939, although praised by James *Joyce, and was recognised as a work of genius only in the 1960s. Other works include The Third Policeman (1940), The Hard Life (1960) and The Dalkey Archive (1965).

O’Brien, Patrick (Richard Patrick Russ) (1914–2000). English novelist, translator and biographer. He wrote 20 novels with naval themes, featuring the characters Captain Jack Aubrey and Dr Stephen Maturin, which attracted a cult following, and lives of *Picasso (1976) and Joseph *Banks (1987).

O’Casey, Sean (1884–1964). Irish playwright, born in Dublin. Educated, so he said, in Dublin's streets, after working as a labourer he became active in politics and literature. His first plays, produced at the Abbey Theatre, Dublin, were The Shadow of a
Ockeghem, Jean de (c.1410–1497). Franco-
Flemish composer, probably born near Mons. He worked in Antwerp and for the French court, was a master of polyphonic complexity and had a profound influence on *Josquin. His few surviving works include 12 Masses, five motets and some songs.

Ockham (or Occam), William of (Latin: Gulielmus Occamus) (c.1287–1349). English philosopher, probably born at Ockham in Surrey. He early joined the Franciscans and studied at Oxford. Summoned to Avignon by Pope John XXII on a charge of heresy (1326), he was confined to a friary until 1328 when, after siding against the Pope in a Franciscan dispute concerning poverty, he fled to live under the protection of the emperor *Louis IV at Pisa and Florence. In 1329 he was disqualified in 1334. He was the principal leader of the Chartist movement (whose six demands included universal suffrage and voting by secret ballot). MP for Nottingham 1847–52, he organised the Chartist mass movement for the repeal of the Act of Union. This involved him in a trial for sedition (1844). His sentence was quashed by the House of Lords but his refusal to adopt revolutionary methods and his conservative attitude to social questions militated against his success. He died in Genoa.

O’Connor, Feargus Edward (1794–1855). Irish Chartist leader, born in County Cork. From a Protestant family, educated at Trinity College, Dublin, he was MP for Cork 1832–35, as a follower of *O’Connell, but he took a far more radical approach on social conditions and the Poor Law, and was disqualified in 1835. He was the principal leader of the Chartist movement (whose six demands included universal suffrage and voting by secret ballot). MP for Nottingham 1847–52, he organised the Chartist ‘monster petition’, presented to Parliament in 1848, followed by a huge rally. However, he became increasingly erratic, alcoholic and violent and was followed by a huge rally. However, he became increasingly erratic, alcoholic and violent and was certified in 1852.

Octavian(us) see Augustus

Odets, Clifford (1906–1963). American playwright. Originally an actor, he wrote several socio-political dramas, e.g. *Waiting for Lefty (1935), *Awake and Sing (1935), *Till the Day I Die (1935), and probably his best known play, *The Golden Boy (1937). Much of his work was produced by the Group Theatre, New York, of which he was a founder.

in Caen, and commissioned the Bayeux tapestry. He lost all his English possessions for joining a revolt against *William II and died at Palermo on the way to the 1st Crusade. He was a patron of scholarship.

Odovacar (or Odoacer) (d.493). King of Italy 476–493. Probably a Germanic chieftain from the Sicrii tribe, after the abdication of *Romulus Augustulus, last of the Roman emperors of the west, he was proclaimed King of Italy by his troops (476). After four years he gained full control of Italy and later proved his ability to defend and extend the area he had won. Alarmed by his growing power, the Byzantine emperor Zeno encouraged *Theodoric, King of the Ostrogoths, to invade Italy (488). After three defeats (489–90) Odovacar retired to Ravenna, where he was besieged until he was forced by famine to yield (493). He is said to have been stabbed to death by Theodoric at a feast.

Oersted, Hans Christian (1777–1851). Danish physicist. Professor of physics at the University of Copenhagen 1806–29 and director of the Polytechnic Institute, Copenhagen 1829–51, he discovered (1820) the magnetic field created by an electric current, showing for the first time that electricity and magnetism are connected. This important discovery was taken up by *Ampère and *Faraday. The unit of magnetic field strength, the oersted, is named after him.

Offa (d.796). King of Mercia 757–96. One of the greatest Anglo-Saxon kings, by conquest or marriage ties he controlled all England south of the Humber and protected his subjects from Welsh raiders by the mighty earthwork known as Offa’s Dyke, which stretched from the estuary of the Dee to that of the Humber. He controlled all England south of the Humber and protected his subjects from Welsh raiders by the mighty earthwork known as Offa’s Dyke, which stretched from the estuary of the Dee to that of the Wye. He was a patron of monasticism and a lawmaker.

Offenbach, Jacques (Jakob Levy Ebers) (1819–1880). German-Jewish composer, born in Cologne. He lived in Paris from 1833 and wrote many successful operettas and opéras bouffes, e.g. Orpheus in the Underworld (1858) and La Belle Hélène (1865). The opera on which he worked for many years, *The Tales of Hoffmann, was produced posthumously (1881).

Ogden, Charles Kay (1889–1957). English educationist. With I. A. *Richards of Harvard University, in 1929 he devised ‘Basic English’, a simplified form of the language by which most ordinary concepts could be expressed with a vocabulary of some 850 key words and 18 verbs.

Oglethorpe, James Edward (1696–1785). English soldier, colonist and philanthropist. After service with Prince *Eugène of Savoy against the Turks (1717), he returned to England where as an MP 1722–54 he roused public opinion against the press gang, prison conditions and imprisonment for debt. He obtained a charter to found the colony of Georgia, which he peopled mainly with English debtors and refugee Austrian Protestants. He himself accompanied the first contingent (1733) and raised a regiment with which he successfully defended the colony against the Spaniards. In 1743 he returned to England to answer charges of incompetence and was later court-martialled for his conduct of operations in the Jacobite rebellion (1745). Both times he was acquitted, but his military career was ended and in 1754 he was not re-elected to parliament. Among the many friends of this colourful general were *Johnson, *Boswell and *Burke.

O’Higgins, (Riquelme), Bernardo (1778–1842). Chilean liberator. He never met his father *Ambrosio O’Higgins (1720–1801) who rose in the Spanish service in South America to be Viceroy of Peru. Bernardo studied in London 1795–98, then joined a group of men plotting to free South America from Spanish rule. He inherited his father’s estates, returned to Chile (1802) and, after playing a prominent part in the revolution of 1810–11, became Commander-in-Chief of the Chilean forces. After military setbacks he fled to join *San Martin, who gave him a command in the army about to cross the Andes to liberate Chile. When he returned with the victorious army O’Higgins was appointed (1817) dictator of Chile, proclaiming its independence in 1818, but his rule proved so unpopular that he was forced to resign and retire to Peru (1823).

Ohm, Georg Simon (1787–1854). German physicist. He did fundamental work on the mathematical treatment of electric currents and published (1827) the law stating that the current flowing in a conductor is directly proportional to the potential differences between its ends (Ohm’s Law). He also did important work on acoustics. The unit of electrical resistance, the ‘ohm’, is named after him. His most important work was done as a teacher at the Cologne Gymnasium. Later he was a professor of physics at Nuremberg 1833–49 and Munich 1849–54.

Ohsumi Yoshinori (1945– ) Japanese cell biologist. He was awarded the Nobel Prize for Medicine in 2016 for his work in explaining ‘autophagy’: how cells recycle their components.

Oistrakh, David Fyodorovich (1908–1974). Russian-Jewish violinist and conductor, born in Odessa. He graduated from Odessa Conservatory in 1926, made his debut in Moscow in 1933, but for many years was known in western Europe only from recordings. He began extensive tours after 1951. His son Igor Davidovich (1931– ) was also an outstanding player.
O’Keeffe, Georgia (1887–1986). American painter. She achieved recognition from the 1920s for her vivid semi-abstractions of animal bones, flowers and landscapes. In 1924 she married the photographer Alfred Stieglitz (1864–1946). His work includes two sets of 400 portraits of her.

Olaf II (St Olaf) (995–1030). King of Norway 1015–28. He propagated Christianity in his country but with such severity that he was forced to take refuge in Russia (1028).Returning (1030), he was defeated and killed in battle against King *Cnut (Canute) of Denmark, thus becoming the symbol of Norwegian resistance to Danish domination. He became the hero of legend and saga and came to be considered patron saint of Norway. He is commemorated in England by several churches (St Olave’s) and Tooley Street, London (a corruption of his name s’Tolof).

Oldcastle, Sir John (c.1377–1417). English Lollard. He took the title of Lord Cobham through his third wife. Condemned as a heretic (1413), he escaped from prison and led a Lollard rising (1414). After its failure he remained in hiding for three years until recaptured and executed. He is sometimes thought to have been the original of *Shakespeare’s Sir John Falstaff: the character was, indeed, originally called ‘Oldcastle’ but the name was changed on the objection of the Lord Cobham of the day. Oldcastle (like Falstaff) was a friend of *Henry V as Prince of Wales. Regarded as a martyr by Tudor protestant reformers, he was extolled by Bale, *Foxe and Weever.

Oldenbarnevelt, Johan van (1547–1619). Dutch statesman. Prominent in the estates (parliament) of Holland, he became a leading figure in the struggle for independence from Spain. After the death of *William the Silent he offered the throne to the English Queen Elizabeth, effected the appointment of Prince *Maurice of Orange as stadtholder of Holland and Zeeland, and as the most important member of the Republican Government did everything possible to support and finance the war. Alliances were made with England and France (1596) and eventually a 12–year truce with Spain (1609). The religious conflict, however, between Remonstrants and Counter-remonstrants, brought about a breach between him and Maurice. Oldenbarnevelt was accused of corruption and treason and Maurice had him arrested, tried and executed.

Oldenburg, Henry (1618–1677). German scientist in England. One of the most important figures in 17th-century scientific communications, he went to England in 1653, joined the Royal Society in 1661 and soon became its secretary. He devoted the rest of his life to the Society’s administration and was one of the chief reasons for its early success. Oldenburg helped launch the Philosophical Transactions (1665), the first modern scientific journal, which published scientific findings, news, book reviews and correspondence. He was an ideal secretary for the Society, since he had extensive foreign contacts. There was evidently some danger in keeping up correspondence with enemy nations: he was temporarily put in the Tower in 1667 during the Anglo-Dutch War. Oldenburg made no scientific contributions of his own, but passionately supported the Baconian, empirical, utilitarian approach to science.

Olds, Ransom Eli (1864–1950). American inventor and manufacturer. He made the Oldsmobile, the first successful US automobile brand name, from 1901 and was a forerunner of Henry *Ford in mass-production.

Oliphant, Sir Mark (Marcus Laurence Elwin) (1901–2000). Australian physicist, born in Adelaide. He studied at Adelaide University and St John’s College, Cambridge, became *Rutherford’s assistant at the Cavendish, isolated tritium (3H) a radioactive isotope of hydrogen, and helium³ (³He) in 1934 and was professor of physics at Birmingham University 1937–50 and a pioneer in radar. In the US (1943–45), he worked on the ‘Manhattan Project’, developing the atomic bomb, and his studies on hydrogen-isotope interactions contributed (much to his horror) to the hydrogen bomb. In 1943, he designed the first ‘proton synchrotron’, but none was built until the 1950s. He directed the research school of physics at the new Australian National University at Canberra 1950–63, was foundation President of the Australian Academy of Science 1954–57 and Governor of South Australia 1971–76. He became FRS in 1937, KBE in 1959 and AC in 1977.

Olivares, Gaspar de Guzmán (y Pimental Ribera y Velasco de Tovar), Count-Duke of (1587–1645). Spanish statesman born in Rome. He entered the service of *Philip IV of Spain (1615) and so completely dominated his master that he was Chief Minister and virtual ruler of the country from 1621 until 1643, when he was dismissed. During those years, wholly occupied by the Thirty Years’ War, Spain’s hold on
Holland was irrevocably lost, Portugal resumed its independence and Catalonia was in revolt. He was memorably painted three times by *Velázquez.

Olivier, Laurence Kerr, Baron Olivier of Brighton (1907–1989). English actor and director, born in Dorking. Son of a clergyman, he began acting as a child and his skills matured in Sir Barry Jackson’s Birmingham Repertory Co. (1926–30). In 1930 he made a London hit with Noël *Coward’s Private Lives* and was soon in constant demand for films and stage productions in the 1930s. He attracted international attention in the films *Wuthering Heights* (1939), *Rebecca* (1940, directed by *Hitchcock*) and *Pride and Prejudice* (1940). After brief war service in the Fleet Air Arm, he produced, directed and starred in the patriotic epic *Henry V* (1944), the most successful Shakespearean film to that time. He was Director or co-Director of the Old Vic Theatre Company 1944–49, toured Europe in 1945, the US in 1946 and Australia–New Zealand in 1948, being acclaimed for his performances as Richard III, Hotspur and Oedipus. The film *Hamlet* (1948) won him an Academy Award and his films of Richard III, Hotspur and *Oedipus*. The film *Hamlet* was directed by *Hitchcock* and filmed 1960 and showed his virtuosity in *Ionesco’s Rhinoceros* (1960), *Farquhar’s The Recruiting Officer* (1964), as Edgar in *Strindberg’s Dance of Death* (1967), and in plays by *Sheridan*, *Ibsen* and *Chekhov*. He was a rather frustrated Director of the National Theatre 1962–73, then played character roles in several popular films including * Sleuth* (1972), *Marathon Man* (1976) and *The Boys from Brazil* (1978). His last great performance was in a television production of *King Lear* (1983). He married the actors Jill Esmond (1930), Vivien *Leigh* (1940) and Joan Plowright (1961). Knighted in 1947, he was created a life peer in 1970, given the OM in 1981 and buried in Westminster Abbey.

Olenhauer, Erich (1901–1963). German Socialist politician. He fled to Czechoslovakia when *Hitler came to power in Germany, and was in England during World War II. He succeeded Schumacher as Leader of the West German Social Democratic party (1952) and opposed *Adenauer’s policy of joining the western alliance. He was replaced (1960) by Willy *Brandt.

Olsen, John (Henry) (1928– ). Australian painter, born in Newcastle. He trained in Sydney and Paris, lived in Spain, and his paintings (and some pottery) expressed an exuberant lyricism, joyous, inventive, celebrating nature and human vitality. They include a series based on the theme of *journey to You Beaut Country* (1961ff), *McElhune Steps* (lithograph, 1963) and *Salute to Five Bells* (mural in Sydney Opera House, 1973). He was an imaginative recorder of figurative landscape, with brilliant colour. He won the Archibald Prize in 2005 for *Self Portrait Janus Faced*. *The King Sun* (2013), 6 m x 8 m, in eight panels, was commissioned for Collins Square, Docklands, Melbourne.

Omar I and II see Umar I and II.

Omar Khayyám (Ghiyāth ad-Din Abū’l-Fath ‘Umar ibn Ibrāhīm al-Khayyām Nishāpūrī) (c.1050–1132). Persian poet, astronomer and mathematician, born in Nishapur. Long famous in his own and adjacent countries, his *Rubā‘īyāt* (i.e. ‘quatrains’) first became widely popular in the west in the English verse paraphrases of Edward *Fitzgerald*, and were later translated more accurately into many languages. The *Rubā‘īyāt* is a collection of epigrammatic verses recommending enjoyment of wine, poetry and love while professing a gentle scepticism about the future, whether expressed in human hopes or divine plans. (Omar’s exact part in writing the poems has been the subject of prolonged controversy). His mathematical work produced improvements in algebra, the calendar and the compilation of astronomical tables.

O’Meara, Barry Edward (1786–1836). Irish surgeon. He served on HMS *Bellerophon*, which conveyed *Napoleon to St Helena. At the fallen emperor’s request he stayed to attend him on the island and became his ardent partisan in his quarrels with Sir Hudson *Lowe. Having been sent home (1818) for this, he suggested that Napoleon’s life was in danger in the governor’s hands. He was dismissed and wrote *Napoleon in Exile* (1822), a sensational but one-sided account of the events.

Onassis, Aristotle Socrates (1906–1975). Greek millionaire and ship-owner, born in Smyrna. He bought his first ships in 1932 and gradually built up one of the largest independent fleets. He was one of the first owners to develop the ‘super-tanker’ for bulk liquid cargo. For many years the lover of Maria *Callas, in 1968 he married, as his second wife, Jacqueline, the widow of President John *Kennedy.*

Somare as Prime Minister 2012–, provoking controversy about its constitutionality; however, he won the election of June–July 2012 comfortably. In July 2013 he agreed with the Rudd government’s policy that asylum-seekers arriving by boat would be permanently resettled in Papua New Guinea.

O’Neill, Eugene Gladstone (1888–1953). American playwright, born in New York. Son of James O’Neill, an actor, he worked, during an adventurous early life, as a gold prospector in Central America, an actor and a newspaper reporter. He joined (1915) the Provincetown Players and not only acted for them but wrote and produced a number of short plays. He won the Pulitzer Prize for his first full-length play, Beyond the Horizon (1920), and also for Anna Christie (1921), a realistic drama of the water front and the regenerating influence of the sea upon the heroine. The Emperor Jones (1920) shows how a Negro adventurer reverts from ruler to savage, the title of The Hairy Ape (1922) refers to a powerful stoker on a liner, whose vain attempt to overcome his handicaps provides the theme. All God’s Chillun got Wings (1924) deals with the problem of a black–white liaison in which the white woman is disabled, with which the black tries to contend. The much discussed Desire under the Elms (1924), dealing with a father–son conflict, was followed by The Great God Brown (1926), in which masks were used to symbolise characters. In Strange Interlude (1928), which lasts five hours, O’Neill tried another experiment with the ‘stream of consciousness’ technique. Mourning Becomes Electra (1931) attempts to place the Oresteian trilogy in a modern context. From 1934 there was a gap until The Icemen Cometh (1946). The ‘iceman’ symbolises death and the play handles the touch of death on a group of waterfront characters. The posthumously published Long Day’s Journey into Night (1957) is mainly autobiographical. These plays are the most important of a long series that caused O’Neill to be regarded as America’s greatest dramatist. He won the Nobel Prize for Literature (1936).

O’Neill, Hugh, 2nd Earl of Tyrone (c.1550–1616). Irish nobleman. The last member of his family to exercise independent rule, he was grandson of the O’Neill who, having submitted to the English king *Henry VIII was created (1543) the 1st Earl. Hugh O’Neill had an English education, remaining on good terms with England until he had had his earldom recognised and made his position secure in Ireland, where he aspired to rule all Ulster. This aim brought him into conflict with *Elizabeth I and after a long struggle (1593–1603) he was forced to submit, though allowed to retain his personal estates. Finding English supervision intolerable, he left Ireland (1607), and travelled throughout Europe, finally settling in Rome from 1608 to his death. The O’Neills had ruled turbulently in Ireland, with constant quarrels between branches of their own line and rival families, e.g. the O’Donnells, ever since the days of Niall of the Nine Hostages (d.405), from whom they claimed descent.

Onnes, Heike Kamerlingh see Kamerlingh Onnes, Heike

Onsager, Lars (1903–1976). American chemist, born in Norway. He taught at Yale from 1935, developed the gas-diffraction method of separating U 235 from U 238 and won the 1968 Nobel Prize for Chemistry. His discovery of reciprocal relations in irreversible chemical processes has been called ‘the Fourth Law of Thermodynamics’ (*Nernst).

Oodgeroo Noonuccal (originally Kath(leen Jean Mary) Ruska, later Walker) (1920–1993). Australian poet, born in Brisbane. We Are Going (1964) was the first volume of poetry published by an Aborigine. An active campaigner for indigenous rights, education and recognition in the Australian Constitution, from 1988 she was known as Oodgeroo (‘paperbark tree’) Noonuccal (name of her tribe).

Oort, Jan Hendrik (1900–1992). Dutch astronomer. A student of J. C. *Kapteyn at Groningen University, he worked at Leyden University from 1924 and was professor of astronomy and director of the observatory 1945–70. His model of the structure of the universe, as a rotating disc spread around a nucleus containing 90 per cent of all stars, published 1925–27, has been confirmed by observation and is generally accepted. He estimated that the Sun is 30,000 light years from the centre of the galaxy and takes 225 million years to orbit around it.

Oparin, Aleksandr Ivanovich (1894–1980). Russian biochemist. Professor of biochemistry at Moscow University 1929–60, he wrote The Origin of Life on Earth (1936), which proposed (parallel with theories by J. B. S. *Haldane) that the interaction of sunlight on a methane/ammonia atmosphere could have led to the development of amino acids and – ultimately – cellular life, a thesis later confirmed by S. L. *Miller. An ardent supporter of *Lysenko and a party loyalist, winning the Lenin Prize five times, his star waned after *Stalin’s death.

Ophüls, Max (originally Maximilian Oppenheimer) (1902–1957). German-Jewish film director. He worked in Germany, France and the United States and his stylish films include Letter from an Unknown Woman (1948), La Ronde (1950) and The Earrings of Madame de … (1953). His son, Marcel Ophüls (1927– ), an actor and director, educated in the United States, was best known for Le Chagrin et la Pitié (The Sorrow and the Pity, 1969), a controversial documentary about France and the Vichy regime, not released in France until 1981. He won an Academy Award for Hotel Terminus (1988).
Oppenheim, E(dward) Phillips (1866–1946). British author. He was one of the most prolific and popular novelists in the thriller and spy tradition, producing some 150 books and memoirs The Pool of Memory (1941).

Oppenheimer, Sir Ernest (1880–1957). South African businessman, born in Germany. He lived in South Africa from 1902, formed the Anglo American Corporation of South Africa, Ltd, in 1917 (with the backing of J. P. *Morgan) and began to exploit the Witwatersrand goldfield. He formed Consolidated Diamond Mines of South West Africa, Ltd, in 1919. Through the success of this company he was able to gain control of De Beers, the predominant diamond company. He also mined Rhodesian copper through his Rhodesian Anglo American Corporation. He was Mayor of Kimberley 1912–15, received a knighthood in 1921 and became a Unionist MP 1924–38. His son, Harry Frederick Oppenheimer (1908–2000), was a Unionist MP 1947–58, chairman of over 60 companies, a notable art collector and a racial liberal.

Oppenheimer, J(ulius) Robert (1904–1967). American theoretical physicist, born in New York. His parents were rich, radical and cultivated, and he studied at Harvard, Cambridge (unhappily) and Göttingen. Professor of physics at Caltech 1936–42, 1945–47, he worked on astrophysics, nuclear disintegration, cosmic rays and relativity. Despite his political naïveté, because of his extraordinary command of detail and ability to determine priorities, he became the central figure in ‘the Manhattan Project’ and at the Los Alamos (New Mexico) Laboratory 1942–45 led the team that designed and built the first atomic bombs. As Chairman of the Advisory Council of the US Atomic Energy Commission 1946–53, he opposed developing the hydrogen bomb. From 1952 he was persistently attacked by his former colleague Edward *Teller and suspended as a ‘security risk’ on the grounds of past association with Communists. He became director of the Institute for Advanced Studies at Princeton 1947–67. He delivered the BBC’s Reith Lectures in 1953, was given the Legion of Honour by France in 1957, elected FRS in 1962 and received the Fermi Award in 1963. A chain smoker, he died of throat cancer.

Orczy, Emmuska, Baroness (in full Emma Magdolna Rozália Mária Jozefa Borbála Orczy de Orczi) (1865–1947). English writer, born in Hungary. In London from 1880, she won immediate success when she turned her rejected novel The Scarlet Pimpernel (1905) into a play about Sir Percy Blakeney, the heroic rescuer of French aristocrats doomed to the guillotine. It became a successful film (1935) with Leslie *Howard. She wrote other romances, some detective stories collected as The Old Man in the Corner, and an autobiography, Links in the Chain of Life (1947).

Oresme, Nicole (1320–1382). Norman French philosopher. He seems to have been particularly interested in the notion of the universe operating as if by clockwork, and yet he made no break with the Aristotelian idea of intelligences being directly responsible for motion in nature. He pondered over the problem of the possibility of the plurality of worlds. He believed that science was against such a view, but stressed that God undoubtedly possessed the free will to have created such a state of affairs. Oresme denied the validity of astrological forces on both physical and theological grounds. Some of his most prescient thinking in physics relates to his studies of falling bodies. His emphasis that acceleration depends upon time of fall, rather than distance fallen, contains an idea developed later by *Galileo.

Clagett, M., The science of mechanics in the Middle Ages. 1959.

Orff, Carl (1895–1982). German composer, born in Munich. Reacting against the complexity of much 20th-century music he developed a tuneful style with a direct appeal and strongly marked rhythms. The scenic cantata Carmina Burana (1937), a series of medieval Latin and German verses set for soloists and chorus with accompaniments of dancing and mime, was designed for stage performance. There are 40 recordings in the current CD catalogue and it is often performed. Its sequel Catulli Carmina (1943) has had less exposure. Among his other works are the operas Der Mond (1939), Die Kluge (1942), Antigone (1949) and incidental music to A Midsummer Night’s Dream (1939).

Orford, Robert Walpole, 1st Earl of see Walpole, Sir Robert

Origen (Origenes Adamantius) (c.185–c.253). Christian theologian and biblical scholar, born at Alexandria. He accepted the orthodox Christian doctrines as revealed in the Bible but held it to be the right and the duty of individual Christians to seek for themselves answers to unanswered questions (e.g. the nature of the soul) in philosophical writings, even those of pagans on the ground that there were ‘Christians before Christ’. As his reputation grew, his Alexandrian friends and followers encouraged him to publish his views and he wrote De Principeis (On First Principles), one of the most influential books of early Christian philosophy. He was ordained in Palestine (230) but Demetrius, his bishop, regarded such ordination as irregular and exiled him. He settled at Caesarea, and there produced his Hexaplus, a revised version of the Septuagint (the Greek text of the Old Testament) and other versions and the Hebrew original set out in parallel columns. During the persecutions of the emperor Decius, Origen was
imprisoned and tortured, which led to his death. The official ecclesiastical view continued to be hostile to Origen. Justinian condemned the study of his voluminous works with the result that the greater part is lost.

Orlando, Vittorio Emanuele (1860–1952). Italian politician. First elected to the Chamber of Deputies in 1897, he held ministerial offices and in the last years of World War I was Prime Minister 1917–19. As Italy’s chief representative at the Paris Peace Conference (1919) he was one of the ‘Big Four’ and had frequent clashes with President *Wilson in his attempt (largely successful) to obtain implementation of the secret Treaty of London, by which Italy had been induced to enter the war on the side of the Allies.

Orléans, Philippe, Duc d’ (1674–1723). French regent. A nephew of *Louis XIV, he set aside (1715) the late King’s will and made himself sole regent, an act which encouraged suspicions that the numerous recent deaths in the royal family were caused by poison on his orders. Such suspicions (based on his dissolute character, rather than on evidence) were almost certainly unfounded. Orléans, guided by his old tutor, Abbé Dubois, shrewd and energetic but as dissolute as his master and entirely corrupt, made a special effort to put the finances in order. However, an inquisition, extending back over more than 20 years to discover any moneys that might be owed to the state by tax-gatherers and others, was abandoned because of its unpopularity, nor was his involvement with the banker John *Law much more fortunate. He completely reversed Louis XIV’s foreign policy by allying France with its former enemies, England, Holland and Austria, against his dynastic rival *Philip V of Spain. He retired when *Louis XV came of age.

His grandson Louis Philippe Joseph, Duc d’Orléans (1747–1793) was an atheist and equally debauched. Perhaps hoping for the crown, he espoused the revolutionary cause, adopted the nickname ‘Philippe Égalité’ and voted for *Louis XVI’s death. This did not save him, however, and he was condemned and executed. His son became *Louis Philippe, King of the French. The present French ‘pretender’ belongs to the Orleanist line.

Orlov, Grigory Grigoryevich (1734–1783). Russian noble. He was prominent in the revolution that replaced *Peter III by his wife, *Catherine II (Catherine the Great). He was already Catherine’s lover and, even when he ceased to be so, remained her principal adviser.

Orsay, Alfred Guillaume Gabriel de Grimaud, Comte d’ (1801–1852). French dandy. Son of a general, he resigned from *Louis XVIII’s bodyguard (1822) to attach himself to Lord and Lady *Blessington, whom he had met in England and who were touring Europe. His marriage (1827) with the Blessingtons’ 15-year-old daughter soon ended in separation, and in 1831 Lady Blessington (whose husband had died two years before) returned to London with d’Orsay. For the next 20 years the pair dominated the fashionable world, d’Orsay proving his accomplishment as a gentleman not only by his style in clothes but by practising painting and sculpture. In 1849 they fled from their creditors to France, where Louis Napoléon (*Napoléon III) made the count Director of Fine Arts.

Orsini, Felice (1819–1858). Italian conspirator. Having already served in the galleys for plots against the papacy, he took part in many conspiracies designed to further the cause of Italian unification. Considering *Napoléon III, who maintained a garrison in Rome, as the greatest single obstacle, he threw three bombs at the imperial carriage outside the Paris Opera. The Emperor and Empress were unhurt, but 10 bystanders were killed and 156 injured. Orsini was captured. Before he was guillotined he wrote to Napoléon urging him to free Italy and, admiring his courage, the Emperor published his last letter.

Ortega y Gasset, José (1883–1955). Spanish writer and philosopher, born in Madrid. He became professor of metaphysics at Madrid University 1911–36, supported the 1931 revolution, became Civil Governor of Madrid, and lived abroad after *Franco seized power. His philosophy shows the influence of *Kant but he is best known for his essays on modern civilisation, which he regarded as being destroyed by totalitarianism. His works include *Meditations of Quixote (1914), a symbolic framework for a comparison of the Spanish spirit with that of other nations, *Invertebrate Spain (1923), an analysis of the historical development of the national character, *The Revolt of the Masses (1930), which looks forward prophetically to the Civil War, and studies of Kant, *Goethe and *Mirabeau.

Orton, Arthur (1834–1898). Anglo-Australian imposter, born in Wapping. He impersonated Roger Charles Doughty Tichborne (1829–1854), heir to an old Catholic family in Hampshire, presumed to have been lost at sea. Tichborne’s father, the 10th baronet, died in 1862 and was succeeded by a second son. On the latter’s death in 1886, Orton (alias Tom Castro), a butcher from Wagga Wagga, appeared in England, claiming the barony and estates, and gained support from the dowager Lady Tichborne. Two trials (for ejection against Orton as 12th baronet, 1871–72, and for perjury, 1873–74)
were among the longest, most sensational and most expensive in Victorian history. At the second trial he was sentenced to 14 years’ imprisonment.

Orwell, Dorothy (1627–1695). English letter writer. Her love letters to Sir William Temple, whom she married (1655) after a long courtship, reveal the writer’s gay and intelligent mind and paint a vivid picture of 17th-century English life. First published in 1888, nearly all the letters are now in the British Museum.

**Oscar I** (1799–1859). King of Sweden and Norway 1844–59. His father, Marshal *Bernadotte, had become King of Sweden as Charles XIV John during the Napoléonic Wars. Oscar was a moderate liberal and furthered reforms, e.g. freedom of the press.

**Oscar II** (Oscar Fredrik) (1829–1907). King of Sweden 1872–1907. Second son of *Oscar I and the brother of Charles XV, he was an able historian, poet and translator. Also King of Norway until 1905, he accepted without rancour its independence and establishment of a separate dynasty (*Haakon VII*).

**O’Shea, Katherine** (Katie) see *Parnell, Charles Stewart*

**Osler, Sir William, 1st Baronet** (1849–1919). Canadian physician, born in Ontario. A McGill University graduate, he held chairs in clinical medicine at McGill 1874–84 and Pennsylvania 1884–89 and was elected FRCP and FRS. He was professor of clinical medicine 1889–1904 at the new Johns Hopkins University, Baltimore, where the clinical unit became internationally famous under his direction. He was Regius professor of medicine at Oxford University 1904–19, receiving a baronetcy in 1911. The most important of his many works is *The Principles and Practice of Medicine* (1891). He was also a noted bibliographer and classical scholar and died during the great influenza epidemic.

**Osman Pasha** (1832–1900). Turkish soldier. After distinguishing himself in the Crimean War, he gained an international reputation for the skill and courage with which he defended Plevna in Bulgaria for five months against the Russians (1877).

**Ossian see Macpherson, James**

**Ostade, Adriaen van** (1610–1684). Dutch painter. Although a pupil of Frans *Hals, little of his teacher’s influence is seen in his genre scenes in which topers, fiddlers, dancers, often performing in country inns, play a conspicuous part. His brother, *Isaack van Ostade* (1621–1649), at first chose similar subjects but later turned to the streets and countryside (especially in winter) for inspiration.

**Ostrom, Elinor Claire** (née Awan) (1933–2012). American political economist. She taught in Indiana and Arizona and wrote extensively about the concept of managing ‘the commons’. Her books included *Understanding Knowledge as a Commons: from Theory*
to Practice (2005). She was the first woman to win the Nobel Prize for Economics, sharing the 2009 award with Oliver Williamson.

Ostrovsky, Aleksandr Nikolaievich (1823–1886). Russian dramatist. He had close associations with the Maly Theatre in Moscow, where he became noted for realistic plays mostly concerned with the middle classes, merchants, officials etc. There is much more poetic force, however, in The Storm (1860), usually considered his masterpiece.

Ostwald, Wilhelm Friedrich (1853–1932). German physical chemist. Professor of chemistry at Riga 1881–87, and at Leipzig 1887–1916, he adopted and advocated the electrolytic dissociation theory of *Arrhenius, and applied the laws of mass action to obtain what is now known as Ostwald's dilution law. He discovered the process for the catalytic oxidation of ammonia into nitric acid by which most nitric acid is now made and won the Nobel Prize for Chemistry (1909). He was a profound sceptic about atomic theory.

Oswald, St (604–642). Northumbrian King (from 633). A son of King Aethelfrith of Bernicia, he returned from exile to succeed King *Edwin. At the time *Cadwallon was ravaging Northumbria, but Oswald defeated him at Hexham (634) and was able to consolidate and extend his rule until he was overlord of nearly all England. He revived Christianity in Northumbria by inviting Aidan and monks from Iona to found a monastery at Lindisfarne. Oswald was killed in battle against King *Penda of Mercia and received almost immediate recognition as a saint.

Oswald, Lee (Harvey) (1939–1963). American assassin. After joining the US Marines in 1954, he defected to the USSR in 1959, married there and returned to the US, apparently disillusioned, in 1962, and worked in Texas for Communist-fringe organisations. On 22 November 1963 he assassinated President John F. *Kennedy by shooting him twice as he drove in an open car through the streets of Dallas. Oswald also wounded Governor John *Connally of Texas and killed a policeman. Two days later Oswald was shot by Jack Ruby, a nightclub owner, as he was being transferred from one jail to another. Oswald's record indicated him to be a psychopathic isolate. Despite his political associations the president's murder was generally thought to have a psychological rather than a political significance, although speculation about conspiracies continued for two decades.

Othman (or Osman) I see Uthman I

Otho, Marcus Salvius (32–69). Roman Emperor (69), one of four in that year. While Governor of Lusitania (Portugal) he joined Galba (68) against Nero, but, disappointed in his hopes of the succession, he was proclaimed Emperor by his troops in the Roman forum and had Galba put to death. Meanwhile, the troops in Germany had proclaimed Vitellius, and he defeated Otho in north Italy. Otho then committed suicide.

Otis, Elisha Graves (1811–1861). American inventor, born in Vermont. He worked on many inventions including train brakes, a snow plough and a rotary oven, but secured immediate success at the 1854 New York World's Fair with his elevator (lift) that made the vertical city possible. He died of diphtheria.

Otto I (1815–1867). First King of the Hellenes 1833–62. A Bavarian prince, he was imposed on the Greeks by the London Conference (1832). Although well-meaning, he was deeply resented and deposed after a military revolt. *George I, imported from Denmark, replaced him.

Otto I (known as the Great) (912–973). German King 936–73 and Holy Roman Emperor 962–73. He was the son of Heinrich (*the Fowler), Duke of Saxony and German King 919–36. Crowned Emperor at Rome (962), because of the extension of his power into Italy and close relations with the papacy he is held to be the founder of the Holy Roman Empire. In Germany he centralised the administration, controlled the Slavs and repelled the Magyars. In Italy he became King of the Lombards, mastered Rome and the country to the south as far as Capua. His first wife was a daughter of *Edward the Elder of England. His son, Otto II (955–983), crowned German King in 961, while his father was still alive, and later Emperor, was defeated by the Saracens in southern Italy and in consequence lost control of the Slavs in Germany. An attempt by his son, Otto III (980–1002), to establish an empire on the Byzantine pattern centred on Rome failed and was resented by his German subjects. Otto IV (c.1175–1218), a son of *Heinrich der Löwe, was crowned German King (1198) but his title of Emperor was constantly in dispute. In alliance with the English king *John he was completely defeated at Bouvines (1214) by *Philip II of France.

Otto, Nikolaus August (1832–1891). German inventor. He was co-inventor (1867) of a successful internal combustion engine and patented (1884) the four-stroke Otto engine. Gottlieb *Daimler was the chief engineer of the company formed to exploit the patent.

Ottoboni, Pietro (1667–1740). Italian cardinal, born in Venice. Created a cardinal in 1689, he was not ordained as priest until 1724. He patronised the arts, especially music, and among his protégés were Arcangelo *Corelli, Alessandro *Scarlatti, George Frideric *Händel and Antonio *Vivaldi.
Otway, Thomas (1652–1685). English Restoration dramatist. He left Oxford without taking a degree and went to London, where, after failing as an actor, he produced his first successful play, _Don Carlos_ (1676). Adaptations from "Racine's _Bérénice_ and *Molière's _Les Fourberies de Scapin_" followed (1677). He is chiefly remembered for the blank verse tragedy _The Orphan_ (1680) and his masterpiece _Venice Preserved_ (1682). After a breach with his patron, the Earl of Rochester, he died in poverty.

Oudinot, Charles Nicolas (1767–1847). French marshal. His "grenadiers Oudinot" won fame at Austerlitz (1805), and after the Battle of Wagram (1809) he was created Prince of Reggio. With "Ney" he covered the crossing of the Beresina River in the heroic rearguard action that saved the remnants of the Grand Army retreating from Moscow. He remained aloof during the Waterloo campaign. He later gained distinction in the royal service.

Overbury, Sir Thomas (1581–1613). English poet and courtier. In the reign of *James I he was the go-between of the beautiful Frances Howard, Countess of Essex, and her lover Robert Carr, the king's favourite, afterwards Earl of Somerset. Overbury's remark to Carr during a discussion about divorce, that the Countess was all right for a mistress but not for a wife, seems to have been repeated and so angered the lady that she contrived a pretext on which Overbury was confined to the Tower of London, where he was found dead from poison. Four minor participants in the crime were later hanged and afterwards the Countess of Somerset (as she had become) admitted her guilt but was pardoned by the King, as was her husband.

Ovid (Publius Ovidius Naso) (43 BCE–17 CE). Roman poet, born in Sulmona. Among his earliest poems were the _Amores_ , written to an imaginary mistress, Corinna. Equally imaginary are the letters in the _Heroides_, allegedly written by legendary heroines, to their husbands or lovers (e.g. Penelope to Ulysses). In the _Art of Love_, often regarded as his masterpiece, the poet tells a lover how to gain a courtesan's favour and advises a girl on how to win and hold a lover. The _Metamorphoses_ contains myths where change of shape provides the central theme. Having written this, Ovid was suddenly and mysteriously banished by "Augustus (perhaps because he had become involved in one of the intrigues of the Emperor's daughter Julia) to Tomi (now Constanta) on the Black Sea. _Tristia_, his laments for the misfortune, was already started while he was on the way. While in exile, from which he was never recalled, he also revised the _Fasti_ , a month-by-month description of the festivals of the Roman year. Only six of these survive and perhaps no more were written. Ovid had an astonishing facility for turning almost any subject into hexameters and pentameters without metrical blemish, and provided themes and examples for many writers, e.g. *Shakespeare and *Pope. He was often translated, notably by *Dryden, and his reputation remains high.

Owen, David Anthony Llewellyn, Baron Owen (1938–). British politician. Educated at Cambridge, he became a neurologist and MP (1966–92), Labour until 1981, and was Callaghan's Foreign Secretary 1977–79. He published _Face the Future_ (1981), left Labour to be a co-founder of the Social Democratic Party, which he led 1983–87. He opposed the SDP merger with the Liberals and became an independent. He was the UN mediator in Bosnia 1992–95 (with Cyrus *Vance until March 1993) and received a CH in 1994.

Owen, Sir Richard (1804–1892). British zoologist and palaeontologist. Trained as a surgeon in Edinburgh and London, he attended lectures by *Cuvier in Paris, became Hunterian professor of surgery at the Royal College of Surgeons 1836–56, superintendent of natural history at the British Museum 1856–84, and founded the Natural History Museum at South Kensington. He was the leading expert on Australian fossils. He promoted public interest in palaeontology, coined the word 'dinosaur' (terrible lizard) in 1841 and argued that they were active creatures, a view which went out of fashion but is now respectable again. He received the Copley Medal in 1851 and became an increasingly shrill and isolated antagonist of *Darwin on the issue of natural selection.

Owen, Robert (1771–1858). Welsh social reformer, born in Montgomeryshire. After being a draper's assistant in Manchester, he became a master spinner and took over (1800), with partners, the New Lanark mills, originally started by *Arkwright and David Dale, whose daughter Owen married. Here he improved working conditions and housing, shortened hours and, for the children, introduced a new educational system (visual methods etc.) designed to bring out the special aptitudes of each particular child. Some of his improvements were incorporated in the Factory Act (1819). In the industrial depression that followed the Napoléonic Wars, Owen proposed as a substitute for the poor relief system 'villages of cooperation' in which each member was expected to work according to his ability for the good of the whole. The few experimental settlements all failed, for though _New Harmony_ (1825) in Indiana, USA, survived, the cooperative principle was soon abandoned.

As early as 1813 Owen had, in _A New View of Society_, propounded the view that man's character was formed by his environment and he denounced the Churches for holding people responsible for sins resulting from capitalism and other social evils. He also held that such evils could be swept away if only the 'industrial classes' would combine to overthrow them. He took the lead in the foundation (1833) of .
the ‘Grand National Consolidated Trades Union’, but this collapsed within a year. Undeterred, he and his followers, now called ‘Socialists’, founded a new settlement, Queenwood in Hampshire, but this too only survived a few years.

Owen, Wilfred (1893–1918). English poet. A teacher by profession, he served in World War I and was killed a week before the armistice. His war poems, written with irony, pity and ruthless honesty, were published after his death by his friend Siegfried *Sassoon. Some were set by Benjamin *Britten in his War Requiem* (1962).

Owens, Jesse (1913–1980). American athlete. At the 1936 Olympic Games at Berlin, watched by *Hitler, he won four gold medals, including one for a record long jump of 26 ft 8 1/4 ins. (8.135 m), not surpassed until 1960. Such feats, performed in Berlin by a Negro at a time when the Nazis were proclaiming their theories of Nordic racial superiority, caused a sensation.

Oxenstierna, Axel (1583–1654). Swedish statesman. Of aristocratic birth, he was instrumental in securing a settlement between the nobles and *Gustaf II, whose chancellor he became (1612). The diplomatic preparations which left Gustaf free to sweep into Germany as the Protestant hero of the Thirty Years’ War were in Oxenstierna’s hands and, after his master’s death at Lutzen (1632), it was he, as regent for Gustaf’s daughter *Christina, who kept the war going and made sure that Sweden was adequately rewarded by territorial gains. Meanwhile he had made notable administrative reforms, but after the war a faction of the nobility asserted itself, Queen Christina’s support was lukewarm and finally, despite his persuasions, she abdicated. Soon after this final disappointment Oxenstierna died.

Oxford, 17th Earl of, Edward de Vere (1550–1604). English courtier and poet. Educated at Cambridge, he was violent and improvident, although a poet and patron of writers. T. J. Looney (sic) proposed in 1920 that Oxford was the ‘real’ author of the plays attributed to *Shakespeare, and *Freud joined the ‘anti-Stratfordian’ cause.

Oxford and Asquith, 1st Earl of see Asquith, Herbert Henry

Oxford and Mortimer, 1st Earl of see Harley, Robert

Oyama Iwao, Prince (1842–1916). Japanese field marshal. He became Minister of War 1880–95 and Chief of the General Staff 1899–1906, defeating the Russians at Mukden (1905). He received an honorary OM from Britain (1906).
Paasikivi, Juho Kusti (1870–1956). Finnish politician. He was the first Prime Minister of Finland (1918) after the declaration of independence, and again 1944–46 at the end of World War II, serving as President 1946–56. With U. K. *Kekkonen he negotiated peace with the USSR and Finland’s neutralist policy is known as ‘the Paasikivi line’.

Pachacuti (d.1471). Sapa Inca of Peru 1438–71. He brought the Inca Empire (Tawantinsuyu or ‘Land of the Four Quarters’) to its height, extending from northern Ecuador to central Chile, and built Machu Picchu.

Pachmann, Vladimir de (1848–1933). Russian pianist. One of the most popular and accomplished (though often eccentric) concert performers of his generation, he was a notable interpreter of Chopin.

Packer, Kerry Francis Bullmore (1937–2005). Australian media proprietor. Son of Sir (Douglas) Packer, Kerry Francis Bullmore generation, he was a notable interpreter of Chopin. One of the most popular and accomplished Pachmann, Vladimir de pianist, composer and politician. He studied under *Leschetizky (1884–87) before specialising as a virtuoso pianist, and touring Europe and America with enormous success. He wrote two concertos and much piano music, including the two concertos and the Concerto in D. His technique was regarded as phenomenal and he enlarged the range of the violin by introducing left-hand pizzicatos and double harmonics. His tempestuous career and odd appearance made him a popular idol.

Page, Sir Earle Christmas Grafton (1880–1961). Australian politician. A surgeon, he entered the federal House of Representatives 1919–61 and became co-founder and leader of the Australian Country Party 1921–39. He was Deputy Prime Minister 1923–29 and 1934–39, and Prime Minister (April 1939) after * Lyons died, until *Menzies succeeded. As Minister for Health 1949–56, he introduced a national health scheme. Due to illness, he was unaware that he had lost his seat a fortnight before he died.

Page, Sir Frederick Handley (1885–1962). English aircraft designer. He founded Handley Page Limited in 1909 and during World War I designed and built his twin-engined 0/400, one of the earliest heavy bombers. He established a civil air service between England and the Continent in 1919 and continued to build aircraft, notably the Hercules airliner. During World War II Handley Page Limited built transport planes and bombers, notably the Halifax. He was President of the Royal Aeronautical Society 1945–47 and received the society’s Gold Medal in 1960. His company closed down in 1970.

Pagnol, Marcel (1895–1974). French author, playwright and film director. His plays include *Cabballe (1922), *Topaze (1928) and the trilogy Marquis, Fanny, César (1929–36). He directed or produced several films, e.g. César (1936), Le Reyain (Harvest, 1937) and La Femme du boulanger (1938). Among his novels are Le Château de ma mère, Le Temps des Secrets. He was the first film-maker elected to the Académie Française (1946).

Paine, Thomas (1737–1809). English political writer. Having tried several occupations including that of excise officer, he went, on the advice of Benjamin *Franklin to America, where he published Common Sense (1776), a pamphlet demanding complete independence from Britain, and The Crisis (1776–83), a series of pamphlets advocating the
same end. Meanwhile he had fought in the colonial armies and had been administratively concerned with the framing of the constitution. In 1791 he returned to England, but publication of his greatest work, The Rights of Man (1791–92), a reply to Edmund *Burke's Reflections on the Revolution in France, forced him to go to France to avoid prosecution. There he was elected to the Convention but, after opposing the execution of *Louis XVI, was for a time in prison, where he began The Age of Reason (1794–96), a work defending deism (i.e. a belief in God that is divorced from Christianity or any other 'enslaving' religion). He returned to America in 1802, where he came into conflict with the Federalists. He died in New York. Paine's writings continued to inspire radicals in the century after his death.

**Palestrina, Giovanni Pierluigi da** (c.1525–1594). Italian composer, born at Palestrina (Praeneste). Known from his birthplace, he became organist and choirmaster there at St Agapito in 1544. In 1551 Pope Julian III (who as Bishop of Palestrina had been the composer’s master) appointed him a member of the Julian choir at St Peter’s. In 1555 Palestrina was briefly a member of the pontifical choir until he was forced to resign by the reformist pope *Paul IV. He remained in Rome as musical director of the Church of St John Lateran 1555–60 and of S. Maria Maggiore 1561–67, returning to St Peter’s (1570) as master of the Julian choir, a post he held until his death. Palestrina’s output was enormous and included motets, litanies, magnificats and 94 Masses. (The legend that his famous Missa Papae Marcelli had the effect of dissuading the Council of Trent from burning polyphonic Church music is unfounded.) His work represents the culminating point of development in polyphonic vocal music, but the new ideals inaugurated by his immediate successors led to its neglect until the late 19th century, since when it has remained, at least in technique, the chief model for liturgical composers.

**Paley, William** (1743–1805). English clergyman and theologian. He held a number of livings and diocesan appointments but is chiefly remembered for his View of the Evidences of Christianity (1794), one of the most convincing and influential books of its kind.

**Paley, William S.** (1901–1990). American business executive, born in Chicago. He was Chairman of CBS (Columbia Broadcasting System) 1928–46, Chairman 1946–83 and Chief Executive 1946–77 and played a decisive role in shaping television programming. CBS was also an important book publisher and record producer.

and author of *Going Rogue* (2009). Popular with the 'Tea Party' and the far-right, she did not seek a presidential nomination in 2012.

Palladio, Andrea (1508–1580). Italian architect, born in Padua. His ability was first noticed, while he was working as a stone mason at Vicenza, the humanist Gian Giorgio, who enabled him to study and make drawings of classical antiquities in Rome (1545–47). In and around Vicenza he built, in a distinctive classical style which became known as 'Palladian', the famous Basilica (1549), with two arced storeys round an older hall, town palaces and country villas, and his last important work, the Teatro Olimpico (begun 1580). The churches of S. Giorgio Maggiore (1566) and Il Redentore (1576), both in Venice, have remarkable facades. Through his *Quattro libri dell'architettura* (1570), which contained many of his designs, his influence spread widely, in England his style was introduced by Inigo *Jones and later popularised by Lord *Burlington. He was also copied in 18th-century America.

Palme, (Sven) Olof Joachim (1927–1986). Swedish Social Democratic politician. Partly educated in the US, he was a prominent youth leader and a Riksdag member (1956–86), succeeding Tag *Erlander (whose secretary he had been) as Prime Minister of Sweden 1969–76, 1982–86. He was assassinated in Stockholm.

Palmer, Samuel (1805–1881). English painter and engraver. Son of a bookseller, he was largely self-educated as an artist but exhibited at the Royal Academy as early as 1819. He first met William *Blake in 1824 and, deeply inspired, produced landscapes full of vision and fire. He painted his most original work living at Shoreham (1825–36) where, with George Richmond, he formed a group of Blake's admirers (known as 'The Ancients'). His later work, largely in watercolour, was uninspiring.

Palmerston, Henry John Temple, 3rd Viscount (1784–1865). British politician, born in Broadlands, Hampshire. Educated at Harrow and the University of Edinburgh, as the holder of an Irish peerage he was eligible to be elected to the House of Commons, and sat as an MP 1807–65. Originally a Tory, he broke with the Party (1828) and henceforth as a Whig or Liberal favoured a policy of nonalignment with European powers and support for national movements. Thus, as Foreign Secretary 1830–34, 1835–41, he supported Belgian independence and the constitutionalists in Spain and Portugal, and saved the decaying Turkish Empire from domination by Russia. After a period in opposition (1841–46) he was again Foreign Minister 1846–51 and in 1848 he supported the nationalist uprisings, especially those against Austria, and when *Louis Philippe was deposed in France he recognised the republic and later, without consulting his colleagues, the coup d'état (1851) of Louis Napoléon (*Napoléon III). Lord John *Russell forced his resignation over this but he returned (1853) as Home Secretary in Lord *Aberdeen's coalition. He was Prime Minister 1855–58 and 1859–65, and died in office. He brought the Crimean War to a satisfactory end and acted vigorously in response to the Indian Mutiny (1857). Despite his liberalism his methods were often domineering and his judgment was often faulty, especially in his later years (e.g. over the American Civil War). He was extremely popular with the British public, but Queen *Victoria and his colleagues found his enthusiasm for forceful action very trying.

Pamuk, (Ferit) Orhan (1952– ). Turkish novelist, screenwriter and academic, born in Istanbul. His novels include *The Black Book* (1990), *My Name is Red* (2000) and *Snow* (2002). He also wrote short stories and essays. He had several periods of teaching at Columbia University and in 2005–06 faced harsh criticism in Turkey and threats of prosecution for protesting about historic aggression against Armenians and Kurds. In 2006 he won the Nobel Prize for Literature. The citation read: 'In the quest for the melancholic soul of his native city, [he] has discovered new symbols for the clash and interlacing of cultures.'

Paneth, Friedrich Adolf (1887–1958). Austrian-British chemist, born in Vienna. He left Germany in 1933 and became professor of chemistry at Durham 1939–53, then director of the Planck Institute for Chemistry, Mainz 1953–58. His most important work was on the use of radio-isotopes in chemical research. He devised techniques for measuring the minute quantities of helium produced in rocks by radioactive decay, and thus provided a method of finding the age of rocks. The lunar crater Paneth and the mineral Panethite are named for him.

Panhard, René (1841–1908). French engineer and motoring pioneer. Founder of the Panhard company, in 1886 he formed a partnership with Emile Lavassor (1844–1897). They acquired the French and Belgian
rights to use *Otto's internal combustion engine and pioneered the building of true cars with the engine mounted on a chassis.

**Pankhurst, Emmeline** (née Goulden) (1858–1928). British militant suffragette. She worked with her husband, **Richard Marsden Pankhurst** (1839–1898), on behalf of many radical causes, but after his death concentrated on votes for women. The dramatic methods by which she, her daughters and the militants of the Women's Social and Political Union (founded by her in 1903) pursued their ends included chaining themselves to lamp posts, slashing pictures, assaulting the police, and hunger strikes in prison (Mrs Pankhurst was confined eight times). Many less extreme supporters were estranged, but World War I, in which women proved their ability in almost every occupation, broke down opposition. In 1918 women over 30 acquired the vote and in 1928 they were given equality of franchise with men. Two of Mrs Pankhurst's daughters were especially identified with her work: **Dame Christobel Pankhurst** (1880–1958), even more extreme, later took up revivalism in the US; **Sylvia Pankhurst** (1882–1960), also active in the early days, became a keen socialist after World War I and later devoted herself to the cause of Ethiopia (Abyssinia) when it was overrun by the Italians. She lived in Addis Ababa from 1956.

**Paoli, Pasquale de** (1725–1807). Corsican patriot. After many years in exile (1739–55) for opposing the Genoese, he was chosen as President of Corsica. When the Genoese sold Corsica to France he opposed the French authority but, after a valiant resistance, was defeated and fled to England, where *Boswell befriended him. In 1791 he was appointed Governor of Corsica by the French Revolutionary Government, and when accused (1793) of being a counter-revolutionary, he proclaimed Corsica independent. With the help of the British Navy he defeated the French and the island was declared a British protectorate. After he was recalled to England (1795) the pro-French islanders drove the British from Corsica.

**Paolo and Francesca** see Francesca da Rimini

**Papadopoulos, Georgios** (1919–1999). Greek soldier and politician. A brigadier, he led the military coup of April 1967 which overthrew the civilian government. He became Prime Minister of the *junta* 1967–73, and President of the Republic 1973. Sentenced to death for treason in 1975 after the restoration of democracy, his sentence was commuted to life imprisonment.

**Papagos, Alexander** (1883–1955). Greek field marshal. Having distinguished himself in both Balkan Wars, in World War I and in the Turkish War that followed, he was Commander-in-Chief against the Italians in World War II. Despite inferiority of numbers and equipment he gained a series of remarkable victories until German intervention made further resistance impossible. After the war he resumed his post as Commander-in-Chief (1949) and quickly defeated the Communists. Entering politics, he formed (1951) a new party, the Greek Rally, at the head of which he gained (1952) a great electoral victory. As Prime Minister 1952–55 he restored political and economic stability.

**Papen, Franz Joseph Herman Maria von** (1879–1969). German politician and diplomat. When military attaché in the US during World War I he was expelled (1915) for promoting sabotage. He was elected to the Prussian Diet (1921) and subsequently used his friendship with President *Hindenburg's son, Oskar, to secure advancement. Finally (June 1932) he was appointed Chancellor. His first attempt to bring *Hitler into his government failed, but after another election (November 1932) and Papen's resignation the two came to terms: Hitler became Chancellor and Papen Vice Chancellor, with a secret assignment from Hindenburg to curb Nazi excesses. Papen soon became critical of his new ally and narrowly escaped death in Hitler's *Night of the Long Knives* (30 June 1934). The warning was enough. He accepted the post of Ambassador to Vienna 1934–38 and prepared the ground for the Nazi occupation of Austria. He was sent to Turkey 1939–44, where his embassy became the centre of a spy network. After the war he was acquitted at Nuremberg, and released after serving two years of a nine-year sentence imposed by a German denazification court.

**Papin, Denis** (1647–1713). French physicist. He assisted *Huygens and (from 1675) Robert *Boyle in work on air pumps. Among his inventions were the double-stroke air pump, the condensing pump and the autoclave (then known as the ‘digester’), a pressure vessel in which temperatures above the boiling-point of water may be obtained. A pioneer of the steam engine, and elected as Fellow of the Royal Society (1680), he died in London, destitute.
Papineau, Louis-Joseph (1786–1871). French-Canadian politician, born in Montréal. He was elected (1808) to the Québec legislative assembly, of which he was later Speaker 1815–37. His bitter oratory gave fervent support to the cause of French-Canadian self-government and after the defeat of the 1837 rebellion he took refuge in the US and then France. He returned to Canada in 1845, was elected to the lower house 1848–54, then retired from politics.

Pappus of Alexandria (fl. 300–350 CE). Greek geometer. His treatise, the Synagoge, is particularly valuable as a source of information about earlier Greek mathematicians and geometers. When giving proofs from earlier figures, Pappus frequently offers alternative solutions, or his own improvements. He offers full discussions of many of the classic problems of Greek mathematics, such as squaring the circle or the trisection of an angle. Pappus also evidently had interests in geography; he is known to have composed a geographical work, which has not survived. He wrote commentaries on *Euclid and *Ptolemy's Almagest.

Paracelsus (Theophrastus Bombastus von Hohenheim) (c.1493–1541). Swiss physician and alchemist. He travelled widely in Europe, lecturing and practising medicine, and won considerable renown. Although he practised alchemy and the occult sciences, he did not accept demonological explanations for insanity, and many of his medical views were advanced for his time: he attacked the traditional belief that diseases were caused by ‘humours’ in the body and taught the use of specific remedies. He introduced opium, laudanum, mercury, sulphur iron and arsenic as medicines. Of his numerous works, the Paragranum gives the best exposition of his medical views. Robert Browning's dramatic poem Paracelsus (1835) is based on his life.

Paré, Ambroise (1510–1591). French army surgeon. Known especially for introducing more humane methods in surgery, he abandoned the boiling-oil treatment of wounds in favour of dressings with egg yolk, altar of roses and turpentine, and used ligatures to seal blood vessels after amputations instead of cauterisation. He was surgeon to all French kings from *François I to *Charles IX. He has been called the ‘father of modern surgery’. He stressed the importance of proper nursing, and was much concerned about the treatment of wounds in childbirth. His Apology is a vivid autobiography.

Pareto, Vilfredo (1848–1923). Italian economist and sociologist, born in Paris. Trained as a mathematician and engineer, he was a professor of economics at Lausanne from 1893. He applied mathematical analysis and logical rigour to the study of income distribution. In Mind and Society (1916–23) he argued that both revolutionary and evolutionary social change led merely to the ‘circulation of élites’, that real power could not be distributed equitably because human capacity is unequal. *Mussolini claimed him as a major influence on Fascism.

Parini, Giuseppe (1729–1799). Italian poet. His work was modelled on Latin poets, especially Horace, but he abandoned the artificialities of the preceding period and wrote creatively with elegance and feeling. His most famous poem, Il Giorno (The Day, begun 1763), gives an ironic and lively account of a day in the life of a young nobleman in a corrupt age.

Paris, Matthew (1200–1259). English monk and chronicler. He entered (1217) the monastery of St Albans, where he acquired skill not only as a writer and illuminator but in gold and silverwork. He continued Roger of Wendover's Major Chronicles from 1235 to 1259, enlarging their scope to include foreign events. His Minor History is a summary of events from 1200 to 1250. He was favoured by Henry III, and his chronicles, apart from their historic value, are vigorous and vivid and not without critical comment on contemporary trends and developments.

Park Chung Hee (1917–1979). Korean soldier and politician. In 1961 he led a military coup in the Republic of Korea, and was President 1963–79. His wife Yuk Young-soo (1925–1974) was assassinated by a North Korean agent. Park promoted rapid growth and technological change until his assassination by the head of Korea's Central Intelligence Agency. Their daughter, Park Geun-hye (1952–), was a member of the Korean Parliament 1998–2012, survived a stabbing attack in 2006 and became leader of the conservative Saenun party. She was elected as the first woman president of the Republic of Korea 2013–17, but was impeached on corruption charges and removed from office.

Park, Mungo (1771–1806). Scottish explorer in Africa. A surgeon, in 1795 he went to Africa to explore the course of the river Niger and find its exit to the sea. After much hardship he joined the Niger at Segou, followed it downstream and, before being forced by obstructions to return, proved that it had an eastward flow at this point. The problem of its point of exit remained unsolved. His Travels in the Interior of Africa (1799) proved a popular success, and in 1805 he made another journey but of his 45 companions only seven reached the Niger. They struggled on as far as Boussa (Basu), where the canoe was wrecked and Park and four remaining Europeans were attacked by natives and drowned while trying to escape.

Schiffers, H., The Quest for Africa. 1957.
Parker, Alton Brooks (1852–1926). American jurist. A judge from 1885, he was Chief Justice of the New York Court of Appeals 1898–1904. In 1904 he was a surprising choice as the Democratic candidate for president, defeating William Randolph *Hearst, because, as a judge, he had been silent on political issues and offended nobody. Theodore *Roosevelt was considered unbeatable and Parker was a sacrificial lamb. He is the only major presidential candidate never to have been the subject of a biography.

Parker, Dorothy (née Rothschild) (1893–1967). American writer. She was well known for short stories, collected in, e.g. *Laments for the Living (1930) and Her Lies (1939), and for her mordantly humorous poems, sayings and book reviews contributed to *The New Yorker. (When told that the taciturn President *Coolidge had died, she asked ‘How can they tell?’).

Parker, Matthew (1504–1575). English prelate, born in Norwich. Educated at Corpus Christi College, Cambridge, he was a moderate reformer, became chaplain to *Anne Boleyn, Vice Chancellor of Cambridge and Dean of Lincoln. He supported Lady Jane *Grey and under *Mary was lucky to lose only the Deanery and not his life. *Elizabeth appointed him (1559) her first archbishop of Canterbury, and he was largely responsible for the Prayer Book of 1559 and the Thirty-nine Articles of 1562, both modelled on the corresponding publications of *Edward VI’s reign. One of Parker’s main problems was that the clergy who returned from exile demanded the much more drastic Protestantism that they had met on the Continent. It was they who reinforced the growing body of ‘Puritans’ and were opposed to Parker’s course of compromise. He was a great contributor and benefactor to Anglo-Saxon studies.

Parkes, Sir Henry (1815–1896). Australian Liberal politician, born in England. He reached New South Wales in 1839, founded a newspaper (1850) and became a prominent opponent of convict transportation. He entered the legislature (1854). In five broken terms he was premier of New South Wales 1872–75, 1877, 1878–83, 1887–89, 1889–91, state education being among the many reforms he introduced. His restrictions on Chinese immigration were first steps towards the White Australia Policy. His most important contribution was in raising the Federation issue (1889–90) and afterwards devoting all his energy to its promotion. He received a KCMG (1877) and GCMG (1888) and was President of the National Australasian Convention (Sydney, 1891). He wrote on Australian politics and history and published some poetry. Martin, A. W., *Henry Parkes. 1980.

Parnell, Charles Stewart (1846–1891). Irish Nationalist politician, born in County Wicklow. From a Protestant landowning family, unhappily educated in England, he was elected MP for County Meath (1875) as a Home Ruler. As a speaker he was cold and sardonic but as a tactician he was superb making especially skilful use of all the parliamentary rules that help obstruction. After becoming leader of the party (1880) he handled his colleagues autocratically. He became President (1879) of the Land League and inaugurated (1880) the policy of the boycott, which resulted in a large increase of agrarian crime. Parnell was imprisoned but released (1882) after promising to fight crime if the government would provide relief for rent arrears. Such bargaining was soon ended by the murder of the chief secretary, Lord Frederick Cavendish, in Phoenix Park, Dublin. In 1885 Parnell, with the Irish votes holding a balance of power, provided the pressure behind the introduction of *Gladstone’s Irish Home Rule Bill of 1886 which split the Liberal Party and brought the Conservatives back to office. In 1887 *The Times published allegations, based on documents forged by Richard Piggot, that Parnell had condoned political murders. Piggot was exposed, but in 1889 Parnell was successfully cited as co-respondent by a colleague, Captain O’Shea with whose wife, Catherine (Katie, née Wood) (1845–1921), he was alleged to have committed adultery. Parnell refused to resign his leadership, but Gladstone and half the party, backed by the Roman Catholic hierarchy, turned against him. He married Katie in June 1891. Four months later, his career foundering, he died suddenly in Brighton. In 11 years of leadership his outstanding achievement was to persuade Gladstone and the Liberal Party to adopt Home Rule as policy.

Parr, Catherine see Catherine Parr

Parry, Sir (Charles) Hubert (Hastings), 1st Baronet (1848–1918). English composer. He became professor of the Royal College of Music on its foundation (1883) and was its director 1895–1918. A prolific composer, especially of choral and orchestral music, his best known works are the choral ode Blest Pair of Sirens (1887) and his setting of "Blake's Jerusalem" (1916), inspired by World War I. He was made a baronet in 1902. Like his contemporary *Stanford, Parry is important less for the quality of his own works than as a pioneer of the revival of English music which began at the end of the 19th century. Among his pupils was *Vaughan Williams and *Holst. He died in the Spanish flu epidemic.

Parry, Milman (1902–1935). American scholar, born in California. He observed the recitation of long, ancient oral epics by often illiterate bards in Bosnia in the 1930s, and proposed that The Iliiad and The Odyssey evolved, over centuries, in a bardic oral tradition, long before the development of a written language. His hypothesis, not published until 1971, is now widely accepted.

Parry, Sir William Edward (1795–1855). British Arctic explorer. In the second of two attempts to find the Northwest Passage to the Pacific (1819), he almost succeeded by reaching Melville Island, but he failed again in 1824–25. He discovered (1821–22) the Hecla and Fury Straits, which he named after his ships. His last (1827) expedition, an attempt to reach the pole by boat and sledge from Spitzbergen, was unsuccessful (though he reached latitude 82°43'N). Pary, A., Parry of the Arctic. 1963.

Parsons, Sir Charles Algernon (1854–1931). Anglo-Irish engineer. He developed the steam turbine named after him which revolutionised marine propulsion. The Turbinia (1897), the first turbine-powered ship, achieved the unprecedented speed of 36 knots. He was also concerned with optics and manufactured 86 cm (34 inch) and 193 cm (76 inch) reflecting telescopes. He received the KCB (1911) and the OM (1927).

Parsons (or Persons), Robert (1546–1610). English priest. After leaving Oxford University he became a Roman Catholic convert, went to Rome and became (1575) a Jesuit. He returned to England (1580) to minister to Roman Catholics and eluded capture for a whole year. After the arrest of Edmund *Campion he returned to the Continent, where he intrigued with *Philip of Spain to invade England. He wrote many controversial pamphlets, became rector of the English College in Rome and died there.

Pärt, Arvo (1935–). Estonian composer. He worked for Estonian Radio, taught at Tallinn Conservatory, and lived in Berlin 1980–. His St John Passion (1982), powerfully compressed, minimalist and repetitive, is frequently performed, despite its lack of movement or modulation. He also wrote Stabat Mater (1985) and Miserere (1989).

Parvus, Aleksandr Lvovich (originally Israel Lazarevich Gelfand) (1867–1924). Russian-Jewish-German revolutionary, born in Belarus. He studied in Switzerland, lived in Germany, joined the Mensheviks and influenced *Trotsky and *Lenin. He made money as an arms trader in Istanbul, and in 1917 persuaded contacts in the German General Staff to send Lenin to Russia to foment revolution and its withdrawal from World War I.

Pascal, Blaise (1623–1662). French physicist, mathematician and philosopher, born at Clermont-Ferrand. Son of an exchequer official of great mathematical ability, he was precocious and at 16 wrote a treatise on conic sections, greeted with admiration by *Descartes (who doubted it was Blaise's own work). The experiments he conducted with his father, and in 1647 described, on the problems of a vacuum and the effects of air pressure on tubes of mercury, led to the construction of barometers. To facilitate his father's work he also invented a calculating machine (patented 1647). Later in life he did basic work on the mathematical theory of probability, and laid the foundation for the invention of differential calculus.

In complete contrast to *Montaigne, Pascal begins with the vastness of space and eternity compared to man's isolation and impotence, and tries to relate the universal and infinite to the human and particular. If there is order, it is a mystery, comprehended through grace, too complex for a single formula. 'It is not in space that I must seek my human dignity, but in the ordering of my thought. It will do me no good to own land. Through space the universe grasps me and swallows me up like a speck; through thought I grasp it.'

Two years after his father's death (1651), his sister, Jacqueline, became a nun at Port-Royal, near Versailles, a headquarters of the Jansenists, whose doctrines, later declared heretical, stressed those parts of St *Augustine's teaching that appear to support predestination and redemption solely through grace. On 23 November 1654, the 'night of fire', he experienced a revelation of Christ, wrote a short Memorial and kept it on his body until his death. The foundation of all his religious thought is devotion to Christ, the Saviour: 'I lay all my actions before God who shall judge them and to whom I have consecrated them.' In December 1654 he went to live at Port Royal, although he took no vows, and wrote his Lettres provinciales (1656–57), a defence of the Jansenists combined with a brilliant, if unfair, attack on the casuistry of their main adversaries, the Jesuits. His more personal views on religion and philosophy as well as his most brilliant writing are, however, contained in his Pénsees, notes for a projected apology.
for the Christian religion, collected and published in 1669, after his death. Many of the Pensées have become proverbial e.g. ‘Man is but a reed, the weakest in nature, but he is a thinking reed’ and ‘The state of man: inconstancy, boredom, anxiety’. ‘Men despise religion. They hate it and fear it may be true …’; ‘The heart has its reasons which reason knows nothing of’.

‘Pascal’s wager’ (Pensées, part III, §233) proposes the argument: ‘Let us weigh the gain and the loss in wagering that God is. Let us estimate these two chances. If you gain, you gain all; if you lose, you lose nothing.’

Pasmore, (Edwin John) Victor (1908–1998). British painter and graphic artist. Largely self-taught, he passed through naturalism and post-impressionism to evolve a personal style, of which his three dimensional abstractions and relief paintings are best known. He migrated to Malta in 1965 and received the CH in 1981.

Passfield, 1st Baron see Webb, Sidney

Passy, Frédéric (1822–1912). French economist and politician. He was a deputy 1874–89, a co-chair of the International League of Peace and the International Parliamentary Union. He shared the first Nobel Prize for Peace with Henry *Dunant, having received 39 nominations.

Pasternak, Boris Leonidovich (1890–1960). Russian novelist and poet, born in Moscow. His father was an artist and friend of *Tolstoy, and Boris studied law, art and music before turning to literature. He was well known within the Soviet Union as a poet, original story writer and a translator of *Shakespeare. He was refused permission to publish his wide-ranging novel Doctor Zhivago (completed 1957) about Russia in the years 1903–29. It was smuggled out of the Soviet Union and published abroad (in Italy 1957). It immediately attracted international acclaim and won for Pasternak the Nobel Prize for Literature in 1958. It was attacked in the USSR for its lack of enthusiasm for revolutionary values, and Pasternak declined, under pressure, the Nobel award. He made a conventional apology for errors as the price for remaining in Russia. He also wrote the autobiographical Safe Conduct (1931) and Essay in Autobiography (1959) in addition to much poetry.

Pasteur, Louis (1822–1895). French bacteriologist, born at Dôle in the Jura. His father, a tanner, had been a Sergeant Major during the Napoléonic Wars. His education led him to the Ecole Normale in Paris where he eventually became (1857–63) director of scientific studies, having earlier taught at Dijon, at Strasbourg (where he married Marie Laurent, daughter of the university rector) and as professor of chemistry at Lille. A devout Catholic, three of his children died of infectious diseases. His early researches were on crystallography and the polarisation of light. He pointed to odd asymmetries (which he called ‘left and right handedness’) in molecules, crystals and other chemical structures. In 1857 he began to study why fermentation in wine vats produced lactic acid which caused the wine to go sour. He proved conclusively that this fermentation was caused by bacteria in the air (and his success was said to have saved France more than was paid in reparations after the Franco-Prussian War). This verified the ‘germ theory’ of disease and demolished the old idea of spontaneous generation. These conclusions (published 1864) were of basic importance in *Lister’s development of antiseptic surgery. In 1865 Pasteur discovered, and found how to cure, a disease that was attacking silk worms and threatened the whole French silk industry. He devised (1870) the process known as pasteurisation for killing bacteria in milk, and developed vaccines against the cattle disease anthrax (1877, later successfully extended to hydrophobia, or rabies) and chicken cholera (1880). He received the Copley Medal of the Royal Society (1874) and was elected to the Académie Française in 1882. The first Pasteur Institute was founded in 1885 and a branch was established in Sydney in 1890. Pasteur’s work ranks him as one of the greatest of all benefactors of the human race, and in effect the founder of bacteriology.

Patel, Vallabhbhai Jhaverai (1875–1950). Indian politician and lawyer, born in Gujarat. He became a barrister, was widowed in 1908, then studied at the Middle Temple London, returning to set up practice at Ahmadabad in 1913. He joined the Indian Congress Party in 1917 as a follower of *Gandhi, became the leader of its conservative wing and a rival of *Nehru. Although an opponent of violence (on pragmatic grounds), during the civil disobedience campaigns he was imprisoned 1930, 1932–34, 1940–41, 1942–45, despite his advocacy of resistance to Japanese invasion. He was among the first to recognise the inevitability of Indian partition
and the creation of Pakistan. Deputy Prime Minister 1947–50 under Nehru, he successfully integrated the princely states into the Indian Union.

Pater, Walter Horatio (1839–1894). English essayist and critic, born in London. A fellow of Brasenose College 1865–94, a journey to Italy (1865) and the works of "Ruskin and "Winckelmann influenced his thought, but his polished and poetic style, first known to the public through the essays collected as Studies in the History of the Renaissance (1873), is highly individual. His belief that the cultivation of beauty should be an end in itself, irrespective of its relationship to life, provided academic justification for the aesthetic movement, then blossoming into fame. His best known book is the philosophical romance Marius the Epicurean (1885), set in the time of Marcus Aurelius and concerned with the intellectural and spiritual processes by which a young Roman moves towards Christianity.

Paton, Alan Stewart (1903–1988). South African writer. His famous novel, Cry the Beloved Country (1948), presents with compassion rather than bitterness, the psychological problems besetting the coloured man in South Africa, where the environment is created for and by the white. He was President of the South African Liberal Party (made illegal in 1968).

Patrick, St (c.385–461). Celto-Roman apostle, born probably in South Wales. The patron saint of Ireland, he was the son of an official. Kidnapped by Irish marauders when about 16 years old, he worked as a slave (traditionally in County Antrim) for about six years before he escaped to Gaul (France) and thence back to Britain. He then seems to have had a vision summoning him to convert the Irish, for which he did not rapidly obtain sanction, but at last he was ordained Bishop and started his Irish mission (432 is the traditional date). Christianity had already penetrated parts of the country, but he was the first missionary in the more remote areas. His method was to convert the princes and through them the common people (hence the story of his preaching before the 'high king' at Tara). He organised the Irish Church on a territorial basis and became the first bishop of Armagh (444?). He describes his life and work in his Confessio. St Patrick's Day is 17 March.

Patten, Chris(topher Francis) Baron Patten of Barnes (1944– ). English Conservative politician. MP 1979–92, Secretary of State for the Environment 1989–90 and Chairman of the Conservative Party 1990–92, he was the last Governor of Hong Kong 1992–97. He received a CH in 1998. He advised the *Blair Government on Northern Ireland, became EU Commissioner for External Relations 1999–2004 and Chancellor of Oxford University 2003–. He received a CH in 1998, a peerage in 2005 and served as Chairman of the BBC 2011–.

Patti, Adelina (Adela Juana Maria) (1843–1919). Italian soprano, born in Madrid. She sang in New York at the age of seven, and made her operatic debut there in 1859. Noted for her brilliant execution of coloratura roles, she was much admired by *Verdi and made a few acoustic recordings. From 1878 she lived at Craig-y-Nos Castle in the Swansea Valley, with her last husband, Baron Rolf Cedestrom, and died there. She was buried at the Père Lachaise Cemetery, Paris.

Patton, George Smith (1885–1945). American soldier, born in California. One of the most successful and colourful generals of World War II, in 1940 he commanded an armoured division. He led the invasion of US forces in North Africa (November 1942) and in Sicily (July 1943) but was relieved of his command for 11 months for striking two soldiers whom he suspected of malingering. He returned to lead the 3rd Army in the European liberation campaign (1944), exploiting its breakout of the Cotentin Peninsula (south of Cherbourg) with a triumphant drive across France, outflanking the Germans in Normandy, taking Paris and reaching the Moselle. He died after a motor accident in Heidelberg.

Paul, St (Paulos in Greek: Sha’ul in Aramaic) (c.8 CE–c.67 CE). Christian apostle, born in Tarsus. A Jew and a Roman citizen, known as Saul before his conversion, his life can only be partially reconstructed from the Acts of the Apostles and some of his epistles. A tentmaker by trade, he was a zealous Pharisee and took part in the persecution of Christians, but on his way to Damascus (37?) to bring back some Christians for trial he was temporarily blinded by a sudden vision and miraculously converted. After some time meditating in the desert he went to preach at Jerusalem, but, though supported by *Barnabas, he was regarded with suspicion. He had an uneasy relationship with *James and *Peter. Paul returned to Tarsus where he remained for 10 years before Barnabas sought him out and took him to Antioch. A year later, the two friends, with *Mark as assistant, set out on their first missionary journey through Cyprus and many cities of Asia Minor. They made many converts but ultimately were stoned and expelled, mostly by hostile Jews.

When Paul and Barnabas (Mark having left them) returned to Antioch, they were faced with controversy about whether Gentile converts were required to be circumcised and follow other prescribed Jewish observances. Paul and Barnabas argued for exempting Gentiles from such requirements and the eventual
compromise, reducing them to a minimum, enabled him then to continue their work. The term 'Christian' was first applied in Antioch. A second missionary journey was begun but in Cyprus a dispute as to whether Mark should again be taken led to a parting. Barnabas taking Mark as his companion, leaving Paul with Silas. For part of the way Paul retraced his steps in Asia Minor, but after a dream in which he was begged to come over to Macedonia and help, he crossed to Greece. The first Christian presence in Europe was in Philippi (c.51) and Paul's first convert was a cloth dealer, Lydia (Acts 16). Paul and Silas were driven out of Thessalonica by hostile Jews, and in Athens, the home of philosophy, they had little success. In Corinth (from c.51) Paul found a home for 18 months before returning to Antioch.

In the New Testament, 14 books are attributed to Paul, advice and instruction to churches he had founded, or sought to influence. These were certainly written before the gospels. Modern scholarship is only confident about Paul's authorship of seven epistles: 1 Thessalonians (the earliest, perhaps 50–51, written in Corinth or Athens), Philippians, Philemon, 1 Corinthians, Galatians, 2 Corinthians and Romans (the longest, probably written in Corinth). The epistles were decisive in influencing early church theology.

After again visiting churches in Asia Minor (it was his practice to organise a congregation of believers in as many as possible of the places he passed through) he made Ephesus the focal point of his third journey. He stayed there nearly three years and from there wrote 1 Corinthians (c.57). He then returned to Jerusalem where his old enemies roused the mob against him. Only the intervention of the commandant saved him, but the Roman governor Felix and his successor Festus kept him imprisoned for two years until at last Paul, as a Roman citizen, exercised his right to appeal to Caesar (*Nero). Wrecked at Malta on the way, Paul eventually reached Rome in c.60 or 61 and was held in custody there (though with considerable liberty) for about two years, and probably visited Spain (Romans xv:24, 28). He appears to have been well-connected in Rome. There is a strong tradition that he was beheaded in the Neronian persecutions, probably on the site of the Basilica of St Paul outside the Walls. St Paul, the Apostle of the Gentiles, was probably on the site of the Basilica of St Paul outside the Walls.

Paul (Pavel) I (1754–1801). Tsar of Russia 1796–1801. He succeeded his mother *Catherine the Great, having been kept from the throne by her for 34 years. He established a law of primogeniture. He broke his alliance with England to come to terms with *Napoléon and planned to invade India. His rule as a capricious tyrant provoked a military plot and he was strangled by officers.

Paul I (1901–1964). King of the Hellenes 1947–64. Son of *Constantine I, he was exiled in England 1923–35, served in the Greek army during World War II and in 1947 succeeded his brother *George II as king. He attempted to popularise the monarchy, but his wife, Frederika of Brunswick, was disliked because of her alleged pro-Nazi sympathies. He was the father of *Constantine II (XIII).

Paul III (Alessandro Farnese) (1468–1549). Pope 1534–49. Born of a noble family, he combined the roles of zealous Church reformer and Renaissance potentate. He confirmed the first Jesuit constitution (1540), established the Inquisition in Rome (1542) and initiated the Council of Trent. A great patron of the arts, he commissioned *Michelangelo to design the dome of St Peter's and paint the fresco of the Last Judgment for the Sistine Chapel.

Paul IV (Gian Pietro Carafa) (1476–1559). Pope 1555–59. Born of an aristocratic Neapolitan family, he was made a cardinal by *Paul III and recognised as leader of the Counter-Reformation long before becoming Pope at the age of 70. A strict and ruthless moralist, he introduced the Index of prohibited books and increased the range of the Inquisition and the severity of its sentences. After his death a mob destroyed his statue and burned the prisons of the Inquisition.

Paul VI (Giovanni Battista Montini) (1897–1978). Pope 1963–78. Born near Brescia, son of an anti-Fascist editor and Unione Popolari deputy, he was educated by the Jesuits. Ordained in 1920, he joined the Vatican's Secretariat of State, served in Poland (1923) and became assistant to the future *Pius XII. Undersecretary of State 1939–44 and Prosecretary for Extraordinary (i.e. non-diplomatic) Affairs 1944–54, he was not made a cardinal in 1953 (effectively excluding him from the succession to Pope Pius) but became Archbishop of Milan 1954–63. He was *John XXIII's first appointment as cardinal (1958) and on his death was elected Pope on the 6th ballot. He continued the work of adapting the teaching and practices of the Catholic Church to modern needs through the ecumenical council summoned by his predecessor. He took a number of unprecedented initiatives, e.g. his pilgrimage to Jerusalem (1964, but without mentioning the Jews or Israel) and his speech to a session of the United Nations in New York. He made the first papal visits to Asia (1964), North America (1965), South America (1968), Africa (1969) and Australia (1970). His encyclical *Humanae Vitae (1968) reaffirmed the Church's traditional opposition to contraception.

Pauli, Wolfgang (1900–1958). Austrian physicist. Professor of physics at the Zürich Institute of Technology 1928–40, 1946–58, he taught at Princeton 1940–46. A pioneer in the application of the quantum theory to atomic structure, his most notable contribution was the ‘exclusion principle’ stating that two electrons cannot occupy the same quantum mechanical state at the same time. He suggested (1931) the existence of the neutrino, an uncharged particle of almost zero mass. Pauli won the Nobel Prize for Physics (1945).

Pauling, Linus Carl (1901–1994). American chemist. Professor of chemistry at the California Institute of Technology 1929–64, the University of California, San Diego 1964–69 and Stanford 1969–74, he was best known for his work on molecular structure and valency. He introduced (1931) the concept of resonance, the rapid alternation of a pair of structures to produce a median structure or resonance hybrid, and this idea made it easier to elucidate the structure of several compounds that had previously offered great difficulties. He won the Nobel Prize for Chemistry (1954) and the Nobel Prize for Peace (1962), the second award recognising his opposition to nuclear weapons and advocacy of a Nuclear Test Ban Treaty.

Pausanias (d.c.470 or 465 BCE). Greek soldier. A regent of Sparta, he was the general who led the Greek army to victory over the Persians at Plataea (479 BCE). Later he adopted Persian clothes and manners and according to Thucydides, entered into treacherous relations with the enemy. (*Herodotus defended him.) When finally he tried to gain power in Sparta by raising the serfs in revolt he was starved to death in the temple to which he had fled.

Pausanias (fl. 143–176 CE). Greek geographer, born in Lydia. He travelled through Greece, Italy and parts of Asia Minor and Africa, and may be regarded as the first writer of guide books, since his Itinerary of Greece gives the history of and legends connected with all the places he visited as well as details of all the works of art he saw there. It has thus inestimable value for the historian, geographer, archaeologist and mythologist.

Pavarotti, Luciano (1935–2007). Italian operatic tenor, born in Modena. From 1963 he was an increasingly popular lyric tenor in Italy, Britain and the US, excelling in opera, recitals and as a teacher. He appeared in several films and was much recorded.

Pavelic, Ante (1889–1959). Croatian politician and lawyer. Deeply opposed to Serbian domination of Yugoslavia, in 1929, with Mussolini’s patronage, he founded Ustasha (Arise) and organised the assassination of *Alexander I and *Barthou in Marseille (1934). In 1941 the Germans established Croatia as a client state, with Pavelic as dictator. His regime is estimated to have murdered more than 500,000 Serbs, 60,000 Jews and many Moslems. He escaped in 1945 through Italy and lived in Buenos Aires and Madrid.

Pavlov, Ivan Petrovich (1849–1936). Russian physiologist. He took a medical degree (1883) and from 1891 was director of the physiology department of the Institute of Experimental Medicine at St Petersburg. He won the Nobel Prize for Medicine (1904) for his study of gastric secretions in the digestive glands. The experiments on dogs undertaken in the course of this work and the studies which developed from it won him worldwide notice. In his best known experiment Pavlov rang a bell before giving food to dogs, whose glands would begin to secrete saliva at the sight of food. After repetition the dogs salivated when they heard the bell even if no food was forthcoming. Such experiments revealed the ‘conditioned reflexes’ and led to a study of their effect on human behaviour and so to the behaviourist theories in modern psychology.

Pavlova, Anna Pavlovna (1882–1931). Russian ballerina, born in St Petersburg. Educated at the Imperial Ballet School, she quickly won renown and after a single season (1909) in Paris with *Diaghilev, formed her own company, with which she toured the chief cities of the world for the rest of her life, visiting Australia in 1926 and 1929. She was most famous for her solo performances in divertissements, e.g. The Dying Swan (music by *Saint-Saëns), but she was also acclaimed for her roles in such ballets as Don Quixote, Chopiniana and Autumn Leaves (the last her own creation). She was also a gifted sculptor.

Paxton, Sir Joseph (1806–1865). English gardener and architect. As superintendent of the Duke of Devonshire’s gardens at Chatsworth he gained experience in the construction of large conservatories, which led to his commission to design the Crystal Palace for the Great Exhibition (1851), a landmark in the development of structural steel architecture. He was knighted for this work. The Crystal Palace, originally built in Hyde Park, was re-erected in Sydenham (1853–54) and survived until a fire in 1936. Paxton was a Liberal MP 1854–65.

Peabody, George (1795–1869). American philanthropist. Having made a fortune as a wholesaler in the US, he settled in London (1837) as a merchant banker. His benefactions included over £1 million for educational purposes in the US and £500,000 for working class flats in London. He refused honours, but on his death a British battleship conveyed his body to America where the name of his birth place, Danvers, Massachusetts, was changed to Peabody.

Peacock, Thomas Love (1785–1866). English novelist and poet. He worked for the East India Company from 1809. His conversational novels, interspersed with lyrics, satire contemporary writers, philosophers and literary fashions. They include Headlong Hall (1816), Melincourt (1817), Nightmare Abbey (1818), Crotchet Castle (1831) and Gryll Grange, which did not appear until 1860. He also wrote two romances, Maid Marion (1822) and The Misfortunes of Elphin (1829). Peacock was a close friend of Shelley (from 1814) and his executor. His Memorials of Shelley, edited by H. Brett Smith, appeared in 1909. One of Peacock’s four daughters was George Meredith’s first wife.

Peale, Charles Willson (1741–1827). American painter and gallery director. He opened his own museum in Philadelphia and painted over 1000 portraits in neo-classical style, including *Franklin, *Washington, *Adams and *Jefferson. His sons Raphaelle, Rembrandt and Titian were also painters. The last was also a naturalist who explored the Upper Missouri, Florida and the South Seas.

Pears, Sir Peter (1910–1986). English concert and opera singer. A high tenor with superb diction, he was the lifelong partner and interpreter of Benjamin Britten. He made his stage debut in 1942 and later sang at Covent Garden, at Sadler’s Wells and with the English Opera Group. He was (with Britten) co-founder of the Aldeburgh Festival (1948) and created principal roles in 13 of Britten’s operas, notably Peter Grimes (1945). He was knighted in 1978.

Pearse, Patrick (Padraic) Henry (1879–1916). Irish republican leader. He combined enthusiasm for the revival of Gaelic with a political extremism which induced him to join the Irish Republican Brotherhood and the nationalist Irish Volunteers (1913–16). He was chosen as President of the provisional republican government proclaimed during the Easter Rising (1916), and after its suppression was court-martialled and shot. He was a man of the highest ability and integrity.

Pearse, Richard William (1877–1953). New Zealand pioneer aviator. A self-educated farmer, he built a monoplane at Waitohi, South Island, and it is almost certain that he succeeded in a short manned flight on 31 March 1903, some eight months before the Wright Brothers. He was derided as a crank and became easily discouraged, concluding that the Wrights would have much easier access to finance and engineering support. He abandoned aviation and later became a recluse.

Pearson, Karl see Galton, Sir Francis

Peary, Robert Edwin (1856–1920). American Arctic explorer. He joined the US navy (1881) and an expedition to Greenland roused his interest in the problem of reaching the North Pole. In 1891–92 he crossed the Greenland ice pack from west to east and discovered what is now Peary Land. Subsequently (on leave from the navy) he made repeated expeditions with his aim always in view, and finally, on 6 April 1909, he and Matthew Hensen, after a dangerous sledge journey, became the first explorers to reach the Pole. His book The North Pole (1910) describes the achievement but minimises Hensen’s role. (His rival Frederick Albert Cook claimed to have beaten him to the Pole, in 1908.) Peary was promoted to Rear Admiral in 1911.

Pedro I (known as ‘the Cruel’) (1334–1369). King of Castile and Leon 1356–69. The only legitimate son of Alfonso XI, but he had to contend with the implacable enmity of his illegitimate half-brothers. Three were disposed of by assassination, but the most important, Henry of Trastamara, who had taken refuge in France, returned with a mercenary army. Pedro fled to Gascony and enlisted the support of the English Black Prince, who won a great victory...
at Najera but retired in disgust at Pedro's vengeful atrocities. Once more Henry invaded Castile, and after his victory at Montiel (1369), the two half-brothers met in single combat and Pedro was killed.

Pedro I (1798–1834). Emperor of Brazil 1822–31, and (as Pedro IV) King of Portugal 1826. During the Peninsular War, when Portugal was invaded by "Napoléon's armies, his father, *João VI, and other members of the royal family took refuge in the Portuguese colony of Brazil. When João returned to Europe (1821) Pedro was left as regent, but, when Brazil resisted Portuguese efforts to reimpose a colonial relationship, Pedro put himself at the head of the independence party, and a declaration, the 'Grito do Ipiranga' (1822), gave independence to Brazil with himself as first emperor. He granted a constitution (1826) and in the same year, on his father's death, he also became King of Portugal. Shortly after, however, he renounced the Portuguese crown in favour of his daughter Maria. His involvement in the affairs of Portugal brought him unpopularity in Brazil, and in 1831 he abdicated in favour of his son Pedro II. He then returned to Europe and in 1832, with the help of the English naval forces, defeated the Miguelist faction in Portugal which had driven out Maria, and re-established her as Queen.

Pedro II (1825–1891). Emperor of Brazil 1831–89. Though only 16 when he assumed power after a period of troubled regency, Pedro proved himself a liberal-minded constitutional ruler and he showed skill in reconciling the political disputes of the various parties. In 1870 a long war with Paraguay ended successfully but the heavy Brazilian losses caused recriminations. The army's support for the regime weakened and a republican party appeared. The landed gentry, the emperor's strongest supporters, were offended by extensions of the franchise, and his position became untenable in 1888 when, during his absence on a trip to Europe, his daughter freed the slaves without compensating the owners. After a bloodless revolution Pedro retired to Europe (1889). He died in Paris and was reburied in Petropolis (1893).

Peel, Sir Robert, 2nd Baronet (1788–1850). English politician, born in Lancashire. Son of a rich cotton manufacturer, he was a friend of *Byron at Harrow and distinguished himself at Oxford. A Tory MP 1809–50, first elected at 21, at 24 he became Chief Secretary for Ireland 1812–18, where Daniel *O'Connell was his powerful opponent. As Home Secretary 1822–27, 1828–30, his terms of office were made famous by the creation of the Metropolitan police force (whose members were nicknamed after him 'peelers' or 'bobbies'). Though he had worked in harmony with *Canning, he resigned with the Duke of *Wellington (1827) as a protest against Roman Catholic emancipation, which, however, they both accepted and passed through parliament when they returned to office in the same year after Canning's death. By the election following *George IV's death, the Whigs returned to power and passed the famous parliamentary Reform Act (1832) against Peel's opposition. He succeeded Wellington as Tory leader, and served twice as Prime Minister 1834–35, 1841–46. When *Melbourne resigned (May 1839) Peel's return to office was delayed by Queen Victoria's refusal to part with her ladies of the bedchamber (all Whigs). After the election of 1841 Peel became Prime Minister with a useful majority, and in defiance of his Tory supporters, gradually became a convert to free trade. His first step was to introduce a sliding scale by which the duty on corn varied in accordance with the price at home, the lost revenue being replaced by an income tax of 7d. in the pound. But when the potato blight in Ireland, followed by famine, made the cheapest possible corn an urgent necessity in Peel's opinion, he introduced (1846) his measure for Corn Law repeal. A Party split was the inevitable result and, though Peel pushed the act through with Whig support, he was forced to resign. He was never again in office but his prestige in the House of Commons and his popularity in the country remained undiminished. He died as a result of being thrown from his horse on Constitution Hill. In public life Peel appeared cold and austere, and O'Connell remarked, 'His smile was like the silver plate on a coffin'. Although highly competent, he was never a good Party man. In private he led an ideally happy domestic life with his wife (née Julia Floyd) and seven children, and he was a genial and generous friend.

Péguy, Charles (Pierre) (1873–1914). French poet and publisher. He combined active socialism with Catholicism and sincere patriotism, revealed in the drama Jeanne d'Arc (1897), which he wrote in pseudonymous collaboration with his friend Marcel Baudouin. He founded (1900) the journal Cahiers de la Quinzaine, in which he published his own works and those of other writers, several of whom, e.g. Romain *Rolland, subsequently became important. Péguy's later works include Le Mystère de la charité de Jeanne d'Arc (1910) and La Tapisserie de Notre Dame (1913). He was killed in World War I.

Wilson, N., Charles Péguy. 1965.

Pei, I(eoh) M(ing) (1917– ). American architect, born in Canton. In the US from 1935, he taught at Harvard and won international recognition with a series of important buildings in Boston – the Christian Science Church Centre, the west wing of the Museum of Fine Arts, the Kennedy Memorial Library (Harvard), and (with Henry Cobb) the John Hancock Tower. He designed the east wing of the National Gallery in Washington, the Place Ville-Marie in Montréal and the Bank of China building.
Hong Kong. His glass and steel Pyramide in the Cour Napoléon at the Louvre, opened in 1989, illuminates and coordinates the underground visitors' reception area and the Carrousel (shops and restaurants).

Wiseman, C., I.M. Pei. 1990.

Peierls, Sir Rudolf Ernest (1905–1995). German-Jewish-British physicist, born in Berlin. He studied in Zürich and Cambridge, remaining in England after *Hitler's regime took power. He worked on nuclear physics with James *Chadwick, and with Otto *Frisch proposed a specific model for an atomic bomb, worked at Los Alamos 1943–45, and personally assembled the parts for the Hiroshima bomb. (Klaus *Fuchs was his assistant.) He held chairs at Birmingham and Oxford and was a founder of the Pugwash movement.

Peierls, R., Bird of Passage. 1985.

Peirce, Charles Sanders (1839–1914). American philosopher. The son of a well known mathematician, he studied mathematics, physics and chemistry, spending much of his life in the US Government Coast and Geodetic Survey. Because of his unconventionality he obtained no proper academic recognition, and most of his writing became available only after his death. He is best known for his view of the meaning of concepts: our idea of something is made up of notions of that thing's effects. William *James and others turned this 'pragmatic maxim' into the dubious theory ('pragmatism') that the test of a statement's truth is whether or not it has (good) effects, but this extension was disdained by Peirce. His own theory of truth, which he named 'pragmaticism' to distinguish it from James's version, involved the verification of hypotheses by the scientific community.

Peisistratus (c.600–528 BCE). Athenian tyrant. He fought successfully against Megara, then by claiming that his wife was threatened he obtained a bodyguard, with which (c.560) he seized the Acropolis. He was twice expelled but as the owner of gold and silver mines he was able to hire mercenaries to ensure his victory over his opponents. He ruled with wisdom and success and, by using his own fortune and money confiscated from his adversaries, helped the farmers, and did much to assist the poor, as well as fortifying and beautifying Athens. He is traditionally held to have been the first to collect *Homer's poems. He was succeeded by his sons Hippias and Hipparchus.

Pelagius (b.c.370). Christian monk, born either in Britain or Brittany. With his disciple Coelustinus he settled in Rome (c.400) but when the Goths threatened the city the two withdrew to Carthage (409). From there Pelagius made a pilgrimage to Jerusalem, while the impetuous Coelustinus, still in Carthage, attacked St *Augustine's doctrines on predestination and original sin, thus opening the Pelagian controversy. Pelagius objected to the doctrine of original sin and affirmed that Adam would have died whether or not he had sinned, and that each of his descendants is born as innocent as he. He further held that it is at least theoretically possible for a man to live without sin, solely by his own free will, a doctrine that seemed to diminish the need for God's grace. Pelagianism was first officially condemned in 416 and more formally at the Councils of Carthage and Ephesus (418 and 431). Pelagius was banished from Rome (418). It is not known where, when or how he died.

Evans, R. F., Pelagius. 1968.

Pelham, Henry (1696–1754). English Whig politician. Member of Parliament 1717–54, he held several important offices under *Walpole but after his fall (1742) joined his own elder brother, the Duke of *Newcastle, in building up such a successful system of patronage that no administration could exist without them. He was Prime Minister 1743–54, apart from a three-day resignation in 1746. Henry, the cleverer of the two, having shed the brilliant Carteret (Lord *Granville), whose continental policy he distrusted, was able to enjoy a decade of efficient and unspectacular rule. He maintained his parliamentary influence, however, as much by systematic corruption as by his political and financial abilities.

Pell, George (1941– ). Australian cardinal, born in Ballarat. Educated in Ballarat and Oxford, he was Archbishop of Melbourne 1996–2001, of Sydney 2001–14, and created cardinal in 2003. A firm advocate of Roman supremacy in the church, conservative in faith and morals, less so in economics, he supported a republic, was a 'climate change' sceptic and came under attack for lacking empathy with victims of clerical sexual abuse. He became Prefect of the Secretariat for the Economy at the Vatican 2014–.

Pembroke, Richard de Clare (or FitzGilbert), 2nd Earl of (known as 'Strongbow') (c.1130–1176). Anglo-Norman adventurer. He led an expedition into Ireland (1169) and married Eva, the daughter of the deposed Diarmid (Dermot) of Leinster, whose kingdom he recovered. On his father-in-law's death (1171), he ruled Leinster, for which he paid homage to *Henry II of England, thus inaugurating the long and unhappy period of English rule in Ireland. His son-in-law William *Marshal became Earl of Pembroke in a second creation.

Penda (d.655). Anglo-Saxon King of Mercia 633–55. He gradually built up the strength of his kingdom and finally (633) allied himself with the Christian Welsh king Cadwallon to defeat and kill Edwin of Northumbria and so make Mercia independent. For a time Penda was the most powerful king in England, but Northumbria reasserted its power when Oswald's brother Oswy (Oswiu) defeated and killed Penda in a battle near Leeds.

Penfield, Wilder Graves (1891–1976). Canadian neurosurgeon, born in the US. A Rhodes Scholar at Oxford, he studied under *Osler and *Sherrington, and worked in Montréal from 1926. His operations on epileptics led to his 'mapping' brain areas responsible for memory, sensory and motor functions. He was a prolific writer on the mechanism of the brain and received the OM in 1953. He also wrote two novels and an autobiography No Man Alone. A Surgeon's Life (published posthumously, 1977).

Penn, William (1644–1718). English Quaker and founder of Pennsylvania, US. Son of a distinguished admiral of the Commonwealth period, he adopted the beliefs of the Quakers which he expounded in, e.g. The Sandy Foundation Shakers (1668), for which he was confined in the Tower of London, and No Cross, No Crown (1669). His belief in toleration and the need for it in the members of the Society of Friends (Quakers) brought him into touch with James, Duke of York (later *James II), who suggested emigration and helped Penn to secure the lease of a large territory, named Pennsylvania after its founder, to the west of the Delaware River. Here he set up a colony of Quakers. Its religious tolerance also attracted English, Dutch and German settlers of other sects. Philadelphia ('city of brotherly love') was founded in 1682. Penn, who visited the colony twice (1682–84 and 1699–1701), drew up for it a constitution that was remarkably liberal, e.g. the governor (at first Penn himself) could rule only by consent, the legislature was chosen by ballot and, most important of all, toleration was enjoined for all forms of religion compatible with Christianity. Penn's later years were clouded by religious disputes and financial difficulties, but he remains one of the most practical idealists of his time. He wrote extensively on theological matters and from time to time was an itinerant preacher.

Penney, William George, Baron Penney (1909–1991). English mathematician and physicist, born in Gibraltar. After teaching mathematics at the Imperial College of Science and Technology, London 1935–44, he directed armament research in the Ministry of Supply 1946–52. In 1953 he superintended the testing at Woomera, Australia, of the second British atomic bomb, was awarded the KBE, and became director of the nuclear weapons establishment at Aldermaston, Berks. He was Chairman of the United Kingdom Atomic Energy Authority 1964–67 and Rector of Imperial College 1967–73. He received the OM in 1969.

Penzias, Arno Allan (1933–). American radioastronomer, born in Germany. He worked for the Bell Telephone Laboratories 1961 and with Robert Woodrow Wilson (1936– ) continued research, begun by Karl *Jansky, into the origins of background interference to radio signals. After all specific sources had been eliminated, a weak, evenly spread signal was detected which they concluded came from the universe at large and was decisive evidence for the 'big bang' theory. Penzias and Wilson shared the 1978 Nobel Prize for Physics with Pyotr *Kapitza.

Pepin (or Pippin). Frankish family of administrators. They served the Merovingian kings and were the ancestors of *Charlemagne and the Carolingian dynasty. Pepin I (d.640) and his grandson Pepin II (d.714) were administrators with the title 'mayor of the palace'. The son of *Charles Martel, Pepin III (the Short) (714/5–768) took the decisive step of deposing the Merovingian king *Childeric III and assuming the royal title. By helping the pope to regain the papal territories he obtained consecration, and his victories over the Arabs in France enabled him to hand over an enlarged and strengthened kingdom to his son Charlemagne.

Pepys, Samuel (1633–1703). English diarist and public servant, born in London. During the Dutch War 1664–67, when his duties in the Admiralty were mainly concerned with supply, he waged a continuous struggle with corrupt officials and dishonest contractors. In the Admiralty he rose to be Secretary to the Commission 1673–79 and 1684–89, where he worked with great industry and efficiency. He served as MP 1673–79, 1679, 1685–87. One of many falsely accused (1679) in the Popish plot (Titus *Oates), he was briefly imprisoned in the Tower of London, and not restored to his post until 1684. A friend of *Wren, *Newton and *Dryden, Pepys was President of the Royal Society 1684–86.

His famous diary covers the years 1660–69. The gossip and scandal of *Charles II’s court, theatrical life, and public events (e.g. the Plague, the sailing up the Thames by the enemy Dutch fleet and the Great Fire) are all vividly recorded. The diary also describes his own domestic life with his lively wife, Elizabeth St Michel, daughter of a Huguenot refugee, who was only 15 when he married her (1655). Throughout his constant philanderings, their mutual jealousies and ardent reconciliations, he and his wife, ‘poor wretch’, never ceased to be in love. The diary, written in Thomas Shelton’s system of short-hand (tachygraphy), lay unread in the library of Magdalen College, Cambridge. Successful publication (1818) of John *Evelyn’s diaries revived interest in Pepys. Transcribed by John Smith, bowdlerised sections of the diary were published in 1825. About 90 per cent appeared in the edition of H. B. Wheatley, published 1893–99. The complete work, transcribed by William Matthews, edited by Robert Latham, was published in 11 volumes 1970–83.

Perahia, Murray (1947– ). American pianist and conductor, born in New York. Of Spanish Sephardic ancestry, he became a friend of Vladimir *Horowitz (although their styles were radically different), recorded all *Mozart’s piano works and toured extensively. He suffered a series of hand injuries and withdrew from playing for several years, but turned to conducting. Awarded an Hon. KBE (2004), he became a specialist in *Bach, *Beethoven, *Schubert and *Chopin.

Perceval, Spencer (1762–1812). British Tory politician and barrister. Educated at Trinity College, Cambridge, he entered parliament in 1796 and with the support of *Pitt had risen to be Attorney-General when Pitt died (1806). He served as Chancellor of the Exchequer under Portland 1807–09 and succeeded him as Prime Minister 1809–12. He was shot by a lunatic, John Bellingham, in the lobby of the House of Commons, the only British prime minister ever assassinated.

Percy, Sir Henry (known as ‘Hotspur’) (1364–1403), English nobleman. His Norman family held lordships in the north from 1067 and his father, Henry Percy, 1st Earl of Northumberland (1342–1408) was a supporter of *Wyclif. *Hotspur had already gained renown as hero of the Battle of Otterburn (1388) against the Scots when supporting his father in his quarrel with *Henry IV, he joined a conspiracy to replace the king by a rival claimant, Edmund, Earl of March. Intercepted on his way to join the Welsh rebel leader Owen *Gladstone, he was killed in the battle of Shrewsbury.

Perelman, Sidney Joseph (1904–1979). American humorist, born in New York. He wrote scripts for the *Marx Brothers’ films Monkey Business and Horse Feathers, was a regular contributor to The New Yorker from 1931 until his death, produced several travel books and won a 1956 Academy Award for his Around the World in 80 Days. He had a genius for parody and a mastery of language comparable to *Joyce and *Nabokov.

Israel 2007–14. He was a cousin of the actor Lauren Bacall and received a GCMG in 2008 from the UK and the US Presidential Medal of Freedom in 2012.

Pérez Galdós, Benito (1843–1920). Spanish writer, born in the Canary Islands. Considered the greatest Spanish novelist since *Cervantes, in his 46 Episodios nacionales (1873–1912) he followed a plan of relating important historical events to ordinary lives. In his extensive series of Novelas espanolas contemporaneas he throws into dramatic relief the incompatibles of 19th-century life and thought, e.g. liberalism and absolutism, science and imagination, progress and tradition, in others (e.g. the Torquemada series) he dramatises the parallel conflicts in the individual conscience. Many of his plays are dramatised versions of his novels.

Peri, Jacopo (1561–1633). Italian composer, born in Rome. He worked for the *Medici in Florence and composed Dafne (1598), probably the first opera, now lost. Euridice (1600), based on the Orpheus legend, is occasionally performed, but Peri was unlucky to have been overtaken by *Monteverdi.

Pergolesi, Giovanni Battista (1710–1736). Italian composer. He wrote religious music (e.g. the famous Stabat Mater for female voices and strings), instrumental pieces and operas (serious and comic) but is best known for the enormously successful La Serva Padrona (1733), which, though it came to be performed as a comic opera, was initially a series of intermezzi between the acts of his serious opera Il Prigionier superbo. Tuberculosis and personal disappointments clouded his short life.

Pericles (c.490–429 BCE). Athenian statesman. He came of a noble family and was educated by leading thinkers, e.g. *Anaxagoras. Though aloof in manner and never courting popularity, politically he was a radical and opposed the ruling oligarchy headed by the Commander-in-Chief Cimon and backed by the Spartans. A rift between the latter and Cimon enabled Pericles to reorient the constitution by depriving the Areopagus (the conservative council of ex-magistrates) of its power (462) and securing the ostracism of Cimon (461). A change in foreign policy followed, Athens and Sparta parted company and thereafter were either at war or enjoying uneasy peace. Peace too was made with Persia, and most of the states that comprised the Delian League against Persia were gradually converted under the guidance of Pericles, who dominated the Athenian assembly until his death, into a maritime empire under Athenian control. He even secured the acceptance of a proposal that the League funds collected for the war should be used not only for policing the seas but for rebuilding and beautifying Athens, which had suffered much during the Persian invasion. Under his guidance, and through his patronage of such artists as the great *Phidias, Athens grew in a few years into the most beautiful city in the world: the Parthenon, the Propylaea and the Odeum being among the buildings constructed at this time. Meanwhile there was mounting jealousy of Athens’ growing strength. Some of the allies, including Samos (which was decisively crushed), revolted, and the Spartans invaded Attica (446) but were bribed by Pericles to withdraw and renew the truce. The crisis was thus delayed until 433 when Pericles, feeling that the time was ripe for a final trial of strength, induced the assembly to accept the plea of Corcyra (Corfu) for an alliance against Sparta’s ally Corinth. This provoked the Peloponnesian War with Sparta (which lasted with intervals from 431 to 404 and eventually brought about the Athenian Empire’s downfall). Pericles’ death was caused by the great plague of 430, during which a quarter of the population died. His domestic life was dominated by his mistress, the beautiful and talented Aspasia.

Perkin, Sir William Henry (1838–1907). English chemist. While attempting to synthesise quinine when he was only 18, he discovered the first aniline dye, which he named ‘mauve’. The commercial application of his discovery was pursued much more intensively in Germany than in Britain, which had no sizable synthetic dye industry until after World War I. Perkin made a number of discoveries in organic chemistry, the most important of which was probably the ‘Perkin synthesis’ (1867) for the preparation of unsaturated aromatic acids. He was knighted in 1906. His son, also William Henry Perkin (1860–1929), was an organic chemist who worked on the formation of rings of carbon atoms and berberine, and made important contributions to the organisation and extension of chemical studies and facilities at Oxford.

Perkins, Frances (1882–1965). American social worker. A pioneer consumer lobbyist and industrial safety investigator in New York, she was a friend of Franklin D. *Roosevelt who appointed her Secretary of Labor 1933–45. She was the first US woman cabinet member.

Perón, Juan Domingo (1895–1974). Argentinian soldier and politician, born in Lobos. One of a group of discontented officers in the 1930s, he served as military attaché in Rome 1939–41, observing *Mussolini, then led a revolt (1943) against President Ramón Castillo and became Vice President and War Minister under Edelmiro Farrell. He won favour with labour unions by decrees that granted social welfare
benefits. Briefly imprisoned in 1946 he was released following labour demonstrations largely organised by his wife Eva, and in the general election of 1946 was elected President by an overwhelming majority. For the next nine years (he was re-elected in 1951) he ruled as a dictator backed by the militant support of the industrial workers who were delighted with his policy (‘peronismo’), which was in essence to favour the workers at the expense of other classes and fiscal stability. From 1952 Perón had increasing difficulty in managing the country and was foolish enough to provoke the antagonism of the Roman Catholic Church. This, together with the chaos caused by inflation, provoked the revolt of the army and navy (1955) which led to his exile. He remained in exile for 18 years but in 1973 he returned to Argentina and assumed the presidency. At his death the country was in political chaos.

His second wife Eva Perón (née María Eva Duarte), generally known as ‘Evita’ (1919–1952), was a stage and radio actor. She threw her vast energy and ambition on the side of Perón whom she married in 1945. She skilfully wooed the support of Argentinian women, especially through the Eva Perón Social Aid Foundation for dispensing help to the poor. Her death from cancer led to extraordinary public demonstrations of grief (a mood captured in Andrew Lloyd Webber’s 1976 musical Evita). After periods refrigerated in Buenos Aires, Milan and Madrid her body was finally interred in Buenos Aires in 1976. Perón’s third wife, Isabel Martínez de Perón (née María Estela Martínez Cartas) (1931– ), was a folk and cabaret dancer when he married her in 1961. Elected as Vice President in 1973, she succeeded as President on his death (1974) until deposed by the army (1976).

Perot, H(enry) Ross (1930– ). American industrialist, born in Texarkana. Educated at the US Naval Academy, he served with the navy and with IBM before forming Electronic Data Systems in 1962, and was its Chief Executive until 1986. A billionaire, he attracted international interest by securing the release of EDS personnel held prisoner in Iran and for attempting to find missing US military personnel in Vietnam. In 1992 he ran as an independent candidate for president, withdrew, then re-entered, securing 19 per cent of the vote and contributing to the defeat of President *Bush. He ran for president again in 1996 when his vote fell to 8 per cent.

Pérotin [Perotinus Magnus] (c.1160–1205). French composer. His three- and four-part music [organum] for voices, written in Paris, perhaps for Notre Dame, was of tremendous importance in the development of polyphony. He is considered to be the earliest great European composer.

Perrault, Charles (1628–1703). French civil servant and writer. The son of a lawyer, he became adviser on art to *Colbert and was elected (1671) to the Académie Française. In his own time he was known in France for his part in the ‘quarrel of the ancients and the moderns’ in which he championed the moderns in a lengthy controversy with *Boileau. His greater fame comes from his Histoires du Contes du temps passe (1697), a collection of eight traditional fairy stories, among them Sleeping Beauty, Red Riding Hood, Blue Beard, Pass in Boots and Cinderella, to which he gave a definitive shape of lasting popularity. They are sometimes called Mother Goose’s Tales after the secondary title Contes de ma mère l’Oye on the frontispiece of the original edition.

Perret, Auguste (1874–1954). French architect, born in Brussels. He worked in Paris, Grenoble and Le Havre, where his reconstruction became a World Heritage Site in 2005. *Le Corbusier was a protégé. His Rue Franklin apartments in Paris (1904) were important ferro-concrete structures with large windows.

Perry, Matthew Calbraith (1794–1858). American sailor. As commodore of a US squadron he was sent to Japan (1853) by President *Fillmore to conclude a trade agreement, he succeeded on his second attempt in January 1854. In March he signed the Treaty of Kanagawa with the shogun’s adviser *Ii Naosuke, opening up two ports, Shimoda and Hakodate, to the US, ending Japan’s isolation from the West since 1642. He received a grant of $20,000 from Congress, wrote Narrative of the Expedition of an American Squadron to the China Seas and Japan (1856) and died in New York.

Perse, Saint-John (pen name of Marie René Auguste Alexix Saint-Léger Léger) (1887–1975). French poet and diplomat, born near Guadeloupe. He became Permanent Secretary for Foreign Affairs and was consistently opposed to appeasement. He escaped from Vichy France to the US (1940) where he became an adviser on French affairs to the US administration. His best known poem, Anabase (1924), was translated into English by T. S. *Eliot (1930). Later volumes of poetry include Exil (1942), Vents (1946), Amers (1957) and Chroniques (1960). He won the Nobel Prize for Literature (1960) for ‘the soaring flight and evocative imagery of his poetry, which in visionary fashion reflects the condition of our times’.

Pershing, John Joseph (1860–1948). American general, born in Missouri. He served in Cuba (1898), the Philippines (1899–1903) and invaded Mexico (1916) to capture Pancho *Villa. Known as ‘Black Jack’, he was Commander-in-Chief of the US Expeditionary Force in France 1917–19. He accomplished a remarkable feat in building up a huge army of 38 divisions, which played a critical role in stopping the last German offensive (1918). He was created General of the Armies in 1919. He became...
Cavafy’s in Egypt) but he is regarded as the greatest published in his lifetime (his experience paralleled commercial correspondent. Virtually nothing was Portuguese poet. He grew up in South Africa, Pessoa, Fernando Antonio Nogueira (1888–1935). British educational reformer. Under the influence of *Rousseau he believed that primary education for the masses (and especially for destitute children) would best achieve its aim of creating useful and virtuous people in the natural surroundings and occupations of agricultural life; he therefore started his first educational experiment in a farm at Neulof, but lack of practical ability led to its failure (1780). He then gave up for a time his educational experiments to think out a system derived from his experience. His books, especially the social novel How Gertrude Teaches Her Children (1801), propound his basic theory that education should develop and train all the faculties, not merely the intellect. In 1798 he again opened an orphan school at Stanz but within eight months it was ruined by peasant bigotry. Finally (1805) he established himself at Yverdon, but, though he had many admirers and followers, the attempt to extend his methods to secondary education was one of several mistakes that caused him to die a disappointed man.

Pertini, Alessandro (1896–1990). Italian Socialist politician. A lawyer who was active in the anti-Fascist underground and imprisoned many times between 1930 and 1943, he served in parliament 1946–76, becoming chairman of the Chamber of Deputies 1968–76. As President of Italy 1978–85, he brought dignity, unpretentiousness, warmth and humour to the office and remained a consistent advocate of human rights.

Perugino, II (Pietro Vannucci) (c.1445–1523). Italian painter. After working in Florence and Rome he settled at Perugia, where some of his best work remains. His art is characterised by clearly articulated composition, and he is traditionally regarded as the teacher of *Raphael, and certainly Raphael’s early works bear striking Peruginesque qualities. Perugino executed (1481) part of the decorative program in the Sistine Chapel at the Vatican (e.g. the fresco of Christ giving the keys to Peter). He is represented in the National Gallery, London, by a characteristic triptych, originally at Pavia.

Perutz, Max Ferdinand (1914–2002). British biochemist, born in Vienna. He left Austria in 1936, worked at Cambridge but was interned during World War II as an enemy alien. He directed the Medical Research Council Laboratory (originally Unit) of Molecular Biology at Cambridge 1947–79 and won the 1962 Nobel Prize for Chemistry (with J. C. *Kendrew) for their use of X-ray diffraction in working out the structure of protein molecules. Awarded the CH (1975), the Copley Medal (1979) and the OM (1988), he was also a perceptive writer on scientific issues e.g. Is Science Necessary? (1989).

Pessoa, Fernando Antonio Nogueira (1888–1935). Portuguese poet. He grew up in South Africa, returning to Portugal in 1908 and worked as a commercial correspondent. Virtually nothing was published in his lifetime (his experience paralleled *Cavafy’s in Egypt) but he is regarded as the greatest Portuguese poet since *Camões.

Pertinax (Publius Helvius Pertinax Augustus) (126–193 CE). Roman Emperor 193. Son of a freed slave, he became a teacher, then a soldier, provincial governor and senator. After the murder of *Commodus, he was raised to the purple in the ‘Year of the Five Emperors’. He attempted modest reforms but after three months was murdered.

Pertini, Alessandro (1886–1990). Italian Socialist politician. A lawyer who was active in the anti-Fascist underground and imprisoned many times between 1930 and 1943, he served in parliament 1946–76, becoming chairman of the Chamber of Deputies 1968–76. As President of Italy 1978–85, he brought dignity, unpretentiousness, warmth and humour to the office and remained a consistent advocate of human rights.

Perugino, II (Pietro Vannucci) (c.1445–1523). Italian painter. After working in Florence and Rome he settled at Perugia, where some of his best work remains. His art is characterised by clearly articulated composition, and he is traditionally regarded as the teacher of *Raphael, and certainly Raphael’s early works bear striking Peruginesque qualities. Perugino executed (1481) part of the decorative program in the Sistine Chapel at the Vatican (e.g. the fresco of Christ giving the keys to Peter). He is represented in the National Gallery, London, by a characteristic triptych, originally at Pavia.

Virtually nothing was published in his lifetime (his experience paralleled *Cavafy’s in Egypt) but he is regarded as the greatest Portuguese poet since *Camões.
the Germans put Pétain into protective custody at Sigmaringen. On his return to France (1945) he was tried and sentenced to death but de *Gaulle commuted the sentence to life imprisonment.

**Peter, St** (Petros in Greek; Shimon in Aramaic) (d.c.64 CE). Christian apostle, born in Bethsaida. The name Peter (from the Greek petra, the equivalent of the Aramaic Kephos, *stone*) is the Anglicised form of the name given by Jesus to the most prominent of his disciples, Simon, son of Jonah. The interpretation of the sentence ‘Thou art Peter and upon this rock I will build my Church’ (Matthew xvi:18) has long been the subject of controversy between Roman Catholics (who use the text to assert the supremacy of Peter's Church in Rome) and Protestants.

Peter, a fisherman on the Sea of Galilee, lived with his wife at Capernaum. He and his brother *Andrew*, followers of *John the Baptist*, were among the first disciples of *Jesus*, regarded with special affection. He was the first to hail Jesus as Messiah, but just before the Crucifixion, he denied three times that he had any connexion with Jesus. Peter (as Kephos) was, with *James* and *John*, one of the ‘three pillars’ of the Christian community. He had an uncomfortable relationship with James and, later, *Paul*. Peter preached in Antioch and became its first bishop. In the controversy concerning the observance of Jewish practices by Gentile converts, Peter appears to have supported the compromise view eventually adopted. The first and second Epistles of St Peter seem to have been written by different hands: the first, early in date and simple in doctrine, is usually accepted as Peter's work. Both Peter and Paul were in Rome and presumably shared leadership of the Christian community. Acts xxviii locates Paul in Rome but 1 Peter v:13 has only a single reference linking Peter with ‘the Church that is at Babylon’. He is said to have lodged for seven years with the family of Pudens. According to Catholic tradition, Peter became first Bishop of Rome and was martyred there during *Nero's* persecution, as was Paul, either in 64 or 67. Presumably crucified, the tradition that he was executed head down is very late. The assumption of Petrine primacy by Church in Rome had a decisive influence on the adoption of Christianity as a state religion by *Constantine*. However, some historians reject the Petrine primacy, arguing that the Church had a collegiate leadership until about 200. Peter is often represented in art holding keys, as the gatekeeper of Heaven. St Peter's is the metropolitan church of the bishopric of Rome. In 324 Constantine began to build a basilica on the presumed site of his burial. This was pulled down in the 15th century and the new St Peter's, designed by *Bramante*, was begun by *Julius II* in 1506. Excavations 1939–49 uncovered a tomb believed to be Peter's.

**Peter I** (Pyotr) (*the Great*) (1672–1725). Tsar (Emperor) of Russia 1682–1725. Only son of Tsar *Aleksei* by his second wife, he succeeded Pyodor II, but, after a revolt engineered by his half-sister Sophia, he shared the throne (under her regency) with his feeble minded half-brother Ivan. When the latter died (1696) Peter assumed full power. Much of his education, mainly in mechanics, navigation, and military science, he had acquired from young foreigners in Moscow whom he made his companions. Two expeditions (1695 and 1696) against the Turks, by which Russia acquired the fortress of Azov and so gained access to the Black Sea from the Don, gave him his first experience of leadership. While travelling abroad (1696–98) he spent much of his time in the shipyards of Holland and England (where he worked for a time at Deptford) working with his own hands and learning shipbuilding and navigation. He also engaged skilled men to go to Russia as instructors. With the aim of modernising Russia he started schools, arranged for textbooks to be translated, edited the first Russian newspaper, opened the first museum; he brought the Church entirely under state control by abolishing the patriarchate and substituting a Holy Synod; and, without abandoning any of his autocratic powers, he turned the administration into an efficient machine, but the poll-tax and other impositions to provide revenue were not popular. Peter's most spectacular undertaking, designed to make the country look westwards, was to build an entirely new capital on swampy ground won from Sweden at the point where the Neva joins the Baltic Sea. Thousands of peasants, many of whom died in the unhealthy conditions, were forcibly enrolled for the task, government offices and palaces sprang up, and nobles and wealthy men were compelled to build houses in the new capital. So, through the Emperor's initiative and genius for planning, the city of St Petersburg became one of the most beautiful cities of the world.

Peter's foreign policy was in line with his westernising policy. In the course of a prolonged war with Sweden (1700–21), defeat after defeat was finally reversed by a great victory over *Charles XII* at Paltava (1709) which enabled him to annex parts of Finland, Estonia and Livonia and secure for Russia a commanding influence in the Baltic.

Peter's domestic life was unhappy. Under the influence of his first wife, his son Aleksei joined the faction opposed to his policies and died mysteriously during the investigation into their intrigues. After his divorce, Peter married Catherine, his peasant mistress and ultimate successor, whom he had taken over from his friend and collaborator *Menshikov*. She bore him 12 children, but Peter died without naming an heir.

Peter (Peter) I (1844–1921). King of Serbia 1903–18 and of Yugoslavia 1918–21. As a member of the Karageorgevic dynasty, he lived in exile until the assassination (1903) of King Alexander of the rival Obrenovic dynasty brought him to the Serbian throne. He secured great territorial advantages for his country at the expense of Turkey and Bulgaria in the two Balkan Wars (1912–13). Meanwhile he had reversed his predecessor's policy by aligning Serbia with Russia instead of Austria, and it was a Serb patriot who murdered the Austrian Archduke Franz Ferdinand, sparking off World War I. Peter remained steadfast while his country was overrun and after the final victory, which united the Austro-Hungarian South Slav territories with his own, he was declared King of the Serbs, Croats and Slovenes (Yugoslavia). He was succeeded by his son Alexander I. His grandson, Peter II (1923–1970), became King in 1934 and was declared of age (1941) when his uncle Paul was deposed from the regency during World War II for acquiescing to Hitler's demands. Peter went into exile in London (1941) but in 1945, after the allied victory, Marshal Tito abolished the monarchy. Peter worked in New York, became an alcoholic and died in Los Angeles.

Peter (Potyr) II (1715–1730). Tsar of Russia 1727–30. As the son of Aleksei, “Peter the Great's dead son, he would have been his grandfather's natural successor had not *Menshikov secured the proclamation of the emperor's widow as *Catherine I. On her death Peter II inherited peacefully, but died from smallpox within three years.

Peter III (1728–1762). Tsar of Russia 1761–62. He succeeded his aunt, the empress *Elizabeth, and made his single contribution to European history when he immediately withdrew Russia from the coalition which at that stage of the Seven Years' War was threatening *Friedrich II ('the Great') with disaster. He was one of Friedrich's most uncritical admirers, and one of his more harmless hobbies was drilling soldiers dressed in Prussian style. Vain, obstinate and feeble minded, Peter was soon seen to be unfit to rule. A plot was formed by the guards regiment and successfully carried out by which his wife was to be proclaimed Empress as *Catherine II. Peter abdicated and was killed a week later, allegedly in a drunken brawl.

Peter the Hermit (Pierre l’Ermite) (c.1050–c.1115). French monk. One of the many preachers in Germany and France who aroused enthusiasm for the 1st Crusade, in 1096 he led a group of fanatical peasants across Hungary into Asia Minor. By then they had become so unruly that he left them to almost inevitable slaughter at the hands of the Turks. He returned to Constantinople and joined the main body of crusaders who in 1099 captured Jerusalem. On his return he founded a monastery at Huy (now in Belgium), where he died.

Peterborough, Charles Mordaunt, 3rd Earl of (1658?–1735). English adventurer. After naval service in the Mediterranean he was able to render such help to *William III in his bid for the throne that he received high office and rewards. Under Queen *Anne he was given joint command (1705), with Sir Clowdisley *Shovell, of an expedition sent to Spain during the War of the Spanish Succession, he captured Barcelona and made a spectacular victorious march through Catalonia, quarrelling constantly, however, with his associates or allies. Ambassadorial appointments followed, each ended by some irregular or impetuous action. His appointment (1714) as Governor of Minorca was terminated when Queen Anne died in the same year. This closed his official career though he continued to tour Europe as a self-appointed and self-accredited envoy. He was a friend of *Pope and *Swift.

Peters, Winston Raymond (1946– ) New Zealand politician. Of Scottish-Maori parentage, he worked in Australia, then became a rugby player, MP and National Minister. He founded the New Zealand First Party in 1993 and was Deputy Prime Minister and Treasurer 1997–98 in coalitions under Jim *Bolger and Jenny *Shipley. He was Foreign Minister in Helen *Clark's Labour Government 2005–08, lost his seat but was re-elected 2011–.

Petipa, Marius (1822–1910). French dancer and choreographer. He performed at the Comédie Française and soon became well known throughout France and in Spain. He went to Russia (1847) where he was immediately acclaimed, and he is regarded as one of the founders of the Russian ballet. His best remembered works were produced in association with *Tchaikovsky, e.g. The Sleeping Beauty (1890) and Swan Lake (1895).

Petit, Roland (1924–2011). French dancer and choreographer. He worked as a boy with the Paris Opera ballet, and in 1948 formed his own company which appeared at the Théâtre Marigny. He created many new ballets, e.g. Le Loup, Ballabille (for the London Royal Ballet) and Cyrano de Bergerac (1959), his first full length ballet. In 1965 he created and danced in Notre Dame de Paris, suggesting the hunchback's deformity without padding.

Petrarch (Francesco Petrarca) (1304–1374). Italian poet and scholar, born at Arezzo. His father moved (1311) to Avignon, then the seat of the papacy, and Francesco later returned there after three years uncongenial study of civil law at Bologna; he then took minor orders. He first saw Laura (plausibly identified as the wife of Hugues de Sade) in church at Avignon at Eastertide in 1327. Worshipped from a distance, she remained the love of his life until and even after her death (1348) and was the inspiration of his famous love poems (Rime or Canzoniere). Petrarch did not invent the 14–line sonnet form, in which nearly 300 of them were written, but his fame...
inspired the many imitators (e.g. Sir Thomas *Wyatt) and so justifies the name Petrarchan sonnet. By his contemporaries, however, Petrarch was acclaimed for scholarship. He was among the first to revive interest in the language and literature of classical Rome. He took advantage of his travels to search for and discover old MSS., including an interesting batch of *Cicero's letters. Through the patronage of the Colonna family, in Avignon and Rome he came to know the learned and great and even to correspond with rulers on political affairs. Evidence of his fame came after he had settled (1337) in retirement at Vaucluse in Provence and had started his epic *Africa on the life of *Scipio Africanus. Invitations came to him simultaneously from the university of Paris and the Roman Senate to accept the tribute of a laurel crown. Back in Vaucluse he must have begun to question his own motives, for in the imaginary dialogues of *De Contemptu Mundi (1343) he finds himself confronted with *St Augustine's censure for his attachment to Laura and to fame. Laura's death and the failure of the attempt (1347) by his friend *Cola di Rienzi to establish a republic in Rome seem to have stirred in him a deep pessimism about the state of Italy. From Rome, where he met and won the admiration of *Boccaccio, he went to Padua and then to Venice, where he advocated peace with Genoa. He returned to France (1351), but after further travels in Italy he settled at Arqua in the hills near Padua and there he was found dead with his head resting on a book. Petrarch is commonly regarded as the father of Italian humanism.

**Petrie, Sir** (William Matthew) *Flinders* (1853–1942). English archaeologist, born near Greenwich. A grandson of Matthew *Flinders, he was educated at home. He first went to Egypt in 1881, surveyed the pyramids at Giza, establishing new standards of excavation procedure. He explored the Greek city of Naukratis in the Nile delta 1884–85. In 1888 he discovered hundreds of vivid, naturalistic portraits in encaustic at Fayum and exhibited them in London. From 1890 he worked on stratification and established the principle of sequence dating from potsherds and other artefacts. He was professor of Egyptology at University College, London 1892–1933. He also excavated Abydos, Tell el Armana, the Ramesseum at Thebes and in Palestine from 1926. He retired to Jerusalem in 1933 and died there.

**Petronius** (Arbiter) (d.66). Latin author. Probably the Gaius Petronius who was ‘Arbiter elegantiae’ at the court of *Nero, directing the Emperor's lavish entertainments. His only surviving works are fragments of the *Satyræae (wrongly known as Satyricon), a prose extravaganza interspersed with verse, parodying the sentimental Greek romances of the day, among episodes relating the obscene adventures of three rascals in *Dinner with Trimalchio, a banquet in the house of a typical nouveau riche. To avoid execution by Nero, Petronius staged an elaborate suicide to the accompaniment of a witty discourse, delaying his death by continually re-bandaging the opened veins.

**Pheidippides** (5th century BCE). Greek runner. He carried the news of the Persian invasion and a request for help from Athens to Sparta (490 BCE), covering the distance of 240 km in two days. Some versions of the story name him also as the runner who fell dead after conveying news of victory from the battlefield of Marathon to Athens. This exploit is commemorated in the modern Olympic Games by the Marathon race (42.2 km).

**Phidias** (c.490–c.430 BCE). Athenian sculptor. He was the principal artist employed by *Pericles to carry out the beautification of Athens, which he had planned. The frieze of the Parthenon was probably carved from his designs, but none of his actual work survives. Representations of the two works for which he was most famous in the Ancient World, the ivory and gold statues of Athena Parthenos in Athens and of Zeus at Olympia can be seen on coins etc. Accusations of theft and sacrilege, made by the enemies of Pericles, caused Phidias to leave Athens (432).

**Philby, Kim** (Harold Adrian Russell) (1912–1988). British journalist and KGB agent, born in India. Son of (Harry) *St John* (Bridge) *Philby* (1885–1960), an explorer and writer on Arab affairs, educated at Trinity College, Cambridge, he was a journalist in Germany, Austria and Spain and joined MI6 in 1940, using membership of the foreign service as a cover, becoming First Secretary at the British Embassy in Washington 1949–51. After the defection to Moscow of *Burgess and Maclean, his friendship with Guy Burgess led to an investigation and, although nothing was proved against him, he was forced to resign,
largely because of his Communist associations in the 1930s. He went to the Middle East as an Observer correspondent until he disappeared from Beirut in January 1963. He soon surfaced in Moscow as a KGB Major General and confirmed that he had been 'the third man' in the Burgess and Maclean case.

**Philidor, François André Danican** (1726–1795). French musician and chess-player. He composed many operas, and through his *Analyse du jeu des échecs* (1749) he became one of the most famous names in the early history of chess. His 'Philidor's Defence' is an example of his tactical mastery of the game.

**Philip, St** (Philippos in Greek: ‘lover of horses’) (d.c.80 CE). Christian apostle, born in Bethsaida. He may have been a follower of *John the Baptist*. He traditionally preached in Phrygia, Scythia and (possibly) Ethiopia, and is said to have died in Hierapolis, now in Turkey.

**Philip** (Philippe: known as 'the Good') (1396–1467). Duke of Burgundy 1419–67. To avenge the murder of his father, John the Fearless, by adherents of the Dauphin (afterwards *Charles VII*), he negotiated the Treaty of Troyes (1420) with the English king *Henry V*. This treaty disinherited the Dauphin in favour of any child that Henry might have by Princess Catherine of France. Philip therefore supported the cause of *Henry VI* in the wars in which *Joan of Arc* played a notable part, but he was reconciled with Charles in 1435. He employed Jan van Eyck from 1425. Most of his energies were devoted to the extension of his inheritance in the Netherlands, almost all of which he brought under his control, suppressing a rebellion (1454) with great bloodshed. He founded (1430) the Order of the Golden Fleece and made his court one of the most magnificent of medieval Europe. He died in Bruges.

**Philipp** (Philippus in Greek: 'Phileas') (382–336 BCE). King of Macedon 359–336 BCE. Father of *Alexander the Great*, he was chosen to take the place of his nephew Amyntas, for whom he had acted as regent from 359. His kingdom when he began to rule was poor and backward, but when he died he had made it by war and diplomacy the dominant power in Greece and had created an army with which his son achieved his great victories. An early success (356) which made the others possible was his occupation of Grenides (Philippi) to gain control of the vital gold and silver deposits. Another stage was his occupation of the islands in the Ionian Sea which made possible the establishment of the League of Corinth, a confederacy in which every state but Sparta had votes except Sparta lay at his mercy. He now showed his statesmanship by creating the League of Corinth, a confederacy in which every state but Sparta had votes to accord with its military strength, Philip himself being its supreme head. Now all was ready for the trial of strength with Persia, which Philip had long planned, but as the first Macedonian troops moved into Asia Minor he was assassinated by Pausanias. His tomb and remains were found in 1977 at Vergina.

IV and King John. By his success Philip established the strength and prestige of the French monarchy for a century and more.

Philip (Felipe) II (1527–1598). King of Spain 1556–98. He succeeded on the abdication of his father, Carlos I (the emperor *Charles V), and acquired the whole of the western part of the Habsburg heritage, Spain and Spanish America, the Low Countries, Naples and Milan. He conquered Portugal (1580), but his hope of adding England peacefully to his dominions ended when his second wife, *Mary Queen of England, failed to provide him with an heir. With immense industry but little wisdom the proud and lonely king ruled his vast inheritance. Moreover he considered himself the military arm of the Counter Reformation, destined to bring all Europe back into the Roman Catholic fold, though he was frequently in conflict with the papacy on political issues. He thus provoked a long struggle in the Netherlands and so deprived himself of much of the trade and wealth of Europe's richest land. Even before the defeat of the Armada (1588) the English privateers had sapped his overseas trade and naval strength. In addition he carried on a long dynastic war with France and felt it his duty to hold the Turks at bay. Meanwhile at home the over-centralised governmental machine creaked ominously, agriculture and industry were ruined by the inflationary flow of gold from Mexico and Peru, the Inquisition produced, indeed, an enforced unity, but the country lost much of its vigour through the imprisonment or expulsion of many of the most industrious citizens (especially those of Moorish descent). Philip lived aloof in the monastic palace of the Escorial. He was suspected (unfairly) of murdering his eldest son, the unstable Don *Carlos. Although he married four times, only one son survived to succeed him: Philip III (1578–1621). Pious and benevolent in his private life, he was indifferent to public affairs which he left to his favourite, the Duke of Lerma. Under Philip III Spanish culture was at its height.

Parker, G., Philip II. 1979.

Philip IV (known as ‘the Fair’) (1268–1314). King of France 1285–1314. A strong ruler, he was determined to extend the royal power. This led him into quarrels with Edward I of England, the Flemish burghers, his own nobles and above all with Pope *Boniface VIII, this last settled only by the pope's death, when Philip secured the election of a Frenchman, Clement V, and the removal of the papacy from Rome to Avignon. He further asserted his strength by forcing the pope to disband the Order of the Templars. The monarchy's power was also increased by developing centralised institutions, e.g. the Parlement of Paris.

Philip IV (1605–1665). King of Spain 1621–65 and Portugal 1621–40. Conscientious but ineffectual, he was dominated (1621–43) by his minister *Olivares, whose unsuccessful wars impoverished Spain, losing Portugal and the Netherlands. Philip is best remembered as the subject of 10 surviving portraits by *Velázquez.

Philip V (1683–1746). First Bourbon King of Spain 1700–24, 1724–46. A grandson of *Louis XIV of France, he was named by the childless *Charles II of Spain as his successor. By permitting Philip to accept, Louis provoked the War of the Spanish Succession. By the Treaty of Utrecht (1713) Spain ceded the Spanish Netherlands to Austria and some possessions, including Gibraltar, to Britain, but Philip was able to retain his Spanish throne. He was much under the influence of two women: the Princesse des Ursins, his first wife's maid of honour, and his second wife, Isabella (Elisabeth) Farnese, whose ambitions for her children moulded the foreign policy of the reign. His acute melancholia was soothed each night by the singing of *Farinelli.

Philip (Felipe) VI. (Felipe Juan Pablo Alfonso de Todos los Santos de Borbón y de Grecia) (1968–). King of Spain 2014–. He succeeded on the abdication of his father *Juan Carlos I.

Philip, Prince see Edinburgh, Duke of

Philip Neri, St see Neri, St Philip

Philippa of Hainaut (1314?–1369). English queen consort 1327–69. Daughter of William, Count of Hainaut and Holland, she married her second cousin *Edward III (1328) and bore seven sons and five daughters. It was her pleas that resulted in the sparing of six prominent burghers of Calais, whose lives Edward, incensed by his year-long siege, had demanded as his price for not sacking the city. She appointed the chronicler *Froissart as her secretary and is buried at Windsor.

Philsps, Anton Frederik (1874–1951). Dutch industrialist. Son of a banker, with his elder brother Gerard he founded a factory at Eindhoven in 1892 for the manufacture of electric light bulbs. The company became the largest European manufacturer of radios and television, with subsidiaries throughout the world. The Philips brothers were young cousins of *Marx.

Phillip, Arthur (1738–1814). English sailor and administrator, born in London. Son of a German language teacher (possibly Jewish) from Frankfurt, he trained as a merchant seaman, joined the Royal Navy during the Seven Years War, but saw little active service. He was a skilled surveyor and modest property developer. Seconded to the Portuguese navy 1774–78, he served in Brazil. The reasons for his appointment as first governor of the penal settlement in New South Wales are unclear, but he showed firmness and courage in his period in office 1788–92. In January 1788 he chose the site on Port Jackson where Sydney was to be built, clearly foresaw the colony's future greatness,
and was committed to Enlightenment principles. In February 1788 he established a penal settlement on Norfolk Island. He faced tremendous difficulties, the risk of famine, insubordinate officers and corrupt contractors. Sympathetic to Aborigines, he lacked enthusiasm for the death penalty. After a long period of illness, he returned to active naval service in the French wars, retired to Bath in 1805 and was promoted to Admiral of the Blue. Geoffrey Robertson, QC, asserts (2007) that his remains have been lost.

**Phillipps, Sir Thomas, 1st Baronet** (1792–1872), English bibliomaniac, born in Manchester. He inherited a substantial fortune (textile manufacturing and land) but devoted himself to amassing what was probably the greatest single collection of 40,000 books and 60,000 manuscripts, driving his family to distraction in the process.

**Philo Judaeus** (c.20 BCE–c.45 CE). Jewish philosopher, born in Alexandria. He made a wide study of Greek philosophy and literature, but remained a Jew and accepted the Old Testament without reservations. He conceived his task as the integration of Greek philosophy, based on reason, with Jewish religion, based on revelation and faith. The logos (God's divine message) he regarded as supreme, but he recognised that it can reach mankind through the lips of Greek philosophers such as Plato. This thought was taken up by the neoplatonists, both Christian and pagan, and is at the root of nearly all medieval philosophy.

Sandmel, S., Philo's Place in Judaism. 1956.

‘Phiz’ see Browne, Hablot K.

**Phryne** (4th century BCE). Greek courtesan. Traditionally, she was the model for a picture by Apelles of Aphrodis (Venus) rising from the waves and for the * Aphrodite of Cnidos*, a famous statue by *Praxiteles. Accused of profaning the Eleusinian mysteries, she was acquitted after her robe was cast aside to reveal to the judges her naked beauty.

**Phyfe, Duncan** (originally Fife) (1768–1854). American furniture designer, born in Scotland. He became a cabinet maker in New York, employing more than 100 craft workers, and designed in the Neoclassical and Empire style.

Piaget, Jean (1896–1980). Swiss psychologist. Educated in Neuchâtel, Zürich and Paris, he was professor of child psychology at Geneva 1929–71 and wrote over 50 books, many on the intellectual developmental stages in children, such as concept formation, classification and ordering. He argued that classroom teaching is inappropriate when it attempts to impose adult reasoning on children who are not yet genetically programmed to receive it. He was a member of UNESCO’s Executive Board 1950–54.

**Piano, Renzo** (1937– ). Italian architect, born in Genoa. Educated in Milan, he was joint winner with Richard *Rogers of the competition to design the Pompidou Centre Paris (1971). Other works include the Menil Art Gallery, Houston; Bercy commercial centre, Paris; Zentrum Paul Klee, Berne; and Auditorium Parco della Musica, Rome.

**Piazzolla, Ástor Pantaleon** (1921–1992). Argentinian composer. Son of Italian migrants, his father became a hairdresser in New York. He mastered the bandoneon, studied in Paris with Nadia *Boulanger and created ‘tango neuvre’, a fusion of tango, jazz and the classics. He composed 46 film scores and a total of about 3000 works, 500 of them recorded.

**Picasso, Pablo Ruiz** (1881–1973). Spanish painter and sculptor, born in Málaga. Son of a Castilian artist and teacher, *José Ruiz Blanco*, and an Andalusian mother Maria Picasso y Lopez, his family moved to Corunna in northwest Spain in 1891. Pablo studied with his father and in 1895 painted his first important oils, in the style of the old masters. In Barcelona he attended the School of Fine Arts (1895–97), then the San Fernando Academy in Madrid (1897–99). He held his first one-man exhibition in Barcelona (Feb. 1900), showed paintings in Paris (June 1901) and the powerful large blue *Self-Portrait dates from the end of that year. He moved to and from Spain, settling in Paris in 1904 and remained there for 44 years, apart from a short period in Holland (1905). The works of *Cézanne and *Toulouse-Lautrec were among the strongest influences on him. In his ‘Blue Period’ (1901–05), the colour provided symbolic background for anguished pictures of the poor and lonely. The poet *Apollinaire published the first book on Picasso in 1905. The Lady with a Fan (1905) was a transitional work. His ‘Rose Period’ (1905–07) was notable for many paintings of circus life, e.g. *Family of Saltimbanques* (1905) but included the striking *Portrait of Gertrude Stein* (1906) and young nudes, strangely vulnerable against their rose and terracotta backgrounds. An abrupt change of style (1907) derived from a study of African, Iberian and Pacific Island art in museums, demonstrates the forcefulness that a work of art can gain from simplification and distortion. ‘Cubism’, developed by Picasso and Georges *Braque, began in 1907 with *Les Demoiselles d'Avignon*, and Picasso continued his experiments until about 1925. The impact of photography and film meant
that painters could abandon static representation, interpreting ‘reality’ in a new way, seeing objects from every geometric position, as with sculpture. His shapes, now in subdued greys and browns, were not entirely abstract, retaining some relationship to actual objects. Picasso’s art usually reflected his private life and his extraordinary sexual energy. He lived with Fernande Olivier 1905–12 and with Marcelle (‘Eva’) Humbert (d.1915) from 1911. The impact of World War I revived his interest in colour and decoration. He designed Parade (1917), The Three Cornered Hat (1919) and Pulcinella (1920) for Diaghilev’s Ballets Russes. In 1918 he married the Russian dancer Olga Koklova (d.1955). A son Paulo was born in 1921 and his Classical period (1920–25), influenced by Ingres, reflects a rare serenity e.g. Mother and Child and Woman Bathers. Then the women in his paintings become huge and shapeless until Marie-Thérèse Walter entered his life in 1927, followed by Dora Maar in 1936. Both inspired some of his most passionate paintings. He turned to sculpture and his Woman with a Vase (1933), a masterpiece, is on his grave. Political turmoil in the 1930s drew Picasso towards Surrealism. He was a strong (but absentee) supporter of the Republicans during the Spanish Civil War and was made Honorary Director of the Prado Museum, Madrid 1936–39. His enormous tortured work Guernica (1937), denouncing German bombing of a Basque town, has the power of Goya. He lived in Paris undisturbed during the German occupation, joining the Communist Party after liberation in 1944, although the CP considered his work decadent, contrary to Stalin’s doctrine of ‘socialist realism’. He lived 1943–53 with the painter Françoise Gilot (1921– ), and had two children by her. He moved to the south of France in 1947, first to Vallauris, then to Cannes, Vauvenargues and to Mougins (where he died). He spent much of his creative energy from the 1950s on lithographs, ceramics and sculptures, especially of animals (bulls and bullfights), birds (notably the ‘Dove of Peace’) and flowers. He wrote the Symbolist play Desire Caught by the Tail (1952) and some poetry. In August–December 1957 he painted 44 studies of Velázquez’s Maids of Honour (Las Meninas) and completed a huge (unsuccessful) mural The Fall of Icarus for UNESCO. He lived with Jacqueline Roque (1927–1986) from 1954, marrying her in 1961: in 1962 he produced 70 Jacqueries – paintings; drawings; engravings and ceramic tiles. He was buried at his home at the Château de Vauvenargues, near Aix. Picasso claimed to be the most important artist since Michelangelo – and for sheer originality, range and influence, few have exceeded him. Titian, Rembrandt, Velázquez, Goya and El Greco climbed higher peaks, but they worked within an established tradition; Picasso created several new traditions. With an unequalled production of about 20,000 works, Picasso was certainly the greatest artist of the 20th century. He asserted that painting ‘isn’t an aesthetic operation. It’s a form of magic designed as a mediator between this strange, hostile world and us, a way of seizing power by giving form to our terrors as well as our desires’. In 1971 the Louvre held a retrospective Picasso exhibition – the first for a living artist. Picasso made the world look at reality in a new way but he remains intensely controversial. He was also a great collector. Picasso Museums were established in Antibes (1947), Barcelona (1963) and Paris (1985). The literature on him is enormous.

His daughter, Paloma Picasso (1949– ), a couturier, designed jewellery for Yves Saint Laurent, ceramics and pottery for Villeroy and Boch, and produced perfume under her own name.

Picard, Auguste (1884–1962). Swiss physicist. Best known as a pioneer explorer of the stratosphere and the deep oceans, he was professor of physics at the Free University of Brussels (1922–54) and a close associate of Einstein. With his twin brother Jean-Felix (1884–1963), a pioneer in studying cosmic radiation, he took up ballooning and finally (1932), in an airtight gondola designed by himself, reached a height of 17,766 m (54,150 ft). After World War II he turned to investigating the ocean depths and designed a special steel diving capsule or ‘bathyscaphe’. With his son Jacques Piccard (1922–2008) he descended to a record depth of 3391 m (10,335 ft) off the island of Capri (1953) and Jacques, with a US naval officer, reached a depth of 14,401 m (37,800 ft) off the Pacific island of Guam (1960). Jean’s son Bertrand Piccard (1958– ) a psychiatrist, completed, with Brian Jones, the first balloon circumnavigation in the Breitling Orbiter III (March 1999).

Pichégru, Charles (1761–1804). French soldier. He gained rapid promotion in the revolutionary armies. In 1793 as Commander-in-Chief of the Rhine army he thrust back the Austrians and overran the Palatinate. In the following year he was given the command in Flanders and in January 1795 entered Amsterdam. After this triumph he returned to the Rhine, but was soon in active correspondence with the Bourbons. Arrested in Paris (1797), he was sentenced to banishment in Cayenne but managed to escape. He returned to France (1804) with another conspirator against the life of Napoleon but was arrested and shortly after found strangled in prison.

Pickford, Mary (Gladyss Smith) (1893–1979). American film star, born in Canada. Having first appeared on the stage at the age of five, she started to act in films in 1909 and through her childlike sentimental parts soon became known as the ‘world’s sweetheart’. With her second husband, Douglas Fairbanks, she was one of the founders (1919) of the cinema company United Artists. Among the most
his outstanding paintings are as one of the supreme artists of his time. Among work, and only in the 20th century was he recognised. *Manet and Henry *Layard revived interest in his *Vermeer, Piero was a forgotten artist until Edouard *Montefeltro, and his wife Battista (Uffizi, Florence). Clark, K.M., Piero della Francesca. 1951; Pope-Hennessy, J., *The Piero della Francesca Trail. 1991.

Piero de Montreuil (d.1267). French architect. He worked for *Louis IX and built the chapel at the palace at St Germain-en-Laye (1235–38). His masterpiece was Sainte Chapelle in Paris, designed in the Rayonnant style and consecrated in 1248.

Pigott, Richard (1828–1889). Irish journalist. He forged documents purporting to implicate *Parnell in the murders (1882) of Lord Frederick Cavendish and T. H. Burke (the Irish chief secretary and his Undersecretary) in Phoenix Park, Dublin. The publication of these documents in *The Times (April 1887) caused a political sensation which was not abated until a commission of inquiry (1888–89) proved them to be forged. Pigott, having confessed, escaped to Madrid where he shot himself.

Pilate, Pontius (d.c.55 CE). Roman official. Procurator of Judaea and Samaria 26–36, he sentenced *Jesus to be crucified and was recalled to Rome to face charges of venality and brutality. He was ignorant of Jewish character and beliefs. His later career is unknown but *Eusebius wrote that he committed suicide. Among many legends is one that he became a Christian; his wife Claudia Procula, said to have been converted, escaped to Spain to become a saint in the Orthodox Church. He is remembered for his question ‘What is truth?’ put to Jesus at his trial.

Pilsudski, Józef Klemens (1867–1935). Polish soldier and politician, born in Zulów, then part of Russia, now in Lithuania. Educated in Vilnius, he began studying medicine in Kharkov. He spent the first part of his life in two overlapping causes, revolutionary socialism and freeing what was then Russian Poland from tsarist rule. Sent to Siberia (1887–92), on release he founded the Polish Socialist party. Arrested again (1900), after pretending to be insane he escaped abroad. He soon returned and from 1907 began to create units of Polish riflemen on Austrian territory. With these he fought for Austria against Russia in World War I but, finding himself exploited for German aims, disbanded his forces and was imprisoned (1917) at Magdeburg. On the Allied victory, he became Chief of State (November 1918) of the newly proclaimed Poland and played a prominent role in the newly proclaimed Poland and played a prominent

Dictionary of World Biography

673
part in the battles, political as well as military, by which Poland's frontiers were determined. He was appointed 'First Marshal of Poland' in March 1920 but refused the presidency in 1922 and 1926. He lived in retirement until, in May 1926, he organised a coup d'état after which he exercised almost dictatorial powers until his death, in a variety of roles: Prime Minister 1926–28, 1930, Inspector General of the Armed Forces 1926–35 and Minister of Military Affairs 1926–35. He became increasingly critical of democracy but opposed totalitarianism and rejected anti-Semitism.

Pinckney, Charles Cotesworth (1746–1825). American soldier and politician. Educated in England, he practised as a lawyer in Charleston, S. Carolina, and was active in the first Continental Congress. This precipitated the War of Independence, during which he was ADC to Washington and rose to be a brigadier general. At the Constitutional Convention (1787) he introduced the clause forbidding religious tests. He was an unsuccessful Federalist candidate for the presidency, losing to Jefferson in 1804 and Madison in 1808.

Pindar (c.522–c.440 BCE). Greek lyric poet, born near Thebes. He wrote numerous ceremonial odes, hymns, convivial songs etc. for rulers and cities throughout Greece. From 476 to 474 he was at the court of Hieron, King of Syracuse and other rulers in Sicily. Of the 17 book rolls of his poetry only four survive almost entire, i.e. those celebrating victories in the Olympic, Nemean, Pythian and Isthmian games. Into these he introduced myths and other apparent irrelevancies which give colour and variety to what might seem a monotonous theme, though to the Greeks themselves the games were religious festivals and victory symbolised divine favour as well as conferring prestige on the athletes and their cities. The poems are choral odes to be accompanied by dancing, but owing to their early date and linguistic problems they are hard to translate and their merits difficult to assess. The Greeks, however, counted Pindar among their greatest poets. Dryden's Alexander's Feast is an imitation of a Pindaric ode.

Pinel, Philippe (1745–1826). French physician, born in Languedoc. He qualified at Toulouse and went to Paris (1778), in 1787 he began to write about insanity, of which he had made a firsthand study. Both at the Bicêtre, of which he became head in 1793, and later at the Salpêtrière he introduced more humane treatment of the insane (e.g. removal of chains by which they were restrained) and as far as possible substituted empirical and psychological treatment for the then customary drugs, bleeding etc. He paved the way for future improvements by establishing the custom of keeping case histories and records for research.

Pinkerton, Allan (1819–1884). American detective, born in Scotland. He emigrated to the US (1842) and founded in Chicago the private detective agency which became the best known in the world. During the American Civil War he did secret service work and in 1861 frustrated a plot against Lincoln's life. The agency was continued and enlarged by his sons.

Pinochet Ugarte, Augusto (1915–2006). Chilean general. As army Commander-in-Chief, he led the coup which deposed President Salvador Allende (September 1973), headed a provisional government 1973–74, and was President of Chile 1974–90. He remained Commander-in-Chief until 1998, then became a senator for life. In 1998 he was arrested in London, after surgery, when Spain demanded his extradition. He returned to Chile in March 2000 after the Blair Government made a controversial decision to release him on the grounds of his age and incapacity. The Chilean courts then removed his immunity from prosecution. His supporters insisted that he had saved the Chilean economy; his opponents charged that he was brutal and corrupt.

Piper, John Egerton Christmas (1903–1992). English painter. His vivid and effective use of bold, vigorous draughtsmanship and dramatic colour contrasts was seen at its best in architectural themes (e.g. the pictures of bombed buildings for which he became known in World War II). He designed stage sets, engraved glass and tapestries, e.g. in Coventry cathedral. Piper also wrote poetry and architectural and topographical guides. He was awarded a CH in 1972.

Pirandello, Luigi (1867–1936). Italian writer, born in Sicily. His novels include *Si Gira* (1916) which introduces the reader to film stars and photographers. During World War I he began to write plays of a slightly surrealist nature: among the best known of about 40 are *Six Characters in Search of an Author* (1921), in which a rehearsal stage is invaded by a group of characters seeking to take part in a play,
and Henry IV (1922), where the theme of madness is treated in an original way. He won the Nobel Prize for Literature (1934).

Piranesi, Giambattista (1720–1778). Italian draftsman and etcher. His powerful series Carceri d’invenzione (‘Imaginary Prisons’, 1745) were precursors of Romantic art and his Roman scenes were conceived on the grand scale.

Pisano, Andrea (c.1290–1348). Italian architect, sculptor and goldsmith, born near Pisa. Apparently unrelated to Nicola and Giovanni *Pisano, he produced two doors for the Baptistery at Florence (*Ghiberti) and worked on the cathedral's campanile with *Giotto.

Pisano, Nicola (c.1225–c.1278). Italian sculptor. Founder of the Pisan school, he had made a study of classical sculpture, and though he applied the knowledge that he had gained to essentially Gothic structures he has a claim to be regarded as the first Renaissance sculptor. For example, on the pulpit of the baptistry at Pisa, for the characteristically Gothic line of figures against a flat background he substitutes groups, each member of which is expressively natural in pose, dress and expression and so carved as to give an impression of depth. Among the best known of his other works are the pulpit at Siena Cathedral and the fountain in the market place, Perugia. In much of his work Nicola was helped by his son Giovanni Pisano (c.1250–1330) who won an independent reputation both as architect and as sculptor and was praised by *Michelangelo.

Pissarro, Camille (1830–1903). French painter, born in the West Indies. His early pictures show the influence of *Corot, but after meeting *Manet (1866) he worked closely with the Impressionist group, of which he was the oldest member. For a time (1884–88) he adopted *Seurat's pointillist techniques. In the last years of his life he painted figure studies of peasants etc. and pictures of warmly sunlit Paris streets.

Pitman, Sir Isaac (1813–1879). English inventor. His shorthand system based on phonetic principles gained worldwide popularity. He also devised a simplified spelling of English but he won little support for this.

Pitt, William, 1st Earl of Chatham (known as 'Pitt the Elder' and 'the Great Commoner') (1708–1778). English Whig politician, born in Westminster. Grandson of 'Diamond Pitt' who had made a fortune in India, he inherited little, was educated at Eton and, briefly, at Oxford and Utrecht. After service in the King's Own Horse Regiment 1731–36, he became a Whig MP 1735–66 (originally in the rotten borough of Old Sarum), earning the enmity of *George II by serving as Groom of the Bedchamber 1737–45 to *Frederick, Prince of Wales. As Paymaster General of the Forces 1746–55, he created a precedent by refusing bribes. He married (1754), Hester Grenville, sister of Earl Temple and George *Grenville, and had a strong network of family connections. He was Secretary of State for the South (in effect, Minister for War) December 1756–April 1757 under the nominal leadership of the Duke of *Devonshire and July 1757–October 1761 under the Duke of *Newcastle. He was an expansionist, or Big Englander, who thought that Britain should be actively involved in European affairs, in sharp contrast to *Walpole's isolationist policy. He proved an outstanding leader during the Seven Years' War and was the virtual founder of the British Empire, the colonial system and ensuring primacy in sea power. Under his direction, *Clive established British supremacy in India, *Amherst and *Wolfe defeated the French in Canada and *Rodney dominated the West Indies. Claiming to have 'conquered America on the plains of Germany', Pitt retired in 1761 on the grounds of health (he suffered acutely from gout and manic depression, which he called 'attacks of gout in the head'), securing a peerage and a £3,000 pension for his wife. He opposed the Treaty of Paris (1763) as too favourable to France. In 1765 he attacked *Grenville's Government over the Stamp Act, a measure that imposed taxation without representation on the American colonies. He returned to office under the Duke of *Grafton as Lord Privy Seal July 1766–October 1768, but de facto Prime Minister, until acute depression forced his withdrawal early in 1767. He had made the grave mistake of going to the House of Lords (1766) as Earl of Chatham, at which, as "Chesterfield observed, 'his enemies rejoiced and his friends were stupefied', since his power base was in the Commons and the City of London. In 1768 he resigned when Charles "Townshend imposed new taxes on the Americans. When the American War of Independence began, Chatham was in an untenable position: opposed both to British military intervention and to withdrawal. He collapsed after his last speech in the Lords, denouncing government weakness in America, died at Hayes five weeks later and was buried in Westminster Abbey. A loof, aggressive, passionate, wayward and anti-social, Pitt had allies but no friends and was not an effective party leader or manager. His oratory was powerful and his mood-swings alarming.

Plumb, J. H., Chatham. 1965.
a Member of Parliament 1781–1806. He attached himself to Lord *Shelburne, an oppositionist who had supported the elder Pitt. After Lord *North fell in March 1782, there were three ministries in the following 21 months: *Rockingham, who soon died, Shelburne, who appointed Pitt as Chancellor of the Exchequer (July 1782–Apr. 1783), and *Portland (essentially a *Fox-North coalition). *George III appointed Pitt as First Lord of the Treasury, in effect Prime Minister, although the title was not then used, and he served in that office and also as Chancellor of the Exchequer December 1783–March 1801, May 1804–January 1806. He disregarded defeats in the Commons and held on until winning a majority in the general election of 1784. Notably efficient in public finance, he was a reformer in his first years, bringing India into shared control between the East India Company and the government (1784), admitting Roman Catholics to the bar and the army and attempting to achieve parliamentary reform. After the French Revolution and especially after the reign of terror, Pitt became more conservative, reflecting fear of change in society. He was a strong administrator, an effective manager in the House of Commons and a persuasive orator. He emphasised national security and sometimes acted ruthlessly to crush political dissent. He abandoned the cause of parliamentary reform and failed to moderate harsh penal and game laws. In 1800 he secured the passage of the Act that incorporated Ireland in the United Kingdom and dissolved its parliament. Pitt was prepared to legislate for Catholic emancipation to enable Irish MPs to represent Catholic voters in Westminster, but the king objected so strongly that he felt obliged to resign. *Addington proved to be embarrassingly inept as a successor. In 1803 war was resumed and a year later Pitt returned, organising the Third Coalition against *Napoléon. He died 20 months later at the age of 46, his health worsened by his heavy drinking. In his last speech, at the Guildhall, he said: 'England is not to be saved by a single man: England has saved herself by her exertions and will, I trust, save Europe by her example.' Pitt had an extraordinarily narrow range of experience. He never married, had few friends, never travelled far from London apart from a few weeks in France (and knew nothing of Scotland and Ireland), read little and was ignorant of art and science. He left debts of £40,000 (£3.1 million in 2016 values), which were paid off by the Parliament.

**Pitt-Rivers, Augustus Henry Lane-Fox** (1827–1900). British archaeologist and army officer. He began his career in the army in 1845 and rose to Lieutenant General. In 1880 he succeeded to the Dorset estate of his cousin, Lord Rivers, adopting his surname Pitt-Rivers, and pioneered there scientific, properly recorded archaeological digs. His work in Dorset is preserved in the Pitt-Rivers museum at Farnham. His personal ethnological and archaeological collection formed the Pitt-Rivers Museum at Oxford University. He was also the first Inspector of Ancient Monuments (1882). He wrote *Excavations in Cranborne Chase* (1887–98).

**Pius II** (Enea Silvio de Piccolomini) (1405–1464). Pope 1458–64. Born near Siena, of noble parentage, he was poet laureate at the court of Friedrich III, worked as a diplomat, wrote histories, a play and a novel and generously patronised artists and writers. He became Bishop of Siena 1450–58. As Pope, he strove for European unity against the Turks and died at Ancona, trying to organise a crusade.

**Pius VI** (Giovanni Angelo Braschi) (1717–1799). Pope 1775–99. Born in Emilia, of aristocratic family, he had no pastoral experience, worked in the Papal Curia, became secretary to *Benedict XIV and was created cardinal in 1773. Elected after a four month conclave, his long pontificate was a disaster. Vain, extravagant and inclined to nepotism, he completed St Peter's Basilica and patronised the arts. In 1782 he visited Vienna in a futile attempt to persuade *Joseph II to moderate his anti-clerical policies. He condemned the French Revolution for legislating State control of the clergy and Church property. In 1798 Napoléon's troops occupied Rome, and Pius died in Valence (France) as a prisoner.

**Pius VII** (Luigi Barnaba Chiaramonti) (1742–1823). Pope 1800–23. A Benedictine, he became a professor of theology and Bishop of Imola 1785–1800. In 1797 he expressed some sympathy for political change. He had the extraordinarily difficult task of facing the consequences of the French Revolution and *Napoléon's rise to power without offending Austria, the papacy's firmest ally. His first great achievement, assisted by *Consalvi, his Secretary of State, was the Concordat (180l) with France, whereby he recognised the Republic and Napoléon's rule in return for the withdrawal of all anti-Catholic laws. In 1804 he went to Paris to anoint Napoléon at his coronation. He refused, however, to take part in the French Emperor's measures against England and in consequence the papal states were invaded and the Pope held in captivity (1809–14). His reign is also remembered for his restoration (1814) of the Society of Jesus (Jesuits).

**Pius IX** (Giovanni Mastai-Ferretti) (1792–1878). Pope 1846–78. Son of a count, ordained in 1819, he served in Chile 1823–25 and was Bishop of Imola 1832–46. On his election as Pope, he began as a liberal reformer of the constitution and government of the papal territories, but his failure (1848) to head a national movement against Austria's influence in Italy
caused an uprising in Rome, the murder of several members of the administration, the flight of the Pope to Neapolitan territory and the establishment of a republic under *Garibaldi and *Mazzini. Restored by a French army (1849) and his secular power maintained by a French garrison, the reformer became a conservative, his main preoccupation being to retain his political status. In the 'Syllabus of Errors' (1864) he denounced 80 elements relating to 'progress, liberalism and modern civilisation', including socialism, democracy, science and freedom of conscience. During the Franco-Prussian War (1870) the French withdrew and Rome became the capital of unified Italy. Pius responded by refusing to recognise these events and henceforth remained in self-imposed imprisonment in the Vatican an example followed by his successors until *Pius XI concluded the Lateran Treaty with the Italian state (1929). During his papacy – the longest in history – the doctrine of the Immaculate Conception was promulgated (1856), and at the Vatican Council, which ran for seven months 1869–70, the dogma of Papal Infallibility in matters of faith and morals was defined. Pius IX was amiable, witty and of great charm, with no personal enemies. He was an epileptic. His beatification by *John Paul II in 2000 was controversial.

**Pius X, St** (Giuseppe Melchiorre Sarto) (1835–1914). Pope 1903–14. Born in Riese, he came from a very poor family and had spent his whole previous career in diocesan work, so his talents were essentially practical. He was cardinal-patriarch of Venice from 1892 until his election to the papacy. A strong conservative, deeply opposed to 'modernism', he codified the canon law, reorganised the papal administration and rearranged the missal and the breviary. His refusal to accept secular control over the French Church led to a 20–year breach between the papacy and the French State. Much beloved for his simplicity and holiness, he was canonised in 1954.

**Pius XI** (Achille Ambrogio Damiano Ratti) (1857–1939). Pope 1922–39. He won three doctorates at the Gregorian University, was a priest in 1899 and joined the papal secretariat in 1902. He was Papal Nuncio to Bavaria during World War I and to Germany 1925–31 until he became *Pius XI's Secretary of State: he travelled widely, including South America and the US and spoke eight languages. Cardinal Pacelli thus had considerable diplomatic experience when, on the eve of World War II, he was elected Pope in the shortest conclave of modern times. He was the first Roman pope since 1730. His main objective was to ensure that the Roman Catholic Church survived with its independence and strength unimpaired, and he has been attacked for not explicitly denouncing Nazi atrocities, although individual Jews were assisted. In 1950 he proclaimed the doctrine of the bodily Assumption of the Virgin Mary – the first exercise of papal infallibility since 1870.

**Pizarro, Francisco** (c.1475–1541). Spanish (Castilian) conquistador, born in Trujillo, Extremadura. Illegitimate and illiterate, he became a soldier and went to Darien (Panama) and in 1524 and 1526–27 made his first attempts, with Diego de *Almagro, to conquer Peru. This failed but after returning to Spain and receiving authorisation and the title of Governor, he again set out (1531), from Panama, with his brothers Hernando, Juan and Gonzalo and a band of 62 horsemen and 106 infantry to conquer the Inca empire (*Tawantinsuyu – 'Land of the Four Quarters'), landing at Tumbes in May 1532. Luck was with him – the Incas were fighting a savage civil war and the use of armour, guns, steel swords, cannon and horses gave the Spaniards a great advantage. So did introduced smallpox. In Cajamarca (Nov. 1532), he seized *Atahualpa, the Inca ruler (whom he later had murdered), and, with the heart of the resistance broken, spent the next nine years in overrunning the country and amassing a vast treasure from the Inca hoards. He founded Lima in 1535. A dispute with Almagro, his fellow conquistador, mainly concerned with the ownership of Cuzco, proved disastrous. Almagro occupied the city (1537) but was defeated by Hernando Pizarro, tried and strangled. In revenge Francisco Pizarro was attacked and killed in his own house by some of Almagro's men. He and the conquistadors wiped out the whole Inca nobility and virtually destroyed every trace of Inca culture. He was buried in Lima.

Plato, Francis (1771–1854). English reformer, born in London. Son of a bailiff, he achieved a remarkable feat of self-education and became a successful master tailor, while sponsoring practical causes such as the monitory schools associated with the name of Joseph *Lancaster, and birth control. He retired from business in 1817 but the library behind his old shop in Charing Cross remained a centre for his political activities, in which he was associated with Jeremy *Bentham and other reformers. Although not an MP he became a master of parliamentary lobbying, his greatest achievement being to secure the repeal (1824) of the Combination Acts which made trade unions illegal. He was a leading figure in the agitation that led to the Reform Act (1832) and he helped William Lovett to draw up the People’s Charter in 1838.

Thale, M., Francis Place. 1972.

Planck, Max Ernst Ludwig (1858–1947). German mathematical physicist. Son of a professor at Kiel, at Berlin University he attended the lectures of *Kirchhoff, whom he eventually succeeded as professor (1889). Planck originated (1900) the quantum theory stating that energy, like matter, is not continuous in nature but is radiated and absorbed in small portions called quanta. Planck won the Nobel Prize for Physics (1918), and in 1930 became President of the Kaiser Wilhelm Institute of Berlin. His son Edwin was executed in 1945 for his involvement in the plot against *Hitler.

Planck, M., Scientific Autobiography and Other Papers. 1949.

Plantagenet. English dynasty sprung from Geoffrey, Count of Anjou, whose badge was a sprig of broom (planta genista). The first English Plantagenet king was *Henry II, Geoffrey’s son by *Matilda, daughter of *Henry I: the last of the line was *Richard III.

Platonic. Almost all Plato’s work seems to have survived: most is in the shape of dialogue, a method of discussion known as dialectic. Socrates, the venerated teacher of his youth, is nearly always a participant. It is not clear therefore how much of the thought is that of the historic Socrates and how much Plato’s own. The Socratic method was not to propound a philosophic scheme but, by exposing a pupil’s statements to a searching cross-examination, to achieve precise definitions and so enable him to reach towards the truth for himself. Thus an approach to a general answer to such questions as ‘What is beauty?’ ‘What is justice?’ or ‘What is knowledge?’ is made by a series of questions leading to the elucidation of specific points.

In the Republic, a discussion about the ideal state, a conclusion is reached favouring rule by a philosopher-king. Theories about the universe ascribed to *Pythagoras are expounded in the Timaeus, the dialogue which was regarded as essentially Platonic by those neoplatonists who helped to give Christian theology its Platonic character. The influence of Pythagoras is also apparent in the Symposium, from a literal point of view one of Plato’s most attractive works. Here Socrates, *Aristophanes, *Alcibiades and others discuss the nature of love, the real background and real people here, as so often in Plato adding to the charm and naturalness of the dialogue. Perhaps the most important of Plato’s own contributions to philosophic thought is his theory of ‘ideas’ (or more literally ‘forms’). According to this theory the ‘idea’ of a thing is the unchanging and fundamental reality behind the superficial and mutable concepts produced by imagination or the senses. Highest of such ‘ideas’ is ‘the good’, knowledge of which is supreme virtue. But, since such complete knowledge is all but unattainable, for practical purposes man must act in

Plato (c.427–347 BCE). Greek philosopher, born in Athens. Of noble descent, he almost certainly studied under *Socrates. After Socrates was put to death by the restored democracy (399), Plato lived and travelled abroad for a number of years, visiting probably Egypt and certainly Sicily, where he won Dion to his philosophy. On his return (388) he set up a school at his house in Athens which became known as the Academy because it was near the grove of the mythical hero Academus. The students, mainly young aristocrats, devoted themselves to philosophy and mathematics and to practical studies in politics and administration. After the death (368) of *Dionysius I of Sicily, Plato was invited by Dion, the tyrant’s son-in-law, to return to Syracuse to train Dionysius II to become the philosopher-king of Plato’s dreams. The young ruler soon tired of his studies; he quarrelled with Dion, and Plato had to depart. A later visit (c.361), undertaken to reconcile Dionysius with Dion, was again unsuccessful. Plato is said to have died at a wedding feast.

Almost all Plato’s work seems to have survived: most is in the shape of dialogue, a method of discussion known as dialectic. Socrates, the venerated teacher of his youth, is nearly always a participant. It is not clear therefore how much of the thought is that of the historic Socrates and how much Plato’s own. The Socratic method was not to propound a philosophic scheme but, by exposing a pupil’s statements to a searching cross-examination, to achieve precise definitions and so enable him to reach towards the truth for himself. Thus an approach to a general answer to such questions as ‘What is beauty?’ ‘What is justice?’ or ‘What is knowledge?’ is made by a series of questions leading to the elucidation of specific points.

In the Republic, a discussion about the ideal state, a conclusion is reached favouring rule by a philosopher-king. Theories about the universe ascribed to *Pythagoras are expounded in the Timaeus, the dialogue which was regarded as essentially Platonic by those neoplatonists who helped to give Christian theology its Platonic character. The influence of Pythagoras is also apparent in the Symposium, from a literary point of view one of Plato’s most attractive works. Here Socrates, *Aristophanes, *Alcibiades and others discuss the nature of love, the real background and real people here, as so often in Plato adding to the charm and naturalness of the dialogue. Perhaps the most important of Plato’s own contributions to philosophic thought is his theory of ‘ideas’ (or more literally ‘forms’). According to this theory the ‘idea’ of a thing is the unchanging and fundamental reality behind the superficial and mutable concepts produced by imagination or the senses. Highest of such ‘ideas’ is ‘the good’, knowledge of which is supreme virtue. But, since such complete knowledge is all but unattainable, for practical purposes man must act in
accordance with his true nature under such guidance or constraint as the education implicit in the laws of the ideal state would provide.

Through his own writing and those of his most famous pupil, *Aristotle, Plato’s influence has probably transcended that of any other writer in the philosophic field.

**Plautus, Titus Maccus** (Maccius) (c.250–184 BCE). Roman writer of comedies. He began to write plays (c.224) after failing in business and continued to produce them with remarkable regularity for the rest of his life. Twenty-one comedies – those regarded by Varro as the only certainly genuine ones – survive complete. The plots of the plays were derived from Greek originals (e.g. Menander), as were the stock characters – the clever rascal of a servant, the long-lost daughter, the duped father, the interchangeable twins. Indeed they have served the turn of *Shakespeare, Molière and many lesser men, but Plautus made the farce much broader than that of his Greek originals and introduced songs and sometimes a chorus. One of his best known plays is *Miles Gloriosus* (Boastful Soldier): its chief character, Captain Pyrgopolynices, may have been a model for Falstaff.

**Playford, Sir Thomas** (1896–1981). Australian Liberal politician. An orchardist who fought in World War I, he was a Member of the South Australian Parliament 1933–68, serving as Premier 1938–65 for a record term, assisted by an electoral redistribution that favoured rural voters. He was a vigorous interventionist in economic policy.

**Plekhanov, Georgi Valentinovich** (1857–1918). Russian socialist and propagandist. Born to a noble family, he was an army officer, then joined the Populists, became a Marxist and was exiled, living in Geneva 1883–1917. Regarded as the founder of the Russian Social Democratic Labour Party (RSDLP), he founded the journal *Izra* (The Spark) in 1900 but gradually active leadership passed to his disciple *Lenin. He became a Menshevik after 1904 and opposed Lenin’s dictatorship after 1917. He was a prolific theoretical writer.

**Plimsoll, Samuel** (1824–1898). British politician. Known as ‘the merchant seaman’s friend’, he was in the coal trade in London when he became interested in the condition of merchant ships and seamen.

Overloading and undermanning and the deliberate sending out of unseaworthy ships in order to collect insurance after shipwreck were among the evils he fought against. To obtain reform he became an MP 1868–80, but it was not until 1876 that he got the Merchant Shipping Act passed. One provision was that ships should carry the ’Plimsoll line’, a disc with a horizontal line drawn through it to indicate the loading limit.

**Pliny the Elder** (Gaius Plinius Secundus) (23–79 CE). Roman official and writer. Brought up as an accomplished, well-educated soldier, administrator and naval commander, he is known to have practised law. But he is chiefly remembered for his interest in natural history. His *Natural History* is the most comprehensive account of its kind written in antiquity. The first two books deal with astronomical and cosmological matters; Pliny then moves on to cover the geography of the globe and the nature of man. Books 8–11 treat of the animal world, and books 12–19 deal with plants, including long discussions of agriculture and the use of herbs for medical purposes. The last sections of the work discuss such topics as pharmaceuticals, metals, precious stones, the history of painting, magic and charms. Pliny’s work is essentially a compilation; it is comprehensive, but Pliny was careless in his use of sources, and frequently credulous. He enjoyed the fabulous and the moralistic aspects of natural history, and retold old wives’ tales. Pliny’s *Natural History* remained the standard encyclopaedic compilation covering the three kingdoms of nature down to the 17th century. He commanded the fleet in the Bay of Naples, described the eruption of Mt Vesuvius with remarkable accuracy but after landing for closer examination was overcome by fumes and died.

A figure of lesser stature was his nephew and adopted son **Pliny the Younger** (Gaius Plinius Caecilius Secundus) (61/2–c 114), a notable orator and a diligent official under *T rajan. His letters are factually interesting as they deal with the lives of ordinary respectable citizens in provincial towns, and his exchanges of letters with Trajan reveal how even the more enlightened men of his time regarded the early Christians, whom he found ‘unboundedly superstitious’ but not ‘grossly immoral’.

**Plisetskaya, Maya** see Shchedrin, Rodion

**Plotinus** (205–270). Roman philosopher, born in Egypt. Having studied philosophy in Alexandria, he joined a military expedition to the east in the hope of learning the philosophy of Persia and India and barely escaped with his life in Mesopotamia. In 244 he went to Rome, where he founded a school and lived for the rest of his life. As an old man he attempted to found in Campania a ‘republic’ on the pattern of Plato’s ideal state. Relying on inward vision rather than reasoning,
he effects in his writings an integration of all Greek philosophy in order to provide a philosophic basis for a renaissance of Greco-Roman civilisation. He regards all souls as one with a world-soul, all intelligences as one with a world-mind, the source of both being the Light of God within us (variously described as the ‘One’ or the ‘Good’). This pagan version of the Trinity was adapted by Christian neoplatonists to accord with their own creed.

Plücker, Julius (1801–1868). German physicist and mathematician. Professor of mathematics 1836–47 and of Physics 1847–68 at Bonn, his investigations into electrical discharge in gases at low pressure led to his discovery (1859) of cathode rays, which formed the basis of later work on atomic structure and of many technical developments, including television.

Plumer, Herbert Charles Onslow, 1st Viscount (1857–1932). English field marshal. He was a cautious field commander in France in World War II, with a low casualty rate, later serving as Governor of Malta 1919–25 and High Commissioner in Palestine 1925–31.

Plunket, St Oliver (1629–1681). Irish Roman Catholic, bishop and martyr. Primate of all Ireland from 1669, he was one of many victims of the Popish Plot campaigns of Titus *Oates, who accused him of plotting a foreign invasion of Ireland. He was tried and acquitted in Ireland, tried again in London, convicted and executed. He was canonised in 1757.

Plutarch (Ploitarkhos, later Lucas Metrius Plutarchus) (c.46–120CE). Graeco-Roman historian, born in Chaeronea. Educated in Athens, he often visited Rome but spent most of his life in his native Boeotia. Best known of his works on history and philosophy is his Lives of the Noble Greeks and Romans (often called Parallel Lives), containing biographies of 23 Greek and 23 Roman figures notable in history. Distinguished by their literary excellence and narrative interest, the lives vary much in historical value owing to Plutarch’s uncritical use of his sources. They became available to Elizabethans through *North’s translation (1579) of Amyot’s great French translation (1559) and *Shakespeare used them for his Roman plays.

Barrow, R. H., Plutarch and his Times. 1967.

Pocahontas (or Matoaka) (1595–1617). American Indian princess. When Captain John *Smith, leader of the settlement of Jamestown, Virginia, was captured, Pocahontas, though only 11 years old, allegedly saved his life ‘by taking his head in her arms’. Five years later, when she was held as a hostage in Jamestown, one of the settlers, John Rolfe, fell in love with her. They were married and in 1616 he took her (now baptised ‘Rebecca’) to England where she was received by the king and queen. She had one son, *Plücker, Julius (1801–1868). German physicist and mathematician. Professor of mathematics 1836–47 and of Physics 1847–68 at Bonn, his investigations into electrical discharge in gases at low pressure led to his discovery (1859) of cathode rays, which formed the basis of later work on atomic structure and of many technical developments, including television.

Podébrad, Jiří (George) z Kunštátu (1420–1471). King of Bohemia 1458–71. As leader of the moderate Hussites, he was elected King by the Diet although he had no blood ties with the former rulers. He quickly restored the country after the Hussite Wars and strengthened the power of the monarchy at the expense of the nobility, the Catholic members of which formed a league against him. This acted in concert with the invading army of *Matthias Corvinus, King of Hungary, whose pretext was a mandate of deposition by the Pope, by whom Jiří had been excommunicated (1446). Jiří, however, held his opponents at bay and fighting was still in progress when he died.

Podgorny, Nikolai Viktorovich (1903–1983). Russian Communist politician, born in the Ukraine. Originally a mechanic, he became a food technologist and a protégé of *Khrushchev, serving as Secretary of the Ukraine CP 1957–63 and a Politburo member 1960–77. He was President of the USSR 1965–77.

Poe, Edgar Allan (1809–1849). American poet and short-story writer, born in Boston. Both his parents were on the stage, and on his mother’s death (1811) he was adopted by John Allan, a merchant who sent him to school in England and to the University of Virginia, from which he ran away after a quarrel over debts. A projected career as an army officer became financially impossible when Allan married again, and Poe had to manœuvre his dismissal from West Point (1831). Meanwhile his first book *Tamberlane and Other Poems (1827) had appeared, but like its two successors (1829 and 1831) attracted little notice. A prizewinning short story, *MS. Found in a Bottle (1833), obtained for him the editorship of a paper in Richmond, Virginia, which he turned into a success. In 1836 he married his 13-year-old cousin Virginia Clemm and to better himself moved to New York and then Philadelphia. In 1840 he published *Tales of the Grotesque and Arabesque (which included *The Fall of the House of Usher) and in 1841 he joined George Graham for whom he edited *Graham’s Magazine, the circulation of which he raised from 5000 to 35,000, his own contributions including the famous detective story *The Murders in the Rue Morgue. Recognition as a major poet came with the publication of *The Raven and Other Poems (1845). After the death of his wife (1847) he had a nervous breakdown and he died in Baltimore two years later on his way to fetch his aunt, Mrs Clemm, to attend his second marriage to a boyhood sweetheart, Sarah Elmira Royster. The commonly held view that Poe was a drug addict and an alcoholic is derived from a slanderous account in the preface to the collected edition written by his literary executor, Rufus W. Griswold, an old enemy with whom Poe believed himself reconciled. Every item has been refuted by his many loyal friends but the myth persists. He was in fact hard working and much loved. Few writers have equalled Poe in his presentation of the macabre and his tales of mystery and horror (e.g. *The Pit and the Pendulum, *The Gold
Bug a classical reference for the solution of ciphers and The Cask of Amontillado have been reprinted over and over again. His poems, e.g. The Raven, Annabel Lee and The Bells, show metrical mastery, haunting rhythms and resonances and undertones of melancholy which deeply influenced *Baudelaire and the French Symbolists.

Poincaré, (Jules) Henri (1854–1912). French physical scientist and mathematician. Originally trained as a mining engineer, he became a physics lecturer first at Caen University and then at the Paris Faculté des Sciences where he taught until his death. His major work was in the field of functions. He developed important techniques of probing their properties by partial differential equations (which he termed 'fuchsian' and 'kleinian' functions). In much of his mathematical work he was a follower of Charles Hermite, especially in regard to the application of non-Euclidian geometry to the theory of quadratic forms. Another interest was an investigation of the properties of integral curves of differential equations. His longstanding concern for probability theory was expressed in his book of 1895 *Leçons sur le Calcul des Probabilités. By the turn of the century he was thinking more philosophically about the foundations of Newtonian physics, and becoming aware of some of the dimensions of relativity. He grasped how absolute motion was incapable of being observed (i.e. that for the observer, everything in nature must be relative to something else). Poincaré was a gifted writer with deep insight into the creative process of mathematical discovery and logic, capable of being understood by the layman.

Poincaré, Raymond Nicholas Landry (1860–1934). French politician. A cousin of J. H. *Poincaré, he first became a deputy in 1887 and held a number of government offices including two terms as Finance Minister 1894–95 and 1906. In 1912 he proved himself a firm and popular Premier and was President of the republic 1913–20. During World War I he inspired and maintained confidence. As Premier 1922–24, he insisted upon a stern reparations policy towards Germany and ordered the occupation of the Ruhr when German payments were in arrears (1923). Recalled to 'save the franc' he was Premier for the last time 1926–29.

Poisson, Simon-Denis (1781–1840). French mathematical physicist. He adopted a two-fluid theory of electricity: like fluids repelled and unlike attracted. Their strengths were in proportion to the inverse square law. He presupposed that the normal condition of any body was to possess equal quantities of both fluids. Bodies became electrically charged when they acquired a superfluity of one. Using *Lagrange's methods, he attempted to render these ideas in mathematical terms. He developed the bell shaped normal distribution curve. He shared the Copley Medal with *Faraday (1832).

Poietiers, Diane de (1499–1566). French mistress. Although she was 48 when her lover *Henri II came to the throne she long kept her beauty and used her power to counteract that of the Guises.

Pol Pot (originally Saloth Sar) (1925–1998). Cambodian (Kampuchean) Communist politician. A rubber worker and teacher, educated in Paris, he led the Khmer Rouge which took power on the US withdrawal from Indo-China and he became Premier 1976–79, with China's backing, until overthrown by Vietnamese forces. He imposed a totalitarian regime that sought to eliminate all religion, urbanisation and Western influence (Year Zero). Deaths in the 'killing fields' have been estimated at 3 million.

Polanski, Roman (1933– ). Polish-French film director. Educated at the Polish Film School, Lodz, his first film was Two Men and a Wardrobe (1958), followed by Repulsion (1964), Rosemary's Baby (1968), Chinatown (1978) and Frantic (1988). He also directed the operas Lulu, Rigoletto and Tales of Hoffmann. In 1968 his wife Sharon Tate was murdered by Charles Manson.

Polanyi, Michael (1891–1976). Hungarian-British chemist, social scientist and philosopher. He made fundamental contributions to adsorption, X-ray diffraction and reaction kinetics, lived in England from 1933 and created a new career as a social scientist. His son John Charles Polanyi (1929– ), a professor at Toronto, shared the 1986 Nobel Prize for Chemistry for his work in chemical kinetics, and was active in the Pugwash Group on Sciences and World Affairs.

Pole, Reginald (1500–1558). English cardinal. Son of the Countess of Salisbury, through whom he was connected with the royal family, he was educated at Oxford and Padua and became a distinguished humanist scholar and a friend of *Henry VIII. Ecclesiastical preferment, including the archbishopric of York, was offered in the hope that he would approve the annulment of Henry's marriage to *Catherine of Aragon. Unable to respond, Pole withdrew abroad and made public his disapproval of the divorce and of Henry's claim to supremacy of the English Church in De Unitate Ecclesiastica (1536). Henry was even more enraged when (1536–37) Pope *Paul III made Pole a cardinal and appointed him papal legate. He attained him, arrested members of his family and later had his mother executed. Pole continued in papal employment and in 1545 was one of the three legates who presided over the opening of the Council...
of Trent. He remained abroad during Edward VI’s reign, but on the accession of Queen Mary I, he returned as papal legate and was the principal instrument by which Roman Catholicism was reimposed. He must be held, therefore, at least partly responsible for the burnings of Protestant martyrs. He succeeded Cranmer as Archbishop of Canterbury (1556) but in 1558 his legateship was cancelled by Paul IV. He died on the same day as Queen Mary (17 November 1558).

Schenk, W., Reginald Pole. 1950.

Politian (or Poliziano: Angelo Ambrogini) (1454–1494). Italian scholar and poet. He was educated in the Florence of Lorenzo de’ Medici, whose patronage he attracted by a Latin translation of Homer’s Iliad which he began at the age of 17. His later works include translations of the great medical writers Hippocrates and Galen. In 1584 he became professor of Latin and Greek at Florence University. Some of his poetry (e.g. his Latin elegy on Lorenzo) shows both depth of feeling and metrical skill. His Orfeo was the first secular drama written in Italian. He was a major influence on Michelangelo.

Polk, James Knox (1795–1849). 11th President of the US 1845–49. Born in North Carolina, he became a lawyer in Tennessee. He entered the US House of Representatives in 1825, was speaker 1835–39, and Governor of Tennessee 1839–41, being defeated twice (1841, 1843). In 1844 he was the original ‘dark horse’ candidate, winning the Democratic nomination on the eighth ballot, after Martin Van Buren, having won a simple majority, failed to gain the two-thirds vote. Although comparatively unknown, and failing to win his own state, in November he defeated Henry Clay and won the presidency. His term of office was notable for the settlement of the Oregon boundary dispute with Britain, the occupation of Texas and the ensuing war with Mexico by which California and New Mexico were acquired. He died three months after his term ended.

Pollini, Maurizio (1942– ). Italian pianist, born in Milan. His repertoire was exceptionally wide, from Renaissance music to the works of Boulez, Stockhausen and Nono, and he combined technical brilliance with deep interpretative gifts.

Pollock, Jackson (1912–1956). American painter. The pioneer and leading exponent of New York Abstract-Expressionism, by spraying or dribbling paint on to an unstretched canvas tacked to floor or wall and being thus enabled to approach his picture from all sides, he claimed that he could achieve an intimacy with his subject otherwise unattainable. Using this method, he created tense and intricate patterns of swirling lines and shapes into which representational elements were sometimes introduced. He had great influence among his contemporaries. His Blue Poles (1952) was bought by the Australian National Gallery for $US1.9 million in 1973, at that time a record price for his work. (In 2016 Blue Poles was insured for $350 million.) In 2006 his Number 5 (1948) sold for $US140 million.

Polo, Marco (1254–1324). Venetian traveller, born possibly in Korčula, Dalmatia. The journeys which he vividly described resulted from an earlier expedition (1260–69) by his two uncles to Mongol territory during which they were persuaded to visit the great khan, Kublai, who as the result of Mongol conquests was also Emperor of China. They set out (1271) on a second journey, taking Marco with them, and travelled overland from Acre through Persia, Turkestan and the Gobi Desert, reaching Cambuluc (Peking) in 1275. Marco became a favourite of Kublai Khan who employed him on missions that took him to the furthest parts of the country, and also appointed him Governor of Yangchow. So high were the Polos in the khan’s favour that it was not until 1292 that they were allowed to leave as part of the escort of a Mongolian princess on her way to Persia to marry a prince. The voyage took two years and the bridegroom had died meanwhile, but she married his brother, and the Polos eventually reached Venice in 1295. In 1296 Marco commanded a galleys against the Genoese and was captured. While in prison he was allowed to send for his notes and, with the help of a fellow prisoner, Rustichello (or Rusticiano), he composed them a record of his adventures. The book was published in 1298 as Divisament dou Monde (‘Description of the World’) but was soon better known, because of the incredulity it provoked, as Il milione, and became the great bestseller of the pre-Gutenberg age. Although the book contains some legendary material, its descriptions of China are generally accurate.

Latham, R., ed. and trans., The Travels of Marco Polo. 1958.

Polybius (c.200–c.120 BCE). Greek historian. Sent to Rome (166) as a hostage, he became friendly with Scipio Aemilianus whom he accompanied when Carthage was destroyed (146). It was thanks to the encouragement of the Scipio family that he wrote his Universal History, one of the greatest historical works ever written. The first five books survive intact, but of the other 35 only fragments remain. The extant books mainly cover the period 221–168 BCE and provide a careful and critical account of the Punic Wars.

Polycarp, St (c.70–155/6). Greek Bishop of Smyrna. His long life made him a link between the apostles and the Fathers of the Church: Irenaeus relates that as a boy he had heard Polycarp speaking of his ‘intercourse with John and others who had seen the Lord’. He wrote a notable epistle to the Church at Philippi. He was martyred in Smyrna. His feast day is 26 January.
Polycitus (5th century BCE). Greek sculptor. He worked particularly in bronze and was contemporary with *Phidias. *Pliny thought his Doryphorus perfect sculpture.

Polycrates (d.522 BCE). ‘Tyrant’ of Samos c.535–522 BCE. Having built a large fleet he dominated the Aegean as a kind of pirate king. Enriched with spoils, he beautified Samos and made it temporarily the cultural centre of the Greek world, Anacreon being one of the many poets and artists attracted to his court. At last the Persian Governor of Lydia, whose ships and ports had suffered most heavily, lured him to Magnesia where he had him assassinated. The famous legend of the ring and the fish relates to Polycrates: told to throw away something precious, lest his prosperity provoke the envy of the gods, he hurled a valuable ring into the sea. When the ring came back to him the next day in the belly of a fish, it was taken as a portent of his doom.

Pombal, Sebastião José de Carvalho e Melo, Marquês de (1699–1782). Portuguese statesman. He showed his outstanding ability as Foreign Minister 1750–55 and Prime Minister 1755–77 under King Joseph (José). The skill with which he met the problems created by the earthquake that destroyed Lisbon (1755) gave him a reputation that enabled him to carry out important reforms and curb powers of the Church he thought excessive. Thus sentences passed by the Inquisition now required government approval, censorship passed to state control; he also expelled the Jesuits, whom he suspected of political intrigue. Facilities for education, hitherto almost entirely in Church hands, were extended by building 800 schools and reforming the universities. He promoted the development of Brazil and decreed 800 schools and reforming the universities. He promoted the development of Brazil and decreed the liberation of the Indian slaves. Ruthlessness in carrying out his policies gradually built up opposition and when Maria I succeeded (1777), he was dismissed. Energy, honesty and vision made Pombal one of the greatest figures of Portuguese history.

Pompadour, Jeanne Antoinette, Marquise de (1721–1764). French mistress of *Louis XV. Daughter of a speculator, François Poisson, she was beautiful and accomplished, and married Lenormant d’Etoiles, a man rich enough to enable her to entertain and be entertained. She became the king’s mistress in 1745 and for the rest of her life maintained a hold over him even after her sexual attractions had ceased. As her beauty faded her extravagance increased, but she had good taste and her patronage of literature and the arts was wisely bestowed, e.g. on *Voltaire and *Boucher. She founded the porcelain factory at Sèvres and the École Militaire. Her meddling in politics resulted in the diplomatic upheaval by which the hereditary enemies France and Austria fought as allies in the disastrous Seven Years War (1756–63). Her protégé the Duc de *Choiseul became Foreign Minister in 1758.

Pompey the Great (Gnaeus Pompeius Magnus) (106–48 BCE). Roman soldier and politician. He sided with *Sulla against *Marius in the Civil War and for his successes in Africa won the title Magnus (‘the great’). After Sulla’s death (78) he put down a revolt by *Lepidus, and in Spain crushed the remaining faction of Marius. Back in Rome, his quest for office led him to break with the senatorial party, heal an old feud with *Crassus and jointly with him hold the consulship of 70, gaining popularity by restoring the power of the tribunes. He received a special commission to clear the Mediterranean of pirates, which he accomplished in a single brilliant campaign (67). His next achievements were to finish off the war with *Mithridates (66), annex Syria and capture Jerusalem (63). On his return to Rome (61) he found the timid and jealous Senate reluctant to concede his two reasonable demands: provision for his veterans and confirmation of his eastern settlement which involved the creation of four new Roman provinces, Bithynia (with Pontus), Cilicia, Syria and Crete. He was thus almost forced into forming (60) the First Triumvirate with *Caesar, whose daughter Julia he married, and Crassus. Caesar departed to pursue his conquests in Gaul, and Crassus went east. Pompey began to be suspicious of the activities of Caesar’s friends in Rome, and following the deaths of Julia (54) and Crassus (53) the friendship deteriorated. The death of *Clodius, followed by anarchy in Rome, brought about the final breach. Pompey and the Senate, the only sources of law and order, were reconciled and in 52 Pompey was made sole consul. Caesar, seeing his prospects of renewed power and even his life endangered if he returned unarmed, took the symbolic step of crossing the Rubicon and entering Italy with his legions (49). Pompey with most of the senators withdrew to Greece to collect an army but when the rivals finally met at Pharsalus (48), Pompey was defeated, fled and was murdered in Egypt.

His son, Sextus Pompeius (Magnus Pius) (c.67–36 BCE), a general, fought against the Second Triumvirate (*Octavian, Mark *Antony and *Lepidus), controlled Sicily 42–36 and invaded southern Italy. He defeated Octavian in two battles (37, 36) but *Agrippa destroyed his navy (36). Escaping to Asia Minor, he was captured and summarily executed in Miletus.

Pompidou, Georges Jean Raymond (1911–1974). French politician, born in Montboudif. Originally a teacher, during World War II he became active in the Resistance, joined de *Gaulle's personal staff
in 1944 and was a member of the Council of State from 1946 until he became director general of Rothschild's French banking house (1954). When de Gaulle returned to power (1958) he chose Pompidou to head his personal staff and appointed him Prime Minister in succession to Michel Debré 1962–68. He was President of France 1969–74, dying in office, suddenly, from Waldenström's macroglobulinemia, a rare form of lymphoma. The Great Centre Pompidou (Beaubourg), for modern art, was named for him and he encouraged *Boulez' avant-garde music.

**Poncelet, Jean Victor** (1788–1867). French mathematician and engineer. He served in the Napoléon army at Walchern and in Russia, where he was wounded, and imprisoned. During his years of captivity (until 1814) he applied himself to the mathematical works of Monge, and wrote some important papers. He returned to Metz in 1814 and worked in the field of projective geometry, producing his *Traité des Propriétés Projectives des Figures* in 1822. Poncelet's most fertile period in applied mechanics was between 1825 and 1840. He spent much time on the improvement of water wheels and turbines. He made some important advances in the field of fortifications, and wrote extensively about the theory of machines. His main influence, however, was as a practical teacher. In 1848 he was made head of the Paris École Polytechnique.

**Ponchielli, Amilcare** (1834–1886). Italian composer. A prolific writer of opera, he is now remembered only for *La Giaconda* (1870), and his significant influence on *Puccini*.

**Poniatowski, Josef Antoni** (1762–1813). Polish patriot and marshal of France. A nephew of *Stanisław Augustus, the last king of Poland, in the struggle that preceded the final partition of the Polish kingdom (1793), he gained several victories over the Russians. In 1794 he commanded the division of Kosciusko's patriot army which vainly defended Warsaw. When *Napoleon formed the grand duchy of Warsaw, Poniatowski became War Minister and Commander-in-Chief. In 1812 he headed the large Polish contingent which fought its way with Napoléon to Moscow and, still with the French army after the retreat, he performed so gallantly at Leipzig (1813) that Napoléon created him Marshal. He was drowned whilst covering the French retreat.

**Ponti, Gio(vanni)** (1891–1979). Italian architect, designer and craftsman. From 1923, when he appeared at the Triennale Exhibition as a ceramics designer, he designed furniture, industrial products, the interiors of liners, and stage costume and settings, as well as buildings throughout Europe and America. Of his modern commercial buildings, the Pirelli tower (1957) in Milan is among the most striking. He founded (1928) the magazine *Domus* and became its editor. **Pontiac** (c.1720–1769). American Ottawa Indian chief. He planned a large-scale concerted attack on the British colonists in which all the frontier forts from Canada to Virginia except Detroit and Pittsburgh were captured (1763). Pontiac agreed to a peace treaty in 1766.

**Pope, Alexander** (1688–1744). English poet, born in London. Son of a linen merchant, his family, to avoid persecution as Roman Catholics, left London (c.1700) to live in Windsor Forest. Deprived of a normal education by lifelong deformity caused by a tubercular spine, the boy Alexander educated himself, with his father's encouragement and help. By precocious reading and writing he began an epic at the age of 12. His pastoral poems were the first to be published, followed by the *Essay on Criticism* (1711) and the mock-heroic *Rape of the Lock* (1712). With these works and other poems he was steadily building up a reputation when the publication of his Homeric translations, *The Iliad* (1715–20) and *The Odyssey* (1725–26), brought fame and enough fortune to enable him to rent a villa at Twickenham and lay out a five-acre garden in the romantic fashion of the time, with a temple, obelisk (in memory of his mother), 'sacred groves', an orangery and above all a grotto, where he could talk with his many and famous visiting friends.

His edition of *Shakespeare* (1725) produced much criticism, to which the *Dunciad* (1728), in which his opponents were satirised as pedants and dunces, was a reply. His *Essay on Man* (1733–34) is a popular exposition in verse of current philosophical beliefs, while his *Moral Essays* (1731–35) deal with the characters of men and women, the use of riches, and good taste. The fitting of names to the imaginary characters involved the author in several literary quarrels. The most famous of them was with Lady Mary Wortley *Montagu by whom Pope was at first dazzled but whose unkind cynicism soon disillusioned him. In his *Imitations of Horace*, perhaps the best of Pope's satirical works, she saw herself in the lines:

From furious Sappho scarce a milder fate.

Poxed by her love, or libelled by her hate.

But if Pope had a talent for making enemies, he had also a gift, much truer to his real character, of making friends – *Swift, Gay, Bolingbroke, Arbuthnot*, and Martha Blount. Pope's 'heroic couplets' in which so much of his work is written would be monotonous were it not for the flexibility he introduced by variation of stress, turn of phrase and exact choice of word. The wit and wisdom is accompanied, too, by a poet's imaginative vision. In spite of his deficiencies of character, Pope is one of the great figures of English literature.

Popper, Sir Karl Raimund (1902–1994). British philosopher, born in Vienna. Educated at Vienna University, he left Europe after *Hitler came to power, lectured at Canterbury University College, Christchurch, New Zealand 1937–45, was denied Sydney University’s senior lectureship in philosophy (1945), became reader in logic 1945–49 and professor of logic and scientific method 1949–69 at the London School of Economics. His books e.g. *The Logic of Scientific Discovery (1934), *The Open Society and its Enemies (1945), *The Poverty of Historicism (1957) and *Conjectures and Refutations (1963), examine the conditions of scientific and social progress and elaborate his main theories that the confirmation of a theory can never be more than provisional, while its refutation will always be final; that ethical standards are ‘autonomous’ (i.e. are not derivative from facts), hence that individuals have the right to criticise authorities and institutions, and finally that progress is made possible not by Utopian approach but by readiness to make the best of existing material resources. He argued that the proponents of an idea must be able to propose methods for testing ‘falsifiability’, leading to confirmation or refutation of the hypothesis. In Popper’s view, followers of *Marx, *Freud, religions and most economic theories are unable (or unwilling) to meet the test. He was elected FRS (1976), a rare honour for a non-scientist, and made a CH (1982).

Porpora, Nicola Antonio (1686–1768). Italian composer and teacher, born in Naples. He worked in Naples, Vienna, Venice, London and Dresden and was considered as a rival to *Händel. He wrote about 50 operas (some in one act, beginning with *Agrippina, 1706), ending with *The triumph of Camilla (1760). He taught the outstanding castrato *Farinelli, for whom he wrote many virtuoso arias.

Porsche, Ferdinand (1875–1951). German engineer and motorcar designer. He began work with *Daimler and Auto Union, and set up his own workshops in 1931. In 1934 he designed the revolutionary Volkswagen, a cheap, reliable people’s car with a rear engine, intended for a mass market in the 1930s but not produced until after 1945. The Porsche company produced very sophisticated sports cars.

Porson, Richard (1759–1808). English classical scholar. The founder of scientific textual criticism, his editions of *Euripides and those of *Aeschylus and *Aristophanes compiled from his notes, set new standards of criticism. He was also a connoisseur of wine, and his correspondence reveals a mischievous sense of humour.

Portal of Hungerford, Charles Frederick Algernon Portal, 1st Viscount (1893–1971). British airman. Educated at Winchester and Oxford, after a brilliant record (MC, DSO, and bar) in World War I, he held important administrative posts between the wars and became Chief of Bomber Command 1940. As Chief of Staff, RAF 1940–45 he largely directed operational strategy and became Chairman of the Joint Chiefs of Staff 1945. Created a marshal of the RAF (1944), he was made a baron in 1945, a viscount, KG and OM in 1946. He chaired the UK Atomic Energy Commission 1946–51. *Eisenhower thought him the most impressive of Britain’s war leaders.

Porter, George, Baron Porter of Luddenham (1920–2002). British chemist. Educated at Cambridge, he taught there at Sheffield and (from 1963) at the Royal Institution, London. He shared the 1967 Nobel Prize for Chemistry for work on photo-chemistry. He was a successful populariser of science in writing and on television, became President of the Royal Society 1985–1990, and received the OM and a peerage.

Porter, Michael Eugene (1947– ). American economist. He taught economics at Harvard from 1973, and was a professor 1982–. In *The Competitive Advantage of Nations (1980) he modified *Ricardo’s concept of ‘comparative advantage’, demonstrating how nations with no history or experience in particular areas developed niche markets against ferocious competition, e.g. Finland’s Nokia mobile telephones or Kone medical assay equipment.

Portsmouth, Louise de Keroualle, Duchess of (1649–1734). French mistress of "Charles II of Britain. She also acted as confidential agent of "Louis XIV of France. Charles Lennox, her son by the king, was created Duke of Richmond and Gordon.

Post, Emily (1873–1960). American writer, born in Baltimore. After writing some novels on social themes she turned to becoming mentor to Americans in all matters of social behaviour and etiquette, broadcasting and writing newspaper articles on these subjects. Her reputation was based on the book Etiquette (1922).

Potemkin, Grigori Aleksandrovich, Prince of Tauris (1739–1791). Russian soldier. He was one of the guards officers who conspired to put "Catherine the Great on the throne (1762), he became her lover (1769) and perhaps her secret husband (1774). He was of impressive physique and personality and showed his talents as an administrator when he was sent to colonise territory conquered from Turkey. He also created the Russian Black Sea fleet and founded the naval base of Sevastopol. He acquired his princely title and vast wealth from Catherine, but he was not merely the self-seeking rascal portrayed by those who invented the tale that, to deceive foreigners, he had built cardboard villages to convey a false impression of the prosperity of the Crimea.

Potter, (Helen) Beatrix (1866–1943). English author and illustrator. She produced notable children's books, e.g. The Tale of Peter Rabbit (1900) and The Tailor of Gloucester (1902). She lived in the Lake District for many years and left her extensive estate to the National Trust. Her books have been translated into many languages, modern and classical, and are still highly popular.

Poujade, Pierre (1920–2003). French bookseller. In 1953–54 he organised a tax revolt by small businessmen, and in 1956, 52 Poujadist deputies were elected (with 12 per cent of the vote) on a policy proposing tax cuts, regionalism and vaguely Fascist social policies. His movement faded with de "Gaulle's return to power (1958).

Poulenc, Francis (1899–1963). French composer and pianist, born in Paris. One of 'Les Six' ("Honegger), his output included concertos for harpsichord (1928), two pianos (1932) and organ (1938), chamber music, piano pieces, e.g. Mouvements Perpetuels (1918), the ballet Les Biches (1923), the Mass in G Minor (1937), the cantata La Figure Humaine (1943) and the operas Les Mamelles de Tirésias (1944) and Dialogues des Carmélites (1956). He wrote many songs for his lover, the baritone Pierre Bernac (1899–1979), touring and recording with him.

Pound, Sir (Alfred) Dudley (Pickman Rogers) (1877–1943). British Admiral of the Fleet. A captain in World War I, after distinguishing himself at Jutland, he became director of operations at the Admiralty. He was Commander-in-Chief, Mediterranean 1936–39 and promoted Admiral of the Fleet and First Sea Lord 1939–43, gaining credit for successes in the Mediterranean and Atlantic, and blame for failures in the Far East. He received the OM just before his death.

Pound, Ezra (Weston Loomis) (1885–1972). American poet, born in Idaho. After spending the years 1906–07 in European travel he lived mainly in England. His early works, e.g. Provenca (1910), Canzone (1911) and Ripostes (1912), included adaptations of Latin, Provençal, Chinese and Japanese verses (the latter two based on literal translations). As a leader of the Imagist group (c.1914), which attempted to transfer to poetry the modern movements in art, he was distinctive with his "velvet coat … pointed beard … and fiery hair". In pursuit of the same aim he was co-editor with Wyndham Lewis of Blast, the organ of Vorticism. He was also foreign correspondent of Poetry (Chicago) (1912–19) and the Little Review (1917–19). Among his best works were Quia Pauperam Amavi (1919) and Hugh Selwyn Mauberley (1920). During this time he formed literary friendships with W. B. Yeats (whose secretary he became), Robert "Frost, James "Joyce, Ernest "Hemingway and T. S. "Eliot (and edited his The Waste Land). He lived in Paris from 1920, moved to Rapallo in 1924, became an enthusiastic supporter of "Mussolini and helped to revive interest in "Vivaldi. From about 1919 to 1960, he worked intermittently on his Cantos, a vast, complex compilation, publishing the first part in 1925. He made much use of 'free association' and distorted spellings and contained a sprawling medley of quotations ranging from ancient Greek and Chinese to modern slang. Meanwhile he had taken up, in turn, Social Credit (C. H. "Douglas) and Fascism, for reasons deriving in part at least from his obsessive hatred of 'usury' as the basis of all the evils of modern life, and wrote Jefferson and/or Mussolini (1935). During World War II he made regular broadcasts from Italy supporting Mussolini, and in 1945 he was arrested, charged with treason and returned to the US. Certified insane, he was held in St Elizabeth's Hospital, Washington, but produced
the controversial *The Pisan Cantos* (1948). Released in 1958, he returned to Italy and died in Venice, where he is buried. He had a major influence upon modern poetry but critics are sharply divided about the quality of his poetry.

**Pound, Roscoe** (1870–1964). American jurist. Trained as a botanist, and without a law degree, he held a number of academic appointments, especially in his native Nebraska and in the Harvard Law School, where he was Story professor 1910–13, Carter professor of jurisprudence 1913–16 and then Dean 1916–36. His influence in the development of modern jurisprudence was important in directing attention to social implications. He turned against the New Deal after 1937.

**Poussin, Nicolas** (1594–1665). French painter, born in Normandy. He was trained in Paris then went to Rome (1624), where he remained for the rest of his life. The carefully planned compositions for which he is famous show historical, mythological and biblical scenes in settings where usually some statue or building exactly copied from the antique gives the necessary verisimilitude. His work is remarkably homogeneous but the passage of years is marked by the change from the warm colours of the Venetians, *Titian* and *Tintoretto*, to the cool, clear tones of the north. From about 1645 Poussin devoted more attention to landscapes, which he peopled with mythological figures. In these he achieves, even more significantly than in other works, the beauty that comes from perfect compositional balance. In 1640 Poussin accepted an invitation from *Louis XIV* to return to France and decorate the long gallery of the Louvre, but he found the work uncongenial and returned to Rome. Poussin’s influence was strong during the classical revival of the following century.

**Powell, Anthony Dymoke** (1905–2000). English novelist, born in London. Educated at Eton and Oxford, his first novel was *Afternoon Men* (1931). In 1951 he published *Question of Upbringing*, the first of a 12–novel sequence called *A Dance to the Music of Time*, completed in 1975 with *Hearing Secret Harmonies*. The books have a single narrator, Nick Jenkins, who records (somewhat satirically) his own life and circle in a prosperous, fashionable society from the 1920s to the early 1970s. V. S. *Pritchett thought the sequence was like *Proust* translated by *Wodehouse: it became a television series in 1997–98. Powell also wrote *John Aubrey and His Friends* (1948) and received a CH in 1988.

**Powell, Colin Luther** (1937– ). American general, born in New York. Of Jamaican parentage, he was educated at the City University of New York and George Washington University. Commissioned in the US Army in 1958, he had an unusual degree of political experience for a serving soldier and became the first African-American to be Chairman of the Joint Chiefs of Staff 1989–93. His memoirs *My American Journey* (1995) encouraged support for Powell as a Republican presidential candidate in 1996 but he declined to run. As Secretary of State 2001–05, he was deeply uneasy about George W. *Bush’s plan to invade Iraq* (2003) but became compromised by his advocacy for it at the United Nations.

**Powell, (John) Enoch** (1912–1998). English politician and classicist. Educated at Trinity College, Cambridge, he was professor of Greek at the University of Sydney 1937–39. During World War II he served in the army (general staff) and rose to the rank of brigadier. He became Parliamentary Secretary to the Ministry of Housing and Local Government in the Conservative Government of 1955, Financial Secretary to the Treasury 1957–58 and Minister for Health 1960. He became famous for his views on the dangers he saw attending coloured immigration and for his opposition to Britain’s membership of the Common Market. He refused to stand as a Conservative in the general election of February 1974 and was an Ulster Unionist MP 1974–87.

**Powys, John Cowper** (1872–1963). British writer. His works include the historical novels *A Glastonbury Romance* (1933) and *Owen Glendower* (written 1905), and literary criticism, e.g. *Dostoevsky* (1947) and *Rabelais* (1948). His brother *Llewelyn* (1884–1939) was also a novelist and essayist of distinction e.g. *The Pathetic Fallacy* (1928) and *Love and Death* (1939) as was his brother *Theodore Francis* (1875–1953). He wrote chiefly on rural and allegorical themes, notably *Mr Weston’s Good Wine* (1927).

**Poynings, Sir Edward** (1459–1521). English statesman. An opponent of *Richard III*, he fled to France to join the Earl of Richmond, who became King of England as *Henry VII* (1485). Poynings was later appointed (1494) the king’s deputy in Ireland and his name is given to the law (1494) which laid down that the summoning of an Irish parliament and its legislative agenda were both dependent upon the consent of the English Privy Council and that all laws passed in Westminster were applicable in Ireland.

**Poyning, Sir Edward** (1459–1521). English statesman. An opponent of *Richard III*, he fled to France to join the Earl of Richmond, who became King of England as *Henry VII* (1485). Poynings was later appointed (1494) the king’s deputy in Ireland and his name is given to the law (1494) which laid down that the summoning of an Irish parliament and its legislative agenda were both dependent upon the consent of the English Privy Council and that all laws passed in Westminster were applicable in Ireland.
Pozzo, Andrea (1642–1709). Italian painter, architect, stage designer and art theorist, born in Trento. He worked for the Jesuits and his masterpiece is the astonishing trompe l’oeil ceiling, Apotheosis of St Ignatius (1685–94) at the Church of St Ignatius (S. Ignazio) in Rome. He designed the tomb of St Ignatius *Loyola in the Church of the Gesù, then worked in Vienna, where he died.

Praetorius, Michael (originally Schulz or Schulteiss) (1571–1621). German composer, born in Silesia. Influenced by Giovanni *Gabrieli and the Venetians, he was prolific in many forms, both religious and secular, including Terpsichore, arrangements of 300 dances. A distant kinsman, Hieronymus Praetorius (1560–1629) was organist at Hamburg and wrote a splendid Magnificat (1599).

Pramoedya Ananta Toer (1925–2006). Indonesian writer, born in Java. His first major novel, The Fugitive, written 1947–49 as a prisoner of the Dutch, was published in 1950. Imprisoned without trial by the Indonesians 1965–79, he wrote the tetralogy The Earth of Mankind. His books have been extensively translated but remain banned in Indonesia.

Pratt, Sir Charles see Camden, 1st Earl

Praxiteles (c.390–330 BCE). Greek sculptor. He was the first to sculpt an entire female nude figure, using his mistress, Phryne. The only surviving statue believed to be original is of ‘Hermes carrying off the infant Dionysus’, in the Archaeological Museum in Olympia. His famous statue of Aphrodite of Cnidus (Venus) no longer exists but some ancient copies survive, of which the finest are in the Vatican and at Munich.

Prendergast, Maurice Brazil (1859–1924) American painter, born in Newfoundland. He trained in Boston, painted extensively in France and Italy, was influenced by *Cézanne, *Whistler, *Signac, *Degas and *Sickert, and had seven paintings in the 1913 Armory Show in New York. His work, first in watercolour, then oil, reflects the colour and form of Impressionism, in sharp contrast to the prevailing academic style in American painting.

Prescott, William Hickling (1796–1859). American historian, born in Salem, Mass. Educated at Harvard, he was blinded in the left eye, had limited sight in the right and suffered from acute rheumatism. He devoted himself to the history of Spain and the conquest of the Aztec and Inca empires, working from primary sources where possible although he never visited South America. His major works are History of the Reign of Ferdinand and Isabella the Catholic (3 vols., 1838), History of the Conquest of Mexico (3 vols., 1843), History of the Conquest of Peru (2 vols., 1847) and A History of the Reign of Philip the Second, King of Spain (3 vols., 1858), impressive but biased in favour of the Spanish.

Prester John. Legendary figure of medieval times, generally believed to be the Christian ruler of some distant Asian or (more usually) African kingdom of great wealth. Garbled reports of the Christian kingdom of Ethiopia may have lain behind this curiously persistent legend. The search for Prester John was the motive for many voyages of exploration.

Pretender, the Old and the Young see Stuart, James Edward and Stuart, Charles Edward

Pretorius, Andries Wilhelmus Jacobus (1799–1853). South African Boer leader, born in Cape Colony. He became prominent during the Great Trek from the Cape to Natal, when by his victory over the Zulus (1838) he avenged the massacre of Piet Retief and his 60 followers by the Zulu chief, *Dingaan. After the British occupation of Natal, Pretorius moved on to the Transvaal, the independence of which was secured by the Sands River Convention (1842). First President of the Transvaal South African Republic 1852–53, its capital Pretoria was named for him. His son Marthinus Wessels Pretorius (1819–1901), President of both the Transvaal 1855–71 and the Orange Free State 1859–63, tried, vainly, to unite them.
Prévost (d’Exiles), Antoine François (1697–1763). French novelist, known as l’Abbé Prévost. Having left his Jesuit college to serve as a soldier, he joined the Benedictines and became a priest. His vocation was real enough but often in conflict with the demands of his nature for passion and adventure. His life in consequence contained clashes with his Church superiors (and even the police) as well as periods when he found it wise to live abroad, especially in England. The conflict was to some extent resolved by his writings in which he could enjoy by proxy some of the experiences otherwise denied. In the Abbey of St Germain des Prés in Paris, he wrote the novel Les Mémoires d’un homme de qualité (1728–31). This included the famous love story Manon Lescaut (later an opera by *Puccini) in which the titular heroine was the femme fatale in the life of the chevalier Des Grieux, a young man closely resembling Prevost himself. He translated several of Richardson’s novels into French.

Price, Richard (1723–1791). Welsh Unitarian minister. A thinker on moral and political problems and ideas, he advocated the reduction of the National Debt in 1771 and defended the policies and aspirations of the American Revolutionaries. A friend of Benjamin *Franklin, he was well regarded in America and was invited over by Congress in 1778, after his Observations on Civil Liberty and the War with America (1776).

Prichard, Katherine Susannah (1883–1969). Australian novelist, born in Fiji. She grew up in poverty in Tasmania and Victoria, became a governess, then a journalist, lived in London 1908–16 and in Western Australia from 1919. Her novels included The Pioneers (1915), Working Bullocks (1926), Coonardo (1929) and The Roaring Nineties (1946). She joined the Australian Communist Party in 1920 and became an inflexible Stalinist. Her husband, Jim (Hugo Vivian Hope) Throsell (1884–1933) won a VC at Gallipoli, supported her politics and pacifism but suffered from depression and shot himself.

Priestley, J(ohn) B(oynton) (1894–1984). English novelist, playwright and essayist, born in Bradford. Wounded in France in World War I, he studied at Cambridge University, then worked as publisher’s reader in London. After making his name with critical studies of Meredith (1926) and Peacock (1927) he wrote the picaresque novel The Good Companions (1929), the most popular of all his works, followed by e.g. Angel Pavement (1930), Bright Day (1946) and Festival at Farbridge (1951). The plays Dangerous Corner (1932) and Laburnum Grove (1933) show his skill and originality in a new medium. Four others Time and the Conways (1937), I Have Been Here Before (1937), Music at Night (1938) and An Inspector Calls (1946) have plots based on J. W. *Dunne’s space-time concepts. He wrote more than 100 books, including three volumes of autobiography, history and criticism, and was a particularly effective broadcaster (especially during World War II). He received the OM in 1977.

Priestley, Joseph (1733–1804). English Unitarian clergyman and chemist, born in Yorkshire. The orphaned son of a preacher, he was largely self-educated, with a gift for languages. He met *Franklin in 1766 and this encouraged him to concentrate on science and to write a History of Electricity (1767). He was the first to produce several gases e.g. ammonia, sulphur dioxide and the oxides of nitrogen. Experiments with carbon dioxide led to the invention of soda water (1772), which earned him the Copley Medal. He became librarian (1772–80) to Lord *Shelburne, adviser to Josiah *Wedgwood and a member of the Birmingham Lunar Society. The first to realise that air is not an elementary substance, but a compound of gases, Priestley isolated – as did *Scheele – the active component which he called ‘dephlogisticated air’ (1774), named ‘oxygen’ by *Lavoisier in 1779. His History of Early Opinion concerning Jesus Christ (1786) was deeply controversial. He strongly supported the French Revolution and this led to his Birmingham house being sacked by a mob (1791). Cold, remote and disagreeable, he felt increasingly isolated and migrated to America (1794). He first advocated the goal of ‘the greatest happiness for the greatest number’, later taken up by *Bentham.

Priére de la Côte-d’Or (originally Prieur-Duvernois), Claude-Antoine (1763–1832). French military engineer and politician. He served in the Legislative Assembly 1791–92, Convention 1792–95, Committee of Public Safety 1793–94 and the Council of 500 1795, Committee of Public Safety 1793–94 and the Council of 500 1795–99. He worked with *Carnot as de facto Minister for Supply in providing the weapons in the revolutionary wars. He founded the École Polytechnique, pushed for adoption of the metric weights and measures, then ran a wallpaper factory.

Prim y Prats, Juan, Count of Reus, Marques de los Castillejos (1814–1870). Spanish soldier and politician. He was a capable general and military administrator in several fields and also had a chequered but influential political career. He played a large part in the rivalries of Queen *Isabella’s reign and helped to overthrow *Espartero. Exiled for a time for complicity in a military plot, he returned to Spain
in 1850. Again exiled (1864–66) he was prominent in the revolution that deposed Isabella (1868) and in 1870, now Prime Minister, he took the unpopular step of offering the crown to Prince *Amadeo of Savoy, which provoked his murder by an unknown assassin.

**Primo de Rivera** (y Orbanela), Miguel, Marques d’Estella (1870–1936). Spanish dictator. After a military career which took him to Morocco, Cuba and the Philippines, he held a number of administrative appointments. After a military coup (1923) he set up a dictatorship welcomed by King *Alfonso XIII. He joined with France to crush *Abd el-Krim in Morocco (1926) and he improved Spain’s material prosperity, but opposition to his authoritarian rule steadily grew and in 1930 he resigned and retired to Paris, where he died. His son *José Antonio Primo de Rivera (1903–1936), a charismatic lawyer, whose friends included the poet Garcia *Lorca, founded the Falange Party, was elected to the Cortes and executed by Republican extremists in Alicante. *Franco, who saw him as a rival but found him a useful martyr, posthumously created him a duke in 1947. His name is memorialised on many church walls in Spain.

**Princip, Gavrilo** (1895–1918). Bosnian Serb nationalist. A student, he joined the Black Hand and assassinated *Franz Ferdinand and his wife at Sarajevo (28 June 1914). Fifteen youths were arrested for treason and six executed. Reprieved on account of his age, Princip died of tuberculosis in prison.

**Prior, Matthew** (1664–1721). English poet and diplomat, born in Wimborne. Son of a joiner, he was educated under the patronage of Lord Dorset and sent to Holland as secretary to the British Ambassador. There he was noticed by William of Orange (*William III) and later played so important a part in the Treaty of Utrecht (1713) that it was known as ‘Matt’s Peace’. The success of his *Poems on Several Occasions* (1718) relieved him of financial anxiety and, though the Whigs had no use for his political services, he led an agreeable life much courted for his wit. Much of his work was in the form of burlesque and he was a successful writer of light verse.

**Pritchett, Sir Victor S(awdon)** (1900–1997). English author and critic. He wrote biographies of *Balzac, *Turgenev and *Chekhov, an autobiography, many essays and much admired short stories. He was awarded the CH in 1993.

**Proclus** (410–485). Greek philosopher, born in Constantinople. Of wealthy parentage, he studied rhetoric, grammar and law, and was a mathematician and astronomer as well as a philosopher. He is ranked with neoplatonists, and indeed he carries to an extreme their practice of forming a synthesis of all beliefs and philosophical systems, using not only the inner vision of *Photinus but a Euclidian method of classification of gods, demons etc. derived from all the mythologies and theologies known to him. Using the method of dialectic, he also applied this system of subdivision to the Intellect (or Mind) and Soul, forming an elaborate chain of descent from the One. Having thus carried the neoplatonist process of integration to an extreme point, he could have no direct successors, though he influenced *Descartes and *Spinoza among others, and in a sense anticipated deism. He lived as an ascetic and, though like the other neoplatonists he interpreted *Plato as a theologian, he was an initiate of the pagan mysteries.

**Procopius** (d.565). Byzantine historian. He accompanied *Belisarius on his campaigns, and wrote *De Bello (Wars) in eight books and the scurrilous *Anecdota (Historia arcana or Secret History), which provide valuable first-hand accounts of the wars against the Vandals and other events of *Justinian’s reign. His *De aedificiis, a book describing the public buildings of his time, has great archaeological interest.

**Prodi, Romano** (1939– ). Italian economist and politician. A professor at the University of Bologna, he was Premier of Italy 1996–98, as head of the ‘Olive Tree’ Centre-Left coalition. He became President of the European Union 1999–2001, and Prime Minister 2006–08, after a tight contest with *Berlusconi, but his left coalition fell apart in 2008 and Berlusconi returned to office.

**Profumo, John Denis** (1915–2000). English soldier and Conservative politician. Of Italian descent, he was MP 1940–45, 1950–62, served in World War II and reached the rank of brigadier. In 1954 he married the beautiful film star *Valerie Hobson (1917–1998). As Secretary of State for War 1960–63, under *Harold Macmillan, he was at the vortex of a scandal (the *Profumo Affair) involving his liaison with Christine Keeler, who had informal relations with a Russian agent, creating media frenzy about sex, snobbery, espionage and the consequences of lying to Parliament. The affair paralysed the last months of the Macmillan Government. The disgraced Profumo redeemed himself by active involvement in charities.

**Prokhorov, Aleksandr Mikhailovich** (1916–2002). Russian physicist, born in Peeramon, Queensland. His family, political exiles, returned to Russia in 1923. With Nikolai Basov he worked out the theoretical basis of the maser, which led to the laser, independent of C. H. *Townes’ research. All three shared the 1964 Nobel Prize for Physics.

**Prokofiev, Sergei Sergeyevich** (1891–1953). Russian composer, born in the Ukraine. A brilliant pianist from his early childhood, he studied composition with *Glìère, *Rimsky Korsakov and *Lyadov. Among his early works written before he left Russia in 1918 or during his sojourn abroad were...
his **Classical Symphony** (1916–17) the first and still perhaps the best known of seven symphonies, the opera **Love of Three Oranges** (1921) and ballet scores for *Diaghilev in Paris* (1921–27). He returned to the USSR in 1933. A prolific composer, his later works included two violin concertos, five piano concertos, the operas *The Flaming Angel* (1922–25) and *War and Peace* (1941–42), scores for *Eisenstein's films Alexander Neesby and Ivan the Terrible*, the ballets *Romeo and Juliet* (1935) and *Cinderella* (1941–44), the popular 'symphonic fairy tale' for children *Peter and the Wolf* (1936) and nine piano sonatas. His music is noted for its satirical, often astringent, tone.

**Propertius, Sextus** (c.50–c.15 BCE). Roman poet. He spent most of his life in Rome. Almost all his poems are dedicated to his passion for 'Cynthia', the courtesan Hostia. His elegics lack the smooth perfection of *Ovid's* but show much deeper feeling.

**Protagoras** (c.485–c.411 BCE). Greek sophist from Abdera in Thrace. His religious scepticism was, he explained, due to ignorance of the existence of the gods, owing to 'the obscurity of the subject and the shortness of human life'. He is remembered for his maxim 'Man is the measure of all things, of the existence of the things that are and the non-existence of the things that are not'. Good (i.e. efficient) conduct, leading to success, was the target at which his teaching was aimed. He is portrayed in *Plato's dialogue bearing his name.*

**Proudhon, Pierre Joseph** (1809–1865). French political theorist, born in Besançon. From a poor family, he was educated with the help of friends and later won a three-year bursary given by the Besançon Académie. He went to Paris where he published *Qu'est-ce que la propriété?* (1840), the answer to the question being 'property is theft'. The clearest exposition of his views is found in his *Système des Contradictions économiques* (1846). In the revolution of 1848 he was elected to the assembly but the violence of his opinions and writings led to more than one period of imprisonment and exile. His writings fill 33 volumes with another 14 of correspondence. His statement that property is theft is based on the theory that owners of property whether in land or industry exact the produce of labour in the form of rent, interest, profit etc. without giving equivalent recompense. Another main thesis that anarchy is the culmination of social progress predicts that when man attains his full social development he will have acquired enough self-discipline to enable police and government restraints to be dispensed with. Much of Proudhon's thought was adopted by others, but he died neglected.

**Proust, (Valentin Louis Georges Eugène) Marcel** (1871–1922). French novelist, born in Auteuil (now a suburb of Paris). His father, a physician, was Catholic, his mother Jewish, and he grew up in a wealthy bourgeois environment. Asthmatic from the age of nine, his education was much interrupted by illness. He abandoned law studies at the Sorbonne but read avidly and was influenced by the aesthetics of John *Ruskin and the philosophy of his relative by marriage Henri *Bergson. He was an early and active supporter of Alfred *Dreyfus. He lived as a dilettante until he was 35, ambitious to rise in society and haunting the literary salons. During this time he published only a few volumes of verse and, although his grasp of English was imperfect, translations of Ruskin's *The Bible of Amiens* (1899–1900) and *Sesame and Lilies* (1904–05).

He had become attracted to Bergson's views on time and the unconscious. He explored the limitations placed on the intellect's ability to grasp and hold by the continuous process of time, and finally on the superiority of intuition over intellect in assessing reality. His mother's death (1905) brought a complete change. Without her protective care and understanding the sensitive invalid withdrew into the seclusion of a cork-lined flat and devoted himself for the rest of his life to writing seven novels (3300 printed pages in total) which bear the collective title *À la recherche du temps perdu.*

*À la recherche du temps perdu* describes events (estimated as 182 days) between 1877 and 1925 (a projection, three years after Proust's death), but providing a panoramic view of French society, especially in the decade 1892–1902, *la belle époque*, during the Third French Republic, seen through the eyes of a social climber, a heterosexual and non-Jew, not Proust himself. The Narrator describes himself as ‘(je) throughout, but there are two casual references to ‘Marcel’. The work provides a penetrating analysis of personalities, class, painting and music, the *belle époque*, the Dreyfus case and the demoralising impact of war. It is both a comic masterpiece and an examination of time and memory. Proust’s psychological insights are profound. The dividing line between real and imaginary is often unclear. But this is no dream sequence; the characters are sharply, and often ironically, drawn. It defies definition and comparison. The contrast between Swann's Way (*Du côté de chez Swann* – 1913) and The Guermantes Way (*Le côté de Guermantes* – 1920) – is both literal and
metaphorical: two areas bisected by the Seine, the bourgeois Faubourg Saint-Honoré on the right bank, the aristocratic Faubourg Saint-Germain on the left.

Proust had a profound psychological understanding, matched by his analysis of time and aesthetics. In *Time Regained* the Narrator writes: 'Every reader is, as he reads, actually the reader of himself. The work of the writer is only a kind of optical instrument that he offers the reader so he is able to discern what he would perhaps never have seen in himself without this book. The reader's recognition in himself of what the book says is the proof of the book's truth.' The novel is marked by a preoccupation with optics – with the process of seeing, sorting and interpreting images. Even more important is memory, especially involuntary memory, the celebrated and often quoted moments biheureux, incidents apparently trivial which keep being recalled: a madeleine dipped in tea, his mother's failure to kiss him good night, the unevenness of cobblestones, the clink of cutlery on a plate. Proust picked up from *Montaigne* the concept of 'soul error' ('une erreur d'âme'), the persistent undervaluing of our own observation or experience. Nevertheless, he recognised that memory is not fixed, but ever-changing as creativity interacts with the raw material of experience.

The first novel *Du côté de chez Swann* (*Swann's Way*) was completed in 1912 but only published at the author's expense; the first volume appeared in 1913. (André *Gide* had rejected it for serialisation in *Nouvelle Revue Française.*) World War I interrupted publication and meanwhile the author had changed and expanded his plan. A new publisher took over, and a second volume, *À l'ombre des jeunes filles en fleur*, was awarded the Prix Goncourt (1919). The remaining volumes, including the notorious *Sodom et Gomorrhe* (3 volumes, 1922), continued to appear until his death and afterwards (1920–25). *À la recherche* appeared in an English translation by C. K. Scott Moncrieff between 1922 and 1931, under the Biblical and Shakespearean title *Remembrance of Things Past*. Since the 1992 revision, based on a corrected French text, the title *In Search of Lost Time* (less poetic but closer to Proust's own title) has been used. Although he was never even nominated for the Nobel Prize, by the year 2000 Proust was often identified in surveys as the greatest novelist of the 20th century.

**Prout, William** (1785–1850). English chemist and physician. He pioneered researches into organic chemistry, principally on the digestive system, and on urine. He recognised that the gastric juices of many animals contain hydrochloric acid, and experimented on the chemical decomposition of foodstuffs (seeing them as combinations of water, fats, carbohydrates and proteins). Prout's main theoretical concept was the belief based on some experimental work that the atomic weights of all elements were integral if the atomic weight of hydrogen was taken as unity. He had an underlying conception of hydrogen as a kind of primary matter from which all other matter might be formed. Prout's hypothesis turned out to be untrue, but it proved an important stimulus through the 19th century to the study of atomic weights, and to attempts to classify the elements.

Prout, William (1600–1669). English Puritan politician and pamphleteer. Because his *Histriomastix* (1632), a huge work attacking the stage and its players, was alleged to defame *Charles I* and his queen Prynne, he was savagely sentenced by the Star Chamber to imprisonment in the Tower of London, a large fine and the loss of his ears. Three years later he was again fined, and branded 'S. L.' (seditious libeller) on his cheeks for attacking Archbishop *Laud* in pamphlets. He was released in 1640, became an MP in the Long Parliament and a strong supporter of the parliamentary cause. In December 1648 he was expelled, following Pride's Purge. He wrote many pamphlets attacking the army and the developments of the 1650s. Under *Cromwell* he suffered imprisonment and became a vigorous propagandist for the Restoration, after which event he was rewarded by being appointed Keeper of the Records at the Tower of London. He published valuable historical work.

**Ptolemy** (Claudius Ptolemaeus) (c.90–168). Greek astronomer and geographer. He lived in Alexandria and wrote an astronomical treatise (known under its Arabic name *Almagest*) which is the source of almost all our knowledge of Greek astronomy and was a fundamental textbook until the discoveries of *Copernicus* upset its basic theory that the earth is the centre of the universe. His *Guide to Geography*, with the accompanying maps, was equally influential. He conceived of the world as a sphere and he introduced the method of fixing locations by means of parallels of latitude and meridians of longitude. That he made mistakes of measurement is of small account when compared with the greatness of his achievement, to which the whole science of cartography owed its origin. It was due to Ptolemy's mismeasurement of the equator that *Columbus* believed that he had reached Asia by a westward route when he discovered the West Indies.

Ptolemy I (c.367–283 BCE). Macedonian founder of an Egyptian dynasty. One of *Alexander the Great's Macedonian generals, he became Governor of Egypt when the Macedonian conquests were divided after the king's death. In 305 for his assistance to besieged Rhodes he was named Soter (Saviour), and in the same year assumed the title King of Egypt. He made Alexandria, his capital, a centre of commerce and Greek culture.

His son Ptolemy II Philadelphus (c.308–246 BCE) founded the great Alexandrine library and raised Ptolemaic Egypt to its zenith. There followed a long line of which Ptolemy XIV (47–30 BCE) was the last. Ptolemy XII was the brother of *Cleopatra.

Puccini, Giacomo (1858–1924). Italian composer, born in Lucca. Last of a musical family, he became an organist and studied composition at Milan. He wrote some religious and instrumental music but, influenced by *Verdi and *Wagner, turned to opera and had his first success at La Scala in 1884 with *Le Villi by *Verdi and *Wagner, turned to opera and had his first success at La Scala in 1884 with *Le Villi, followed by *Edgar (1889). The last great practitioner of verismo (realism) in Italian opera, his melodic gift, capacity to exploit vocal and orchestral resources, and theatrical sense were enormously successful. Far more than his contemporary Richard *Strauss, he was open to new ideas and recognised the importance of *Debussy, *Schoenberg and *Stravinsky. His intensely romantic operas, e.g. *Manon Lescaut (1893), *La Boheme (1896), *Tosca (1900), *Madama Butterfly (1904), *The Girl of the Golden West (1910), *Turandot (unfinished at the time of Puccini's death but completed by Franco Alfano and first performed in 1926), brought him international fame and great wealth. He died in Brussels after a failed operation for throat cancer.

Pugachev, Emelian Ivanovich (1744?–1775). Russian impostor. He was a Cossack who posed (1773) as *Catherine the Great's dead husband *Peter III. He managed to attract a large force, mainly of serfs whom he had enlisted with promises of freedom. Despite early successes he was defeated, betrayed into captivity, taken to Moscow in an iron cage and there executed.

Pugin, Augustus Welby Northmore (1812–1852). English architect and writer. Protagonist of the Gothic Revival, although he designed more than 60 churches (e.g. St Chad's Cathedral, Birmingham, and his masterpiece, St Giles, Cheadle, Staffordshire) and many country houses, he exercised more influence through his writings, notably *The True Principles of Pointed or Christian Architecture (1841), which became the textbook of Victorian Gothic. He worked under *Barry on the Houses of Parliament and much of the elaborate detail of ornament and fittings was designed by him. Pugin was no mere copyist but indicated how Gothic forms and structural principles were adaptable to modern buildings.

Pulitzer, Joseph (1847–1911). American newspaper proprietor, born in Hungary. Having fought in the Civil War he became a reporter, and later acquired the St Louis Post Despatch (1877) and the New York World (1883), which he made the leading Democratic newspaper. In his will he established a fund for annual prizes for journalism, literature and music.

Pullman, George Mortimer (1831–1897). American industrialist. He invented and, in America, practically monopolised the manufacture of the railway sleeping-cars and luxury day-coaches that bear his name. The town of Pullman in Illinois was built for his employees.

Pulteney, William, 1st Earl of Bath (1684–1764). English politician and orator. He served as a Whig MP 1705–42, was Secretary of State for War 1714–17 and originally a strong supporter of *Walpole. However, he came to regard Walpole as corrupt and from 1725 led ‘the Patriot Whigs’ in opposition to him. He accepted a peerage from *George II in 1742. In 1742 and 1746 he almost became Prime Minister but on both occasions lacked enough support in the House of Commons.

Purcell, Henry (1659–1695). English composer, born in London. He came from a family of musicians and as a boy was a chorister of the Chapel Royal, London (1669–73). He later sang as a counter-tenor ‘with incredible grace’. After being a music copyist at Westminster Abbey he was appointed (1677) composer to the king’s violin band. Two years later he became organist of Westminster Abbey, and from 1682 of the Chapel Royal. He composed much Church music, over 200 songs, duets and catches, keyboard works, chamber music (some early string fantasias on the Elizabethan model and later works in the new Italian concerted style), nearly 70 anthems, many with orchestral accompaniment, and incidental music for plays. His six operas and semi-operas include *Dido and *Aeneas (1689), *King Arthur (1691), *The Fairy Queen (1692), an adaptation of *Shakespeare’s *Midsummer Night’s Dream, and *The Indian Queen (1695) to words by *Dryden. His occasional works include the ode for St Cecilia’s Day *Hail,Bright Cecilia (1692) and odes of welcome and birthday odes for the sovereign, e.g. *Come ye sons of art (1694).

Purkinje, Jan Evangelista (1787–1869). Czech physiologist. His main work centred on the physiology of the senses. He experimented on vertigo, was interested in the aberrations of the eyes and performed interesting self-experimentation on the visual effects of applying pressure to the eyeball. The physiological basis of subjective visual effects had been examined but hitherto largely ignored in the German-speaking world, partly because of the assumption, made by "Goethe and other Romantics, that they were essentially products of the imagination. After 1830 much of Purkinje’s work centred on cell observations, using compound microscopes. He described nerve fibres and cell division and observed the ‘fibres of Purkinje’ in the heart ventricles. He was one of the earliest scientists to use the term ‘protoplasm’.

Pusey, Edward Bouverie (1800–1882). English religious leader. After being ordained (1828), he was Regius professor of Hebrew at Oxford 1829–82. With *Newman and *Keble he was a leader of the Tractarian or Oxford Movement which started in 1833 with the publication of the first issues of Tracts for the Times, to which Pusey made notable contributions on the eucharist and baptism. The movement was designed to combat rationalism and by stressing the common heritage of the Roman Catholic and English Catholic churches it was hoped to pave the way for eventual reunion. But Pusey did not himself follow Newman’s example of joining the Roman Catholic Church and in his writings and sermons argued against such a course. He was responsible for many benefactions and worked in the East End of London during the cholera epidemic of 1866. His book collection formed the nucleus of the library at Pusey House, Oxford, opened in his memory in 1884.

Pushkin, Aleksandr Sergeivich (1799–1837). Russian poet, dramatist and short-story writer, born in Moscow. He came of a poor but noble family, with an exotic strain in his ancestry: his maternal great-grandfather, Abram Petrovich Gannibal, claimed to be an Abyssinian prince and became a general under *Peter the Great. In St Petersburg as a young man, he combined work at the Foreign Office with life as a poet and man about town, but many of his poems, e.g. the fiery Ode to Liberty (1820), were infected with the ideas that the French armies had carried with them through Europe and he was exiled to south Russia. There, under *Byron’s influence, he began to replace the rigid classicism that Russia had borrowed from France by freer, romantic and more dramatic forms. Twenty-four of his works became operas (some set several times). In Odessa he began (1824) his verse novel Eugene Onegin suggested by *Byron’s Don Juan and later converted into an opera by *Tchaikovsky. A similar musical destiny awaited several of Pushkin’s best known creations. Ruslan and Lyudmila (1820), his first major work, became an opera by *Glinka. The tragic drama Boris Godunov (1825) is even better known as *Mussorgsky’s opera. The Queen of Spades, a remarkable short novel, had a future not only as an opera by Tchaikovsky but also as a film. Mozart and Salieri (1831) and Ruslan and Lyudmila (1820), his first major work, was set by *Glinka. The Gypsies (1824), an epic poem, became *Rachmaninoff’s opera Aleko (1892). Mozart and Salieri (1831) and The Golden Cockerel (1835) became operas by *Rimsky-Korsakov. Among Pushkin’s other works was the narrative poem The Bronze Horsemen (1833) and the novel The Captain’s Daughter (1836). He also wrote folk and fairy stories and many beautiful lyrics, several of which have been turned into songs. Pushkin returned to St Petersburg after the accession of Tsar *Nikolai I, and a visit to the Caucasus (1829) resulted in a finely descriptive prose work, The Journey to Arzrum. In 1831 he succeeded at last in making the beautiful but frivolous Natalya Nikolayevna Gonchorova (1813–1863) his wife, but the marriage was unhappy and he died of wounds received in a duel with a French officer Georges d’Anthès whom he suspected of being his wife’s lover. Like *Shakespeare and *Goethe, Pushkin’s work is all the more extraordinary because he created a national literary tradition rather than building on one. *Gogol, *Turgenev, *Dostoevsky and *Tolstoy were his heirs.

Puvis de Chavannes, Pierre (1824–1898). French painter. He attempted with partial success to restore to wall paintings their significant place in art. Examples of his work are the paintings of the life of St Genevieve on the walls of the Panthéon, which occupied him from 1874 until his death.

Putin, Vladimir Vladimirovich (1952– ). Russian administrator and politician. A KGB spy in East Germany 1985–89, he became an aide to Anatoli *Sobchak in St Petersburg. PM 1999 and Acting President 2000, after *Yeltsin’s resignation, he won the presidential election in March 2000 on the first ballot, with 52 per cent of the votes, and was re-elected in 2004. In 2008, constitutionally barred from seeking a third consecutive term, he secured the election of Dmitri *Medvedev, who then appointed him Prime Minister 2008–12. Putin and Medvedev exchanged roles in 2012, with Putin resuming the presidency. His personal wealth was calculated at $42 billion and his rule often described as a kleptocracy.

Pu’yi, Henry (Xuantong) (1906–1967). Last Qing (Manchu) emperor of China 1908–12. A nephew of the murdered emperor Guangxu, he was appointed to the throne by the dowager empress *Cixi (Tz’u Hsi) at the age of two. Deposed by *Sun Yatsen’s revolution (1912), he adopted his English pre-name as a tribute to *Henry VIII. In July 1917 he was restored for one week. He lived in Japan 1932–34 and, after the invasion of Manchuria, became as Gang
De, the puppet emperor of Manchukuo 1934–45. Held by the Russians 1945–50, and jailed in China as a political criminal 1950–59, he declared himself as a supporter of the People's Republic, worked as a gardener in Shenyang, then as a research worker in Beijing. He wrote memoirs and was the subject of *Bertolucci's film *The Last Emperor (1986).

Pym, Barbara (Mary Crampton) (1913–80). English novelist. She published six novels between 1950 and 1961 with modest success, only gaining wider recognition after 1977 when critics in the *Times Literary Supplement singled her out as one of the most underrated writers of the century. Her books include *No Fond Return of Love (1961), *Quartet in Autumn (1977) and *The Sweet Dove Died (1978).

Pym, John (1584–1643). English politician. He first entered parliament in 1614, and after the accession of *Charles I became the crown's sternest and most effective opponent. Prominent in the impeachment of *Buckingham, he took an active part in promoting the Petition of Right (1628). After the 11 years during which Charles called no parliament (1629–40) he was foremost in pressing the proceedings against Strafford and Laud. In 1642 he was one of the five MPs whom Charles tried to arrest. Until his death in December 1643, he led the Commons. After the outbreak of the Civil War he devised the alliance with the Scots which eventually gave the parliamentarians the victory. An outstanding parliamentary orator, he died of cancer.

Pyrrho of Elis (c.310–270 BCE). Greek philosopher. He taught an extreme form of scepticism, which held that it was impossible to understand the nature of things and that the best state of mind was obtained by suspending judgment rather than attempting to make decisions. He would admit that man could have a sensation of sweetness or pain but in the latter case would lessen its effect by not believing it to be evil. The term 'Pyrrhonian scepticism' passed into common speech. None of his writings survive.

explanation of knowledge. It fathered most schools of philosophy that existed in the European tradition for the next two millennia.

**Pytheas** (4th century BCE). Greek navigator and geographer, born at Massilia (Marseilles). He sailed past the coasts of Brittany and reached Cornwall, where he traded in tin at an island believed to be St Michael’s Mount. Eventually he reached ‘Thule’ (probably one of the Shetlands) and the Baltic Sea. His account, now lost, was received with incredulity in his own day, but was used by *Strabo* and seems to have been as accurate as possible with his limited resources. He attributed tidal movement to lunar attraction.

**Pythias** see Damon and Pythias
Qaddafí see Gaddafi

Qianlong (1711–1799). Chinese Emperor 1736–96, of the *Qing dynasty. Grandson of *Kangxi, he abdicated so that his reign would be of identical length. He built the beautiful Chengde (jehol) summer resort with its famous gardens, was a gifted calligrapher, painter and poet and a major collector of art works. Although he received Lord *Macartney’s mission (1792–94), he sealed China, rejected Westernisation, and banned and burned books. China’s population doubled during his reign.

Qianlong (1711–1799). Chinese Emperor 1736–96, of the *Qing dynasty. Grandson of *Kangxi, he abdicated so that his reign would be of identical length. He built the beautiful Chengde (jehol) summer resort with its famous gardens, was a gifted calligrapher, painter and poet and a major collector of art works. Although he received Lord *Macartney’s mission (1792–94), he sealed China, rejected Westernisation, and banned and burned books. China’s population doubled during his reign.

Qin. Chinese dynasty, formerly called Ch’in (Wade-Giles), the first to unify the country and which ruled 221–206 BCE.

Qin Shihuang (Shi Huang Di) (‘First sovereign emperor’, personal name Ying Zheng) (259–210 BCE). Chinese Emperor 221–210 BCE, founder of the Qin dynasty. From the age of 13 he was King of the state of Qin, based on Shaanxi in the northwest. Through war and diplomacy he defeated six rival states to unify China under his rule. Assisted by his minister *Li Ssu, he imposed an authoritarian regime from his capital Xianyang, near the present city of Xi’an. Writing, weights and measures (even axle widths) were standardised. He built the Great Wall with remarkable speed and efficiency, imposed a rigorous censorship, had 460 scholars burnt alive, and destroyed ancient manuscripts, only preserving those on farming and medicine. He made frequent journeys through his empire and died while travelling. His dynasty fell in 206 BCE to the Western Han.

Quadros, Janio da Silva (1917–1992). Brazilian politician. A teacher and lawyer and an able campaigner with an eccentric style, he was Governor of São Paulo 1955–59 and President of Brazil 1961, resigning unexpectedly after seven months and going into exile. He was Mayor of São Paulo 1985–89.

Quant, Mary (1934– ). British designer. In 1955 she established her first shop, promoted the miniskirt (1966), used denim in fashion, created her own garments, textiles and cosmetics, won many awards and wrote an autobiography Quant by Quant (1966).

Quarles, Francis (1592–1644). English metaphysical poet. The most successful verse-moralist of his day, Divine Emblems (1635) was the main source of his fame. Some of his epigrams are remembered, e.g. ‘No man is born unto himself alone’, ‘He that begins to live, begins to die’. A royalist in the Civil War, he was plundered by the Roundheads.

Quasimodo, Salvatore (1901–1968). Italian poet, critic and translator, born in Sicily. Trained as an engineer, he taught literature at the Milan Conservatory 1935–64 and translated works by *Aeschylus, *Ovid, *Shakespeare, *Molière and *Neruda. He is considered the leading writer of the Italian Hermeticist movement which was inspired by a symbolical use of language. His later poems are much concerned with ‘la poesia sociale’, expressing a social conscience and a sense of history. He received the Nobel Prize for Literature in 1959.

Tondo, M., Salvatore Quasimodo. 1970.

Queen, Ellery. Pen name of Frederic Dannay (1905–1982) and Manfred B(ennington) Lee (1905–1971), American authors. They wrote 35 full-length detective novels and hundreds of short stories. ‘Ellery Queen’ is the name not only of the author but of the detective hero.

Quenneau, Raymond (1903–1976). French novelist and poet. Originally a surrealist, he became a master of parody and word play, along Joycean lines, and had a profound influence on young writers, notably Georges *Perec.
Quennell, Sir Peter Courtney (1905–1993). English writer and critic. He edited the *Cornhill Magazine* (1944–51) and became joint-editor of *History Today* (1951–79). His works include biographical and critical studies, notably of Lord *Byron, John *Ruskin, *Shakespeare, *Pope and Samuel *Johnson. He also wrote poetry, e.g. *Inscription on a Fountain Head* (1929).

Quénesay, François (1694–1774). French physician and economist. Physician to *Louis XV, he was best known for his many books on economics and for his contributions, on agricultural and economic subjects, to the famous *Encyclopédie*. As the leader of the Physiocrats, he held that land was the ultimate source of all wealth and that to interfere with production or exchange must lead to disaster. His *Tableau économique* (1758) anticipates to a limited extent the tables of national income and expenditure of today.

Quetelet, (Lambert) Adolphe Jacques (1796–1864). Belgian statistician, born in Ghent. He showed early mathematical talent and in 1815 he was appointed professor of mathematics at the Collège de Ghent, in 1819 receiving a doctorate from the newly founded university. In the 1820s he developed an interest in astronomy, and began to take a mathematical approach to meteorology. But the work for which he was feted in his own day emerged in the 1830s. He began to develop the theory of mathematical statistics, devised careful tests for the validity of statistical information, and pioneered the use of social statistics for the understanding of the ‘average man’. Quetelet's belief, that the regularities of human behaviour revealed by weight of data demonstrate that man, too, operates under natural law, was not original (political economists, for example, had always assumed it). But much use was made of Quetelet's mathematical prestige in attempts to generate an empirical sociology or a theory of man as part of Nature. He pioneered the concept of the normal distribution curve, which became an important tool in later studies of criminal and deviant behaviour.

Quétredo y Villégas, Francisco Gómez de (1580–1545). Spanish writer. He became secretary to *Philip IV* (1632) but after opposing *Olivares was imprisoned, which so injured his health that he died soon after release. His works, both in poetry and prose, display a striking contrast between those that are moral or religious in tone and the burlesques noted for their broad humour, puns, slang and exaggerated style. A picaresque novel, *La Vida del Buscón Pablos* (1626) is perhaps his best known work. His *Suenos*, translated as *Visions*, were popular in Stuart England.

Quèzon y Molina, Manuel Luis (1878–1944). Filipino politician. He fought in the revolt against the Spaniards (1898), and later became leader of the nationalists in the Philippine Assembly (when the islands were under US control). He campaigned vigorously for independence both as Commissioner to the US 1909–16 and as President of the Philippine Senate 1916–35. When the Commonwealth of the Philippines was created (1935) he was elected the first president and he was a strong supporter of the Americans against the Japanese. He took refuge in the US when the Japanese invaded the country and headed a government in exile. Quezon City, the capital, was named after him.

Quiller-Couch, Sir Arthur Thomas (1863–1944). English scholar and anthologist. Of Cornish origin, educated at Oxford, he was a prolific essayist under the pen name ‘Q’. He edited *The Oxford Book of English Verse* (1900), received a knighthood in 1910 and became the first King Edward VII professor of English literature at Cambridge 1912–44. His 30 novels, many set in Cornwall, have disappeared without trace.

Quincy, Josiah (1772–1864). American politician. Continuing the tradition of his father, *Josiah Quincy* (1744–1775) who had been a prominent New England revolutionary, he played an important political role. He was elected to the House of Representatives in 1802 and became known as a staunch individualist, strongly opposed to slavery. He was a senator 1813–20 and having been an energetic and reforming mayor of Boston 1823–28 he became head of Harvard University, where his long presidency 1829–45 was marked by liberalism and progress. In 1854 he emerged from retirement to greet the new Republican Party and welcome its denunciation of all compromise with slavery.

Quine, W(illard) V(an Orman) (1908–2000). American philosopher, born in Ohio. Educated at Oberlin College and Harvard, he taught at Harvard from 1933, as a professor 1948–78, and received many academic awards. His publications on set theory and mathematical logic were highly influential. He criticised *Wittgenstein’s linguistic philosophy and urged reconsideration of a relationship between science and metaphysics*. *Quiddities* (1987) and *Pursuit of Truth* (1989) were aimed at a popular audience.
Quintilian (Marcus Fabius Quintilianus) (c. 30–96?). Latin rhetorician, born in Spain. He became famous for his *Institutio Oratoria (The Training of an Orator). The theme is wider than the title since it discusses what to say as well as how to say it. It not only advises the would-be orator on everything from dress to figures of speech but provides the basis of an elementary education, and lists authors whose style merits imitation. None of his own speeches, however, has survived. Little is known of his life and the date of his death is uncertain.

Quirino, Elpidio (1890–1956). Filipino politician. As a law clerk in the Philippine Senate he became friendly with *Quezon and was for years his close ally. He led the Filipino resistance to the Japanese and was first vice president of the Independent Philippines (1946) and president (1948–53). Ramon *Magsaysay defeated him in 1953 on the issue of government corruption.

Quiroga, Juan Facundo (1790–1835). Argentinian soldier. He took part in the revolution of 1810 against Spain and soon established himself as *caudillo (chietain) of the Andean provinces. To ensure his local supremacy he was a strong advocate of a federal form of government, which was adopted in 1827. He was notorious for his pitiless suppression of a faction that favoured a unitary state and raised a rebellion. He was assassinated, probably at the instigation of Juan de *Rosas, Governor of the province of Buenos Aires.

Quisling, Vidkun (1887–1945). Norwegian politician. After serving in the army, as an assistant in *Nansen’s relief work in Russia (1920–23), and as a consul, he became Minister for Defence 1931–33 and founded (1933) the National Unity party, a Norwegian version of *Hitler’s Nazi organisation in Germany. After the German invasion (1940) he proclaimed himself head of the Norwegian Government and, though temporarily disowned by the Germans, was recognised by them (1942) as head of an administration under German control. After the German defeat he was sentenced to death by a criminal court and shot. His name has become a synonym for a traitor and renegade.

Qutb, Sayyid (1906–1966). Egyptian Islamist and writer, born in Musha. He became a teacher, bureaucrat, writer and critic, studying in Colorado 1948–50. He became a leader of the Egyptian Muslim Brotherhood, contributing to a radical critique of Western values, based on his extreme distaste for culture and morality in the United States, and reviving concepts of jihad. He wrote a long commentary, *In the Shade of the Qu’ran. He opposed the Arab nationalism of Gamal Abdel *Nasser, and was imprisoned 1954–64. Re-arrested in August 1965, after a show trial he was convicted of plotting to overthrow the state and hanged. He is regarded as a spiritual founder of al-Qaida and a major influence on Osama bin *Laden.

Rabelais, François (c.1494–1553). French writer, born near Chinon in Touraine. His father was probably an advocate. He entered (c.1520) the Franciscan Order but transferred, with papal consent, to the Benedictines (c.1524). He seems to have visited several universities and acquired a great range of learning before finally leaving the Order to become a lay priest. In 1532 he graduated in medicine at Montpellier and afterwards practised at Lyons, where he wrote *Pantagruel* (1532) and *Gargantua* (1534) under the pseudonym Alcofri bas Nasier, an anagram of his own name. The giant Gargantua is Pantagruel's father and so in a sense the two books and those which followed are parts of a single work. A third book was published in 1546 and a fourth appeared complete in 1552. The authenticity of a fifth published after Rabelais' death is doubtful. The books were condemned at various times by the Sorbonne, though it was not the doctrines of the Church that were satirised but the ignorance and obscurantism of monks and priests and the many abuses that had become established. *François I refused to ban them and Rabelais himself was protected by Jean du Bellay, Bishop of Paris (cardinal from 1536), whom he twice accompanied to Rome, probably as his physician. The details of Rabelais' later life are obscure. Most of the time must have been spent in medical practice. He seems to have again visited Rome more than once. After the condemnation of the third book (1545) he took refuge in Metz and finally received an appointment (which he seems never to have taken up) as curé of Meudon, a small town near Paris. The books, which achieved an astonishing contemporary success (by 1600 more than a hundred editions had appeared), tell of the travels of two giants, Pantagruel and Gargantua, with their companion Panurge. They are a compound of great learning, bawdy wit and satire, expressing in an extreme form and by unusual means the humanism not only of the author but of Renaissance culture generally. Sir Thomas Urquhart (1611–1660) made a famous English translation (Books 1 and 2 published 1653, Book 3 1693) in language almost as exuberant as the author's own.

Rabi, Isidor Isaac (1898–1988). American physicist, born in Austria. In 1937 he became professor of physics at Columbia University in New York where he worked on the magnetic properties of atomic nuclei and perfected the molecular-beam resonance method. For this he was awarded the Nobel Prize for Physics (1944).

Rachel (Élisa Félix) (1821–1858). French actor, born in Switzerland. From her first stage appearance in Paris (1837) her greatness as a tragédian was recognised. As she played the great parts of *Corneille*, *Racine* (above all as Phèdre) and *Voltaire* she won renewed acclaim. During the revolution of 1848 her public recital of *La Marseillaise* provoked a sensation. She had a reputation for avarice and amassed a huge fortune. Through her liaison with Count *Walewski*, the emperor's natural son, she became the mother of a grandson of *Napoléon I*.

Rachmaninoff (Rakhmaninov), Sergei Vasilievich (1873–1943). Russian composer and pianist, born in Semyonovo. He studied first at St Petersburg and then (1885–92) at the Moscow Conservatoire, where he was the pupil of *Arensky* and Taneyev and knew *Tchaikovsky*, who was a major influence. By the age of 20 he had written the opera *Aleko*, the Piano Concerto No. 1, the ubiquitous Prelude in C Sharp Minor (its popularity irritated him) and many songs. In his 20s he was conducting, teaching and giving piano concerts. The failure of his Symphony No.1 (1897), due to *Glazunov's* poor conducting, caused three years of acute depression until he responded to treatment by hypnosis. The piano concertos No. 2 (1900–01) and No. 3 (1909), Cello Sonata (1901) and Symphony No. 2 (1906–07) marked his recovery. After the 1917 Revolution, he lived in the US and his career as a piano virtuoso reached its height in his 40s. Other works included the Concerto No. 4 (1927, revised 1938), *Rhapsody on a Theme of Paganini* (1934), Symphony No. 3 (1935–38), preludes and études-tableaux for piano, piano transcriptions and *Symphonic Dances* for orchestra (1940). His compositions remain popular because of their melodic strength, emotional intensity, and the dazzling virtuosity of the piano writing.

Racine, Jean (1639–1699). French dramatist, born in Picardy. Son of a lawyer, he was educated at Port-Royal, where he was influenced by Jansenist teachings. In Paris, where he sought literary fame, he became a friend of *Molière*, *La Fontaine* and later *Boileau*, meanwhile winning the favour of *Louis XIV with
complimentary poems. Molière’s company staged his first play, *La Thébaïde*, in 1664, but the production of the second, *Alexandre le Grand* (1665), led to the famous quarrel between the two playwrights. After a fortnight’s run Racine, dissatisfied with the performance of Molière’s company, transferred the production to that of his main rival, at the same time, it is said, stealing his mistress and star actor Madeleine du Parc. There were, indeed, many defamatory stories about Racine’s life in Paris at this time, including one said to have been extracted under torture from a well known sorcerer that he had poisoned his mistress, but Racine had the art of making enemies as well as friends and much can be attributed to malice. With the production of his third play, *Andromaque* (1667), Racine entered his great period. In this play and those that followed he displayed the great human emotions of love, jealousy and hatred at their highest point of intensity with their consequences of crime, madness or death. Though he was bound by the same classical formulas as his predecessors, he achieved freshness by a remarkable simplification of design combined with a psychological subtlety hitherto unknown. Moreover, he was a great poet and his lines are distinguished by their musical cadences.

The plot of *Andromaque* was taken from *Euripides*, as were those of *Iphigénie* (1674) and *Phèdre* (1677) a grim tale of illicit passion and jealousy which provides one of the finest parts ever written for a tragic actor. *Bajazet* (1672), which with *Britannicus* (1669), *Bérénice* (1670) and *Mithridate* (1673) forms a historical group, has an uncharacteristically complicated plot and an atmosphere of oriental intrigue. His only comedy, *Les Plaideurs*, appeared in 1668. In 1677 the office of royal historiographer enabled him to leave the theatre in dignity and comfort. The event coincided with a ‘conversion’, inspired perhaps by the coming of middle age, the influence of Madame de *Maintenon* and Boileau and his own underlying piety inculcated at Port-Royal. To this period belong his last two plays, *Esther* (1689) and *Athalie* (1691), both on biblical themes and written for the Maison de Saint-Cyr, the school founded by Madame de Maintenon. With the possible exception of *Phèdre*, *Athalie* is considered Racine’s greatest work. Its mighty theme, concerned with God’s anger and divine providence, is enriched by stage effects and choruses of outstanding beauty.

*Radcliffe, Ann* (née Ward) (1764–1823). English novelist. She was the most important of the writers of the ‘gothic romances’, the fashion for which was set by Horace *Walpole’s Castle of Otranto* (1765). The principal ingredients are romantic settings in which occur deeds of darkness, strange and mysterious events, and ‘supernatural’ happenings, afterwards rationally explained. Her best known work is *The Mysteries of Udolpho* (1794), set in a sombre castle in the Appenines. She influenced *Byron* and *Scott*, but Jane *Austen*, in *Northanger Abbey*, ridiculed her inferior imitators.

*Radek, Karl Bernardovich* (real name K. B. Sobolsohn) (1885–1939?). Russian author and politician, born in Poland. Of Jewish descent, he became a journalist and supported the German Social Democratic Party from 1904. He was imprisoned several times, fought in the Russian Revolution (1917) and tried to organise a communist revolution in Germany (1918–19). He was a member of the presidium of the Communist International 1919–1923 but his influence declined when the Comintern proved ineffective, and he became head of the Sun Yat Sen University for Chinese Students in Moscow 1923–27 until expelled from the Communist Party for having supported *Trotsky*. Restored to favour, he wrote for *Izvestia* and helpeddraft the 1936 constitution. In 1937 he was sentenced to 10 years’ jail for treason (a surprisingly light penalty) and presumably died there.

*Radetzky, Johann Joseph, Count* (1766–1858). Austrian field marshal. He fought against France throughout the Revolutionary and the Napoléonic Wars and was Commander-in-Chief in Austrian Italy from 1831. In the revolutionary year of 1848–49 he defeated the insurgents and their Sardinian allies at Custozza and Novara and forced the surrender of Venice. He held the country in firm control until his retirement (1857).

*Radischev, Aleksandr Nikolayevich* (1749–1802). Russian philosopher, poet and radical thinker. In 1790 he wrote *Journey from St Petersburg to Moscow*, which portrayed the miseries of serfdom and called for a social revolution. He was later sentenced to death, the sentence being commuted to exile in Siberia. He was allowed to return home after the death of *Catherine the Great* in 1796. In 1801 he became a member of a law commission but, despairing of
any progress towards abolishing serfdom, committed suicide. His writings influenced Russian reformers throughout the 19th century.

Rae, John (1813–1893). Scottish (Oradian) explorer and doctor, born in Orkney. He worked for the Hudson’s Bay Company, explored northern and northwestern Canada, explained (1854) the mystery of the loss of Sir John *Franklin and his expedition (enraging Lady Jane *Franklin in the process) and failed to receive appropriate recognition as the discoverer of the Northwest Passage, other than election as FRS and FRGS.

Raeburn, Sir Henry (1756–1823). Scottish portrait painter, born in Edinburgh. After two years in Rome 1785–87 he became a fashionable portrait painter in his birthplace. A keen sense of character, combined with strong colour and vivid effects of light, make his portraits lively as well as realistic. His best painting was The Skating Minister (1794). Sir Walter *Scott was among his sitters, often presented in national costume or on horseback in parkland settings. He became President of the Royal Scottish Academy in 1812, elected RA in 1815, and knighted in 1822.

Raeder, Erich (1876–1960). German sailor. Chief of Staff 1912–18 to Admiral Franz von Hipper, who commanded the battle cruisers in World War I, having been appointed Grand Admiral in 1939, he became Commander-in-Chief during World War II until superseded by Admiral Karl * Dönitz (1943). Condemned by the Nuremberg tribunal to life imprisonment for his part in planning the war and especially the invasion of Norway, he was released in 1955.

Raemaekers, Louis (1869–1956). Dutch cartoonist. The bitter irony of his cartoons attacking the Germans in the Amsterdam newspaper De Telegraaf had a remarkable effect on neutral opinion in World War I.

Raffles, Sir (Thomas) Stamford (1781–1826). English colonial administrator, born at sea. Son of a sea-captain, he joined the East India Company and went to Malaya (1805) as assistant secretary at Penang. In 1811 the British occupied Java (Holland then being under Napoléon’s rule). As Lieutenant Governor 1811–16 Raffles founded the magnificent botanic gardens at Bogor, began restoring Borobudur and wrote a monumental History of Java. On his personal initiative, and despite official misgivings, he founded (1819) Singapore, and so secured British control of Malaya. In 1824 a fire on board the ship on which he was returning to England destroyed his botanical and zoological specimens but with such replacements as he could collect he founded the London Zoological Society, of which he became first president 1824–26. He died of a brain tumour.

Rafsanjani, Ali Akbar Hashemi (1934–2017). Iranian politician and cleric. Educated in Qom, he was Speaker of the Islamic Consultative Assembly 1980–89 and became President of Iran 1989–97. In 2005 he contested the Presidency again, losing narrowly to Mahmoud * Ahmadinejad and in 2013 was disqualified as a candidate by the Council of Guardians.

Raglan, 1st Baron, FitzRoy James Henry Somerset (1788–1855). British soldier. Eighth son of the 5th Duke of Beaufort, as ADC to the Duke of *Wellington he was present at all the great battles of the Peninsular War, and lost an arm at Waterloo. He served as Wellington’s secretary 1819–52 and on his death received a barony and became Master General of the Ordnance. In 1854 he was appointed to command the British forces in the Crimea. For his victory at Inkerman, although made a field marshal, he was blamed for the misconstrued order that led to the fatal charge of the Light Brigade at Balaclava. Though an excellent tactician, he lacked the outstanding qualities demanded of a commander-in-chief. He died of dysentery and clinical depression in the Crimea.

Raikes, Robert (1735–1811). English philanthropist, born at Gloucester. His father was a printer and owner of a local newspaper which he inherited. Concern for the children whom he saw wandering in the streets on Sundays fired him to start a Sunday school (1780), where children might learn to read and repeat the catechism. Newspaper reports led to the scheme spreading to all parts of the country.

Rainborough (or Rainboro), Thomas (d.1648). English soldier and republican. A naval commander in the Parliamentary fleet, he became a colonel in the army and MP for Droitwich 1646–48. In the Putney Debates of the General Council of the New Model Army (October–November 1647), he led the republican officers, in opposition to * Cromwell and * Ireton, proposing manhood suffrage and religious toleration. He was killed by Cavaliers at Doncaster while resisting capture.

Rais (or Retz), Gilles de (1404–1440). French soldier and murderer. After fighting with * Joan of Arc at Orléans and being made a marshal by * Charles VII, this Breton nobleman took to necromancy and murder. Over 140 children are said to have been tortured and killed by him before he was taken and hanged. Breton tradition links him with the fairytale figure of Bluebeard.
Rajagopalachari, Chakravarti (1879–1972). Indian politician. A lawyer, he joined *Gandhi’s non-cooperation movement, but served as Prime Minister of Madras 1937–39. After partition and independence, he was Governor of West Bengal 1947–48 and *Mountbatten's successor as Governor-General 1948–50, the last to hold that post. He became *Nehru’s Deputy Prime Minister 1950–52 and Chief Minister of Madras 1952–54.

Rákosi, Mátyás (1892–1971). Hungarian Communist politician, of Jewish descent. As a young man he worked in a London bank, became a minister under Belá *Kun (1919), and was jailed (1927–40) under *Horthy. As first secretary of the United Workers (i.e. Communist) Party 1945–56 and Prime Minister 1952–53, he took a tough Stalinist line. He coined the phrase ‘salami tactics’ – dividing opponents ideologically and cutting them off piece by piece.

Raleigh (or Raleigh), Sir Walter (1552?–1618). English courtier, adventurer and writer, born in Devon. After accompanying his half-brother Sir Humphrey *Gilbert on an unsuccessful colonising expedition to the West Indies (1578), he served in Ireland (1580) and in 1582 went to court as a protégé of the Earl of *Leicester. He quickly won the favour of *Elizabeth I by his good looks, his wit and his fine clothes, and he received estates, trading monopolies in wine and wool, and a knighthood (1585). His haughty impatient manner brought him, however, many bitter enemies. He used his wealth to finance privateraing expeditions and colonising schemes, but he was not lucky. He found money for Gilbert’s last and fatal voyage. The attempts (1585 and 1587) to found a colony of Virginia, named after the queen, failed. He did not accompany the expeditions, but by planting on his Irish estates the potatoes his men brought back, and by setting a persuasive example of smoking the tobacco, he popularised the use of both (though they had already been discovered by the Spanish and Portuguese). The rivalry of a new favourite, *Essex, and the discovery (1592) of Raleigh’s liaison with Elizabeth Throckmorton, one of the queen’s maids-of-honour (whom he later married), brought temporary disgrace. In 1595 he was again at sea bound for the Orinoco, but gold from the fabled ‘El Dorado’ eluded him, and his discoveries in Guiana stirred few. He shared with *Howard and Essex the credit for the successful Cadiz raid (1596) but by taking no part in the intrigues which brought *James I to the throne, he earned the new king’s suspicious hostility. On trumped-up charges of conspiracy he was condemned to death (1603) and, though finally reprieved, he was confined in the Tower of London until 1616. Then at last he was allowed to lead another gold hunting expedition to Guiana, on condition that he did no injury to Spanish interests (an impossible condition as Spain claimed all these lands). He returned unsuccessful, and to appease the Spanish was executed on the old charge. James had indeed exalted his enemy and by his shameful treatment had turned an unpopular (and arrogant) court favourite into a national hero.

Like many of his contemporaries, Raleigh wrote verse. His political thought, e.g. in *The Prerogative of Parliaments (written 1615, published 1628), was liberal and progressive and his religious thought (which brought accusations of atheism) showed wide tolerance. His most famous achievement was his great History of the World (1614), written while in prison. The completed portion carries the story from the creation to the fall of Macedonia (130 BCE). It has little historical value but is a fine example of Elizabethan prose style, much admired by Oliver *Cromwell for its moral lessons.

Rama IV (Mongkut) (1804–1868). King of Thailand (Siam) 1851–68. Originally a monk, he began modernising Thailand, entered into treaties with the US and Britain and introduced the first railway. He had 27 wives and 82 children. Memoirs (1870, 1872) by a Welsh governess Anna Leonowens became the basis of the book Anna and the King of Siam and the musical The King and I.

Rama V (Chulalongkorn) (1853–1910). King of Thailand 1868–1910. Son of Rama IV, he abolished feudalism and slavery, introduced telephones and extended the railways, created postal services, unified weights, measures and currency, built schools and a university and reorganised government along vaguely Western lines.

Rama IX see Bhumibol Adulyadej

Ramakrishna (Gadadhar Chatterji) (1834–1886). Indian mystic. Son of a poor Brahman of Bengal, he lived as a wandering ascetic and in his meditations became convinced that the fundamental unity of Hinduism, Islam and Christianity could be attained by the practice of piety. His teachings were widely spread in America and Europe by his disciple Svami Vivekananda (1862–1902) who on his return to India founded (1897) the Ramakrishna mission for the destitute.

Ramakrishnan, Sir Venki (Venkatraman) (1952– ). Indian-British structural biologist, born in Tamil Nadu. He studied at Baroda, Ohio and Yale, worked at Yale and Utah and moved to Cambridge in 1999. He shared the 2009 Nobel Prize for Chemistry for studies of the structure and function of the ribosome (particles of RNA + protein found in cells), using crystallography to explain its three-dimensional structure and how protein production operates at the atomic level. He became President of the Royal Society 2015–.
Raman, Sir Chandrasekhar Venkata (1888–1970). Indian physicist, born near Madras. From a landowning family, son of a physics teacher, he graduated from the Presidency College, Madras at 16 and was largely self-educated. Professor of physics at the University of Calcutta from 1917, he became director of the Indian Institute of Science, Bangalore (1933–47), and of the Raman Research Institute (from 1947). He discovered (1928) that when a transparent substance is irradiated with monochromatic light of a given frequency the scattered light contains additional frequencies characteristic of the substance. This is known as the Raman effect, and study of the Raman spectra so produced gives valuable information about molecular structure. He was knighted in 1929 and awarded the Nobel Prize for Physics (1930).

Ramanujan, Srinivasa (1887–1920) Indian mathematician, born in Tamil Nadu. Self-taught, he worked at Trinity College, Cambridge with Godfrey Harold Hardy. In 1915, at the age of 24, he was elected FRS and made a Fellow of Trinity in 1918 and died soon after returning to India. He left 21 major papers on number theory which anticipated many problems in cosmology and computer science.

Rambert, Dame Marie (originally Cyvia Rambam) (1888–1982). British ballet producer and teacher, born in Poland. Trained by *Cecchetti, she worked with *Diaghilev's company (1912–13) but devoted most of her life to teaching. She launched (1931) the Ballet Rambert in London, and from it many important dancers and choreographers have emerged. Among her honours were the Legion d'honneur (1957) and the DBE (1962).

Clarke, M., Dancers of Mercury. 1962.

Rambouillet, Catherine de Vivonne, Marquise de (1580–1665). French literary hostess. During the reign of *Louis XIII she presided (in her 'blue room') over one of the most famous salons in French literary history, its guests from c.1615 to 1650 including *Richelieu, *Malherbe, Madeleine de Scudéry, *La Rochefoucauld, *Saint-Evremond, Marie de *Sevigny and *Corneille, whose new plays were read there. The good conversation and refined manners of her salons set a highly civilised model in French social circles.

Rameau, Jean-Philippe (1683–1764). French composer, born at Dijon in the same decade as *Telemann, *Händel, J. S. *Bach and Domenico *Scarlatti. After studying in Italy he became a church organist. In his important Treatise on Harmony (1722) he published the results of some years of study of the composition and progression of chords: in later theoretical works he improved the system he had advanced. He was a prolific composer of keyboard works, chamber music and Church music. His Suite in D (1724) for harpsichord includes Les Cyclopes and L'entretien des muses, dramatic works suggesting vivid images. Rameau was important as *Lully's successor in the history of French opera, and as a bold innovator in harmony and orchestration. However, his fame came late, after the age of 50. The first of more than 20 operas and ballets to achieve success was Hippolyte et Aricie (1733), from *Racine's Phèdre but it was also attacked by Lully's partisans, and the term 'baroque', applied for the first time, as a term of abuse. Les Indes galantes (1735), Castor et Pollux (1737) and Dardanus (1739) were enormously successful. He collaborated with *Voltaire on several projects. His last opera, Les Boréades (1764), unperformed in his lifetime makes dramatic use of a wind machine and special effects.

Rameses (or Ramses). Name of 11 pharaohs of Egypt of the XIXth and XXth dynasties. Rameses I (d.c.1306 BCE) succeeded at an advanced age, founded the XIXth dynasty and began the hypostyle hall at Karnak. Rameses II(*the Great) (d.1224 BCE), grandson of Rameses I and son of *Seti I, ruled from 1290 to 1224 BCE. He fought the Hittites for 15 years, defeating them in Syria, then made a treaty of friendship. He enlarged Egypt's power in wars against the Libyans and Nubians. The greatest temple-builder, he extended the temple of Amun at Karnak and erected the Luxor temple, the mortuary temple Ramesseum (Shelley's Ozymandias) and the great small temples at Abu Simbel (lifted 65 metres 1964–68 when the Aswan High Dam raised water levels). He reigned for 66 years and left a 100 children. The Exodus of the Israelites might have occurred in his reign. Rameses III (d.1163 BCE) ruled from 1195, defeated the Libyans, Philistines and the Sea Peoples, exploited gold and copper mines, and built temples at Karnak and West Thebes (Medinet Habu).

Ramón y Cajal, Santiago (1852–1934). Spanish physiologist. Son of a poor barber surgeon in Navarre, after a year as an army surgeon in Cuba (where he contracted malaria), he decided on an academic career in anatomy. In 1883 he became professor of anatomy at Valencia (having made himself, by self-teaching, an expert histologist and microscopist). He became professor of histology at Barcelona in 1887 and at
Madrid 1892–1922. He devoted the creative period of his life to the study of the fine structure of the nervous system, concerned above all to discover the functional pathways of the transmission of stimuli. He was acutely aware of the problem of understanding how neural information is passed across anatomical gaps. His researches were published in his massive and highly influential *Textura del Sistema Nervioso del Hombre y de los Vertebrados* (1904). For this work, he shared the Nobel Prize for Medicine (1906) with Camillo Golgi. His later work focused more on the degeneration and regeneration of nervous structures. His researches confirmed the correctness of the 'monogenesist' school which believed that the regeneration of fibres came from the sprouting of the cylinders of the central stump. One of very few internationally famous Spanish scientists, Ramón y Cajal devoted much of his energies to attempting to promote science within the Spanish educational and administrative systems.

**Ramos-Horta, José** (1949– ). Timorese journalist and advocate. After the Indonesian occupation of East Timor in 1975, he was the leading international spokesman for independence, working from Portugal and Australia. He shared the 1996 Nobel Prize for Peace with Carlos Felipe Ximines Belo (1948– ), Bishop of Timor. After independence, Ramos-Horta was Foreign Minister 2002–06, Prime Minister 2006–07, and President 2007–12. He survived an assassination attempt in 2008, was defeated for re-election in 2012 but became UN representative in Guinea-Bissau.

**Ramphal, Sir Sonny** (Shridath Surandranath) (1928– ). Guyanen lawyer and administrator. He was Secretary-General of the Commonwealth 1975–90 and a member of the *Brandt Commission on Development Issues 1977–79.

**Ramsay, Sir William** (1852–1916). British chemist. Professor of chemistry at University College, Bristol, and later at University College, London, he was best known for his work on the inert gases: *Rayleigh had found (1892) that atmospheric nitrogen is heavier than nitrogen produced from compounds, and Ramsay's investigation of this led to the discovery of argon (announced 1894) and of neon, krypton and xenon (1898). Helium, discovered in the sun in 1868, was obtained by Ramsay from a uranium mineral in 1895. He won the Nobel Prize for Chemistry (1904).

**Ramsay, Allan** (1713–1784). Scottish painter. After studying in Italy he returned to Edinburgh but settled in London (c.1762). He became painter to *George III (1767), his portraits of the king and of Queen

*Charlotte are in the National Portrait Gallery, London. His intellectual interests made him a friend of *Johnson and the correspondent of *Hume, *Rousseau and *Voltaire.

**Ramsey, (Arthur) Michael, Baron Ramsey of Canterbury** (1904–1988). English prelate, born in Cambridge. Educated at Magdalene College, Cambridge, and ordained in 1928, he was professor of divinity at Durham 1940–50 and Cambridge universities 1950–52, Bishop of Durham 1952–56 and Archbishop of York 1952–56. He succeeded Geoffrey *Fisher as the 100th Archbishop of Canterbury 1961–74 and was also President of the World Council of Churches 1961–68. A high churchman and distinguished theologian, he wrote several books. As Archbishop of Canterbury he worked hard to reconcile the differences between the various churches and in 1966 made the first official visit by an English archbishop to the pope since the Reformation. He was made a life peer on his retirement. His brother, Frank Plumpton Ramsey (1903–1930), was a philosopher, mathematician and economist who worked on optimal taxation theory.

**Ramus, Petrus** (Pierre de la Rame) (1515–1572). French scholar. Son of a charcoal burner, he was able to educate himself by taking advantage of his position as the servant of a wealthy scholar. His statement that 'all *Aristotle said was false' was symptomatic of a lifelong rebellion against scholastic authority. After some years of travel and exile he returned to France (1571) only to meet his death in the Massacre of St Bartholomew. As well as his explorations in philosophy and a new system of logic for which he became famous, he brought his rational and original mind to bear upon the study of Greek and Latin, mathematics, astronomy and almost every known subject. His followers, known as Ramists, exercised a strong educational influence, notably at Cambridge.

**Ranjit Singh** (1780–1839). Sikh ruler, known as the 'Lion of the Punjab'. At the age of 12 he succeeded his father as chief of the Sukerchakias clan, and by his shrewdness and advantageous marriages became leader of the Sikhs. In 1799 he seized Lahore from the Afghans and proclaimed himself Maharajah of the Punjab in 1801. He negotiated with the British (1809) to establish his eastern boundary on the Sutlej River and by 1819 had expelled the Afghans from the Vale of Kashmir. He modernised his army from 1820
and recruited foreign officers (some former veterans of the Napoléonic wars). Although illiterate, he was well informed, tolerant, and a masterly politician and strategist.

Ranjitsinjhi Vibhaji, Maharajah Jam Saheb of Nawanagar (1872–1933). Indian prince and cricketer. Educated at Cambridge University, he played for the Sussex County club 1895–1904 and for England 1896–97, 1899–1904, playing against Australia 15 times. In 1899 he became the first cricketer to score 3000 runs in a year, achieving 3065 in 1900. Known as ‘Ranji’, he was graceful and popular with an unorthodox style. As ruler of Nawanagar from 1907, he built up roads, railways and irrigation. He served as a colonel in France during World War I, represented India at the League of Nations (1920) and received a GC SI and GBE.

Rank, J(oseph) Arthur Rank, 1st Baron (1888–1972). English financier. With a fortune derived from his family’s flour milling interests he gradually gained, by purchase and amalgamation, a predominant position in the production and distribution of British films.

Ranke, Leopold von (1795–1886). German historian. He was noted as a pioneer in the application of modern critical methods to historical sources and for the thoroughness and objectivity with which he documented his narratives. In the preface to the first of his many books, a history of medieval and later Europe, he announced his purpose merely to relate what actually occurred. His best known work is The History of the Popes (1840). Though it is confined to the Counter Reformation period and its author was denied access to the Vatican library, it is numbered among the world’s historical masterpieces. Ranke was over 80 when he started on the world history of which nine volumes (to the 15th century) were complete when he died.

Ransome, Arthur Mitchell (1884–1967). English writer. He reported on the Russian Revolution for the Manchester Guardian and married *Trotsky’s former secretary. Realistic treatment and keen observation characterise his stories of children’s adventures, several of which, e.g. Swallows and Amazons (1931), are concerned with the handling of small boats.

Raoult, François-Marie (1830–1901). French physical chemist. Professor of chemistry at Grenoble (1870–1901), his chief work was the investigation of the changes that occur in the boiling point, freezing point, and vapour pressure of liquids when solids are dissolved in them. From these investigations he was able to deduce the fundamental law (Raoult’s law) relating the vapour pressure of a solution to the concentration of the dissolved substance, and he thus laid the foundations on which *Van’t Hoff built the modern theory of solutions.

Raphael Santi (Raffaello Sanzio) (1483–1520). Italian Renaissance painter, born at Urbino. Son of a court painter, his mother died in 1491 and his father in 1494. Influenced by the works of *Uccello, *Mantegna, *Piero and *Signorelli, he was apprenticed to *Perugino. The Crucifixion (1503) in the National Gallery, London, is an early masterpiece. He left Urbino and lived in Florence 1504–08, when *Leonardo da Vinci and *Michelangelo were working there. His Florentine paintings include The Lady with the Unicorn (1506) and The Deposition of Christ (1507), both in the Borghese Gallery, Rome. He moved to Rome in 1508. The rest of his short life was spent in Rome, where his agreeable nature as well as his astounding gifts ensured immediate success. His 26 surviving portraits include Pope *Julius II (1511), Pope *Leo X (1519), Baldassare *Castiglione (1515), several cardinals and himself. Julius II commissioned him to paint frescoes in four rooms (Le Stanze) in the papal apartments at the Vatican; they include The School of Athens and The Dispute over the Holy Sacrament. After * Bramante’s death he was appointed architect in charge of building St Peter’s but none of his proposals survive. He drew the cartoons for the tapestries in the Sistine Chapel (at the same time painting the mythological Galatea cycle for the Palazzo Farnese). He also produced many large and small altarpieces as well as portraits. Raphael’s output was large for so brief a life though in his last years he left completion of his intentions more and more to his assistants (Giulio *Romano being the most gifted). He died of a sudden fever, according to * Vasari after sexual excess, and was buried in the Pantheon in Rome. Raphael’s nature was receptive rather than dynamic and he absorbed ideas from Leonardo, Michelangelo and ancient sculptures without destroying the unity of his own work. Few, if any, artists have excelled him in the facility with which he transferred his intuitive ideas into paintings.

Rapp, Jean, Comte (1772–1821). French soldier, born in Alsace. One of the bravest of the revolutionary soldiers, he gained distinction in Germany and Egypt before becoming ADC to *Napoléon. A brilliant charge at Austerlitz won him the rank of a divisional general and for further services he was made a count. He served throughout the Russian expedition, the plan of which he had opposed, and on his return held Danzig for nearly a year.

Ras Tafari see Haile Selassie

Rashi (formed from the initials of Rabbi Shelomo Yitzchaki, i.e. Solomon ben Isaac) (c.1040–1105). Jewish exegete and grammarian, born in Troyes, France. His commentary on the Pentateuch is believed to have been the first Hebrew book to be printed (1475). The Talmud is usually printed with his commentary. He also died at Troyes after wanderings probably confined to Lorraine but greatly expanded by legend.

Rasputin, Grigori Efimovich (1869–1916). Russian mystic and faith healer, born in Pokrovskoye, Siberia. Son of a peasant, he claimed to have experienced a religious vision at a monastery at the age of 18, and became a wandering pilgrim (strannik), visiting Greece and Jerusalem. In 1903 he arrived in St Petersburg, where mystical religion was then fashionable. An introduction to the tsarina *Aleksandra followed and his apparent success in alleviating her son *Alekssei’s haemophilia gave him her complete devotion and confidence. The absence of Tsar *Nikolai II at the front during World War I enabled Rasputin to exploit his power for private gain and the political advancement of his friends. Changes in the ministries became so unpredictable that confusion, easily interpreted as treachery, grew. He seems to have argued that sin, followed by repentance, was a pre-condition for salvation, and chose alcohol and sex as his ways to grace. He had many enemies at court and in the Russian Orthodox hierarchy and his growing opposition to the war aroused foreign concern, especially from British intelligence. A group of conservative nobles, led by Prince Felix Yusopov, decided to kill him but the accounts of his murder (29 December 1916) are contradictory. He was shot four times, clubbed and then thrown into the Neva River. (A British intelligence officer was present and may have fired the fatal shot in the forehead.)

Minney, R. J., Rasputin. 1972.

Rathenau, Walther (1867–1922). German industrialist and politician. Of Jewish origin, his father was the virtual founder of the German electrical industry and Walther was president (1915–20) of the great electrical company abbreviated as AEG. In the republican government after World War I he was Minister of Reconstruction (1921) and in 1922, as Foreign Minister, signed the Russo-German Treaty at Rapallo. Soon afterwards he was assassinated by two young nationalist fanatics.

Rattigan, Sir Terence Mervyn (1911–1977). English playwright. He ranged from brilliant farce, e.g. French Without Tears (1936), to character studies in depth, e.g. that of Lawrence of Arabia in Ros (1960). The Winslow Boy (1946) was based on the Archer Shee case and here, as in The Browning Version (1948), Rattigan introduced poignant situations without sentimental over-emphasis. Other plays include The Deep Blue Sea (1952).

Ratzinger, Joseph Alois see Benedict XVI

Rauschenberg, Robert (1925–2008). American artist, born in Texas. He studied in Kansas City, Paris and New York and with Josef *Albers, became a designer of stage sets and a choreographer. From 1953 he developed ‘combine paintings’ in which three-dimensional manufactured objects were incorporated into the flat plane of the painting. He worked with lithography and silk screen printing in the 1960s and then to three-dimensional reliefs with fragile materials. With Jasper *Johns, his partner 1954–61, he was important in leading American pop art away from abstract expressionism towards pop art and minimalism, and also encouraged ‘happenings’, spontaneous performance art, a form that John *Cage had pioneered in music and Josef *Beuys in the plastic arts.

Rautavaara, Einojuhani (1928– ). Finnish composer. Educated in Finland, the US and Germany, he was extremely prolific and much performed. His works include 8 symphonies, 12 concertos, 9 operas, 5 string quartets and many instrumental and choral pieces.

Ravel, Maurice (Joseph) (1875–1937). French composer, born in Ciboure. His father was Swiss-Savoyard, his mother a Basque. He studied in Paris under *Fauré and others and lived an uneventful life. He was a mother’s boy, never married and lived in a doll’s house outside Paris. A chain-smoking dandy, he looked like an erudite jockey but drove an ambulance at the front line in World War I, earned a fortune from his music and travelled to the Britain, the United States and Canada. In October 1932 he suffered a brain injury in a taxi accident. Pick’s disease, a rare neurodegenerative condition, led to five
years of memory loss. He died after a brain operation in December 1937. (In July 1937, George *Gershwin also had a fatal brain operation.)

His total output is the smallest of any major composer: 88 works in the catalogue, some were mere fragments, but with an exceptional consistency. His longest ballet, *Daphnis et Chloé* (1912) and the two operas, *L’heure espagnole* (1909) and *L’enfant et les sortilèges* (1925), run for barely 50 minutes each. He never attempted a symphony but described *Daphnis* as ‘symphonie chorégraphique’.

Ravel wrote evocative settings for the voice, notably his song cycle *Shéhérazade* (1903) for soprano and orchestra, settings of poems by Tristan Klingsor. His genius as an instrumental writer and orchestrator is unsurpassed, challenging players to achieve exceptional performance standards. A competent pianist, but not a virtuoso, he showed a perfect understanding of keyboard technique in the Sonatine (1903–05) and in the suites *Miroirs* (1905, including *Alborada del Gracioso*, later orchestrated), *Gaspard de la Nuit* (1908 – including *Scarbo*, one of the most challenging works in the piano literature) and *Ma Mère l’oye* (*Mother Goose*, duet, 1908). His chamber works – the String Quartet (1903), the Septet for two violins, viola, cello, flute, clarinet and harp (1905), and the powerful Piano Trio (1914) – have a pellucid clarity. His major orchestral scores reveal unparalleled mastery of technique, but also profound rhythmic sweep and voluptuous sensuality. He orchestrated *Mussorgsky’s Pictures at an Exhibition* (1922). *Stravinsky’s dismissal of Ravel as ‘the Swiss watchmaker’ was clever but misplaced.

Ravel’s ‘choreographic poem for orchestra, *La Valse* (1920), echoes the impact of World War I and contains a distinctive historic perspective. The sumptuous world celebrated in waltzes by *Strauss (Johann and Richard) is turned into savage parody. *Boléro* (1928), Ravel’s most famous work, achieved international notoriety, to the composer’s irritation. An 18 bar melody is played 18 times, accompanied by an unchanging ostinato rhythm on the snare drum; increasingly complex orchestration leads to a long sustained crescendo until a dramatic key change (from C major to E major), just before a shuddering end.

The two piano concertos, both completed in 1931, are outstanding. Concerto in G major has a beautiful slow movement, containing perhaps the longest single theme in serious music, 44 bars long, Mozartian in style. The witty last movement is inspired by jazz. Concerto in D major for Left Hand, written for Paul *Wittgenstein, is a powerful work with sinister (appropriately) elements and obvious parallels with *La Valse*, requiring a virtuoso to manage the rhythmic sweep of one hand across the entire keyboard.

Ravel’s music reflects such disparate influences as *Couperin, *Mozart, *Liszt and *Rimsky-Korsakov. His music is less impressionistic and more classical, than *Debussy’s with which it is often compared.

**Rawlins, Sir Henry Creswicke, 1st Baronet** (1810–1895). English archaeologist, administrator and diplomat. He held many official appointments in India and the Middle East, and was known mainly for his work on cuneiform inscriptions as ‘the father of Assyriology’. His brother *George Rawlinson* (1812–1902) was Camden Professor of Ancient History at Oxford 1861–89 and author of a notable translation and commentary upon *Herodotus (1858–60). His son, *Henry Seymour Rawlinson, 1st Baron Rawlinson* (1864–1925), a general, commanded the 4th Army at the Somme (1916). His greatest success, a breakthrough in the Hindenburg Line near Amiens (August 1918), opened the way for the final advance. He commanded British forces in Russia 1919–20 and India 1920–25.

**Rawsthorne, Alan** (1905–1971). British composer. He taught 1932–34, but afterwards worked exclusively at composition, establishing a reputation with *Symphonic Studies*, performed at the Warsaw Festival in 1939. After World War II he wrote concertos for oboe, violin and piano. His music is atonal and his works small in scale.

**Ray, John** (1627–1705). English naturalist. Son of an Essex blacksmith, he studied botany and zoology at Cambridge University. He spent the years 1658–66 in extensive travels, during which, by observation and collection, he gained a unique knowledge of European flora and fauna. He systematised and classified this vast amount of material in a series of volumes, a foundation on which *Linnaeus and others were to build. He was no mere compiler, however, as he proved and was the first to distinguish between monocotyledons and dicotyledons. Major works were *Methodus Plantarum Nova* (1682), *Historia Plantarum* (1686–1704) and *Synopsis Methodica Annualium* (1693). Ray was also a philologist and published *A Collection of English Proverbs* (1670).

**Ray, Man** (Emmanuel Rudnitzky) (1890–1976). American painter, photographer and film maker, born in Philadelphia. Secretive about his real name, he worked in Paris 1921–40, 1946–76, was involved in the Surrealist and Dada movements, became active in fashion and portrait photography and used new techniques such as solarisation.

Rayleigh, John William Strutt, 3rd Baron (1842–1919). English mathematical and experimental physicist. He was Cavendish professor of experimental physics at Cambridge 1879–84, professor of natural philosophy at the Royal Institution 1887–1905, and finally Chancellor of the University of Cambridge 1908–19. His researches covered a wide range of subjects, e.g. sound and other aspects of vibratory motion, scattering of light and the colour of the sky, the theory of radiation. He discovered (1892) that atmospheric nitrogen is heavier than nitrogen from compounds, which led to *Ramsay’s work on the inert gases. Rayleigh, who succeeded to his father’s title in 1873, received the Order of Merit in 1902, won the Nobel Prize for Physics (1904), and was President of the Royal Society 1905–08.

Raynouard, François Juste Marie (1761–1836). French poet and philologist. A prosperous Paris advocate, he entered the Legislative Assembly (1791), joined the Girondins, and was imprisoned. His poems and tragedies were successful, and in 1807 he was elected to the Académie Française, later becoming secretary (1817). He wrote on Provençal language and literature, notably his *Lexique Roman* (1838–44).

Rayleigh, John William Strutt, 3rd Baron (1842–1919). English mathematical and experimental physicist. He was Cavendish professor of experimental physics at Cambridge 1879–84, professor of natural philosophy at the Royal Institution 1887–1905, and finally Chancellor of the University of Cambridge 1908–19. His researches covered a wide range of subjects, e.g. sound and other aspects of vibratory motion, scattering of light and the colour of the sky, the theory of radiation. He discovered (1892) that atmospheric nitrogen is heavier than nitrogen from compounds, which led to *Ramsay’s work on the inert gases. Rayleigh, who succeeded to his father’s title in 1873, received the Order of Merit in 1902, won the Nobel Prize for Physics (1904), and was President of the Royal Society 1905–08.

Raynouard, François Juste Marie (1761–1836). French poet and philologist. A prosperous Paris advocate, he entered the Legislative Assembly (1791), joined the Girondins, and was imprisoned. His poems and tragedies were successful, and in 1807 he was elected to the Académie Française, later becoming secretary (1817). He wrote on Provençal language and literature, notably his *Lexique Roman* (1838–44).

Razi, Abu Bakr Muhammad Ibn Zaksriyya Al-(known as Rhazes) (c.854–925). Persian physician. His main scientific interests lay in alchemy with a strong empirical concern with descriptions of exact processes, closely related to a descriptive and clinical approach to medicine. Skeptical about *Galen's theories, he wrote many manuals and distinguished between smallpox and measles. In cosmology and natural philosophy, he took issue with *Aristotle, believing that the world had been created in time and that there were five eternal principles: Creator, soul, matter, time and space. Time was not – as for Aristotle – a measure of movement or process, but rather a boundary principle, existing independently of objects. In the Islamic world, Razi had a high reputation as an alchemist and medical writer, but his scepticism and pugnacious character led to religious and philosophical attack.

Razumovsky, Andrey Kyrillovich, Count (1752–1836). Russian statesman, art collector, amateur violinist and patron of music. Ambassador in Vienna 1792–1807, he was Russia’s main representative at the Congress of Vienna in 1814 and later made a prince. From 1808–14 he maintained the celebrated Razumovsky Quartet. Razumovsky’s name was immortalised through the dedication to him of *Beethoven’s three string quartets, Op. 59, and (with Prince Lobkowitz) the Fifth and Sixth Symphonies. He was a munificent and prodigal patron of art: his enthusiasm for music had drawn him to *Haydn, he knew *Mozart well and had close associations with Beethoven (1796–1816). However, after the destruction by fire of his Vienna palace, he was forced to discontinue his way of life, and lapsed into obscurity.

Read, Sir Herbert Edward (1893–1968). English critic and poet, born in Yorkshire. Educated at Leeds University, he fought in World War I (winning the DSO and MC). His early poetry (*Naked Warriors, 1919*) was influenced by the carnage. He became an anarchist, curator at the Victoria & Albert Museum 1922–39, professor of fine arts at Edinburgh 1931–33, editor of *The Burlington Magazine* (1933–38), and promoted the work of T. S. *Eliot, Henry *Moore, Ben *Nicholson and Carl *Jung. He taught at Harvard 1953–54. He was an influential thinker on creativity in education (*Education through Art,* 1943) and some aspects of philosophy, especially existentialism.

Reading, 1st Marquess of, Rufus Daniel Isaacs (1860–1935). British lawyer and administrator, born in London. He worked in the family fruit business and on the stock exchange, and became a barrister in 1887 without having a university degree. After establishing a reputation for skilful cross-examination at the bar, he became one of the highest paid KCs. He entered parliament as a Liberal (1904) and was Solicitor-General in *Asquith’s Government 1910 and Attorney-General 1910–13. He was involved (1912) in the Marconi scandal (favour was alleged to have been shown to the company in return for an opportunity to make private profit), but after a parliamentary inquiry he and other ministers were absolved from blame. He was Lord Chief Justice 1913–21, with a peerage, but led a wartime financial mission to the United States 1915 and served as Ambassador 1918–19. As Viceroy of India 1921–26, he adopted a sympathetic attitude towards Congress moderates but *Gandhi’s leadership was increasingly important. Created a marquess in 1926 (the first commoner to reach this rank since *Wellington), he became Chairman of ICI 1928–31 and 1931–35.
Reagan, Ronald Wilson (1911–2004). 40th President of the US 1981–89. Born in Tampico, Illinois, he graduated from Eureka College and became a radio sports announcer. Between 1937 and 1964 he acted in 54 films, mostly as a second lead. These include King’s Row (1942) and The Hasty Heart (1950). In 1940 he married the leading actor Jane Wyman (1914–). They divorced in 1948 and in 1952 he married another actor, Nancy Davis (1923–). President of the Screen Actors Guild 1947–52 and 1959–60, he was originally a staunch liberal but became a hard-line conservative in the 1950s. For some years he was an effective spokesman for the General Electric Co., both on television and in public appearances. He supported Barry *Goldwater for president in 1964 and in 1966 was elected Governor of California 1967–74, defeating Edmund G. (‘Pat’) Brown who had beaten Richard *Nixon in 1962. In 1976 he challenged Gerald *Ford in a close race for the Republican presidential nomination. He won the nomination in 1980 and defeated Jimmy *Carter by 51 to 41 per cent of the popular vote, winning 44 states. He proclaimed commitment to small government and to market-force economics, and his administration continued to spend heavily, especially on defence. His robust anti-Communism, appeals to patriotism, support of traditional American values and gifts as a communicator swept him to a second-term victory over Walter *Mondale (1984) in 49 states, with 59 per cent of the popular vote, the highest aggregate in US history. After six years of unusually strong public support, in which he restored confidence in the presidency, his carelessness or ill-informed handling in 1986 of arm sales to Iran (‘Iranscandal’) in order to finance ‘Contra’ activity in Nicaragua led to vigorous attacks on his credibility but his popularity remained high. In 1987 he proposed the first trillion dollar ($1,000,000,000,000) Budget to Congress. The savings and loan scandals and the US’s transition from being a creditor to a debtor nation were not held against him and he was often credited with the collapse of Soviet Communism and the ending of the Cold War. George *Bush’s election as president in 1988 was a virtual third term for Reagan. He was awarded the British GCB and the US Medal of Freedom. In 1994 he announced that he was suffering from Alzheimer’s disease. Next to Gerald Ford he was the longest lived US president.

Réaumur, René Antoine Ferchault de (1683–1757). French scientist. His work for the Académie des Sciences, of which he became a member in 1708, led him into such diverse avenues of research as metallurgy, turquoise mines and the manufacture of opaque glass. The thermometer which bears his name has the boiling point of water at 80° and the freezing point at zero.

Reber, Grote see Jansky, Karl

Récamier, Françoise Julie Adelaide (née Bernard) (1777–1849). French beauty and wit. Her salon attracted some of the most notable literary and political personalities of the day. Among them were Madame de Staël, Benjamin Constant and Chateaubriand. Her husband, a middle-aged banker, died in 1830. The painter *David perpetuated the charm of Madame Récamier as she reclined at ease.

Trouncer, M., Madame Récamier. 1949.

Redgrave, Sir Michael Scudamore (1908–1985). English actor. He went to the stage after a brief career as a teacher, and gained much of his early experience at London’s Old Vic. He became outstanding as a Shakespearian actor and returned to the familiar parts, but he also adapted his technique to suit the continental classics (e.g. The Father, Uncle Vanya and A Month in the Country) and to modern plays such as The Aspern Papers, where stylish acting combined with acute characterisation was required. His film career, equally varied, included parts in The Importance of Being Earnest, The Browning Version and The Dam Busters. He was knighted in 1959. He married the actor Rachel Kempson (1910–2003) and their three children were all successful performers. Vanessa (1937–), a stage and film actor, won an Academy Award for her role in Julia (1977). She was a strong opponent of US foreign policy and a PLO supporter. Corin (1939–2010) was an able character actor and Lynn (1943–2010) won an international reputation with Georgy Girl (1966).

Redmond, John Edward (1856–1918). Irish politician. He led the Parnellite wing (‘Parnell’) of the Irish National Party in the British House of Commons (from 1891) and (from 1900) the reunited party. He accepted ‘Asquith’s Home Rule Bill (1912–14), but, when Sir Edward *Carson raised a volunteer force in the north to resist it, Redmond countered him with volunteers raised in the south. Civil war was imminent when World War I broke out. Redmond’s support of the war cost his party the confidence of the Irish electors but Redmond died before they were swept out of parliament by Sinn Féin.

Redon, Odilon (1840–1916). French Symbolist painter, lithographer and etcher. Influenced by *Goya, he developed a style of fantastic and haunted imagery, which evokes the world of *Poe and *Mallarmé. His later works anticipated the psychedelic art of the 1970s.
Redouté, Pierre Joseph (1759–1840). French flower painter, born in Liège. He went to Paris and became famous in his specialised field, popularised through engravings. Both *Marie Antoinette and the empress *Josephine were among his pupils.

Reed, Sir Carol (1906–1976). English film director. Son of Sir Herbert Beerbohm *Tree, he became an actor and directed 33 films including Odd Man Out (1947), Outcast of the Islands (1952), Oliver! (1968), and three based on Graham *Greene stories The Fallen Idol (1948), The Third Man (1949) and Our Man in Havana (1959).

Reed, John (1887–1920). American journalist. In 1917 he went to the USSR and became a friend of *Lenin. His Ten Days that Shook the World (1919) is considered one of the best eye-witness accounts of the Bolshevik Revolution. He founded a US Communist Party in 1919, returned to the USSR, died of typhus and was buried in the Kremlin Wall.

Reed, Walter (1851–1902). American surgeon and bacteriologist. He joined the US army medical corps (1874) as an assistant surgeon and became (1893) professor of bacteriology at the Army Medical School. He headed a commission sent to Cuba to study yellow fever (1899) and his team proved the thesis of Carlos Finlay that the disease is transmitted by the Aedes Aegypti mosquito. He died of appendicitis.

Reger, (Johann Baptiste Joseph) Max(ilmilian) (1873–1916). German composer, conductor, pianist and teacher, born in Bavaria. Influenced by *Beethoven, *Wagner, *Brahms and *Bach (an unusual combination), he was extraordinarily prolific, acquiring a largely unjustified reputation for writing turgid, ponderous academic music, rarely performed outside Germany. His Variations and Fugue on a Theme of J. A. Hiller (1907), piano concerto (1910), Variations and Fugue on a Theme of Mozart (1914), violin sonatas and some songs and organ pieces have been brilliantly recorded, leading to a re-evaluation of his achievement. He was professor of composition at Leipzig University 1907–16, conductor of the Meiningen Orchestra 1911–14 and toured extensively.

Regiomontanus (Johann Müller) (1436–1476). German astronomer and mathematician, born at Königsberg. Son of a miller, he studied philosophy at Leipzig and astronomy and geometry under Georg von Peurbach at Vienna, from 1452. It was at this time that he came to recognise the inadequacy of the current astronomical tables (the Alfonsin). On Peurbach’s death, Regiomontanus completed his work on *Ptolemy’s Almagest, which finally appeared in 1496. This digest was a work of current scholarship in its own right. *Copernicus’ careful study of it revealed to him some of Ptolemy’s errors, and stimulated the development of his own system of astronomy. Regiomontanus learned Greek from Cardinal Bessarion, and spent much of the 1460s combing Italy for astronomical manuscripts. His concern was to purify the learning of antiquity. He discovered an important manuscript of the mathematician Diophantus, but did not live to edit it. Amongst his completed works, however, were lectures on astrology and important trigonometrical writings that gave tables of tangents and sines. He was more important as a publisher of astronomical data – he made early use of the printing press – than as a theorist in his own right.

Reich, Wilhelm (1897–1957). Austrian-American psychoanalyst, born in Vienna. One of the most controversial figures in the history of psychoanalysis, he lived in the US from 1939, and developed a theory of sexuality based on the ‘orgone’ (a compound word derived from organism and orgasm). He built ‘orgone accumulators’ to treat patients, but was charged with fraud and when he violated an injunction was sent to jail where he died of heart failure and his publications were burnt by court order.

Reichstadt, Duke of see Napoléon II

Reid, Sir George Houstoun (1845–1918). Australian politician, born in Scotland. He emigrated to Australia at the age of seven, was called to the bar (1879) and entered the New South Wales Parliament 1880. As Minister of Public Instruction he introduced 1883–84 a public system of secondary education, became Leader of the Opposition 1891–94 and was
Premier 1894–99. In addition to tax simplification and a factories act, he freed the civil service from political control. He became a strong supporter of federation and when the Federal Parliament was formed became Leader of the Opposition, with a policy favouring free trade. Prime Minister for 11 months 1904–05 in a Free Trade-Protectionist coalition, he went to London as Australia’s first High Commissioner 1910–16, and became a British MP 1916–18.

Reid, Thomas (1710–1796). Scottish philosopher. After a number of academic appointments he succeeded Adam Smith as professor of moral philosophy at Glasgow 1764–80. In his Inquiry into the Human Mind on the Principles of Common Sense (1764) he argued, against *Hume and others, that in perception we are directly aware of physical objects and not of sensations or ‘ideas’ which may be related to them. He believed that all knowledge is based on self-evident principles established in ‘common sense’, a term that came to be applied to his philosophy as a whole. His larger Essays on the Intellectual Active Powers of Man (1785) is in effect a theory of knowledge based on these principles, while in his Essays on the Active Powers of the Human Mind (1788) he discusses moral issues and arrives at the conclusion that ‘moral approbation implies a real judgement’.

Reinhardt, Max (1873–1943). Austrian American theatrical producer. He acted at the Deutsches Theater, Berlin 1894–1905 became its director and filled the next 25 years with a remarkable series of some 450 productions, which brought fame to the theatre and himself. As well as the ancient Greek and European classics he staged the works of *Ibsen, *Strindberg and *Shaw. He was closely identified, too, with the Salzburg Festival. He specialised in spectacular productions, e.g. The Miracle in London (1911), which entailed the handling of crowds of performers and remarkable lighting effects. He left *Hitler's Germany in 1933 and later became a naturalised US citizen.

Adler, G., Max Reinhardt. 1964.

Reis, Piri (d.1534). Turkish admiral and cartographer. Nephew of the pirate Kemal Reis, he served at Lepanto and commanded the Ottoman fleet under *Suleyman the Magnificent. In 1513, at Gallipoli, he compiled a detailed map of the Atlantic, now held in the Topkapi Museum in Istanbul, thought to have been based on lost materials, possibly Chinese, including a world map dating from about 1428 and which may have been known to *Columbus.

Reith of Stonehaven, John Charles Walsham Reith, 1st Baron (1889–1971). Scottish administrator, born in Stonehaven. Son of a clergyman, he trained as an engineer and was wounded as an officer in World War I. He became the first general manager of the British Broadcasting Company Ltd 1923–27, and when it became publicly owned, first director-general of the British Broadcasting Corporation (BBC) 1927–38. He implanted a tradition of complete integrity in the presentation of news and of educational and cultural zeal, setting out the mission statement ‘inform, educate, entertain’. Autocratic and prudish, his diaries indicate some enthusiasm for *Hitler and *Mussolini. Knighted in 1927, he received a peerage in 1940. Reith was the first chairman of BOAC 1939–40, then became Minister for Works 1940–42 under *Churchill, who detested him. He chaired the Commonwealth Telecommunications Board 1946–50, the National Film Finance Corporation 1948–51 and the Colonial Development Board 1950–59. Created a KT in 1969, the BBC established (1947) an annual series of ‘Reith Lectures’ in honour of his services to broadcasting.

Réjane (Reju), Gabrielle Charlotte (1856–1920). French comedy actor. She acquired a reputation comparable with Sarah *Bernhardt: wit, brilliant technique and subtlety of mood, rather than beauty of face or voice, were the qualities on which she relied for her success.

Remarque, Erich Maria (1897–1970). German-American author. He served in World War I and his novel All Quiet on the Western Front (1929), one of the most realistic and effective war novels enjoyed great popularity and was filmed twice. He lived in Switzerland (1932–39) and then the US, where he became a citizen. In 1958 he married the actor Paulette Goddard (1911–1990), formerly *Chaplin's wife.

Rembrandt (Rembrandt Harmenszoon van Rijn) (1606–1669). Dutch painter, born at Leyden. Son of a miller, he left university early (1621) to study painting. After three years’ apprenticeship to a local artist he spent six months in Amsterdam with Pieter Lastman who had been to Italy and had become familiar with the work of *Carracci and others.
Rembrandt seems to have been more influenced by the Dutch followers of Caravaggio, who by directing the fall of light from a single direction could create emphasis by contrast and suggest sculptured form. From this technique was developed Rembrandt’s famous chiaroscuro, with several illuminated points gradually fading into the golds and browns of deepening shadow. He returned to Leyden (1625) and soon acquired a considerable reputation and several pupils. Chiaroscuro effects are already to be seen in, for example, Simeon in the Temple.

In 1631 Rembrandt moved to Amsterdam and quickly became a fashionable portrait painter, and since his subjects were mostly rich burghers whom he did not have to flatter unduly, provided gave them the dignity and trappings of wealth, he was free to display his great gift for interpreting human personality. The romantic side of his own character was shown (as indeed earlier at Leyden) by his delight in dressing his sitters in all sorts of fantastic finery, not only silks and satins but furs, turbans and even armour. To indulge this taste to the full he painted large numbers of self-portraits, thus arrayed. Biblical and classical subjects continued to attract him and he excelled in dramatic narrative. Group portraits, of which The Anatomy Lesson of Dr Tulp (1632) was among the first to achieve fame, were also popular and by their greater size provided scope for the stronger colours he now liked to employ. The year 1642 marked a turning point in his life. His wife, Saskia van Uylenburgh (married 1634), whose dowry combined with his own earnings had enabled him to lead the life of a substantial citizen, died in 1642, a year after the birth of Titus, their only child to survive infancy. In the same year the group portrait The Night Watch failed to attract, mainly because the background figures were not sufficiently individualised to please the vanity of the persons portrayed. In the years that followed, Rembrandt’s earning power steadily declined until (1656) his house and possessions were auctioned to pay his debts. But, ironically, the change in his circumstances marked no decline in the powers of the artist, but the reverse. His increasing impatience with the artistic conventions of the time may have heightened off his patrons but it completed his emancipation as an artist. The rich burghers may have been less often seen in his studios, but that only left him freer to concentrate upon the intense inner life of those who took their place and who had no social importance that it was necessary to convey. Some of his most perceptive portraits are of his son Titus, of Hendrickje Stoffels (who became his mistress in 1645, bore him a daughter, Cornelia, and was his constant attendant in old age), and the continuing series of self-portraits reflecting alike the passing years and his changes of mood and style. As regards the latter, Rembrandt was becoming increasingly interested in the texture of his works. He abandons the illusionist convention by which the activity of the paint is always concealed and discovers the emotive power of brush strokes left visible. He no longer pursues the search for the dramatic with its attendant contrasts of light and shade; the vivid colours of the middle years are subdued to the browns, russets and olive greens familiar in his later work. Biblical (and sometimes mythological) subjects recur more often but they are simpler and more serene. Among the most famous of the pictures of these later years are Saul and David and the group portrait of the Syndics of the Clothmakers Guild. About 300 of his 500 paintings survive, together with 300 etchings and over 1000 drawings.

Renan, (Joseph) Ernest (1823–1892). French religious writer. Brought up for the priesthood, but after a long period of doubt he abandoned his faith and turned to academic work, and became famous with the first volume of an immense work on the history of the origins of Christianity. This volume, the Vie de Jésus (1863), tells the life story of an ‘incomparable man’. Under *Napoléon III its anti-religious content cost him his professorship, restored after the Franco-Prussian War. He continued his great history and other works, was elected to the Académie Française (1878), and became (1883) Administrator of the Collège de France, playing a notable part in the form of French education. The substance of his personal belief was that though God does not exist he is in the process of becoming, through man’s struggle for perfection.

Chadbourne, R. M., Ernest Renan. 1968.

Renault, Louis (1877–1944). French motor car manufacturer. He collaborated with the Germans during World War II and is believed to have been murdered by members of the Resistance. His factories were taken over by the state.

Rendell, Ruth Barbara (née Grasmann), Baroness Rendell (1930–2015). English writer. She wrote 24 detective stories featuring Chief Inspector Reginald Wexford, and also wrote thoughtful novels under the name of Barbara Vine. She was a Labour life peer.

Renzi, Guido (1575–1642). Italian painter, born in Bologna. He became one of the most prominent of the Baroque painters, the main influences on his style being *Carracci, under whom he studied, and *Caravaggio, whose contrasting effects of light and shade he adopted, in later years his colours became paler and cooler. His subjects are mainly mythological and Biblical, e.g. Aurora, a famous ceiling painting, and Ecce Homo and Mater Dolorosa.
Rennie, John (1761–1821). Scottish engineer and bridge builder. He constructed many docks and canals and is best known for the Southwark (1819) and old Waterloo (1817) bridges in London, and the great Plymouth breakwater.

Renoir, Jean (1894–1979). French film director. Son of the painter Pierre Auguste *Renoir, he began work as a director in 1924 and established a reputation by a unique blend of lyricism and realism. His films include Nana (1926), Une Partie de Campagne (1936), La Grande Illusion (1938), Le Regle du jeu (1939) and French Can-Can (1956).

Renoir, Pierre Auguste (1841–1919). French painter. One of the most important of the Impressionists, as a boy he was employed as a painter on porcelain. At Gleyre's studio in Paris (1861) he met and became friends with *Monet and *Sisley. With them he worked in the open air concentrating on the problems of sunlight and its reflection, for example, on water or human flesh. It was with the latter that Renoir showed his special skill and the exuberant delight that his painting gave him and which he always wished to impart. There is no exotic frailty about his nudes: their flesh is rosy and their limbs are muscular. For Renoir, love of painting and a love of life were inseparable. A more sophisticated gaiety is seen in La Loge, Les Parapluies and Au Théatre, la Première Sortie. He experimented briefly with pointillism but in general he was a more scholarly painter and more concerned with composition, e.g. his large paintings of Bathsheba in the 1880s, than many of his contemporary Impressionists. He spent most of his life between Paris and the French countryside and, though his hands were crippled with arthritis, continued to paint in his garden near Cagnes to the time of his death. He achieved a total of 6000 paintings. He was happily married.

Repton, Humphry (1752–1818). English landscape gardener. He began to design gardens c.1790, sometimes working in partnership with the architect John *Nash. He restored a formal setting to country houses by planting the immediate surroundings of the house in a decorative and obviously artificial style. This was a departure from the carefully ‘natural’ parkland, unrelieved by planted beds, that was formerly prevalent. He wrote Observations on the Theory and Practice of Landscape Gardening. (1794).

Respighi, Ottorino (1879–1936). Italian composer, violinist, conductor and musicologist, born in Bologna. An outstanding orchestrator, he scored piano works by *Rossini for the ballet La Boutique fantasque (1918). He composed several high-spirited ‘pictorial’ orchestral works, e.g. The Fountains of Rome (1917), The Pines of Rome (1924) and Roman Festivals (1929). His edition of Monteverdi’s Orfeo (1935) exemplified his valuable work in reviving interest in early Italian music. He was important in the revival of interest in *Vivaldi. His three Suites of Ancient Airs and Dances (1917, 1923, 1932) and The Birds (1928) were based on works by 17th-century composers.

Reszke, Jean de (1850–1925). Polish tenor. He made his operatic debut at Venice (1874) as a baritone, but developed into one of the most famous tenors of his epoch, especially in Wagnerian roles.

Retz, Gilles de see Rais, Gilles de

Retz, Jean François de Gondi, Cardinal de (1613–1679). French cleric and politician. A colourful character, famed as a young man for his duels, love affairs and wit, he played an important part in the wars and disturbances of the Fronde (1648–53). He was arrested (1652) but escaped from prison (1654) and reached Spain and Italy. In 1662 he became reconciled with *Louis XIV by giving up his archbishopric (in return, however, for generous compensation elsewhere). His Mémoires (published 1717) show a lively talent for describing character and events.

Reuchlin, Johann (1455–1522). German humanist. Having mastered Greek and Hebrew (the latter from a Jewish physician) he became the principal promoter of these two languages in Renaissance Germany. He protested successfully against the destruction of Jewish books and did much, by his writing and teaching, to encourage intellectual tolerance.

Reuter, Paul Julius, Baron von (originally Israel Beer Josaphat) (1816–1899). Anglo-German journalist and entrepreneur, born in Kassel. Founder of the famous news agency, as a bank clerk at Göttingen he realised the importance for business of speedy information and organised (1849) the transmission of stock exchange prices between Aachen and Brussels by pigeon post. He moved to Paris and then London where he set up (1851) an office for the collection of, not only share prices, but also news items from the Continent. From these small beginnings sprang the huge international news agency which still bears his name. Reuter became a naturalised British citizen and was created baron in 1871 by the Duke of Saxe-Coburg-Gotha.

Reuther, Walter Philip (1907–1970). American trade union leader. He began to organise workers in the motor industry in 1935. He became (1952) President of the Congress of Industrial Organisation (CIO), and when it merged (1955) with its rival, the American Federation of Labor (AFL) he became Vice President of the new organisation.
Reynolds, E. K., of Dr *Johnson's circle, almost all of whom he painted. Reynolds, sociable and good-natured, was a member of Dr *Johnson's circle, almost all of whom he painted. His work was of exhibition quality and much of it survives.

Green, M., Paul Revere, Man Behind the Legend. 1964.

Reynaud, Paul (1878–1966). French politician. A successful advocate from 1908, he was a member of the Chamber of Deputies 1919–24, 1928–42 and the National Assembly 1946–58. Finance Minister 1938–40, he succeeded *Daladier as Premier March–June 1940 and worked with *Churchill to organise more effective resistance to the German invasion. But most of his Cabinet were defeatists and he was replaced by *Pétain who negotiated a surrender. Detained by the Germans 1940–45, Reynaud was a deputy again 1946–58 and Vice Premier 1953–54.

Reynolds, Sir Joshua (1723–1792). English painter, born in Plympton, Devon. Son of a schoolmaster, he began his art studies under Thomas Hudson (1740–43), and widened his range by practice and study. The turning point came with a visit to Italy (1749–53) during which he made an intensive study of the work and methods of the great masters, *Raphael, *Michelangelo, *Correggio, *Titian and the other Venetians. The rest of his life was spent in London where his record as a fashionable portrait-painter was one of continued and remarkable success. The versatility with which he could adapt his knowledge and technique to the changes of time and fashion amazed his contemporaries. He was equally successful with the formal or informal occasion, the latter often enhanced by a parkland or garden setting. He also shows something of *Van Dyck's pleasure in the texture and decorative value of fine clothes. He was one of the founders of the Royal Academy (1768) and was its first president, remaining in office for the rest of his life. His prize-giving Discourses retain their value for the student, and also give a valuable account of his own aims. He visited Flanders and Holland (1781) and a renewed study of *Rubens in particular brought fresh life into his later pictures. He painted almost every celebrity of his time (over 2000 in all); Lady Cockburn and her Children and Mrs *Siddons as the Tragic Muse are perhaps the best known of his works. Reynolds, sociable and good-natured, was a member of Dr *Johnson's circle, almost all of whom he painted.

Reza Shah Pahlevi (1878–1944). Shah of Iran (Persia until 1934) 1925–41. A man of unusual energy and untutored intelligence, he rose from the ranks in the army to become a distinguished officer. He led a military coup (1921), became military dictator, and deposed Ahmed Shah, last of the Qajars (1925). As shah he adopted the dynastic name 'Pahlevi' to recall an early and famous Persian dynasty. He abolished the veil for women, broke the power of the mullahs (the Moslem clergy) and strove to modernise the country, whose name, he insisted, should be 'Iran'. His pro-German attitude during World War II led Britain and the USSR to occupy Iran and force him to abdicate (1941) in favour of his son *Mohammed Reza. He died in Johannesburg.

Avery, P., Modern Iran, 1965.

Rhee (Yi) Syng-man (1875–1965). Korean politician, born in Whanghae. Educated at a Methodist school, he became a Christian while imprisoned for nationalist activities by the Japanese, then ruling Korea. In 1904 he went to America. After the failure of the Korean rising of 1919 he was Chairman of the Korean government in exile. On the Japanese defeat, Korea was partitioned on the 38th parallel. Rhee was first president of the Republic of Korea (i.e. the south) 1945–60. When the Democratic Peoples' Republic of Korea invaded the south (June 1950), Rhee called on the US and UN for aid. An international force, largely American and led by General *MacArthur, helped the South Koreans in a long and costly war to restore the frontier. Rhee was re-elected in 1956 and 1960 but his dictatorial rule had become increasingly unpopular, and after hostile demonstrations (April 1960) he was removed and exiled to Hawaii.

Rhine, Joseph Banks (1895–1980). American psychologist. As head of the laboratory of parapsychology at Duke University, North Carolina, he investigated extra-sensory perception and tried to find scientific explanations for 'supernatural' occurrences, e.g. telepathy, clairvoyance, psychical phenomena (ghosts, poltergeists etc). His numerous publications include Extrasensory Perception (1934) and Frontier Science of the Mind (1957).

Rhodes, Cecil John (1853–1902). South African politician and financier, born in Bishop's Stortford. Son of a clergyman, he went for health reasons to South Africa at the age of 17 and secured many valuable claims at the diamond diggings at Kimberley. Eventually he joined 'Barney' Barnato in forming (1888) the De Beers Consolidated Mines Company to unite their interests. Meanwhile he had been to Oxford University, gained a degree and became one of the youngest of self-made millionaires. Already his mind was busy with his dream of a British-controlled Africa from the Cape of Good Hope to Cairo. For this he needed the cooperation of the Cape Dutch and he secured it by promising their leader Jan *Hofmeyr support for the protection of Cape farmers in return
for acquiescence in his northward advance. First he limited the expansion of the Dutch South African Republic (the Transvaal) by inducing the British to declare a protectorate over Bechuanaland. With the same motive he purchased from the Matabele chief *Lobengula the mining rights in his territory. As a result the British South Africa Company was formed by royal charter (1889). The creation of Rhodesia soon followed. Rhodes was Prime Minister of the Cape 1890–96. Still in cooperation with *Hofmeyr, he passed an act giving the coloured population votes for their local government. While in pursuit of his expansionist policy he completed the Cape–Cairo telegraph and, to overcome the most difficult obstacle, tried to negotiate a confederation with President *Kruger's South African Republic (Transvaal). He failed in this. The discovery of gold meant that the Transvaal could remain independent and Kruger refused all political rights to the British and other foreigners (the Uitlanders) who had come to exploit the goldfields and upon whom the country's prosperity depended. Angry and impatient, he organised the notorious *Jameson Raid (December 1895 – January 1896), an armed incursion from the north that turned into a fiasco when its intended beneficiaries failed to rise. Rhodes was forced to resign when his part in it was discovered, and the divisions it created brought about the Boer War. Rhodes was a supporter of the Liberals in the UK and sympathetic to *Parnell's Irish nationalism. Rhodes spent much of his remaining life in developing Rhodesia (now Zimbabwe and Zambia). He is buried (with Jameson) at the Malindidzimu Hill ('View of the World') in the Rhodes Matopos National Park, Zimbabwe. He never married. Of his huge fortune, all bequeathed for public purposes, he left a large sum for the foundation of Rhodes scholarships at Oxford University for students from the British Empire, the United States and Germany.

**Rhys, Ernest** (1859–1946). Anglo-Welsh editor. He went to London (1886) and pursued a varied literary career until he was introduced by Edmund *Gosse to J. M. Dent, for whom he produced the famous Everyman’s Library of reprints, which brought great literature within the reach of millions. From 1906 when the first books were published (at a price of 1s.) until Rhys’s death, nearly 1000 titles were issued and 35,000,000 copies sold.

**Ribbentrop, Joachim von** (1893–1946). German diplomat. Originally a champagne salesman, after working in Canada he joined the Nazi party (1933) and became *Hitler's adviser on foreign affairs. He negotiated the Anglo-German naval treaty (1935) and served as Ambassador to Britain 1936–38 and Foreign Minister 1938–45. His greatest coup was negotiating the Russo-German Non-Aggression Pact of August 1939 with *Molotov, a condition precedent to the outbreak of World War II. Ribbentrop, despised by the other Nazi leaders, was tried by the Nuremberg Tribunal and hanged.

**Ribera, Jusepe** (or José, known as Spagnoletto, ‘little Spaniard’) (1591–1656). Spanish painter. He studied in Spain and Italy, and eventually settled in Naples (1616) where he became court painter to the viceroys. He adopted *Caravaggio's style of chiaroscuro and painted subjects such as *The Massacre of St Bartholomew with brutal realism.

**Ricardo, David** (1772–1823). English economist, born in London. Son of Dutch-Jewish immigrants, estranged by his marriage to a Quaker, he became a successful stockbroker, and added to his business experience the theoretical knowledge of economics acquired through his friendship with Jeremy *Bentham and James *Mill to produce the famous *Principles of Political Economy and Taxation (1817). In his own words he gives an account of the natural course of rent, profit and wages. The method of assessing value by the amount of labour put into the production of commodities was later abandoned by him (at least in its unmodified form) but was used by Karl *Marx and so achieved a lasting influence. His theory of ‘comparative advantage’, a refinement of Adam *Smith’s ‘absolute advantage’, argued that, in international trade, nations should concentrate on areas where natural endowments, history or experience, provided cost benefits (e.g. Australian wool). This pointed the way towards Free Trade. Ricardo was MP for an Irish pocket borough 1819–23 (Michael *Porter).

**Ricci, Matteo** (1552–1610). Italian Jesuit missionary. He learned Chinese and went to China (1583) but was expelled from place after place until allowed to settle in Peking (Beijing) in 1601. Here he attracted interest by showing and explaining European clocks and maps and soon made converts. His adaptation of Christian theology to accord with Chinese custom, however, aroused controversy and disapproval in Rome.

**Rich, St Edmund** see Edmund of Abingdon, St

**Richard I** (known as ‘Cœur de Lion’) (1157–1199). King of England 1189–99. Born at Oxford, son and successor of *Henry II and of his queen *Eleanor of Aquitaine. At the time of his father’s death, Richard and his brothers, incited by their mother (by then
separated from Henry), were in rebellion against him. Almost immediately after his succession Richard joined the 3rd Crusade provoked by the capture (1187) of Jerusalem by Saladin. He conquered Cyprus (where he married Berengaria of Navarre), proved his military skill by the capture of Acre, but, having quarrelled with, and been deserted by, *Philip II of France and Duke Leopold of Austria, he had to be content with only a sight of Jerusalem before making a truce (1192). On the way home he was wrecked in the Adriatic and while trying to return overland in disguise was caught by his enemy Duke Leopold and imprisoned for two years until a sufficient instalment of the vast ransom demanded had been paid. (The legend that the King's place of captivity was discovered by the troubadour *Blondel de Nesle is unsubstantiated.) On his return he forgave his brother *John, who had been in arms against him, and spent the rest of his reign defending his French dominions against Philip II. He was killed by a chance arrow shot at the siege of Chaluz. He had spent only a few months in England during his reign, but his justiciars, William de Longchamp and *Hubert de Burgh ruled well and the ransom was ungrudgingly paid. Richard earned his nickname for his bravery and was generous and chivalrous. He is buried at Fontevraud-l'Abbaye, Anjou.

Richard II (1367–1400). King of England 1377–99. Born at Bordeaux, he was the son of *Edward, the Black Prince, and succeeded his grandfather, *Edward III. During the crisis of the Peasants' Revolt (1381), Richard, though still under the regency of *John of Gaunt, personally intervened and when their leader, Wat *Tyler, was struck down he courageously took charge and promised to redress their grievances. From c.1382 Richard tried to assert his kingship, but his aims were frustrated by the magnates in his council (Lords Appellant) who objected to the favours bestowed upon members of the court party. Richard tried to resist, but from 1386 to 1389 the Lords Appellant were in complete control. Their divisions destroyed them. Richard regained the initiative and for the next eight years ruled constitutionally and well. But he foresaw danger, and for an expedition to Ireland (1394) he raised an army dependent only upon himself. Thus fortified, he struck back (1397) at his opponents. Execution or exile was their fate, and with parliament packed and submissive he established a despotism that became increasingly severe. He made the mistake, however, of quarrelling with and exiling his cousin Henry Bolingbroke, and more foolish still, sequestrating the Lancastrian estates when his uncle, John of Gaunt, died (1399). While Richard was absent in Ireland, Henry landed in Yorkshire and marched across England gathering adherents. The King returned and, judging the position hopeless, surrendered. He was taken to Pontefract Castle in Yorkshire from which he never emerged. His cause of death is uncertain – he may have been smothered, or starved himself. He was married twice but died childless. Bolingbroke succeeded him as *Henry IV. Richard encouraged the arts and his court became a centre for culture.

Richard III (1452–1485). King of England 1483–85. Born at Fotheringhay Castle, Northamptonshire, son of *Richard, Duke of York, he was created Duke of Gloucester (1461) when his brother *Edward IV deposed *Henry VI, whom he probably murdered (1471) by bashing his skull. In 1472 he married Anne Neville (1453–1485), daughter of *Warwick the Kingmaker. When Edward IV died (1483), the boy king *Edward V succeeded and Richard ruled, as protector. The events that followed arose directly from the hostility to him of the widowed queen, Elizabeth (Woodville), and the swarm of her relations raised to wealth and power by Edward IV. Richard proceeded to isolate the king from his mother, to seize and kill the most prominent of the queen's relations and then to induce parliament to declare the queen's marriage invalid and the king a bastard, and consequently to dethrone him. Richard then accepted the crown as next in line of inheritance. Meanwhile, young Edward and his brother Richard were in the Tower of London, where they were killed in circumstances that have never been established: Sir Thomas *More's narrative (followed by *Shakespeare), which made Richard Crouchback the exemplar of all wicked uncles, may be exaggerated and certainly contains Tudor bias, and, significantly, there is no contemporary accusation of murder against him. Richard, a successful and just administrator and hitherto very popular, now began to lose adherents, a process accelerated when the Lancastrian claimant Henry Tudor (*Henry VII) landed at Milford Haven, and Richard was defeated and killed in the battle which ensued at Bosworth in Leicestershire. Richard's reputation has had several champions in recent decades, and he is to some extent rehabilitated. In a 1984 television 'trial' in Britain, with a former lord chancellor as judge and leading criminal QCs as prosecutor and defence counsel, Richard was acquitted. In September 2012 a skeleton, later convincingly identified as Richard's, was excavated in a Leicester car park and he was interred in Leicester Cathedral in March 2015.

Richard, Earl of Cornwall (1209–1272). King of the Romans 1257–72. Born at Winchester, son of King *John and brother of Henry III of England, he went on crusade (1240–41). His birth, wealth and integrity enabled him to take an important part in continental politics in the confused period following the death (1250) of the Holy Roman Emperor *Friedrich II. He refused the Sicilian crown offered (1253) by Pope
Innocent IV but in 1257 was the successful candidate for the office of King of the Romans (i.e. emperor elect) and was crowned German King at Aachen, but only gained partial recognition. In the baronial civil war in England he tried to mediate but finally sided with his brother, was captured at Lewes and held prisoner until after the Royalist victory at Evesham.

Richard, Duke of York (1411–1460). English prince. Leader of the Yorkist faction against *Henry VI of England, he was a grandson of Edmund, a younger son of *Edward III, but his claim to the throne came through his mother, Anne Mortimer, who was descended from an older son of Edward III. Soon after the outbreak of the Wars of the Roses he was killed at the Battle of Wakefield. Two of his sons became *Edward IV and *Richard III.

Richards, Frank (pen name of Charles Harold St John Hamilton) (1876–1961). English author. Probably the most prolific author of all time (more than 100 million published words), he wrote two weeklies for boys, Gem (as Martin Clifford, 1907–39) and the better known Magnet (as Frank Richards, 1908–40). Magnet, set at Greyfriars School, featured the fat boy Billy Bunter (who later appeared in books, on stage and television), Tom Merry and Harry Wharton. As Hilda Richards he also wrote girls' school stories. George Orwell's critical essay Boys' Weeklies (1940) provoked a strong defence by Richards.

Richards, Frank (1893–1979). English literary critic. He taught at Cambridge 1922–29 and Harvard 1939–63 and was a pioneer of New Criticism, applying rigorous scientific and analytical method to the study of texts. With C. K. Ogden he devised *Basic English.

Richardson, Henry Handel (pen name of Ethel Florence Lyndsay Richardson) (1870–1946). Australian novelist, born in Melbourne. She studied music in Leipzig, but after her father's death she devoted herself to writing and translation. Although her massive first novel Maurice Guest was published in 1908, it was not until the last volume of the trilogy The Fortunes of Richard Mahony (1917, 1925, 1929) that she achieved success and fame. In a detailed day-by-day account of a man's life in the harsh Australia of the 1850s and 1860s the author conveys the ruthless inevitability of great tragedy. Disappointed not to have received a Nobel Prize, she remained in England until she died.

Richardson, Sir Ralph David (1902–1983). English actor. He first won fame by his Shakespearian performances with the Old Vic, and especially in the New Theatre season, immediately following World War II, during which he had done naval service. From the 1930s he was equally well known for his appearances in many films, including *Things to Come (1936), Anna Karenina (1948), The Fallen Idol (1948) and *The Heiress (1949). Among his stages successes were *Arms and the Man, *The Heiress, *Flowering Cherry. He was knighted in 1947.

Richardson, Samuel (1689–1761). English novelist. Son of a cabinetmaker 'who understood architecture', he had a grammar school education, after which he was apprenticed to a London printer, whose daughter he married (1721). He established (1724) his own business in Salisbury Square and managed it successfully for the rest of his life. He was already 50 when at the suggestion of two friends he wrote a book of specimen letters for various occasions for the benefit of those unable to express their own thoughts. From one of these letters, 'A Father to a Daughter in Service on hearing of her Master's attempting her Virtue', sprang Pamela, or Virtue Rewarded (1740), the first of three epistolary novels intended, since Richardson was primarily a moralist, 'to promote religion and virtue'. Often described as the first modern novel, Pamela, a hugely popular book, was followed by Clarissa (1747–48), a prodigious work in seven volumes where death appropriately follows a lapse from virtue. In Sir Charles Grandison (1753–54) the hero and heroine, their virtue proof against all trials and misfortunes, ultimately and happily unite. Richardson's influence was various and widespread. Pamela was parodied by Fielding in Shamela and Joseph Andrews, and Voltaire made use of it for one of his own plays; Clarissa was translated by the Abbé *Prévost, and *Diderot and *Rousseau were among the author's fervent admirers.

Richelieu, Armand Jean du Plessis, Duc de (1585–1642). French statesman and cardinal, born at Richelieu, Poitou. He was a younger son of François du Plessis, grand provost of France, and at the age of 21 was nominated Bishop of Luçon. Representing the clergy at the States-General of 1614, he made contact with the court and in 1616 was appointed Secretary of State as the protégé of Concino Concini, favourite of the Queen Mother and regent *Marie de Médicis. Concini's assassination (1617), consented to by Louis XIII to assert his independence, seemed likely to end Richelieu's career but, by reconciling the king and his mother, he made himself acceptable to both. Richelieu became a cardinal in 1622, Chief Minister in 1624 and for 18 years was virtual ruler of France. He crushed the political power of the Huguenots (1625–29) by reducing the strongholds granted to them as places of refuge by Henri IV. La Rochelle, the most important, fell (1628) after heroically resisting a siege of 15 months, Richelieu himself ensuring the result by building a huge dyke across the harbour and so preventing relief by the English fleet.
Richelieu next had to contend with attempts by the feudal nobility, aided by the king’s vain and foolish brother Gaston, Duke of Orleans, to undermine his power. Plot after plot Richelieu unveiled and punished, and even overcame a desperate attempt by Marie de Médicis, now turned against him, to have her former adherent removed from office. Having created the centralised autocracy of which *Louis XIV was to be the beneficiary, Richelieu turned to foreign affairs. The Thirty Years’ War was raging and with the death of the Swedish king *Gustaf II (1632) the Protestant cause might have foundered and France been at the mercy of Habsburg Austria had not Richelieu, Catholic cardinal though he was, stepped in with subsidy and armed forces to fill the gap. During the last two years of Richelieu’s life (1640–42), Artois, Alsace and Roussillon were occupied by France. Though primarily a politician, Richelieu proved himself a discerning patron of the arts and learning, and in 1635 founded the Académie Française, his most abiding memorial. Richelieu was known as ‘Eminence Rouge’, his confidential agent as ‘Eminence Grise’ (*Joseph, Père).

**Riel, Louis** (1844–1885). Canadian insurgent, born in Manitoba. In 1869 he led a rebellion of Métis (mixed European and Indian descent) against the
introduction of settled government to Manitoba by the Dominion of Canada. The rising was easily suppressed. Riel fled to the US, then returned, was twice elected as a Dominion MP, but refused to take his seat. He lived in Montana 1879–84 and became a US citizen. Returning to lead an uprising of Métis in Saskatchewan (March 1885), on its defeat Riel was tried for treason, convicted and hanged in Regina.

Riemann, Georg Friedrich Bernhard (1826–1866). German mathematician. He studied under *Gauss at Göttingen, where he returned to teach (1851) and was professor of mathematics 1857–66. He put forward (1854) a system of non-Euclidean geometry that includes the idea of a finite but unbounded space capable of any number of dimensions and rejects many of the basic concepts of *Euclid, e.g. the notion that parallel lines meet only at infinity.

Rienzo, Cola di (1313–1354). Italian patriot, born in Rome. Son of an innkeeper, trained as a lawyer, he looked back to the glories of the ancient republic and convinced himself that it was his destiny to restore the squalid city of his own time to its former greatness. He headed a mission (1343) to Avignon, where the papacy was installed in voluntary exile, to secure constitutional reforms from Pope Clement VI. Returning empty-handed, he succeeded by his eloquence in obtaining popular support for the revival of the Roman republic and he was proclaimed Tribune (1347). As long as he used his despotic power to maintain law and order all was well, but by stirring the people against the nobles he provoked fights and bloodshed and his pretensions to exercise the old Roman supremacy over the rest of Italy were resented. Seven months after assuming office he was forced to flee. He went to Prague (1349–50) to enlist the support of the emperor Charles IV in his plans for a revived Roman Empire. Charles sent him captive to Avignon but in 1353 Pope Innocent IV, hoping to use him to restore papal power, sent him back to Rome, where he resumed despotic rule. But now the mob turned against him, stormed the Capitol and killed their former hero. His story is told in *Lytton’s novel and *Wagner’s opera, both called Rienzi.

Riley, Bridget Louise (1931– ). British painter, born in London. Educated at Goldsmiths’ College and the Royal College of Art, she achieved international recognition from 1962. Her paintings were created within the op art tradition, depending on tension between contrasting colours in stripes and curves, leading to an instability of focus so that the canvas seems to be in motion. She received a CH in 1999.

Rilke, Rainer Maria (1875–1926). Austro-German poet, born in Prague. After his parents separated, he was unhappily educated at a military school and at Prague, Munich and Berlin universities. His earliest works were melancholy reveries. With *Nietzsche’s friend, Lou Andreas-Salomé, who became his mistress, he visited Russia 1899–1900, met *Tolstoy and developed a mystical preoccupation with its history and religion. His poems became concerned with the interrelationship of God (identified with Life), Man and Death. He married (1901) a pupil of the French sculptor *Rodin, and became his secretary (1905–06) and fervent admirer. Though his spiritual search continued, he learnt from Rodin the importance of form; his poems thus lost much of their vague mysticism and as his vision became more objective he directed it to more concrete themes. His novel *The Notebook of Malle Laurids Brigge (1910) is partly autobiographical. He lived in Trieste 1910–12. After further travels he settled in Switzerland (1919), and with the publication (1923) of the 10 *Duino Elegies (1912–15, 1922) and the *Sonnets to Orpheus he seemed to have found tranquillity in the cult of beauty. He was preoccupied with the ‘inseparability of uniqueness and transience’ in human life, and the centrality of courage, awareness and aesthetics, and is regarded as the greatest modern German poet. He died of leukaemia.

Rimbaud, (Jean-Nicolas) Arthur (1854–1891). French poet, born in Charleville. He reacted against the dominating puritanism of his mother and an unhappy home life by running away from home several times before settling in Paris (1870). His amazing precocity was shown in all his early pieces and especially in his *Le Bateau ivre (The drunken boat) in which the rhythms and images already have the magical quality that appears in the work of the later symbolists. He lived with *Verlaine in Paris from 1871 but the association ended abruptly when Verlaine was sent to prison for firing two shots at Rimbaud who was threatening to leave. But it was Verlaine who made Rimbaud famous with an analysis of his poems in *Les Poètes maudits (1884). Rimbaud never knew of this. All his poems were written before he was 20, many under the deliberate stimulation of drink, drugs, or debauchery: all the fragments, *Les Déserts de l’amour (1871), *Les Illuminations (the basis of a song cycle by *Britten, 1872–73), *Une Saison en enfer (1873) are infinitely revealing of a genius in the making and the spoiling. After that he drifted round
the world until, in 1883, he reached Abyssinia, where he established a harem and set himself up in trade. His account of his travels there was published in 1928. He had a working knowledge of Latin, English, Italian, Greek, German, Dutch, Russian, Arabic and Amharic. He died in hospital at Marseilles after an amputation for a tumour on the knee.

**Rimsky-Korsakov, Nikolai Andreyevich** (1844–1908). Russian composer. Though trained for the navy, he joined *Balakirev’s* group of ‘nationalist’ composers known as ‘the Five’ (the other three being *Borodin*, *Mussorgsky* and *Cui*), who made it their rule to introduce the themes and spirit of Russian folk music into all their compositions. His first symphony (1861–65), his second (1868, twice revised and eventually published as a symphonic suite, Antar, in 1903), and an opera *The Maid of Pskov* (1868–72) belong to this period. The group broke up c.1870, but, as all lacked academic training, Rimsky-Korsakov was astonished to find himself appointed (1871) professor at the St Petersburg Conservatoire. He succeeded, none the less, in making himself a master of orchestration and contrapuntal technique, and, though the effects upon his work were at first devitalising, he later achieved the brilliance of *Capriccio Espagnol* (1887) and *Scheherazade* (1888). From 1888 he turned to opera but only gave of his best when he had succeeded in shedding *Wagner’s* influence with such fairytale operas as *Sadko* (1894–96), *The Snow Maiden* (1880–81) and *The Golden Cockerel* (1906–07), his last work. Rimsky-Korsakov’s work lacks depth of feeling and his fame rests on his versatility, especially *Dargomyzhski’s* works of other composers who lacked his technical mastery, especially Dargomyzhski’s *Stone Guest*, *Mussorgsky’s* *Boris Godunov* (here the original has more individuality) and *Borodin’s* *Prince Igor*.

**Rinehart, Gina** (Georgina Hope, née Hancock) (1909– ) Australian mining heiress, born in Perth. Daughter of *Lang Hancock* (1909–92), who made a fortune opening up the Pilbara, Western Australia, for iron ore mining, she became Australia’s richest person, with $AUD22 billion net worth (2013), and the fourth richest woman in the world. She was a powerful advocate for conservative causes, and was strongly opposed to action on climate change.

**Ripon, 1st Earl of, Frederick John Robinson** (1782–1859). English Tory/Conservative politician. Educated at Harrow and Cambridge, he became a barrister and MP 1806–27, and held office in every Tory Government between 1809 and 1846. He introduced the Corn Laws (1815) and as Chancellor of the Exchequer 1823–27 was known as ‘Prosperity Robinson’ or ‘Prosperity Fred’. Created *Viscount Goderich* in 1827, on *Canning’s* death he became Prime Minister briefly 1827–28 and had the unique distinction that his Ministry never met parliament. (Disraeli called him ‘a transient and embarrassed phantom’.) His son, *George Frederick Samuel Robinson, 1st Marquess of Ripon* (1827–1909) declared himself a Christian Socialist, first held office as *Palmerston’s* Undersecretary for War 1859–63 and retired as *Campbell-Bannerman’s* Lord Privy Seal 1905–08. He was Grand Master of the Freemasons 1870–74, then became a Catholic. He chaired the commission that settled the ‘Alabama’ dispute with the US (1871) and, as *Gladstone’s* Viceroy of India 1880–84, encouraged moves towards self-government.

**Ritz, César** (1850–1918). Swiss hotelier. He created Ritz Hotels in London, Paris and New York and his name became synonymous with luxury (as in the adjective ‘ritzy’).

**Rivera, Diego** (1886–1957). Mexican painter. He studied in Paris where he came to know the principal Cubists and was influenced by the works of *Gauguin*. His best known works are large murals and frescoes for which he revived the encaustic methods of the ancient Maya sculptors. His themes were revolutionary episodes from history intended to promote the communist cause. His style was a composite of ‘folk art’, symbolism and Aztec undertones directed towards political ends. He was, for a time, obliged to leave Mexico. After his return (1935) he began to adopt surrealist techniques. His second wife was the painter Frida *Kahlo*.

**Rivera, Primo de see Primo de Rivera y Orbaneja, Miguel**

**Rizal y Mercado Alonso, Jose Prolasio** (1861–1896). Filipino writer and patriot. As a writer he aimed at fostering a desire for Filipino independence. His novels *Noli me Tangere* (1886) and *El Filibusterismo* (1891) were eloquent attacks on Spanish misrule. He founded a nationalist society, and was exiled from Manila. When the Filipino revolt of 1896 broke out Rizal was arrested (outside the Philippines), brought to Manila and executed. He is regarded as a national hero.

**Rizzio (or Riccio), David** (c.1533–1566). Italian musician and secretary, born near Turin. He went to Scotland (1561) and became the favourite and secretary of *Mary Queen of Scots*. His arrogant assumption of power and his personal relations with the Queen roused such anger and jealousy that *Darnley*, her husband, joined a group of nobles in a conspiracy to murder. The Queen was having supper in her room with Darnley, Rizzio and Lady Argyll, when Lords *Morton* and *Ruthven* burst in...
and denounced the favourite. Other conspirators appeared and during the ensuing fracas Rizzio was dragged out and immediately stabbed to death.

**Robbia, Luca della** (1400–1482). Florentine sculptor. A skilled worker in bronze and silver, he is best remembered for his terracotta sculptures to which, in the manner of the Moors in Spain, white and coloured enamels were applied. The Madonna and Child ‘type’, which he developed, perhaps influenced Raphael’s Florentine Madonna series. Luca’s first dated and justly celebrated major work was the Cantoria or Singing Gallery for Florence Cathedral (1431–38), known for its panels of singing and dancing boys. Luca’s nephew, Andrea della Robbia (1435–1525), his partner and less accomplished successor, is remembered for the medallions of babes in swaddling clothes on the Foundling Hospital in Florence. His sons, including Giovanni della Robbia (1469–1529) and Girolamo della Robbia (1488–1566) carried on the family workshop.

**Robert I** see Bruce, Robert

**Robert II** (1316–1390). King of Scotland 1371–90. Son of Walter the Steward, his hereditary office passed to him and so made him the first king of the Stewart (Stuart) dynasty. His claim to the throne came through his mother Marjorie Bruce, daughter of Robert I (Robert *Bruce) and sister of David II, for whom he acted as regent during his captivity in England.

**Robert III** (1340–1406). King of Scotland 1390–1406. Son and successor of Robert II, injury from the kick of a horse made him incapable of rule, and power was exercised by his brother, the Duke of Albany. Robert was succeeded by his surviving son James I.

**Roberts, Frederick Sleigh, 1st Earl Roberts of Kandahar, Pretoria and Waterford** (1832–1914). British field marshal, born in Cawnpore, India. Educated at Eton and Sandhurst, as a young officer in the Bengal artillery he won the VC during the Mutiny (1858). He became a national hero in the Afghan wars, when in 1880 he led an army of 10,000 men from Kabul through the mountains to the relief of Kandahar, covering a distance of 495 kilometres in 22 days and then defeating the Afghans. After brief service as commander in Natal and Transvaal (1881), he returned to India and was Commander-in-Chief 1885–93, receiving a peerage in 1892. He became Commander-in-Chief in Ireland 1895–99, and was promoted to field marshal (1895). After the serious defeats with which the Boer War opened (December 1899) Roberts was sent out as Commander-in-Chief and quickly retrieved the situation. Pretoria was captured (June 1900) and, though guerrilla warfare continued, organised operations were at an end. Roberts returned to become Commander-in-Chief of the British army, a post abolished in 1904. From then on, with the threat from Germany in mind, he campaigned in vain for conscription for military service. He condoned threats by the Ulster Volunteer Force (UVF) to use force against the establishment of Home Rule in Ireland, and broke with John *French. He died in France visiting troops in World War I. He had the longest set of post-nominal awards in British history: VC, KG, PC, KP, GCB, OM, GC, GCIE.

**Roberts, Tom** (Thomas William) (1856–1931). Australian painter, born in Devon. He migrated to Melbourne in 1869 and studied art there, and in London 1881–84. He was a central figure in the Heidelberg School of painters (1887–90), with his friend Arthur *Streeton. Apart from important portraits and landscapes, his iconic paintings include *Coming South* (1886), *Shearing the Rams* (1890), *A Break Away!* (1891), *Bailed Up* (1895) and *The Big Picture* (opening of first Commonwealth Parliament, 1903). Back in England 1903–19, 1921–23, he returned to live in Victoria, then Tasmania, where he died.

**Robertson, Pat** (Marion Gordon) (1930– ). American evangelist, political activist and broadcasting executive. Son of a US senator (Democrat), he became a Southern Baptist minister, founded the Christian Broadcasting Network, was a famous televangelist, sought the Republican nomination for president in 1988 and wrote 13 books.

**Robertson, Sir William Robert, 1st Baronet** (1860–1933). English soldier, born in Lincolnshire. Son of a tailor, he was a footman in service and joined the army as a private in 1877. After long service in India, he was an intelligence officer under Lord *Roberts in South Africa and subsequently held a succession of staff appointments until he became, on the outbreak of World War I, QMG to the British armies in France and Chief of the Imperial General Staff 1915–18. He commanded the armies on the Rhine 1919–20. He was the only soldier to rise from private to field marshal (1920).

Robertson, W. R., *From Private to Field-marshal.* 1921.

**Robeson, Paul Le Roy** (1898–1976). American singer and actor, born in Princeton. Son of a runaway slave who became a Methodist minister, he became an All-American footballer and studied arts and law at Rutgers and Columbia Universities. He appeared as
Brutus Jones in Eugene "O'Neill's The Emperor Jones in New York (1923), London (1925) and in the film (1933) and was a notable Othello (1930, 1943–45, 1959). He achieved his greatest success with the song 'Ol' man river' in Showboat and as Bosambo in Sanders of the River and his resonant bass voice was memorable in Negro spirituals and worksongs. He visited the USSR for concert tours and was blacklisted during the 'cold war' for his advocacy of black rights, the peace movement and other radical causes. He lived in England 1958–63.

Robespierre, Maximilien François Marie Isidore de (1758–1794). French Revolutionary leader, born at Arras. Orphaned at 7 and brought up (with his brother Augustin) by maiden aunts, he was a leading lawyer, judge and litérateur in Arras until elected (1789) to the Estates-General, soon renamed the National Assembly. At first little known, he spoke 500 times in the National Assembly – nearly every sitting day. In 1791, having moved to Paris, he was elected to the Paris Commune and consolidated his great support among the Jacobin clubs. His rigidity and honesty earned him *Marat's description as 'incorruptible' ('the seagreen Incorruptible' in *Carlyle's famous phrase), but it was by his speeches and his gift for putting into words what others were feeling that he gradually gained ascendency in the Jacobin Club, the meeting place of the extreme republicans encouraged and supported by the Paris mob. As leader of the left Jacobins, he made 100 speeches in Paris between September 1791 and August 1792. He opposed declaration of war on Austria (April 1792) bitterly – and predicted its outcome. He was elected as the first of Paris's 24 delegates to the Convention in September 1792. He proposed and secured the passage of the 1793 Constitution, modelled along the ideas of his idol J. J. *Rousseau. In July 1793 the murder of Marat contributed to the proscription of the Girondes and the election of Robespierre to the Committee of Public Safety, where he served from 27 July 1793 to 26 July 1794. This was his first exercise of power, more as a resident conscience than a minister. He called for a regime based on 'virtue without which terror is baneful, terror without which virtue is powerless' and purged the Convention of 'ultra-revolutionaries' such as *Hebert (March 1794) and moderate 'indulgents' led by *Danton (April 1794). He introduced the 'Maximum', rigorous government control of the economy, and planned what was virtually a welfare state. He proposed a state cult based on Rousseau's 'civil religion', seeing this as a compromise between atheism and Catholicism. His great day of triumph, presiding at the 'Festival of the Supreme Being' (8 June), marked the beginning of a conspiracy against him by *Tallien, *Fouché and *Barras, corrupt men who feared for their own lives as the Reign of Terror increased in intensity. The battle of Fleurus (June 1794) confirmed that the Committee of Public Safety had placed France militarily in the ascendancy, thus removing the main justification of Terror. A scene was staged in the Convention 27 July (9 Thermidor in the Revolutionary calendar) during which Robespierre was denounced and arrested. Next day, after rescue and recapture he was guillotined without trial with 21 other leaders of the Terror. The historians Mathiez and Lefebvre have gone far towards rehabilitating his reputation as a sanctimonious butcher and Crane Brinton has suggested that he was best explained as essentially a religious figure, pledged to destroy corruption and error. Nevertheless he was a flawed character, cold, remote and inflexible. He was a bachelor and owned poodles.

Robey, Sir George (George Edward Wade) (1869–1954). English music-hall comedian. Educated in Germany, he was a clerk who played in amateur theatre, made his professional debut in London (1891), and soon being known as 'the Prime Minister of Mirth'. In World War I he had a triumphant success in the revue The Bing Boys are Here. In 1935 he played Falstaff on stage in Henry IV Part I and repeated it in *Olivier's film Henry V (1944).

Robin Hood. Legendary English folk-hero, probably based on a bandit-rebel active during the reign of *Richard I (1189–99). Robin originally in all probability a hero of oral folktales, appears first 'formally' in the 14th-century poems Piers Plowman, but popularity was mainly stimulated by 15th-century ballads. These depict him living in Sherwood Forest as the leader of a gang of outlaws, an expert archer and champion of the poor, particularly active against the injustices and extortions of the Sheriff of Nottingham.

Robinson, Edwin Arlington (1869–1935). American poet, born in Maine. Educated at Harvard, he lived in poverty until Theodore *Roosevelt gave him a post in the New York Custom House (1905). He published 26 volumes of epigrammatical and conversational verse in strict classical forms. His best known poem is Miniver Cheevy, from The Town Down the River (1910). He sees man as a creature trapped between his animal and spiritual natures and in each he studies 'the small Satanic king': the poet is 'the modern man seeking light in a dark universe'. The same problems and the same pessimism appear in his great Arthurian trilogy, Merlin (1917), Lancelot (1920) and Tristram (1927). He won the Pulitzer Prize three times.

Robinson, (William) Heath (1872–1944). English illustrator and comic artist. He was best known for his drawings of weird elaborate machines for performing elementary operations.
Robinson, Jackie (John Roosevelt Robinson) (1919–1972). American baseballer, born in Georgia. In 1947 he became the first African-American in a major baseball team (Brooklyn Dodgers), stoically resisted racist attacks and was an important role model.

Robinson, Mary (1758–1800). English actor. Known as ‘Perdita’ from her role in Shakespeare’s *The Winter’s Tale, she played at Drury Lane (1776–80) and became (1779) the mistress of the Prince of Wales (*George IV). She wrote poetry, plays and novels, but despite a pension, she died in poverty.

Robinson, Mary Therese Winifred (née Bourke) (1944– ). Irish politician, born in Dublin. Educated at Trinity College, Dublin, and at Harvard, she became a lawyer, married a Protestant, joined the Labour Party, taught at Trinity and was active in the International Commission of Jurists. As a senator 1969–89, she was an ardent advocate of women’s rights. In November 1990 she was elected as President of Ireland with 53 per cent of the votes, defeating the government’s candidate. She resigned to become United Nations Commissioner for Human Rights 1997–.

Robinson, Sir Robert (1886–1975). English organic chemist. Educated at Manchester, he held chairs at Sydney, Liverpool, St Andrews, Manchester and London before becoming Waynflete professor of organic chemistry at Oxford (1930–55), where he headed a team investigating the chemistry of penicillin. His researches into organic chemistry were mainly in the fields of the alkaloids, plant pigments and phenanthrene derivatives. Knighted in 1939, he was President of the Royal Society 1945–50, won the Nobel Prize for Chemistry (1947) and received the Order of Merit in 1949.

Rob Roy (‘Robert the Red’, i.e. Robert Macgregor) (1671–1734). Scottish outlaw. A grazier on the braes of Balquhidder (where he is buried) in southwest Scotland, he maintained an armed band for the protection of his flocks and those of his neighbours as well as for purposes of his own. His exploits, real and legendary, earned him the reputation of a Scottish Robin Hood, robbing the rich for the benefit of the poor, while at the same time pursuing a personal vendetta against the Duke of Montrose.

Robsart, Amy (1532–1560). English noble woman. First wife of Robert Dudley, later Earl of *Leicester, her mysterious death at Cumnor Place, Berkshire, roused suspicions that she had been killed on her husband’s order (with or without *Elizabeth’s most improbable connivance), in order to enable him to pursue his ambition to marry the queen. Her story forms the basis for Sir Walter *Scott’s *Kenilworth.

Robson, Dame Flora McKenzie (1902–1984). English actor. She made her debut in 1921 and played her first season at the Old Vic Theatre, London, in 1934, after which she appeared frequently in London, on tour and in New York in an unusually wide variety of classical and contemporary plays. Her first film was *Korda’s *Catherine the Great (1934). She was made DBE in 1960.

Rocard, Michel Louis Lon (1930–2016). French Socialist politician. Son of a physicist, educated at the University of Paris and the École Nationale d’Administration (ENA), he became an inspector general of finances and stood in 1969 as a presidential candidate for the Parti Socialiste Unifie (PSU), which later merged with *Mitterrand’s Socialists. He was Minister for Planning 1981–83, for Agriculture 1983–85 and Prime Minister 1988–91 and had a poisonous relationship with Mitterrand. With Bob *Hawke and Jacques Yves *Cousteau, he played a central role in organising a 50-year moratorium (1991) against mineral exploration in Antarctica. He was Leader of the Socialist Party 1993–94.

Rochefoucauld, Duc de de la see *La Rochefoucauld, Duc de

Rochester, John Wilmot, 2nd Earl of (1647–1680). English poet and courtier. Son of a Royalist general ennobled by *Charles I, he was one of the profligate wits who attended the court of *Charles II, of whom he wrote ‘He never said a foolish thing, Nor ever did a wise one’. An exaggerated reputation of being a debaucher overshadowed his achievements as a poet. Some of his lyrics are exquisite expressions of tender feeling, and his *Satire Against Mankind (1675) sparkles with devastating wit, though much of what he wrote is certainly pornographic. His deathbed repentance was described by Bishop *Burnet.

Rockefeller, John Davison, Sr (1839–1937). American industrialist and financier, born in Richford, New York. The son of a farmer and patent medicine salesman (who later disappeared), his family moved to Cleveland, Ohio in 1853 and he left school at 16. He progressed from bookkeeper to oil well owner in the young oil industry (1862) and in Ohio founded (1870) the Standard Oil Company. This, by 1878, controlled 98 per cent of the American oil industry. In 1892 the monopoly was broken by court order, but he continued to dominate the industry through a holding company (Standard Oil of New Jersey) until he retired in 1911. He gave over $550 million to charity, founded Chicago University and the Rockefeller Institute of Medical Research and was reputed to be the richest man in the world. He founded (1931) Rockefeller Center, New York, the largest non-governmental building so far built. His son John Davison Rockefeller, Jr (1874–1960) was an active philanthropist and gave the United Nations the site on which it stands (East River, New York) and his son, Nelson Aldrich Rockefeller (1908–1979), was Assistant Secretary of State for Latin American Affairs 1944–45 and Undersecretary of State for Health and Public Welfare 1953–54. He was Governor of New York State 1959–73, being the only Republican to score a major victory in 1958. He campaigned as a liberal for the Republican presidential nomination in 1960, 1964 and 1968. Under Gerald Ford he was appointed as Vice President of the US 1974–77. He was a notable patron and promoter of ethnographic and modern art.

Rockingham, Charles Watson Wentworth, 2nd Marquess of (1730–1782). English politician. A member of the same family as Charles I’s famous minister Sir Stafford, he led the main body of the Whigs after the retirement of Sir Newcastle, but he had too many outside interests (including the turf) and too little force of character to be a great leader. He favoured the conciliation of the American colonists and was Prime Minister 1765–66 in the government that repealed the Stamp Act. Prime Minister again March–July 1782, he died in office. He owed many of his political ideas to Burke, his private secretary (1765).

Rodgers, Richard (1902–1979). American composer. He wrote musical comedies in collaboration with the librettists Lorenz Hart (1919–42) and Oscar Hammerstein (1942–60). Among the many successes for which he wrote the music are Pal Joey, Oklahoma, South Pacific, The King and I and The Sound of Music.

Rodin, (François) Auguste (René) (1840–1917). French sculptor, born in Paris. He began his art training at the age of 14 but was slow to mature. During a visit to Italy (1875) he was influenced by Donatello and Michelangelo, while a tour of French cathedrals (1877), about which he wrote a book, led him to call himself a latter-day Gothic artist. This was true only in the sense that he eschewed the plastic smoothness of the antique and expressed spiritual and emotional stresses through the effect of light and shade on roughened surfaces. After his tour he settled at Meudon near Paris and lived there or in Paris itself for the rest of his life. His most famous works include Danaide (1884–85), The Burghers of Calais (1884–95), The Kiss (1898) and The Thinker (1904), the last two intended as part of a vast work The Gate of Hell (186 figures), inspired by Dante’s Divine Comedy, which preoccupied him from 1880. His love affairs with Camille Claudel and Gwen John caused lasting damage to both women. Politically, he was a conservative and a moderate anti-Dreyfusard. The poet Rilke was his secretary 1905–06. Rodin did many sculptures, both busts and full length, of famous subjects e.g. Balzac, Hugo, Baudelaire, Mahler, Célestin, Bernard Shaw. In 1914 he presented 18 pieces from his London exhibition to Britain in gratitude for its support of France in World War I. He gave the remainder of his unsold works to France and they are now displayed in the Rodin Museum, Paris. In January 1917 he married Rose Beuret, his long term mistress. She died three weeks later.

Rodney, George Brydges Rodney, 1st Baron (1719–1792). British admiral. He served as Governor and Commander-in-Chief in Newfoundland 1748–52, and in the Seven Years’ War (1756–63) destroyed the flat-bottomed boats assembled in Le Havre for the invasion of England (1759) and captured Martinique, Grenada and St Lucia (1761). He defeated the Spanish 1779–82 and gained a great victory (the Battle of the Saints) over the French in 1782. A domineering character, Rodney made many enemies, in and out of the navy.

Spinney, D., Rodney. 1969.

Rodrigo, Joaquin (1902–1999). Spanish composer. Blind from the age of three, caused by diphtheria, he studied with Dukas in Paris and was influenced by Satie, Debussy and Spanish folk music. His Concierto de Aranjuez for guitar and orchestra (1939) is the most popular ever written. He also wrote Concierto andaluz for four guitars (1967) and a large amount of piano and vocal music.

Roebuck, John (1718–1794). English inventor. He devised (1749) the first commercially practicable method of producing sulphuric acid, and set up (1762) a factory for converting pig iron to malleable iron by means of a blast furnace. He collaborated with Watt in producing the steam engine.

Roemer, Olaus (1644–1710). Danish astronomer, born in Jutland. He went to Paris (1671) and, working with Picard at the Observatory there, achieved his best known discovery (1675), that the velocity of
light is finite, which he deduced from the fact that the observed time of eclipses on one of the satellites of Jupiter varied with the planet’s distance from earth. He returned to Copenhagen (1681) and was professor of astronomy at Copenhagen 1685–1710 and mayor of the city 1705–10.

**Roentgen see Röntgen, Wilhelm Konrad**

**Roger I** (1031–1101). Norman ruler, Count of Sicily 1072–1101. Son of Tancred of Hauteville, he joined his brother the adventurer Robert *Guiscard, in an enterprise by which much of southern Italy as well as Sicily was conquered. Left to rule Sicily, he showed great administrative gifts which enabled him to leave his successor a united state. His second son, Roger II (1097–1154), who succeeded (1105) his brother, united the Norman conquests into a single kingdom of Sicily, Calabria and Apulia (with Naples and Capua also included). Though the Pope and Emperor temporarily combined against him, he extended his absolute rule over Malta and the African coast from Tripoli to Tunis. His Sicilian capital, Palermo, embellished with buildings in a blend of Romanesque and Saracenic styles, became a great meeting place for scholars from the Greek and Arab worlds.

**Rogers, Richard George, Baron Rogers of Riverside** (1933– ). English architect, born in Florence. Educated at London University and Yale, in 1971 he won the design competition for the Pompidou Centre (Beaubourg) in Paris with Renzo *Piano. He was also architect for the rebuilding of Lloyds of London, redevelopment of the London Docks, the European Court of Human Rights, Strasbourg, the Inmos factory, Gwent, the Music Research Centre, Paris, and other major projects in Tokyo, Berlin, Florence, Princeton and Quimper. He designed the controversial Millennium Dome at Greenwich. He received the CH in 2008.

**Rogers, William Penn Adair** (1879–1935). American actor and humorist, born in Oklahoma of Indian descent. His cowboy act in vaudeville, with its shrewd and homely monologues filled with sharp criticisms of manners and politics, achieved enormous success. Films, newspapers and books, e.g. *Illiterate Digest* (1924), provided him with further outlets. He was killed in a plane crash with the aviator Wiley Post.

**Roget, Peter Mark** (1779–1869). English physician, inventor and lexicographer. His work on the slide-rule earned him his FRS, and his investigations into ‘persistence of vision’ suggested the possibilities of cinematography, but he is best remembered for his *Thesaurus of English Words and Phrases* (1852).
Roland (de La Platière), Jean Marie (1734–1793). French Girondin politician. An administrator and industrialist in Amiens, he became a leader of the Girondin faction and Minister for the Interior 1792 and 1792–93. His wife Jeanne-Marie Manon Roland (née Philibon) (1754–1793) ran a celebrated Parisian salon for the Girondins and dominated her husband. On the fall of the Girondins, Roland escaped but his wife was imprisoned, then executed. Roland committed suicide.

Rolfe, Frederick William (known as Baron Corvo, or Fr Rolfe) (1860–1913). English novelist and eccentric, born in London. A schoolteacher, with a deep knowledge of history and art, but bitter and isolated, he became a Catholic convert and a rejected applicant for the priesthood, probably because of his homosexuality. He dramatised his experience in his novel Hadrian the Seventh (1903), where George Arthur Rose, similarly rejected but then admitted as priest, is unexpectedly elected Pope and proceeds to transform the Church before dying as a martyr. Hadrian was later dramatised and also filmed. A morose and embittered drifter, Rolfe lived as a remittance man in Venice, where he died, using the title Baron Corvo. Other novels include Don Tarquinio (1905) and The Desire and Pursuit of the Whole (1909, published 1934).

Roland, Romain Edmé Paul Emile (1866–1944). French novelist, biographer and essayist. After studying archaeology and history in Rome he gained his doctorate (1895) at the Sorbonne in Paris with a thesis on the early history of music, and returned there to teach musical history (1904–10). His early plays, e.g. Danton (1900), lacked distinction, and he first achieved success with lives of *Beethoven (1903), *Michelangelo (1906) and *Tolstoy (1911). His major work of this period was the huge novel Michelangelo (1906) and *Tolstoy (1911). His major work of this period was the huge novel Jean Christophe (10 volumes, 1904–12), which describes the life of a musical genius in a world of mediocrity. As a pacifist opponent of World War I, he lived in Switzerland from 1914 where he wrote Au-dessus de la mêlée (1915). He won the Nobel Prize for Literature (1915). Between the wars he wrote another long novel L’Amé enchantée (7 volumes, 1922–33) and showed a lively interest in the nonviolent campaign in India by lives of *Gandhi (1924) and *Ramakrishna (1930). Growing Communist sympathies took him to Russia, where he spent some months with his friend Maksim *Gorki, but he modified his pacifist attitude as the Fascist-Nazi threat developed. His later works include Parle Révolution la paix (1935). He returned to France in 1938 and offered his full support to the Allies. He died in Vézelay.

Rolls, Charles Stewart (1877–1910). English aviator and motor manufacturer. A son of Lord Llangattock, he was a pioneer of motoring and aviation. With F. H. *Royce he founded (1906) the Rolls-Royce Company. He made a two-way cross-channel flight (1910), and he died in a flying accident.

Romains, Jules (pen name of Louis-Henri-Jean Farigoule) (1885–1972). French novelist, dramatist and poet. He taught philosophy in French universities, and wrote plays, e.g. Knock (1923), poetry and novels. He evolved the literary theory of ‘unanisme’ an attempt to convey the collective spirit of a city or locality. His major work is the novel sequence known as Les Hommes de bonne volonté (27 volumes, 1932–46), a vivid panorama of French life between 1908 and 1933, collectively the longest novel ever published. He lived in the US 1940–45 and was elected to the Académie Française in 1946.

Romano, Giulio see Giulio Romano

Romanov. Russian dynasty, ruling from 1613 when Mikhail Romanov was chosen Tsar, to 1917 when Nikolai II was forced to abdicate.

Romberg, Sigmund (1887–1951). American composer, born in Hungary. He composed over 70 operettas including such great successes as The Student Prince (1924) and The Desert Song (1926).

Romiilly, Sir Samuel (1757–1818). English lawyer. He had already achieved success at the bar, mainly in chancery practice, when his able pamphlet Thoughts on the probable Influence of the French Revolution on Great Britain (1790) attracted controversy. Solicitor-General 1806–07, and MP 1806–07, 1808–18, he devoted himself to the reform of the criminal law and especially into reducing the number of offences, then some 200, punishable by death. Bill after bill he presented but the results of his perseverance were seen only after his death. He joined the anti-slavery movement and firmly opposed all arbitrary acts (e.g. suspension of Habeas Corpus) by the government. He committed suicide three days after his wife's death.

Rommel, Erwin (1891–1944). German field marshal. He gained the highest decoration for valour in World War I and in 1933 joined the Nazi party. In World War II he commanded an armoured division in France (1940) and in 1941 was given command of the Afrika Korps sent to rescue the Italians in Libya. This he built up with astonishing speed into a powerful instrument of attack and counter-attack and became known as ‘the Desert Fox’. In July 1942 he drove the British back into Africa as far as El Alamein, but *Auchinleck prevented the Germans from racing on to Alexandria. In October, when Rommel was in Berlin, *Montgomery, with
superior forces, won the second Battle of El Alamein, one of World War II’s turning points. This offensive eventually drove Rommel’s forces westward across the Continent into Tunisia, where the German armies finally surrendered. Before this Rommel had been recalled; later he fought in Italy and in 1944 was given command of an army group resisting the Allied invasion of northern France. In July he was seriously wounded when his car was attacked by a British fighter plane. Following the attempted bomb plot on Hitler (July 1944), Rommel was suspected of complicity and forced to commit suicide (October).

Romney, George (1734–1802). English portrait-painter, born in Lancashire. Son of a carpenter, he learnt to draw mainly from copying, but when he went to London (1762) he soon achieved considerable success. He paid his first visit to Paris in 1764 and the delicacy and charm then fashionable there is evident in his work. After a time he ceased to exhibit his pictures and so never became an RA. However, he had no difficulty in attracting sitters especially women, to whose portraits his style with its clean brushwork and clear light colouring was particularly adapted, whereas his drawing and composition were noticeably weak. In 1782 he met and became infatuated with Emma Hart, afterwards Lady *Hamilton, of whom he painted portrait after portrait, many in the theatrical poses in which she took delight. In later life he developed melancholia and lived as a recluse. He was one of the most esteemed English portrait painters of the 18th century, although artistically excelled by *Gainsborough and *Reynolds.

Romulus Augustulus (d. after 476). Roman usurper. Sometimes called the last Roman emperor of the West 475–76, this description is a historical convenience, with no constitutional justification and would have surprised his contemporaries. Romulus was a usurper set upon the throne by his father, a rebel general, the patrician Orestes. Almost immediately the German mercenaries rose against him and their leader Odoacer (Odovacar) killed Orestes, contemptuously spared Romulus’s life and proclaimed himself King of Italy. The Roman Empire reverted to its original constitutional form with a single ruler, now resident in Constantinople. A century later *Justinian reasserted the imperial power.

Ronsard, Pierre de (1524–1585). French poet, born in Couture-sur-Loir. Son of a courtier of noble family, his boyhood was spent as a page in the royal service. He accompanied *James V and his bride, Marie de Lorraine, to Scotland where he stayed for three years. In 1540 illness and deafness forced him to give up his career at court and after his father’s death (1544) he went to Paris. Here he became the centre of a small group of poets (later called the Pléiade) whose aim was to improve French poetry by a close study of Greek, Latin and Italian verse, and by the introduction of new words and forms, e.g. the Petrarchan sonnet. The final test should be as for music, that of the ear. Five books of Ronsard’s Odes were published in 1550–52 and the Amours, sonnets addressed to his mistresses, first appeared in 1552. *Henri II made him court poet (1554), an office he retained under *François II and *Charles IX. The first collected edition of his poems appeared in 1560, and was constantly enlarged until his death, that of 1578 containing the Sonnets to Hélène de Surges. In addition he wrote political poems, e.g. Remonstrance au peuple de France (1562), which reveal his patriotism, and the ambitious, disappointing and unfinished epic Le Français (1572). Ronsard has been described as the ‘prince of poets and poet of princes’.

Röntgen, Wilhelm Konrad (1845–1923). German physicist, born in Lennep. Educated in Utrecht and at the Zürich Technical School, he became professor of physics at Strasbourg 1876–79, Giessen 1879–88, Würzburg 1888–94 and Munich 1900–20, and rector of the university of Würzburg 1894–1900. The discoverer of X-rays (X = unknown, also called Röntgen rays) in 1895, he found that when a high-voltage direct current is applied to a discharge tube containing a rarefied gas the resulting stream of electrons from the cathode, if made to bombard a metal target anode, will produce invisible rays capable of passing through many opaque substances. He also made notable contributions to other branches of physics and won the first Nobel Prize for Physics (1901).

Rooke, Sir George (1650–1709). English sailor. He played a distinguished part at Cape La Hogue (1692), the anchorage where 12 French warships taking refuge after their defeat off Cape Harfleur (as well as many troopships and storeships assembled for an invasion of England to restore *James II to the throne) were destroyed. As a reward Rooke was promoted to be Vice Admiral and knighted. Among other important successes was his capture of Gibraltar (1704) with Sir Clowdisley *Shovell.
Roon, Albrecht Theodor Emil, Graf von (1803–1879). German field marshal. After long service on the staff he was Prussian Minister of War 1859–71 and effected the military reorganisation that enabled victory in the Austro-Prussian War (1866) and the Franco-Prussian War 1870–71 to be achieved with such remarkable speed and success.

Rooney, Mickey (Joe Yule, Jr) (1920–2014). American actor. On the stage from infancy, he made his film debut in 1926 and appeared in 140 movies. He was a memorable Puck in Midsummer Night’s Dream (1935), starred in 15 Andy Hardy films and as Huckleberry Finn (1939). He became a fine character actor and starred in the Broadway musical Sugar Babies.

Roosevelt, Franklin D (elano) (‘FDR’) (1882–1945). 32nd President of the US 1933–45. Born at Hyde Park, New York, into a distinguished family of Dutch descent he was the only child of James Roosevelt (1828–1900) and Sara Delano (1854–1941). Educated at home, he briefly attended schools in Germany and Switzerland (1891), entered Groton in 1896, then Harvard and Columbia, where he was only a moderate student. Having already married Eleanor *Roosevelt (niece of Theodore) in 1905, he joined a New York firm of lawyers. His branch of the family were Democrats and as an opponent of Tammany Hall, the corrupt party machine, he won election as a N.Y. State Senator 1911–13. He supported Woodrow *Wilson in 1912, and was appointed Assistant Secretary of the Navy 1913–20. James M. *Cox won the presidential nomination in 1920 and Roosevelt was the vice presidential candidate. They were heavily defeated by *Harding and *Coolidge. In August 1921 at Campobello Island, New Brunswick, he was afflicted with poliomyelitis which left him permanently paralysed: he needed assistance to walk with crutches and was later confined to a wheelchair. In 1922 he returned to work in law, banking and insurance. With the support of his wife, a devoted personal staff (notably his secretary Louis Howe) and a strong political network, he developed a new maturity and toughness. He supported Al *Smith’s unsuccessful campaign for the presidential nomination in 1924. He wrote Smith’s campaign biography The Happy Warrior, when he became the Democratic candidate in 1928 but lost to *Hoover. However, FDR was elected Governor of New York State, serving 1929–33. The onset of the Great Depression in 1929 limited his scope as a social reformer but he won re-election in 1930 with a large majority.

At the Chicago Convention in June 1932, he won the presidential nomination on the fourth ballot, with the support of W. R. *Hearst, and named J. N. *Garner as Vice President. He flew to Chicago (an unprecedented gesture) to accept nomination and pledged a ‘New Deal’ for the American people. (Smith was a deeply resentful loser.) Hoover, frustrated by the Depression and 25 per cent unemployment, suffered a humiliating defeat. Roosevelt won 57 per cent of the vote (a popular majority of over 7,000,000 votes), carrying 42 of 48 states. After a short hesitation, he created a team of economic and social advisers, known as the ‘Brain Trust’ and embarked on a policy of ‘relief, recovery, reform … for the forgotten man at the bottom of the economic pyramid.’ FDR’s own economic knowledge was shaky, but his team took a central role in transforming the US economy. There were three major approaches to tackling the Great Depression – *Stalin’s, *Hitler’s or FDR’s. The ‘New Deal’, although imperfect, offered the only remedy compatible with democracy. If it had failed, democracy might have been fatally damaged, leading to a World War II which was, like the Spanish Civil War, essentially a struggle between Communism and Fascism. Novel remedies were adopted, parallel to those proposed by J. M. *Keynes – budgeting for deficit, encouraging consumption, central control of credit, massive spending on public works. Weekly working hours were cut to 48, child labour abolished, minimum wages set and a ‘Labor Code’ entrenched the principle of collective bargaining. A Social Security scheme was established. The ‘New Deal’ pioneered soil conservation, reforestation, and flood control, with agencies such as the Civilian Construction Corps (CCC) and the Tennessee Valley Authority (TVA), also providing electricity and irrigation. The Public Works Administration (PWA) employed 4,000,000 at its peak. The National Recovery Administration (NRA) virtually abolished laissez faire until the Supreme Court declared it unconstitutional in 1935. The psychological effect was immense and FDR was a persuasive advocate in his radio ‘fireside chats’: ‘The only thing we have to fear is fear itself, unreasoning terror that paralyses the will.’ Nevertheless, unemployment remained above 12 per cent until 1939. In the 1936 election he defeated Alf *Landon by 46 states to two, winning 61 per cent of the vote (an 8,000,000 majority). Roosevelt, frustrated by the conservative Supreme Court, attempted to appoint six younger judges but Congress rejected this. Encouraged by his wife, he took some hesitant steps towards economic and political rights for black Americans (very difficult
when the Deep South voted faithfully for the New Deal) and took no action against segregation or lynching.

From 1920 isolationism had been overwhelmingly popular in the US and FDR was slow to challenge the conventional wisdom. He signed the Neutrality Act (1935) without demur but soon found ways of circumventing it. From 1938 he voiced increasing opposition to Hitler and *Mussolini. In October 1939 he received a warning from *Einstein about the possibility of building atomic weapons, and directed Vannevar *Bush to initiate developments, leading to the 'Manhattan Project' (*Fermi, *Oppenheimer) and the beginning of the atomic age. Although he helped Britain with Lend Lease (from September 1940) and built up defence industries, the US avoided military commitment.

FDR won an unprecedented third term in November 1940 with 54.7 per cent of the vote, defeating Wendell *Willkie. (Henry A. *Wallace became Vice President.) He took the US out of the tradition of isolationism that *Washington established, *Monroe defined, *Lincoln maintained and Wilson failed to break. He declared that the US 'must become the great arsenal of democracy', proclaimed the Four Freedoms (January 1941), probably influenced by H. G. *Wells, and met *Churchill in August 1941 to conclude the 'Atlantic Charter'. The Japanese attack on Pearl Harbor (December 1941) took the US into World War II, followed by the inexplicable German declaration of war by Hitler. After 1942 the US became the great allied powerhouse and FDR dominated the overall direction of strategy, providing resources and articulating allied war aims. He clashed privately with his military advisors, opposing a 'beat Japan first' strategy, insisting on an allied invasion of North Africa rather than premature landings in Europe. His judgment appears to have been vindicated. He had a clear, sometimes naïve, view about developments in the post-war world, including de-colonisation, the end of European empires and extending democracy. His closest confidant Harry *Hopkins coordinated relations with the Allies. FDR attended conferences at Casablanca (January 1943), Québec (August 1943) and Cairo (November–December 1943). At Teheran (November–December 1943), sandwiched between two parts of the Cairo talks, 'the Big Three' (Roosevelt, *Stalin, Churchill) met for the first time and final defeat of the Axis powers was planned.

FDR was nominated for a fourth term in 1944. Because of his failing health, Democratic Party leaders, concerned that Wallace was too radical and unpredictable as a potential successor, secured the nomination of Harry *Truman as Vice President. In November 1944 FDR won 53.4 per cent of the primary vote, and 36 states, to defeat Thomas *Dewey. He was the principal architect of the United Nations, initiated the World Bank, International Monetary Fund and long term moves towards lower tariffs and global trade. In February 1945 he attended his last international conference at Yalta in the Crimea. He was unduly optimistic that he could negotiate with Stalin, appearing to push Churchill aside (something the British voters did for themselves in July) and has been accused of giving the USSR a free hand in eastern Europe. However, the Red Army was already in occupation and in October 1944 at Moscow, Churchill had conceded 'spheres of influence' to Stalin, acknowledging Russia's dominant role. He contemplated resigning as President to become the first UN Secretary-General.

FDR's powers were weakened by exhaustion, his long physical debility, a mild stroke and possible cancer. In April he died suddenly of a cerebral haemorrhage at Warm Springs, Georgia, while his portrait was being painted, and was buried at Hyde Park.

He remains the most controversial figure in modern US history, denounced variously as 'Fascist', 'revolutionary', 'traitor to his class' and 'madman', while his supporters saw him as courageous, optimistic, creative and deeply committed to democracy and human advancement. His political tradition was continued by Truman, *Johnson, *Clinton and *Obama while his style influenced *Reagan. In a 1983 survey of 846 US historians on presidential rankings conducted by R. K. Murray and T. H. Blessing, Lincoln was No. 1, Roosevelt No. 2, Washington No. 3.

Roosevelt, Theodore (1858–1919). 26th President of the US 1901–09. Born in New York to a rich family which emigrated in the 16th century from Holland, he was admitted to the New York bar in 1881. As a Republican member of his state legislature 1881–84 he took his stand against corruption, but after the death (1884) of his wife (née Alice Hathaway Lee of Boston) and a breakdown of health he became a rancher in North Dakota. In 1886 in London he married Edith Kermit Carow of New York and abandoned the outdoor life of a typical Westerner to return to politics. An ardent hunter, he was also an expert naturalist and birdwatcher. Unsuccessful in his bid for election as Mayor of New York, he was appointed (1889) by President *Harrison to the Civil Service Commission, from which he resigned (1895) to become President of the Board of the New York City police. His spectacular attempt to break the link of corruption between police and underworld made him well known. In 1897 he was appointed Assistant Secretary of the Navy. He resigned on the outbreak
of war with Spain (1898) to raise a mounted force known as 'Rough Riders' for the Cuban campaign, and gained national attention for leading a charge up San Juan Hill (July 1898). On his return as a national hero he was elected Governor of New York State 1899–1901 and showed in his legislation (e.g. the laws for slum clearance etc.) a zeal for social reform. In 1900 he was elected Vice President of the US and on the assassination of *McKinley (September 1901) became President. He used the presidential power more vigorously than any holder of the office since *Lincoln. In 1904 he won 56 per cent of the vote defeating Alton B. *Parker. He helped to settle the great coal strike of 1902, inspired the fight against monopolies ('trust busting'), the passage of the pure food act (1906) and the enforcement of laws against child and female labour. He established national parks and put conservation and environment issues on the political agenda. His interventions in foreign affairs, e.g. when troops were sent to Venezuela (1902) and Dominica (1904) and the seizure of the Canal Zone to facilitate the building of the Panama Canal, were characteristic of his belief in forceful policies. This was further illustrated by his mediation that brought the Russo-Japanese War to an end (T reaty of Portsmouth, 1905) and won him the Nobel Peace Prize (1906). He coined the maxim: 'Speak softly and carry a big stick!'. He was progressive in race issues.

In 1908 he secured the nomination of his friend William Howard *Taft, who succeeded him as president. The next year he spent hunting in Africa and touring Europe. On his return Taft's increasing conservatism could no longer command his support. At the Chicago Republican Convention in 1912, he challenged Taft for the nomination but the conservative wing prevailed and Taft won easily. Roosevelt then stood as the candidate of a new Progressive ('Bull Moose') party and in the November election the Republicans split. The Democrat Woodrow *Wilson won easily, while Roosevelt came second, with Taft holding only two states. TR explored the Brazilian jungle in a scientific expedition 1913–14. A vigorous advocate of US entry into World War I, he was the leading Republican contender for the Presidency in 1920 until his sudden onset of inflammatory rheumatism followed by a fatal heart attack. In 1927 his sculpture by Gutzon *Borglum joined *Washington, *Jefferson and *Lincoln on Mount Rushmore, South Dakota. In 2001 Bill *Clinton awarded him the Medal of Honor for his gallantry at San Juan Hill. (His son Theodore Roosevelt, Jr (1887–1944), also won the Medal of Honor for his services in Normandy.)

Roper, William (1496–1578). English biographer. In 1525 he married Margaret More (1505–1544), collector of the papers and letters – and subsequently the head – of her father Sir Thomas *More. After More's execution he wrote Mirrour of Vertue in Worldey Greatness or the life of Syr Thomas More (1535, first published in Paris 1626), one of the earliest biographies in English.

Rorem, Ned (1923– ). American composer, born in Indiana. Working in New York and Paris, his works include songs, chamber music, five concertos and three symphonies. He won the Pulitzer Prize in 1976 for Air Music for orchestra but may be best remembered for his lively diaries.

Rosa, Carl August Nikolaus (1842–1889). German violinist, impresario and conductor, born in Hamburg. He married the soprano Euphrosyne Parepa and formed his first opera company in New York (1867), moving to London (1871) and Cairo. The Carl Rosa Opera Company opened with Figaro in London 1875 and Rosa gave British premieres of The Flying Dutchman (1876), Lobengrin (1880) and Aida (1880).

Rosa, Salvador (1615–1673). Italian painter, born near Naples. He became a pupil of Aniello Falcone, whose taste for battle scenes he acquired. He went to Rome in 1635 and in 1640 to Florence, where he received the patronage of the *Medici. Back in Rome (1649) he became popular, not only for his energetic landscapes in which with his fine use of chiaroscuro he often produced eerie and fantastic effects, but also for his other accomplishments as musician, satirist and poet. Babylon, his satire on Rome, won particular acclaim.

Rosas, Juan Manuel de (1793–1877). Argentinian dictator. After winning popularity as a leader of irregulars in frontier defence against the Indians, he served as Governor of Buenos Aires province 1829–32. More successes against the Indians resulted in his returning (1835) with full dictatorial powers. For the first time since 1810 the country had stable
government, but the methods of terrorism by which it was achieved undermined the popularity of Rosas, and a Franco-British blockade when he intervened in Uruguay weakened the country's economic strength. He was defeated and deposed by General Urquiza (1852) and died in exile in England.

**Roscius, Quintus** (d.62 BCE). Roman actor. The greatest comedian of his age, he won the patronage of *Sulla and taught oratory to *Cicero, who defended him in a speech, which survives, when he was sued for debt.

**Rosebery, Archibald Philip Primrose, 5th Earl of Rosebery, 1st Earl of Midlothian** (1847–1929). Anglo-Scottish politician and writer, born in London. Educated at Eton and Oxford (where his preference for racing over study led to his expulsion), he inherited his peerage in 1868, and declared three ambitions: to become Prime Minister, marry an heiress and win the Derby. In 1878 he married Hannah Rothschild (d.1890). He served under *Gladstone as Undersecretary at the Home Office 1881–83, Commissioner of Works 1884–85, and Foreign Secretary 1886 and 1892–94, leading the Liberal Party's imperialist wing. He was the first chairman of the London County Council 1889–90, an excellent orator, and a race horse owner who won the Derby in 1894, 1995 and 1905. On Gladstone's retirement (1894), Queen *Victoria chose him as Prime Minister, in preference to Sir William *Harcourt and Earl Spencer. Rosebery, suffering from insomnia and increasingly isolated from his colleagues, resigned after a snap defeat in the Commons (1895). The Conservatives held office for a decade. He never returned to office and pursued an increasingly independent line. He opposed the entente with France on the grounds that it would provoke a German war and produced a plan of his own for the reform of the House of Lords. He was the richest Prime Minister and, despite his short term in office, well rewarded with a KG, KT, Royal Victorian Chain and a second earldom. His historical studies, e.g. *Pitt*(1891) and *Napoleon, the Last Phase* (1901), were well written.

**Rosenberg, Alfred** (1893–1946). German writer and politician, born in Estonia. Of mixed German, Russian and Estonian descent, he studied architecture in Moscow, joined the Nazi Party (1920) and edited its daily newspaper *Völkischer Beobachter* (from 1921). He tried to create a new ideology, compounded of anti-Semitism, Nordic mythology and mysticism, and his unreadable book *The Myth of the 20th Century* (1930) promoted the theory of Aryan racial superiority. Even his fellow Nazis regarded him as a crank. Minister for Occupied Territories in the East 1941–44, he was hanged at Nuremberg.

**Rosenberg, Julius** (1918–1953). American Communist. An electrical engineer, Rosenberg, with his wife Ethel, née Greenglass (1916–1953), was convicted in 1951 on a charge of 'conspiracy to commit espionage in wartime' for passing, in early 1945, technical details of detonation devices in US atomic weapons to the USSR (then an ally). The trial was conducted in an atmosphere of Cold War hysteria and they were both convicted and electrocuted. Freedom of Information disclosures indicate there was a reasonable case against Julius (although the penalty is now thought grossly excessive) but the case against Ethel was threadbare, relying entirely on allegations by her brother, David Greenglass, who turned 'states evidence'.

**Ross, Harold** (Wallace) (1892–1951). American editor. Co-founder of *The New Yorker* (1925), which he edited until his death, the magazine had a major impact on writing and cartooning. Ross promoted the work of *Thurber, Arno, Addams, Steinberg, Perelman, White, De Vries, Edmund Wilson, Dorothy Parker* and many others.

**Ross, Sir James Clark** (1800–1862). British polar explorer. He was the nephew of the Arctic explorer **Sir John Ross** (1777–1856), under whose command he discovered (1829) the north magnetic pole. While leading a scientific expedition (1839–43) to the Antarctic for the British Government he discovered Mounts Erebus and Terror (named after his two ships) and the Ross Ice Shelf. He was knighted on his return. His last polar expedition (1848–49) searched for Sir John *Franklin.

**Ross, Sir Ronald** (1857–1932). British bacteriologist, born in India. After qualifying as doctor (1881) he served in the Indian Medical Service until 1889. During this time he studied the causes of malaria and concluded that it was transmitted by the female *Anopheles mosquito. This discovery won him the Nobel Prize for Medicine* (1902) and a KCB in 1911. As professor of tropical medicine at Liverpool University 1902–12 he carried his studies further in many expeditions to the tropics. He went to King's College Hospital, London, as physician for tropical diseases (1912) and became (1926) Director of the Ross Institute, founded at London University in his honour. He wrote *Memoirs* (1923).

**Rossellini, Roberto** (1906–1977). Italian film director. Son of an architect, he made propagandist films during World War II, then became a leader of the neo-realist school. His *Open City* (1945) was the first internationally recognised European film after the war, followed by *Paisan* (1946), *Ways of Love* (1948) and *Stromboli* (1949). His affair with Ingrid *Bergman led to an unofficial boycott of their films and his career never recovered, although he continued to be a prolific producer, screenplay writer and operatic director.
Rosetti, Christina Georgina (1830–1894). English poet. Of Italian extraction, sister of Dante Gabriel. *Rossetti, her first published verse appeared in 1847. She continued to write poems that showed an exceptional sense of beauty combined with strong religious instincts. The best known collections are *Goblin Market (1862) and *The Prince’s Progress (1866). Packer L. M., Christina Rossetti. 1963.

Rosetti, Dante Gabriel (1828–1882). English painter and poet, born in London. Son of Gabriel *Rossetti (1783–1854), a political refugee from Naples. He studied art at the Royal Academy School with Ford Madox *Brown, an important influence, and Holman *Hunt. He and *Millais discussed their aim of returning to the principles of pre-Renaissance painting by imposing upon themselves the disciplines of a noble subject, truth to nature and meticulous detail. The result was the formation of the Pre-Raphaelite Brotherhood in 1848, the year after Rossetti had written his best known poem *The Blessed Damozel. The paintings produced (among which was Rossetti’s *Ecce Ancilla Domini, now in the National Gallery, London) were received with such abuse that he was discouraged and after 1850 produced no important oil painting for 10 years. In 1860 he painted an altarpiece for Llandaff Cathedral, followed by portraits and pictures in a highly individual imaginative style, with jewelled colouring and of a dreamlike character. The first of the new style portraits was an ethereal, idealised representation of his dead wife, Elizabeth Siddal. Only two years after their marriage (1860) she had died from an overdose of laudanum. In despair he buried his poems with her in 1868 and sold the artwork. Meanwhile he had continued to paint. His most frequent model was the beautiful wife of William *Morris, with whose ventures in the applied arts Rossetti was closely connected. Of his other pictures the large *Dante’s Dream (1870) and *The Blessed Damozel (1875–76) are among the best known. Partial paralysis marked the onset of his final illness. Grylls R., Portrait of Rossetti. 1965.

Rossini, Gioachino Antonio (1792–1868). Italian composer, born at Pesaro. He studied at Bologna, but claimed that he had been more influenced by the music of *Haydn and *Mozart than by his teachers. At 14, he was already working in local theatres, and by the age of 21 he had composed a dozen operas including L’italiana in Algeri (1813). In all he wrote nearly 40 operas, serious and comic. Most of the latter enjoyed outstanding contemporary success for their vivacity, humour and boisterous spirits. The best known include *The Barber of Seville (1816), based on *Beaumarchais – probably his best and certainly his most popular work – *La Cenerentola (1817), and *Le Comte Ory, which were triumphantly acclaimed in Vienna, Paris and London. Suddenly, at the age of 37, he abandoned opera composition and apart from a Mass (1864) his only subsequent major work was his *Stabat Mater (1832–41). There were also a few songs and piano pieces, some of which were later orchestrated by *Respighi for the ballet *La Boutique fantasque and by Benjamin *Britten for Soirées musicales. Weinstock, H., Rossini. 1968.

Rostand, Edmond (1868–1918). French dramatist and poet, born in Marseille. An early volume of verse, *Les Musardises (1890), was followed by a series of light poetic plays, *Les Romanesques (1894), *La Princesse Lointaine (1896) and *La Samaritaine (1897). Fame came with the play *Cyrano de Bergerac (1897), based on a life of a 17th-century soldier and poet disfigured by his grotesque nose. This was followed by *L’Aiglon (1900) about the life of the son of *Napoléon and Marie Louise at the Austrian court: Sarah *Bernhardt played the young prince. *Chantecler, a farmyard fantasy in which Lucien *Guiruy appeared (1910), proved disappointing. Rostand was elected to the Académie Française in 1901.

Rostovtzeff, Michael Ivanovich (1870–1952). Russian historian. He was a professor at St Petersburg (Leningrad) from 1898 but after the Revolution went to the US, where he was professor of ancient history at Wisconsin 1920–25 and Yale 1925–44. His best known work *The Social and Economic History of the Roman World (3 volumes, 1941), is important in being the first application of archaeological research to expand and illuminate ancient history.

Rotblat, Sir Joseph (1909–2005). British physicist, born in Poland. He worked on the ‘Manhattan Project’ which built the first atomic bombs. He was co-founder (1957) of the Pugwash Conferences on Science and World Affairs and shared the 1995 Nobel Peace Prize with the organisation.

Roth, (Moses) Joseph (1894–1939) Austrian-Jewish novelist and journalist, born in Galicia. His essays *The Wandering Jew (1927) and the novel *Radetzky March (1932) were eerily prophetic of the Holocaust.

Rothermere, Harold Sidney Harmsworth, 1st Viscount (1868–1940). English newspaper proprietor. He worked closely with his brother, Lord Northcliffe, in many enterprises, providing the business acumen to match the other's journalistic flair. He bought the *Daily Mirror* (1914) and founded (1915) the *Sunday Pictorial*. He took over Northcliffe's business interests on his death and in turn handed them on to his son. As Air Minister 1917–18 he helped to create the RAF from the Flying Corps and the Naval Air Service and was made a viscount (1919). His newspapers were consistently pro-German 1933–39.

Rothko, Mark (originally Markus Yakovlevich Rothkovitch) (1903–1970). American painter, born in Latvia. His Russian-Jewish family migrated to the US in 1913. He grew up in Oregon and later studied painting in New York. After 1948 he became a leading figure of the Abstract Expressionist movement and his huge, brooding canvases rely on the use of colour alone for their emotional impact. He is strongly represented in major US galleries and at the Tate in London. He committed suicide and the 658 paintings left in his estate were the subject of bitter litigation between his heirs and his agents. His *Orange, Red and Yellow* (1961) sold at auction for $US87 million in 2012.

Rothschild, Mayer Amschel (1743–1812). German banker. During the Revolutionary and Napoléonic Wars he ensured the family fortunes (whatever the outcome of the wars) by sending his sons to operate in different European capitals. The eldest stayed with his father at Frankfurt-on-Main and the others went to London, Paris, Vienna and Naples. Nathan Mayer Rothschild (1777–1836), the London representative, made more than £1 million by arranging to receive speedy news of the result of the Battle of Waterloo and being able to speculate on the basis of knowledge. His son Lionel Nathan de Rothschild (1808–1879) was, from 1847, repeatedly elected MP for the city of London, but took his seat only when the act removing Jewish disabilities was passed (1858). He arranged the £4 million that enabled *Disraeli to secure for the British Government a controlling interest in the Suez Canal* (1875), and was the model for Sidonia in *Disraeli's Coningsby*. His son, Nathan Mayer Rothschild, 1st Baron Rothschild (1840–1915), Liberal MP 1865–85 and raised to the peerage in 1885, was the first Jew to sit in the House of Lords. His grandson, (Nathaniel Mayer) Victor Rothschild, 3rd Baron Rothschild (1910–1990), educated at Harrow and Trinity College, Cambridge, became a zoologist, succeeded his uncle in the peerage in 1937, joined MI5 and worked in disinformation and espionage. Despite allegations that he was a KGB agent (*The Fifth Man*), essentially based on his friendship with Guy *Burgess and Anthony *Blunt, his denials were plausible, and – although a Labour peer – he was trusted by Edward *Heath and, to a degree, Margaret *Thatcher. His sister, Dame Miriam Louisa Rothschild (1908–2005), educated at home, was a code-breaker in World War II and conducted research into fleas, butterflies and schizophrenia. His son, (Nathaniel Charles) Jacob Rothschild, 4th Baron Rothschild (1936– ), was a banker, philanthropist and arts administrator, deeply involved in archaeological conservation. He was awarded the OM in 2002. The 4th Baron's sister, Emma Georgina Rothschild (1948– ), was an economic historian, Professor of History at Harvard and wife of Amartya *Sen.

Rouault, Georges (1871–1958). French painter. He was first trained as a glass painter, a fact recalled by the broad black outlines by which he later emphasised the luminous colours in his pictures. His earliest paintings were of religious subjects in the manner of his teacher Gustave *Moreau. Later, as his constitutional pessimism deepened, he painted in passionate and horrified protest scenes in brothels or other places where human misery abounds. In his later work, the horror changes to pity, he returns to religious themes, but they are painted with the same passion and reveal the same distortions as his pictures of everyday life. These distortions are a reminder of his link with the group known as the 'Fauves', but though he joined them he was never truly of them: the conventions they used for decoration he used for emphasis; he was in fact an isolated figure in the world of art. His pessimism is seen also in his etchings, e.g. *Miserere* and *Guerre* (reminiscent of *Goya*).

Roubaud, Louis François (c.1695–1762). French sculptor. Trained in France, he lived in England as a Huguenot refugee from 1727. His works include impressive sculptures of *Shakespeare and *Newton. His reputation was established by a statue of *Händel.
made (1737) for Vauxhall Gardens. Strong modelling and subtle characterisation, in the style of *Bernini, distinguish his works. His powerful tomb of Lady Elizabeth Nightingale (1761) is in Westminster Abbey. Whinney, M. D., *Sculpture in Britain, 1530–1830. 1970.

**Rouget de Lisle, Claude Joseph** (1760–1836). French author and composer. He wrote *La Marseillaise* (1792), the French national anthem, while an engineer officer in the Revolutionary army. It was adopted as a marching song by a Marseilles battalion bound for Paris and its stirring words and music soon gave it national fame.

**Rous, Francis Peyton** (1879–1970). American physician. Educated at Johns Hopkins University, he worked at the Rockefeller Institute for Medical Research from 1909 and in 1911 identified the first tumour virus, known as the 'Rous chicken sarcoma virus'. In 1966 he shared the Nobel Prize for Medicine for his work on the chicken virus. At 87 he was the oldest recipient of the award and the gap between research and recognition (55 years) is a record.

**Rousseau, Henri** (known as 'le Douanier') (1844–1910). French painter. His nickname derives from his position as a customs officer 1871–85. At the age of 41 he went to Paris to devote his time to painting. He was a naive and natural painter belonging to none of the contemporary groups, but he was able to transfer to canvas with a wonderful child-like assurance the pictures that his vision saw, his memory recalled or his rich imagination conceived. It was as natural to him to paint streets, landscapes, neighbours as the mysterious jungles where tigers prowled. Animals and birds, human beings, he paints them all as they pass before his inner or outer vision, the colour schemes seeming the more original because they are seldom schemed at all. *Gauguin, *Seurat, *Signac and *Pissarro were among his friends and in 1908 *Picasso gave a memorable banquet in his honour.

**Rousseau, Jean-Jacques** (1712–1778). Swiss-French writer and political philosopher, born in Geneva. His father, a watchmaker, abandoned him to relatives. He was apprenticed to an engraver but ran away from his harsh treatment, crossed the frontier into Savoy and found a refuge, half-servant, half-lover, with Madame *Françoise-Louise de Warenens, a woman of generous affections. In the years of vagrancy that followed he would always be welcomed back to her home and in the domestic interludes found time to study music, literature, and philosophy. In 1744 he was settled in Paris making a living by copying music and writing comedies, and having as mistress a kitchenmaid named *Thérèse Levasseur with whom he lived for 25 years. Each of the five children she bore him he deposited on the steps of a foundling hospital, an inconsistency between principle and practice of which he became increasingly ashamed. Meanwhile his opera *Les Muses galantes* (1747) had led to a correspondence with *Voltaire and an acquaintance with *Diderot, for whose great *Encyclopédie he wrote articles on music and political economy. His winning (1749) of a prize for an essay in which he argued that the arts and sciences merely corrupted the natural goodness of man may have encouraged him to develop the theme of the ‘noble savage’ which pervades much of his work. His political thoughts sprang from the same romantic origins. In their natural state men are free, equal and good; it is institutions that have made them otherwise. His *Discours sur l'origine de l'inegalité parmi les hommes* (1755) explains how this came about. Even more influential was his *Du contrat social* (1762). The famous opening words, ‘Man is born free, but everywhere is in chains’, show the same romantic starting-point, the problem of political association being to enable the noble impulses of free man to find collective expression. Much of the book relates to the way in which there can emerge in a community a ‘general will’ in which the individual wills of each participant will find identification. Sovereignty lies with the people as a whole and is the exercise of the general will. There is an implied contract that each individual hands over all his personal rights to the community on the understanding that the precepts of the general will are observed. Sophistries abound in the book. It provides an intellectual preparation for the French Revolution, but has equally provided texts in support of the state despotisms of our own times.

In *Émile* (1762) Rousseau uses the form of a novel to give views on education that resemble those described as ‘modern’ today: education should release and not inhibit natural tendencies; a child's natural curiosity should provide the incentive to learn; experience rather than book-learning is the key to knowledge. However, by ‘child’ he meant ‘boy’ and could see little point in educating girls for a life outside domesticity. In a lighter vein *La Nouvelle Héloïse* (1761), a novel in the form of letters, again takes up the theme of ‘return to nature’ in the context of sex and the family. After his death were published his *Confessions* (1781), where vanity and candour often compete. There are to be found episodes of his childhood and early manhood, his inner reveries and descriptions of the beauties of nature, and though there are many lapses of judgement and taste in this book, it contains, with its supplementary volume, *Rêveries d’un promeneur solitaire* (1762), some of the most exquisite passages of French literature. Since *Émile* had provoked a threat of arrest, Rousseau went to Switzerland and then, on David *Hume's invitation, to England. Signs of delusional insanity began to appear here. (He imagined Hume was plotting against him.) He returned to France (1770) still suffering at times from insanity and died eventually of a heart attack. In 1794 his remains were buried in the Panthéon near those of Voltaire.

Rousseau, Théodore (1812–1867). French landscape painter. He painted in the Auvergne and Normandy before he became a leading figure of the Barbizon school, called after a village in the forest of Fontainebleau (*Millet). Groupings of trees, marshy patches, all the quiet details of an unspoilt countryside are the subjects in which he takes unwearying delight.

Rousseff, Dilma Vana (1947– ). Brazilian economist and politician, born in Belo Horizonte. Of Bulgarian parentage, she became an economist and worked closely with Luis *Lula de Silva, becoming his Minister for Mines and Energy 2003–05 and Chief of Staff 2005–10. She was the first woman (and the first economist) to be president of Brazil 2011–16. In 2015, charged with budgetary offences, she was impeached by the House of Representatives and removed from office in August 2016 in a highly partisan vote by the Senate.

Roussel, Albert (1869–1937). French composer. Originally a naval officer, he devoted himself to music from 1893, studying (1898–1907) under Vincent *D’Indy in Paris at the Schola Cantorum, where he was also professor of counterpoint 1902–14. From 1918 he was forced by ill health to live in the country. His orchestral works include four symphonies and the ballets *Le Festin de l’Araignée (*The Spider’s Banquet, 1912) and *Bacchus and Ariadne (1930). He also wrote piano and chamber music. His sturdily individual style blends French influence with that of *Stravinsky.

Rowe, Nicholas (1674–1718). English poet and dramatist. Among the best known of his plays were *Tamerlane (1702), *The Fair Penitent (1703) and Jane Shore (1714), the last two of which provided excellent parts for Mrs *Siddons. He also published a translation (highly praised by Dr *Johnson) of Lucan’s *Pharsalia. His edition of *Shakespeare (1709) divided the plays into acts and scenes. He became poet laureate in 1715.

Rowland, Henry Augustus (1848–1901). American physicist. Professor of physics at Johns Hopkins University 1867–1901, he developed methods of producing better and larger diffraction gratings, and made (1882) the first concave grating. The Rowland circle, a circle having the radius of curvature of a diffraction grating, is named after him. He improved on the determinations of the mechanical equivalent of heat made by *Joule. He also investigated electromagnetic effects and made an accurate determination of the value of the ohm.

Rowland, (Frank) Sherwood (1927–2012). American chemist. Professor of Chemistry at the University of California, Irvine 1964–92, he shared the 1995 Nobel Prize for Chemistry with Paul Crutzen and Mario Molina for their work in investigating and explaining depletion of the ozone layer by the use of chlorofluorocarbons, leading to the adoption of the Montréal Protocol (1989).

Rowlandson, Thomas (1756–1827). English draughtsman and caricaturist. Extravagant tastes, love of travel and a zest for life, combined with a determination to pay his way to make him one of the most industrious and prolific of artists. Wherever he went, he drew. He is best known for his book illustrations (e.g. *A Sentimental Journey, by *Sterne, and *Baron Münchausen’s Travels) and political cartoons and caricatures, the quality of which he and his contemporary *Gillray raised almost to the level of a new art.

Rowntree, Joseph (1801–1859). English Quaker philanthropist and chocolate manufacturer. He founded the firm at York that still bears his name and helped to found the Friends’ Education Society (1837) as well as schools in York and elsewhere. His grandson (Benjamin) Seebohm Rowntree (1871–1954), also combined his duties as head of the family firm with social work. His Poverty (1901) and Poverty and Progress (1941) resulted from social surveys in York, which set a pattern for later surveys and led to the foundation of the Industrial Welfare Society and similar organisations, in which he was active.

Rowse, A(lfred) L(eslie) (1903–1997). English historian, novelist, poet and critic, born in Cornwall. Proud of his working class origins, he was educated at Oxford, taught there but retired to Cornwall in 1952. He made many enemies, published 105 books, including works on *Shakespeare, *Marlowe, *Swift and the *Churchills, and received a CH in 1996.

won the Socialist nomination for President of France, losing to Nicolas *Sarkozy in 2007. She was formerly married to François *Hollande.

Royce, Sir Frederick Henry, 1st Baronet (1863–1933). British engineer. He was founder (with C. S. *Rolls), and for many years engineer-in-chief of the firm of Rolls Royce at Derby.

Rubbia, Carlo (1934– ). Italian physicist. Educated at Rome and Columbia universities, he was a research physicist at the Centre Européen pour la Recherche Nucléaire (CERN), Geneva from 1960, professor of physics at Harvard 1972–88, and Director of CERN 1989–93. He shared the 1984 Nobel Prize for Physics with Simon van der Meer (1925–2011), also at CERN, for their work in demonstrating the existence of massive short-lived particles called bosons.

Rubbra, Edmund Duncan (1901–1986). English composer. Pupil of *Vaughan Williams and *Holst, his compositions include 11 symphonies, a Sinfonia Concertante for piano and orchestra, piano and viola concertos, choral works (including unaccompanied settings of the Mass) and chamber music. He became a lecturer at Oxford University 1947–68. Influenced by the polyphonic composers of the late 16th and early 17th centuries, and in the main unaffected by modern trends, his music is reflective in manner.

Rubens, [Sir] Peter Paul (1577–1640). Flemish painter, born in Westphalia. His father, a burgomaster of Antwerp, was exiled during the religious wars. Rubens returned to Antwerp where he became court painter to the Duke of Mantua and in frequent travels had the opportunity of studying the works of the great Renaissance masters, especially *Titian and *Tintoretto. He absorbed with a natural eclecticism the features of each necessary for the maturing of his own style, which, as he gradually shed the effects of his early Manneristic training, displayed the full exuberance of the Baroque. In 1608 he returned to Antwerp where he became court painter to the Spanish regents. From his studios came a continuous flow of religious pictures, battle pieces and mythological subjects, portraits both singly and in groups. In the first category the Descent of the Cross can be contrasted with the Raising of the Cross (1610, both in Antwerp Cathedral), the latter (and earlier) showing a much greater sense of strain; in the second category, the Rape of the Daughters of Leucippus is well known, and the first Bacchanales, the nudes revelling in their unrestrained sensuality, bear witness to the intoxicating joy of life. Among the portraits, one of the artist himself with his first wife Isabella Brant (d 1626) is of special interest. By 1621, the year in which he depicted for *Marie de Médicis, the French Queen, episodes of her life in a magnificent allegorical sequence, Rubens had reached full maturity. Movement is freer, composition and colour more dramatic, draughtsmanship (e.g. his daring foreshortenings), confident and secure. His masterpiece was probably Fall of the Rebel Angels (c.1621), now in the Alte Pinakothek, Munich.

The death of his first wife left him freer to undertake confidential missions for which he was well equipped by his artistic and diplomatic talents. Thus he negotiated and painted in France (1620–28), in Spain (1628) and in England (1629–30) with *Charles I, to whom he presented Allegory of the Blessings of Peace, and for whom he designed the ceiling panels for the Banqueting Hall at Whitehall and received a knighthood. Whenever he was at home the outflow of his pictures continued. For this purpose he maintained an elaborate organisation of assistants, of whom *Van Dyck was among the chief, others being employed for painting, e.g., fruit and flowers (Jan *Brueghel) or animals. Rubens abandoned court life in 1633 and retired to his estate at Steen with his young second wife Helena Fourment whom he had married in 1630 and who appears in the nude as Andromeda and in several fine portraits, e.g., The Fur Coat. His subjects are little changed but outlines are softer, shadows less opaque and the colours more delicate, often with a silvery tone. Some of his most famous pictures belong to this period, e.g. The Rape of the Sabines (1635), The Judgement of Paris (1638–40) and the ‘martyrdoms’ (1635–40) e.g. Crucifixion of St Peter. Rubens ranks among the greatest of the world’s artists not only because of the brilliance of his painting techniques, his superb draughtsmanship, inventiveness and observation, but also because his buoyant satisfaction with his life, his success, and his art communicates itself through his work.

Rubinstein, Anton Grigoryevich (1829–1894). Russian composer and pianist. First director of the St Peters burg Conservatorium 1862–67, 1887–91, he toured Europe and the US, as a pianist, but his many compositions, including operas, symphonies, cantatas, and chamber and piano music are now infrequently performed. His brother Nikolai Grigoryevich Rubinstein (1835–1881) was an outstanding pianist, conductor and – to a lesser degree – composer.

Rubinstein, Arthur (1887–1982). Polish-American pianist, born in Łódz, then part of Russia. He first played in public at four, studied in Warsaw, made his debut in Berlin under *Joachim (1900), followed by New York (1906) and London (1912). After early success as a virtuoso, he gained a more serious reputation after 1937 as an interpreter of *Chopin,
Rudolf, Andrei (c.1365–c.1429). Russian icon painter. Trained in the Byzantine tradition, he painted in Zagorsk and Moscow and became a monk. The biographical film Andrei Rublev (1966), directed by Andrei Tarkovsky, was released in 1971 in a censored form.

Rudolf, Kevin Michael (1957– ). Australian Labor politician, born in Queensland. Educated at the Australian National University, he became a diplomat, serving in Sweden and China (and achieving mastery in Mandarin), was head of the Queensland Cabinet office 1991–95, and a Federal MP 1998–2013. Shadow Foreign Minister 2001–06, he was Leader of the Opposition 2006–07, and Prime Minister 2007–10, defeating John *Howard. He made powerful enemies in the ALP factions, compounded by concentrating power in his own office. Following polling which suggested a sharp fall in the party’s primary vote, he was removed from the leadership in a coup (June 2010) and replaced by Julia *Gillard. He was Foreign Minister 2010–12, resigning after having been provoked into making a failed bid for the leadership. After polls put the ALP’s primary vote at 29 per cent, Rudd contested the leadership, defeated Gillard in Caucus and was Prime Minister again June–September 2013, then suffered a heavy election loss to Tony *Abbott. He relocated to New York, became a consultant and sought election as Secretary-General of the United Nations in 2016.

Weller, P., Kevin Rudd: Twice Prime Minister. 2014.

Rumford, Benjamin Thompson, Count (1753–1814). Anglo-American scientist and administrator, born at Woburn, Mass. From 1770 he was a schoolmaster in Rumford, New Hampshire. His Anglophile views in the events that led to American independence caused him to go to England where he worked for the Colonial Office. His experiments with gunpowder won him election as FRS. He returned to America (1782) as a British officer, but the coming of peace (1783) brought him back to England and he was knighted. The next phase of his career, resulting from a friendship with Prince Maximilian, was in Bavaria where, as Minister of War and Police and also Grand Chamberlain, he introduced army education, drained marshes, established workshops, and provided relief for the unemployed. In 1791 he was made a count of the Holy Roman Empire, choosing his title from his former American home. He finally left Bavaria in 1799 and eventually settled in France where he died. In 1805 he married *Lavoisier’s widow. Meanwhile he had endowed Rumford medals for English and American scientists, had conducted researches and had written a paper (1798) for the Royal Society concerning the causes of heat, his conclusion being that heat was not a substance but a form of motion. On the practical plane he designed ovens, grates and chimneys to avoid loss of heat.

Rumi, (Jalāl ad-Dīn Muḥammad Balkhī) (1207–1273). Persian poet and mystic, born in Balkhī, Afghanistan. A Sufi, he lived at Rum (now Konya, in Turkey), wrote Mathnawi, a poetic account of Sufism, and was virtual founder of the ‘whirling dervishes’.

Runciman, Garry (Walter Garrison), 3rd Viscount Runciman of Doxford (1934– ). English historical sociologist. He had an active life as ship owner and company director but as a fellow of Trinity College, Cambridge 1959–63, 1971–, was a productive and original sociologist and expert on Max *Weber. He chaired the Royal Commission on Criminal

Runciman, Sir Steven (James Cochrane Stevenson) (1903–2000). English historian. Educated at Trinity College, Cambridge, his books include The First Crusade (1951), The Sicilian Vespers (1958) and The Fall of Constantinople 1453 (1965). He received a CH in 1984. The sociologist Garry *Runciman was a nephew.

Dinshaw, M., Outlandish Knight. 2016.

Rundstedt, (Karl Rudolf) Gerd von (1875–1953). German field marshal. Born into an old Junker family; he fought in France, Russia and Turkey in World War I but, despite his seniority, he was passed over in favour of *Brauchitsch for chief command in World War II. He proved one of the greatest German generals. He commanded an army group in Poland (1939), he directed the drive across the Meuse (1940), which reached the Channel ports, he was in charge of the great sweep through southern Russia (1941) and in 1942 was transferred to the West to prepare for, and resist (1944), the Allied attack. Briefly supplanted by von Kluge owing to strategical disputes, on his return he staged the last spectacular counter-attack in the Ardennes. Held prisoner in England for a time after the war, ill and old, he was never sent for trial to Nuremberg.

Runneberg, Johan Ludvig (1804–1877). Finnish poet. His works, written (as was then customary) in Swedish, include the long narrative poems The Elkhunters (1832) and The Tales of Ensign Satl (1848), an old soldier's memories of the war with Russia of 1808, the opening poem of which has become Finland's national anthem. King Fjaler (1844) is a romance cycle of the Viking period. Many of Runneberg's ballads and lyrics were set to music by *Sibelius.

Runyon, Damon (1884–1946). American writer. Originally a sports writer, he gains fame by his stories and sketches of New York characters written in the present tense in a racy, continuously flowing style which gives an exciting immediacy. Among his characters are Harry the Horse, Ambrose Hammer, Little Dutch, Ropes McGonagle and many more. His tales make successful films, e.g. Guys and Dolls (1931), and Little Miss Marker (1934) starring Shirley *Temple.

Rupert, Prince (Ruprecht von Wittelsbach), Duke of Cumberland (1619–1682). Anglo-German General and Admiral, born in Prague. Son of the elector Palatine *Frederick (Friedrich) V, and of Elizabeth, daughter of *James I of Great Britain, after fighting in the Thirty Years' War he went to England (1642) to support his uncle *Charles I. His brilliance as a cavalry officer won many successes in the early part of the conflict, though his reckless impetuosity sometimes led him to continue the pursuit instead of returning to consolidate victory. Criticism of his surrender of Bristol (1645) caused him to demand a court martial, which acquitted him. After Charles's defeat and imprisonment he went to France and subsequently commanded the royalist fleet. He returned to England after the Restoration and served as an admiral in the Dutch Wars. He was First Lord of the Admiralty 1673–79. His military exploits were supplemented by his achievements as artist, scientist and inventor. He attended meetings of the newly formed Royal Society and introduced (but probably did not invent) the mezzotint process. In 1668 he spent the winter in the Arctic, and he helped to found the Hudson's Bay Company (1670).

Rurik (d.879). Russian ruler and dynastic founder. A Varangian (Scandinavian), he probably reached Novgorod in 962 and after his death his descendants formed principalities in Kiev, Moscow and elsewhere. Indeed, until the failure of the Muscovite line in 1598 with the death of Feodor I, usurpers all over Russia claimed to be of Rurik's blood. Even in later times Rurik's descendants were automatically styled 'prince'.

Rush, Benjamin (1746–1813). American chemist and medical practitioner, born near Philadelphia. He studied medicine at the College of New Jersey, and at Edinburgh under Cullen and *Black. He received an Edinburgh MD in 1769, then became professor of chemistry at the College of Philadelphia. In 1789 he moved to the chair of the Theory and Practice of Physick. His chemical thinking closely followed that of Black, but he was more original in his medical outlook. Whereas Cullen had explained most diseases in terms of the nervous system, Rush thought the arterial system more important. Thinking that most diseases originated from excessive tension in the arterial system, he became an enthusiastic exponent of reducing that pressure by heroic quantities of bleeding. Later in his life, his interest turned chiefly towards mental illness, having been placed in charge of the insane at Pennsylvania Hospital in 1787. His Medical Inquiries and Observations upon the Diseases of the Mind (1812) is the first American work of psychiatry. Rush was an ardent supporter of American Independence, being a signatory of the Declaration. He was opposed to slavery and capital punishment, and a promoter of women's education, being a founder of Dickinson College. He was an important teacher and one of the inspirational figures of American medicine.

Rush, Geoffrey Roy (1951– ). Australian actor and producer, born in Toowoomba. He gained international recognition as a film actor, winning the
Academy Award for best actor in *Shine* (1996), an Emmy Award for *The Life and Death of Peter Sellers* (2004) and a BAFTA Award in *The King's Speech* (2010). He was Australian of the Year (2012) and foundation President of the Australian Academy of Cinema and Television Arts.

**Ruskin, John** (1819–1900). English author and art critic, born in London. Son of a wealthy wine merchant, he was brought up in a cultured and religious family, but his mother's overprotectiveness influenced him. He studied philosophy (his *Philosophy of Leibniz* appeared 15, 1919–21, being elected FRS in 1908. Having also studied mathematics at Trinity College, Cambridge where he was a Fellow 1895–1921, 1944–70 and lecturer 1910–15, 1919–21, being elected FRS in 1908. Having also studied philosophy (his *Philosophy of Leibniz* appeared in 1900), he was particularly well equipped to write
(in collaboration with Alfred North *Whitehead) Principia Mathematica (3 volumes, 1910–13), an attempt to show that the truths of mathematics are derivable from the basic truths of logic; this great work had immense influence. The appearance of Problems of Philosophy (1912) marked a gradual transference of interest to less purely abstract fields. He had already abandoned his early Hegelian idealism for a form of realism demanded by his faith in mathematical truth. He now offered a theory of knowledge which had at its centre not idealistic inferences from the unknown but logical constructions out of sense data and other ascertainable phenomena.

He was greatly influenced by Gottlob *Frege and his own student Ludwig *Wittgenstein. With the austerity of Russell’s academic thought is his exuberant championing of the unorthodox view in public life. A characteristic essay explained why he was not a Christian. He defended sexual freedom, and from a study of his own children established a progressive ‘school’. In World War I he was fined and imprisoned (1918–1919) for sedition. A visit to Russia disillusioned him about Communism and he wrote The Practice and Theory of Bolshevism (1920) and several popular books about philosophy, science and education. He succeeded his brother Frank as 3rd Earl in 1931, married four times and had many amours. After being sacked from a New York chair (1940) for his writings on sexuality, he gave lectures at the *Barnes Foundation, Merion, Pa. (1941–42) which became the basis of his popular A History of Western Philosophy (1945). He abandoned his pacifist views in 1939. He was again imprisoned again in August 1961. Among his many honours were the OM (1949) and the Nobel Prize for Literature (1950).

Russell, Charles Taze (1852–1916). American preacher. Founder (1872) of the International Bible Students. In 1884 the movement was formed into the Watch Tower Bible and Tract Society, the members of which became known (1931) as Jehovah’s Witnesses. They hold firm pacifist views and believe in the imminence of a second armageddon and a period of 1,000 years when sinners will be given a second chance to reform and repent.

Russell, George William (1867–1935). Irish writer. Better known under his pseudonyms AE, A E and A.E., he was closely linked with other leaders of the Irish literary renaissance, notably W. B. *Yeats, with whom he was associated in the creation (1904) of the Abbey Theatre, Dublin. Russell’s drama Deirdre had been produced only two years before. Earlier he had joined Horace Plunkett’s Irish Agricultural Organisation Society (IAOS) designed to improve the conditions of poor farmers, and edited the Irish Statesman 1923–30. Among his prose works are Imaginations and Reveries (1915) and Song and its Fountains (1932); his poems are mostly mystical.

Russell, John, 1st Earl Russell (1792–1878). English Liberal politician, born in London. Third son of the 6th Duke of Bedford, educated at Westminster School and Edinburgh University (but leaving without a degree), as Lord John Russell he was MP 1813–17, 1818–61. The nickname ‘Finality Jack’ indicated his firm support for all measures of civil and religious liberty, in the tradition of Charles James *Fox. He was a member of Earl *Grey’s ministry which carried the Parliamentary Reform Act of 1832, which Russell had a principal part in framing. As Home Secretary 1835–39 in Lord *Melbourne’s second ministry he passed the Municipal Reform Act (1835) and the Titles Commutation Act (1836), but a moderate attempt to secure freer trade caused the defeat and fall of the government. To prove that he had the support of the financial community Russell stood for and was elected by the City of London, which he represented until 1861. When *Peel became Prime Minister, Lord John was Leader of the Opposition. He pronounced (1846) in favour of complete repeal of the Corn Laws. The government fell but Russell was unable to form a ministry. Peel returned and, having legislated repeal with Whig support, was immediately defeated and again resigned. Russell now became Prime Minister 1846–52 and proved his worth by coping with the Irish famine and the Chartist agitation, until friction with *Palmerston, his Foreign Secretary (whom he dismissed), broke up the ministry. Russell was Foreign Secretary 1852–53 in Lord *Aberdeen’s coalition but criticisms of the conduct of the Crimean War caused him to resign from Cabinet (1855). As British delegate to the Vienna Conference the compromise he tried to agree with Russia was rejected by Cabinet, and Russell was without office until, in 1859, he came to terms with Palmerston. As Foreign Secretary 1859–65 and Prime Minister 1865–66 he supported the unification of Italy under King *Vittorio Emanuele and maintained British neutrality in the American Civil War. He resigned after failing to secure the passage of a new Reform Bill.

Russell, Mary Annette Russell (née Beauchamp), Countess (1866–1941). English novelist, born in Sydney. Writing under the pen name ‘Elizabeth’, she was a cousin of Katherine *Mansfield, married Count Henning von Arnim in 1891 and in Germany wrote Elizabeth and her German Garden (1898), a book of irony and charm which was one of the big successes of the period. She lived in England after her husband’s death, became a lover of H. G. *Wells and in 1916 married the 2nd Earl Russell. Her other books include The Enchanted April (1922) and Mr Skeffington (1940).
Russell, Lord William (1639–1683). English Whig politician. Son of the 5th Earl (later 1st Duke) of Bedford, he was a vigorous opponent of the court party, executed for alleged participation in the Rye House plot to assassinate *Charles II on his return from Newmarket. Of Russell’s ignorance of this conspiracy there is no doubt, but it is equally certain that he, Algernon *Sidney and the more violent Whigs were planning rebellion. Popular indignation aroused by the unmasking of the Rye House plotters spread to the others and enabled a charge of treason to be maintained.

Russell, Sir William Howard (1820–1907). British journalist, born in Ireland. The first and one of the greatest war correspondents, he had gained experience of reporting the stormy politics of Ireland before being sent as war correspondent for *The Times to the Crimea. As well as thrilling readers with accounts of the great battles (Balaklava, Inkerman etc.) he shocked them by revelations of appalling sufferings caused to the troops by the failures of the supply and medical services, the latter leading to the dispatch of Florence *Nightingale. Later he reported the Indian Mutiny (and by his articles stayed indiscriminate punishments), the Civil War in America (where his impartiality offended both sides), and finally the Austro-Prussian, Franco-Prussian and Zulu wars. He founded (1860) the *Army and Navy Gazette.

Ruth, ‘Babe’ (George Herman) (1895–1948). American baseballer, born in Baltimore. The greatest player of the period 1914–35 (often called ‘the Sultan of Swat’), and a left-hander, he established many records, e.g. the most home runs secured in a season (60 in 1927). He played for the Baltimore Orioles (1914), the Boston Red Sox (1914–20) and the New York Yankees (1920–34). After retirement he coached the Brooklyn Dodgers.

Rutherford, Dame Margaret (1892–1972). English actor and comedian. Famous for portraying elderly eccentrics, she was originally a teacher of elocution, and made her stage debut in 1925. Her most famous roles were Madam Arcati in *Blithe Spirit (1941) and Miss Whitechurch in *The Happiest Days of Your Life (1948). Her film career included the character of Miss Marple in the filmed detective novels of Agatha *Christie. She was made DBE in 1967.

Rutherford, Ernest, 1st Baron Rutherford of Nelson (1871–1937). New Zealand physicist, born in Nelson. Educated at Canterbury College, Christchurch, he won an exhibition that took him to Cambridge where he worked with J. J. *Thomson on the long series of fundamental researches into radioactivity and the structure of the atom for which he became famous. His progress was marked by professorships of physics at McGill University, Montréal 1898–1907, Manchester 1907–19 and the Cavendish chair at Cambridge 1919–37. With *Soddy, he put forward (1903) the radioactive transformation theory, which showed that radioactivity arises from spontaneous disintegration of atoms. He also deduced the laws governing the transformations producing radioactivity. He suggested (1911) that the atom consists of a minute nucleus around which electrons orbit, and his model of the nuclear atom became the basis of modern concepts of atomic structure. He realised that if the atom could be split artificially, very large amounts of energy would be released. He succeeded in transforming nitrogen into an isotope of oxygen (1919) and thus, for the first time, achieved transmutation of elements. Apart from his own important discoveries, Rutherford was a great teacher and had, as pupils, many eminent scientists, e.g. *Appleton, *Bohr, *Cockcroft, *Walton, *Hahn, *Kapitza, *Chadwick and *Oliphant. He won the 1908 Nobel Prize for Chemistry (a surprise as he had expected Physics), was knighted in 1914, received the Copley Medal in 1922, the OM in 1925, became President of the Royal Society 1920–25 and a baron in 1931. A great experimenter, the next step for him was often the right one, although sometimes his judgment was wrong e.g. his dismissal of nuclear power as ‘moonshine’. One of the greatest figures in the history of science, he had a warm, open nature and a kindly common sense for which he was loved by pupils and contemporaries alike.

Rutskoi, Aleksandr Vladimirovich (1947– ). Russian soldier and politician. A fighter-bomber pilot, he served in Afghanistan and formed the Peoples’ Party of Free Russia, which included many former CP hardliners. Vice President of Russia 1991–93, he was sacked by *Yeltsin and claimed the presidency himself.

Ruysdael (or Ruisdael), Jacob van (1628–1682). Dutch landscape painter, born at Haarlem. Originally a physician, probably trained by his uncle *Solomon van Ruysdael (c.1600–1670), his quiet pictures of dunes, marshes, rivers and woodlands, mostly in golden-brown tones, are inspired with strong feeling and had much influence on the German Romantics, the *Mill at Wijk being among the best known. His Scandinavian landscapes are also notable.

Ruyter, Michiel Adriaan Zoon de (1607–1676). Dutch sailor. He first went to sea as a cabin boy in a merchantman, but having transferred to the navy was a captain by 1635. In the first Dutch War (1652–53), fought during the Commonwealth, he and *Tromp contended with varying fortunes against the English admiral *Blake. In the second Dutch War (1664–67) against England he captured forts on the African coast, preyed upon shipping in the West Indies and fought (1666) a four-day battle against Prince
*Rupert and *Monk off Dunkirk. In 1667 he made sensational raids up the Medway to Rochester and the Thames to Gravesend, burning ships as he went. In 1676 – Holland and England having come to terms – he took his fleet into the Mediterranean to aid Spain, but died from wounds after a defeat by the French off Sicily.

Ryckmans, Pierre see Leys, Simon

**Rykov, Aleksei Ivanovich** (1881–1938). Russian politician. Originally a Social Democrat, he joined the Bolsheviks in 1905. Arrested and imprisoned several times, after the Revolution he was head of the Supreme Economic Council 1917–24 and succeeded *Lenin as Premier of the USSR 1924–30. *Stalin dismissed him, but in 1931 he re-entered the government when he recanted his opposition to Stalin’s policies. Charged with complicity in a plot to murder Stalin (1936) he was tried and executed.

**Ryle, Gilbert** (1900–1976). English philosopher. Educated at Oxford, he tutored at Christ’s College from 1925, served in the Welsh Guards in World War II and was Waynflete professor of metaphysical philosophy 1945–68. He edited *Mind* 1947–71 and became (with J. L. *Austin) leader of the ‘Oxford school’. His influential work on the analysis of concepts culminated in *The Concept of Mind* (1949), in which he concluded that many concepts that have been usually considered as reflections of the introspective mind are in fact referable to tendencies to act or behave in particular ways.

**Ryle, Sir Martin** (1918–1984). British radio-astronomer. He worked on radar during World War II, and at Cambridge (from 1945) developed new techniques involving the use of radar devices and, later, computers, leading to the aperture synthesis interferometer. He directed the Mullard Radio Astronomy Laboratory 1957–84, was a professor of radio-astronomy at Cambridge 1959–84 and Astronomer Royal 1972–84. Discoverer of the quasar, he shared the 1974 Nobel Prize for Physics with Antony *Hewish.

**Rysbrack, John Michael** (1693–1770). Dutch sculptor. He worked in England from 1720, first worked for James Gibbs and William *Kent on figures for tombs in Westminster Abbey (e.g. Matthew Pryor, *Newton). Later the family tomb (1733) erected for the Marlborough family at Blenheim and the bronze equestrian statue of *William III at Bristol led to a steady flow of commissions. He executed the statue of *George II at Greenwich Hospital and many fine portrait busts (e.g. *Pope, *Milton and Sir Robert *Walpole).
Saarinen, Eero (1910–1961). American architect, born in Finland. Son of the architect Eliel Saarinen (1873–1950), his family lived in the US from 1923. Eero's buildings include the General Motors technical centre at Detroit, the TWA terminal at Kennedy Airport, the US Embassy in London, and major buildings at MIT, Yale and Dulles Airport, Washington.

Sabatier, Paul (1854–1941). French chemist. Professor of chemistry at Nîmes, Bordeaux and Toulouse, he is best known for his discovery (1899), with Jean-Baptiste Senderens (1856–1937), of the method of converting oils into fats by hydrogenation over a catalyst of finely divided nickel. This is the basis of present-day manufacture of margarine from materials such as palm oil and whale oil. He won the 1912 Nobel Prize for Chemistry.

Sabatini, Rafael (1875–1950). English novelist, born in Italy. His popular historical novels and adventure stories include Scaramouche (1921), Captain Blood (1922) and The Black Swan (1932).

Sabin, Albert Bruce (1906–1993). American virologist, born in Russia. He graduated in medicine from New York University, worked for the Rockefeller Institute, Cincinnati University and the National Institute of Health. A rival of Jonas Salk, he developed an oral vaccine against poliomyelitis which was adopted universally.

Sabine, Sir Edward (1788–1883). British soldier and scientist. After being commissioned in the Royal Artillery he accompanied several voyages of exploration as an astronomer. He carried out much research on terrestrial magnetism and discovered the connexion between sunspots and magnetic disturbances on the earth. He was President of the Royal Society 1861–71.

Sacagawea ('Bird Woman') (1787?–1812). American Indian (Shoshone) guide. Married to a Canadian trapper, she accompanied the expedition of *Lewis and *Clark (1805).

Sacco, Nicola (1891–1927), and Bartolomeo Vanzetti (1888–1927). Italian anarchists, resident in the US. Following the murders of a paymaster and a guard at a shoe factory in South Braintree, Mass. (April 1920), they were tried and convicted at Dedham (1921) on circumstantial evidence. Because they were anarchists, it was widely believed that they were the victims of political prejudice. International protests followed but appeals were refused and they were electrocuted. In 1977 both were given posthumous pardons. Further research suggests that Sacco was probably guilty and Vanzetti innocent.

Sacheverell, Henry (1672–1724). English clergyman. He shared rooms with *Addison at Oxford and later became well known as a ‘High-Church’ preacher. He preached at Derby and St Paul’s, in 1709, sermons so violent in their denunciation of the Act of Toleration and the Whig ministry that he was impeached and, despite his skilful defence and the encouragement of a yelling crowd of supporters outside, was suspended from preaching for three years. At the end of this time the government had changed, Sacheverell was invited to speak before the House of Commons and became rector of St Andrew’s, Holborn, where he is buried. Quarrels with parishioners and Jacobite intrigues occupied his remaining years.

Sachs, Hans (1494–1576). German poet and Meistersinger. A shoemaker by trade, he became a ‘master singer’ in the Nuremberg guild (1517), wrote more than 4000 ‘master songs’ and led the guild from 1554. An enthusiastic Lutheran, he is the central figure in Wagner’s opera, Die Meistersinger von Nürnberg (1868).

Sackville-West, Virginia Mary (*Vita) (1892–1962). English poet, novelist and gardener, born in Knole, Kent. Daughter of 3rd Baron Sackville, she was largely educated at home. She married (1913) Sir Harold *Nicolson, and was the lover of Virginia *Woolf. In Knole and the Sackvilles (1922) she described her family’s historic home, and set her novel The Elizabethans (1930) there. Her long poem The Land (1927) won the Hawthornden Prize. Best remembered as a gardener, especially at Sissinghurst Castle, Kent, she received a CH in 1948.

Sadat, Mohamed Anwar el (1918–1981). Egyptian soldier. He was commissioned in 1938, rising to the rank of colonel. He took part in the army officers’ coup of 1952 which deposed King Farouk and was Minister of State 1955–56, Speaker of the United Arab Republic National Assembly 1961–69 and Member of the Presidential Council 1962–64. Vice President of Egypt 1964–66 and again in 1969, he was elected President in October 1970. Particularly noted for his initiative in going to Israel
for peace talks in November 1977, his action put an end to a longstanding policy of Israeli–Egyptian confrontation. A peace treaty was finally signed in 1979. He shared the Nobel Prize for Peace with Prime Minister Begin in 1978. He was assassinated by dissident officers.

Sadat, M. A. el, In Search of Identity. 1978.

**Saddam Hussein** (1937–2006). Iraqi politician, born in Tikrit. Educated in Baghdad and Cairo, he was a militant in the Arab Ba'ath Socialist Party and twice exiled. In 1968, the Ba'athists seized power in Iraq and Saddam was Deputy Chairman of the Revolutionary Command Council until 1979. As President of Iraq and Commander-in-Chief of the Iraqi armed forces 1979–2003, he exercised absolute power. Secular Iraq was at war with Islamic fundamentalist Iran 1980–88 and both sides received material aid from the US. He suppressed minorities, especially the Kurds. In August 1990 Iraq occupied Kuwait and this led to the formation of an international coalition organised by President *Bush under UN auspices, which imposed economic sanctions and resulted in military invasion. The Iraqi forces were heavily defeated by ‘Operation Desert Storm’ in the Gulf War in February 1991. Saddam was forced to give up Kuwait but he remained in power, still a popular hero. UN forces resumed air attacks in January 1993. Saddam's failure to open up weapons storage sites to UN inspectors led to threats of US air attacks (February–March 1998), a situation averted by a settlement negotiated by the UN Secretary-General Kofi *Annan. In December 1998 after Saddam's refusal to cooperate with UN arms inspectors, the US and UK launched four days of attack on Baghdad: this merely consolidated his position. The US led a ‘coalition of the willing’ against Iraq, claiming that ‘weapons of mass destruction’ posed a serious threat to world peace. Iraq was occupied in April 2003 after 28 days of fighting, but continuous acts of violence continued. Saddam disappeared but was found near Tikrit in December 2003, and his trial for the murder of Shi’ites in 1982 began in November 2005. After an appeal court upheld his death sentence, Saddam was speedily hanged in Baghdad.

**Sade, Donatien Alphonse François, Marquis de** (1740–1814). French author. He fought in the Seven Years' War, and was imprisoned many times for crimes of wanton cruelty (hence the word ‘sadism’). To avoid a death penalty he lived for a time in Italy but returned (1777) and was again imprisoned. Released in 1791, he began to publish a number of ‘novels’ (e.g. Justine) which are in part sexual fantasy, in part pseudo-philosophical attempts to justify his vices. He also wrote a melodrama, Otiern. He was confined on the orders of *Napoléon in a criminal lunatic asylum where he died.

**Sādī (or Saadi)** (Abū-Muhammad Muslih al-Dīn bin Abdallāh Shirāzī) (1210–1291). Persian poet, born and lived in Shiraz. His many books are concerned with morals and ethics and his long poem Bustān, and Gulistan, a miscellany in verse and prose, are still highly regarded and used as models of style in Iranian schools.

**Safdie, Moshe** (1938–). Canadian architect, born in Israel. He worked with Louis *Kahn, created the controversial Habitat ’67 for the Montréal Expo, and taught urban design at Harvard 1978–89. Other buildings included the National Gallery of Canada, Ottawa, the Toronto Ballet and the Museum of Civilisation, Québec.

**Sagan, Françoise** (1935–). French novelist. Her books, Bonjour Tristesse (1954) and Aimez-vous Brahms? (1959), probe with frankness and subtlety the sexual relationships of sophisticated youth in her social environment and achieved immense contemporary success. Later novels had less impact. She also wrote the plays Château en Suede (1960), Les Violons, parfois (1961) and Un piano dans l'herbe (1970).

**Saigo Takamori** (1827–1877). Japanese field marshal. A samurai from Satsuma, he was a notable warrior, famous for his bravery and height (1.8m), who led imperial troops in the final overthrow of the shogunate. He urged invasion of Korea (1875) and resigned in a fury when his plans were rejected. He led the Satsuma revolt (January–September 1877) against foreign influence and the adoption of western technologies during the Meiji restoration, but was defeated by a conscript peasant army. Wounded in battle, he asked a friend to behead him. Japanese militarists in the 1930s regarded him as a hero.

**Sainsbury**. English retailing dynasty. **John James Sainsbury** (1844–1928), a London grocer, began a chain of stores that expanded throughout Britain. Family members became active in philanthropy, politics and support for the arts, science and mental health. There were three life peers (two Labour, one Tory); the Sainsbury Wing at the National Gallery, London; the Sainsbury Institute for Art in East Anglia; a Sainsbury Laboratory in Cambridge.
Saint Arnaud, Jacques Leroy de (1796–1854). French soldier. After achieving a high reputation in Algeria, he was created a marshal for helping to effect the coup d'état by which *Napoléon III became Emperor. He commanded French troops cooperating with the British in the Crimean War and took part in the Battle of the Alma. He died nine days later.

Saint-Beuve, Charles Augustin (1804–1869). French critic. After studying medicine he took to journalism and joined the group of Romantic writers of whom Victor Hugo was the centre. Successful neither with his own poems nor a self-analytical novel, Volupté (1835), he turned to criticism, an art form much more suited to his natural scepticism. In a long series of critical studies beginning with Portraits littéraires (1832–39) and Portraits le femmes (1844), he arrived at his literary verdicts by identifying himself with the writers concerned, aided in this by his medical knowledge, psychological insight and analytical mind. His thoroughness is shown in his vast Histoire de Port Royal (1840–60) which, in order to explain the characters and background of the learned members of this headquarters of Jansenism, includes a series of vivid portraits of such great 17th-century figures as *Corneille, *Molière, *Racine. After the revolution of 1848, Saint-Beuve withdrew for a time to Belgium, but soon returned and became reconciled with the new regime. He was given teaching posts at the Collège de France and the École Normale Supérieure and, with a critical article produced regularly week after week, became one of the great literary figures of the Second Empire, and is considered one of the greatest critics.

Saint-Exupéry, Antoine Marie Roger de (1900–1944). French aviator and writer. He became a pilot in 1926, pioneered several commercial air routes, and despite his age flew for the French Air Force in World War II. He disappeared on a reconnaissance flight over the Mediterranean. Flying had always fascinated him, and he conveyed the rare sense of exaltation he derived from flying in books such as Vol de nuit (1931) and Pilote de guerre (1942). In this way he inspired a whole generation of flyers. Thought and fantasy make a successful blend in his children's story *Le Petit Prince (1943).

Saint-Just, Louis Antoine Lon de (1767–1794). French revolutionary. One of the most implacable of the extremist section, he voted for the death of *Louis XVI, and later turned against the Girondins. He was a member of the Committee of Public Safety, and a follower and friend of *Robespierre, whose downfall he shared, being executed two days after his leader.

Saint Laurent, Yves (Henri Donat) (1936– ). French couturier, born in Algeria. He worked for and succeeded Christian *Dior as the dominant figure in French fashion, and also manufactured shirts, ties and stockings. He designed stage sets and costumes for films (e.g. *Belle de jour, 1967), ballets and plays.

St Laurent, Louis Stephen (1882–1973). Canadian lawyer and Liberal politician, born in Quebec. After a distinguished career as a lawyer and academic, he was recruited into government by his friend Mackenzie King as Minister for Justice 1941–46, then succeeded King as Secretary of State for External Affairs 1946–48. As King's preferred successor, St Laurent became the Liberal Party Leader and Prime Minister 1948–57. His government was heavily defeated by *Diefenbaker's Progressive Conservatives in 1957.

Saint-Saëns, (Charles) Camille (1835–1921). French composer, pianist and organist, born in Paris. An infant prodigy, he first attracted recognition as a pianist, playing all *Mozart's concertos and *Beethoven's sonatas. * Liszt praised him, especially as an organist, and he played at the Madeleine Church 1857–77. He studied composition with Halévy at the Paris Conservatoire and was also an accomplished writer, linguist and amateur scientist. He promoted the music of *Bach, *Mozart and *Wagner, and toured extensively, visiting Russia, the US, Argentina, Brazil, Uruguay and Algeria. Of his 13 operas only *Samson et Dalila (1877) remains in the repertoire, of five symphonies (only three of them numbered), the 'Organi' symphony No. 3 (1886) is often played and recorded. His best known work, *Le carnaval des animaux (1886), a brilliant set of parodies, was not performed until 1922, at his direction, except for *The Swan. He also composed five piano, three violin and two cello concertos, *Marche heroïque (1871), *Le rouet d'Omphale (1872) and *Danse macabre (1875). He taught *Fauré and was a contemptuous antagonist of *Debussy and *Stravinsky.
Saint-Simon, Claude Henri, Comte de (1760–1825). French social philosopher. Belonging to the same family as the Duc de *Saint-Simon, he fought in the American War of Independence, but during the French Revolution was suspected an aristocrat and briefly imprisoned though he resigned his title. His ‘experiments in living’, undertaken to prepare him for his task as a social philosopher reduced him to poverty, but his self-confidence was unbounded, as was shown by his unsuccessful proposal to Madame de *Staël on the grounds that the marriage of two such remarkable people would produce an even more remarkable child. His thought was revealed in such books as Du Système industriel (1821) and the more important Nouveau Christianisme (1825). The latter contained his fundamental precept, which was the Christian ‘Love one another’. This was to be put into practice by reorganising society so that it should be controlled by industrial chiefs instead of military or feudal leaders and by scientists instead of priests. His ideas were, however, diffuse and vague and Saint-Simon can be described as the ‘founder of socialism’ only through the activities of his followers and his influence on such thinkers as *Comte.

Saint-Simon, Louis de Rouvroy, Duc de (1677–1755). French writer of memoirs. Having resigned a commission in the King's Musketeers because of failure to gain promotion, he attended court and from 1710 to 1723 he lived at Versailles, an embittered observer of a way of life he shared but affected to despise. After the death of *Louis XIV (1715) he was a member of the regency council but never played an effective political role. His fame rests on his posthumously published Mémoires which he began to write in their final form in 1740. With malice and prejudice but with unique powers of memory and observation he recalls quarrels, love affairs, intrigues, dress, mannerisms and personal foibles with an authenticity and minuteness of detail seldom if ever equalled in descriptions of court life.

St Vincent, 1st Earl of, John Jervis (1735–1823). English admiral of the fleet. He served with *Wolfe in Québec and in the West Indies during the Seven Years' War (1756–63). With *Nelson's support he defeated the Spanish fleet at Cape St Vincent (the southwest extremity of Portugal) in February 1797 and was created earl. A moderate reformer, he was First Lord of the Admiralty 1801–06.

Sakharov, Andrei Dimitrievich (1921–1989). Russian nuclear physicist. A pupil of Pyotr *Kapitza and Igor Tamm, he gained his PhD for work on cosmic rays and led research on hydrogen fusion, playing a decisive role in creating the hydrogen bomb (1953). After 1958 he campaigned against nuclear proliferation, calling for Soviet-American friendship and a convergence of capitalism and Communism in his Progress, Co-existence and Intellectual Freedom (1968). In 1970 he founded the Committee for Human Rights. He was awarded the Nobel Prize for Peace in 1975. In 1980 he was exiled to Gorky and kept under police surveillance. Reports of his failing health led to international concern about his welfare. In December 1986 *Gorbachev allowed him to return to Moscow. He became the leader of the democratic movement in the USSR and was elected to the Congress of Peoples' Deputies in 1989, where he exerted an immense moral and intellectual influence. Within 11 months, at the height of his influence, he was dead.

Saki (pen name of Hector Hugo Munro) (1870–1916). Scottish author, born in Burma. Son of a colonial inspector-general of police, about 1900 he started in journalism in London as a political satirist on the Westminster Gazette and was the Morning Post correspondent in Russia and France (1902–08). The first of the volumes of fantastic, elegant and witty short stories for which he became famous was published in 1904 under his pseudonym and in 1912 appeared his novel The Unbearable Bassington. Interest in his work was later revived by television versions of many of his stories and a collected edition of his works (1963). He was killed in France during World War I.

Saladin (Salah al Din Yusuf ibn Ayyub) (1137–1193). Sultan of Egypt and Syria 1174–93. Born in Mesopotamia of Kurdish origin, he succeeded his uncle as Vizier of Egypt (1169). In 1171 the Caliph of the Fatimid dynasty in Egypt died. No successor was appointed and in 1174 Saladin was confirmed as Sultan of Egypt and Syria by the Caliph of Baghdad. He consolidated his hold over Syria, and conquered Mesopotamia (1180). He ruled his new empire from Damascus and in 1187 invaded the Christian kingdom of Jerusalem. The fall of the city provoked the 3rd Crusade, during which *Richard Coeur de Lion won back the coastal towns from Acre to Jaffa. Saladin retained Jerusalem but allowed pilgrims access. His chivalry was much admired by the Crusaders and he was a just and efficient ruler as well as a fine soldier. He built many roads and canals.

Salam, Abdus (1926–1996). Pakistani physicist. He was a pioneer in the study of superfields and directed the International Centre for Physics, Trieste, 1964–93. He shared the 1979 Nobel Prize for Physics for attempting to reconcile the weak and electromagnetic interactions in elementary particles. He won the Copley Medal in 1990.

Salazar, Antonio de Oliveira (1889–1970). Portuguese dictator. Originally trained for the Church, he became professor of economics at Coimbra University (1916) and was General Carmona’s Minister of Finance 1928–32 and Prime Minister 1932–68. Having introduced a modified form of fascism, he ruled as virtual dictator and rescued the country from financial chaos. He was sternly repressive of opposition but avoided any
spectacular display of power. He kept Portugal neutral in World War II while proving his loyalty to the ancient British alliance by granting facilities in the Azores. In 1968 he suffered a stroke and was unaware that he was no longer premier at the time of his death in 1970.

Salieri, Antonio (1750–1825). Italian composer. He composed 44 operas, all of which have disappeared from the repertoire, and much instrumental, orchestral and sacred music. He served as court composer to the Habsburg emperors from 1774–88 (when *Mozart was a young rival) and music director 1788–1824. Suggestions that he poisoned Mozart, the basis of a dramatic poem (1830) by *Pushkin and an opera by *Rimsky-Korsakov, were revived in Peter *Shaffer's play Amadeus (1979): the poisoning was almost certainly metaphorical. Salieri was a friend of *Haydn and teacher of *Beethoven, *Schubert and *Liszt.

Salinas de Gortari, Carlos (1948– ). Mexican politician. Educated at the National University of Mexico and Harvard, he became a statistician, entered the Department of Finance and became its Director-General 1978–79. He directed economic and social policy in the Budget Ministry 1979–81 and was Minister for Planning and Federal Budget 1982–87. Selected as the Party of Revolutionary Institutions (PRI) candidate in 1987, he was elected narrowly as President of Mexico and served 1988–94. He concluded the North American Free Trade Agreement (NAFTA) with the US and Canada in 1992. In 1995 he went into exile in the US after his brother Raul was charged with assassinating a party official.

Salinger, J(erome) D(avid) (1919–2010). American writer. He won acclaim with his novel The Catcher in the Rye (1951), the acutely observed story of a boy's teenage problems. Franny and Zooey (1961) and his short stories continued to deal with the subject of adolescents' ways of seeing and problems.

Salisbury, 3rd Marquess of, Robert Arthur Talbot Gascoyne-Cecil (1830–1903). British Conservative politician, born in Hatfield, Hertfordshire. After an unhappy childhood, he attended Eton and Oxford, left early and visited South Africa, Australia and New Zealand 1851–52. A Member of Parliament 1853–68 (as Viscount Cranbourne), he served as Secretary of State for India 1866–67, 1874–78 and Chancellor of Oxford University 1869–1903. Foreign Secretary for 12 years 1878–80, 1885–86, 1886–92, 1895–1900, he found this office very congenial. He went with *Disraeli to the Congress of Berlin where he revealed an independent mind unhindered by party shibboleths. He served three terms as Prime Minister June 1885–January 1886, July 1886–August 1892, June 1895–July 1902, a total of nearly 14 years. He declined a dukedom in 1886. He was mainly concerned with agreements that secured peace in Egypt and the Mediterranean lands, and with the problems of African partition. He worked closely with *Bismarck but refused an alliance. He was a keen amateur botanist and astronomer, bored with the routine of politics, and deeply anti-democratic. He allowed his ministers to retain involvement in business, despite conflict of interest, and the 'spoils system' was applied in judicial and imperial appointments and honours. He was succeeded as Conservative leader and Prime Minister by his nephew Arthur *Balfour. So many family members were accommodated in government that the term 'Hotel Cecil' was applied as a sneer. His successors in the marquessate and his younger sons, Robert (Viscount *Cecil of Chelwood) and Hugh (Lord Quickswood), were all politically prominent.

Salisbury, Robert Cecil, 1st Earl of (1563–1632). English statesman. Son of Lord *Burghley, he succeeded to much of his father's power when he was appointed (1596) Secretary of State by Queen *Elizabeth. He dealt successfully with the rebellion of *Essex but was increasingly occupied with the intrigues by which he secured the succession of the Scottish James VI as *James I of England. Not unnaturally, he was retained in office (as Lord Treasurer from 1608). He discovered the Gunpowder Plot and was largely responsible for the downfall of Sir Walter *Raleigh, whose bellicose attitude towards Spain conflicted with his own pacific policy. Salisbury showed wisdom and moderation as a ruler but lacked his father's personality and was extremely conscious of the spinal deformity that gave him a dwarf-like appearance. He was created Baron Cecil (1603), Viscount Cranbourne (1604) and Earl of Salisbury (1605). He devoted much time to the building and adorning of the palace known as Hatfield House, still the family seat.

Salk, Jonas Edward (1914–1995). American microbiologist. During World War II he was a consultant on epidemic diseases and afterwards held a series of professorships at the University of Pittsburgh. He produced (1954) a successful vaccine against poliomyelitis. In 1963 he founded the Salk Institute for Biological Studies at La Jolla, California, which he directed until 1975. He married the painter Françoise Gilot, *Picasso's companion and biographer.

Sallust (Gaius Sallustius Crispus) (86–35/6 BCE). Roman historian. Having served under *Caesar and enriched himself as a proconsul in north Africa, he bought *Caesar's villa at Tivoli, there built the famous 'Sallustian gardens' and settled down to write histories
of the Catiline conspiracy and the Jugurthine wars as well as the more general History, of which only fragments survive.

Salomon, Johann Peter (1745–1815). German impresario, violinist and composer. A friend of C.P.E. *Bach, he lived in London from 1781, gave solo concerts, conducted, brought *Haydn to England for two successful seasons and was dedicatee of his Symphonies Nos 93–104.

Samson (fl. 11th century BCE?). Hebrew strongman. He was one of the 'judges' of Israel and probably an authentic hero of the war against the Philistines. The Bible tells how he was charmed by the Philistine Delilah to reveal that the secret of his strength lay in the flowing locks on one who had taken the Nazarite vow. She cut off his hair, and thus weakened, he was captured, blinded and taken to Gaza, where, with a last effort of renewed strength, he pulled down the supporting pillars of the temple, killing both himself and his enemies. Milton's Samson Agonistes is a poetic reconstruction of the tale.

Samuel (fl. c.1040 BCE). Hebrew prophet. When the nation was hard pressed by the Philistines, inspired by God and yielding to the persuasions of the people, he anointed Saul as the first of the Israelite kings.

Samuel, Herbert Louis Samuel, 1st Viscount (1870–1963). English-Jewish politician and administrator, born in Liverpool. Educated at Oxford, he became a Liberal MP 1902–18, 1929–35, served as a Minister under *Campbell-Bannerman and *Asquith, was Home Secretary 1916 but resigned when *Lloyd George became Prime Minister. After World War I, he became the first British High Commissioner to Palestine 1920–25, Leader of the Liberal Party 1931–35 and again Home Secretary 1931–32 in the National Coalition. He wrote on philosophic and autobiographical themes, including In Search of Reality (1957), and received the OM in 1958.

Samuelson, Paul Anthony (1915–2009). American economist. Educated at Chicago and Harvard, he was a professor of economics at the Massachusetts Institute of Technology 1940, a proponent of *Keynes's ideas during wartime government work and wrote a standard text Economics (1948), which has remained in print. He advised the *Kennedy and *Johnson administrations and won the 1970 Nobel Prize for Economics.

Sancroft, William (1617–1693). English prelate, born in Suffolk. After living abroad during the Commonwealth period he returned at the Restoration and rose quickly in the Church to become Dean of York and (1664) of St Paul's, and (1678) Archbishop of Canterbury. The same out-spokenness which he is said to have used at *Charles II's deathbed marked the dealings of this robust Tory Churchman with later monarchs. He was the leader of the seven bishops tried by order of *James II for presenting a petition against having to read out publicly the Declaration of Indulgence, their acquittal being regarded as the starting point of the Glorious Revolution. However, having taken an oath of allegiance to James, Sancroft refused one to *William and *Mary. He was therefore deprived of his see and ejected from Lambeth Palace. He retired to the Suffolk village of his birth.

Sand, George (Aurore-Lucile Dupin) (1804–1876). French novelist, born in Paris. She was brought up by her grandmother, an illegitimate daughter of Marshal de Saxe, at the château de Nohant, in the province of Berry; it is now a museum maintained in her memory. She grew up with feminist views, an independent mind and a romantic disposition. After an incompatible marriage to Baron Dudevant, she went to Paris (1831) where she lived with Jules Sandeau, from whose name her pseudonym was derived. Her novels tended to be linked with the circumstances of her life: Indiana (1832) glorifies free love, Elle et lui (1859) and Lélia (1833) relate to her love affair with *Musset; her socialism inspired other novels. Meanwhile her search for the perfect lover went on but she could offer only an excess of sentiment or maternal care for the passion demanded. Her love affair with the exiled and ill *Chopin (1838–47) was the nearest to her needs but even that progressed with bickering and ended with bitterness. The château at Nohant was her most constant and probably the nearest to her needs but even that progressed with bickering and ended with bitterness. The château at Nohant was her most constant and probably the nearest to her needs but even that progressed with bickering and ended with bitterness. The château at Nohant was her most constant and probably the nearest to her needs but even that progressed with bickering and ended with bitterness. The château at Nohant was her most constant and probably the nearest to her needs but even that progressed with bickering and ended with bitterness.
Sandburg, Carl (1878–1967). American writer, born in Galesburg, Illinois. He led a wandering life collecting folksongs and ballads, and writing his own poems in the idiom of the country people he met. His collecting produced, e.g., *The American Songbag* (1927). His own verse is in such books as *Smoke and Steel*. His most ambitious enterprise was a four-volume biography of *Abraham Lincoln* (1926–42) which won the 1940 Pulitzer Prize for history. His *Collected Poems* won the 1951 Pulitzer Prize for poetry.

Sandwich, John Montagu, 4th Earl of (1718–1792). English politician. Despite notorious profligacy he held several ministerial posts during an undistinguished career, including terms as First Lord of the Admiralty 1748–51, 1763 and 1771–82. The Sandwich Islands (now Hawaii) were named after him by Captain *Cook. He is best known for inventing the sandwich to enable him to eat without interrupting his play at cards.

Sanger, Fred(erick) (1918–2013). British biochemist. Educated at St John's College, Cambridge, he worked for the Medical Research Council (originally Unit) of Molecular Biology, Cambridge 1951–83. He won two Nobel Prizes in Chemistry: in 1958, for determining the first complete structure and the amino-acid sequencing of a protein (bovine insulin); in 1980, sharing the award for work on determining the chemical structures of elements in DNA. He was awarded the Copley Medal (1977), the CH (1981) and the OM (1986).

Sanger, Margaret (née Higgins) (1883–1966). American birth control advocate. Born to a large family, she worked as a teacher, nurse and set up the first US birth control clinic in Brooklyn (1916). She founded the American Birth Control League in 1921 and organised the first World Population Conference in Geneva in 1927. She also advocated more passionate and enjoyable sex and her lovers included H. G. *Wells and Havelock *Ellis.

San Martin, José de (1778–1850). Soldier, born in Yapeyú (Argentina). Having returned to Spain with his parents from South America as a child, he served with the Spanish army in the Peninsular War but in 1812 again crossed the Atlantic and volunteered his services to the revolutionary government of Buenos Aires. In 1816, independence was declared with his support. Regarding the whole of Spanish America as a single country he enlarged the area of independence by a daring march over the Andes, by passes across four cordilleras up to 4,000 metres high, into Chile; the Spaniards were defeated at Chacabuco, and Santiago occupied. Chileans and Argentineans, helped by a naval contingent under *Cochrane, now combined to liberate Peru. San Martin occupied Lima (1812) and declared himself ‘protector’, but the interior was still in Spanish hands while *Bolívar had reached Ecuador. The two ‘liberators’ met but, as they were unable to agree, San Martin with characteristic self-denial withdrew. He left South America (1824) and died in poverty and exile at Boulogne. He was buried in Buenos Aires.

Santa Anna, Antonio López de(1797–1876). Mexican soldier and politician. Having helped to overthrow *Iturbihe he led a successful Liberal revolution in 1828. He forced the surrender of a Spanish expedition sent to recover Mexico and in 1832–33 became President. Two years later, having seized dictatorial powers, he resigned to lead a campaign to secure Texas but was defeated and captured. Victory over a French debt-collecting expedition (1838) made him again a popular hero. Another period of dictatorship (1841–46) was followed by exile, but he returned to lead the Mexicans to defeat against the US (1847–48). In 1853 he was again dictator, but was once more overthrown in 1855. After many years of exile, and an unsuccessful landing in 1867, he was allowed to return (1872) but never regained power.

Santamaria, B(artholomew) A(gustine) (‘Bob’) (1915–1998). Australian political activist, born in Melbourne. He worked for the Catholic Rural Movement, founded the National Civic Council, campaigned passionately against Communist influence in trade unions and was a major figure in the Labor split (1954–55) which kept the ALP out of office nationally until 1972 (*Whitlam) and in Victoria until 1982. He encouraged Catholics to become active in the Liberal and National parties and was an effective publicist on television and in print.

Santayana, George (Jorge Agustín Nicolás Ruiz de Santayana y Borrás) (1863–1952). Spanish philosopher, novelist, essayist and poet, born in Madrid. He lived in the US 1872–1912, studied at Harvard, Berlin and Cambridge, and taught philosophy at Harvard 1889–1912, where his students included Robert *Frost, Gertrude *Stein, Felix *Frankfurter and T. S. *Eliot. He never became a US citizen, left in 1912 and never returned, living first in England, then, from 1924, in Rome. In his philosophy he was sceptical about proving the existence of matter or indeed anything, and suggested that ordinary beliefs derive from ‘animal faith’. His view of the world was thus a species of naturalism. He also accepted, in a somewhat poetic way, the existence of a realm of universals or essences similar to the ‘forms’ of *Plato. His philosophical ideas are contained in *The Life of Reason* (5 volumes, 1905–06), *Scepticism and Animal Faith* (1923) and...
the ‘realm’ series, *The Realm of Essence* (1927), *… of Matter* (1938) and *… of Spirit* (1940). His more general books include *Sense of Beauty* (1896), a novel, *The Last Puritan* (1936), two volumes of poetry and autobiographical works. All reveal the author’s wisdom and cultivated wit.

*Santos-Dumont, Alberto* (1873–1932). Brazilian aviation pioneer, born in Palmira, Minas Gerais. The son of a rich coffee producer, after building balloons and airships in France he experimented with aeroplanes and became the first man to fly one in France (1906). He campaigned for the creation of the Iguazu National Park (1916). He committed suicide (or was murdered) in Sao Paolo. His birthplace was renamed for him.

*Sappho* (b.c.600 BCE). Greek poet. Born in Lesbos where she spent most of her life, her poems, with one or two exceptions, survive only in fragments. Passionate, graceful and intensely personal, they are mostly addressed to a group of young women, perhaps fellow devotees of the love goddess Aphrodite. She was married and had at least one daughter. Enough remains of her work to support the belief of the ancients that she was the greatest poetess of their time.

*Saragat, Giuseppe* (1898–1988). Italian Socialist politician. He led a minority group of Socialists that broke away from Nenni’s leadership in protest against the alliance with the Communists. He founded (1947) the Social Democratic party, which entered into coalition with the Christian Democrats. Deputy Premier 1947–49 and 1954–57, he was President of Italy 1964–71.

*Saramago, Jose* (1923– ). Portuguese novelist. He won the Nobel Prize for Literature in 1998, the first awarded to a writer in Portuguese.

*Sarasate* (y Navascués), Pablo Martin Meliton (1844–1908). Spanish violinist and composer. A brilliant player in the *Paganini* tradition, he wrote many works that have remained in the repertoire, including *Zigeunerweisen* (1878) and *The Carmen Fantasy* (1883).

*Sarasvati, Dayanand* (1820–1883). Indian religious reformer. He founded (1875) an association called the Arya-Samaj which claimed for all Hindu castes the right to study the Vedas. The many adherents of the society form one of the most progressive elements of modern Hinduism.

*Sardou, Victorien* (1831–1908). French writer. The most successful playwright of his day, for 40 years from 1860, when he was first acclaimed, he produced success after success, the result not only of his superb technique but of his gift for creating parts specially adapted to the particular talents of the great players of his time. Thus the title roles of *Fedora* (1882), *La Tosca* (1887) and *Cismondo* (1894) were created by Sarah *Bernhardt and the comedy Madame Sans Gene* (1893) was written for *Réjane. He also wrote for *Irving and others. His plays now seem artificial, and revivals are rare.

*Sargent, John Singer* (1856–1925). American artist, born in Florence. He studied painting there and in Paris, moved to England (1884) and soon won great success as a fashionable portrait painter. If his work sometimes seems too facile, he showed at his best a brilliant technique (e.g. in evoking the shimmer of satin) modelled on that of *Velázquez, and an eye for character, at times too penetrating for the comfort of his sitters (e.g. the Wertheimer portraits at the Tate Gallery, London). In America he worked on a series of decorative paintings for public buildings, including the *Evolution of Religion* for the Boston Library.

*Sargent, Sir* (Harold) Malcolm (Watts) (1895–1967). English orchestral conductor. Trained as an organist and composer, he was Chief Conductor of the Royal Choral Society from 1928, conducted concerts for children sponsored by Robert *Mayer, and became Musical Director of the Halle Orchestra 1939–42, the Liverpool Philharmonic 1942–49 and the BBC Symphony 1950–57. He conducted the London Proms with great success, recorded many choral works and became an accomplished broadcaster.

*Sargon I* (or Sharukkan) (d.c.2276 BCE). King of Sumer and Akkad c.2331–2276 BCE. His origins were mysterious: found in bulrushes (like Moses) and raised by a gardener, he became a cupbearer to the king of Kish whom he deposed. By conquest, his kingdom, with its capital at Akkad, included all Sumeria, extending to Arabia, Syria and Asia Minor.

*Sargon II* (d.705 BCE). King of Assyria 722–705 BCE. He inaugurated a period of great expansion by conquering Elam and Babylonia, subduing the Medes and extending his power from Anatolia to Egypt. He exiled whole nations of conquered peoples to the remoter reaches of his territories. The excavations of his palace at Khorsabad bear witness to his magnificence.

*Sarközy* (de Nagy-Bócsa), Nicolas Paul Stéphane (1955– ). French politician, born in Paris. Son of a Hungarian father and Greek-Jewish mother, he became a lawyer, municipal councillor, Minister for the Budget 1993–95, for the Interior 2002–04, 2005–07, and for the Economy 2004. Combative in style, he won political support from a coalition stretching from the centre to far right. Leader of the Union pour un Mouvement Populaire (UMP) 2004–, he led in the first ballot for President of France (April 2007) and won 53 per cent of the vote in the second round (May 2007), defeating Ségolène *Royal, serving as President of France 2007–12. He was created an honorary GCB in March 2008.*
Sarmiento, Domingo Faustino (1811–1888). Argentinean politician. A rural schoolteacher who was exiled to Chile, he became an influential journalist and his book Facundo: Civilization and Barbarism (1845) was an important examination of the gauchito tradition and culture and an attack on the "Rosas regime. Elected as Argentina's first civilian president 1868–74, he introduced public education in primary, secondary and technical schools.

Sarnoff, David (1891–1971). American entrepreneur, born in Russia. He worked for *Marconi, became a pioneer broadcaster and a founder of RCA (Radio Corporation of America, 1921) and NBC (National Broadcasting Company, 1926) which developed radio and television networks in the US. He was President 1930–47 and Chairman 1947–70 of RCA/NBC.

Saro-Wiwa, Ken (ule Beeson) (1941–1995). Nigerian writer and political activist. A leader of the Ogoni people, he was arrested by Nigeria's military rulers, charged with murder and hanged with eight others after a rushed trial.

Saroyan, William (1908–1981). American author. Of Armenian descent, his first work was a volume of short stories, The Daring Young Man on the Flying Trapeze (1934). He wrote a number of novels and plays, including The Time of Your Life (1939) for which he was awarded (but did not accept) a Pulitzer Prize. The Human Comedy (1943) exemplifies the simplicity and optimism of much of his work.

Sartre, Jean-Paul (1905–1980). French philosopher, playwright and novelist, born in Paris. A nephew of Albert *Schweitzer, he was educated at the École Normal Supérieure and the Sorbonne. In 1931–39 at lycées in Le Havre, Laon and Paris and published the novel La Nausée (1938, *Nausea) and the short stories Le Mur (1939, *Intimacy). After brief army service he was a prisoner of war 1940–41. During German occupation of Paris, Sartre became a successful playwright with Les Mouches (1942, *The Flies) and Huis-clos (1943, *No Exit). His major philosophical works were L'Être et le néant (1943, *Being and Nothingness, translated 1956) and L'Existentialisme est un humanisme (1946, *Existentialism and Humanism, 1948). Identified as the founder of existentialism (although *Kierkegaard was there first), his philosophy is often summarised as 'man's existence precedes his essence', by which is meant that a man's essence or essential being is determined by the facts of his nature. Standing alone in a godless world, man can, within the limits of these facts, determine and develop his own essence: thus men choose to make themselves what they become and they are therefore responsible for what they are.

He remained in France during the Occupation and, despite his known 'leftist' politics seems – like Pablo *Picasso – to have been left alone. Having avoided political engagement before and during the war, Sartre became hyperactive from 1945. He edited the influential left-wing journal *Les Temps modernes 1945–80 and became leader of left-bank literary society in Paris. He had an increasingly antagonistic rivalry with Albert *Camus. He pursued radical causes after the war, was an avid Stalinist 1952–56, then switched allegiance to *Mao, finally to *Castro. Clive James wrote: "Sartre ... never actually killed anybody. But he excused many who did, and most of those never actually killed anybody either: they just gave orders for their subordinates to do so." He campaigned against *de Gaulle and US intervention in Vietnam. Other works include the novels L'Age de raison (1945, *The Age of Reason) and Le Sursis (1945, *The Reprieve), the play Les Mains sales (1948, *Dirty Hands), a biography of his protégé Jean *Genet (1952), some film scripts, the autobiography Les Mots (1963, *Words) and a huge unfinished work on *Flaubert (1972). He was awarded, but declined, the Nobel Prize for Literature in 1964, on the grounds of his opposition to bourgeois society. Buried at Montparnasse cemetery, Simone de Beauvoir is next to him.

Sassoon, Siegfried Loraine (1886–1967). English poet. Member of an ancient Jewish family from Baghdad, his father was disinherited for marrying a Christian. He dropped out of Cambridge, but became an officer in World War I, winning a MC and befriending Wilfred *Owen. The disgust produced by his experiences in World War I produced the fierce satire of Counter-attack (1918) and Satirical Poems (1926). He also wrote a series of semi-autobiographical works including Memoirs of a Foxhunting Man, which won the Hawthornden Prize (1929), Memoirs of an Infantry Officer (1930) and Sherston's Progress (1936). Other books more directly autobiographical followed, e.g. *The Old Century (1938).

Satie, Erik Alfred Leslie (1866–1925). French composer, born in Honfleur. An eccentric (a fanatical collector of umbrellas), he lived obscuresly until, from 1910, he was hailed as leader of the younger, more advanced composers, notably of the groups 'L'École d'Arcueil' and 'Les Six'. His work, harmonically advanced, also influenced *Ravel and other contemporaries. He wrote limpid, beautiful piano works, including the three Gymnopédies (i.e. "naked feet", 1888, two later orchestrated by *Debussy); some with bizarre titles (e.g. *Three Pear-shaped Pieces.
Sauckel, Fritz (1894–1946). German Nazi politician. During World War II he was in control of manpower in occupied territories and was responsible for the deportation of millions of slave labourers. He was identified with Japan's rapid economic expansion technology 1960–64. As Prime Minister 1964–72, he was identified with Japan's rapid economic expansion and concluding the 1969 Sato-Nixon treaty with the US. The award to him of the Nobel Prize for Peace in 1974 was greeted with some international scepticism. Sauckel was a complex character – forceful and ruthless, but also a gifted calligrapher.

Savage, Michael Joseph (1872–1940). New Zealand politician, born in Victoria. He arrived from Australia in 1907, entered parliament in 1919, and in 1935 became the first Labour Prime Minister of New Zealand. His pledge to Britain at the outbreak of World War II became historic, ‘Where she goes we go – where she stands we stand.’ He died in office.

Savage, Richard (1697–1743). English poet and dramatist. He claimed the 4th Earl Rivers and Anne, Countess of Macclesfield as his parents, a theme he pursued in his poems The Bastard (1728) and The Wanderer (1729). His best known play was The Tragedy of Sir Thomas Overbury (1724) in which he performed. His life was colourful and after a timely reprieve he escaped hanging for murder (1727). He died in debtors’ prison. The Life of Savage (1744) by his friend Samuel *Johnson, more colourful than accurate, was the first literary biography written in English.

Holmes, R., Dr Johnson and Mr Savage. 1993.

Savall (i Bernadell), Jordi (1942– ). Catalan (Spanish) composer, conductor and viol player. Educated in Barcelona and Basle, he was a specialist in medieval and baroque music, founding Hespèrion XX (known since 2000 as *Hespérian XX) in 1974 and Le Concert de Nations in 1989, recording and touring extensively. His wife Montserrat Figueras (1941–2011) was an outstanding soprano.
Savery, Thomas (1650?–1715). English engineer. He patented (1698) a ‘fire engine’ which by direct steam pressure could raise water to a height of 1,330 metres (4,050 feet). The patent did not expire until 1733 and was held to cover the very different engine of Thomas *Newcomen. Savery was elected FRS in 1705.

Savonarola, Girolamo (1452–1498). Florentine preacher. In 1475 he became a Dominican friar. He was sent to the convent of S. Marco in Florence in 1481 and again in 1490, after which he gained enormous influence by his sermons denouncing corruption, sensuality and luxury. When the ‘Scourge’ constantly predicted by him came (1494) in the form of the French army, which drove out the *Medici, he emerged as the dominating figure of the new republic. Many great works of art (as well as rich dresses and other signs of luxury) perished in the ‘bonfire of vanities’ on the grounds that they commemorated pagan cultures. Savonarola was blamed for the inefficient administration of the republic as well as for his adherence to the French alliance. He was excommunicated (1497) by Pope *Alexander VI who was building an alliance against the French. His opponents in Florence gained the upper hand and after a trial by papal commissioners for heresy, Savonarola with two companions was strangled and burned.

Savoy (Savoa). Burgundian dynasty, founded by Umberto Biacamano (Humbert the Whitehanded), which ruled the county of Savoy (south of Lake Geneva) from 1003. Its members became kings of Sicily, then of Sardinia, Piedmont and of Italy 1861–1946.

Saxe, Maurice, Comte de (1696–1750). French soldier. Usually known as Marshal de Saxe, he was an illegitimate son of *Augustus II of Saxony and Countess Aurora von Königsmark. As a boy he ran away to join *Marlborough’s army in Flanders; in 1711 he was fighting with Russo-Polish forces, and next with Prince *Eugène against the Turks. Made Duke of Courland, he had to withdraw in 1729 and thereafter fought only for France. In the War of the Austrian Succession he invaded Bohemia and took Prague (1741). He became a marshal in 1744, and defeated the Duke of *Cumberland at Fontenoy (1745), and again at Lauffett (1747), whereas on other occasions he lost the full benefit of victory by failure to pursue. He wrote a book on the art of war, Mes Reveries (1757).

Saxe-Coburg-Gotha (or Sachsen-Coburg-Gotha). German dynasty that provided sovereigns of Belgium, Great Britain and Bulgaria. The family name – rarely used – was *Wettin.

Saxe-Coburggotski, Simeon Borisov see Simeon II

Saxo Grammaticus (also known as Saxo cognomine Longus) (c.1150–c.1220). Danish historian and cleric. Secretary to the Archbishop of Lund, he wrote, in Latin, Gesta Danorum (16 volumes), the first complete history of Denmark. Early books relate episodes from the Danish and Norse legendary past, including the story of Amleth (Hamlet), in Books 3 and 4, written about 1216. The last volume describes struggles with the Slavs in the Baltic. The surname ‘Grammaticus’ was added in the 15th century to commemorate Saxo’s learning.

Say, Jean Baptiste (1767–1832). French economist. In preparation for a business career he spent some of his early years in England. On his return to Paris he became a journalist and wrote effectively about the new economic theories of Adam *Smith. He was the most influential economist in France. His chief work was Traite d’économie politique (1803). He later lectured on political economy at the Conservatoire des Arts et Métiers and (from 1831) at the Collège de France.

Sayers, Dorothy L(eigh) (1893–1958). English novelist, poet, playwright and translator, born in Oxford. Educated at Somerville College, Oxford, she wrote 28 volumes of detective fiction, distinguished by fine writing, e.g. Busman’s Holiday (1933) and The Nine Tailors (1934), in which the hero is an aristocratic detective, Lord Peter Wimsey. Her religious works include the series of radio plays The Man Born to be King (1942). She regarded the translation of *Dante’s The Divine Comedy (Hell, 1949; Purgatory, 1955 and Paradise, 1962, completed by Barbara Reynolds) as her greatest achievement.

Scalia, Antonin Gregory (1936–2016). American jurist, born in New Jersey. Educated at Harvard, he was a Justice of the US Supreme Court 1986–2016, a ‘strict constructionist’, interpreting the US Constitution as it would have been understood by the Founding Fathers (no Mothers involved).

Scaliger, Joseph Justus (1540–1609). French scholar. Of Italian descent, he was son of the scholar Julius Caesar Scaliger (1484–1558), notorious for his scurrilous attacks on *Erasmus. At the University in Paris he acquired a complete mastery of Greek and Latin and some Hebrew; he also became a Protestant. After travels in Italy and England he was professor (1570–72) at *Calvin’s academy at Geneva and then for 20 years lived in France with the Roche-Pozay family. During this time he produced the editions of *Catullus, * Tibullus and *Propertius which made him famous, and above all his De Emendatione Temporum (1583) by which he is ranked as the founder of the modern science of chronology. He spent his last years
at Leyden University preoccupied with controversies engendered by his arrogant disposition, which did not prevent his recognition as one of the greatest scholars of the age.

Scanderbeg see Skanderbeg, George Castriota

Scarlatti, Alessandro (c.1659–1725). Italian composer, born at Palermo, Sicily. He was maestro di cappella (i.e. court or household musician) to the eccentric Queen *Christina of Sweden in Rome, to the viceroy of Naples, and to Cardinal *Ottoboni. He wrote over 100 operas of which 35 survive, as well as about 600 cantatas for solo voices, and choral works. He is believed to have invented or introduced the aria da capo which was of fundamental importance in 18th-century opera. For the opera Tigrane (1715) horns were introduced into the orchestra.

Scarlatti, (Giuseppe) Domenico (1685–1757). Italian composer and harpsichordist. Son of Alessandro *Scarlatti, in Rome he wrote operas for the Queen of Poland, and Church music for St Peter's. He lived in Spain from 1729 and there wrote his famous harpsichord sonatas of which over 550 survive. They mark an important stage in the development of sonata form.

Kirkpatrick, R., Domenico Scarlatti. 1953.

Scarron, Paul (1610–1660). French writer. Known (from 1643) as a writer of burlesque verse, equally successful was Le Roman comique (1651–57), a satiric novel about strolling players which provided an agreeable contrast to the artificial romances then in vogue. From 1638 he was half paralysed. When a beautiful 15-year-old girl, Françoise d'Aubigné, was taken to visit him (1651) she wept in pity. The pity was mutual: it grieved him that so lovely a girl should be so poor, he offered to provide a dowry and when she refused he proposed marriage. They were married in 1652 and she showed her gratitude by watching over his health and his career for the rest of his life. She was later better known as Madame de *Maintenon.

Schacht, Hjalmar Horace Greeley (1877–1970). German financier. He became President of the Reichsbank 1923–30 and 1933–39, and, as *Hitler's Minister for the Economy 1934–37, was much admired for the manoeuvres by which he enabled German rearmament to be financed. He lost to *Goering in a power struggle over direction of the German economy. He claimed at the Nuremberg trials that he had never been a Nazi and was acquitted. A sentence of imprisonment by the German denazification court was quashed on appeal.

Scharnhorst, Gerhard Johann David von (1756–1813). Prussian officer. After the Prussian defeats in the Napoléonic Wars he undertook (1807), with August *Gneisenau, the complete reorganisation of the Prussian army, and forged the more efficient forces which won victories (e.g. Leipzig, 1813) against the French.

Schatz, Albert Israel (1920–2005). American microbiologist. He studied at Rutgers University, and as a graduate student identified (1943) that streptomycin, found in soil, was effective as an antibiotic in treating tuberculosis. His supervisor, Selman *Waksman, appropriated sole credit for the discovery. It was only in 1994 that Schatz's priority was recognised.

Scheele, Carl Wilhelm (1742–1786). Swedish chemist. He made many important discoveries while working as an apothecary. Using very primitive equipment, he identified and isolated eight elements (chlorine, manganese, barium, molybdenum, tungsten, nitrogen, hydrogen and oxygen) – more than any other chemist – but was strikingly unlucky and his priority was not recognised for decades. He discovered oxygen in 1772 (two years before Joseph *Priestley did so independently) but did not publish his findings until 1777. He was the first to prepare chlorine, phosphorus, hydrogen sulphide, glycerine, and many organic acids. He also discovered the action of light upon silver salts, a reaction basic to photographic reproduction. His work disproved the phlogiston theory three years ahead of *Priestley and *Lavoisier. His death was hastened by his practice of tasting elements (such as mercury) on which he was working. The mineral from which tungsten is extracted was named scheelite for him.

Scheer, Reinhard (1863–1928). German sailor. During World War I he was appointed (January 1916) Commander-in-Chief of the High Seas Fleet and was in command at the Battle of Jutland (May 1916, *Jellicoe). After Jutland, he called for unrestricted submarine warfare and became Chief of Naval staff in 1918.

(1785) to Leipzig and Dresden, on the invitation
He continued to write plays but it was after a move
(1785) to Leipzig and Dresden, on the invitation of admirers, that he completed his first dramatic
masterpiece Don Carlos (1785), which, though
involved with the fate of the unhappy son of *Philip
II of Spain, finely expressed the 18th-century ideals
of political and religious liberty. His next moves were
to Weimar and Jena where he was professor of history
1789–99 and published his History of the Revolt of the
Netherlands (1788) and History of the Thirty Years War
(1789–93). After an illness from which he was slow
to recover, he studied *Kant's philosophy, especially
those parts relating to aesthetics, and wrote essays on
such subjects as the nature of tragedy, the meaning
of beauty, and aesthetic education. His philosophic
poems of this time reflect the same themes. From
1794 he was a close friend of *Goethe and in 1799
he settled at Weimar to be near him. To the last period
of his life belong some of his greatest plays, The Death
of Wallenstein (1799), Mary Stuart (1800), The Maid
of Orleans (1881) and William Tell (1804). He is also
well known for his lyrics and ballads (e.g. Die Glocke,
in which the processes of casting a bell symbolise the
events and influences that make up the life of man).

Schindler, Oskar (1908–1974). German entrepreneur. Although a Nazi Party member, he
saved more than 1100 Jews in factories in Poland and
Czechoslovakia during the Holocaust (1943–45),
became honoured as a 'righteous gentile' in Israel,
died in Argentina and was buried in Jerusalem. Thomas *Keneally's book *Schindler's Ark (1982) was
filmed as *Schindler's List (1993) by Steven *Spielberg.

Schinkel, Karl Friedrich (1781–1841). German
architect, town planner, painter and stage designer.
He laid out Berlin, worked in classic, Gothic and
romantic traditions and designed atmospheric
productions of works by *Mozart and *Goethe.

Schirach, Baldur von (1907–1974). German Nazi
politician. Youth leader of the Nazi Party 1936–40
and Gauleiter of Vienna 1940–45, he was sentenced
to 20 years' imprisonment by the Nuremberg tribunal.

Schlegel, August Wilhelm von (1767–1845).
German critic. In 1797 he became professor of
literature at Jena, and his lectures there and at
Berlin and Vienna provide a clear exposition of the
romantic viewpoint. He is best known, however, for
his translations of *Shakespeare's plays (1798–1810)
and of *Dante, *Calderon and *Camães. His brother,
Friedrich von Schlegel (1772–1829), is regarded as the
finest critic produced by the Romantic movement
and, with *Hegel, one of the most important
influences on German thought of his period. He also
wrote poetry and a novel, Lucinde (1799), based on
his own love affair with a daughter of the philosopher
Moses *Mendelssohn. He was among the first in
Germany to study Sanskrit.

Schleicher, Kurt von (1882–1934). German general
and politician. He served on the general staff in
World War I and became politically important in
1932 as Defence Minister in June and Chancellor in

Schiele, Egon (1890–1918). Austrian expressionist
painter and designer. A follower of *Klimt, he
developed a tight linear style and his figure drawings
show great virtuosity. An important painter in the
Szecesszionist school, he died of influenza, aged 28.

Schiff, Sir András (1953– ). Hungarian-Jewish-
British pianist and conductor, born in Budapest. An
outstanding interpreter of *Bach, *Mozart,
*Beethoven, *Schubert and *Schumann, he toured
extensively and became a British subject in 2001.

Schikaneder, Emanuel (1751–1812). Austrian
dramatist, actor and theatre director. He wrote the
libretto for *Mozart's opera Die Zauberflöte (The
Magic Flute, 1791), a Masonic allegory, and created
the role of Papageno.

Schillebeeckx, Edward (1914–2009). Belgian-
Dutch theologian, born in Antwerp. He joined the
Dominicans and became professor of theology at
Nijmegen University 1958–83. As adviser to the
radical Dutch bishops he was suspected of heresy by
conservatives in the Vatican. His many books include the
magisterial Jesus (1974, published in English
1979), *Christ (1977: 1980) and Jesus in Our Western
Culture (1987).

Schiller, Ferdinand Canning Scott (1864–1937).
English philosopher. He taught at Corpus Christi
College, Oxford 1897–1926 and was professor
of philosophy at the University of Southern
California 1926–36. His chief contribution to
English philosophy was his part in the revival of the
empirical tradition. Under the influence of William
*James, with whom he formed an early friendship,
he emphasised that the primary cause of human
thinking is the need to act. He looked on pragmatism
as a form of philosophical humanism, which rejected,
as secondary or unreal, metaphysical idealism and
the formal logic that so often fortified it. He had a
deep knowledge of the physical sciences, wrote on
eugenics, and was an active member of the Society for
Psychical Research. His more general works include
*Studies in Humanism (1907) and Logic for Use (1929).

Schiller, (Johann Christoph) Friedrich von (1759–
1805). German poet and dramatist, born at Marbach
near Stuttgart. His father was a captain in the service
of the Duke of Württemberg, at whose instigation
the promising boy became (1773) a pupil at the new
academy for officers and public servants. He became
an army surgeon but absented himself without leave
to watch a performance of his first play Die Räuber
(1782, The Robbers) at Mannheim. For a similar
offence he was briefly imprisoned, fled from the
Duke's service and took refuge at Mannheim where,
after an interval, he was appointed theatre poet.
He continued to write plays but it was after a move
(1785) to Leipzig and Dresden, on the invitation of admires, that he completed his first dramatic
masterpiece Don Carlos (1785), which, though

Dictionary of World Biography
December. His attempt to find a basis of power by alternately angling for the support of the Nazis and of the trade unions lost him the confidence of all. He resigned in January 1933 and was murdered during the Nazi’s ‘Night of the Long Knives’ in June 1934.

Schleiden, Mathias Jakob (1804–1881). German botanist, born in Hamburg. He practised law unhappily, took up botany as a hobby and after studying in Göttingen and Berlin, became professor of botany at Jena 1839–64. His life-long concern was to orientate botany away from the obsession with classification which had followed from the work of *Linnaeus. His interest was in plant physiology, with cellular structure and growth. With *Schwann he helped to formulate the notion of the cell structure of plants. He believed wrongly that cells formed out of a nucleus and then became encased in cell walls. Schleiden pursued a great variety of plant studies with the aid of the microscope. He was involved with the pathology of plants, and investigated fungoid infections that attacked plant roots. He was a strong supporter of *Darwin.

Schlesinger, Arthur Meier, Jr (1917–2007). American historian, born in Ohio. Son of a historian of the same name, he taught at Harvard 1946–61, became special assistant to President *Kennedy 1961–63 and held the chair of humanities at the City University of New York 1966–. His books include The Age of Jackson (1965), which both won a Pulitzer Prize, A Thousand Days: John F. Kennedy in the White House (1964), which both won a Pulitzer Prize, and Cycles of American History (1986).

Schlieffen, Alfred, Graf von (1833–1913). German soldier. He was a staff officer in the Prussian Wars of 1866 and 1870. He later developed a strategic plan for future wars by which France would be attacked through Belgium whilst only a holding operation would be fought on the Russian front. This plan was closely followed in both 1914 and 1940.

Schliemann, Heinrich (1822–1890). German archaeologist. He amassed a fortune as a merchant and contractor in Russia and in the US, retiring in 1868 to devote himself to archaeology. He mastered 15 languages. He claimed to have been fascinated by *Homer from childhood and dreamed of proving that *The Iliad had a historical basis. He accepted in 1868 Frank Calvert’s identification of Hisarlik as the site of Troy (Ilium) but the slow granting of permission to excavate delayed his major work until 1871–73. He worked at Troy 1876, 1882, 1889–90. He found nine layers of occupation and assumed that Homer’s Troy was second from the bottom (Troy II). In 1890 his assistant Wilhelm Dörpfeld (1853–1940) persuaded him that Troy II was a millennium too early, the correct level being Troy VI or VIIa (c.1250 BCE). In 1876 his excavations at Mycenae proved the richness of its civilisation and made him world famous. He also worked at Orchomenos (1880–81, 1886) and Tiryns (1884) with Dörpfeld. He wrote several books about his discoveries, including *Troia (1884), written in collaboration with Dörpfeld. He planned to excavate Knossos (Arthur *Evans) and Ithaca but died suddenly in Naples. His second wife Sophia Engastromenos (1852–1932) worked on the excavations with him. The Troy treasure, held in Berlin, was taken to the USSR in 1945 and negotiations for its return began in 1993.

Schmeling, Max (imilian Adolph Otto Siegfried) (1905–2005) German boxer, born in Pomerania. In 1930 he won the world heavyweight championship in New York when Jack Sharkey was disqualified; however, in 1932 Sharkey regained the title.

Schmidt, Brian Paul (1967–). American-Australian astrophysicist, born in Montana. He grew up in Alaska and went to university in Arizona and at Harvard. In 1994 he moved to Australia, where he held a chair at The Australian National University and worked at the Mt Stromlo observatory. He shared the 2011 Nobel Prize for Physics with Saul Perlmutter and Adam Riess ‘for the discovery of the accelerating expansion of the Universe through observations of distant supernovae’, and worked on ‘dark energy’. He was elected FAA and FRS, and awarded an AC in 2013. He became Vice-Chancellor of *The Australian National University 2015–.

Schnabel, Artur (1882–1951). Austrian pianist, teacher and composer, born in Lipnik, then in Moravia, now in Poland. A pupil of Theodor *Leschetizky, he lived in Berlin 1900–33 and became internationally famous for his interpretations of *Beethoven, *Mozart, *Schubert and *Brahms. In 1932 he recorded all 32 Beethoven sonatas. He toured Australia in 1938 and lived in the US from 1939. His advanced compositions were in the style of *Schoenberg.

Schneerson, Menachem Mendel (1902–1994). American rabbi, born in Nikolayev, Russia (now Ukraine). In 1950 he succeeded his father-in-law as...
chief rabbi of the Lubavitcher (Hasidic) sect, with its headquarters in New York, with 200,000 followers and synagogues worldwide. Some followers believed him to be the Messiah.

**Schnittke, Alfred** (1934–1998). Russian composer, born in Engels. Son of a German-Jewish journalist who migrated to the USSR, he studied in Vienna. Enormously prolific, his works included nine symphonies, eight concertos, six concerto grossi, chamber music, three operas, three ballets, many choral works and film scores. His piano quintet (1976) and three sonatas for violin and piano are powerful and original. He was professor of composition at the Hamburg Hochschule 1989–98.

**Schnittler, Arthur** (1862–1931). Austrian physician dramatist and novelist. His medical profession made him interested in psychological problems, usually erotic but sometimes morbid. He is at his best in cycles of short plays, e.g. Anatol (1893) and Reigen (1900) in which one or more characters of one play are carried on into the next. (The French film La Ronde was based on his work.) Schnittler was a Jew and the theme of Professor Bernhardt (1912) is conflict between a Jewish doctor's sense of duty and Roman Catholic principles in an anti-Semitic country.

**Schoenberg** (Schönberg), Arnold (Franz Walter) (1874–1951). Hungarian-Czech-American composer, theorist, teacher and painter, born in Vienna. Raised in an Orthodox Jewish family, Schoenberg struggled with religion as he did with politics and aesthetics, becoming a Lutheran in 1898, and reconverted to Judaism in 1933. He worked as a bank clerk, was between a Jewish doctor's sense of duty and Roman Catholic principles in an anti-Semitic country. In 1933, after a brief stay in Paris he went to the US where he taught at the University of California at Los Angeles. Schoenberg wrote, with good reason: ‘... if it is art, it is not for all, and if it is for all, it is not art.’ (1946).

**Scholl, Andreas** (1914–1943). German resister. A student in Munich, she became active in the White Rose, a non-violent resistance group. She and her brother Hans Scholl were convicted of treason for handing out leaflets and both were guillotined.

**Scholl, Sophia Magdelena** (1921–1943). German artist. Born into a family of singers, she studied in Switzerland with *René Jacobs*, and developed a style of exceptional agility, musicality and interpretive depth, especially in works by *Vivaldi*, *Händel* and *Bach*.

**Schönauer, Martin** (c.1430–1491). German artist. Born in Colmar, Alsace. Son of a goldsmith, he studied (and taught?) at Leipzig and was influenced by the Flemish masters, especially Rogier van der Weyden. His masterpiece, The Madonna of the Rose Garden (1473), was his 'years of silence'. Almost all his work from the Twelve-tone row onwards was composed according to the twelve-tone row, one of the most important innovations in the history of music. The tone row for his Violin Concerto (1936), one of his most accessible works, is: A, B♭, E, F♯, C, D♭, G, A♭, D, F. Later works include the String Quartets Nos. 3 (1927) and 4 (1936), the Piano Concerto 1942, Ode to Napoleon (1943), A Survivor from Warsaw (1947), expressing passionate fury about the Holocaust, and the opera Moses und Aron, which was unfinished at his death. He lived in Vienna (apart from a few years in Berlin) until, at 51, he became a professor at the Prussian Academy of Arts in Berlin. Dismissed by the Nazis in 1933, after a brief stay in Paris he went to the US where he taught in New York and Boston, then became a professor at the University of California at Los Angeles. Schoenberg wrote, with good reason: '... if it is art, it is not for all, and if it is for all, it is not art.' (1946).

**Schopenhauer, Arthur** (1788–1860). German metaphysicist, born in Danzig (now Gdansk). Best known for his view that will is the reality of the universe, he was a lecturer in philosophy at Berlin (1820–31) and suffered a dramatic reverse when he deliberately lectured at the same time as *Hegel* and did not win away students. Influenced by eastern philosophy, he stressed the existence of human suffering and is sometimes called the philosopher of pessimism. His major work is The World as Will and Idea, the will being the active principle, a blind
irrational impulse, a term which includes all active processes, even those of gravity or motivation. The ‘idea’ on the other hand was merely something received, a brain picture, a nothing of itself and with no exploratory function such as would be implied in such phrases as ‘intellectual intuition’. Schopenhauer’s ethical system rests on sympathy which to him is much more than fellow feeling, the actual identification of self with another. But asceticism he places even above sympathy, since through it is attained the subjection of the will to live and the intellect is freed to pierce the veil of illusion. Schopenhauer spent the last 30 years of his life in isolation at Frankfurt-am-Main. He gained little acceptance until old age and received few academic distinctions. His subsequent influence has been partly due to his emphasis on the irrational.

**Schreiner, Olive** (Emilie Albertina) (1855–1920). South African author, born in Lesotho. Daughter of German missionaries, she wrote *The Story of an African Farm* (1883), an outspoken story of life in a Boer homestead and of spiritual problems similar to her own. Its rebellious attitude to the subordination of women caused much controversy at the time. She supported Cecil *Rhodes, then broke with him on the issue of political rights for women and blacks. She wrote *Woman and Labour* (1911), became a pacifist and corresponded with *Gandhi*.

**Schröder, Gerhard Fritz Kurt** (1944– ). German Social Democratic politician. He was a lawyer and administrator, Bundestag deputy 1980–86, Minister-President of Lower Saxony 1990–98, and SPD candidate for Chancellor 1998, defeating Helmut *Kohl and forming a coalition with the Greens. He was Chancellor 1998–2005 until defeated by a coalition led by Angela *Merkel. Married four times, known as 'Audi man' or 'Lord of the Rings', he left politics and entered business. He became close to Vladimir *Putin*.

**Schrödinger, Erwin** (1887–1961). Austrian theoretical physicist. Educated at Vienna University, after a comparatively mediocre career, he had a sudden burst of creativity in a period of six months in 1926 when he wrote several brilliant papers which tackled major problems in quantum theory. He became professor of physics at Berlin University 1927–33. He was largely responsible for the development of wave mechanics, for which he deduced the fundamental equation (Schrödinger’s wave equation). This makes it possible to treat atomic structure on a more mathematical basis than is permitted by *Rutherford’s mechanical model. With *Dirac, Schrödinger won the Nobel Prize for Physics* (1933). He taught in Rome and Oxford and was professor of physics at the Institute for Advanced Studies, Dublin 1939–56. His book *What Is Life?* (1944) influenced a generation of young scientists to turn from physics to the biological sciences. He also wrote *Nature and the Greeks* (1954).

**Schubert, Franz Peter** (1797–1828). Austrian composer, born in Vienna. Son of a schoolmaster, he was the 12th of 14 children (only 5 surviving infancy). He showed precocious musical talent, and from 1808 studied at the choir school in Vienna which provided singers for the Imperial Court chapel, and his teachers included *Salieri. In 1813, the year he left school, he composed his first symphony. In 1814, when he went to teach at his father’s school, he composed his first opera *The Devil’s Pleasure Palace*, the first six masses. Schubert was the first major Austrian composer to express the pleasure-loving, nostalgic and partly rustic atmosphere of Vienna, in the many songs and dances in which folk influence is discernible. He wrote in the Viennese classical tradition, with extraordinary melodic gifts and an increasing mastery of complex forms.

His lyricism, which has never been surpassed, found its finest expression in his songs (*Lieder*), which number 651 in the Deutsch (D) catalogue and he created the modern art of song. He set 63 of *Goethe’s poems, some in several versions, beginning with *Gretchen at the Spinning Wheel* (1814), ending with *Mignon’s Song* (*Knowest thou the land?*: 1826), and including some masterpieces: *The Erl-King* (*Erkönig*), *Headeroses, To the Moon*, and *The King of Thule*. (Sadly, the poet was indifferent.) He also set texts by *Schiller, *Klopstock, *Shakespeare, *Heine, Wilhelm Müller and Friedrich von Matthisson. In 1815 he wrote 145 songs (nine on a single day) including many of his best. The song cycle *Winterreise* (*Winter Journey*), 24 poems by Wilhelm Müller, set for baritone and piano is, appropriately, chilling.

Schubert wrote four operas, none of which were performed in his lifetime and have only been rarely performed since, and was strikingly lacking in theatrical gifts, despite the drama, pathos and psychological insight of his songs. Choruses, both sacred and profane, poured from his pen. Twenty of his songs and many popular piano pieces were published in 1821. He derived his small income from music sales and teaching.

In 1816 he gave up school teaching, living a more or less hand-to-mouth existence, returned to his father’s school in 1817, then was a music master in Count Johann Esterhazy’s household in Hungary in 1818 and 1824. Schubert, a convivial character with many friends, frequently played and sang at concert parties (*Schubertiaden*) and receptions. He never married. The Piano Quintet (*‘The Trout’,* 1819) and Symphonies No. 4 (1816), 5 (1816) and 6 (1818) were rarely played until the 1930s.
Much of his finest music dates from his last years e.g.,
the song cycles *Die Schöne Müllerin* (Müller, 1823)
and *Die Winterreise* (Müller, 1827), the famous
Symphony No. 8 (*Unfinished*, 1822: first performed
1865), and Symphony No. 9 (*The Great*, 1825–28:
first performed 1839, but regarded as too long and
ignored for decades). Later chamber works include
the Octet in F (1824), the String Quartets in A Minor
(1824), D Minor (*Death and the Maiden*, 1824) and
G Major (1826). The String Quintet in C major,
D 956 (two violins, one viola, two cellos), written in
the year of his death but unperformed until 1850,
is his masterpiece, full of a passionate intensity and
lyricism in its range, lyrical, dramatic, tragic, even
violent at times. The Adagio is one of the greatest
movements in all music: it cuts to the heart. The
Quintet is especially poignant because Schubert
faced an early death, while his creative powers were
still developing. He was a prolific writer for piano,
including 21 Sonatas, the *Wanderer Fantasy* (1822),
two sets of four Impromptus, the *Fantasy* in F Minor
for piano duet, the *Moments musicaux* and many
lyrically dances. The last three Piano Sonatas, ranking
with *Beethoven’s*, were written only months before
he died, and were dedicated to *Schumann* (who
failed to appreciate them). They were published first
in 1838. Sonata No. 21 in B flat major, D. 960, is
a long masterpiece, poignant, threatening, self-
revelatory, and confronting.

The misfortunes of his last years – ill health, financial
difficulties, failure (1826) to obtain salaried posts
were offset by belated recognition. He met the dying
Beethoven, who appreciated his work. In March 1828
his only public concert took place in Vienna where,
in November, he died of typhoid fever at the age of
31. He had long suffered from syphilis, complicated
by alcoholism, which makes his productivity all the
more astounding. Schubert, the shortest lived of the
great composers, was much influenced by Beethoven,
and suffered by appearing to be in his shadow
(an accusation which later haunted *Brahms*). This
was only an optical illusion. Schubert plumbed the
depths of human emotion, of isolation, the separated
soul, as few others have, before or since. He was buried
next to Beethoven and had a profound influence on
*Bruckner* and *Mahler.*

**Schumacher, Ernst Friedrich** (1911–1977). British
economist, born in Germany. He lived in Britain
from 1937, worked for the National Coal Board,
then devoted himself to promoting ‘intermediate’ and
alternative technology. His book, *Small is Beautiful*
(1973) was a major bestseller.

**Schuman, Robert** (1886–1963). French politician,
brorn in Luxembourg. He first became a deputy in
1919, played an active part in the Resistance during
World War II and after the war was a prominent
member of the MRP (Mouvement Républicain
Populaire). Prime Minister 1947–48, as Foreign
Minister 1948–53 in 10 administrations he proved
himself a strong supporter of European integration.
The ‘Schuman plan’ led to the European Coal and
Steel Community (ratified 1952). In 1958 he
became first president of the European Parliamentary
Assembly.

**Schumann, Clara Josephine** (née *Wieck*) (1819–
1896). German pianist and composer, born in Leipzig.
Daughter of the important piano teacher *Friedrich
Wieck* (1785–1873), she was a child prodigy, toured
extensively and composed many piano pieces and
songs. Despite her father’s passionate opposition,
she married Robert *Schumann* in 1840, bore eight
children between 1841 and 1854 and supported him
during his mental breakdown. The intimate friend
(but not lover) of Johannes *Brahms*, she disapproved
of *Liszt’s* florid style, introduced the practice of
playing from memory, was recognised as the definitive
interpreter of *Beethoven* *Chopin*, Schumann and
Brahms, and taught in Frankfurt. She toured Britain
16 times.

**Schumann, Elisabeth** (1888–1952). German
soprano. She sang opera and lieder, and was a member
of the Vienna State Opera 1919–37. Much of her
international success came from her recordings of
songs by *Schubert*. She settled in New York in 1938.

**Schumann, Robert Alexander** (1810–1856).
German composer, born in Zwickau in Saxony. Son
of a publisher and bookseller, he showed early musical
ability but went as a law student to Leipzig, where he
was unhappy, and to Heidelberg where law competed
unsuccessfully with music and a gay and extravagant
social life. From 1830 he was committed to music,
studying piano with *Friedrich Wieck*, whose
daughter (Clara *Schumann*) he married. His hopes
of a career as a virtuoso were ended by an injury to his
right hand. He founded and edited *The New Journal of
Music* (Leipzig, 1834–44) in which his vividly written
criticisms did much to promote the reputations of
*Chopin* and *Berlioz*. Of his compositions in this
first period the set of piano pieces known as *Carnaval*
were inspired by an early love affair, while his love
for Clara is immortalised in the C Major Fantasia,
the *Kreisleriana*, the *Etudes Symphoniques* (1837)
and other piano works. In 1840 he was absorbed by the
romantic poems of *Heine*, many of which he turned
into songs. In 1841 he turned to composition on a
more extended scale: the Symphony No. 1 (*Spring*),
the first version of the Symphony No. 4 and the first
movement of the Piano Concerto (completed 1845)
date from this year. In 1842 there followed three
String Quartets and the great piano Quintet (op. 44).
His first large choral work, *Paradise and the Peri*, was
finished in 1843. A move to Dresden with its opera
house suggested experiment in the theatrical field
(e.g. incidental music for *Byron’s Manfred*). The
Schwab, Charles Michael (1862–1939). American industrialist. He worked his way up from being a stake-driver to become first President of the United Steel Corporation (1901–03) and President of the Bethlehem Steel Corporation (from 1903).

Schwan, Theodor (1810–1882). German physiologist, born in Cologne. Educated in Berlin, Bonn and Würzburg, he worked with J. P. *Müller and all his great achievements were in the 1830s, investigating the chemistry of life processes. He devoted himself to the study of digestion, and discovered the enzyme 'pepsin'. He worked on the formation of sugar solutions and the role of yeast in fermentations. His denials of spontaneous generation led to experiments on sterilisation which *Pasteur was later to build upon. Schwann is perhaps best known for his contributions to cell theory in plants and animals. He was concerned with showing the differentiation of cell structure in very different tissues (e.g. cartilage and bones). All aspects of animals and plants were either cells or their products. Cells had a physiological and chemical life of their own, which was, however, subordinate to the overall life of the organism. He coined the term 'metabolism'. Professor of Anatomy at Louvain 1838–47 and Liege 1847–80, he was awarded the Copley Medal in 1845.

Schwarzkopf, Dame (Olga Maria) Elizabeth (Friederike) (1915–2006). German soprano (naturalised British). Her career flourished after World War II with the encouragement of her husband Walter Legge (1906–1979), record producer and founder of the Philharmonia Orchestra. Her enormous ability as singer and actor, combined with striking good looks, made her the most admired operatic and concert soprano of her time, and she made several films. She was a notable Countess in Figaro and Feldmarschall in Raukavalier, and made many lieder recordings.

Schwann, Theodor (1810–1882). German physiologist, born in Cologne. Educated in Berlin, Bonn and Würzburg, he worked with J. P. *Müller and all his great achievements were in the 1830s, investigating the chemistry of life processes. He devoted himself to the study of digestion, and discovered the enzyme 'pepsin'. He worked on the formation of sugar solutions and the role of yeast in fermentations. His denials of spontaneous generation led to experiments on sterilisation which *Pasteur was later to build upon. Cells had a physiological and chemical life of their own, which was, however, subordinate to the overall life of the organism. He coined the term 'metabolism'. Professor of Anatomy at Louvain 1838–47 and Liege 1847–80, he was awarded the Copley Medal in 1845.

Schwab, Charles Michael (1862–1939). American industrialist. He worked his way up from being a stake-driver to become first President of the United Steel Corporation (1901–03) and President of the Bethlehem Steel Corporation (from 1903).

Schvan, Theodor (1810–1882). German physiologist, born in Cologne. Educated in Berlin, Bonn and Würzburg, he worked with J. P. *Müller and all his great achievements were in the 1830s, investigating the chemistry of life processes. He devoted himself to the study of digestion, and discovered the enzyme 'pepsin'. He worked on the formation of sugar solutions and the role of yeast in fermentations. His denials of spontaneous generation led to experiments on sterilisation which *Pasteur was later to build upon. Schwann is perhaps best known for his contributions to cell theory in plants and animals. He was concerned with showing the differentiation of cell structure in very different tissues (e.g. cartilage and bones). All aspects of animals and plants were either cells or their products. Cells had a physiological and chemical life of their own, which was, however, subordinate to the overall life of the organism. He coined the term 'metabolism'. Professor of Anatomy at Louvain 1838–47 and Liege 1847–80, he was awarded the Copley Medal in 1845.

Schwarzkopf, Dame (Olga Maria) Elizabeth (Friederike) (1915–2006). German soprano (naturalised British). Her career flourished after World War II with the encouragement of her husband Walter Legge (1906–1979), record producer and founder of the Philharmonia Orchestra. Her enormous ability as singer and actor, combined with striking good looks, made her the most admired operatic and concert soprano of her time, and she made several films. She was a notable Countess in Figaro and Feldmarschall in Raukavalier, and made many lieder recordings.
Schwarzkopf, H(erbert) Norman (1934–2012). American general. Son of a brigadier, he grew up abroad, then graduated from West Point and the University of Southern California. He served in Vietnam, Grenada and Washington, and was appointed as Commander of the UN’s ‘Operation Desert Storm’, in which 500,000 troops (mostly US) defeated Iraq in the Gulf War (1991). He wrote an autobiography It Doesn’t Take a Hero (1992).

Schweitzer, Albert (1875–1965). French (Alsatian) medical missionary, theologian and musician, born in Kaysersberg, Alsace. He studied theology and philosophy at the universities of Strasbourg, Paris and Berlin, but first became known as an interpreter of J. S. *Bach, and wrote an authoritative biography (1905, revised 1966). With C-M. *Widor he edited Bach’s organ music. (He also made some excellent recordings.) His controversial book The Quest of the Historical Jesus (1906, translated 1910) argued that *Jesus’ mission was to warn of an impending end of the world. In 1905 Schweitzer decided to become a medical missionary in Africa and, after qualifying in medicine in Paris, he established a mission hospital at Lambaréné in French Equatorial Africa (now Gabon), treating leprosy, sleeping sickness and other tropical diseases. He worked there 1913–17, 1923–65, apart from a period of internment in World War I (1917–18) and concert and lecture tours in Europe (1919–23, 1928, 1935, 1937, 1949–50, 1952–53) to raise funds. In 1949 he visited the US. He was criticised for neglecting modern methods of hygiene, e.g. by letting wives and children accompany the patients to hospital and cook meals etc. in the hospital precincts. His answer was that his methods won the affection and trust of those for whom he worked and that the fear of hospital was removed. Improvements were, however, gradually introduced. In his Civilisation and Ethics (1923) he urged adoption of the philosophy of ‘reverence for life’ (Ehrfurcht vor dem Leben). He wrote several autobiographical works, e.g. From my African Notebook (1936). In the early years of the Cold War, Schweitzer was often linked with Albert *Einstein and Bertrand *Russell in campaigning against atomic weapons. He received the 1952 Nobel Prize for Peace, having been nominated 30 times since 1930. His Nobel Prize address is a careful examination of the horrors of World War II, including atomic bombs, fire bombings and displacement of refugees but, bizarrely, made no reference to *Hitler, the Holocaust, the Middle East or Africa. He used his Nobel Prize money to build a leprosarium and died in Lambaréné.

His many honours included election to the Académie Française (1953) and the British OM (1955). He was a cousin of Jean-Paul *Sartre and the conductor Charles *Munch.

Schweppe, (Jean) Jacob (1740–1821). German-Swiss inventor, born in Hesse. A jeweller in Geneva, he followed the experiments of Joseph *Priestley and invented a machine that produced the first aerated soft drinks. He was in commercial production by 1783 and set up a factory in London in 1792.

Schwitters, Kurt (1887–1948). German artist and poet. A leader of the Dada movement, he developed three dimensional collages (collectively called Merz – from the German word Kommerz), using everyday objects. He lived in England from 1940.

Scipio Aemilianus, Publius Cornelius (185–129 BCE). Roman general. The adopted son of Publius Scipio, the son of *Scipio Africanus, he was elected consul (147), commanded the Roman forces in the Third Punic War and after a long siege took and utterly destroyed Carthage (146). Back in Rome, he became a leader of the conservative opposition to the reforms (especially the agrarian law) of his brother-in-law Tiberius Gracchus (*Gracchi). Scipio’s death was generally believed to be a political murder.

Scipio Africanus, Publius Cornelius (236–183 BCE). Roman general. Having gained self-confidence and public esteem in battle against *Hannibal in Italy, he was appointed, at the early age of 27, proconsul in Spain. One by one he reduced the Carthaginian strongholds and by 207 had conquered the whole country, thus depriving Hannibal of his base. He was elected consul (205) but instead of directing his forces against Hannibal, still in Italy, he conceived the plan, which he carried out against strong opposition, of going direct to Africa and by a threat to Carthage itself ensuring Hannibal’s recall. So it transpired. Scipio was victorious on the plains outside Carthage and Hannibal’s army on its return was surrounded and destroyed at Zama (202). For the next 10 years Scipio’s prestige gave him almost unlimited power, though his love of all things Greek and a policy to accord with it created a conservative opposition under Marcus Porcius *Cato. Scipio’s campaign (190–189) against *Antiochus of Syria provided an opportunity for his enemies. Lucius Scipio, Africanus’s brother, was asked to account for using part of the indemnity received from Antiochus as a bonus to his troops. Africanus, who realised that he was the real target, was insulted by what he felt to be base ingratitude and
retired from public life. By his victories and breadth of vision he had ensured the future of Rome as a great imperial power.

**Scofield**, (David) **Paul** (1922–2008). English actor. He created the stage role of Thomas *More in Robert Bolt's* *A Man for All Seasons* (1962) and Salieri in *Amadeus* (1979) and toured as Hamlet and Lear. His films include John Schlesinger's *The Train* (1964), *A Man for All Seasons* (1966, for which he won an Oscar) and Peter *Brook's King Lear* (1971). He received the CH in 2001.

**Scopes, John Thomas** (1901–1970). American teacher. After being dismissed for teaching the Darwinian theory of evolution (forbidden by Tennessee law), he was the protagonist of the famous 'monkey' trial at Dayton, Tenn. (1925). Defended by Clarence *Darrow against a prosecution led by William Jennings *Bryan, he was fined $100 but the sentence was reversed on appeal.

**Scott, C(harles) P(restwick)** (1846–1932). English newspaper editor, born in Bath. Educated at Oxford, he was editor of the Manchester Guardian 1872–1929 and made it a radical force, supporting Home Rule for Ireland and opposing the Boer War. Scott was a Liberal MP 1895–1906 but insisted 'Comment is free, but the facts are sacred'. When the proprietor J. E. Taylor died in 1905, Scott bought the paper.

**Scott, Sir** (George) **Gilbert** (1811–1878). English architect. After being articled to a London firm he gained a major success by winning (1844) an open competition for designing St Nikolai Church, Hamburg (now a ruin). From then on he was constantly in demand for building new churches, mainly in the Gothic style, and restoring old ones, including Westminster Abbey and the cathedrals of Hereford, Salisbury, Chester, Ripon, Exeter, St Albans and Bath Abbey. Among his secular works were Reading Gaol (1844), the Foreign and Commonwealth Office (1868), St Pancras railway station and hotel (1868) and the Albert Memorial (1872) in London.

**Scott, Sir Giles Gilbert** (1880–1960). English architect. Grandson of Sir George Gilbert *Scott, he won a competition for designing the Anglican Cathedral for Liverpool (1902) and supervised its construction for many years. Among his other designs were those for the Cambridge University Library, the new Bodleian Library, Oxford, the new Waterloo Bridge, London, the new chamber of the House of Commons after World War II (designed 1944, completed 1950), and the Battersea Power Station (converted to the Tate Modern). He received the OM in 1944.

**Scott, Michael** (1175–1234). Scottish scholar. He translated parts of Aristotle from Arabic and became official astrologer to the emperor *Friedrich II. His magical powers are referred to by Dante. Some of his works survive. He was buried at Melrose Abbey, where his grave is still marked.

**Scott, Sir Peter Markham** (1909–1989). British ornithologist and artist. Son of Robert Falcon *Scott, he worked for the conservation of endangered species partly through the World Wildlife Fund but principally through his own Wildfowl Trust at Slimbridge which he founded in 1946. He led ornithological expeditions to Iceland, the Galapagos Islands and the Antarctic.

**Scott, Robert Falcon** (1868–1912). English sailor and Antarctic explorer. He joined the navy (1881) and was promoted captain in 1906. He led two expeditions to the Antarctic: the first (1901–04) explored the Ross Sea area, in a second voyage (begun 1910) to the same area he commanded the *Terra Nova* and among his objectives, which included much scientific and exploratory work, was a sledge journey to the South Pole. When Scott and his four companions, E. A. Wilson, L. E. G. *Oates, H. R. Bowers and E. Evans reached their goal (18 January 1912) they found that the Norwegian explorer Roald *Amundsen had been there a month earlier. Disappointment became tragedy when, already delayed by a sudden drop in temperature, intense blizzards, and illness, the party remained in its tent until provisions were exhausted. Scott recorded the last days in his diary, later discovered and published in 1913.

**Scott, Sir Walter, 1st Baronet** (1771–1832). Scottish writer, born in Edinburgh. To please his father, an Edinburgh lawyer, he studied law and advanced in the profession, but medieval history and the Romantic literature becoming popular in Germany were his more fruitful regions of study. The collection *Minstrelsy of the Scottish Border* (1802–03) was followed by his own original *The Lay of the Last Minstrel* (1805), *Marmion* (1808) and several more ballads. Popular fame and wealth immediately ensued, the latter encouraging him to start building what was intended to be the ancestral home of Abbotsford on the Tweed near Melrose. He now turned from poetry to prose and *Waverley* (1814),
published anonymously, introduced the great romantic and historical series known as the Waverley novels, from their author's thin disguise as 'the author of Waverley'. The best known include Guy Mannering (1815), Rob Roy (1817), The Heart of Midlothian (1818), The Bride of Lammermoor (1819) which inspired Donizetti's opera, Ivanhoe (1819), The Monastery and its sequel The Abbott (both 1820), Kenilworth (1821), Quentin Durward (1823) and The Talisman (1825). Coincident with the publication of Woodstock (1826) came the disaster that shadowed Scott's last years. Partly to meet the cost of Abbotsford he had entered into partnership with his friend James *Ballantyne, the publisher. The firm crashed, Scott, with his delicate sense of honour, refused bankruptcy and with immense courage and industry assumed the task of repaying in full a sum of £130,000 due to creditors. This was eventually achieved by the sale of copyrights after his death, hastened by strain and exhaustion. The quality of his work inevitably declined but to this last period belong three more novels (e.g. Anne of Geierstein), the collection of stories from Scottish history titled Tales of a Grandfather (1828–30), and his Life of Napoleon (1827). Fiercely reactionary, he was created a baronet in 1820.

Scott's particular form of romanticism is out of fashion, his characterisation was often poor, but some of his historical portraits, e.g. of *Louis XI of France in Quentin Durward, are remarkable. He played an important part in the development of the historical novel. In his Journal (March 1826), he wrote, after commenting on Jane *Austen, 'The big bow-wow strain I can do myself like any now going; but the exquisite touch, which renders ordinary commonplace things and characters interesting, from the truth of the description and the sentiment, is denied to me.'

Abbotsford passed eventually to Scott's granddaughter Charlotte (child of his daughter Sophie and J. G. *Lockhart, his biographer). It then passed to her descendants.

Scott, Winfield (1786–1866). American soldier, born in Virginia. As General in Chief of the US Army 1841–61, he introduced French tactics and showed his skill in the Mexican War (1846–48): he captured Mexico City and won the soubriquet 'Old Fuss and Feathers'. In 1852 as an anti-slavery candidate he defeated Millard *Fillmore for the Whig presidential nomination, but lost to Franklin *Pierce (who had been a subordinate in Mexico). He remained loyal to the Union in the Civil War, retiring in November 1861.

Scott Moncrieff, C(harles) K(enneth) (1889–1930). Scottish writer and translator. Educated at Winchester and Edinburgh University, he translated Beowulf and *Stendhal, served as an officer in World War I and was injured. From 1921 until his death, he devoted himself to translating *Proust's À la recherche du temps perdu, as Remembrance of Things Past, a masterpiece in its own right, poetic but not always strictly literal. He lived in Italy from 1923, in Florence, Pisa and Rome, reporting to British Intelligence on *Mussolini and the Fascist regime. He also translated *Pirandello.

Scriabin (or Skryabin), Aleksandr Nikolayevich (1872–1915). Russian composer and pianist. A cousin of V. M. *Molotov, he was a contemporary of *Rachmaninoff at the Moscow Conservatoire, where he was professor of the piano forte 1898–1904. His early piano works were strongly influenced by *Chopin. After leaving Moscow he devoted himself to composition and lived in Switzerland, Belgium and France. Later under the influence of theosophy he developed doctrines that attached religious significance to all forms of art, and in his compositions subordinated everything to the achievement of ecstasy for which purpose he used such effects as clanging bells, incantations and blaring trumpets. The orchestral works Poem of Ecstasy (1908) and Prometheus (1911) and the last five piano sonatas (Nos. 5–10) illustrate this development. In his later works he introduced a harmonic system based on a 'mystic’ chord of ascending fourths.

Scribe, (Augustin) Éugène (1791–1861). French dramatist. He was a prolific writer of plays that entertain mainly by the skill of the plot and clever denouements, e.g. Adrienne Lecouvreur (1849, later an opera by *Puccini). He also wrote about 90 libretti, for operas by *Adam, *Auber, *Bellini, Boieldieu, *Donizetti, *Halévy, *Meyerbeer, *Offenbach, *Rossini and *Verdi. He believed that the function of the theatre was to amuse, not to be a reflection of life or a means of instruction.

Scullin, James Henry (1876–1953). Australian Labor politician, born near Ballarat. He was a grocer, journalist and union organisers, a member of the House of Representatives 1910–13, 1922–49 and Leader of the Australian Labor Party 1928–35. His term as Prime Minister 1929–32 coincided with the onset of the Great Depression in which Australia was severely hurt. His party split over means of combatting the crisis, with Jack *Lang defecting to the Left and J. A. *Lyons to the Right. In the December 1931 election, the ALP national vote fell to 26.7 per cent and Lyons led the United Australia Party to a landslide victory.

Sculthorpe, Peter Joshua (1929–2014). Australian composer, born in Launceston. After studying in Melbourne and Oxford, he taught composition at Sydney University 1963, becoming a Professor in 1992. Encouraged by the conductor Sir Bernard Heinze (1894–1982) and by the Australian Broadcasting Commission (now Corporation) his music was frequently performed. His works include 15 string

Seaborg, Glenn Theodore (1912–1999). American physicist, born in Michigan. Educated at the University of California at Los Angeles and Berkeley, he worked on transuranic elements with Edwin *McMillan and shared the 1951 Nobel Prize for Physics with him. He co-discovered (and named) the elements plutonium (No. 94), americium (95), curium (96), berkelium (97), californium (98), einsteinium (99), fermium (100), mendelevium (101) and nobelium (102). He chaired the US Atomic Energy Commission 1961–71 and campaigned for an end to nuclear testing. Seaborgium (106) was named for him in 1994, and Asteroid Seaborg in 1995.

Searle, Ronald (1920–2011). British artist and cartoonist. He published his first work in 1935 and joined *Punch* in 1956. He was also attached to *Life* from 1955 and to the *New Yorker* from 1966. He published 60 books (21 with collaborators) of drawings and cartoons in a detailed, linear style and first gained wide popular success with his grotesque school children, whom he drew as inky-fingered caricatures of juvenile delinquency. The most famous of these, the girls of St Trinian's, appeared in the early 1950s.

Sebastian (1554–1578). King of Portugal (from 1557). A posthumous child, he succeeded his grandfather *João III. He grew up with an antipathy to women and a fanatical sense of mission to lead a crusade against the Moslems of North Africa. He sailed to Morocco in 1578 but was defeated and never seen again. The mystery of his disappearance produced impostors and led to the growth of a legend that he would return to deliver Portugal in time of need.

Seddon, Richard John (1845–1906). New Zealand politician, born in Lancashire. He emigrated to Australia in 1863 and then went to the Westland goldfields of New Zealand (1866). First elected to the House of Representatives in 1879, he became (1891) a minister in the Liberal Government of John Ballance, whom he succeeded as Prime Minister 1893–1906. Known as ‘King Dick’, he straightened the affairs of the Bank of New Zealand, assisted Britain in the Boer War with New Zealand troops, introduced Imperial Preference (1903), and annexed the Cook Islands. He was no socialist but to control prices he introduced state coal-mining (1901), fire insurance (1903), and house-building (1905). He died at sea.

Sedgwick, Adam (1785–1873). British geologist. Son of the curate of Dent in Yorkshire, he studied at Trinity College, Cambridge, and became a Fellow in 1810. Despite knowing no geology, he was appointed professor in the subject in 1818, holding the chair for the next 55 years and becoming one of the foremost British geologists. An empirical geologist, with strong Christian sentiments, he disapproved of *Lyell's Uniformitarianism, was suspicious of Glacial Theory, and rejected all theories of evolution, especially *Darwin's. He excelled in two fields, in palaeontology, especially palaeozoic fossils, and in understanding the stratigraphy of the British Isles, using fossils as an index of relative time. His greatest work lay in the geology of Wales, bringing to birth the concept of the Cambrian System on which he eventually quarrelled with *Murchison, another proponent of the Devonian system.

Sedley, Sir Charles (1639–1701). English poet and dramatist. A member of the circle of wits and profligates who surrounded *Buckingham and *Rochester at the court of *Charles II, he wrote charming lyrics, excellent translations of *Virgil and *Horace, and plays, e.g. the comedies *The Mulberry Garden* (1667), based on *Molière's *L'École des maris*, and *Bellamira* (1687).

Segovia, Andrés (1893–1987). Spanish classical guitarist. Regarded during his active period as the greatest in the world, he made his debut at 14 and established an international reputation mainly with Spanish music. He inspired many works for the guitar, notably by *Villa-Lobos, Ponce and Castelnuovo-Tedesco and adapted pieces by *Bach and *Mozart. He was ennobled as Marqués de Solobrefia in 1981.

Segré, Emilio Gino (1905–1989). American nuclear physicist, born in Italy. Professor of physics at the University of Palermo 1935–38, he then worked in the US, where he became professor of physics at the University of California 1946–72. He helped to prepare artificially the elements technetium (No. 43) and astatine (No. 85), which are below uranium in atomic number but not found naturally on earth. Segré was a pioneer in the investigation of anti-matter and discovered (1955) the anti-proton. He won the Nobel Prize for Physics (1959). His publications include *Nuclei and Particles* (1964).
Seidler, Harry (1923–2006). Australian architect, born in Vienna. Of Jewish-Romanian parentage, he escaped to London in 1938 and was briefly interned in Canada, studied architecture in Manitoba, then won a scholarship to Harvard where he worked with *Gropius and *Breuer, and in Boston with *Aalto. In Sydney from 1948, he designed more than 180 buildings, including the Australian Embassy in Paris. He was associated with *Niemeyer in Brasilia. The Grand Tour, Travelling the World with an Architect's Eye (2004) presents 1000 photographs by Seidler.

Sejanus, Lucius Aelius (d.31 CE). Roman politician and conspirator. A favourite of *Tiberius, he ran the praetorian guard, arranged murders inside the imperial family, but was detected in treachery and executed.

Selden, John (1584–1664). English jurist, parliamentarian and scholar. From 1621 he sat almost continuously in parliament. He helped to draw up the Petition of Right and (1629–31) was imprisoned in the Tower, but though he sat in the Long Parliament his refusal to vote for the attainder of *Stratford made him suspect and he gradually withdrew from public life. His Titles of Honour (1614) and History of Tithes (1618) still have value, but most of his learned works are long forgotten and he is remembered mainly for his Table Talk (1689), a record collected by his secretary of his conversations and remarks during his last 20 years. He was also an orientalist whose collection of manuscripts came to the Bodleian Library, Oxford. The Selden Society (for legal publications) was founded in his honour.

Seleucus I Nicator (d.280 BCE). Macedonian general, founder of the Seleucid dynasty. After the death of *Alexander the Great (323) his conquests were divided among his generals. By 312 Seleucus, one of the ablest and most ambitious, had married a Persian princess and ruled Babylonia. He gradually enlarged his empire until it included much of Asia and extended from Syria to India. He was assassinated. Under his successors, known as the Seleucids, the eastern provinces were gradually lost and the power of the dynasty continued in Syria until 64 BCE, when the country was conquered by the Romans, though the Hellenistic culture introduced by the Seleucid dynasty survived.

Selim I (‘the Grim’, in the West; in his empire ‘the Steadfast’) (1467–1520). Turkish Sultan 1512–20. Son of *Mehmet II and father of *Suleyman, he was also Caliph 1517–20. The Ottoman Empire expanded threefold during his reign. He occupied Egypt in 1517 and died as he was about to invade Hungary. He was also a gifted poet.

Selkirk, Alexander (1676–1721). Scottish seaman. While serving under William *Dampier on a privateering expedition he was marooned (1704). According to one account he was left at his own request on one of the Juan Fernandez Islands in the Pacific. He was rescued (1709) and his story inspired Defoe’s Robinson Crusoe.

Sellers, Peter see Goons, The

Selznick, David O(iver) (1902–1965). American film producer, born in Pittsburgh. He worked in publishing and real estate, then moved to Hollywood and, after an unhappy period with Paramount, MGM and RKO, became the most important independent producer. His films include Anna Karenina (1935), David Copperfield (1935), Gone with the Wind (1939), Rebecca (1940), Duel in the Sun (1946) and The Third Man (1949). He married the actor Jennifer Jones (1919–2009). She won the 1943 Academy Award for best actress in The Song of Bernadette, appeared in Madam Bovary (1949), Beat the Devil (1953) and Love is a Many Splendoured Thing (1957), and married the industrialist, philanthropist and art collector Norton Simon, whose gallery in Pasadena she chaired.

Semenov, Nikolai Nikolaevich (1896–1986). Russian physical chemist. Assistant professor of physics at Leningrad Polytechnic Institute 1928–31, he directed the Academy of Sciences Institute of Chemical Physics 1931–66 and was professor of physical chemistry at Moscow State University 1944–66. He carried out important researches in chemical kinetics and shared the Nobel Prize for Chemistry (1956) with *Hinshelwood for their important discoveries in this field.

Semmelweis, Ignác Philipp (1818–1865). Hungarian obstetrician. Working in a Vienna hospital he discovered in 1847 that the death rate from puerperal fever was far higher (10 per cent against 3 per cent) in the ward attended by doctors who had come straight from post mortem rooms than in that attended by midwives. He worked in Pest from 1849. By insisting on adequate use of antiseptics he reduced the death rate from infection to 1 per cent. The value of his work was recognised after his death but provoked much controversy at the time. Infected by a cut, he died of septicemia in an asylum.

Gortvay, G., and Zoltán, I., Semmelweis, his Life and Work. 1968.

**Senanayake, Don Stephen** (1884–1952). Ceylonese (Sri Lankan) politician. He led Ceylon’s independence movement, and as Minister of Agriculture 1941–46 he achieved much in irrigation and land reclamation. He became (1948) the first Prime Minister of the newly created dominion, dying in office after falling from a horse. His son, Dudley Senanayake (1911–1973), was Prime Minister 1952–53, 1960, 1965–70.

**Seneca, Lucius Annaeus** (c.4 BCE–65 CE). Roman tragedian and politician, born in Córdoba. His fame as an orator roused the jealousy of *Caligula and almost cost him his life. Under *Claudius the favour of the Emperor’s sister brought the hostility of *Messalina, the Emperor’s wife, and Seneca was banished to Corsica. He was recalled (49 CE) to be tutor to the young *Nero and when his pupil became Emperor provided five years (the famous quinquenniumNeronis) of model government. Later he became involved in a conspiracy and was forced to commit suicide. As a philosopher he inclined towards modified Stoicism and wrote essays on such subjects as Calm of Mind, Shortness of Life. He is better known for his nine surviving verse tragedies, which elaborate the familiar classical stories (Medea, Phaedra, Oedipus etc); with much melodrama, moralising and horror, they influenced Elizabethan drama and *Corneille and *Racine. Though Seneca’s private life was blameless, he lacked strength of character, became a time-serving flatterer and condescending vices he could not prevent. He even wrote the oration defending Nero’s matricide of *Agrippina. Nevertheless, as his 124 Moral Epistles show, he was, in his timid way, a seeker after virtue.

**Senghor, Leopold Sédar** (1906–2001). Senegalese politician and poet. A Member of the French National Assembly 1945–58, he became President of Senegal 1960–80 and was elected to the Académie Française in 1983.

**Sennacherib** (d.681 BCE). King of Assyria (from 705 BCE). He successfully maintained the empire of his grandfather, *Tiglath-Pileser III and his father Sargon. Babylon, constantly in revolt, he destroyed, and he punished a revolt in Judaea (see 2 Kings) by laying waste part of the country and besieging Jerusalem. His greatest achievement was the building of a large part of the capital city of Nineveh (on the Tigris opposite Mosul), where magnificently carved reliefs illustrated his campaigns. The remains of magnificent aqueducts near Mosul suggest that the famous ‘Hanging Gardens’, one of the world’s seven wonders, were actually in Nineveh, not Babylon. He is the subject of *Byron’s The Destruction of Sennacherib.

**Sennett, Mack** (Michell Sinott) (1880–1960). American film director and producer, born in Québec. He worked in film from 1908, as an actor, then director, and formed Keystone Films in 1912, directing a long series of comic shorts which featured Charles *Chaplin and later the Keystone Kops. He was a victim of the transition to talking films but received a special Academy Award in 1937.

**Senussi** (or Sanusi), Mohammed ibn Ali as- (c.1787–1859). Arab religious leader. He established an order or fraternity that aimed at a return to the pure and simple Islamic doctrines untainted by later ‘reformers’. Forced to leave Arabia, Mohammed ibn Ali established himself and his followers in Cyrenaica, where the Senussi, whose numbers grew eventually to over 200,000, formed a semi-independent state under Mohammed ibn Ali and his dynastic successors. The Senussi proved the most tenacious opponents of the Italian régime that succeeded that of Turkey after the war of 1911–12. Their leader Mohammed *Idris became the first king of Libya in 1951.

**Septimius Severus, Lucius see Severus, Lucius Septimius**

**Sequoyah see Sequoyah**

**Sequoyah** (Ssiqoyah or Sequoya, also known as George Giss) (c.1770–1843). American Cherokee silversmith and soldier, born in Tuskegee, Tennessee. From 1809 he developed a written form of the Cherokee language, a syllabary, adopting Latin, Greek and Arabic letters. The genus sequoia is probably not named for him (1847).

**Serra, Junipero** (1713–1784). Spanish missionary, born in Mallorca. A Franciscan friar, he worked in Mexico (1750–69), then established nine missions in California along the Camino Real. He was sympathetic to the Indians and introduced them to European agriculture.

**Serra, Richard** (1939– ). American sculptor, born in San Francisco. Of Spanish and Russian-Jewish descent, he studied at the University of California, also working at a steel mill, then studied painting at Yale, where Josef *Albers and Philip *Guston were influential, and won a *Fulbright Scholarship to work on sculpture in Rome. Serra produces huge metal works made from Cor-ten steel sheets. His works are not objects, but intended to transform space. His *Torqued Ellipses (1996ff), stimulated by *Borromini’s San Carlo alle Quattro Fontane, in Rome, challenged clock time and spacial perceptions. The *Hedgehog and the Fox (1999), inspired by an essay of Isaiah *Berlin, is at Princeton University. The Museo Guggenheim in Bilbao features a collective permanent exhibition of eight works by Serra, with the collective name *The...
Seurat, Georges (1859–1891). French painter. At the Salon des Indépendants (1884) he exhibited Une Baignade (now in the Tate Gallery, London), the first of the huge pictures in which he excelled. With *Signac and *Pissarro he developed, under the influence of optical theorists, the ‘pointillist’ technique by which the canvas is covered with dots of unmixed colour (‘confetti’ according to the scoffers) which merge at a distance into the required tones. This technique was the hallmark of the neo-Impressionists, more distinctive of Seurat was the nobility he gave to ordinary activities by strictly disciplined composition.

Severus, Alexander see Alexander Severus

Severus, Lucius Septimius (146–211). Roman Emperor 193–211. Born in Leptis Magna, now in modern Libya, he was governor of Upper Pannonia (parts of Austria and Hungary) when news of the murder of *Pertinax reached his troops, who immediately proclaimed him Emperor. He marched at once to Rome and, having overcome his rivals, turned against the Parthians, annexed northern Mesopotamia and built forts in Arabia and Mauretania. He introduced a complicated administrative system involving strict delimitation of function under imperial control. By encouraging troops to live and marry in the frontier regions, he increased the incentive to vigorous defence at the cost of mobility. With an army of 40,000 he attempted (208) to conquer Caledonia (Scotland) and after protracted asymmetrical warfare with the Scots, reached the Central Lowlands. He became fatally ill and died at Eborauc (York). The Romans then retreated to Hadrian’s Wall. Septimius established a dynasty (Severan), was succeeded by his son *Caracalla and deified by the Senate. The claim by *Eusebius that he persecuted Christians appears to be wrong.

Sévigné Marie de Rabutin-Chantal, Marquise de (1626–1696). French noblewoman. After the death of her husband in a duel (1651) she went to Paris where she wrote to her daughter in Provence her famous letters, which record with wit and apparent spontaneity her impressions of society in Paris and the provinces at the time of *Louis XIV.

Seward, William Henry (1801–1872). American Republican politician, born in New York. An attorney, he entered state politics as a Whig and was Governor of New York 1839–43. As a US senator 1849–61, he campaigned for emancipation of the slaves, sought Republican nomination for the presidency in 1860, lost to *Lincoln but became Secretary of State 1861–69. He drew up the Emancipation Proclamation (1863). After Lincoln’s murder (he was stabbed on the same night) he continued to serve under Andrew *Johnson and was statesman enough to foresee the advantage to be obtained by the purchase (1867) of Alaska from Russia, although this was denounced as ‘Seward’s folly’. His incomplete Autobiography was published in 1877.

Seymour, Edward see Somerset, 1st Duke of
Seymour, Horatio (1810–1886). American Democratic politician. Governor of New York 1853–55 and 1863–65, he was Democratic candidate for president (1868), being narrowly defeated by U. S. Grant.

Seymour, Jane see Jane Seymour

Seymour of Sudeley, Thomas Seymour, 1st Baron (1508?–1549). English nobleman. Brother of Edward Seymour, Duke of *Somerset, and of Jane *Seymour, third wife of *Henry VIII and mother of *Edward VI, he married Henry's widow *Catherine Parr. In 1547 he was appointed Lord High Admiral but two years later was beheaded for intrigue against his brother, who had become protector of England during Edward's minority.

Seys-Inquart, Arthur von (1892–1946). Austrian Nazi politician. A lawyer, he was Chancellor and Governor of Austria for two days (March 1938) after *Hitler's annexation (Anschluss), administrator of southern Poland 1939–40, and Reichskommissar in the Netherlands 1940–44. He was Foreign Minister for a few days (1945) after Hitler's suicide. For the brutality of his rule in the Netherlands he was sentenced to death by the Nuremberg tribunal and hanged.

Sforza, Carlo, Conte (1872–1952). Italian diplomat. After a period of successful foreign service and a short spell (1920–21) as Foreign Minister, he resigned when *Mussolini came to power. He lived in Belgium and (from 1940) in the US, where he became prominent for his anti-Fascist views. After Mussolini fell he helped to form the provisional government of 1944 and was Foreign Minister under de *Gasperi 1947–51.

Sforza, Ludovico (‘Il Moro’) (1451–1508). Italian nobleman, Duke of Milan 1482–99, known as ‘The Moor’ for his dark skin. His father, Francesco Sforza (1404–1466), was a famous condottiere who fought on both sides in the struggle between Venice and Milan but whose allegiance was finally determined by his marriage to Bianca, an illegitimate daughter of the Visconti Duke of Milan. This enabled him to become duke in 1450. The duchy passed to his son, then to his grandson the seven-year-old Gian Galeazzo *Sforza (1476–1494) whose authority was usurped by his uncle Ludovico, strongly suspected of hastening his death. The court of Ludovico, and his brilliant wife Beatrice d’Este became a centre of Renaissance culture, *Leonardo da Vinci being the most famous of the artists he befriended and employed. Ludovico was expelled (1499) by *Louis XII of France and, after failing to regain his duchy, was imprisoned at Loches on the Loire, where he died.

Shackleton, Sir Ernest Henry (1874–1922). British Antarctic explorer, born in Ireland. He was with *Scott on his first voyage of exploration, and sailing in the *Nimrod he led his first expedition (1907–09) during which the magnetic pole and a record southern latitude of 88°23’ were reached. His second expedition (1914–16) was an attempt to cross Antarctica from the Weddell to the Ross Sea. After his ship, the *Endurance, had been crushed by ice, Shackleton and five companions made a hazardous journey to bring relief. All were in fact saved. He helped to organise the northern expeditionary force intervening in the Russian Civil War (1918–19) and died in South Georgia while on a third voyage to Antarctica. He wrote about his expeditions in, e.g. *Heart of the Antarctic (1909) and *South (1919). His son, Edward Arthur Alexander Shackleton, Baron Shackleton (1911–1994) was an explorer, writer, BBC producer, Labour MP 1946–55 and Minister 1964–70, awarded a KG, AC and FRS. Hunftord, R., *Shackleton, 1985.

Shadwell, Thomas (1642–1692). English poet and dramatist. His first play, The Sullen Lovers (1668), was followed by 16 more, the best of them comedies and the majority successful. As plays were used for political propaganda, he was, as a Whig, unable to produce plays from 1681, when the party fell into disfavour, until the revolution of 1688. In 1689 he replaced the Tory *Dryden as Poet Laureate. Shadwell's reputation for dullness is largely due to the brilliant but cruel lampoon of him in Dryden's *MacFlecknoe, in fact he often presents a vivid and entertaining picture of contemporary life.

Shaffer, Peter Levin (1926– ). British playwright. His plays include Five Finger Exercise (1958), The Royal Hunt of the Sun (1964), *Equus (1973) and *Amadeus (1979). All were successful in Britain and the US and also as films. His twin brother Anthony Shaffer (1926–2001) wrote Sleuth (1972) and many film scripts.

Shaftesbury, Anthony Ashley Cooper, 1st Earl of (1621–1683). English politician. In the Civil War he first fought as a Royalist, but in 1644 went over to the parliamentary side. A member of *Cromwell’s Council of State, by 1659 he was imprisoned as a suspected royalist. Thus at the Restoration he was favoured by *Charles II, created Baron Ashley in 1661 and from then until 1672, when he was made Earl of Shaftesbury, he acted as Chancellor of the Exchequer (from 1667 as a member of the famous Cabal ministry). Lord Chancellor 1672–73, always disliked, he was then dismissed by Charles II and became the force behind the movement to exclude the Roman Catholic Duke of York (*James II) from the succession, making use of the infamous Titus *Oates to ‘expose’ a Catholic plot. In the ensuing reaction Shaftesbury was acquitted of treason but took refuge in Amsterdam where he died.

The most skilful politician of his day, he was the virtual founder of the Whig Party. His methods were devious, but, as is shown by his association with John
*Locke and the part he played (1679) in amending the Habeas Corpus Act, he had liberal causes at heart. An envenomed satirical portrait of him is contained in *Dryden's Absalom and Achitophel.

Shaftebury, Anthony Ashley Cooper, 3rd Earl of (1671–1713). English philosopher. His chief work, Characteristics of Men, Manners, Opinions, Times (1711) discusses virtue, integrity, self-respect and the 'Affections' which he believed men had naturally for themselves, other men and even fellow living creatures. The good of society and the good of the individual in the nature of things run into one another. Men have a 'moral sense' – he introduced the term – which enables them to separate right from wrong.

Shaftebury, Anthony Ashley Cooper, 7th Earl of (1801–1885). English philanthropist. As Lord Ashley he was an MP 1826–51 until he succeeded to the peerage. He took the lead in securing the passage of a succession of Factory Acts and the Coal Mines Act of 1842. Among the many improvements he secured were the appointment of factory inspectors to ensure that children under nine were not employed in the mills, and that women and children should not work underground in the mines. Another of his measures prohibited the employment of children (such as Tom in *Kingsley's Water Babies) to climb and clean chimneys; he was closely associated with the 'Ragged Schools' movement, and legislation to provide lodging houses for the poor; he helped the work of Florence Nightingale and numerous other good causes. Politically he was a strong Tory and in religion strictly evangelical. He is commemorated by the statue of Eros (Love) in Piccadilly Circus, London.

Shah Jahan (1592–1666). Emperor of India 1627–58. The fifth of the Moghuls, he fought successfully against the Deccan princes but several attempts to recover Kandahar from Persia eventually failed. He was an able ruler and by skilful financial management maintained a court of the greatest magnificence (he constructed the 'peacock throne'). He built the palace and great mosque at Delhi, and at Agra the beautiful 'pearl mosque' and the Taj Mahal, the most famous of all his buildings, erected as a mausoleum (1631–53) for his favourite wife Arjumand Mumtaz (the more familiar Mumtaz is a description – 'ornament' – not a name). In 1658 he fell ill and his son *Aurangzeb, successful in a struggle for the succession, deposed him and held him prisoner until his death. *Dryden's Aurung-Zeb (1676), is based loosely on these events.

Shahn, Ben(jamin) (1898–1969). American artist, born in Lithuania. He was a painter, photographer, lithographer and graphic designer, who achieved early fame with his 23 paintings on the *Sacco and Vanzetti executions (1930). He had a wide range, from political issues to abstractions.

Shaka (Chaka) (c.1787–1828). Zulu chief 1816–28. A military genius, sometimes called 'the black Napoléon', he began the Difaqane (Mfecane) or 'Crushing' which destroyed rival tribes in the Natal and Transvaal area, leading to depopulation. (After his death this gave an opportunity for the Boer 'Voortrekkers' under Pretorius to occupy the Transvaal.) He became psychotic after his mother died (1827) and was murdered by his half-brother Dingaan.

Shakespeare, William (1564–1616). English dramatist and poet, born at Stratford-on-Avon, Warwickshire, on St George's Day, 23 April. Very few of the traditional stories of his early life can stand up to serious examination. His father, John Shakespeare (c.1529–1601) was a glover and wool-dealer who became an alderman, bailiff and money-lender in Stratford and, after a period of financial difficulty and obscurity, received a grant of arms in 1596. His mother, Mary Arden (c.1537–1608), came from a landed family whose genealogy could be traced to Anglo-Saxon times.

Educated at the King's New School (which had covert Jesuit connections), he would have been well grounded in Latin and rhetoric. Some scholars suggest that he was a servant or teacher in Catholic households in Lancashire 1581–82 (a variant of John Aubrey's story that he was 'a schoolmaster in the country') and he seems to have known five men who were executed as recusants. The next positive evidence of Shakespeare's existence is the licence to marry Anne Hathaway (1582). The christenings of their children are recorded, that of his elder daughter Susanna in May 1583, that of the twins Judith and Hamnet in February 1585. The boy Hamnet died aged 11 but Judith married and survived her father; his granddaughter Elizabeth (d.1670), the daughter of Susanna, who had married John Hall, a Stratford physician, was his last known descendant. A familiar, but less likely, legend relates that he left Stratford (c.1585) to avoid prosecution for poaching on the estate of Sir Thomas Lucy of Charlecote. He probably arrived in London between 1585 and 1587, drawn by the appeal of city life and growing realisation of his own talents, probably as an actor-writer with Lord Strange's Men, an acting troupe, in theatres originally managed by James Burbage. A disparaging reference to Shakespeare in 1592 by the dramatist Robert Greene confirms that he was well established in London. Circumstances favoured him: nine open-air theatres were built in London in Shakespeare's lifetime, beginning in 1576, some accommodating audiences of up to 3000, remarkable for a city of 200,000 people. There was an ever increasing demand for plays and spectacles (including bearbaiting), a situation unprecedented until the explosive impact of cinema and television more than 300 years later.

London's theatres were closed in 1592–94 because of the plague. When they re-opened, Shakespeare was with 'The Lord Chamberlain's Men', which acted at
court, as actor, writer and probably director. In 1603 the company was renamed 'The King's Men', under *James I's patronage.

Shakespeare's writing mirrors the circumstances of his times: drama in the theatre filled a psychological gap after the suppression of the Mass and abandonment of mystery plays, the upsurge of patriotic feelings after the defeat of the Spanish Armada in 1588, and publishing poetry when the theatres were closed.

Shakespeare's first published works were the narrative poems Venus and Adonis (1593), very successful and much reprinted, and The Rape of Lucrece (1594), both based on *Ovid and dedicated to Henry Wriothesley, the young Earl of Southampton. Most of the sonnets may date from this period.

Eleven plays (13 including disputed attributions) are based on mistaken /double identity. Answers to the questions 'Who are you?' or 'Are you who you say you are?' could be matters of life or death in Elizabethan England, after convulsive changes from Catholicism, to Anglicanism, back to Catholicism and returning to modified strains of Anglicanism.

Three of Shakespeare's plays (As You Like It, Twelfth Night, The Tempest) do not specify a location, 14 are set (in whole or in part) in England, 12 in Italy (Northern Italy 6, Ancient Rome 4, Sicily 3,), 5 (in whole or part) in France, 2 in Turkey (Ephesus and Ancient Troy), 2 in Athens and Ancient Britain, 1 each in Bohemia, Croatia (Illyria), Egypt, Denmark, Scotland, Lebanon (Tyre), and Vienna.

Some have several locations, for example *Henry V in England and France, *Antony and Cleopatra in Rome, Alexandria, Messina and Athens, *Othello in Venice and Cyprus.

In Shakespeare's time, all the female characters, some of the greatest in all drama – Juliet, Lady Macbeth, Gertrude, Rosalind, Desdemona, Cleopatra, Portia, Beatrice – were played by men or boys. There are only two functional marriages in the 38 plays, Macbeth and Lady Macbeth, Claudius and Gertrude, suggesting that Shakespeare took a bleak view of the institution. Bill Bryson's conclusion that there is 'no evidence that Shakespeare had a warm relationship with any other human being' is probably correct.

The earliest plays included the political-historical tetralogy *Henry VI Part 1, Part 2 and Part 3 and *Richard III (1589–92). The *Henry VI plays, popular in their time, are now sometimes cut and bracketed together and performed as a single work. However, *Richard III is a dramatic masterpiece, despite the unremitting Tudor partisanship of Shakespeare's portrayal of *Richard.

The Comedy of Errors (a free adaptation of Plautus) and Titus Andronicus (from Seneca) are also early and despite skill in plot construction and versification, there are crudities which disappeared as the playwright matured. When the later tetralogy Richard II, *Henry IV Part 1 and Part 2 and *Henry V (1594–99) is compared with the first, it is clear how far Shakespeare's power and psychological insight have strengthened, notably in *Henry IV's torment about the murder of *Richard II.

Sir John Falstaff, fat, scheming and disreputable, Shakespeare's greatest comic creation, is a central character in *Henry IV, parts 1 and 2, and *The Merry Wives of Windsor, and his death is reported in *Henry V.

In comedy, Shakespeare was gaining an increased sureness of touch in combining farcical incident with subtle understanding of human nature, demonstrated in The Taming of the Shrew, which, with *The Two Gentlemen of Verona and Love's Labour's Lost, was almost certainly written before 1594. Some of his most popular plays were written in the period 1594–99: Romeo and Juliet and *A Midsummer Night's Dream, followed by *The Merchant of Venice and *The Merry Wives of Windsor, and another history play, *King John, now rarely performed.

Increasingly rich, in 1597 he bought New Place, a substantial house in Stratford. In 1599 Shakespeare's company acquired the Globe Theatre, which burned down in 1613.

On the eve of *Essex's rebellion in February 1601, his supporters commissioned a special performance of *Richard II, where a weakening sovereign is overthrown. Shakespeare's company was never accused of complicity in the plot: the play was well known and it was clearly a commercial transaction.

Shakespeare's finest comedies were *Much Ado About Nothing (1598), As You Like It (1599) and *Twelfth Night (1600–02).

As a playwright he now reached his zenith, beginning with *Julius Caesar (1599), the first of three Roman plays based on Plutarch, with powerful characterisation of Brutus – by far the longest part, Mark Antony and Caesar, and a chilling cameo of Octavian (the future Caesar *Augustus.)
The second and third of the Roman plays were *Antony and Cleopatra* (1606–07) and *Coriolanus* (1608).

*Antony and Cleopatra*, written in 42 scenes, is a complex epic, involving love, betrayal and conflicting loyalties, and critical opinion has long been divided on its ranking. Shakespeare borrowed from Plutarch and Virgil (whose account of Dido and Aeneas was in part a tactful account of Cleopatra and Antony, their contemporary prototypes). Frank *Kermode marvelled at the play's 'glamour … and magnificence' and the contrasts between 'melting Alexandria and … rigid, stony Rome'.

*Coriolanus*, a dark, rarely performed, late play, considered superior to *Hamlet* by T. S. Eliot, is the most overtly political work in the canon, with a disconcerting contemporary relevance: the central character's chilling sense of his own honour drives his ambition and self-justification.

*Hamlet* (1600–01) is the longest, greatest, most performed, most filmed, most quoted of all the plays and the one most resembling a novel, with its seven interior monologues (soliloquies), exploring the problem of self-knowledge and emotional paralysis. Then came *Othello* (1604), with its themes of sexuality, race and treachery, *King Lear* (1605–06), the darkest of all, with its paroxysms of grief, a metaphor for reversion from civilization to barbarism, and *Macbeth*, psychologically one of the most complex (1605–06).

*Troilus and Cressida* (1602), *Measure for Measure* (1603) and *All's Well that Ends Well* (1604–05) are sometimes described as Shakespeare's 'problem plays', where the boundary between comedy and tragedy is becoming blurred and mood changes are sudden and sometimes inexplicable.

*Cymbeline* (1610), set in Ancient Britain, is an extraordinary mixture of genres, full of anachronisms but with fine poetry. *The Winter's Tale* (1610–11) is a complex and uneven work about separation in families: a return to life after 16 years. Kermode points to ranting and pathology in the first part, then calm and acceptance in the last acts.

His last completed play, *The Tempest* (1610–11), shows his creative powers at their highest and the character of Prospero, the deposed Duke of Milan, a magus-like figure on a remote island, seems to be strongly autobiographical and may have been played by Shakespeare himself. *The Tempest*, the most musical of the 38 plays, represents a farewell to his creative life in the theatre.

Montaigne's influence, with its intense speculation about the inner life and its contradictions, is apparent in *Hamlet* and *King Lear* and he is quoted (without attribution) in *The Tempest*. Montaigne's *Essays* were translated by John *Florio who, like Shakespeare, enjoyed the patronage of the Earl of Southampton.*

The plays are not dated and attempts to arrange them in chronological order have provoked endless controversy. At least 18 were published in Shakespeare's lifetime in quarto form, and they are of particular interest because of their relevance to specific productions, so that the name of an actor may appear in the text instead of the character played.

A collected edition of 36 plays, known as the First Folio, appeared posthumously in 1623, and the names of the editors, John HEMINGES and Henry CONDELL, friends and fellow-actors, vouched for its general authenticity, although the texts were drawn from actors' reconstructions and spellings and rhymes are inconsistent. The First Folio includes the pageant play *Henry VIII* (1613, mostly written by John Fletcher) but excludes the collaborations *Pericles, Prince of Tyre* (1607, with George Wilkins?), and *The Two Noble Kinsmen* (1613, Fletcher). *Cardenio*, based on a story in *Cervantes*' *Don Quixote*, and a collaboration between Shakespeare and Fletcher, performed in 1613, is now lost.

About 750 copies were printed, selling for £1. Eighteen plays, including *Macbeth*, only survive because they appear in the First Folio. The Folger Shakespeare Library in Washington DC holds 82 of the surviving copies.

Shakespeare's plays are generally far longer than those written by his contemporaries.

*The Sonnets* were published in book form, possibly without authorisation, in 1609; Sonnets Nos. 1–126 are homoerotic, addressed to a 'fair youth', Nos. 127–154 to an unidentified 'dark lady'. The dedication, by the publisher Thomas Thorpe (or T.T.) to 'Mr W. H.', as the 'onlie begetter' of the sonnets, has caused much unresolved speculation.

Very little is known about Shakespeare's life: what he read (other than the obvious sources), if he travelled, the inspirations for his powerful and original ideas, his political or religious beliefs, his sexual orientation. The richness, diversity and depth of his work led to the rise of 'bardolatry' in the 18th century but the meagre evidence of his personal life raised some questions, although it was not until 1856 that alternative authors were proposed. Francis *Bacon came first, then Edward de Vere, Earl of *Oxford. The 19th-century fiction that creative writing had to be autobiographical was picked up by *Freud, who should have known better.*

Seventy-nine alternate candidates have now been proposed. Three are royal, 16 are peers or peeresses, one a cardinal, one a saint, and 32 are published authors. None is remotely plausible. (J. S. *Bach also had an enigmatic interior life but his authorship is virtually unchallenged.*
Slips in writing about Europe or classical antiquity provide support for Shakespeare's authorship: no writer from a university would expose himself to such errors. Ulysses quotes Aristotle. There are clocks in Julius Caesar. There are striking examples of anatopism, having something out of place. The Winter's Tale refers to the coasts (and also a desert) of Bohemia. Characters in Two Gentlemen of Verona sail from Milan to Verona (although he might have been referring to travel by canal), and from Milan to the Adriatic in The Tempest. The only banks in Venice were mercantile and lovers would not be sitting on them. Shakespeare was a man of genius who trawled and reworked the secondary sources rather than having direct exposure to life outside England. His Venetians, Romans, Athenians, Sicilians, Ancient Britons are essentially Londoners.

Shakespeare's last five years were divided between London and New Place, Stratford, where his wife had remained. He died there on his birthday, 23 April 1616 (the same date as Cervantes, but 10 days later under the unreformed Julian calendar), and is buried in Holy Trinity Church. A GPR (ground penetrating radar) scan of Shakespeare's grave (2010) suggests that the skull is missing, possibly stolen in the 1790s. New Place was substantially rebuilt in 1702, finally demolished in 1759. Archaeology continues on the site and the gardens have been imaginatively restored.

Shakespeare's plays remained popular in his lifetime and some 20 years after. The theatres closed from 1642–60 during the Civil War and the Commonwealth, and as fashions changed his work suffered some eclipse. (After the Restoration, Pepys recorded seeing 15 performances of plays by and 26 adaptations of Shakespeare and 76 performances of plays by Beaumont and Fletcher). However, Dryden, and later Johnson, proclaimed his pre-eminence, which has never been challenged since.

Henry IV, Parts 1 and 2, were the first plays by Shakespeare performed in Australia (1800).

More than 270 operas are based on Shakespeare's plays, the finest being by Purcell, Berlioz, Bellini, Thomas, Verdi, Gounod, Vaughan Williams, Tippett, Britten, Bernstein and Adès. There have been more than 400 television productions or films of Shakespeare's plays, beginning with short excerpts from the silent era, e.g. King John (1899).

In Shakespeare's hands blank verse became an instrument of great delicacy whether for dialogue, narrative, description or argument; adaptable equally to any plot or situation, tragic or comic. His vocabulary was exceptionally large for his time: David Crystal cautiously estimates that Shakespeare used between 17,000 and 20,000 words, allowing for divergent spellings, definitions and ambiguities. Bill Bryson credits Shakespeare with the coinage, or first recorded use, of 2,035 words (including 'accommodation', 'addiction', 'assassination', 'barefaced', 'bloodstained', 'courtship', 'fashionable', 'frugal', 'generous', 'gossip', 'hobnob', 'lack-lustre', 'leapfrog', 'majestic', 'moonbeam', 'mountaineer', 'negotiate', 'obscene', 'premeditated', 'quarrelsome', 'rant', 'restoration', 'scurfle', 'torture' and 'vast'), 170 of them in Hamlet. His works have been translated more than any other author and many characters are household names. No writer has given more continuous delight or shown greater insight into the heart and mind, although we know so little of his own.

Shalmaneser III (d.824 BCE). King of Assyria 859–824 BCE. Son and successor of Ashur-pasirpal, after regaining control of the Phoenician cities he achieved the great victory commemorated by the Black Obelisk in the British Museum, which shows the biblical King Jehu of the Israelites and other rulers bowing before him.

Shalom Aleichem ('Peace be upon you!', pseudonym of Shalom Rabinowitz) (1859–1916). Russian-Jewish writer, born in the Ukraine. Originally a rabbi, he wrote first in Russian and Hebrew, devoting himself to Yiddish after 1883 and producing more than 40 volumes. His plays and stories describe life in small Jewish towns during the tsarist era. The story cycle, Tevye and his Daughters, was adapted by Joseph Stein for the play Fiddler on the Roof, later a successful film (1971). He moved to the US, became known as the 'Jewish Mark Twain', and died in New York.

Shannon, Claude Elwood (1916–2001). American mathematician. He graduated from the Massachusetts Institute of Technology, then worked for the Bell Telephone Labs and taught at MIT from 1967. His paper 'The Mathematical Theory of Communication' (with Warren Weaver, 1949) is regarded as the beginning of information theory: he
developed “Boltzmann’s insight (1894) that ‘entropy is missing information’ and pointed to entropy as the link between energy and information.

Campbell, J., Grammatical Man. 1982.

Sharif, (Mian Muhammad) Nawaz (1949– ). Pakistani politician and businessman, born in Lahore. Appointed Premier of Punjab 1985–88 by President *Zia-ul-Haq, he became leader of the Pakistan Muslim League and was Prime Minister of Pakistan 1990–93 (removed by the military, then lost the following election), 1997–99 (replaced by Pervez *Musharraf after an army coup) and 2013–.

Sharon (originally Scheinermann), Ariel (1928–2014). Israeli soldier and politician, born in Palestine. He served in the police and army, and, as Defence Minister 1981–83, took responsibility for the murders of Palestinian detainees by Lebanese Phalangists at Chatila and Sabra in 1982. Foreign Minister 1996–99 and Leader of the Likud 1999–2005, he defeated Ehud *Barak to become Prime Minister 2001–06. A secular Jew, he took tough military action against the Palestinian intifada, but after *Arafat’s death he negotiated with the Palestinian Authority and formed a coalition with Labour. In 2005 he cleared Israeli settlers from the Gaza strip. This split Likud which he left in November 2005, forming a new centre party, Kadima, but in January 2006 he suffered an incapacitating stroke. His party won the March 2006 elections, but Sharon remained in a vegetative state.

Sharpe, Cecil James (1859–1924). English collector of folk songs and dances. He began collecting folksongs in 1903 and thereafter made it his life’s work. Like *Grainger, he helped save the English folk tradition from extinction, although he bowdlerised a good many songs. He wrote English Folk Song – Some Conclusions (1907) and founded (1911) the English Folk Dance Society. The London headquarters of the English Folk Dance and Song Society is named after him.

Shastri, Lal Bahadur (1904–1966). Indian politician, born in Uttar Pradesh. Son of a schoolmaster, he became one of the most active workers for Congress and was several times imprisoned for civil disobedience. He first entered the Indian Cabinet in 1952, and succeeded *Nehru as Prime Minister in 1964. Much of his brief term of office was occupied with disputes with Pakistan and the frontier war that followed. He had just reached an agreement for a ceasefire at a conference held under Soviet auspices at Tashkent when he died. Of very small stature, he had a gentle, persuasive manner that commanded much affection.

Shaw, G(eorge) Bernard (1856–1950). Anglo-Irish dramatist, born in Dublin. He paid little attention to school subjects but acquired a cultural background at art galleries and concerts. After five years in a Dublin land agent's office, he went to London (1876), where his mother, a singing teacher, supported him while he wrote unsuccessful novels and haunted the British Museum to improve his education. He was already a vegetarian, teetotaller, and non-smoker, and now, having studied *Marx, became a socialist. As a St Pancras Borough councillor 1879–1903, he observed social distress at close range. He was among the first members of the Fabian Society (1884) and, having overcome his shyness, became a noted public speaker. His professional career began when as ‘Corno di Bassetto’ he was music critic on the Star (1888–90) and on on The World (1890–94). He was a champion of *Wagner, wrote The Perfect Wagnerite (1898), and also warmly championed *Ibsen when he was appointed dramatic critic of The Saturday Review, then under the editorship of Frank *Harris. Since his defence of Ibsen was combined with attacks on *Shakespeare, Shaw doubly shocked many of his readers, but others revelled in the flippant irreverence of his style and were stimulated by his paradoxes. Thus when his first play Widowers’ Houses was produced (1892) he had at least a nucleus of fervent support to set against the general disapproval. Nevertheless, his next play, The Philanderers (1893), was rejected by managements and the third, Mrs Warren’s Profession (1893), by the censor (until 1924). These ‘unpleasant plays’ were followed by ‘pleasant’ ones: Arms and the Man (1894), Candida (1894), You Never Can Tell (1895–96), and The Devil’s Disciple (1896). After a serious illness (1898) Shaw gave up regular journalism and married Charlotte Payne-Townsend (d.1943). He was always grateful for the money she then brought although his own earnings were soon to become prodigious. To what extent his emotions were involved with women is questionable. He was probably too self-centred for love and was at his happiest when in flirtatious correspondence with women he admired, e.g. Ellen *Terry or Mrs Patrick *Campbell. For the former he wrote Captain Brassbound’s Conversion (1899). He had already written Caesar and Cleopatra (1898–99), a delightfully modern conception of a historic theme, for Johnston Forbes-Robertson, his favourite actor. His views on creative evolution are expounded (1901–03) in Man and Superman (and he returned to the theme in the epic Back to Methuselah of 1917–20), a play which with John Bull’s Other Island, Major Barbara and some of his earlier ones was produced under the management of Harley *Granville-Barker at the famous repertory season at the Court Theatre. This finally brought the full recognition for which he had worked so long. To 1912 belong the successful comedy Pygmalion and the flippant play based on an old legend Androcles and the Lion. Heartbreak House, begun just before World War I, during which Shaw’s political views made him unpopular, analysed the breakdown of European society in a domestic setting evocative of *Chekhov. The most financially successful of his plays was Saint Joan (1924) which was followed by the political satire The Apple Cart (1929). In 1925 he was awarded the Nobel Prize for Literature which he had previously declined. Among the non-dramatic works of his later period the best known are The Intelligent Woman’s Guide to Socialism and Capitalism (1928) and
The Black Girl in Search of God (1932). He declined the OM. In old age, Shaw became obsessed with the idea of simplifying English spelling and left most of his money for that end. Shaw’s wit has made his audiences laugh and his flippancy has often made them angry. These reactions would not have displeased him for his purpose was, by goading, provoking, ridiculing or cajoling them, to make them think.

Shaw, Richard Norman (1831–1912). English architect. Under the influence of William *Morris he broke away from current Victorian Gothic and returned, in many London and country houses, to the classic principles of Georgian architecture and to traditional craftsmanship and use of materials. His London buildings included New Scotland Yard (1891), the Gaiety Theatre (1905), now demolished, and the Piccadilly Hotel (1905).

Shaw, Sir Run Run (Shao Renleng) (1907–2014) Hong Kong-Chinese film producer and philanthropist, born in Ningbo. He grew up in Singapore, established a film studio in Shanghai and moved to Hong Kong in 1937. He became a dominant figure in television and endowed many schools and universities.

Shchedrin, Rodion Konstantinovich (1932– ). Russian composer and pianist, born in Moscow. The son of a composer and teacher, he was deeply influenced by *Prokofiev, and composed some much performed works, notable for their wit and panache, including the Carmen Suite (for strings and percussion), the ballet Anna Karenina, four concertos for orchestra, five piano concertos and three symphonies. In 1958 he married Maya Plisetskaya (1925–2015), prima ballerina at the Bolshoi 1960–90.

Shelburne, 2nd Earl of, William Petty, later 1st Marquess of Lansdowne (1737–1805). English Whig politician, born in Dublin. Following distinguished army service in Germany in the Seven Years War he entered politics. After joining George *Grenville’s ministry (1763) he became closely associated with Chatham (William *Pitt) both in office, as Secretary of State 1766–68, and later in opposition to Lord North and his American policy. Again Secretary of State 1782 under *Rockingham, on his death he formed a government as First Lord of the Treasury (i.e. Prime Minister) 1782–83, notable because *Pitt the Younger served as Chancellor of the Exchequer. Shelburne was a man of great ability and a natural radical (favouring free trade, Roman Catholic emancipation and parliamentary reform) but the time was not ripe, his political shifts and turns to approach his objectives were misunderstood and secured him the nickname ‘the Jesuit of Berkeley Square’. Given a consolatory marquessate on retirement (1784), he was a patron of the arts and a collector of manuscripts, purchased for the British Museum in 1807.

Shelley, Mary Wollstonecraft (née Godwin) (1797–1851). British novelist. Daughter of the rationalist philosopher William *Godwin and the feminist writer and radical Mary *Wollstonecraft, she became the second wife of the poet Percy Bysshe *Shelley. She wrote Frankenstein or the Modern Prometheus, about a man who created a monster (1818), and three other novels.

Shelley, Percy Bysshe (1792–1822). English poet, born near Horsham, Sussex. Grandson of a baronet, at Eton he read Enquiry into Political Justice by his future father-in-law William *Godwin, a book that did much to encourage his desire to reform contemporary social systems. He was expelled from Oxford (1811) for writing The Necessity for Atheism. This led to a breach with his father which left the poet constantly short of money. Soon afterwards he married his sister’s school friend, the beautiful 16-year-old Harriet Westbrook, childishly even for her years. Even on the prolonged honeymoon Shelley needed the mental stimulus of his great friend Thomas Jefferson Hogg who committed the quickly forgiven indiscretion of falling in love with Harriet. In London Shelley joined the radical Godwin circle: Shelley and Harriet were already estranged when he fell violently in love and (1814) eloped with Mary Godwin; they married two years later, when Harriet drowned herself. Shelley always refused to accept responsibility for her death, as he had never hidden his views about free love, but he was deeply wounded when the courts gave the care of his children by her into other hands. From 1818 the Shelleys lived in Italy where he, while composing some of the loveliest lyrics ever to be written in English, became involved in the tangled financial, emotional and political affairs of the Godwins, *Byron and Leigh *Hunt. In 1822 the Shelleys were living in a villa at Lerici on the Gulf of Spezia and on 8 July while Shelley, after a meeting with Byron, was sailing back from Leghorn (Livorno) his boat, the Ariel, was upset in a storm; he and his two companions were drowned. His ashes are buried in Rome, near *Keats. Shelley had first revealed his greatness as a poet by long poems, e.g. Queen Mab (1813) and Alastor (1816), but with the exception of his verse plays, of which the greatest are The Cenci (1819), a grim tale of incestuous passion and Prometheus Unbound (1820), he is best remembered by his songs and odes. Ode to a Skylark, Ode to the West Wind and Adonais (1821), the great lament for the poet Keats, are among the many familiar titles. Mary Shelley’s son by the poet inherited his grandfather’s baronetcy.

Sheppard, Jack (1702–1724). English criminal. Whilst apprenticed to a London carpenter he took to crime (1720). In 1724 he was caught four times but always escaped, on one occasion forcing six of Newgate Prison’s great doors. On the last occasion he was held and hanged at Tyburn before a vast and admiring crowd. He was the hero of many ballads and of a novel by Harrison *Ainsworth.

Sheraton, Thomas (1751–1806). English furniture designer, born at Stockton-on-Tees. Before moving to London (c.1790) he was a journeyman cabinet-maker and may later have supervised the manufacture of some furniture, but his style became influential through his illustrated design manuals, notably the Cabinet-maker and Upholsterer’s Drawing Book (1791). Sheraton furniture is distinguished by lightness and simplicity, an emphasis on straight, vertical lines and a preference for inlay decoration. Fastnedge, R., Sheraton Furniture. 1962.

Sheridan, Philip Henry (1831–1888). American soldier, born in New York State. A captain when the Civil War began (1861), *Grant soon gave him command of all the cavalry of the Potomac and he became famous for his spectacular raids behind the enemy lines, in one of which he reached the outskirts of Richmond, the Confederate capital. Later as commander of the army in the Shenandoah Valley 1864–65, he at first showed unwonted caution, but while he was absent his army suffered a severe setback at Cedar Creek. A dramatic ride back to the battlefield enabled him to reverse the situation with a counter-attack in which 24 guns were taken. Sheridan displayed his dash and brilliance to the full as Grant’s principal lieutenant in the operations leading to the surrender at Appomattox. He was Commander-in-Chief of the US army 1869–83. In 1884 he rebuffed attempts to draft him as Republican candidate for president with the words: ‘I will not accept if nominated and will not serve if elected.’ His brother, John Sherman (1823–1900), was a US senator from Ohio 1861–77 and was buried in Westminster Abbey.

Sheridan, Richard Brinsley (1751–1816). Anglo-Irish dramatist and politician, born in Dublin. The son of an actor, his mother, Frances Sheridan (1724–1766), was a minor novelist and dramatist. Having fought two duels on behalf of Elizabeth Ann Linley with whom he eloped and (1773) married, he soon won fame with his three brilliant comedies, The Rivals (1775), The School for Scandal (1777) and The Critic (1779). The Duenna (1775) and others are much inferior. He bought *Garrick’s share of the Drury Lane Theatre (1776), assumed the managership and built (1794) a new theatre, burnt down in 1809. Meanwhile he had become a Whig MP, a friend of *Fox and the Prince of Wales, and was appointed successively Undersecretary for Foreign Affairs (1782), Secretary to the Treasury (1783), and Treasurer to the Navy (1806). He became renowned as an orator, especially for his speeches at the impeachment of Warren *Hastings. When fire destroyed Drury Lane Theatre (1809), Sheridan was financially crippled and arrested for debt (1813). He was buried in Westminster Abbey.

Sherman, William Tecumseh (1820–1891). American soldier, born in Ohio. When the Civil War broke out (1861) Sherman, who had abandoned his career as an officer to become a banker and a lawyer, was a professor at the Louisiana military academy. He at once rejoined the Union army, commanded a brigade at Bull Run and saved the day at Shiloh. Appointed by *Grant to command in the southwest he captured Atlanta (September 1864). Unable to bring his opponent, Hood, to battle, he began in November the great march through Georgia which created a wide band of destruction from Atlanta to the port of Savannah. The march incurred lasting odium, and its military usefulness has been a matter of controversy ever since. It seems certain that then, and on other occasions, Sherman showed himself more adept at destroying communications than in coming to grips with the enemy. He was Commander-in-Chief of the US army 1869–83. In 1884 he rebuffed attempts to draft him as Republican candidate for president with the words: ‘I will not accept if nominated and will not serve if elected.’ His brother, John Sherman (1823–1900), was a US senator from Ohio 1861–77 and 1881–97, Secretary of the Treasury 1877–81, sponsored the Anti-Trust Act (1890) that bears his name and became Secretary of State 1897–98.

Sheriff, Robert Cedric (1896–1975). English dramatist. His play about World War I, Journey’s End (1929), achieved an outstanding success not repeated by his later work.

Sherrington, Sir Charles Scott (1857–1952). English physiologist, born in London. He studied at Cambridge and St Thomas’s Hospital, London, where, after research into cholera in Spain and Italy, he became a lecturer in physiology. Later appointments included professorships at Liverpool University 1895–1913 and Oxford 1913–35. His work on the nervous system and its control of muscles was of great importance, especially on the effects of reflex actions. He was elected FRS (1893) and PRS 1920–25, won the Royal (1905) and Copley (1927) medals and received the OM (1924). With Lord *Adrian, he was awarded the Nobel Prize for Medicine (1932) for their joint study of the neuron (nerve cell). His books include Integrative Action of the Nervous System (1906) and Man on his Nature (1940).
Sherwood, Robert Emmet (1896–1957). American author. His successful plays include Idiot’s Delight (1936), Abe Lincoln in Illinois (1939) and There shall be no Night (1941). He wrote some of President Franklin *Roosevelt’s speeches and won the Pulitzer Prize (1949) for Roosevelt and Hopkins: An Intimate History.

Shi Huang Di see Qin Shihuang

Shirley, James (1596–1666). English dramatist. After leaving Oxford he became a Roman Catholic and took up teaching but soon began writing for the stage. He wrote over 40 plays: the tragedies, e.g. The Cardinal (c.1626), The Traitor (1631) and The Cardinal (1641), are undistinguished, but the comedies, e.g. The Gardener (1633), later adapted by *Garrick, and The Lady of Pleasure (1635), were revived after the return of *Charles II (1660) and strongly influenced Restoration comedy. He died from stress and exposure during the Great Fire of London.

Shoebury, William Bradford (1910–1989). American physicist. He lectured in physics at the Massachusetts Institute of Technology and later worked for the Bell Telephone Laboratories. He was co-inventor with *Brattain and *Bardeen of the transistor (1947) and shared with them the Nobel Prize for Physics (1956).

Shoenberg, Sir Isaac (1880–1963). Russian-British engineer. He worked in England for *Marconi from 1914, pioneered stereo recording and, in parallel with *Zworykin in the US, developed electronic scanning techniques for television which were adopted by the BBC, displacing *Baird’s mechanical scanning.

Sholokhov, Mikhail Aleksandrovich (1905–1984). Russian novelist. In his first major work, And Quiet Flows the Don and its sequel The Don Flows Home to the Sea (1928–40), he gave an account of the events leading up to and following the Revolution and Civil War (in which he fought in the Red army) and the effects on a Cossack village. His second epic, Virgin Soil Upturned (1932–33), dealt with the collectivisation of agriculture. They Fought for their Country (from 1959) is an epic of World War II. He also published many short stories and won the Nobel Prize for Literature in 1965.

Shore, Jane (d.1527?). English mistress of *Edward IV. Wife of a London goldsmith, famed for her beauty and wit, she was accused of sorcery and forced to do public penance by *Richard III. Sir Thomas *More writes of her and her story is the theme of ballads and of a tragedy by Nicholas *Rowe.

Shorten, Bill (William Richard) (1967– ), Australian Labor politician and union official, born in Melbourne. Educated at Xavier College, Monash and Melbourne Universities, and working briefly as a lawyer, he became a trade union official, and National Secretary of the Australian Workers’ Union (AWU) 2001–07. Federal MP 2007–, he was the architect of a national disability policy, and served as Minister for Workplace Relations 2011–13 and for Education 2013. An effective and assiduous advocate, supported by the Right, he became the first Labor leader chosen by a combination of votes in the Caucus and ALP branch members, and was Leader of the Opposition 2013–.

Shostakovich, Dimitri Dimitrievich (1906–1975). Russian composer, born in St Petersburg. Son of an engineer of Polish descent, he was a child prodigy, entering the Petrograd Conservatorium at the age of 13 to study under *Glazunov. He won early recognition with his vivacious Symphony No. 1 (1925), No. 2 (1927) being dedicated to the October Revolution. His output included songs, choral works, many orchestral suites (mostly drawn from other compositions), the opera The Nose (after *Gogol, 1928) and the ballet The Age of Gold (1930). His 36 film scores, nine for *Kozintsev, written, as he said, ‘to pay the rent’, include New Babylon (1928), The Gadfly (1955), Hamlet (1964) and King Lear (1970), and music was adapted for many stage productions.

Brooding seriousness and ironical gaiety are the dominant moods of Shostakovich’s music.

A magnificent pianist himself, his piano works include 24 preludes Op. 34 (1932–33), Concerto for Piano and Trumpet, Op. 35 (1933), Piano Quintet...

His opera Lady Macbeth of Mtsensk (1934) was an outstanding success until seen by Stalin, leading to a denunciation in Pravda and a 30-year ban. To conform with political reality he duly changed his style with the popular Symphony No. 5 (1937). Symphony No. 7 (the Leningrad, 1941) commemorates the German siege and was an immediate international success.

Fifteen powerful string quartets, a form in which he vied for mastery with Bela Bartok, appeared between 1938 and 1974. He originally planned to write 24, one in each key, major and minor. No. 8 in C (1943) is the most played, followed by No. 2, No. 4 and No. 13, but all are outstanding, particularly the last six, which like Beethoven's, explore an inner world and can be profoundly disturbing.

He admired Mussorgsky, re-orchestrated Boris Godunov (1939–40) and orchestrated his Songs and Dances of Death (1962).

In 1948 Zhdanov attacked Shostakovich for 'bourgeois formalism' and dismissed him from the Moscow Conservatorium. Despite decades of frustration (and fear) he learnt how to reconcile Soviet ideological demands and his own creativity in some of his finest works: Symphonies No. 8 (1943), No. 10 (1953), No. 13 (1962), No. 14 (1969) and No. 15 (1971).

He was probably the greatest composer of symphonies since Mahler, who had been a profound influence, and certainly since Sibelius.

Symphony No. 13 (Babi Yar) in B flat minor, op. 113, a long work, turns on five poems by Yevegeni Yevtushenko, for bass, male chorus and orchestra. It begins with a meditation on the Nazi massacre of Jews at Babi Yar in 1943, and ends with 'A Career', a despairing cry against the cynical acceptance of playing safe to secure promotion.

Violin concertos (1948, 1967) were written for Oistrakh, cello concertos (1959; 1966) for Rostropovich and a violin sonata, Op. 134 (1968) for Oistrakh and Rlikhter.

Diffident and obsessive, a heavy drinker and smoker, a sports enthusiast, constantly exhibiting physical tension, he joined the Communist Party in 1960, largely as a protective measure, and had trophy status at international peace congresses. He outwardly conformed to successive regimes (serving as a member of the Supreme Soviet 1962–75) but his music can be understood as a profound protest. The book Testimony: The Memoirs of Shostakovich (1979), edited by Solomon Volkov, remains deeply controversial, with some parts apparently authentic, others conjectural. His son Maksim Dimitrievich Shostakovich (1938– ) was a conductor and pianist.

Shovell, Sir Clowdesley (1650–1707). English admiral of the fleet, born in Norfolk. He ran away to sea, and from being a cabin boy rose by sheer ability to become a rear admiral. When he was a lieutenant he burned four pirate ships in the Mediterranean (1674). He was knighted for his conduct at the Battle of Bantry Bay (1689). At Cap La Hogue (1692), now a rear-admiral, he burned 20 enemy ships. He served as MP 1695–1707. He took part in the capture of Barcelona (1705) but failed at Toulon (1707). On the way home his ship struck a rock and sank off the Scilly Isles, and he and 800 aboard were lost. How his body came to be found in Cornwall is a mystery (was it washed ashore? or was he murdered after landing?). He was buried in Westminster Abbey.

Shrapnel, Henry (1761–1842). English soldier. An artillery officer in the Duke of York's army in Flanders (1793), he invented the spherical case- shell, first used in 1804 and later named after him. It explodes in the air at a fuse-controlled height and propels bullets in a forward cone. He became a lieutenant general in 1837.

Shrewsbury, John Talbot, 1st Earl of (1388–1453). English commander. His exploits in the period when Joan of Arc’s death was followed by the decline of English power made his name one of odium and terror to the French. Among his successes were a victory over the Burgundians at Crotoy (1437) and the recapture of Harfleur (1440). A reckless and precipitate attack at Castillon (1453) brought defeat and death.

Shriver, Lionel (originally Margaret Ann) (1957– ). American-British novelist, born in North Carolina. Her novels include We Need to Talk About Kevin (2003), So Much for That (2010), and Big Brother: A Novel (2013). She became a British citizen in 2012.

Sibelius, Jean (Johan Julius Christian) (1865–1957). Finnish composer, born in Hämeenlinna. Regarded as an embodiment of national culture, after abandoning law for music he studied in Helsinki, Berlin and Vienna (under Goldmark). His gifts were early recognised by the Finnish authorities with a grant for life which enabled him to devote himself to composition. Though not a conscious nationalist in music – he did not base his work on folklore – he was interested in Finnish
mythology. He first won international recognition with the tone poem *En Saga* (1892, revised 1902). The first movement of the Symphony No. 2 (1902) introduces Sibelius's individual approach to formal structure: the movement is built up not from two clearly defined groups of subjects as in classical sonata form, but from a number of short phrases that gradually fuse and develop organically. This method, apparent also in the last movement of the Symphony No. 3 (1907), was to dominate the rest of the series. No. 4 (1911), remarkable for the compression of its material, economical orchestration and bitterness of mood, was followed by the glowing and expansive No. 5 (1915, revised 1916, 1919), the restrained No. 6 and No. 3 (1907), was to dominate the rest of the series. The comparative lack of lyricism in his music and its preoccupation with nature (especially its sinister aspect) must partly account for lack of appreciation outside Scandinavia and the English-speaking world. His structural changes have not been significantly adopted. Long promoted by *Koussevitzky, his work was neglected after the revival of interest in *Mahler's symphonies (and, to a degree, his own contemporary Carl *Nielsen) until taken up by Leonard *Bernstein, Colin *Davis and Lorin *Maazel.

Sica, Vittorio de (1901–1974). Italian film director and actor. After a stage career which began in 1923 he made films such as *Bicycle Thieves* (1948), *Miracle in Milan* (1950) and *Umberto D.* (1951) in which pathos, whimsical humour and a keen sense of character are combined. As a character actor in such films as *Bread, Love and Dreams*, he also won high esteem.

Sickert, Walter Richard (1860–1942). British painter of Danish descent, born in Munich. He studied in London at the Slade School and under *Whistler, and in Paris with *Degas. In 1886 he began to exhibit at the New English Art Club which he helped to found, and lived mainly in London, Dieppe and Venice. After returning to London (1905) he headed a group of artists who formed (1911) the ‘Camden Town Group’, which later (1913) became part of the ‘London group’. Under Degas’ influence he painted scenes of theatre life but many of his subjects were the dark rooms and dismal streets familiar to him from his early London days, painted in the subdued colour schemes he had learnt from Whistler, using French Impressionist and post-Impressionist techniques. In later years he introduced colour and sunshine into his pictures using a fuller and richer palette. He became an ARA in 1924 but, having been elected RA in 1934, resigned a year later. In *Portrait of a Killer* (2002), the writer Patricia Cornwell, after extensive research costing US$6 million, concluded that Sickert was Jack the Ripper – but her verdict was unpersuasive.

Sickingen, Franz von (1481–1523). German knight. After serving as a soldier of fortune under *Charles V of France and the emperor *Charles V, he conducted, on behalf of the Protestant reformers, his own private war against the ecclesiastical princes. Placed under the ban of the empire, he died of wounds while besieged in his own castle. His death symbolised the end of the independent power of German knighthood.

Sickles, Daniel Edgar (1819–1914). American soldier and politician. A New York attorney and state politician, he was a US Congressman 1857–61 and 1893–95. He married (1852) the daughter of Lorenzo *da Ponte’s ward. In 1859 he was tried for murdering her lover, Philip Barton Key, son of Francis Scott *Key, and acquitted on the grounds of ‘temporary insanity’. He served as a major-general in the Civil War, losing a leg at Gettysburg, then, as Minister to Spain 1869–73. He became the lover of *Isabella II.

Siddons, Sarah Kemble (1755–1831). English tragic actor. She came of a famous stage family, the Kembles, and was a sister of John *Kemble. At the age of 17 she married a member of her father's company, and two years later made her debut (1775), under *Garrick’s management at Drury Lane as Portia. She was not notably successful and for the next six years she toured the provinces. She made a triumphant return to London (1782) and until her retirement (1812) dominated the London stage. In tragic roles, above all as Lady Macbeth, perfection was claimed for her, beauty of face, form and voice being allied with vibrant emotional power. She is immortalised in paintings by *Gainsborough and, as *The Tragic Muse*, by *Reynolds.

Sidgwick, Henry (1838–1900). English moral philosopher. Educated at Cambridge, he taught there from 1859 and became Knightsbridge professor of moral philosophy 1883–1900. A disciple of J. S. *Mill, in his Methods of Ethics* (1874) he compared three approaches to decision making: hedonism (self interest), utilitarianism (the greatest good for the greatest number) and intuitionism (instinct). In 1888 he founded the Society for Psychical Research. He campaigned against religious texts and founded Newnham College (1976) to promote education for women. His wife *Eleanor Mildred Sidgwick* (née Balfour) (1845–1936) was President of Newnham College 1892–1910.

Sidmouth, 1st Viscount see *Addington, Henry
Sidney, Algernon (1622–1683). English radical. Son of the 2nd Earl of Leicester and a grand-nephew of Sir Philip Sidney, in the Civil War he fought for the parliamentary forces. Though he opposed Cromwell's Protectorship he was forced after the Restoration to live as an exile on the Continent until 1677. After another visit to France (1679) during which it was alleged (without proof) that he was bribed by "Louis XIV, he returned to England and was arrested after the discovery of the Rye House plot to murder "Charles II on his way back from Newmarket. Tried by Judge "Jeffreys, he was condemned on doubtful evidence for treason, and beheaded. His name was officially cleared in 1689. His Discourses Concerning Government, attacking the patriarchalism of Anti-Filmer and advocating aristocratic republicanism, were printed in 1689.

Sidney, Sir Philip (1554–1586). English poet and soldier. Nephew of Robert Dudley, Earl of Leicester. Travels as a young man enabled him to absorb continental and especially Italian culture, and on his return to Elizabeth I's court he seemed, with his looks, his birth, talents and chivalrous attitude to life, the English personification of the Renaissance ideal. There were numerous portraits (including miniatures) painted of him. Ill-timed advice to the Queen against her proposed French marriage robbed him of her favour, but he returned to court in 1583 and was knighted. He married (1583) the daughter of Sir Francis Walsingham. After his death at Zutphen (where he was said to have passed a cup of water to a wounded soldier in even greater need) during Leicester's campaign to aid the Dutch against the Spaniards, he became a national hero. Over 200 poems were produced in commemoration of his death.

None of his works was published in his lifetime. Arcadia, a pastoral prose romance with poems interspersed, was begun in 1580 and published in 1590. The Apology for Poetrie (called in a later edition Defense of Poesie) was written about the same time; it was the first application of Italian critical methods to English poetry. Astrophel and Stella, consisting of 108 Petrarchan sonnets and 11 songs, is believed to have been inspired by his love for Penelope Devereux, daughter of the 1st Earl of Essex, after she had been forced to marry against her will (1580).

His sister Mary Sidney (1561–1621) married the 2nd Earl of Pembroke, was a lady in waiting to Elizabeth I, a patron of Edmund Spenser, a gifted translator and a powerful (if neglected) poet.

Siemens, (Ernst) Werner (1816–1892). German electrical engineer, born in Lenthé. He invented the pointer telegraph (1846), the self-excited dynamo, new techniques for electo-plating, the first electric tramway (1879) and electric train (1881). With Johann Georg Halske he founded Siemens & Halske in 1847 and it became the largest international telegraph construction company. His brother Sir William (Karl Wilhelm) Siemens (1823–1883), Anglo-German engineer, was born in Hanover. He first visited England in 1843 and 1844 to launch two of his own and his brother's processes and settled there to take advantage of the more favourable patent laws. His principal researches were on applications of heat and electricity. Among his many inventions were a gas-fired regenerative furnace (1848) later used for open-hearth steel production, an early platinum resistance thermometer (1871), and the electric arc steel furnace (1879). He also designed the steamship Faraday, which laid the first transatlantic cable (1874). He was naturalised in 1859, elected FRS in 1862, became President of the British Association for the Advancement of Science 1882 and received a knighthood in 1883.

Sienkiewicz, Henryk (1846–1916). Polish novelist. His early novels belong to the idealistic school but in 1883 he published Fire and Sword which, with The Deluge (1884) and Pan Michael (1887), pictured the troubled scene of the 17th century in Poland. With Quo Vadis? (1896), a story of Nero's persecution of Christians, he won an international reputation, later enhanced by The Crusaders (1900), which told of the Polish struggle against the Teutonic knights. He won the Nobel Prize for Literature (1905).

Sieyès, Emmanuel Joseph, Comte (1748–1836). French politician. Often known by his pre-Revolutionary title, Abbé Sieyès, his pamphlet, Qu'est-ce que le tiers état?, written on the eve of the revolution and indicating the role the 'third estate' might take in bringing about constitutional change, had great influence. In the early days he was a prominent adherent of Mirabeau in the National Assembly and helped to draw up the Constitution of 1791. Later, though he voted for the king's execution, he was cautiously inactive. 'I survived' was his answer when asked what part he had played in the Terror. At first he refused to join the Directory but became a member when it was reformed under Barras's leadership (June 1799). But he saw the need for further change: 'We must have a head and a sword', he said. For 'the head' he did not have to look far, for the 'sword' he chose the popular General Bonaparte and joined with him in staging the revolution of 18 Brumaire (9 November 1799). Unfortunately, Bonaparte was not content to be 'sword' alone. He emerged as First Consul and Sieyès's constitution was doctored to ensure Bonaparte's primacy. Disappointed, Sieyès refused to be Second Consul and was compensated by a seat in the Senate and a large estate. He was an exile in Brussels after Napoléon's defeat, returning after the 1830 Revolution.
Signac, Paul (1863–1935). French painter. With *Seurat and *Pissarro he was a pioneer of 'pointillism', but with greater intensity, and a major theorist of Neo-Impressionism.

Signorelli, Luca (1441?–1523). Italian painter. A member of the Umbrian school, and a follower of *Piero della Francesco, his apocalyptic frescoes in Orvieto Cathedral, including a powerful Last Judgment, anticipated (and probably influenced) *Michelangelo.

Sihanouk see Norodom Sihanouk

Sikorsky, Władysław (1881–1943). Polish soldier and politician. In the Poland made independent by World War I he distinguished himself against the Russians (1920). He was Prime Minister (1922–23) and then Minister of War, but soon resigned after opposing the dictatorship of *Pilsudski. After Poland was overrun at the beginning of World War II he became Prime Minister of the government in exile, at first in France and then in England, raising troops among the Polish miners in northern France and elsewhere. He was killed in an air crash.

Sikorsky, Igor Ivanovich (1889–1972). Russo-American aeronautical engineer, born in Kiev. He studied engineering at the St Petersburg Naval Academy, in Paris and in Kiev, built experimental helicopters (following an idea of *Leonardo da Vinci) in 1909 and 1910 and on their failure turned to fixed wing aircraft. In 1913 he flew the first four-engine aircraft. The Bolshoi (Le Grand) and the 'Clippers' introduced by Pan American Airways in 1937 were a modification of his design. He lived in the US from 1919. Sikorsky's first successful single-rotor helicopter was flown in September 1939.

Sikorsky, I. I., Recollections and Thoughts of a Pioneer. 1964.

Silhouette, Étienne de (1709–1767). French administrator. As Minister of Finance (1759), he acquired such a reputation for parsimony that his name was given to likenesses obtained cheaply by tracing the shadow of a face in profile thrown by a lighted candle on to a sheet of paper and then blackening the enclosed space.

Silone, Ignazio (Secondo Tranquilli) (1900–1978). Italian novelist. Communist and socialist by turns, he was imprisoned several times by * Mussolini before escaping to live in Switzerland (until 1944). His best known novel, Fontamara (1933), describes the effects of Fascism on an Italian village. Other works include The School for Dictators (1938), The Secret of Lucca (1958), and a play, The Story of a Humble Christian (1969).

Simenon, Georges (Joseph Christian) (1903–1989). Belgian novelist, born in Liège. He left school at 16, became a journalist and in 1922 went to Paris, where he wrote more than 400 short popular novels under 16 different pseudonyms. In 1930 he published the first of 80 detective novels featuring Inspector Maigret: some were translated into 50 languages, and sold 500 million copies, 55 were filmed and 279 used in a popular television series. Maigret's popularity diverted attention away from Simenon's penetrating psychological novels. As André *Gide wrote to Simenon: 'You are living on a false reputation – just like Baudelaire or Chopin … You are much more important than is commonly supposed.' Suspected of collaboration, he left France and lived in the US 1945–55, then in Switzerland. Simenon published more than 200 novels in his own name and autobiographical studies, When I was Old (1972) and Intimate Memoirs (1981).

Simeon II (Simeon Borisov Saxecoburggotski) (1937– ). Tsar of Bulgaria 1943–46. Son of *Boris III, he was subject to a regency until deposed by *Dimitrov's Communist Government. He went into exile in Spain, married an heiress and succeeded in business. He returned to Bulgaria, formed the National Movement which won the Parliamentary elections and became Prime Minister 2001–05.

Simeon Stylites, St (c.390–459). Christian ascetic, born in Cilicia. He is said to have spent about 30 years in preaching and contemplation on the top of a tall pillar (Greek stylos, hence his name), near Antioch. This feat, which attracted many imitators, is the subject of a poem by *Tennyson.

Simić, Charles (originally Dušan) (1938– ). Serbian-American poet and essayist, born in Belgrade. His family migrated to the US in 1954. He was educated in New York, then taught in New Hampshire. He won the 1990 Pulitzer Prize for Poetry for the collection The World Doesn't End, was extremely prolific as poet and essayist, wrote the memoir A Fly in the Soup (2000) and became Poet Laureate of the US 2007–. His urgent, immediate, economic style is reminiscent of Emily *Dickinson.

Simmel, Lambert (c.1475–c.1525). English pretender. Of humble birth, he was carefully coached by a priest, Roger Simon, to play the part of the Earl of Warwick, son of the Duke of Clarence and nephew of *Edward IV. He was 'recognised' by Warwick's aunt, the Duchess of Burgundy, was taken to Ireland (1486) and crowned in Dublin as Edward VI (1487). With a small Yorkist following and a few mercenaries sent from Burgundy,
he then crossed to England, but was defeated and captured near Stoke-on-Trent. As a sign of contempt Henry VII employed him in the royal kitchen.

**Simon, St (Shimon in Aramaic, known as 'the Less', 'the Canaanite' or 'the Zealot') (fl. 1st century CE).** Christian apostle. One of the 12, his name is often linked with St 'Jude and he is said to have been martyred in Persia.

**Simon, John Allsebrook Simon, 1st Viscount** (1873–1954). English lawyer and politician, born in Manchester. Son of a Congregational minister, he was elected to a fellowship at All Souls College, Oxford, and was called to the bar in 1899. He had a brilliant legal career (KC in 1908) and was entering parliament as a Liberal (1906) was Solicitor-General 1910–13, Attorney-General 1913–15, and then Home Secretary. He resigned (1916) in opposition to conscription in World War I and after brief military service returned to the bar, where for a time his income was £50,000 a year. His declaration that the May 1926 General Strike was illegal contributed to his collapse. He chaired a statutory commission on Indian constitutional reforms 1927–30. In 1931 he adhered to the coalition as Leader of the National Liberals, and was Foreign Secretary 1931–35, Chancellor of the Exchequer 1937–40 and Lord Chancellor 1940–45. He was a distinguished lawyer but, despite the force and clarity of his intellect, lacked the human qualities that would have made him a great politician.

**Simon, Paul** (1942– ). American songwriter and singers. Simon and Garfunkel achieved great success as a singing duo 1964–71, performing their own spare, elegant, evocative works including *The Sounds of Silence*, *Parsley, Sage, Rosemary and Thyme*, *Bridge over Troubled Water*, *Scarsborough Fair* and *Mrs Robinson*. Simon, educated at Brooklyn Law School, won many awards as a composer and toured extensively after 1972. Garfunkel, educated at Columbia University, was a lyricist and actor who appeared in several films e.g. *Catch 22* and *Carnal Knowledge*.

**Simpson, Sir James Young, 1st Baronet** (1811–1870). Scottish physician. Professor of medicine and midwifery at Edinburgh University 1839–70, he introduced the use of anaesthetics in childbirth (1847), using ether at first. He discovered (1847), the anaesthetic properties of chloroform previously used only as an antiseptic. The original antagonism to its use was overcome when it was given to Queen *Victoria for the birth of Prince Leopold*. In 1866 he was made a baronet. He anticipated the discovery of Röntgen (or X-) rays.

**Simpson, O(renthal) J(ames)** (1947– ). American footballer, broadcaster and actor, born in San Francisco. He was an outstanding running back, first in college, then professional football, breaking records and winning many awards. He achieved legendary status, made many television advertisements, acted in films and became a sports broadcaster. He distanced himself from controversies about race and Vietnam. In June 1994 his former wife, Nicole Brown, and her friend Ron Goldman, were stabbed to death. Simpson was charged with murder. His televised trial (and acquittal, in October 1995) became a media sensation and also revealed sharp racial divisions about attitudes to crime and the law. After a civil trial, Simpson was ordered to pay $US33.5 million in damages to the family of the murder victims (Feb. 1997).

In 2008 he was convicted, in Nevada, of armed robbery and kidnapping and sentenced to 33 years in jail.

**Sinan** (Koca Mîmâr Sinân Âğâ, known as 'Sinan the Architect') (c.1491–1588). Turkish architect, born in Cappadocia. Of Christian parentage, he became a military engineer in the Janissaries, then chief architect for the sultanate, constructing 130 mosques, 34 palaces and many other public buildings. The mosques of Sultan *Süleyman I in Istanbul and Sultan Selim at Edirne and the Sokolovic bridge (1577) in Bosnia are considered to be his masterpieces. 196 of his works survive.

**Sinatra, Frank** (Francis Albert) (1915–1998). American singer and film actor, born in Hoboken, New Jersey. He began his career as a crooner with the Harry James and Tommy Dorsey bands in the 1930s, and made his first film in 1941. The most popular and successful of his early films were *Anchors Aweigh* (1945) and *On The Town* (1949). As an actor, the best of his 40 films were *From Here to Eternity* (1953, winning him an Oscar), *The Man with the Golden Arm* (1955) and *The Manchurian Candidate* (1962). He also gained an international audience as a cabaret singer. His style changed from the romantic to the abrasive c.1960, but he remained extremely popular, and a figure of legendary influence in politics and business.

Sinclair, Archibald Henry MacDonald, 1st Viscount Thurso (1890–1970). British Liberal politician. He led the Liberals 1935–45 and was Air Minister in *Churchill’s wartime coalition 1940–45.

Sinclair, Upton (Beall) (1878–1968). American novelist and socialist. He wrote over 70 novels, most dealing with social evils. They include *The Jungle (1906), an exposure of conditions in Chicago stockyards, *The Moneychangers (1908), *King Coal (1917) and *Oil (1927). With *World’s End (1940) he began a series of 11 novels about his hero Lanny Budd. It provides, in the form of fiction, a socialist view of contemporary history. He founded End Poverty in California (EPIC), ran as Democratic candidate for governor (1934) and was narrowly defeated.

Singer, Isaac Merrit (1811–1875). American inventor. He patented (1851) a practical sewing machine. Although he lost a suit for infringement brought by Elias Howe, his company was already well established, soon took the lead in manufacturing sewing machines and became the first multinational corporation. He lived in France from 1861.

Singer, Peter Albert David (1946– ). Australian philosopher. Educated at Melbourne and Oxford universities, he was a professor of philosophy at Monash University 1977–79, and gained international recognition for his works on bioethics. His *Animal Liberation (1975) raised novel ethical issues about exploitation and infliction of pain on animals. He held a chair in bioethics at Princeton 1999– but also taught at Melbourne University, and was a prolific writer and fearless controversialist.

Singer, Manmohan (1932– ). Indian economist and politician, born in the Punjab. A Sikh, he was educated at Oxford and Cambridge, and became a bureaucrat, academic and UN official. As Minister for Finance 1991–96 he changed economic direction, moving away from the interventionist model (sometimes called the ‘Licence Raj’ system) introduced by Jawaharlal Nehru. Regarded as a technocrat, he unexpectedly became Prime Minister 2004– with the support of Sonia Gandhi. India’s growth rate reached 9 per cent in 2007, but inflation was high and adopting further market-based reforms proved unpopular.

Sisi, Abdel Fattah el- (1954–). Egyptian soldier and politician, born in Cairo. Commissioned in 1977, he undertook training in the UK and US, and was Minister for Defence and Commander-in-Chief, with the rank of field marshal, 2012–14. He overthrew President *Morsi in 2013, suppressed the Muslim Brotherhood and was elected President of Egypt 2014–.

Sisi, Abdel Saaed Hussein Khalil Fatch el- (1954–). Egyptian soldier and politician, born in Cairo. Minister of Defence and Commander-in-Chief 2012–14, he directed the coup which deposed Mohammed *Morsi and was President of Egypt 2014–.

Sisley, Alfred (1839–1899). French painter, born in Paris. Of English parentage, he became a landscape painter, influenced by *Corot, a friend of *Monet, and a major figure among the Impressionists, although his colour range was rather subdued. The quality of his work was only recognised posthumously and he died poor.

Sitting Bull (Tantanka Iyotake) (1834–1890). American Indian chief. He was head of the Dakota Sioux from 1875, led them in the war of 1876–77 and defeated George *Custer’s cavalry at the Battle of Little Bighorn (1876). He escaped to Canada, returning to appear in William F. *Cody’s Wild West show (1885). With eight others he was murdered by Native American police.

Sitwell, Dame Edith Louisa (1887–1964). Sir Osbert, 5th Baronet (1892–1969) and Sir Sacheverell, 6th Baronet (1897–1988). English writers. Children of the eccentric *Sir George Revesby Sitwell, 4th Baronet (1860–1943), it is probable that this formidable (though essentially kindly) personality was unconsciously instrumental in transforming his children into a closely knit literary clan. Their actual work was, however, highly individual. Edith Sitwell, by using startling or grotesque images, odd epithets (e.g. ‘periwigged green leaves’) and many other arresting techniques, e.g. the adaptation of poetry to dance rhythms, escaped from the conventional constraints of the poetry of her time. A miscellany called *Wheel (1916–21), funded by her brothers, friends and herself, helped to make her work more widely known. Her best known collection was *Façade (1923), acclaimed with great success to chamber accompaniment by William...
Skelton, John (c.1460–1529). English poet, born probably in Norfolk. He became tutor to Prince Henry (*Henry VIII), was ordained (1498) and spent most of his time in London, where he became notorious for his wild life, buffoonery and practical jokes. Eventually, having offended *Wolsey by his satires on the clergy, e.g. *Colyn Cloute (1522), he took sanctuary in Westminster Abbey where he remained till his death. One of his best known works, *The Turnyng of Elynow Rummyng, describes a drunken woman’s revels. His metrical lines (Skeltonics) have been described as ‘voluble, breathless doggerel’, but deserve a higher reputation. His one surviving morality play, *Magnysence, was possibly written as a guide to good government for the young Henry.

Skinner, B(urrhus) F(rederick) (1904–1990). American experimental psychologist. He taught at Harvard from 1931 and was professor of psychology 1947–75. Skinner became the major proponent of ‘behaviourism’, an extension of the work of *Pavlov and J. B. *Watson, which asserts that behaviour should only be examined empirically and objectively as a series of reactions to stimuli. Skinner’s teachings aroused much controversy because they assumed a mechanistic view of human experience, with no recognition of ‘inner states’. He wrote *Science and Human Behaviour (1953), *Walden Two (1948) and *Beyond Freedom and Dignity (1971).

Skryabin, Aleksandr Nikolayevich see *Scriabin, A. N.

Slim, William Joseph Slim, 1st Viscount (1891–1970). British soldier, born in Bristol. Commissioned in 1914, he served in Gallipoli (1915) and India (1917–20, 1926–34, 1939–40). In World War II he commanded an Indian division in the Middle East and the 15th Corps in Burma before being appointed to command the 14th Army 1943–45. In this capacity he was responsible for halting the Japanese offensive in Burma and for directing the great campaign by which Mandalay, Rangoon and the rest of the country were eventually liberated. He served as Chief of the Imperial General Staff 1948–52, becoming a field marshal in 1949 and Governor-General of Australia 1953–60. His *Defeat into Victory (1956) was one of the best books of World War II.

worked with the engineer C. F. *Kettering to improve car design and founded the Sloan-Kettering Institute for cancer research in New York (1945).

Sloane, Sir Hans, 1st Baronet (1660–1753). British physician. After studying medicine in France he made a journey to the West Indies from which he brought back (1689) some 800 species of plants. He then settled in practice in Bloomsbury, London. His undiminished interest in natural history was, however, shown by his book *A Voyage to the Islands of Madeira* (1707 and 1725). When the colony of Georgia was founded (1732–33) as a refuge for debtors, Sloane was one of the promoters. The great collection of books, manuscripts and curiosities that he handed over to the nation (1749) became the nucleus of the British Museum. He was made a baronet in 1716.

Smart, Christopher (1722–1771). English poet. Though a scholar of distinction, he was forced to leave Cambridge owing to debts, and his whole life was dogged by poverty. Most of his early work was trivial but, after a serious illness followed by attacks of insanity, he turned to religion and, besides a poetical version of the Psalms, wrote his tender, imaginative masterpiece *A Song to David*. In similar vein is his *Rejoice in the Lamb*. He died in a debtors’ prison.

Smeaton, John (1724–1792). English engineer, born in Leeds. Son of a lawyer, he was intended to enter his father's firm, but from boyhood showed the keenest interest in mechanics and engineering. He was elected FRS in 1753 and won fame when he rebuilt the Eddystone Lighthouse (1756–59) to a new and successful design. He also rediscovered the lost Roman formula for making cement. For his work on the mechanical laws governing the construction of wind and watermills he received the Royal Society's Copley Medal (1759).

Smetena, Bedrich (1824–1884). Czech composer, born in Litomysl. Founder of the Bohemian Nationalist school, his father was the manager of a country brewery. He studied music in Prague and taught music in a nobleman's family and then in a school of his own. In 1856 he went to Sweden as a conductor to the Philharmonic Society of Göthenburg and in the next few years he wrote some symphonic poems (e.g. *Wallerstein’s Camp*) on non-Czech subjects. Back in Prague in 1861, he eventually became the chief conductor of the Provisional Theatre, where the Austrians allowed plays and operas to be given in Czech. Of his eight patriotic operas, *The Bartered Bride* (produced 1870), a gay peasant comedy, is the most popular. Apart from the operas his best known works are *Ma Vlast (My Country)*, a cycle of six symphonic poems (1874–79), and two string quartets (1876 and 1882). From 1874 he struggled against the handicaps of deafness and mental illness by which he was finally incapacitated. *Dvořák, *Suk and others maintained the nationalist tradition of Czech music he created.

Smiles, Samuel (1812–1904). Scottish writer. After studying medicine at Edinburgh, and working as a surgeon in Leeds, an editor and a secretary to railway companies, he achieved enormous success with his *Self-Help* (1857), translated into 17 languages, a collection of lives of great or successful men held up as models to Victorian schoolchildren. This was followed by, e.g. *Thrift* (1875) and *Duty* (1880). He also wrote several biographies, e.g. *George Stephenson* (1857).

Smith, Adam (1723–1790). Scottish economist, born at Kirkcaldy, Fife. Posthumous child of a comptroller of customs, he studied at Oxford University for seven years before returning to Scotland where he was one of the brilliant intellectual circle of which David *Hume became the best known member. As professor of moral philosophy at Glasgow 1752–64 he gained fame as a lecturer and wrote *Theory of Moral Sentiments* (1759). He travelled in France (1764–66) as tutor to the young Earl of Bute and in Paris met *Turgot and *Necker and discussed their economic ideas. In 1776 he settled in London where he joined Samuel *Johnson’s literary circle. In the same year he published his *Inquiry into the Nature and Causes of the Wealth of Nations*, the original source of most future writing on political economy. He was opposed to the monopolistic mercantilism (e.g. Navigation Acts, trading monopolies such as the East India Company etc.) that had dominated previous economic thinking, but neither was he an uncritical advocate of laissez-faire. He believed, with Hume, that enlightened self interest (‘the invisible hand’) would promote public welfare, but insisted in all his works on the maintenance of the link between individual freedom and such moral obligations as kindness, sympathy and justice. Individual freedom releases the energy that produces wealth, but the wealth can only grow by the consumption of goods, not by being hoarded as
gold. He also saw that unfettered individual enterprise must be combined with the division of labour (i.e. specialisation) to maximise efficiency. Specialisation entails the need for markets, which in turn need a common purchasing medium, a conclusion leading to considering methods of determining money values. Thus, one by one, he considered the many interlocking factors of political economy. There was a revival of interest in Smith's ideas with the rise of economic rationalism in the 1980s. Smith has been considered the founder of the study of political economy as a separate discipline.

Smith, Alfred (1873–1944). American Democratic politician, born in New York City. After acute poverty in childhood, he rose rapidly in the New York Democratic machine, serving four terms as State Governor 1918–20 and 1922–28. In 1928 he was the Democratic presidential candidate, the first Catholic nominee of a major party, but lost heavily to Hoover. He was a 'wringing wet' opponent of prohibition, and campaigned against child labour and for state parks. In 1932 he contested the presidential nomination against Franklin D. Roosevelt, failed and was a bitter loser.

Smith, David (Roland) (1906–1965). American sculptor, born in Indiana. He worked as a rivetter for Studebaker, then built locomotives and tanks. He became a pioneer of welded and assembled metal sculptures, making use of industrial forms, later moving into Cubism. He was killed in a motor accident (Anthony Caro).

Smith, George (1824–1901). English publisher. A founder of Smith & Elder (1846), he appointed Thackeray as editor of his new Cornhill magazine (1860) and also started the Pall Mall Gazette (1880). Among the famous writers whose works he published were George Eliot, the Brownings, Mrs Gaskell and Anthony Trollope. The original edition of the Dictionary of National Biography (1885–1900) was his biggest publishing achievement.

Smith, George (1840–1876). English Assyriologist. Trained as a bank note engraver, he worked for the British Museum and deciphered cuneiform tablets that Layard found in Ninevah. In 1872–73 he discovered and translated The Epic of Gilgamesh, an Akkadian creation legend.

Smith, Ian Douglas (1919– ). Zimbabwean (Rhodesian) politician, born in Rhodesia. A RAF pilot 1941–46, he was elected to the Southern Rhodesian Parliament in 1948, became a founder of the Rhodesian Front (1961), devoted to maintaining rule by the white minority. Prime Minister 1964–79, he broke off negotiations with Britain over moving to a multiracial system and adopted a unilateral Declaration of Independence (UDI, Nov. 1965), which remained in force until 1979 when a negotiated settlement was reached. He served in the Zimbabwean Parliament 1980–88 under Robert Mugabe's regime.

Smith, John (1580–1631). English adventurer. He had already had an extraordinary career as a soldier of fortune mainly in service against the Turks during which he escaped from slavery and as a Mediterranean pirate when (1605) he joined the expedition to colonise Virginia. Captured by Indians, he was saved, it was said, by the young Princess Pocahontas, whom he subsequently married. He wrote books about the colony as well as a highly coloured autobiography.

Smith, Joseph (1805–1844). American religious teacher, born in Vermont. Founder of the Mormons, he was the son of a farmer and from boyhood claimed to have had visionary experiences. In 1830 he published the Book of Mormon, the original of which, inscribed on gold plates, was said to have come into his hands (with instructions for translation, using two magic stones called Urim and Thummim) as the result of an angelic visitation from the angel Moroni. The book purported to be supplementary to the Bible and to contain divine revelations to Mormon, a prophet of the era, concerning the history of a second 'chosen people' who came from Jerusalem and inhabited America before the Indians. The Church of Jesus Christ of Latter-Day Saints was founded in 1830 and attracted many converts as well as much ridicule and persecution, which forced the 'saints' to move several times before they found a permanent home. In 1843 Smith split the community, then settled in Illinois, by announcing a divine message favouring polygamy. More persecution followed. In 1844 he announced his intention to stand for the presidency. Smith and his brother Hyrum were arrested on charges of conspiracy and were murdered by a mob that broke into the jail at Carthage, Illinois.
Smith, Sir Matthew (1879–1959). English painter, born at Halifax, Yorkshire. He studied art in Manchester, London and eventually Paris, where he joined the school of *Matisse. His life thereafter was spent between France and England. His scale is large, his composition simplified and bold, and both are admirably suited to the luxuriance and transulence of his colours: for subjects he turned to flowers, fruits and nudes. He was knighted in 1954.

Smith, Sir Ross (1892–1922) and Sir Keith (1890–1955). Australian aviators, born in Adelaide. After service in World War I, the brothers won (1919) the Australian Government's £10,000 prize for the first Australian-manned aircraft to fly from England to Australia within 30 days. Ross Smith was killed in an air crash.

Smith, Stevie (Florence Margaret Smith) (1902–1971). British poet, born in Hull, Yorkshire. She published several collections of verse, three novels and two critical editions: one of T. S. *Eliot's verse, one of children's poetry. She won the Queen's Gold Medal for Poetry (1969). There is a great sense of humour, even comedy, in her work, at the same time as a sense of isolation and blankness, and a preoccupation with death. Her Collected Poems appeared in 1975.

Smith, Sydney (1771–1845). English clergyman, journalist and wit, born in Essex. Educated at Winchester and Oxford, he became a tutor in Edinburgh and co-founder with Francis *Jeffrey and Henry *Brougham of the Edinburgh Review (1802). He returned to London in 1803 and wrote vigorously against slavery, transportation, prison conditions and the game laws, and for Catholic emancipation and the Reform Bill. He lectured in moral philosophy at the Royal Institution, held several rural livings and was canon of St Paul's 1831–45. His wit shone at Lady Holland's Whig soirées and anticipates *Gilbert and *Wilde; but he was wise too, viz: his advice against melancholy. Some of his expressions are still part of the language: 'out of the ark', 'a square peg in a round hole'. He called Daniel *Webster 'a steam engine in a trousers' and *Macaulay 'a book in breeches'.

Smith, William (1769–1839). British cartographer. Known as 'Strata' Smith, his achievement was to determine the succession of English strata from the coal measures up to the chalk in greater detail than previously and to establish their fossil specimens. His greatest work lay in mapping. Smith rightly saw the map as the perfect medium for presenting stratigraphical knowledge. In developing a form of map that showed outcrops in block, he set the essential pattern for geological mapping throughout the 19th century.

Smith, W(illiam) H(enry) (1792–1865). English newsagent. He built up a small firm inherited from his parents by creating a speedy country delivery service, using fast carts, coaches and eventually railways. His son, also W(illiam) H(enry) Smith (1825–1891), secured contracts for most of the railway book stalls, became a Conservative MP 1868–91 and was First Lord of the Admiralty 1877–80 and First Lord of the Treasury 1886–91. His widow was created Viscountess Hambledon.

Smithson, James Macie (1765–1829). English chemist, born in Paris. Natural son of the 1st Duke of Northumberland, he studied chemistry and mineralogy. In 1826 the Royal Society rejected a paper he had written and in revenge he left the reversion of £105,000 to found an institution in Washington 'for the increase and diffusion of knowledge among men'. This was the basis of the great Smithsonian Institution.

Smollett, Tobias George (1721–1771). British novelist, born in Dumbartonshire. He trained for medicine in Glasgow, went to London in 1739 and in 1740 sailed with the fleet to the West Indies as surgeon's mate. It was not until *The Adventures of Roderick Random was published (1748) that he achieved literary success. *The Adventures of Peregrine Pickle (1751) followed, and thus encouraged, Smollett started an intensive publishing career in Chelsea. Of the many works produced there by himself and his collaborators, the best was *The Expedition of Humphry Clinker (1771). His last years were mainly occupied by travels in search of health, injured by hard work and the worries due to the ease with which he gave and took offence. He died near Leghorn (Livorno). In construction and characterisation his picaresque novels do not equal those of *Fielding, but he had a great gift for narrative and a very observant eye.

Smuts, Jan Christiaan (1870–1950). South African soldier and politician, born in Cape Colony. After attending Victoria College, in Stellenbosch, he completed his education at Christ's College, Cambridge, where he won high honours in law. Admitted to the bar in Cape Colony (1895), he entered politics but turned against *Rhodes after the Jameson Raid. Leaving the Cape for the Transvaal he became President *Kruger's Attorney-General. In the latter stages of the Boer War he proved himself one of the most successful guerrilla leaders, penetrating deep into Cape Colony with his raids. He played a leading part at the Peace Conference of Vereeniging.
(1902). In the following years he became a close political associate of Botha and together they built up the South African Party. When the Union of South Africa was formed (1910), Botha became Prime Minister. Smuts served as Minister of Defence 1910–24 and Finance 1912–13 and 1915–19. Like Botha, he supported Britain strongly in World War I, and as GOC of British forces in East Africa 1916–17 he fought against Lettow-Vorbeck. He joined Lloyd George’s war Cabinet in London without Portfolio (1917–18), responsible for organising the RAF and, at the Paris Peace Conference (1919), he was a major architect of the League of Nations. On Botha’s death, Smuts succeeded as Prime Minister 1919–24. Defeated by Hertzog, he became Deputy Prime Minister and Justice Minister in a coalition 1933–39. He became Prime Minister again 1939–48 on the outbreak of World War II, when parliament overturned Hertzog’s neutrality policy, being promoted a British field marshal in 1941. However, after 1945 he steadily lost ground domestically to the Nationalists. He was defeated in the 1948 election. Smuts’ subtle and agile intelligence sometimes led outwitted opponents to charge him with duplicity. (He was known as ‘Slim Jannie’.) His most enduring achievements were probably in international affairs, planning the United Nations and writing the preamble to its charter. In South Africa itself he attempted to weld together the Europeans of British and Dutch descent but, despite his long term of office, made no real attempt to tackle the racial problem. Awarded the CH (1917) and OM (1947), he was Chancellor of Cambridge University 1948–50, published several books on holistic philosophy and was an amateur botanist.

Snow, C(harles) P(ercy), Baron Snow (1905–1980). English novelist and physicist. Educated at Leicester, London and Christ’s College, Cambridge, as a scientist and a civil servant he was much concerned with the cleavage between humane and scientific traditions of culture and wrote The Two Cultures and the Scientific Revolution (1959). His novels, e.g. The Matters (1951), The Affair (1959) and Corridors of Power (1964), explore the manipulations by which decisions are achieved in a university and in government. The critic F. R. *Leavis detested him. He was a member of the Labour Government (October 1964) as Parliamentary Secretary to the new minister of technology, and resigned in March 1966. He married the novelist Pamela Hansford Johnson (1912–1981), author of The Unspeakable Shipton (1959).

Snow, John (1813–1858). English physician and epidemiologist, born in York. Son of a colliery worker, he was apprenticed to a surgeon in Newcastle-upon-Tyne and later studied in London. He made several fundamental contributions to evidence-based medicine, pointing to deficiencies in bread as a factor in rickets, and calculated dosages for the use of ether and chloroform in anaesthesia. In September 1854 he identified a water pump in Broad Street, Soho as a transmission point for cholera, rejecting the prevailing ‘miasma’ theory. He never married and died of a stroke. In 2003, a poll of British doctors ranked Snow as the greatest physician of all time and his bicentenary was commemorated in 2013.

Snellius, Willebrord (or Willebrord Snel van Rijen) (1591–1626). Dutch mathematical physicist. He succeeded his father as professor of mathematics at Leyden 1613–26 and is best known for the general law (1621), named after him, governing the refraction of light when it passes into a medium of different density. This law which had eluded Kepler, was published in a slightly improved form (1637) by Descartes, without acknowledgement. The lunar crater Snellius is named for him.

Snorri Sturluson (1179–1241). Icelandic historian and mythologist. He was a chieftain, active in politics as a member of the Althing. One of the most versatile medieval historians, he wrote Heimskringla, a great history of the Norwegian kings, showing critical abilities and much insight into character. His Younger Edda surveyed Norse mythology and traditions, with the aim of giving help and guidance to poets in search of a theme. He was killed during a violent civil war, followed by Norwegian control of Iceland. His nephew, Sturla Thordson, was author of the Sturlunga Saga.

Snow, Dame Ethel Mary (1858–1944). British composer and feminist. She studied in Leipzig, and her early operas, the best known of which is The Wreckers (1906), were produced in Germany. A comic opera, The Boatswain’s Mate (1916), was founded on a short story by W. W. Jacobs. She also wrote much chamber music and a Mass in D. She was imprisoned (1911) for her activities as a suffragette, and composed a marching song for the movement.

Snow, John (1959). His novels, e.g. The Masters (1951), The Affair (1959) and Corridors of Power (1964), explore the manipulations by which decisions are achieved in a university and in government. The critic F. R. *Leavis detested him. He was a member of the Labour Government (October 1964) as Parliamentary Secretary to the new minister of technology, and resigned in March 1966. He married the novelist Pamela Hansford Johnson (1912–1981), author of The Unspeakable Shipton (1959).

Snowden, Philip, 1st Viscount Snowden (1864–1937). British politician. Crippled by a cycling accident, he studied economics and became a public servant. A Labour MP 1906–18, 1922–31, and an ardent free trader, he was Chancellor of the Exchequer 1924, 1929–31. When the Government split in 1931 he supported Ramsay MacDonald but became increasingly isolated and bitter.

Soane, Sir John (1753–1837). English architect. Son of a builder, after working under George *Dance the younger, he won a Royal Academy Gold Medal and a travelling studentship (1776–80). On his return he evolved an austere, highly individual modification of the classical style. From 1788 he was architect to the Bank of England, the rebuilding of which occupied 40 years. He built the Dulwich College picture gallery and the founder’s mausoleum (1811–14), three London churches and many houses. His house in Lincoln’s Inn Fields is a museum of prints, drawings, paintings and archaeological relics.

Sobchak, Anatoli Aleksandrovich (1937–2000). Russian lawyer and politician, born in Siberia. Working as a lawyer in Stavropol 1960–64, he became an adviser to *Gorbachev, won a doctorate in law at Leningrad University and was appointed a professor. He attracted attention in the USSR Congress of Peoples’ Deputies 1989–91 and was elected Mayor of Leningrad/St Petersburg 1990–96. He played a decisive role in Leningrad in defeating the August 1991 coup against Gorbachev and reform.

Sobers, Sir Garfield (Garry St Auburn) (1936– ). Barbadian cricketer. A left-handed batsman and bowler, he made 8000 test runs and took 200 wickets. He captained the West Indies test side 1953–74 and in 1958 made the record score of 365 not out in a test match.

Sobieski, Jan (1624–1696). King of Poland as Jan III 1674–96. Born in Galicia, he became a soldier and, after being engaged in constant warfare with Turks and Tatars, rose to be Polish Commander-in-Chief. A great victory over the Turks at Khotin (1673) made him a national hero and in the next year he was elected King. In 1683 he won European renown by putting the cause of Christendom before any considerations of national policy and marching to rescue Vienna from the Turks. Aristocratic faction and intrigue at home disturbed his reign.

Socinus, Faustus (Fausto Sozzini) (1539–1604). Italian theologian. He was known for his anti-Trinitarian doctrines adopted from his uncle Laelius Socinus (Lello Sozzini) (1525–1562). He left Italy (1575) to pursue his theological studies, thence he went to Transylvania and in 1579 to Poland where he remained for the rest of his life. Reason was the test he applied to doctrines and it was as an offence against reason that he condemned Trinitarianism, though he accepted the immortality of the spirit (but not of the body). He rejected the divinity of Christ, and the doctrine of Original Sin. Socinianism survived in Transylvania into the 20th century, and was influential elsewhere in the 16th and 17th centuries.

Socrates (c.469–399 BCE). Greek philosopher, born in Athens. Son of Sophroniscus, a friend of *Aristotle and possibly a sculptor, he left no writings and the only first-hand evidence concerning his life and thought comes from *Plato and *Xenophon; the former makes him the chief spokesman of his dialogues, but the ideas expressed may well be those of Plato though the method of eliciting them is almost certainly Socratic. The known facts are simple: Socrates served and showed courage in the Peloponnesian War; the rest of his life was spent in Athens where he frequented public places such as markets and gymnasia and talked with anyone who would listen, but delighted especially in the company of young men of good mind and pleasing appearance. That these were most often to be found among the young aristocrats (*Alcibiades, Critias etc.) may have helped to estrange him from the general populace. He himself was ugly, with thick lips, bulging eyes and flat nose; he walked barefoot, wore the simplest of garments and was indifferent to comfort; but he was no ascetic and could outdrink any of the other guests at a banquet. As it is clear from the caricature of him in *The Clouds by *Aristophanes, he was regarded as a sophist, but though he knew, and probably disputed with, sophists he had no use for their verbal pedantries. Nor was he a follower of any school of philosophy. His interests did not extend to the workings of the universe, that each of his followers and friends should learn to know himself was the aim to which his dialectical method was applied. He was no propounder of truths, he only guided the search for truth, or that part of it which lay within the mind of each of his companions. His method was to feign ignorance and then by question and answer to get nearer and nearer to the heart of the matter without achieving a final solution. The achievement of knowledge, he argued, would be the achievement of virtue, for virtue is the knowledge, in its fullest philosophical sense, of what ought to be done, and vice is correspondingly ignorance.

A minor mystery about his character was his claim to be guided in emergencies by a *daimonion (divine sign) which, since it was peculiar to himself, had more affinity with intuition than conscience. Whatever its exact nature, his talk of it may help to explain the charge of blasphemy that was coupled with that of corrupting the morals of young men when he was brought to trial by the restored democracy in 399. He was convicted by a jury of 501 by 280 votes to 221, then condemned by a 360:141 vote, when 80 who supported acquittal then chose death. He refused an opportunity of escape and after an interval of 30 days took hemlock, the customary alternative to execution. A moving account of his last day is
contained in Plato's dialogue *Phaedo, in which Phaedo describes him as 'the wisest and justest and best of all men I have ever known'.

Soddy, Frederick (1877–1956). English chemist. He was professor of chemistry at Glasgow 1904–14, Aberdeen 1914–19 and Oxford 1919–36. With *Rutherford he put forward (1903) the radioactive transformation theory showing that radioactivity arises from the spontaneous disintegration of atoms. Soddy's work led to the discovery that certain atomic species, which he called isotopes, could have the same atomic number but different atomic weight. He was elected FRS in 1910 and won the Nobel Prize for Chemistry (1921). Among his important books are *Radioactive Elements* (2 vols, 1912–14) and *Matter and Energy* (1912). He also wrote extensively (and eccentrically) on economics.

Soeharto see Suharto

Soekarno (or Sukarno, his personal name is given as Achmed or Koesnosoro) (1901–1970). Indonesian politician, born in Surabaja, East Java. His father was a Javanese Moslem school teacher, his mother a Balinese Hindu. He graduated as an engineer in 1925 and in 1927, with D. M. Kasuma, became co-founder of the Indonesian Nationalist Party (PNI). He fought against Dutch colonial rule, being imprisoned (1930–31) and exiled to remote islands (1933–42). After the Japanese invaded the Netherlands East Indies, Soekarno worked with them, visited Japan in 1943, and was made President of the Java central council and of Putera ('Centre of People's Power'), a nationalist Islamic body. On Japan's sudden collapse in August 1945, he proclaimed Indonesian independence and with Mohammed *Hatta set up a provisional government. He was Head of Provisional Government 1945–49, and President of the Republic 1949–67. The British occupied Indonesia and supported the restoration of Dutch rule, at least on a temporary basis, and four years of conflict followed, in which the islands were partitioned in a Netherlands-Indonesian Union. In 1949 the Netherlands recognised Indonesia as a federal state and withdrew; in December the United States of Indonesia was proclaimed. Named 'President for Life' in 1963, he was also Prime Minister 1963–67. He did much to stimulate a sense of national identity but his rule was marred by extravagance, corruption and caprice. For all his shortcomings as an administrator he was an extraordinary orator and master of communication. Following an abortive coup against the army by the Communist Party (PKI) in September 1965, probably with Soekarno's connivance, he lost power to General *Suharto and was removed from the presidency in March 1967. Moslem puritans disapproved of his private life (*Megawati Soekarnoputri).

Solomon (c.970–c.932 BCE). King of Israel. Son of *David and Bathsheba, under him the kingdom reached its widest limits and his wealth and luxury became proverbial. He is known as a great builder and is credited with the construction of the great temple at Jerusalem that bore his name. Surrounded by his concubines he ruled as an oriental despot, and his way of life offended the austere nationalists led by the prophets, while heavy taxation alienated popular support. These causes, combined with tribal jealousies, brought about the partition of the country in the next reign. Solomon left behind him a tradition of great wisdom and supernatural powers. He may have written parts of the biblical Book of Proverbs, but the Song of Songs, Ecclesiastes and the apocryphal works attributed to him are much later. The royal dynasty of Ethiopia claimed descent from Solomon and the Queen of Sheba.

Solomon (Cutner) (1902–1988). English pianist, born in London. Son of an East End tailor, he made his debut in 1911, toured extensively and made many recordings, retiring in 1956 after a stroke. He had a superb technique, but his interpretative skills were even greater, especially in *Beethoven, *Chopin, *Schumann and *Brahms. He never used his surname.

Solon (c.638?–559 BCE). Athenian legislator and poet. It seems that he first gained popularity by using poetry to express political aims (e.g. the relief of economic distress). As archon (594–563) he was given unlimited power to make economic and constitutional reforms. He started with his revolutionary *Seisachtheia (shaking off of burdens) by which all debts were cancelled, land forfeited for debt restored, and those who had pledged their persons as security for debt were freed from slavery. The acceptance of such pledges was in future forbidden. Currency reforms and encouragement of homegrown food (e.g. corn for wine) were among his other measures. He divided the citizens into classes, by economic standards, rights and duties being prescribed accordingly. Though the people as a whole were more widely represented in the assembly and the courts, Athens was as yet far from being a democracy. After completing his reforms, he refused the offered role of 'tyrant' and spent several years in travels, about which many legends were told. He is numbered among the Seven Sages of Greece.

Solti, Sir Georg (György Stern) (1912–1997). Hungarian-British conductor. A pupil of *Bartók, *Kodály and *Dohnányi, he was an excellent pianist, turning to conducting after World War II. He was musical director of the Munich State Opera 1946–52, the Frankfurt Opera 1952–61, Covent Garden

**Solzhenitsyn, Aleksandr Isayevich** (1918–2008). Russian novelist and dissident thinker, born in Rostov-on-Don. Son of an office worker, he studied mathematics at Rostov and Moscow universities, served as an artillery officer and was decorated for bravery. He spent eight years (1945–53) in a forced labour camp in Kazakhstan for criticising *Stalin obliquely in a letter: this was the basis for One Day in the Life of Ivan Denisovich (1962). During a three-year exile in Central Asia he was cured of cancer; he used this experience in Cancer Ward (1967). Officially rehabilitated in 1957, he became a teacher at Ryazan and, in 1962 during a period of thaw, *Khruushchev allowed his first book to be published. The First Circle (1968), set in 1948, described Marfino prison where skilled personnel worked on special KGB projects. Expelled from the Soviet Writers’ Union in 1969, he was awarded the 1970 Nobel Prize for Literature but was prevented from receiving the prize in Stockholm. Later books include August 1914 (1972) and The Gulag Archipelago (1974), a study of a network of Soviet concentration camps, Lenin in Zurich (1975), and The Oak and the Calf (1980). In 1974 he was expelled from the USSR, settling first in Switzerland, then (1975) in Vermont, USA. He returned to live in Russia in 1994.

**Somare, Sir Michael Thomas** (1936– ). Papua New Guinean politician. A teacher and journalist, he became Chief Minister 1972–75 under Australian rule and the first Prime Minister of independent Papua New Guinea 1975–80, 1982–85, 2002–11. He was awarded a PC, GCMM and CH. In 2011 a constitutional crisis erupted when parliament ruled that Somare’s prolonged absence due to illness disqualified him from being Prime Minister, but the Supreme Court attempted to overturn the decision.

**Somers, John Somers, 1st Baron** (1652–1716). English Whig politician. A barrister, he defended the Seven Bishops put on trial by *James II, and played an important part in drafting the Bill of Rights. As Keeper of the Seal he presided over *William III’s informal Cabinet councils and was one of the king’s most trusted advisers. Impeached by his opponents he lost office in 1700 but was briefly restored to power (1708–10) under Queen *Anne.

**Somerset, Edward Seymour, 1st Duke of** (1506–1552). English nobleman. He became prominent on the marriage of his sister *Jane Seymour to *Henry VIII. Soon after the accession of his nephew, the boy-king *Edward VI, he was created Duke of Somerset and virtually ruled the country as Lord Protector. His rough wooing of *Mary Queen of Scots on behalf of his master led to the victory of Pinkie (1547), after which Mary was sent to France for safety. In England he hastened the growth of Protestantism, and his personal acquisitiveness, coupled with mildness, made him vulnerable to the intrigues of the Earl of Warwick (afterwards Duke of *Northumberland), who engineered his downfall and execution.

**Song** (or Sung). Chinese dynasty which ruled 960–1279, sometimes called ‘Northern Song’. Printing, ceramics and gunpowder were developed in this period.

**Song Zifen** (or Soong Tse-Ven; called in the West, T.V. Soong) (1891–1971). Chinese politician. Son of a well known industrialist, he held many offices in Guomintang governments including that of Prime Minister 1944–47. One of his sisters married *Sun Yatsen, the other *Chiang Kai shek.

**Sophia** (of Bohemia, née Wittelsbach) (1630–1714). Electress of Hanover. Her parents were *Frederick V of the Palatinate and *Elizabeth, daughter of *James I of Great Britain. Sophia married (1658) Ernst August (1629–1698), later first elector of Hanover 1692–98. Her descent from James made her heiress to the British throne. She died shortly before Queen *Anne, and her son *George I became first of the Hanoverian dynasty. Under the British Act of Settlement (1701), which excluded Roman Catholics, the crown was to pass (on the assumption that Queen Anne died childless) to Sophia, but as she predeceased Anne, her son succeeded to the British throne.
Sopwith, Sir T(homas) O(cket) M(urdoch) (1888–1898). British aircraft designer. He founded Sopwith Aviation in 1912 and his aircraft 'Camel' and 'Pup' were used by the RAF in World War I. Bankrupt in 1926, he went into partnership with Harry *Hawker and designed the Hawker Hurricane. He was also a successful yacht designer.

Sordello (d.c.1270). Italian troubadour, born near Mantua. His love lyrics and other surviving poems are written in Provençal. He is mentioned several times in *Dante's *Purgatorio and is the hero of Robert *Browning's *Sordello.

Sorensen, Soren Peter Lauritz (1868–1939). Danish biochemist. As director of the chemical section of the Carlsberg Laboratory, his chief researches were on amino acids, proteins and enzymes. He is best known for his introduction of the pH scale for expressing acidity and alkalinity in terms of hydrogen ion concentration. On this scale neutrality is represented by a pH value of 7, different degrees of acidity and alkalinity are represented by pH values respectively below and above 7.

Soros, George (1930– ). Hungarian investor, born in Budapest. A pupil of Karl *Popper, he achieved extraordinary success as a currency speculator, with an income of $US1.3 billion in 1993. The Soros Foundation encouraged democracy in Eastern Europe and Soros was critical of some aspects of economic liberalism.

Soult, Jean-de-Dieu, 1st Duke of Dalmatia (1769–1851). French marshal. After serving in the ranks he rose to become a general (1799) in the French Revolutionary armies and in 1802 was created a marshal. He played a decisive role at Austerlitz (1805) and commanded the right wing at Jena (1806). In 1807 he drove the British forces from Spain, and was made a duke in 1808. In the subsequent campaigns against *Wellington in the Peninsula he fought with varying fortune but could never achieve a decisive success and, as *Napoleon became less able to reinforce him, was gradually driven back. In 1813 he was unable to prevent Wellington breaking through into France. Soult acted as Chief of Staff to Napoleon in the Waterloo campaign, after which he was banished. Recalled in 1820, he became a partisan of *Louis Philippe, was created Marshal General in 1830 and served as Minister of War 1830–34, 1840–44 and Premier 1832–34, 1839–40, 1840–47.

Sousa, John Philip (1854–1932). American bandmaster and composer, born in Washington. Son of a Portuguese father and a Bavarian mother, he was opposed to bourgeois morality, parliamentarianism and utilitarianism, which he saw as cowardly evasions of history. He became successively a liberal conservative (1889), Marxist revisionist (1893), Dreyfusard (1897), revolutionary syndicalist (1902), supporter of *Action française (1910), and Bolshevik sympathiser (1919). In *Reflections on Violence (1908) he urged a ‘myth’ of a heroic view of man and urged the use of (psychological) violence against the force of the State: out of such a confrontation would come a new order. Both *Mussolini and *Trotsky admired him.

**Sophocles** (c.495–406 BCE). Greek dramatist, born at Kolonos, near Athens. A member of a prosperous family, he is said to have led a boys’ choir which celebrated the naval victory of Salamis. Later, having failed as an actor owing to the weakness of his voice, he devoted himself to writing plays. A mark of his success was that he won first prize at the great festival of the god Dionysus 18 times. Of over 100 plays written by him only seven survive complete. *Ajax*, almost certainly the earliest, takes up the hero's story from the point when he is driven to suicide by anger and disappointment at not being awarded the arms of Achilles. Conflicts provoked by refusal to accord him honourable burial are the theme of the play, which ends with a change of decision by King Agamemnon. In *Antigone* the theme is similar, but the efforts of the Theban princess (the title role) to bury her brother Polynices result in a series of tragic events, including her own death. *Oedipus the King* (Oidipus Tyrannos better known by the Latin name *Oedipus Rex*), usually considered his masterpiece, and the sequel *Oedipus at Colonus* (the latest of the surviving plays) tell the terrible story of Oedipus, King of Thebes, who, having discovered that unknowingly he had killed his father and married his own mother, came in his last years, an old, blinded and impoverished exile, to seek his death. *Electra* is Sophocles’s version of the events that followed the murder of the hero’s mother Clytaemnestra, the unfaithful wife of Agamemnon. *The Trachiniae* (Maidens of Trachis) tells of the death of Heracles at the hands of his wife Deianira who gives him poison in the belief that it is a love charm. *Philoctetes* is the story of a Greek hero who, stricken by a loathsome disease, is abandoned by his companions on the way to Troy, but is at last induced to come to their aid with his magic bow. Sophocles, who first introduced a third actor, was the most technically accomplished of all Greek dramatists, both in construction and dramatic language. He is essentially interested in human character and the interplay of one character upon another. Matthew *Arnold wrote that he ‘saw life steadily and saw it whole’.

leader of the band of the US marine corps (1880–92) and then formed his own band, with which he toured the world. Known as 'the March King', he composed 136 marches, marked by swaggering vitality and imaginative scoring, including The Stars and Stripes for Ever and The Washington Post.

Soustelle, Jacques (1912–1990). French anthropologist and politician. He studied and wrote about Aztec culture in Mexico, turning to politics during World War II when he joined the Free French movement. After the war he was a firm supporter of de *Gaulle, and hoping to ensure the continued association with France of Algeria – of which he had been Governor-General 1955–56 – he helped to organise the coup that brought de Gaulle back to power (1958). When there was an army revolt in Algiers (1960) against de Gaulle's policy of independence, Soustelle was suspected of sympathising with it and was dismissed from office. An order for his arrest was issued (1962) and he lived outside France until 1968 when a general amnesty was declared.

Southampton, Henry Wriothesley, 3rd Earl of (1573–1624). English nobleman. Best known as the man to whom *Shakespeare dedicated Venus and Adonis and The Rape of Lucrece, he may have been the 'Mr W. H.' and the 'lovely boy' of Shakespeare's Sonnets. He lost the favour of *Elizabeth I after his secret marriage to Elizabeth Vernon, and was imprisoned for his part in *Essex's rebellion (1601). *James I pardoned him (1603) and he took part in a number of commercial and colonial enterprises, including the expedition to Virginia (1605). He died of fever on an expedition to the Netherlands to help the Dutch.

Southcott, Joanna (1750–1814). English 'prophet', born in Devonshire. A domestic servant, in 1792 she began to claim divine inspiration for prophecies in prose and verse announcing the imminent 'second coming' of *Jesus Christ. At 64 she claimed that she was about to give miraculous birth to a Prince of Peace, but her own death intervened. An intensive propaganda continues for the opening of a box or boxes left by her. A box was opened in 1927 but no documents or articles of importance were found.

Southey, Robert (1774–1843). English writer. A close friendship with S. T. *Coleridge marked his first years after leaving Oxford University. The two friends married sisters and in 1803 the two couples shared Greta Hall, Keswick. When Coleridge left Keswick that winter he entrusted his wife and family to Southey's care. Southey remained there for the rest of his life, one of the renowned Lakeland poets, with his friend *Wordsworth nearby. *Landor, *Lamb and Walter *Scott were also among his friends, and the younger writers such as *Carlyle and Charlotte *Brontë were helped by his kindness. A mainstay of the Tory Quarterly Review, he was made Poet Laureate in 1813. Overwork brought about his mental breakdown in 1839. Much of his vast output of poetry and prose, which included epics such as The Vision of Judgement (1820) and a valuable History of Brazil (1810–19), is now forgotten, even his lives of *Nelson and *Wesley, and the children's classic The Three Bears.

Simmons, J., Southey. 1945.

Soutine, Chaim (1893–1943). Russian-Jewish-French painter, born near Minsk. Living in Paris from 1913, he suffered great hardship. His convulsive and heavily painted expressionist works, often featuring human depravity and carcasses in the slaughterhouse, were a major influence on Francis *Bacon. He also painted many studies of cooks, hotel valets and page boys.

Southwell, St Robert (1561–1595). English Jesuit and poet. A distant cousin of *Shakespeare, he ministered to Catholics despite the threat of execution for priests who failed to leave England. His poems include *The Burning Babe' and 'New Heaven, New War'. He was arrested in 1592, tortured and executed. He was beatified in 1929 and canonised in 1970.

Soyer, Alexis (1809–1858). French chef de cuisine. He fled to London from the 1830 revolution in France. He was chef to the Reform Club and became the most famous cook of his time. He was sent to the Crimea to reform the army's food commissariat, and introduced the 'Soyer Stove'. Soyer wrote a variety of cookery books.

Morris, H., Portrait of a Chef. 1938.

Soyinka, Wole (1934– ). Nigerian playwright, poet and novelist. Educated at Ibadan and Leeds universities, he wrote in English, worked at London's Royal Court Theatre and returned as professor of drama at Ife in 1972. His works include the plays The Invention (1955) and Death and the King's Horseman (1975), and the autobiography Ake (1982). In 1986 he became the first African to win the Nobel Prize for Literature.

Spaatz, Carl Andrews (1891–1974). American airman. He joined the American Army air force in 1916, and in 1941 he was sent to Britain to organise the 8th Air Force which worked in close association with the British Bomber Command. He commanded (1943) all Allied forces taking part in the North African campaign. He was head of the US Army Air Force 1946–48.
Spence, Sir Basil Urwin (1907–1976). British architect, born in Bombay. He worked in the office of Sir Edwin Lutyens for a year before World War II. He produced (1951) the winning design for the rebuilding of Coventry Cathedral and became its architect. Among other appointments he was consultant architect to Edinburgh, Nottingham, Sussex and Southampton universities and for Basildon new town. He was president of the RIBA (1958–60), knighted in 1960 and received the OM in 1962. He designed the ‘Beehive’ extension to the New Zealand Parliament in Wellington.

Speer, Albert (1905–1981). German architect. His buildings attracted *Hitler's interest and on the death of Fritz Todt he became Minister of Armaments and Munitions 1942–45, producing a record-breaking 3,031 fighter planes in the month of September 1944. He prevented Hitler's scorched earth policy being fully implemented in March–April 1945 and urged the Führer to capitulate. He was sentenced to 20 years' jail at the Nuremberg trials for his use of slave labour. On his release he published the valuable memoirs Inside the Third Reich (1969).

Spelman, Sir Henry (1594–1643), also a historian, wrote a life introduction of the term 'feudalism'. His son produced over nearly 40 years. He is credited with the Glossarium Archaiologicum, of English medieval history, including writings on antiquary. He made major contributions to the study of

Speke, John Hanning (1827–1864). British explorer. After service in the Indian army he joined Richard *Burton to explore Somaliland (when he narrowly escaped with his life). Three years later (1857) the same two explorers were sent by the Royal Geographical Society to look for the great lakes of Central Africa. They reached Lake Tanganyika together but Speke was alone when he discovered Lake Nyanza and concluded (rightly) that it must be the source of the Nile. Burton disagreed and to settle the dispute Speke made another journey in 1860 (with Captain J. A. Grant) and followed the river emerging from the lake far enough to be sure that it was identical with the Nile. Burton still refused to be convinced. On the day before a public meeting to discuss the issue, Speke accidentally shot himself. He wrote Journal of the Discovery of the Source of the Nile (1863).

Speltz, Hans (1887–1984). German soldier. *Rommel's Chief of Staff for a time in World War II, he was imprisoned (1944) for alleged participation in the attempt to assassinate *Hitler. Commander-in-Chief of the new West German army 1955–57, his appointment (1957) to command the NATO forces in Central Europe marked an important stage in the postwar history of the Federal Republic of Germany.

Spence, Sir Basil Urwin (1907–1976). British architect, born in Bombay. He worked in the office of Sir Edwin Lutyens for a year before World War II. He produced (1951) the winning design for the rebuilding of Coventry Cathedral and became its architect. Among other appointments he was consultant architect to Edinburgh, Nottingham, Sussex and Southampton universities and for Basildon new town. He was president of the RIBA (1958–60), knighted in 1960 and received the OM in 1962. He designed the ‘Beehive’ extension to the New Zealand Parliament in Wellington.
Spencer, Sir (Walter) Baldwin (1860–1929). Australian anthropologist, born in Lancashire. Professor of biology at Melbourne University 1887–1919, with Francis James Gillen (1856–1912) he conducted outstanding pioneering anthropological surveys of Aborigines, wrote The Native Tribes of Central Australia (1899) and had profound but unacknowledged influence on Bronislaw *Malinowski.

Spencer, Herbert (1820–1903). English philosopher, born in Derby. Son of a schoolmaster, he became first a teacher and then a railway engineer, and worked at this profession, with occasional incursions into journalism, until 1843 when he became subeditor of the Economist. In his first book, Social Status (1850), he tried to show that social equilibrium would finally result from laissez-faire liberalism, if allowed to work unchecked. His subsequent defence on individual freedom against the encroaching power of the state, The Man versus the State (1854), was one of the most widely read books of the day. His next work, The Principles of Psychology (1855), propounded the theory that life is an ‘adjustment of inner relations to outer relations’ and went on to examine particular relations, e.g. association, reflex action, memory and reason. In 1860, only partly influenced by the publication (1859) of Darwin’s On the Origin of Species, he launched his vast Programme of a System of Synthetic Philosophy, aimed at linking all fields of knowledge on the basis of a principle that evolution is a kind of progress from homogeneity to an organised heterogeneity, the whole being dependent on an unknowable force which sets the whole system in motion. The series of books issued to illustrate this theme include works on biology, sociology, psychology, education and ethics. Nominated for the Nobel Prize for Peace in 1901 and for Literature in 1902, he is buried opposite *Marx in Highgate Cemetery.

Spencer, Sir Stanley (1891–1959). English painter. Except during his service in Macedonia in World War I, he lived and worked in his native village of Cookham, Berkshire. The murals (1927–32) in the memorial chapel at Burghclerc, near Newbury, are his finest works. Equally impressive is the huge Resurrection in the Tate Gallery, London.

Spender, Sir Stephen (Harold) (1909–1995). English poet and critic. At Oxford, he became, with his friends *Auden and *Day Lewis, one of the group of young poets who contributed to New Signatures (1932). In 1930 his own first volume of poetry, Twenty Poems appeared. He worked in Spain for the Loyalists, and his Poems from Spain (1939) reflect this period. His Collected Poems appeared in 1954. He also wrote fiction and literary criticism, eg. The Destructible Element (1935), and a poetic drama, Trial of a Judge (1938). From 1939 to 1941 he was co-editor, with Cyril *Connolly, of the monthly Horizon and in 1953 was co-editor of Encounter.

Spengler, Oswald (1880–1936). German philosopher. After some years as a teacher he came into sensational prominence with the publication (1918) of the first volume of Untergang des Abendlandes (Volume II, 1922, Eng. trans. The Decline of the West, 1926–29). His theme was that civilisations are subject to the same laws of growth and decay as individuals.

Spenser, Edmund (c.1552–1599). English poet, born in London. He left Cambridge University in 1576, and in 1580 became secretary to Lord Grey, Lord Deputy of Ireland. A year earlier he had published his first major work, The Shepheards Calendar, dedicated to his friend Sir Philip *Sidney. After leaving Lord Grey’s service he remained in Ireland in official appointments, living (from 1588) at Kilcolman Castle, Co. Cork, where he continued work on his great epic The Faerie Queene. In 1589 he went to London with Sir Walter *Raleigh to arrange for the publication of its first three books. Disappointed in his hopes of preferment, he returned to Ireland (1591), where he described his recent visit in Colin Clouts come home againe. The next three books of The Faerie Queene were published in 1596. This famous epic, which he left unfinished at his death, is an allegory (modelled to some extent on Ariosto’s Orlando Furioso) of the England of his time, in which *Elizabeth appears as Gloriana, Queen of Fairyland. Much of the allegory is no longer easily comprehensible but the adventures of the knights can be enjoyed as separate episodes and there still remains the sensual delight of the poem’s rich colouring and its metrical charm. It is written in what are now known as Spenserian stanzas. His other works include Astrophel (1586), an elegy on Sir Philip Sidney, and the sonnet sequence Amoretti, which immortalised his courtship of an Elizabeth (supposedly Elizabeth Boyle) whom he married in 1594. Epithalamion was probably written to celebrate the event, while the double wedding of the two daughters of the Earl of Worcester was commemorated by Prothalamion (1596). The prose work View of the Present State of Ireland (1596) was a defence of English policy. When Kilcolman was burnt by insurgents (1598), the last books of The Faerie Queene were probably destroyed. Spenser returned to London where he died in poverty but was buried in Westminster Abbey.

Speransky, Mikhail Mikhailovich, Count (1772–1839). Russian administrator. Son of a priest, he became *Aleksandr I’s secretary and Minister of State 1809–12, proposing liberal constitutional reforms
until forced into exile by fierce hostility from the nobles. Under "Nikolai I he took a prominent part in the proceedings against the Decembrist conspirators, codified Russian law (in 45 volumes, 1830) and studied the peasantry.

Sperry, Elmer Ambrose (1860–1930). American inventor. He designed and manufactured numerous devices incorporating the principle of the gyroscope, among them the gyroscopic compass and stabilisers for ships. He also made improvements in the manufacture of electrical machinery and introduced (1915) the high-intensity searchlight.

Sperry, Roger Wolcott (1913–1994). American neurobiologist and neuropsychologist, born in Connecticut. He studied literature and psychology at Oberlin, zoology at Chicago, primate biology at Harvard and was professor of psychobiology at Caltech 1954–84. Elected FRS, in 1979 he won both the Wolf Prize and the Lasker Prize. He shared the 1981 Nobel Prize for Medicine 'for his discoveries concerning the functional specialization of the cerebral hemispheres', one half being awarded to David Hubel and Torsten Wiesel for their research on visual field processing. The 'left' hemisphere of the brain is dominant in language, speech, logic, numbers, calculation and specific memory, while the 'right' brain processes pattern and spatial recognition, aesthetics, music, creativity and interpretation.

Spielrein (or Shpilrein), Sabina Naftulovna (1885–1942). Russian-Jewish physician and psychoanalyst. She studied medicine in Zürich, and became closely associated with Carl †Jung, as patient, student, colleague and probably lover. Her research anticipated Jung's concept of transformation and 'Freud's 'death wish'. She was killed with her family by a Nazi death squad.

Spinoza, Benedict de (Baruch Despinoza) (1632–1677). Dutch philosopher of Jewish-Portuguese descent, born in Amsterdam. Given a traditional Jewish education, he became lax in his observances, was estranged from his people, and was excommunicated (1656). While earning his living as a lens grinder he learnt Latin and absorbed western culture. A version (1663) of *Descartes' Principles of Philosophy was the only book published under his own name during his lifetime, but Theological Political Treatise (1670) was generally recognised as his. While admitting that human passions necessitate strict obedience to the state, the book pleaded for liberty for the philosopher to express his ideas. Despite the uproar that it caused (difficult now to understand), he was offered (1673) a professorship by the Elector Palatine but preferred to devote himself to completing his greatest work, the posthumously published Ethics (1677). Beginning from the notion of substance, which may be roughly described as having properties or attributes but not being such itself, he proceeds by classically deductive argument to establish that nature is identical with God, the being who possesses infinite attributes but is not the personal God of Christianity. He sees man's mind as part of the divine one and for that reason incapable of exercising free will in an absolute sense. With the same integrating pantheistic vision he argues that man's highest good is his knowledge of his union with nature or intellectual love of God (amor Dei intellectualis). He died of a lung disease aggravated by the glass dust produced by lens grinding.

Springsteen, Bruce (Frederick Joseph) (1949– ). American composer, singer and instrumentalist, born in New Jersey. Guitarist, pianist and harmonica player, he worked in a diversity of genres, ranging from hard rock to heartland rock, gaining international fame with his albums Streets of Philadelphia (1994) and The Rising (2002), and his CD sales amounted to 200 million. He won 20 Grammy Awards and an Academy Award and toured constantly, appealing to devoted followers in very long concerts. He was a social activist and a strong *Obama supporter. He received the Presidential Medal of Freedom in 2016.

Spurgeon, Charles Haddon (1836–1892). English Baptist pastor. His preaching attracted vast congregations and the huge Metropolitan Tabernacle, seating 6000, was built to cope with these. (It burnt down in 1898.) He withdrew from the Baptist Union in 1887 on theological grounds. He was a prolific author, publishing weekly sermons.

Staël-Holstein, Anne Louise Germaine (née Necker, known as Madame de Staël) (1766–1817). French author, born in Paris. Daughter of the financier Jacques *Necker, she married (1785) Baron Erik Magnus Staal von Holstein (1749–1802), the Swedish Ambassador in Paris. She was regarded as the most intellectual and cultured woman of her time and her salons, both in Paris and later at her Swiss home at Coppet, were attended by many of her most brilliant contemporaries. Her efforts to attract *Napoleón Bonaparte (who disliked clever women) failed, they became bitter enemies and in 1803 he ordered her to leave Paris. She went to Germany and there met *Schiller, *Goethe and August von *Schlegel. A later visit resulted in De l'Allemagne (1810), which did much to introduce German Romanticism to France. It was suppressed by Napoléon. To escape his enmity she visited Vienna, Russia, Stockholm and England (where she was warmly welcomed). After the Emperor's downfall she again presided over salons in Paris and Coppet. Her literary career had opened (1788) with a panegyric of *Rousseau. In 1808) with Benjamin *Constant. Her self-portraits and relate to her long liaison (1794–

Stahl, Georg Ernst (1660–1734). German scientist. Son of a Protestant minister, and inclined to Pietist views himself, Stahl studied medicine at Jena and taught there from 1683 until he was appointed professor at Halle in 1693. From 1716 he was personal physician to *Friedrich I of Prussia. His medical writings stressed that living bodies possess some sort of soul, or life-source, which cannot be simply reduced to the total of the separate organs. This was at bottom a religious conception, but it harmonised with his chemical interest in gases and his concern with heat. In chemistry he developed the concept of phlogiston, a substance contained within combustible bodies and given up when burnt. In smelting metals, phlogiston was assumed to be transferred from the charcoal to the ore. The idea of phlogiston tied together the chemistry of combustion in the 18th century until *Lavoisier's rethinking of the subject, and the development of the concept of oxygen (taken out of the air on combustion).

Stålberg, Kaarlo Juho (1865–1952). Finnish politician and judge. He was a lawyer, judge, professor and a member of the Finnish Diet who drafted the republican constitution of 1917 when Finland seized its independence during the Russian Revolution. He became the first President of Finland 1919–25. In 1930 he was kidnapped by the pro-Fascist Lapua movement and lost the presidential elections of 1931 and 1937 by very narrow margins.

Stair, John Dalrymple, 1st Earl of (1648–1707). Scottish politician. His father was the first codifier of Scots law, and on his death (1695) he became 2nd Viscount Stair. Eminent as a lawyer, he was Advocate-General under *James II and *William III, whose cause he strongly supported. As Secretary of State at the time of the Massacre of Glencoe (1692) he was held chiefly responsible and was forced to resign. Later he played a part in preparing the Act of Union (1707) and securing its passage through the Scottish Parliament. On the morning after one of his most convincing speeches he was found dead.

Stakhanov, Aleksei Grigorevich (1905–1977). Russian miner. He worked in coal mines from 1927, and in 1935 achieved notoriety by cutting 12 tons of coal per shift (seven being the norm). He was praised by *Stalin who inaugurated the 'Stakhanovite movement', designed to raise production in Soviet industry.

Stalin (Dzhugashvili), Josef Vissarionovich (1879–1953). Russian (Georgian) Communist politician, born in Gori, Georgia. Son of a shoemaker, educated at the Tiflis (Tbilisi) Theological Seminary, he was expelled for ‘propagating Marxism’ to his fellow students. He joined the Russian Social Democratic Labour Party in 1898 and when the party split into factions in 1903 he became a Bolshevik organiser in the Caucasus, using the name ‘Koba’ (and sometimes

Stafford, Sir Edward William (1819–1901). New Zealand politician, born in Edinburgh. He became a large sheep owner in the Nelson settlement. As Prime Minister 1856–61, 1865–69 and 1872 he pursued an unpopular policy of centralisation, but was a capable administrator. He returned to England in 1874 and was knighted in 1879.
'Soso'). He was imprisoned and escaped five times 1903–12. He met *Lenin in 1905, attended Congresses in Stockholm (1906) and London (1907) and founded Pravda ('Truth') in 1911. Known as Stalin ('man of steel') from 1913, he led the Bolsheviks in the Duma (1913), wrote Marxism and the Nationalities and was exiled in Siberia 1913–17 until released by *Kerensky's Government. After Lenin's second 1917 Revolution, Stalin was a member of the Politburo of the Communist Party 1917–53, Commissar for Nationalities 1917–23 and for the Worker-Peasant Inspectorate 1919–23. His first wife Yekaterina Svanidze had died in 1907, leaving a son who died as a prisoner of war. He married Nadejda Sergeyena Alleluya in 1918 and she committed suicide in 1932. (His son Vassily, an airforce general, became an alcoholic. His daughter Svetlana, later Peters, left the USSR and became a US citizen.) His third wife, married in 1935, was Rosa Kaganovich. In the Civil War, Stalin was active in the defence of Tsarsyn (later renamed Stalingrad, now Volgograd) in 1918 but his success deepened the enmity of *Trotsky, Commissar for War. As General Secretary of the Communist Party of the Soviet Union (CPSU) 1922–53, he made this post the most powerful in the USSR. A dull speaker and even duller writer, he was persistently underrated by his rivals. When Lenin died (1924) Stalin soon eliminated his closest associates, the 'Old Bolsheviks'. He promoted the concept of 'socialism in one country', believing that the best way to ensure Communist supremacy was to build up the USSR's industrial base, in contrast to Trotsky's advocacy of the 'permanent revolution'. The 'Left Opposition' (Trotsky, *Zinoviev, *Kamenev) was removed in 1926–27 and the 'Right Opposition' (*Rykov, *Bukharin, Tomsky) by 1930. The first Five Year Plan was announced in 1928, involving the forced collectivisation of agriculture, elimination of the kulaks and industrialisation, followed by the second (1933) and third (1938) Plans. The 'Great Purges' of 1934–38 were provoked by the murder of S. M. *Kirov and a series of show trials were held 1936–38. Victims included Bukharin, Kamenev, Zinoviev and Rykov. Of Lenin's Politburo, only Stalin survived by 1938. His closest advisers were V. M. *Molotov and A. N. Poskrebyshev. Stalin executed 446 of 621 senior officers in the Red Army, including Marshal *Tukhachevsky. The Nazi-Soviet pact (August 1939), purely opportunistic, led directly to *Hitler's invasion of Poland and the outbreak of World War II. Stalin rejected warnings of Hitler's plans to invade the USSR. When 'Operation Barbarossa' began in June 1941, after a short hesitation, Stalin showed decisive leadership in the 'Great Patriotic War' and succeeded in identifying the CPSU with the cause of national survival. He was Premier of the USSR 1941–53, Commissar for Defence and Commander-in-Chief 1941–46, taking the titles of Marshal (1943) and Generalissimo (1945). He took a dominant role at the Teheran, Yalta and Potsdam Conferences. His strategic grasp and mastery of detail was admired by *Alanbrooke and Henry *Stimson. Since wartime deaths numbered about 22,000,000 and the Red Army had occupied Eastern Europe, he was in a strong position to force Allied agreement to the extension of Soviet control. The USSR declared war on Japan in August 1945. Stalin was dismissive of *Mao, regarding him primarily as a Chinese nationalist and urged him to work with *Chiang. By 1948 the Cold War was at its height. *Tito had left the Soviet bloc and cultural and scientific conformity were imposed by A. A. *Zhdanov and T. D. *Lysenko. Stalin claimed expertise in linguistics and the arts and was credited with having written works on Marxist theory and history which were distributed and translated by the million, but essentially unreadable. The USSR exploded its first atomic bomb in September 1949. Mao proclaimed the Chinese Peoples' Republic in October 1949 and two months later met Stalin in Moscow. Relations were uneasy at best, and the outbreak of the Korean War (June 1950), engineered by Stalin, was an unwelcome surprise for China which was blamed by the US. After a mild thaw in 1952, a new purge aimed at 'cosmopolitans' was imminent when Stalin died, having held absolute power for longer than any other ruler. His body was preserved next to Lenin's in Red Square. In 1956 at the 20th Party Congress, *Khrushchev attacked his character, operating methods, terrorism and cultivation of the 'cult of personality'. His body was removed from the Lenin Mausoleum in 1961.

With the opening up of Soviet archives and years of careful scholarship, it appears that Stalin was directly responsible for about 6 million civilian deaths from executions in purges, the liquidation of kulaks and the 'Great Terror', with 3 million more dying from starvation caused by his policies. These totals, while monstrous, are less than half of previous estimates. Nevertheless, Stalin preserved the USSR during World War II and played the central role in defeating Nazism.

Stambolijski, Aleksandur (1879–1923). Bulgarian politician. He founded the Agrarian party and dreamed of a Balkan federation that would be part of a ‘Green International’ unifying the peasants of all Eastern Europe. Imprisoned for opposing King *Ferdinand’s pro-German policy in World War I, he became Prime Minister on his abdication (1918). He lost popularity by favouring the country people at the expense of the towns and by compromising with Yugoslavia on the Macedonian question. His regime was overthrown, and he was assassinated.

Standish, Myles (c.1584–1656). American colonist. He came of a Lancashire family and had made a career as a soldier of fortune when he was hired by the Pilgrim Fathers to accompany them on the Mayflower (1620). His skill in handling the American Indians was indispensable to the safety of the colony in its
early years and he remained one of its most important members for the rest of his life. He is the subject of poems by *Longfellow and *Lowell.

**Stanhope, Lady Hester Lucy** (1776–1839). English traveller. Daughter of the 3rd Earl Stanhope, she kept house for her bachelor uncle, the younger *Pitt, for the last three years of his life, which included his second premiership (1804–06). In 1810 she startled her aristocratic friends by going to the Levant, where on the slopes of Mount Lebanon she lived the life of an Oriental princess, entertaining friends, dispensing charity, and influencing the neighbouring tribes. Her prodigality exhausted her fortune and her last years were spent in poverty.

**Stanhope, Philip** see Chesterfield, Philip Dormer Stanhope, 4th Earl of

**Stanislavsky, Konstantin** (Konstantin Sergeyevich Alekseyev) (1863–1938). Russian actor and producer. As co-founder of the Moscow Art Theatre (1898), which he directed until his death, he devised the famous 'method' in which actors are trained to develop their own conception of their roles and to analyse and express emotion in an entirely natural manner. Stage settings have to be realistic. After the Russian Revolution it was discovered that his 'method' was in exact accord with the doctrine of 'socialist realism'. As actor and producer, he was accorded the highest distinction, including the Order of Lenin (1937). His house is preserved as a museum and the street in which he lived named after him.

**Stanislaw I** see Leszczyński, Stanislaw

**Stanislaw II Augustus Poniatowski** (1732–1798). King of Poland 1764–95. The favourite of *Catherine the Great, she secured his election. He attempted reforms but after three partitions by Russia, Prussia and Austria (1772, 1793, 1795) his kingdom disappeared.

**Stanley, English noble family.** In 1485 Thomas Stanley (1435–1504) was created 1st Earl of Derby for the decisive contribution that he and his brother Sir William Stanley made to the victory of *Henry VII at the battle of Bosworth Field (1485). The sovereignty of the Isle of Man was held by the Stanley family from 1406 until it passed to the Dukes of Atholl in the 18th century. Among Stanleys prominent in politics were the 14th and 17th earls of *Derby.

**Stanley, Fiona Juliet** (1946– ). Australian paediatrician and epidemiologist, born in Sydney. Working in Perth, she became a specialist in maternal and child care, demonstrated the linkage between low levels of folic acid and spina bifida and became an effective advocate of public health measures, and the use of biostatistics in setting priorities.

**Stanley, Sir Henry Morton** (1841–1904). British explorer and journalist, born in Wales. An orphan (then known as John Rowlands), he ran away from the workhouse at the age of 15, sailed to America as a cabin boy and was adopted by a New Orleans merchant, whose name he assumed. After the Civil War (during which he served on both sides) he became a reporter and joined (1867) James Gordon *Bennett's *New York Herald. After assignments with Robert *Napier in Abyssinia, in Egypt (for the opening of the Suez Canal) and elsewhere in the East, he was sent (1869) to find David *Livingstone, then missing in Africa. The meeting, made historic by Stanley's casual greeting 'Dr Livingstone, I presume?', took place at Ujiji on Lake Tanganyika (27 Oct. 1871), but after exploring the lake together they parted company, Stanley returning to Zanzibar and England while Livingstone, now re-equipped and re-provisioned, remained. Publication of Stanley's book *How I Found Livingstone* (1872) caused him to be feted as a hero, and after an interlude with *Wolsey on the Ashanti campaign, he was jointly commissioned (1874) by the *New York Herald and the *London Daily Telegraph to make another African expedition, which succeeded in solving several geographical problems, including the exact course of the Congo. A book followed each of his exploits, e.g. *Through the Dark Continent* (1878). From 1879 he established on behalf of King *Leopold II of the Belgians the trading stations on the Congo that led to the foundation of the Congo Free State. On his last journey (1887–89) he overcame immense hardships to rescue *Emin Pasha, and discovered the Mountains of the Moon (Ruwenzori range). To complete an astonishing career he was a Unionist MP 1895–1900. He was awarded a GCB in 1899.

**Starling, Ernest Henry** (1866–1927). English scientist. Son of a barrister, Starling studied medicine at Guy's Hospital from 1882, qualifying MB in 1889. From 1887 he was demonstrator at Guy's and from 1890 was researching part-time with Schafer at University College, London. Working with William Maddock Bayliss, Starling pioneered the study of hormones, the chemical messengers of the body produced by the endocrine glands. He then moved on to research on the heart, being interested
in its response to stress in the body organism at large. Starling was a turbulent man of strong views. He campaigned for educational reform, demanding a larger place for science in the school curriculum and in national priorities. His contributions to physiology are amongst the most important of the early 20th century. Four times nominated for a Nobel Prize, he died in Jamaica on a cruise.

Stas, Jean Servais (1813–1891). Belgian chemist. He studied organic chemistry under Jean Baptiste André Dumas of Paris and later worked with him, he was professor of chemistry 1840–45 at the École Royale Militaire, Brussels. He greatly improved methods for determining atomic weight and obtained much more accurate values for the common elements.

Stauffenberg, Claus, Graf Schenk von (1907–1944). German soldier. From a Swabian aristocratic family, he served as an army officer and joined a conservative group which attempted to assassinate *Hitler in July 1944. He was immediately executed.

Stavisky, Serge Alexandre (1886–1934). French speculator, born in Kiev. He promoted a series of fraudulent companies and as the scale of his operations grew he cultivated government and municipal officials, involving many of them in his transactions. His final and most ambitious plan was to obtain control of the issue of bonds, secured by goods pledged with the municipal pawnshops, and soon a flood of worthless bonds began to circulate. Though alerted, the police delayed action until Stavisky had disappeared. When traced to a villa near Chamonix he committed suicide to avoid arrest. The scandal mounted as more and more well known people were suspected of being involved, demonstrations in Paris mounted as more and more well known people were suspected of being involved, demonstrations in Paris eventually led to the fall of the government and the scandal disappeared. When traced to a villa near Chamonix he committed suicide to avoid arrest. The scandal disappeared. When traced to a villa near Chamonix he committed suicide to avoid arrest. The scandal disappeared. Steele, Sir Richard (1672–1729). English essayist and dramatist, born in London. He was educated at Charterhouse and Oxford, joined the army, but soon took to writing. His first works were the plays *The Funeral (1702), The Lying Lovers (1703) and *The Tender Husband (1705). The second of these introduced ‘sentimental comedy’, which, in contrast with Restoration drama, treated lapses from virtue sentimentally rather than with ribaldry. He started (1709) the Tatler, on which he was soon joined by an old school friend. Joseph *Addison. It contained a mixture of news, social comment, essays etc., and was intended to elevate morals and manners as well to amuse. Steele himself wrote as ‘Isaac Bickerstaff’. When the Tatler was succeeded by the Spectator (1711–12) the two friends again collaborated; the famous character Sir Roger de Coverley was invented by Steele and developed by Addison. Later, however, they became estranged by political quarrels. Steele’s association with other papers never achieved the same success. He was a vigorous supporter of *George I’s succession, became a Whig MP (1714) and was knighted (1715). Soon after his last comedy The Conscious Lovers (1722) was produced, he left London and died in Wales.

Steen, Jan (c.1626–1679). Dutch painter, born at Leyden. One of the liveliest and most prolific of Dutch genre painters, nearly 900 works surviving, his works show a mastery of movement in group scenes, with humour and attention to detail, e.g. *Skittle Players (1660, National Gallery London) and The Poultry Yard (1662, Amsterdam). His satire e.g. *The Lovesick Maiden, is gentle, and the colour of such pictures as *The Late Player (Wallace Collection London) is of rare delicacy.

Steer, (Philip) Wilson (1860–1942). English painter. After studying in London and Paris he was, with *Sickert, a founder of the New English Art Club. In 1893 he became a teacher at the Slade School. In his early landscapes, e.g. *The Beach of Walberswick (1890), now in the Tate Gallery, London, he was influenced by *Whistler. Later he adhered more closely to the traditions of *Gainsborough and *Constable, using Impressionist techniques (especially those of *Monet) though he was not a true Impressionist since he did not paint directly from nature. From c.1900 some of his paintings recall *Boucher in his rococo period, in others, e.g. *The Muslin Dress (1910), the exactitude of detail recalls the pre-Raphaelites. The watercolour revival (from c.1918) owed much to Steer’s example. He was awarded the OM in 1931.

Stefan, Joseph (1835–1893). Austrian physicist. His most important work was on radiation, the kinetic theory and hydrodynamics. While professor of physics at Vienna University he discovered the fundamental law of radiation, known as Stefan’s Law: that the rate of radiation of energy from a black body is proportional to the fourth power of its absolute temperature. He was a precursor of *Planck.

Stefansson, Vilhjalmur (1879–1962). American anthropologist and explorer, born in Canada of Icelandic parentage. He studied Eskimo life and habits (1908–12) and wrote My Life with the Eskimo (1913). Later he did valuable exploratory work in the Arctic and discovered several new islands. He made two attempts to resist a Russian claim to Wrangel Island by planting the Union Jack (1914...
and on behalf of Canada 1921–22) but the Soviet Government secured recognition of their sovereignty in 1924. His other books include Unsolved Mysteries of the Arctic (1939) and an autobiography, Discovery (1964).

Stein, St Edith (Teresa Benedictine of the Cross) (1891–1942). German-Jewish philosopher and martyr, born in Breslau. She rejected her Jewish faith in 1904, became an atheist, and studied philosophy at Göttingen with Husserl, winning a PhD in 1916. She became a Catholic convert in 1921, joined the Carmelites, wrote an important study on St John of the Cross and was murdered at the Auschwitz concentration camp. She was canonised in 1998.

Stein, Gertrude (1874–1946). American author, born in Pennsylvania. After studying psychology under James and medicine at Johns Hopkins, she lived in Paris from 1905, first with her brother Leo Stein, an art critic, and from 1912 with her lover Alice B. Toklas (1877–1967). The main elements in her poetic work include free association and repetition, as in her famous line ‘A rose is a rose is a rose’. Her works include Three Lives (1909), Tender Buttons (1914, poetry), The Autobiography of Alice B. Toklas (1933), Portraits and Prayers (1939, art criticism), and Everybody’s Autobiography (1937). She had much influence on modern art movements as well as on literature.

Stein, Karl, Baron von (1757–1831). German political reformer. His outspoken criticism of the backward political system caused his dismissal (1807) from the Prussian civil service, but he was soon recalled as Chief Minister by Friedrich Wilhelm III in the hope of reviving the country after Napoleon’s victories. He was unable to secure acceptance of representative government but he managed to introduce municipal self-government and abolish serfdom (1807–08). Eventually his opponents, now including the king, forced him to flee and in 1812 he entered Russian service. Tsar Aleksandr I sent him to administer East Prussia and to organise resistance to Napoleon but, still unable to carry out reforms, he withdrew into private life (1813).

Steinbeck, John Ernest (1902–1968). American novelist, born in California. He first gained notice with the novel Tortilla Flat (1935), portraying the lives of Spanish Californian peasants. His masterpiece, The Grapes of Wrath (1939) is the story of a typical family of poor farmers in the dust bowl of Oklahoma. In its graphic depiction of human dignity in the face of adversity, it exposed exploitation, hardship and social inequity, and led to reforms, while winning for its author the 1940 Pulitzer Prize. Other works include Of Mice and Men (1937), The Moon is Down (1942), Cannery Row (1943) and The Wayward Bus (1947). He received the Nobel Prize for Literature (1962).

Steinberg, Saul (1914–1999). American graphic artist, born in Romania. Trained as an architect in Milan, he lived in the US from 1942 and won fame with his ingenious, penetrating, amusing and deeply disturbing illustrations for the New Yorker. He held many one-man exhibitions and his works were often reproduced, e.g. the world view from a New York perspective. His published collections included All In Line (1945), The Passport (1954), The Labyrinth (1960), The Inspector (1973), The Discovery of America (1992).

Bair, D., Saul Steinberg. 2012.

Steinem, Gloria (Marie) (1934– ). American feminist writer, born in Ohio. She worked as a journalist in New York, founded Ms. magazine in 1972, and was a prolific author whose books include Outrageous Acts and Everyday Rebellions (1983).

Steiner, Rudolf (1861–1925). German anthroposophist. First known as editor (1890–97) of Goethe’s works on natural science, he was a prominent theosophist until he evolved a system of his own known as ‘anthroposophy’, to develop which he opened (1912) a school (the Goetheanum) near Basle in Switzerland. The system aimed at a restoration of human contact with spiritual reality, lost since the days of myth-making. The fields in which his aims were particularly applicable were medicine, agriculture and education. The special schools his followers set up were often successful, where other educational methods had failed, in preserving the spiritual essence of the subjects taught.

Steinmetz, Charles Proteus (1865–1923). American electrical engineer, born in Breslau. He suffered from dwarfism, hip dysplasia and kyphosis and left
his native Germany to avoid arrest for his activity as a socialist (1888). He became chief engineer for the General Electric (GE) Company 1893–1923 and was professor of electrical engineering 1902–13 and electrophysics 1913–23 at Union College, Schenectady, New York State. He was a major figure in the development of alternating current (AC) for generation and transmission, following *Tesla and *Westinghouse in preference to direct current (DC), advocated by *Edison. Of his many contributions to electrical engineering the most important are his law of magnetic hysteresis, his notation for alternating-current circuits and his development of lightning arrestors for power transmission lines. He invented the metal halide lamp (1912), an electric car (1914) and flood lighting for sporting events.

Steinway, Heinrich Engelhard (originally H. E. Steinweg) (1797–1871). German piano manufacturer. He founded a factory in Brunswick but in 1851, leaving a son to run the German firm, he went to the US to establish a new factory, where pianos were manufactured under the name of Steinway.

Stendhal (penname of Marie-Henri Beyle) (1783–1842). French novelist, born in Grenoble. He served as an administrator in the Napoléonic army in Italy, Germany and Russia, wrote travel sketches, books on the arts etc. and began his psychological analysis of love, *De l’Amour (1822). He spent many years in Italy or in travel. After the revolution of 1830 he was appointed French consul in Trieste 1830–31 and Civitá Vecchia 1831–36. In 1830 he published the first of two masterpieces, *Le Rouge et le noir, a remarkable picture of his times (the ‘red’ being the political upheaval of 1830), and a penetrating analysis of the character, successes and downfall of its hero, Julien Sorel. His second great novel, *La Chartreuse de Parme (1839), amid a magnificent medley of politics, diplomacy, plots and counterplots, contains a vivid impression of the Battle of Waterloo, and of life in a small Italian state. After years of illness, he collapsed and died in Paris. His posthumously published works include the unfinished novel *Lucien Leuwen (1894). Stendhal was little recognised before 1880, but from then his vogue steadily increased. He anticipated both the realism and the psychological approach of modern novelists. ‘Stendhal’s syndrome’ is a term applied to an overpowering reaction, such as palpitations or fainting, caused by exposure to great art or natural beauty, experienced and described by Stendhal during a visit to Florence in 1817.

Stephen (c.1100–1154). King of England 1135–54. Born in Blois, son of the Count of Blois and of Adela, daughter of *William the Conqueror. When *Henry I’s heir, William, drowned in the White Ship (1120), Stephen became a likely heir to the throne. He was elected king when Henry died (1135) despite having sworn fealty to Henry’s daughter *Matilda. Most of his reign was marked by civil war. For a short time in 1141 he was Matilda’s prisoner. After the death of his son (1152) a compromise was reached and he acknowledged Matilda’s son, the future *Henry II, as heir to the throne. He was a weak man, unable to control the barons upon whose support he relied.

Davies, R. H. C., King Stephen. 1967.

Stephen, St (Stephanos: ‘crown’ in Greek) (d.367 CE). Christian martyr: the first (Acts vi). Condemned by the Sanhedrin for his unorthodox doctrine; he was stoned to death in the presence of *Paul (who had not yet been converted). St Stephen’s day is 26 December.

Stephen, St (István) (c.977–1038). First king of Hungary 1000–38. He came from the princely Arpad family and adopted the name of Stephen when he was baptised. After overcoming rival leaders he was recognised as king by Pope Sylvester II. With this prestige he united and converted the whole country, which he divided into counties and bishoprics. He was revered for his saintly life and was canonised in 1083. His feast day is 2 August.

Stephen, Sir Leslie (1832–1904). English author and critic. On becoming an agnostic he gave up his position as a Cambridge don and went to London (1864) to lead a literary life. He contributed to many journals, editor of the *Cornhill Magazine 1871–82 and of the Dictionary of National Biography 1885–91, a field in which his lives of *Johnson (1878), *Pope (1880), *Swift (1882) etc. had shown his preeminence. Meanwhile he had also written his History of English Thought in the Eighteenth Century (1876). His main hobby was alpine climbing about which he wrote several books. His first wife was a daughter of *Thackeray, his daughters by his second wife were Vanessa Bell (Clive *Bell) and Virginia *Woolf.

Stephen, Alexander Hamilton (1812–1883). American politician, born in Georgia. Small and sickly (sometimes called ‘the little pale star of Georgia’), he became a lawyer and a Whig Member of the House of Representatives 1843–59. Although he supported slavery, he strongly opposed Georgia’s secession from the US and the creation of the
Confederacy. Nevertheless he served as Vice President of the Confederate States 1861–65, offering critical support to Jefferson *Davis's conduct of the war. He took an important role in the peace negotiations. He wrote Constitutional View of the Late War between the States (1868–70), returned to Congress 1873–82 and was Governor of Georgia when he died.

**Stephens, James** (1882–1950). Irish writer, born in Dublin. He became known by *The Crock of Gold* (1912), *The Demi-Gods* (1914) and other prose fantasies in which fairies and mortals (e.g. policemen) meet on natural and familiar terms; the author's rhythmic style and happy use of Irish idiom adding a special charm. His collected poems appeared in 1921. Other books include *Deirdre* (1923) and *Etched in Moonlight* (1928).

**Stephenson, George** (1781–1848). English engineer. He started work in a colliery at the age of seven. As a young man he devised several improvements to pumping machines and in his spare time taught himself engineering and mathematics. He won a prize of £1,000 for inventing a miner's safety lamp (1815) and became involved in a controversy with Humphry Davy who had independently invented a similar lamp. A year earlier he had built his first colliery locomotive. He constructed (1825) the first public railway between Stockton and Darlington, Durham (on which, however, horses were still used for passenger trains). He surveyed and constructed the 28 mile (45 km) railway line between Manchester and Liverpool, which was opened in 1830. His engine *The Rocket* won (1829) a prize of £500 for maintaining an average speed of 29 mph (46.6 kph). At his works at Newcastle, managed from 1827 by his son, Robert Stephenson (1803–1859), most of the notable locomotives for the next generation were made, and the two constructed many other railway lines in England and Scotland. Robert subsequently became famous as a bridge builder, his works including the well known suspension bridges over the Menai Straits and at Conway in North Wales, as well as the Victoria Bridge over the St Lawrence at Montréal.

**Stern, Isaac** (1920–2001). American violinist, born in the Ukraine. His family moved to San Francisco in 1921. He toured internationally from 1947, and made many recordings and some films. He was identified with non-musical causes e.g. conservation and peace.

**Sterne, Laurence** (1713–1768). English novelist, born in Ireland. His great-grandfather was an archbishop of York, his father was a brave but erratic ensign in the army. Sterne's childhood was spent in camps and billets. At 17 when his father died, he was left penniless. However, with a cousin's help he went to Jesus College, Cambridge and in 1737 entered the Church. In 1737 he began his highly elaborate courtship of Elizabeth Lumley, even a handkerchief or a plate she had used called for a display of sensitivity, and through his letters he introduced the word 'sentimental' to her and to the world. They were married in 1741, but the marriage soon faltered. Elizabeth became cantankerous and even, at times, insane. This gave Sterne freedom to pay frequent visits to 'Crazy Castle', the home of an eccentric Cambridge friend, John Hall-Stevenson, where he found Rabelaisian conversation, much wine and a library filled with rare (often obscene) books. Stimulated by such influences and by an eager flirtation with Mademoiselle Fourmantelle (the 'dear, dear Jenny' of his forthcoming masterpiece), he started writing *The Life and Opinions of Tristram Shandy*, an extraordinary medley of reminiscence and opinion, narrative and digression, in which Walter Shandy (Tristram's father and obviously modelled on Sterne's father), 'my uncle Toby', and Corporal Trim play the leading roles. The first two books, published in York at his own expense, appeared in 1759 and were immediately acclaimed. Sterne went to London and was lionised by Lord *Chesterfield, *Garrick and others. His portrait was painted by *Reynolds and more volumes were commissioned (volumes 3–6, 1761–62, volumes 7 and 8, 1765, volume 9, 1767). Success and dissipation exacerbated Sterne's normal ill-health. He lived in Toulouse 1762–63 and in Paris was welcomed by *Diderot and others and joined by his wife and daughter. A tour of France and Italy, begun in 1764, provided material for *A Sentimental Journey* (1768), the other work by which he is remembered. He died during a visit to London to supervise the publication of Volume 9 of *Tristram Shandy*. Its importance was recognised at once, being praised by *Voltaire, *Diderot, *Burns, *Goethe and *Pushkin and later (surprisingly) by Karl *Marx. Samuel *Johnson was a notable dissenter and predicted, 'It will not last.' Among writers deeply influenced by *Tristram Shandy* have been *Pushkin, *Gogol, *Tolstoy, *Thackeray, James *Joyce, Flann *O'Brien, Machado *de Assis, Spike *Milligan, Italo *Calvino, Thomas *Pynchon, Salman *Rushdie. *Tristram Shandy: A Cock and Bull Story* (2005), a half-feature film/half-documentary, directed by Michael Winterbottom, about the impossibility of filming the novel, is available on DVD and is an excellent introduction to Sterne's masterpiece.

Stevens, Thaddeus (1792–1868). American Republican politician, born in Vermont. A lawyer, as a US Congressman from Pennsylvania 1849–53, 1859–68, he developed a detestation of slavery. After the Civil War he was the leader of the Radical Republicans who demanded harsh retribution towards the southern whites. He was the driving force behind the impeachment of President Andrew *Johnson, who tried, however ineffectively, to carry out *Lincoln's plans for reconciliation. Disappointment over Johnson's acquittal may have hastened Stevens' own death.

Stevens, Wallace (1879–1955). American poet, born in Pennsylvania. He worked for the Hartford Accident and Indemnity Company from 1916 and was its Vice President 1934–55. His first book, *Harmonium (1923), was followed by a number of volumes, e.g. *Ideas of Order (1935) and *The Man with the Blue Guitar (1937). *The Necessary Angel (1951) is a volume of essays. In his poems Stevens uses the techniques of Impressionism and Symbolism to explore the creative imagination and aesthetics at a time when belief was in decline. His *Collected Poems (1954) won him the National Book Award (his second) and the Pulitzer Prize in 1955.

Stevenson, Adlai E(wing) (1900–1965). American politician, born in Los Angeles. His grandfather *Adlai E Kermode, F., *Wallace Stevens (1879–1955) was a *Cleveland's Vice President 1893–97. Educated at Princeton, Harvard and Northwestern, he practised law in Chicago from 1926. After 1933 he served in Washington as legal assistant in several New Deal agencies and during World War II was Assistant Secretary of the Navy 1941–44 and Assistant Secretary of State 1944–45. As Governor of Illinois 1949–53 he carried out many reforms. After *Truman decided to retire in 1952, he promoted Stevenson as Democratic presidential candidate. Although reluctant to run (he would have preferred 1956 or 1960), Stevenson won nomination over Estes *Kefauver and *Richard Russell, losing to *Eisenhower in the November election, with 44 per cent of the vote. Democratic nominee again in 1956 (although *Truman switched his support to *Harriman), he went on to a second defeat by Eisenhower, with only 42 per cent of the vote. His campaign speeches were published under the titles *Call to Greatness (1954) and *What I Think (1956). He was attacked as an ‘egghead’ at a deeply anti-intellectual period in US history. President *Kennedy appointed him Ambassador to the United Nations, an office he retained under President *Johnson (1961–65). Known for his liberal outlook and high intellectual integrity, he collapsed and died in the street in London. His son *Adlai E(wing) Stevenson III (1930– ) was US Senator from Illinois 1970–81.

Stevenson, Robert (1772–1850). Scottish engineer. He succeeded his stepfather (1796) as first engineer to the Northern Lighthouse Commission and during his 47 years of office constructed 23 lighthouses round the Scottish coasts, including the famous Bell Rock (1807). He also invented the system of intermittently flashing lights which enable a particular lighthouse to be identified. He was the grandfather of Robert Louis *Stevenson.

Stevenson, Robert Louis (Balfour) (1850–1894). Scottish novelist, essayist and poet, born in Edinburgh. He suffered from tuberculosis as a child, studied engineering and then law, but abandoned both for writing. On a canal tour in France and Belgium, which provided the subject of his first book, *An Inland Voyage (1878), he met *Mrs Fanny Osbourne (née Van de Grift) (1840–1914), they married in California (1880), and her son, *Lloyd Osbourne (1868–1947), was later his companion and collaborator. Meanwhile *Travels with a Donkey in the Cevennes (1879) had recalled another journey. Before embarking on the novels that made him famous he had written the essays collected as *Virginius Puerisque (1881) and *Familiar Studies of Men and Books (1882), as well as the tales of fantasy in *The New Arabian Nights (1882). In 1881 he started *Treasure Island (1883), the first and most famous of his series of exciting and imaginative adventure stories, which combined Scott's historical method with the clarity and brevity of his own distinctive style. This was followed by *Kidnapped (1886), *The Black Arrow (1888), *The Master of Ballantrae (1889) and *Catriona (1893). Another immensely popular work was *The Strange Case of Dr Jekyll and Mr Hyde (1886), in which the conflict of good and evil in a man's nature is symbolically treated in a macabre and exciting tale. Stevenson undertook a tour of the South Seas (1889) for the sake of his health and settled in Samoa with his wife and stepson. Given the title of *Tusitala ('teller of tales'), he died there of a cerebral haemorrhage. Three of his last books, *The Wrong Box (1889), *The Wrecker (1892) and *The Ebb Tide (1894), were written in collaboration with Lloyd Osbourne; *St Ives (1897), completed by Arthur *Quiller-Couch) and *Weir of Hermiston (1896), a masterpiece, were left unfinished. The best remembered of his poems are contained in *A Child's Garden of Verses (1885).

Stevin (Stevinus), Simon (1548–1620). Flemish mathematician, born at Bruges. He studied law at Leyden University. He contributed to the development of algebraic notation and of decimals and put forward (1586) the law of equilibrium of a body on an inclined plane and a partial statement of the parallelogram of forces, disproving the concept of perpetual motion. He pioneered the science of...

Stikker, Dirk Uipko (1897–1979). Dutch politician and banker. He helped to finance the Resistance movement in World War II. He revived (1946) the liberal Freedom party, was Foreign Secretary in the coalition of 1948–52, Ambassador to Great Britain 1952–58 and Secretary-General of NATO 1961–64.

Stilicho, Flavius (c.365–408). Roman soldier. He was appointed by the emperor *Theodosius I (whose niece he had married) to be guardian of his son and successor Honorius. For several years, in the east, in Greece, Africa and Italy he held back the waves of barbarians who were engulfing the empire. Some of his most spectacular victories were gained (401–03) in northern Italy against *Alaric, leader of the Visigoths. Stilicho was suspected of aspiring to become Emperor himself. He was killed in a military revolt. Shortly afterwards, Alaric’s army reached Rome.

Stilwell, Joseph Warren (1883–1946). American soldier. He became known as an authority on China, where he was military attaché in the years preceding World War II. As deputy to *Chiang Kai-shek, he commanded a Chinese-American force in Burma which acted in cooperation with the forces based on India against the Japanese. He became (1945) Deputy Supreme Commander of Allied Forces in Southeast Asia. No orthodox soldier, he was difficult to work with, hence his nickname ‘Vinegar Joe’ but of his courage and ability there is no doubt.

Stimson, Henry Lewis (1867–1950). American lawyer and administrator. A Republican, he twice served as US Secretary of War, first under *Taft 1911–13, and during World War II 1940–45 under Franklin D. *Roosevelt and *Truman. He was Governor-General of the Philippines 1927–29 and, with, hence his nickname ‘Vinegar Joe’ but of his courage and ability there is no doubt.

Stinnes, Hugo (1870–1924). German industrialist. He inherited a large concern he built up into a vast industrial empire, which made him an almost symbolic representative of acquisitive man. To river transport, coal mining and distribution he added shipping and shipbuilding, electricity, oil, motor cars and newspapers, his tentacles spread into almost every trade and industry. In 1920 he became a member of the Reichstag.

Stockhausen, Karlheinz (1928–2007). German composer. He studied under *Messiaen and was part of the Musique Concrète group in Paris, experimenting with compositions based on electronic sounds.
He wrote choral, orchestral and instrumental works, sometimes combining electronic with normal sonorities, and avant garde piano compositions.

Stokes, Sir George Gabriel, 1st Baronet (1819–1903). British mathematician and physicist, born in Sligo. After graduating with the highest honours at Cambridge University he became Lucasian professor of mathematics 1849–1903. Elected (1851) a fellow of the Royal Society, he was its president 1885–90. He won the Rumford Medal (1853) and the Copley Medal (1893). He was a Tory MP for Cambridge 1887–92 and he played a major part in the development of hydrodynamics and aerodynamics. His contributions to optics were also important, e.g. his work on spectrum analysis (1852) and his explanation of fluorescence and phosphorescence (1878).

Wilson, David B., Kelvin & Stokes. 1987.

Stolypin, Pyotr Arkadievich (1862–1911). Russian lawyer and politician. As a conservative Prime Minister 1906–11, he endeavoured to keep the Duma in being as an adjunct of government, under strict control, but not to suppress it. He combated revolutionary movements by severe repression accompanied by measures of social reform. He introduced changes in land tenure aimed at turning the peasants into satisfied and loyal small land holders, but these reforms, partly achieved, came too late to check the growing unrest. He opposed *Rasputin, whom he sent briefly into exile in 1911 and was murdered by a secret agent.

Stopes, Marie Charlotte Carmichael (1880–1958). English pioneer of women’s rights. As the first female science lecturer, on palaeobotany, at Manchester University (1904), she developed a passionate interest in eugenics and birth control, on which she wrote several books, e.g. Married Love (1918) which broke new and unconventional ground. She founded the first birth control clinic in Britain (1921), a step that inspired similar clinics in other countries. She also wrote poetry and was deeply interested in drama.

Hall, R., Marie Stopes. 1977.

Stoppard, Sir Tom (Tomáš Strausser) (1937–). English playwright, born in Czechoslovakia. He escaped with his parents in 1939, first to Singapore and India, settling in England in 1946. He left school at 17, and became a journalist. His first stage play was Rosencrantz and Guildenstern are Dead (1967). Later successes include Jumpers (1972), Travesties (1974), Undiscovered Country (1980), Habgood (1988) and Arcadia (1993). He also wrote radio and television plays. His humour is based on juggling with philosophical concepts and on brilliant word play. He received the OM in 2000. The Coast of Utopia (2002), is a trilogy (Voyage, Shipwreck, Salvage) about *Bakunin and *Herzen.

Stout, Rex Todhunter (1886–1975). American author. After a varied career he made enough money to retire from business in 1929 and devoted himself to writing. He created the fictional detective Nero Wolfe (loosely based on Mycroft Holmes).

Stow, John (c.1525–1605). English chronicler and antiquarian. As well as doing original work he translated and summarised much of the work of earlier chroniclers. He is best known for A Survey of London (1598–1603), which gives valuable information about Elizabethan London and the customs and lives of its inhabitants.

Stowe, Harriet Elizabeth Beecher (1811–1896). American author. Sister of Henry Ward *Beecher, the preacher, she is remembered almost solely for her famous anti-slavery novel, Uncle Tom’s Cabin (1851–52). In the years before the Civil War this book did much to solidify the movement in the north against slavery.

Strabo (= squint-eyed) (64 BCE–25 CE). Greek geographer, born in Amasia, Asia Minor. Of wealthy parents, he was Greek by language and culture but studied in Rome, specialising in geography, and became
a convert to Stoicism. He travelled quite extensively, going up the Nile as far as Aswan and exploring the Ethiopian frontier. The only work of Strabo’s that has survived is his Geographica. This was compiled more from reading than from personal observation, though he had travelled extensively as far east as Armenia and as far south as Ethiopia. Most of his sources were Greek and have been lost. He attempted a complete geography, which would tackle the questions of the globe from the mathematical, physical, topographical and political points of view. Strabo saw the known world as a single landmass comprising Africa, Asia and Europe, entirely north of the Equator, though he speculated on the existence of one or more southern continents. He thought the known world was about 11,000 km long, from East to West, and 5,000 km from North to South. He saw the Middle Territories of the Mediterranean as the cradle of civilisation. His detailed accounts of Spain, Asia Minor and Egypt are of high quality, other parts he knew less well. Strabo showed none of the political and religious ideals of his colleagues. He had an opportunity of putting into practice his plans for strong, honest, efficient government when he was appointed President of the Council of the North (1628) and still more so when, as Lord Deputy in Ireland 1633–40, he demonstrated the method of government he himself described as ‘thorough’. If Charles I (who had made him Earl of Strafford in 1639) had followed his advice to bring troops from Ireland and overcome his Scottish and English opponents by force, history might have taken a different course, but Charles procrastinated. When at last the Scottish war forced him to call what became the Long Parliament, Strafford was impeached unsuccessfully. An Act of Attainder was passed by both Houses. Partly to divert hostility from the queen, Charles finally gave the royal assent. His betrayal of Strafford haunted him throughout the coming years until he suffered similar execution.

Strange, Lord, Ferdinando Stanley, later 5th Earl of Derby (1559–1594). English nobleman, patron and poet. Through his mother, he was in the line of succession to Elizabeth I. A patron of Spenser, Marlowe and Shakespeare, he promoted a theatre troupe, ‘Lord Strange’s Men’, later ‘The Lord Chamberlain’s Men’, later still ‘The King’s Men’, and was a singer and (probably) poet. He died mysteriously, probably by poison.

Strasser, Gregor (1892–1934). German Nazi politician. A prosperous pharmacist, he joined the Nazis in 1921, led the radical wing of the party in Berlin from 1926, and was regarded as a rival to Hitler until his murder in the ‘Night of the Long Knives’ (*Rohm).

Stratford de Redcliffe, Stratford Canning, 1st Viscount (1786–1880). English diplomat. First cousin of George *Canning, most of his career was spent in Constantinople. He was First Secretary in the Embassy to the Ottoman Empire 1808–10 and Minister Plenipotentiary 1810–58. During his last period (from 1841), he exercised a very powerful influence over the Sultan’s foreign policy. He aimed to secure Turkey’s independence of Russia without war, and though he failed to avert the Crimean War he obtained enough external support for Turkey to ensure Russia’s defeat. He was also largely responsible for many internal reforms. Throughout his career he acted as a proconsul almost entirely independently of the British Government.

Strathcona and Mount Royal, Donald Alexander Smith, 1st Baron (1820–1914). Canadian administrator, born in Scotland. He rose from clerk to Governor of the Hudson Bay Company 1838–99 but his name is chiefly associated with the construction of the Canadian Pacific Railway, the first to cross the country from coast to coast. He endowed McGill

Strachey, (Giles) Lytton (1880–1932). English biographer. Educated at Trinity College, Cambridge, and one of the ‘Bloomsbury’ group, his Eminent Victorians (1918), in which with brilliant satire he amusingly, but often unfairly, dissected the lives and characters of some of the great figures in 19th-century history, created a literary sensation and started a fashion for ‘debunking’. His other works include Queen Victoria (1921), Elizabeth and Essex (1928) and Portraits in Miniature (1931). Although homosexual, from 1917 he shared a house with the painter Dora Carrington (1894–1932) who loved him. Their lives were dramatised in the film Carrington (1995).

Holroyd, M., Lytton Strachey. 1968.

Stradivari (Stradivarius), Antonio (1644–1737). Italian violin maker. The best known member of a family from Cremona, a pupil of Nicolo Amati, he brought violin-making to its highest point of perfection. In later life he was helped by his sons, Francesco Stradivari (1671–1743) and Omobono Stradivari (1679–1742).

Stratford, Thomas Wentworth, 1st Earl of (1593–1641). English administrator. A member of a rich and distinguished Yorkshire family, he entered parliament in 1614 and became an opponent of Buckingham and the court party and supported the Petition of Right (1628). His opposition to the royal government was based on the grounds of inefficiency and petty illegality and he showed none of the political and religious ideals
University and raised and equipped Strathcona’s Horse for service in the Boer War. He was High Commissioner in London 1896–1914 and became the first Canadian peer (1897).

**Strato of Lampsacus** (d.c.271/268 BCE). Greek philosopher, born on the Asian coast of the Hellespont. He moved to Athens to study at *Aristotle’s school under *Theophrastus. After spending some time in Alexandria as tutor to the future Ptolemy II, Strato returned to Athens to lead the Lyceum on the death of Theophrastus, a position he occupied between 287 and the time of his death about 268. None of Strato’s writings has survived, but much is known about them from accounts by other authors. He set himself the task of teaching Aristotelian doctrine, and he seems throughout his life to have been an orthodox follower of the philosopher. But he was also concerned to shape an interpretation of Aristotle in a particular direction, that is, to stress the purely naturalistic elements in Aristotle’s thought. He stripped Aristotelianism of its religious and transcendental elements, and emphasised material causality. Strato thus underlined the difference between Aristotle’s naturalism and *Plato’s idealist views. He saw causality and force residing in natural objects themselves, rather than guiding them from above. He had no place for Aristotle’s ‘quintessence’, preferring to see phenomena as the product of the mingling of the four elements, earth, air, fire and water. Strato was consistent in his discussion of man. He denied an immaterial soul. He thought intellect resided in the brain, and communicated itself to other parts of the body by some sort of ‘air’. He was one of the most distinguished disciples of Aristotle, and of great influence in the ancient and medieval world.

**Strauss, Oscar** (1870–1954). Austrian composer. He won fame by his Viennese operettas, especially *Waltz Dream* (1907) and *The Chocolate Soldier* (1908), based on *Shaw’s Arms and the Man.*

**Strauss, David Friedrich** (1808–1874). German biblical critic. In his most celebrated work, *The Life of Jesus* (2 volumes, 1835–36, translated by George *Eliot, 1846*), he applied the methods of literary criticism to the Gospels in an attempt to sift historical truth from what he held to be myth. This departure in biblical criticism was greeted with such hostility that his whole life was embittered and his academic career destroyed.

**Strauss, Franz-Josef** (1915–1988). German politician, born in Munich. Already prominent in Bavarian politics, he entered the Federal Bundestag in 1949. There, as leader of the Christian Social Union (the Bavarian counterpart of the Christian Democrats), he soon became prominent as *Adenauer’s Minister of Defence 1956–62.* His arbitrary arrests (for alleged revelation of military secrets) of the proprietor and editorial staff of *Der Spiegel* (1962) forced his resignation, but he kept his popularity in Bavaria and with his party. He returned as Finance Minister 1966–69, served as minister-president (i.e. premier) of Bavaria 1978–88, and was the unsuccessful candidate of the CDU-CSU Coalition for Chancellor (1980).

**Strauss, Johann** (1825–1899). Austrian composer, born in Vienna. His father, *Johann Strauss the elder* (1804–1849), also wrote waltzes but is best known for his famous *Radetzky March* (1848). The younger Johann Strauss wrote over 400 waltzes, including *The Emperor, Voices of Spring, Tales from the Vienna Woods* and, most popular of all, *The Blue Danube* (1867). In later life he wrote 16 operettas of which the best known is *Die Fledermaus* (*The Bat*, 1874). These works, like the waltzes, display the composer’s melodic spontaneity and verve, his sense of style and skill in orchestration. His brother *Josef Strauss* (1827–1870), a composer, was also a poet, painter and inventor. His works include *Music of the Spheres, Delirium,* and *Village Swallows.*

**Strauss, Richard** (Georg) (1864–1949). German composer and conductor, born in Munich. Son of *Franz-Josef Strauss* (1822–1905), a virtuoso horn player who married into a brewing family, he was no relation to Johann *Strauss. Largely self-taught as a composer, his first major work was the Horn Concerto No. 1 (1882, No. 2 dates from 1942). As a protégé of Hans von *Bulow, he gained conducting experience (1885–96) at opera houses in Meiningen, Munich and Weimar, becoming Chief Conductor at the Munich Opera (1896–98) and the Berlin Royal Court Opera (1898–1910) and joint Director of the Vienna State Opera (1919–24). Influenced by *Liszt and Wagner, he wrote a series of dramatic symphonic poems, e.g. Macbeth (1888, revised 1891), Don Juan (1889), Tod und Verklärung (1889), Till Eulenspiegel (1895), Also sprach Zarathustra (1896), Don Quixote (1897) and Ein Heldenleben (1898). While in his 30s he was recognised as the greatest German composer since Wagner and *Brahms.* He wrote almost 200 songs (many of his best in the 1890s), and a monologue for speaker and piano, *Enoch Arden* (1897, after *Tennyson). Strauss wrote 15 operas, and they include his finest music. *Salome* (1905), based on *Wilde’s play, was attacked as lurid, salacious and blasphemous, but this only aided its success. *Elektra* (1909), which Hugo von *Hofmannsthals adapted from his own play, was denounced for its polytonality and extreme modernity. His masterpiece *Der Rosenkavalier* (1911–1911), a neoclassical comedy of manners, with libretto by Hofmannsthal, set in Vienna of 1740, paid obvious homage to *Mozart.* It premiered in Dresden in January 1911. His other operas include *Ariadne auf Naxos* (1912), *Die ägyptische Helena* (1928) and *Arabella* (1933), all with Hofmannsthal’s dialogue, and *Capriccio* (1941). In the 1930s Strauss’s creative powers waned and he unwisely accepted an appointment as President of the Reich Music Chamber under *Hitler* (1933),
however, he was able to protect Jewish relatives by marriage. During 1942–48 he experienced a remarkable 'Indian summer': works of his last period include *Metamorphosen* (for 23 strings, 1945), an oboe concerto (1945) and the *Four Last Songs* (1948). Strauss was in *Ravel's* class as an orchestrator but his writing for voice was even finer, and only Mozart equalled him in setting the high soprano.

**Stravinsky, Igor Fyodorovich** (1882–1971). Russian composer, born in Oranienbaum, near St Petersburg. Son of a famous operatic bass, he studied law but devoted himself to music from 1902, and was for three years a pupil of *Rimsky-Korsakov* in instrumentation. Reacting against *Wagner's* music, he evolved a strikingly original but emotionally neutral style, influenced by *Debussy* and Russian folk music. For Sergei *Diaghilev's* Ballets Russes he wrote three great scores that made him famous: *The Firebird* (1910), *Petrouchka* (1911), and *The Rite of Spring* (*Le Sacre du Printemps*, 1913), the last a savage and mysterious evocation of primitive fertility dances employing a large orchestra, blazing colour and savage dissonance which caused a riot at its premiere under Pierre *Monteux* in Paris, the audience having to be ejected by police. In the final ‘Sacrificial dance’, a young girl whirls herself to death to appease the gods. *The Rite* reached a wider audience through Walt *Disney's* film *Fantasia* (1940), in a 21 minute (Stravinsky thought ‘mutilated’) version, with images of nebulae, the creation of the earth, erupting volcanoes, amoebae, rampaging dinosaurs and solar eclipses.

Stravinsky lived in France 1910–14 and in Switzerland 1914–20, returning to France 1920–39. In the works of his second period (1914–20) he evolved a new style, abandoning the huge orchestra and blazing colour of *The Rite of Spring* for an austere preoccupation with line and structure. They include *The Soldier's Tale* (1918, for narrator, three actors and seven instruments), *The Wedding* (*Svadebka/Les Noces*, 1923, vocalists, four pianos and percussion), *Symphonies of wind instruments* (1920) and songs. In a third, neoclassical, period (1920–32) he wrote the ballets *Pulcinella* (1920, after Pergolesi), *Apollo* (1928, for strings), and *The Fairy's Kiss* (1928, after *Tschaikowsky*), the opera-oratorio *Oedipus rex* (1927, set to *Cocteau's* Latin text), the *Symphony of Psalms* (1930) and a violin concerto. His fourth period (1932–52) was both eclectic and prolific, marked by varied influences ranging from plainsong, *Bach*, *Beethoven*, *Verdi*, through jazz and swing. Music included the ballets *The Card Party* (1936), and *Orpheus* (1947), *Symphony in C* (1940), *Symphony in three movements* (1945), a *Mass* (1944), and the opera *The Rake's Progress* (1951, libretto by W. H. *Auden* and Chester *Kallman*), based on * Hogarth's drawings. Stravinsky became a French citizen in 1934, lived in the US from 1939 and was naturalised in 1945. His fifth period (from 1952) was influenced by the serial techniques of *Schoenberg* and, especially, *Berg* in such works as *In memoriam Dylan Thomas* (1954), the ballet *Agon* (1957), *Threni* (Lamentations of Jeremiah, 1958), two Masses, a cantata, *Abraham and Isaac* (1963, baritone and chamber orchestra) and *Requiem Canticles* (1966). There are obvious parallels between Stravinsky and *Picasso, exact contemporaries who created new traditions and worked in a diversity of styles, from a brutalist mode to neo-classical. Stravinsky made many recordings and toured the world as a conductor of his own works, visiting Australia and Africa in 1961 and making a triumphant return to Russia in 1962. He published an autobiography in 1935 and collaborated with Robert *Craft in two volumes of Conversations* (1959, 1962). He had enormous curiosity about literature, mathematics and aesthetics, and for two generations was the greatest figure in 20th-century music. He died in New York and was buried in the St Michele cemetery, Venice.

**Straw, Jack** (John Whitaker) (1946–). English Labour politician. He graduated in law from Leeds, became a MP 1979–2015, serving as Home Secretary 1997–2001, Foreign Secretary 2001–06 and Leader of the House of Commons 2006–07. Secretary of State for Justice and Lord Chancellor 2007–10, he was the first lord chancellor since 1578 to be a Member of the House of Commons.

**Strawson, Sir Peter Frederick** (1919–2006). British philosopher, born in London. Educated at Oxford, he taught there from 1947 and was Waynfleet professor of metaphysical philosophy 1968–87. He worked on ‘descriptive metaphysics’ and was a rigorous critic of Bertrand *Russell's* philosophical logic.

**Streeton, Sir Arthur Ernest** (1867–1943). Australian painter. With his friend Tom *Roberts, he was one of the 'Heidelberg School' of painters (1887–90), applying plein air impressionist and Turneresque techniques to the Australian landscape. Away from Australia 1897–1923, apart from three short return visits, he was a war artist in France. He failed to attract much attention in England, and his later works, although beautifully painted, lack the excitement of his early decades. *Golden Summer, Eaglemont* (1889) sold for £AU3.5 million in 1995.

**Streicher, Julius** (1885–1946). German Nazi politician. Originally a primary school teacher, he founded the German Socialist Party which merged with the Nazis in 1923. His journal *Der Stürmer* (‘The Stormtrooper’) was so pornographic in its attacks on Jews that many Nazis regarded it as distasteful. He had fallen from the front rank by 1939, was Governor of Franconia 1940–44 and hanged for war crimes after the Nuremberg trials.
Streisand, Barbra (Joan) (1942–). American singer, actor and director, born in Brooklyn. Her first great success was in the Broadway musical Funny Girl (1964), later filmed (1968), winning her an Oscar. She showed her comic gifts in What's Up, Doc? (1972) and played a serious role in The Way We Were (1973). She retired from personal appearances in 1969 until offered $US20 million for two performances (including film and television rights) at the MGM Grand Hotel, Las Vegas, 31 December 1993–1 January 1994.

Stresemann, Gustav (1878–1929). German politician. A successful businessman, he entered the Reichstag (1907) and after World War I founded the German People's Party. During a short period as Chancellor (1923) he succeeded in checking inflation. From November 1923 until his death he was Foreign Minister in a succession of governments. He was a main architect of the pacts by which it was hoped to build a permanently peaceful Europe: he signed the Locarno and Kellogg Briand Pacts and six years before the appointed date he secured the evacuation of the Rhineland by foreign troops. For much of the time he worked closely with *Briand and Austen *Chamberlain. He shared the Nobel Peace Prize (1926) with Briand.

Strindberg, (Johan) August (1849–1912). Swedish dramatist, born in Stockholm. From his childhood, spent in a depressing family home, his neurotic temperament was always at war with his surroundings. His three marriages were disastrous and among the causes of his persecution mania, leading to periodic insanity and alcoholism. In the late 1870s he began writing plays reflecting his radical views, and he gained a considerable reputation with his novel The Red Room (1879), a satirical and realistic account of artistic life in Stockholm. From 1883 to 1889 he lived in France, Switzerland, Germany and Denmark, returning in 1884 to defend himself successfully against a charge of blasphemy resulting from publication of his collection of short stories Giftas (Marriage). Meanwhile he wrote poems on social and philosophical subjects, more plays, and the beginnings of his autobiography. To this middle period belong the three great plays by which he is best remembered, The Father (1887), Miss Julie (1888) and The Dance of Death (1901), all obsessed by family conflict in an atmosphere of foreboding. By this time Strindberg was falling under the influence of *Nietzsche and adopting the attitudes, including contempt for democracy, of his mentor, and adding anti-Semitism. In his last years came a series of historical plays, novels, e.g. the trilogy To Damascus (1898–1904), and fairy plays, indicative of a growing interest in religious mysticism and the occult. He again went to live abroad in 1892 but returned finally in 1896. In 1907 he founded the Intimate Theatre for the production of what he called his 'chamber plays'. He was conspicuously ignored by the Swedish Academy and accepted an 'Anti Nobel' Prize, raised by public subscription, in the year of his death. In his last two years he had a radical period. Only in Germany and Austria were Strindberg's plays often performed. Despite the admiration of *Ibsen, *Shaw, *Gorki, *Mann and *O'Neill, it took 40 years for his genius as a dramatist to be generally recognised. He was also a gifted painter, photographer, and linguist, with a passionate interest in music.

Stringfellow, John (1799–1883). English inventor. A lace manufacturer of Chard, Somerset, until 1956 he was given credit for having built the first powered driven aircraft, but it was then shown that he was only trying to improve one of W. S. *Henson's designs.

Stroheim, Erich von (1885–1957). Austrian-American film actor and director, born in Vienna. His first film role was in Intolerance (1916) and thereafter he tended to become typecast as a German officer. Among his most distinguished parts was that of a soldier in Renoir's La Grande Illusion (1938), as *Rommel in Five Gravesto Cairo and the butler in Sunset Boulevard (1950). The best known of the films he directed were Foolish Wives (1922), Wedding March (1928) and notably Greed (1923–24). He became a US citizen in 1926.

Strongbow, Richard de Clare see Pembroke, 2nd Earl of

Struve, Friedrich George Wilhelm von (1793–1864). German-Russian astronomer. A member of an astronomical dynasty, between 1816 and 1855 he was responsible for designing and constructing the Struve Geodetic Arc, a chain of 258 survey triangulations from Hammerfest in Norway to the Black Sea, a distance of 2,820 km, passing through 10 countries. It was an important international collaboration which led to the accurate measurement of a meridian. Thirty-four of the surviving structures were added to the World Heritage List in 2005. In 1827 he published a catalogue of double-stars.
Strezlecki, Sir Paul (Pawel) Edmund de (1797–1873). Polish-British explorer and geologist, born in Poznan (then in Prussia, now in Poland). From a noble family, sometimes called Count Strzelecki, he left his homeland in 1830, became a self-trained geologist and travelled extensively in North and South America, the Pacific islands and New Zealand. In Australia (1839–43) he explored New South Wales, Victoria and Tasmania, was an early discoverer of gold and named Mt *Kosciuszko in the Australian Alps. He lived in England from 1843, wrote extensively, worked on disaster relief in Ireland and the Crimea and became FRS and KCB.

Stuart family see Stewart

Stuart, Charles Edward (known as ‘Bonnie Prince Charlie’ or ‘the Young Pretender’) (1720–1788). British prince, born in Rome. Eldest son of James Edward *Stuart, on whose behalf he led the Jacobite rebellion of 1745, he landed in Scotland with only seven followers but was joined by an increasing number of Highlanders as he moved south. He captured Edinburgh and secured his position by defeating the government army at Prestonpans. Six weeks later he marched south into England. After capturing Carlisle and reaching Derby he began to withdraw. At Falkirk (17 January 1746) he won a last success before his army was overtaken and virtually annihilated by the Duke of *Cumberland, who here earned the name ‘Butcher’, at Culloden (16 April). Charles, with £30,000 offered for his capture, spent five months unscathed and unbetrayed among the hills and islands of western Scotland until, with the help of Flora *Macdonald, he was able to reach France. So far with his looks and charm he had been the true hero of romance, but the rest of the story is one of disappointment, disillusion and dissipation. Harried by English agents, he wandered about Europe seeking help for schemes by which he vainly hoped to regain his rights. He married (1772) Louisa of Stolberg, a childless and unhappy match. He finally settled in Italy and in his last years was looked after with devotion by a natural daughter. Debauched and discredited, he died in Rome and was buried in St Peter’s, Rome.

Stuart, John McDouall (1815–1866). Scottish explorer, born in Fife. Between 1858 and 1862 he led six expeditions to Central Australia and became the first explorer to cross the continent south to north (and return). He clashed with Aborigines but lost none of his party. He died in London.

Stubb, George (1724–1806). English painter and engraver. In 1766 he published his Anatomy of a Horse based on the study of dead horses in his studio. The engravings created a revolution in animal painting and he was later able to use his anatomical knowledge to give his sporting pictures, e.g. The Grosvenor Staghunt a verisimilitude never obtained before. His masterpiece, Whistlejacket (1762), a huge horse painting, hangs in the National Gallery, London. He was elected RA in 1781.

Sturzo, Don Luigi (1871–1959). Italian priest and politician, born in Sicily. He founded the PPI (Partito Popolare Italiano) in 1919, clashed with *Mussolini and was exiled, living in London 1924–40 and the United States (mostly in Brooklyn) 1940–48. He wrote extensively on sociology, became a major influence on the Christian Democrats (Alcide *De Gasperi) and was appointed a Senator 1948–59.
Suárez Gonzales, Adolfo, Duque de Suárez (1932–2014). Spanish politician. The last Secretary-General of *Franco’s Falange Party 1975–76, as Prime Minister of Spain 1976–81 he worked with king *Juan Carlos to effect a democratic transformation and was created a duke.

Sucre, Antonio José de (1795–1830). South American leader, born in Venezuela. He served under *Bolívar in the War of South American Independence and became a general in 1819. His great victory near Guayaquil ensured the independence of the future Ecuador. With Bolívar he then won a long struggle for the independence of Peru and in 1826 was installed as first president of the newly created Bolivia, but his army mutinied and he was expelled. Two years later he was on his way through the mountains to rejoin Bolívar when he was killed by robbers.

Sudermann, Hermann (1857–1928). German playwright and novelist. His plays include *Die Ehre (1889), *Saudoms Ende (1891) and *Heimat (1893). The last named, translated into English as *Magda, provided a star role for Mrs Patrick *Campbell and other well known actresses. His novels, of which *Frati Sorge (1887) was the first and best known, are mostly set against a background of his native East Prussia.

Sue, Eugène (1804–1857). French novelist. He was among the most successful of writers at adapting his work to serial form. The best known example in an immense output of popular work was *The Wandering Jew (1845). His socialist and republican views, shown in his novels by his idealisation of the downtrodden and criminal classes, earned him the disfavour of *Napoleon III and brought about his exile.

Suess, Eduard (1831–1914). Austrian geologist, born in London. Professor of geology at Vienna 1857–1901 and a liberal in the Reichsrat 1872–96, he first hypothesised the concept of a super-continent (1885) which he named Gondwanaland (*Wegener). He also originated the concept of ‘the biosphere’ and was awarded the Copley Medal in 1903.

Suetonius (Gaius Suetonius Tranquillus) (fl. 117–138). Roman historian. He was *Hadrian’s secretary. His best known work, *De vita Caesarum, which has survived almost complete, contains the biographies of Julius *Caesar and the first 11 emperors, *Augustus to *Domitian. His mixture of documented fact and gossip provides lively reading. Only part of another series on less exalted men (e.g. *Virgil, *Horace) survives.

Suger, Bernard (c.1081–1151). French prelate. Abbot of the Benedictine monastery of St Denis, north of Paris (from 1122), he was employed as Chief Minister by *Louis VI, and later virtually ruled the country while *Louis VII was absent on crusade. The beautiful Abbey Church of St Denis, reconstructed to his design, is one of the earliest examples of the Gothic style. His histories of the kings he served provide an important record of contemporary events.

Suharto (1921–2008). Indonesian general and politician, born in Java. Originally a bank clerk, he was a soldier from 1943, joining the guerrillas against the Japanese. He directed the army strategic reserve 1963–65 and was Army Chief of Staff 1965–66. Following the PKI coup in September 1965 he assumed emergency powers and took *Soekarno into custody. He became President of Indonesia 1967–98, after Soekarno’s deposition. He took a strong line against Moslem fundamentalism and against any separatist movements, notably in East Timor. He was re-elected for a seventh five-year term in March 1998 after a period of sharp economic decline, a collapse of the rupiah, intervention by the IMF, food riots, and attacks on the government support for companies run by family members. After severe rioting (May 1998), his resigned in favour of his protégé B. J. *Habibie. His daughter *Siti (‘Tutut’) Hardiyanti Rukmana (1949–) was briefly Minister for Social Affairs 1998.

Sui Wendi (*The cultured emperor’, personal name Yang Jien) (541–604). Chinese Emperor 581–604, founder of the Sui dynasty. A general, he removed the Northern Zhou emperor, began the Grand Canal which connected the Yangtze and Huang He (Yellow River) and extended his rule to south China. He laid the foundations for the Tang dynasty.

Suk, Josef (1874–1935). Czech composer and violinist. Pupil (and son-in-law) of Antonin *Dvořák, he was second violinist in the Bohemian String Quartet 1892–1933 and taught composition at the Prague Conservatorium. He wrote *Serenade for Strings (1892), the Arenal Symphony (1905–06), chamber music and songs.

Sukarno see Soekarno.

Sulaiman see Süleyman

Süleyman (or Sulaiman) (*the Magnificent’) (1494–1566). Turkish Sultan 1520–66. Son and successor of *Selim I, under him the Ottoman Empire reached its zenith. He captured Belgrade (1521) and Rhodes (1522). He crushed the Hungarians at Mohacz (1526) but failed to take Vienna in 1529 and eventually the emperor *Ferdinand I, while retaining Austria, was left with only a small portion of Hungary. Meanwhile his fleet, under the celebrated corsair Khairesaddin *Barbarossa, was terrorising the Mediterranean but it failed to capture Malta from the Knights of St John. Süleyman won Baghdad (from Persia) and it remained in Turkish hands until 1917. He died during renewed war in Hungary. His legal reforms, mainly relating to land tenure, earned him the name Kanuni (the
lawgiver) and he proved himself a lavish patron of the arts, employing the famous architect *Sinan to build four magnificent mosques.

Sulla Felix, Lucius Cornelius (138–78 BCE). Roman soldier and dictator. He fought under *Marius against *Jugurtha in Africa and against the Cimbri and Teutones, but their mutual antipathy soon developed into political rivalry: Marius siding with the turbulent popular party (‘Populares’) and Sulla with the conservatives (‘Optimates’). After his victories in the Social War (for the enfranchisement of the Italians as Roman citizens) Sulla gained his first consulship (88) but, angered by a proposal that the command in a war against *Mithridates should be transferred to Marius, he led an army against Rome and captured the city. He obtained laws to legitimise his position and left for the east, but as soon as he had gone the Marians regained control. Meanwhile Sulla was expelling the armies of Mithridates from Greece and from the Roman province of Asia. He then returned with his army to Italy, and after another victory over the popular forces at the gates of Rome (82), the Senate appointed him as ‘dictator’, without a term limitation; the first use of the word in its modern sense, and a model for Julius *Caesar. Massacres and proscriptions of his opponents followed. He then carried out a large constitutional and administrative program, the main feature being the restoration of full power to the Senate. He retired voluntarily in 79 and died the following year. Both *Händel and *Mozart wrote operas based on his life.

Sullivan, Sir Arthur Seymour (1842–1900). English composer. After being a chorister at the Chapel Royal he studied music in London and Leipzig. He achieved successes with music for *Shakespeare’s *The Tempest and for the famous comedy Box and Cox before he began his long collaboration with W. S. *Gilbert and the impresario Richard D’Oyly *Carte in the popular Savoy Operas (so-called from their production at that theatre from 1881). The best known are *Trial by Jury (1875), H.M.S. Pinafore (1878), *The Pirates of Penzance (1880), Patience (1881) Iolanthe (1882), Princess Ida (1884), The Mikado (1885), Ruddigore (1887), *The Yeomen of the Guard (1888) and *The Gondoliers (1889). Sullivan’s melodic gift and deft and lively scoring admirably partnered the witty libretti, but the two men later had a business quarrel and abandoned the partnership. Neither collaborator achieved comparable success alone, though Sullivan’s serious opera *Iolanthe (1891) and ballads such as ‘The Lost Chord’ were popular for a time. He was knighted in 1883.

Sullivan, Louis Henry (1856–1924). American architect. After studying in Paris he joined a Chicago partnership and became the most important pioneer of modern steel frame construction. His Transportation building building for the World’s Columbian Exposition (1893) provided a striking illustration of the new technique. He was a strong advocate of the unity of form and function but did not favour stark austerity and introduced original types of decoration in conformity with his ideas. The Schiller Theatre and the Stock Exchange were among his Chicago buildings. There are many other fine examples of his work in St Louis, Buffalo and New York.

Sully, Maximilien de Béthune, Duc de (1559–1641). French minister. Son of a Huguenot, Baron de Rosny, he fought for Henri of Navarre (*Henri IV of France) and became his chief friend and adviser. He approved Henri’s adoption of Roman Catholicism in order to become king. His first task was to restore the finances and economy by removing abuses in the collection of taxes. He strictly controlled expenditure, reduced tax exemptions and re-established former taxes; he fostered agriculture and industry and the building of roads and canals. He was made a duke for negotiating Henri’s marriage with *Marie de Medicis (1606). When he retired after Henri’s assassination he had amassed a huge surplus in the treasury.

Sully-Prudhomme, René François Armand (1839–1907). French poet. He studied science and philosophy in Paris, and his earlier poems are permeated with melancholy. His later long poems are *La Justice (1878) and *Le Bonheur (1888), concerned with philosophic and scientific theories. In this he resembled the Roman poet *Lucretius, whom he translated (1866). He also wrote in prose. He was a leader of the Parnassians, a group which reacted against Romanticism and revived classical detachment. Elected to the Académie Française in 1881, he was chosen for the first Nobel Prize for Literature (1901), against a weak field of nominees (mostly French), and is now completely forgotten.

Sumner, Charles (1811–1874). American Republican politician. A lawyer and US Senator from Massachusetts 1851–74, he was one of the most ardent and eloquent speakers against slavery and, in a famous speech, attacked the Kansas-Nebraska Act for creating opportunities for the expansion of slavery. In May 1856 Preston Brooks, Congressman from South Carolina, beat him savagely around the head, in the Senate chamber, with a heavy cane, which shattered, and Sumner took more than three years to recover. (Brooks received a modest fine, resigned from Congress, was triumphantly re-elected then died suddenly.) After the Civil War, Sumner was among the strongest advocates of punishment for the south and of harsh terms for aid in reconstruction.

Sunderland, Robert Spencer, 2nd Earl of (1641–1702). English statesman, born in Paris. As Secretary of State 1679–88 under *Charles II and *James II, he negotiated the secret treaty under which, in return for an annual pension from *Louis XIV, England was to become subservient to France. He was *James II’s
closest adviser and secretly adhered to the Roman Catholic faith, but at the same time conferred with William of Orange (*William III) and became his Lord Chamberlain 1695–99. His son, Charles Spencer, 3rd Duke of Marlborough (1674–1722), was a Whig politician. In 1700 he married Anne Churchill, *Marlborough's daughter, and became all powerful under *George I. First Lord of the Treasury 1717–21, he was accused of accepting a bribe of £50,000 of company stock in the South Sea Bubble and forced to resign. Father and son shared the brilliance and lack of scruple of their age. Charles Spencer, 5th Duke of Marlborough (1706–1758), became 3rd Duke of Marlborough on the death of his aunt Henrietta in 1733 and was an ancestor of Winston *Churchill.

Sun-tzu (4th century BCE). Chinese warrior-philosopher, born in the State of Ch'i (now Shantung). Presumably a follower of Daoism (Taoism), he was the reputed author of The Art of War (Ping-fa), a short, shrewd and timeless analysis which emphasises the political aspects of war. *Mao Zedong read it closely, especially the maxim: ‘To win without fighting is best’. He led the armies of the State of Wu.

Sun Yatsen (Sun Zhongshan) (1866–1925). Chinese revolutionary politician, born near Canton (Guangzhou). His parents were Christian peasants and he became influenced by western ideas at a missionary school in Honolulu (1878–83). Afterwards he took a medical degree (1892) at Hong Kong and practised at Macao and in Canton. There he began his revolutionary activities, but the failure of the first of a series of plots forced him to live in exile in Japan, the US and England. In London (1896) he was kidnapped and confined in the Chinese Embassy. He would, in all probability, have been murdered there had he not contrived to send a letter to a former English tutor. Many plots instigated by Sun from abroad failed, but finally a mutiny at Hangzhou (1911) spread so quickly that in 1912 the boy emperor Xuantong (*Pu-yi) abdicated. Sun was briefly President of the new republic but had to retire in 1913. Afterward he took a medical degree (1892) at Hong Kong and practised at Macao and in Canton. There he began his revolutionary activities, but the failure of the first of a series of plots forced him to live in exile in Japan, the US and England. In London (1896) he was kidnapped and confined in the Chinese Embassy. He would, in all probability, have been murdered there had he not contrived to send a letter to his former English tutor. Many plots instigated by Sun from abroad failed, but finally a mutiny at Hangzhou (1911) spread so quickly that in 1912 the boy emperor Xuantong (*Pu-yi) abdicated. Sun was briefly President of the new republic but had to retire in 1913. Afterward he took a medical degree (1892) at Hong Kong and practised at Macao and in Canton. There he began his revolutionary activities, but the failure of the first of a series of plots forced him to live in exile in Japan, the US and England. In London (1896) he was kidnapped and confined in the Chinese Embassy. He would, in all probability, have been murdered there had he not contrived to send a letter to his former English tutor. Many plots instigated by Sun from abroad failed, but finally a mutiny at Hangzhou (1911) spread so quickly that in 1912 the boy emperor Xuantong (*Pu-yi) abdicated. Sun was briefly President of the new republic but had to retire in 1913. Afterward he took a medical degree (1892) at Hong Kong and practised at Macao and in Canton. There he began his revolutionary activities, but the failure of the first of a series of plots forced him to live in exile in Japan, the US and England. In London (1896) he was kidnapped and confined in the Chinese Embassy. He would, in all probability, have been murdered there had he not contrived to send a letter to his former English tutor. Many plots instigated by Sun from abroad failed, but finally a mutiny at Hangzhou (1911) spread so quickly that in 1912 the boy emperor Xuantong (*Pu-yi) abdicated. Sun was briefly President of the new republic but had to retire in 1913. Afterward he took a medical degree (1892) at Hong Kong and practised at Macao and in Canton.
Suslov, Mikhail Andreivich (1902–1982). Russian politician and theorist. A peasant’s son, he joined the Communist Party in 1921, was active in Stalin’s purges and became the leading Cominform propagandist. He served on the Politburo 1952–53 and 1955–82, and was regarded as the leading Soviet ideologist.

Sutherland, Graham Vivian (1903–1980). English painter. While an engineering apprentice he started art night classes in London. He first turned his talents to etching and engraving but from 1935 he devoted himself to painting. Influenced by Blake, Samuel Palmer and the Surrealists, he produced Pembrokehire landscapes in which fantastic and sinister-looking plant and insect forms dominate. After working as a war artist in World War II he painted vigorous and original portraits of Somerset Maugham, Lord Beaverbrook and Sir Winston Churchill (the last, disliked by the subject, being destroyed by his family). He designed the altar tapestry, Christ in Majesty, for the new Coventry Cathedral. He received the OM in 1960.

Suttner, Bertha Felicita Sophie, Baroness von (née Kinsky von Chinch und Tettau) (1843–1914). Czech-Austrian pacifist and novelist, born in Prague. Daughter of a field marshal, as a young woman she embraced her family’s military tradition, then became a determined campaigner for various peace movements. She persuaded Alfred *Nobel to establish a Peace Prize and in 1901 received 14 nominations for the first award. Ultimately she was nominated 101 times and in 1905 became the first female Nobel Laureate.

Suu Kyi, Aung San see Aung San Suu Kyi

Suvorov, Aleksandr Vasilyevich (1730–1800). Russian marshal. Of Swedish descent, although sickly and small, he fulfilled his ambition by starting service as a soldier in the ranks at the age of 15. After gaining distinction in the Seven Years' War (1756–63) and the Polish War (1768–71), he fought against the Turks (1773), crushed a rising in the Caucasus (1780) and in a second Turkish War won a great victory at Focani (1789). He crushed *Kosciuszko’s nationalist rising in Poland (1794) and in the French Revolutionary Wars was sent to help the Austrians in Italy (1799). After several successes against the French in Italy he was ordered to join Korsakov in Switzerland, the march over the Alps involved his troops in terrible hardships and losses and he arrived to find that Korsakov had already been defeated by Massena. Suvorov extricated his troops with difficulty to Austria. He died soon after returning to St Petersburg. Never defeated in battle, he was known for his many eccentricities and beloved by his troops. *Stalin created the Order of Suvorov in 1943.

Suzman, Helen (née Gavronsky) (1917–2009). South African politician. Daughter of a Lithuanian migrant, she became a statistician and academic and was a member of the South African House of Assembly 1953–89 (United Party until 1961, then a Progressive). She pursued a lonely criticism of apartheid and violation of human rights, received many awards including an Hon. DBE (1989), and wrote memoirs, In No Uncertain Terms (1993).

Suzuki Daisetz Teitaro (1870–1966). Japanese Zen Buddhist. He was the leading modern authority on Buddhism, with a particular interest in the Zen form. He wrote over 100 books or major studies on religious topics in both Japanese and English.

Sverdlov, Yakov Mikhailovich (real name Y. M. Nakhamkes) (1885–1919). Russian Communist politician. A professional revolutionary from the age of 17, he was exiled to the Arctic, escaped several times and became *Lenin’s closest collaborator. After the Revolution he held three important posts 1917–19: Chairman of the All-Russian Executive Committee of Soviets and virtual head of state, General Secretary of the Bolshevik Party, and Commissar for Internal Security. He ordered the execution of the imperial family in Ekaterinburg (later renamed Sverdlovsk). He died of typhus.

Svevo, Italo (Ettore Schmitz) (1861–1928). Italian author, born in Trieste. Of Jewish origin, his early novels based on personal experience A Life (1892) and As a Man Grows Older (1898) failed to attract, and for many years Svevo abandoned writing. He resumed with his masterpiece The Confessions of Zeno (1923) which brought some appreciation, maintained by at least one critical study. He was a friend of James Joyce.

Swammerdam, Jan (1637–1680). Dutch biologist. One of his major areas of interest was animal physiology, and he adhered to the mechanical philosophy, seeking to apply Cartesian (*Descartes) models of explanation to the action of the lungs, the heart, the respiratory system. Experiments on dogs
demonstrated the contractility of muscles, even when separated from the body. In these and other instances his work was aiming to demonstrate the purely mechanical nature of bodily action, independent of transcendental principles like ‘spirits’ or ‘virtues’. Swammerdam’s other field of expertise was in the microscopic study of lower animals. He was one of the first naturalists to find insects worthy of scientific study. He made detailed studies of the development of insects within the chrysalis, and showed the life history of the butterfly and the dragonfly. He sought to refute the view that insects generate spontaneously (the making of something out of nothing seemed to him both unscientific and also contrary to his religious belief in the order of the world).

**Swan, Sir Joseph Wilson** (1828–1914). English inventor. A manufacturing chemist by profession, he invented, 20 years before *Edison* (1860), an experimental carbon filament electric lamp which, however, was not commercially in production until he improved it (1881). He patented (1883) a process for carbon-filament production that revolutionised the manufacture of electric lamps. He also made a number of inventions of great practical value in the field of photography. A fast gelatin emulsion, for example, confirmed the supremacy of the dryplate technique. Many improvements in photographic printing were also due to him. He was elected FRS in 1894 and knighted 10 years later.

**Swedenborg** (originally Svedberg), Emanuel (1688–1772). Swedish scientist and theologian, born in Stockholm. At first employed by *Charles XII* as an assessor in the College of Mines, he gained a seat in the House of Nobles when his family was ennobled (1719). Meanwhile he wrote on all kinds of mathematical, mechanical and scientific subjects (sometimes anticipating later discoveries) on the calculus, on finding longitude at sea, on tides, decimal coinage and the planetary system, on the atom as a vortex of particles etc. His study of geology and palaeontology led him to a theory of creation, published in the *Opera Philosophica et Mineralia* (3 volumes, 1734). In other works, e.g. *The Animal Kingdom* (1745), he treats, among many other subjects, of anatomy, human and zoological, and eventually explores the relationship of body and soul. By this time his inquiries as a scientist were beginning to merge with his visionary speculations as a seer. He believed that in 1745 direct personal insight into the world of the spirit was conferred upon him to enable him to reveal the true sense of the Bible. In his *Heavenly Arcana* (8 volumes, 1749–56) he gives the first two books of the Bible an allegorical and symbolic meaning. In the following years he had further visions and published some 40 theological books, including *The Christian Religion* (1771) which systematically presents the theology that had appeared piecemeal in earlier writings. The essence of Swedenborg’s theology is his view of *Jesus Christ* whom he sees, not as a Person of the Trinity, but as a human possessed of a divine soul. He spent several of his last years in London where he died. He had organised no sect but the ‘New Church’ based on his doctrines was founded in London some 15 years after his death, and still has followers in Britain and elsewhere.

**Sweelinck, Jan Pieterszoon** (1562–1621). Dutch composer, organist and teacher. Enormously prolific, especially with vocal works, he was a famous organist who rarely left Amsterdam.

**Sweyn Forkbeard** (or Swegen) (960–1014). King of Denmark 986–1014, and of England 1013–14. In revenge for the death of his sister, who perished in the massacre of St Brice’s Day (1002) organised by *Æthelred the Unready*, he attacked and ravaged England repeatedly and just before his death was recognised as King but not crowned. He was succeeded by his son *Cnut*.

**Swift, Jonathan** (1667–1745). Anglo-Irish satirist, novelist, essayist, poet and cleric, born in Dublin. His father, a lawyer, kinsman of *Dryden*, died before his birth, and after his mother, kinsman of *Herrick*, returned to England he was brought up by his father’s family. Educated at Kilkenny College, and Trinity College, Dublin, after the Glorious Revolution of 1688 he joined his mother in England and became secretary to her relative Sir William Temple at his Surrey home of Moor Park. He remained there with intervals (during one of which he took Anglican orders in Ireland) until Temple’s death (1699). There he wrote *The Battle of the Books* (classics v. moderns), which was published (1704) with *A Tale of a Tub*, a satire on religious humbug and corruption which effectively barred him from the highest offices in the Church. At Temple’s house, too, he first met Esther Johnson, then a child of eight, to whom he later wrote the famous *Journal to Stella* (1710–13), which gives, mostly in childish language, an intimate account of his London life. The nature of the bond between them is one of those literary mysteries that many have probed: they may even have married though it seems clear that despite mutual dependence and devotion they had no sexual relations. Similar doubts concern Hester Vanhomrigh, the heroine of *Cademy* (anagram of de camar, ‘dear’) and Vanessa. She loved him passionately, but, having encouraged her, he rejected her and broke her heart. Swift was the most formidable political satirist of his time, working closely with the Tories 1710–14, contributing to the fall of *Marlborough*. He offended Queen Anne, who thought *A Tale of a Tub* blasphemous, by offering gratuitous advice on her household arrangements, and his appointment as Dean of St Patrick’s Cathedral, Dublin, 1713–45 was virtual exile, although he made brief visits to his friends Alexander *Pope* and John *Gay*. The Whigs returned to power in 1714.
Some of his best known tracts and treatises were written during this period, many, including Draper's Letters (1724), protesting against the grievances under which Ireland suffered. Samuel Johnson judged him harshly in his Lives of the Poets, but his poems are clear, direct, using vernacular speech. The most famous of all his works, Gulliver's Travels, part fairytale, part satire, appeared in 1726. His A Modest Proposal (1729) suggested selling children of the poor to be eaten (recipes being provided). He had long suffered acutely from Ménière's syndrome and years of agonising decline followed a stroke in 1738. Stella died in 1728. Swift long suffered acutely from Ménière's syndrome and years of agonising decline followed a stroke in 1738. He was buried beside Stella in St Patrick's. His epitaph on the nearby wall reads 'ubi saevia Indignatio/ Ulterius/ Cor lacerare nequit' ('Where savage indignation can lacerate his heart no more'). He left his estate to found a hospital in Dublin for the mentally ill, which survives. But he remained a frustrated and unhappy man and something of an enigma to his contemporaries and to later generations. Everything he wrote was published anonymously and, except for Gulliver which earned him £200, he received no payment.

Swinburne, Algernon Charles (1837–1909). English poet and writer, born in London. Educated at Eton and Oxford he became a friend of *Landor, *Meredith, *Rossetti and *Morris. The publication of his Poems and Ballads (1865), with their sensual rhythms, pagan spirit and contempt for conventional morality, had aroused both enthusiasm and violent criticism. Songs Before Sunrise (1871) was inspired by *Mazzini's republicanism; Tristram of Lyonesse (1882) and The Tale of Balen (1892) are his contribution to Arthurian legend. He wrote poetic dramas, including Atalanta in Calydon (1865) and an ambitious trilogy on *Mary Queen of Scots. His literary criticism, e.g. Essays and Studies (1875) and monographs on many individual writers, *Shakespeare, Victor *Hugo etc., display a characteristic over-emphasis, but are written with imagination and perception. An alcoholic and flagellant, in 1879 his health broke down under the strain of a dissipated life. His friend Theodore Watts-Dunton (1832–1914) took him into his home at No. 2, The Pines, Putney, where the bohemian rebel quietly spent the rest of his life. He was nominated 10 times for the Nobel Prize for Literature. Few poets have surpassed Swinburne in the composition of verbal music, but though he can still disturb he no longer shocks.

Fuller, J. O., Swinburne: A Critical Biography. 1968.

Swineshead, Richard (fl. c.1340–1355). English medieval philosopher and physicist. It is probable that a Roger Swineshead was at Oxford and wrote logical treatises and a work in physics, the De Motibus Naturalibus, and that a Richard Swineshead was at Merton College in the 1340s and was author of the important Liber Calculationum, an exhaustive treatise which provides techniques for calculating physical variables and their changes. Swineshead devoted attention to variables such as density and rarity, action and reaction, constant speed and acceleration, forces and resistances. Questions of resistance in a medium are given prominence. His English 'calculatory' tradition exercised notable influence on the development of physical studies, especially on *Oresme.

Swithin (or Swithun), St (d.862). English prelate. A man of great piety, he built many churches and for the last 10 years of his life was Bishop of Winchester. When his body was transferred from the churchyard to the cathedral itself (971), tradition says that heavy rain delayed the exhumation, which was to have taken place on 15 July. The belief that rain on St Swithin's Day portends a long rainy spell can be traced to this event.

Swynford, Catherine (née Roelt) (1350?–1403). English noblewoman. After the death of her first husband, Sir Hugh Swynford, she became the mistress of *John of Gaunt. They married in 1394, their children being legitimised under the name of *Beaufort. Her son, Sir Thomas Beaufort, was one of the murderers of *Richard II. Her sister Philippa married Geoffrey *Chaucer.

Sydenham, Thomas (1624–1689). English physician. The founder of modern clinical medicine, his studies at Oxford were interrupted by service with the parliamentarian forces, but from 1655 (though he did not obtain a licence to do so until 1663) he practised as a physician in Westminster and was thus able to study the fevers arising from the marshes of St James's Park. The great plague (1665) provided another exacting test of his medical skill. As his fame grew he got to know John *Locke, Robert *Boyle and other scholars and scientists of the time. He recognised that the physician's task was to assist nature in its constant efforts to eliminate morbid matter or render it harmless. Thus his task was to study the disease in relation to the particular patient. Some of his descriptions (e.g. of gout, based on his own symptoms) are classics of medical literature; convulsions of children are still known as Sydenham's chorea. He was not afraid to do nothing if he felt that he could not render effective help, and his prescription of fresh air, few coverings and a light diet for fevers was almost revolutionary.
Sydney, Thomas Townshend, 1st Viscount (1733–1801). British politician. He is remembered because he was Home Secretary 1783–89 when the first settlers reached New South Wales. Arthur *Phillip named its capital for Sydney (1788).

**Sydow, Max** (Carl Adolf von) (1892– ). Swedish actor. Educated at the Royal Dramatic Theatre School, Stockholm, he had a long stage career, then appeared in 114 films, 11 directed by Ingmar *Bergman.

**Syme, Sir Ronald** (1903–1989). British historian, born in New Zealand. His *The Roman Revolution* (1939) was a powerful analysis of how *Augustus seized power and crushed dissent while preserving a republican facade. He became Camden professor of ancient history at Oxford 1949–70, and wrote biographies of *Tacitus (2 vols, 1958), *Sallust (1964), and *The Augustan Aristocracy (1986). Considered to be the greatest 20th-century historian of ancient Rome, he received the OM in 1976.

**Symington, William** (1763–1831). Scottish engineer. He made early experiments in applying steam power to ships and patented (1801) a horizontal direct-acting steam engine that he fitted to the tug *Charlotte Dundas* on the Forth-Clyde canal. This was the first effective steamboat but, though it towed two coal barges 19 miles in six hours, its adoption was rejected for spurious reasons. A further plan to introduce steam-powered tugs on the Bridgewater Canal ended in disappointment when the 3rd Duke of Bridgewater died (1803). Symington died in poverty.

**Symonds, John Addington** (1840–1893). English man of letters. His *Studies of the Greek Poets* (1873) was followed by the notable *The Renaissance in Italy* (1875–86). He translated Benvenuto *Cellini’s autobiography, and the sonnets of *Michelangelo, whose biography he also wrote (2 volumes, 1893). He wrote several volumes of poetry, and studies of Ben *Jonson and *Shelley.

**Symons, A(phonse) J(ames) A(iroy)** (1900–1941). English writer. He was remembered almost solely for an astonishing piece of literary detection, *The Quest for Corso* (1934), which revived interest in the eccentric novelist Frederick *Rolfe, Baron Corvo.

**Symons, Arthur William** (1865–1945). British critic and poet. By his translations and studies of *Baudelaire and by The Symbolist Movement in Literature* (1899) he was largely responsible for introducing the work of this French literary school to English readers. His other books include *The Romantic Movement in English Poetry* (1909) and several volumes of essays and poems. In 1905 he suffered a mental collapse and never recovered.

**Syngue, John Millington** (1871–1909). Irish playwright, born near Dublin. After living in Paris (1895–1902), where he met *Yeats, he returned to Ireland and made several visits to the Aran Islands, studying folk speech and culture. This study provided him with the setting for his plays, the first two of which, *In the Shadow of the Glen* (1903) and *Riders to the Sea* (1904), brought him into close association with the Abbey Theatre, Dublin. There followed *The Well of the Saints* (1905) and his great comedy *The Playboy of the Western World* (1907). His tragic verse-drama *Deirdre of the Sorrows* was unfinished when he died. His influence upon succeeding Irish playwrights was immense.

**Syngman Rhee see Rhee, Syngman**

**Szállasi, Ferencz** (1897–1946). Hungarian fascist. An extreme Hungarian nationalist (curious because his ancestry was Armenian, Slovak, German and Hungarian), in 1935 he founded a fascist party, renamed Arrow Cross in 1939. Installed in power by the Germans in October 1944, the Arrow Cross regime murdered many thousands of Hungarians (mostly Jews) and Szállasi was executed for war crimes.

**Szell, George** (1897–1970). Hungarian-American conductor, born in Budapest. A juvenile prodigy as a pianist, he made his debut as a conductor in Berlin (1914) and became a protégé of Richard *Strauss and Arturo *Toscanini. Chief Conductor of the Metropolitan Opera, New York, 1942–45, he directed the Cleveland Orchestra 1946–70 and raised it to the first rank, also making many recordings.

**Szent-Györgyi** (de Nagyrápolt), Albert (1893–1986). Hungarian physiologist. He is credited with detecting vitamin C and won the Nobel Prize in Physiology or Medicine in 1937. Active in the Hungarian Resistance during World War II, he entered Hungarian politics after the war.

**Szilard, Leo** (1898–1964). Hungarian American physicist, born in Budapest. He studied in Germany, lived in England from 1934 and the US from 1937. He wrote pioneering papers on information theory (1929) and the theory of nuclear chain reaction (1934). He drafted *Einstein’s letter to President *Roosevelt (October 1939) which led to the ‘Manhattan Project’ and nuclear weapons. He worked with *Fermi in Chicago on the original ‘atomic pile’ and on developing the atomic bomb, although opposing its use against civilian targets. Professor of biophysics at Chicago 1946–53, he had extraordinary insight into a variety of scientific areas but did little sustained research or publication.

Szymanowski, Karol Maciej (1882–1937). Polish composer. Director of the Warsaw Conservatoire (from 1926), his early works are individual for all their eclectic romantic blend of influences (Richard Strauss, *Scriabin*, *Debussy*). Later his study of Polish folk music strongly affected his compositions. His works include his three symphonies; piano and chamber works, e.g. *The Fountain of Arethusa* for violin and piano; operas, e.g. *King Roger* (1926); two violin concertos; and *Stabat Mater* for soloists, chorus and orchestra.

Szymborska, Wislawa (1923– ). Polish poet. She won the 1996 Nobel Prize for Literature for her elegant, subtle but penetrating verse, hailed as Mozartian by enthusiasts. Volumes of her poems include *Views with a Grain of Sand* (1985).
Taaffe, Eduard von, Graf [Count] (1833–1895). Austrian administrator. Of Irish descent, he was a lifelong friend of the Emperor *Franz Josef and became Prime Minister of Austria 1868–70, 1879–93. He proposed concessions to the Czechs in return for support against the Hungarians.

Tacitus, Publius (or Gaius) Cornelius (c.55–120). Roman historian. Born in the reign of *Nero, he became proconsul of Asia under *Trajan and thus lived through seven of the reigns which he described. Of his undisputed works Agricola was a eulogistic account of his father-in-law, especially interesting for its account of Britain; Germania was a first-hand account of the country and its people; The Histories (14 books, of which No. 14 and part of 5 survive) relate the events of his lifetime from the death of Nero (68) to that of Domitian (96). Even better were the Annals (16 books, with most of 1–6 and all of 11–16 extant), which cover the earlier period from the death of *Augustus (14 CE). Tacitus was a shrewd psychologist but where his prejudices were involved (e.g. against *Tiberius) he becomes unreliable and unfair. He aims to be an exact recorder of events, which, however, he sometimes misinterprets. In striking contrast with the rotundity of *Cicero’s period is Tacitus’s terse, epigrammatic style which adds dramatic intensity to the episodes he describes.

Taft, William Howard (1857–1930). 27th President of the US 1909–13. Born in Cincinnati, Ohio, son of Alphonso Taft (1810–1881), briefly Secretary of War 1876 and US Attorney-General 1876–77 under President *Grant, he studied law at Yale and in Cincinnati. He was a judge of the Ohio Supreme Court 1887–90, US Solicitor-General 1890–92 and a judge of the Court of Appeal 1892–1900. Following the defeat of Spain by the US and the acquisition of the Philippines, he was president 1900–01 of the commission sent to the islands and the first Governor-General 1901–04. His friend Theodore *Roosevelt appointed him Secretary of War 1904–08 and secured for him the Republican nomination for president in 1908, which he won overwhelmingly on the first ballot. He defeated William Jennings *Bryan comfortably and in his inaugural address (1909) declared that henceforce the status of American Negroes would become the responsibility of the states, in effect renouncing the principles for which *Lincoln fought the Civil War. His conservatism and lack of initiative alienated Roosevelt who sought the 1912 nomination himself. After Taft’s renomination (significant but with many abstentions), Roosevelt then ran as a third party Progressive candidate, splitting the Republican vote and ensuring victory for the Democratic nominee, Woodrow *Wilson. Professor of constitutional law at Yale 1913–21, he was appointed by President *Harding as Chief Justice of the US Supreme Court 1921–30, becoming the only person to have headed two branches of the US Government. He is also remembered for his huge bulk (about 170kg as president).

His son, Robert Alphonso Taft (1889–1953) was a US senator from Ohio 1939–53. As conservative as his father, he sponsored the controversial Taft-Hartley Labor Act (1947) to curtail union power. He first sought the Republican nomination for president in 1944 and 1948: in 1952 he lost narrowly to *Eisenhower. The most effective conservative of his era, in 1957 he was voted by a US Senate committee as one of the five greatest senators ever. His son, Robert Alphonso Taft, Jr (1917–1993), a lawyer, was a US Congressman 1962–84; 1966–68 and Senator 1971–76.

Taglioni. Italian ballet family. Filippo Taglioni (1777–1871) choreographed about 40 ballets. His best known, La sylphide, to music by Jean Schneitzhoeffer, was premiered in Paris in 1832 and toured extensively as the prototype modern romantic ballet. His daughter Marie Taglioni (1804–1884), born in Stockholm, made her reputation in La sylphide, and created the popular ethereal style, with wispy costume, dancing on points, and elevation. She later taught in London and died in the south of France. Her brother and niece were also famous dancers.

Tagore, (Sir) Rabindranath (1861–1941). Indian writer, born in Calcutta. He came from a well known Bengali family belonging to an unorthodox Brahmin community, which allowed a liberal attitude to religion and life. He studied in England, and founded (1901) at Bolpur in Bengal a school for the reconciliation of western and eastern educational thought. Later at nearby Santiniketan, he established an institution to guide the rehabilitation of village life and a seat of international culture. In his worldwide lecture tours on Indian philosophy and religion in Europe, America and the Far East he continued to stress the international theme. He first became known as a poet outside India by Gitanjali, for which he was awarded the Nobel Prize for Literature (1913). Translations of several other volumes of his poems and of his other works followed. He also wrote many plays, novels and essays. In the natural beauties of earth and sky, the love of children and his mystical experiences (upon which rather than on theology his religion was based) he found the inspiration for his poems, into the original Indian versions of which he introduced much metrical experiment. He was no extreme nationalist but after the Amritsar massacre (1919) he renounced the knighthood received in 1915.

Taine, Hippolyte Adolphe (1828–1893). French historian and critic. He established the principle of applying scientific method to the analysis of history and literature. He first gained recognition with a study of *La Fontaine in 1853. His most famous work, still unfinished at his death, was *Origines de la France contemporaine. He was made professor of aesthetics at the École des Beaux Arts in 1864. His studies of history reveal a pessimistic view of society and its development.

Takeshita Noburu (1924–2000). Japanese Liberal Democratic politician. A Diet member 1958–2000, and originally a member of the *Tanaka faction he was Finance Minister 1982–87, Prime Minister 1987–89. He was a powerful influence behind the scene, regarded as corrupt but skilful at avoiding prosecution.

Talbot, William Henry Fox (1800–1877). English experimenter. Educated at Harrow and Cambridge, he was elected FRS in 1831 and became a Whig MP 1833–34. Assisted by Sir William *Herschel, he worked on techniques to fix the images produced by a camera obscura, and his first photograph using a negative of paper impregnated with silver chloride dates from 1833 and is essentially the photographic technique still in use. (*Niepce and *Daguerre produced single images on metal plates which required long exposure and could not be reproduced.) In 1841 he succeeded in making positive prints and published the first book of photographs, *The Pencil of Nature (in parts, 1844–46). By 1850 he had laid the foundations of modern photography by overcoming the need for long exposures. He also carried out useful investigations on spectra and showed how to distinguish certain elements by their spectral lines. He was also one of the first to decipher the Assyrian Cuneiform scripts from Nineveh.

Talleyrand (Périgord), Charles Maurice de, Prince of Benevento (1754–1838). French diplomat and politician, born in Paris. From a noble family in economic decline, he suffered from a congenital limp that prevented an army career and led him to enter the Church. Combining a dissolute life with theological studies, he became Bishop of Autun in 1788. During the Revolution he was President of the Constituent Assembly (1790), supported the Civil Constitution of the Clergy and resigned his bishopric. He lived in Philadelphia 1794–95. When the Directory came to power, his friend *Barras made him Foreign Minister, a position he held 1797–1807, under Directory, Consulate and Empire, and again 1815–16 under *Louis XVIII. He used his keen and subtle intelligence to consolidate by diplomacy the victories won in the field. Among the treaties he negotiated were those of Luneville (1801) with Austria, of Amiens (1802) with Great Britain and of Tilsit (1807) with Russia. Soon after Tilsit he resigned as Foreign Minister, apparently in disagreement with *Napoléon's policies in Spain and Portugal. He remained, however, at the centre of events and accompanied Napoléon to the Congress of Erfurt (1808). Here, convinced that the policies of his master and the interests of France were increasingly divergent, and being by no means neglectful of personal advantage, he entered into secret relations with Tsar *Aleksandr I and the Austrian statesman, *Metternich. Thereafter he played a double game. After Napoléon's fall (1814) he headed the French provisional government, and at the Congress of Vienna defended French interests with consummate skill. His last important post was that of Ambassador 1830–35 to Great Britain under *Louis Philippe. In the negotiations about the future of the Netherlands his views in favour of creating a neutral, independent Belgium prevailed. He was almost certainly the father of the painter *Delacroix and grandfather of the politician *Morny.

Tallien, Jean Lambert (1769–1820). French Revolutionary politician. He first became prominent as a printer of Jacobin broadsheets. As a member of the Committee of Public Safety he was sent to Bordeaux (1793) to institute the ‘Terror’. There he met his future wife, whom he saved from the guillotine. Later she became known as ‘Notre Dame de Thermidor’ because of the prominent part she played with her husband during the rising of 9 Thermidor (28 July) which resulted in *Robespierre’s downfall. Tallien’s importance soon declined and he died forgotten.

Tallis, Thomas (c.1505–1585). English composer. He was organist at Waltham Abbey until its dissolution (1540). For the rest of his life he was joint organist, with Byrd, of the Chapel Royal. The two men further collaborated in obtaining (1575) a monopoly for printing and selling music and music paper and in publishing in that year a volume of motets, of which they were joint composers. Tallis’s huge output consists almost entirely of liturgical music, including the Lamentations for five voices and the motet Spem in Alium Nunquam Habui for 40 voices.

Tamayo, Rufino (1899–1991). Mexican Expressionist painter. Influenced by pre-Columbian and popular arts forms, as well as *Picasso and *Braque, he lived in the US and was recognised as one of the most important modern Mexican artists.
Tamerlane (or Tamburlaine) see Timur the Lame

Tammany (fl. 1685). American Indian chief. He is said to have welcomed and negotiated with William *Penn. Tammany Hall, founded (1789) as the Tammany Society of Columbian Order, a patriotic political club, was named after him. Later, as the headquarters of the Democratic Party organisation in New York City, it won a bad reputation for the methods of corruption and intimidation by which it was alleged to secure votes.

Tan Malaka (1894–1949). Indonesian Communist leader. A Sumatran, he was a co-founder of the Indonesian Communist Party (PKI) in 1920 and asked the Comintern to endorse the Pan Islam movement. After 1922 he spent many years in exile under a variety of names. His career parallels *Ho Chi Minh’s. He returned to Indonesia in 1942 and worked with the Japanese. In 1948 Moscow denounced him as a Titoist. He founded the Murba (Proletarian) movement, began guerrilla warfare against Soekarno and the Dutch and was shot by the army.

Taney, Roger Brooke (1777–1864). American jurist, born in Maryland. Andrew *Jackson appointed him Attorney-General 1831–33, Secretary of the Treasury 1833–34 (the first presidential nomination ever rejected by the Senate) and Chief Justice of the Supreme Court 1807–64, being confirmed over the objections of *Clay, *Calhoun and *Webster. He was the first Catholic appointed to the Supreme Court. Taney broadly supported increasing Federal power at the expense of the states. However, he is best remembered for his decision in the Dred Scott case (1857) that Negroes had no right to sue in the courts and Congress could not exclude slavery from the territories. Taney was personally opposed to slavery.

Tang. Chinese dynasty which ruled 618–907, marked by a golden age in the arts and a liberated role for women. The Tangs claimed descent from *Lao Zi.

Tange Kenzo (1913–2005). Japanese architect. Educated at Tokyo University, where he became professor of architecture 1946–74, he designed buildings for the Tokyo Olympics 1964, Expo ’70 at Osaka, the Hiroshima Peace Centre and major projects in Italy, Yugoslavia, Algeria, France and the US.

Tapies Puig, Antoni (1923–2012). Spanish artist, born in Barcelona. He studied law and was self-trained as an artist, holding his first one-man exhibition in 1948. He turned from Surrealism to abstraction, working in mixed media, combining glue, paper, cloth, cardboard, plaster and wood, and won an international reputation. In 2010, King *Juan Carlos created him a marquess.

Tardieu, André Pierre Gabriel Amédée (1876–1945). French politician. A journalist who wrote mostly on foreign affairs, he became a deputy in 1914, fought in World War I and assisted *Clemenceau in the peace treaty negotiations. As founder and leader of the Republican Centre Party, almost continuously in ministerial office 1926–32, he was Prime Minister 1929, 1930 and 1932.

Tarkington, Booth (1869–1946). American popular novelist. He is mainly remembered for the novels of life in the Middle West which were dramatised into successful plays or films. e.g. Monsieur Beauficaire (1901) and The Magnificent Ambersons (1918) which won the Pulitizer Prize and was later filmed by Orson *Welles.

Tarquinius Superbus, Lucius (c.564–505 BCE). King of Rome 534–510 BCE. Seventh and last of the semi-legendary kings of Rome, his reign and that of his father Lucius Tarquinius Priscus (616–578) represented a period of Etruscan domination, interrupted possibly by the intervening reign of Servius Tullius (who may, however, also have been Etruscan). Tradition assigns the cause of Tarquinius's expulsion from Rome to the anger caused by the rape of the beautiful Lucretia (Lucrece) by his son Sextus, but it was more probably due to the tyranny of his rule which was remembered so vividly that 'king' became a hated word and the title was never adopted even which was remembered so vividly that 'king' became a hated word and the title was never adopted even once even by the all-powerful rulers of later days. An attempt by Lars Persena (commemorated in the legend of Horatius) to restore Etruscan supremacy failed.

Tartini, Giuseppe (1692–1770). Italian composer. The best known of his surviving compositions, mainly for violin, is the Devil’s Trill sonata, a memory, it is the Devil’s Trill sonata, a memory, it is said, of music played to him by the devil in a dream. He wrote on acoustics and is known as the discoverer of 'resultant tones'. The greatest violinist of his time, he founded (1728) his own school at Padua.

Tasman, Abel Janszoon (c.1603–1659). Dutch navigator. Sent on several voyages of exploration by van *Diemen, Governor of the Dutch East Indies, he discovered Tasmania (1642), which he named Van Diemen's Land, and New Zealand, Tonga and Fiji (1643). On another voyage (1644) he entered the Gulf of Carpentaria (previously discovered) and went on to explore the northwest coast of Australia.
Tassigny, Jean de Lattre de see Lattre de Tassigny, Jean de

Tasso, Torquato (1544–1595). Italian poet, born at Sorrento. Son of Bernardo Tasso (1493–1569), author of Amadigi di Gaula and Floridante, he studied at Padua, where he wrote his epic Rinaldo. In 1565 he went to Ferrara where he served first Cardinal d'Este and then (from 1571) his brother Duke Alfonso II. In 1573 he published a pastoral play, Aminta, the sensuous atmosphere of which was repeated in his great epic of the 1st Crusade, La Gerusalemme liberata (1575). In the following year, partly because of objections to his epic by the Inquisition, he showed signs of persecution mania. For a scene of violence (1577) in the presence of the Duchess he was briefly imprisoned. Given a refuge in a Franciscan monastery he fled to his sister but in 1579 was back in Ferrara. After renewed outbursts of frenzy he was again imprisoned, this time for seven years. The legend repeated by *Goethe and *Byron that the sentence resulted from his love for the Duke's sister has no basis in fact. Released in 1586, he was received by the Gonzagas in Mantua but soon began a wandering life, working intermittently on Gerusalemme conquistata, a revision of his earlier epic, from which many of the loveliest passages were removed. Among his other works were his 'discourses' on poetry, his letters and an unsuccessful tragedy, Torrismondo.

Tate, Sir Henry, 1st Baronet (1819–1899). English merchant and manufacturer, born in Lancashire. As a young man employed in a sugar refinery in Liverpool he patented a device for compressing and cutting sugar into cubes. The profits from this enabled him to set up his own company, Henry Tate and Sons. In 1897 he established the Tate Gallery, to which he gave his own collection of paintings and £80,000.

In 1897 he established the Tate Gallery, to which he gave his own collection of paintings and £80,000.

Tate, Nahum (1652–1715). Anglo-Irish poet. He wrote the libretto for *Purcell's opera Dido and Aeneas (1685), a metrical version of the Psalms (1696) and, almost certainly, the hymn While Shepherds Watched Their Flocks By Night (1702). His version of King Lear (1681) practically ousted Shakespeare's original until 1840. Poet Laureate from 1692, he also wrote Panacea, or a Poem on Tea (1700).

Taubner, Richard (Ernst Seiffert) (1891–1948). Austrian tenor, born in Linz. He sang in opera and, increasingly from 1925, in light opera (e.g. Lilac Time) and films. He was also a noted exponent of Schubert's songs. He composed several songs and the musical comedy Old Chelsea. In 1940 he was naturalised as a British subject.

Taylor, Dame Elizabeth (1932–2011). English film actor in the US. Famous as a child star (National Velvet, 1944), she was a celebrated beauty who appeared in many vapid romances, later gaining a reputation as a dramatic actor, e.g. in Cat on a Hot Tin Roof (1958), Butterfield 8 (1960) and Who's Afraid of Virginia Woolf? (1966), winning an Academy Award for the last two. She married the film director Mike Todd, the singer Eddie Fisher, Richard *Burton (twice), a US senator and three others.

Taylor, Frederick Winslow (1856–1915). American industrial engineer. He wrote Principles of Scientific Management (1911) which applied technocratic modes to industrial practice, setting scientific
standards, such as time-study and cost-benefit, to measure efficiency. Opponents of ‘Taylorism’ thought that his methods increased alienation and dehumanisation in the workplace.

Taylor, Jeremy (1613–1667). English author and clergyman. He attracted attention as a preacher, became chaplain to *Laud and *Charles I and (1638) rector of Uppingham, Rutland. In the Civil War he was a chaplain with the royalist forces, was taken prisoner in Wales, became chaplain to the Earl of Carbery (1645–57) and Bishop of Down in Northern Ireland (1661–67). His theological works, of which The Liberty of Prophesying (1646), Holy Living (1650) and Holy Dying (1651) were the most influential, were written in a style combining simplicity and splendour. They reveal him as a moderate and tolerant Churchman ready to limit matters of faith to what is found in the Bible and the Apostles’ Creed, leaving a large area in which a Christian was entitled to think for himself. Such teaching, which provided a basis of belief for later evangelical Churchmen, was supplemented by Ductor Dubitantium (1660), a vast work on moral theology aimed at formulating distinctions between good and evil.

Taylor, Zachary (1784–1850). 12th President of the US 1849–50. Son of a Virginian planter who had settled in Kentucky, he joined the army and was prominent in the frontier fighting against the Indians. Sent to Texas by President *Polk (1845) to defend the frontier against Mexican attack, he was present when an exchange of shots led to the Mexican War (1846–47). His victory at Buena Vista (1847) was the decisive and culminating episode of a successful campaign and ensured his success when he was nominated by the Whigs as their presidential candidate (1848). Though a slave-owner himself he took the common sense view that California (acquired from Mexico) should, if it chose, enter the Union as a free state. He died in office.

Tchaikovsky, Pyotr Ilyich (1840–1893). Russian composer, born at Kamsko-Votkinsk in the Urals. As a boy he was hypersensitive and abnormally dependent on his mother; her death when he was 14 affected him for the rest of his life. After being trained for the law, for which he was unfitted, at 21 he began to study music under Anton *Rubinstein at the St Petersburg Conservatoire. In 1865 he became professor of harmony at the Moscow Conservatoire, founded the previous year by Rubinstein’s brother Nikolai. In his early works, e.g. the Symphony No. 1 (Winter Dreams, 1868) and the fantasy- overture Romeo and Juliet (1870, revised 1880), he was influenced by the ideals of the nationalist group of Russian composers led by *Balakirev. The strongly Russian flavour of ‘Tchaikovsky’s early music (often based on folksong) was now gradually superseded by a cosmopolitan idiom in which his preference for the French over the German masters became apparent. He met *Berlioz, Johann *Strauss, *Brahms, *Saint-Saëns and *Mahler. Partly to squash speculation about his homosexuality, he married (1877) a former pupil Antonina Milyukova, despite their complete incompatibility. He left her after a fortnight but the episode caused insomnia, hallucinations and a deterioration of his mental stability. He toured from 1877, partly for his health, journeys largely financed by a rich widow Nadezhda von Meck (1831–1894) who settled a generous annuity on him. They corresponded from 1876 to 1891 but never spoke: on two accidental meetings they passed in embarrassed silence. He conducted in Paris, London, Hamburg, Leipzig, Dresden, Berlin and Prague, took holidays in Italy. He lived at Klin, near Moscow, from 1885 and visited the US in 1889, giving concerts in New York, Baltimore and Philadelphia.

He composed eight symphonies, including the unnumbered Manfred (1885) and the incomplete No. 7 (1892). The most performed are Symphony No. 4 (1877), No. 5 (1888) and No. 6 (Pathétique, 1893), his last finished work and the most deeply pessimistic. His major ballets Swan Lake (1876), Sleeping Beauty (1889) and Nutcracker (1891–92) remain in the repertoire of every company. His Piano Concerto No. 1 in B Flat (1875) has challenged every virtuoso and contains some of his most effective keyboard writing. The Variations on a Rococo theme for ’cello (1876) and the Violin Concerto in D (1878) are masterpieces. He wrote the Serenade for Strings (1880), a powerful Piano Trio (1882) and the Souvenir de Florence (string sextet, also arranged for string orchestra, 1890), many superb songs and less successful piano solos.

His emotionalism and rhetoric, which both attracts and repels, is demonstrated in the fantasy overture Romeo and Juliet (1869), the symphonic fantasy Francesca da Rimini (1876), the 1812 Overture (1880) and Hamlet (1888). Of his 10 operas only Eugene Onegin (1878) and The Queen of Spades (1890), both based on *Pushkin, are performed outside Russia. He died, supposedly of cholera, but possibly by suicide, in St Petersburg and was buried there.

Tcherepnin, Nikolai Nikolaevich (1873–1945). Russian composer. After studying under *Rimsky-Korsakov he was attached to the Mariinsky Theatre as an orchestral conductor, moving on in 1908 to work with the *Diaghilev ballet. He wrote music for Diaghilev until 1914 and in 1918 became principal of the Tiflis conservatoire. He wrote two operas, but was best known for his ballet music which showed a mixture of traditional Russian and modern French influences.

Tecumseh (1768–1813). American Shawnee Indian chief. Helped by his brother ‘the Prophet’, he enforced order and discipline, and, above all, forbade all intercourse with the white settlers or any cession
of land without consent of the Indian peoples as a whole. He fought on the British side with the rank of brigadier-general in the War of 1812, among the causes of which were alleged British intrigues with the Indians on the US–Canadian frontier. Near this frontier Tecumseh was killed at the Battle of the Thames (Ontario).

Tedder, Arthur William Tedder, 1st Baron (1890–1967). British airman, born in Stirlingshire. Educated at Cambridge, he joined the colonial service, transferring to the army (1914), then the RFC (1916), becoming a pilot. Director-General of research and development at the Air Ministry 1938–40, he became RAF Commander-in-Chief in the Middle East 1941–43, Allied Air Commander in the Mediterranean 1943, and Deputy Supreme Commander of Allied Forces in Europe 1943–45, under *Eisenhower*. Promoted Marshal of the RAF in 1945 and created a baron in 1946, he was Chief of the Air Staff 1946–49 and Chancellor of Cambridge University 1950–67.

Teilhard de Chardin, Pierre (1881–1955). French geologist, palaeontologist, Jesuit priest and philosopher. He was closely involved in the ‘discovery’ of Piltdown man (1912–13) which may have been intended as a scientific joke rather than a serious hoax. After serving in World War I as a stretcher bearer, he became professor of geology at the Institute Catholique, Paris, in 1918. He lived in China 1923–46, made palaeontological expeditions into Central Asia and worked on the Peking man excavations (1929). In his writings he tried to reconcile Christian theology with science and developed the concept of ‘cosmic evolution’, leading to the ultimate ‘Omega point’ and the second coming of Christ. He lived in France 1946–51 and the US from 1951 and died in New York. Forbidden to publish during his lifetime, he achieved great posthumous fame with his *The Phenomenon of Man* (1938–40, published 1959) but his reputation has declined as rapidly (and mysteriously) as it rose in the 1960s.

Telemann, Georg Philipp (1681–1767). German composer, born in Magdeburg. Self-taught, he abandoned the study of law to become Director of the Leipzig Opera (1702) and later the Hamburg Opera (1732–38). He declined the post of Kantor at the Thomaskirche, Leipzig, in favour of his lesser known colleague J. S. *Bach*. Telemann was almost certainly the most prolific composer of all time, writing 40 operas, more than 600 orchestral suites, 44 passions, 12 complete sets of services, over 1000 cantatas and many chamber works and concertos. Bach and *Händel* admired his music and *Händel*, especially, borrowed heavily from it. His works have sometimes been dismissed as tuneful, ornamental and lacking in dynamic tension, however, with renewed interest in his music, the admiration of his contemporaries appears well-founded.

Telford, Thomas (1757–1834). Scottish engineer, born in Dumfriesshire. Son of an Eskdale shepherd, he worked for several years as journeyman mason, using all his spare time for engineering study. After superintending dockyard construction at Portsmouth (from 1784) he was appointed surveyor of public works in Shropshire and built his first bridges in 1792. His Pontcysyllte Aqueduct and Canal (1795–1805), 18 kilometres long, in north-eastern Wales, became a World Heritage site in 2009. Other great achievements in a career during which he built some 1,200 bridges and 1,000 miles of roads, were the London–Holyhead road (including the Menai Straits suspension bridge, 1826) and the Caledonian Canal (1803–17). Elected FRS in 1827, he was first President of the Institution of Civil Engineers.

Teller, Edward (1908–2003). Hungarian American physicist, born in Budapest. Educated at the Karlsruhe Technical Institute and the universities of Munich and Leipzig, he was professor of physics at George Washington University 1935–41, Columbia 1941–42, Chicago 1946–52 and California 1953–71. He worked on the atomic bomb during World War II and later, as assistant director of Los Alamos Scientific Laboratory (1949–52), he made important contributions to physics by his work on, e.g., the structure of matter, cosmic rays and magnetohydro-dynamics. Known as the ‘father of the hydrogen bomb’, first tested in 1952, he was a hardliner in the Cold War and an opponent of Robert *Oppenheimer*.

Temple (Black), Shirley (1928–2014). American actor. A prodigy, she appeared at 3½ in her first film, and in 1934 alone she made nine more (including *Little Miss Marker* and *Bright Eyes*), winning a special Academy Award. Her skilled acting, singing and dancing, accompanied by curls and dimples, made her an international phenomenon. By 1938 she was Hollywood’s No. 1 box office attraction, spinning off Shirley Temple dolls, dresses and colouring books. By 1940 her juvenile career was in decline, but she made occasional films and television programs until 1960. She became active in Republican politics and was Ambassador to Ghana 1974–76 and Czechoslovakia 1989–92.

Templer, Sir Gerald Walter Robert (1898–1979). Son of a general, he served in France, Italy and Germany during World War II. As High Commissioner in Malaya 1952–55 he defeated the insurgency by the Malaysian Races Liberation Army. Chief of the Imperial General Staff 1955–59, he founded the National Army Museum, London, in 1960 and received a KG in 1963. He is the only field marshal known to have been wounded in action by a grand piano.

Templewood, Samuel John Gurney Hoare, 1st Viscount (1880–1959). British politician. He was a Conservative MP 1910–44 and initiated, as Secretary of State for India 1931–35, the act of 1935 which granted provincial self-government. As Foreign Secretary 1935 he was forced to resign by a storm of protest against the Hoare-*Laval Pact which proposed a partition of Ethiopia and recognition of the Italian conquests. He returned as a minister 1936–40 and served during World War II in the sensitive post of Ambassador to Spain 1940–44, retiring with a peerage. He was an active opponent of capital punishment.

Tendulkar, Sachin Ramesh (1973– ). Indian cricketer, born in Mumbai. He made his test debut in 1989 and by 2012 had scored 100 centuries, for an aggregate of 34,000 runs, and was often ranked as second only to Don *Bradman. He served in the Indian Parliament 2012–.

Teniers, David (1610–1690). Flemish painter. Like his father, David Teniers the Elder (1582–1649), by whom he was trained, and under the influence of Adriaen Brouwer, he painted mostly genre pictures tavern scenes with soldiers gambling or brawling, a village festival, alchemists, witches etc. He worked in Antwerp and later Brussels, was court painter to Archduke Leopold, and compiled an illustrated record of his collection of pictures.

Tenniel, Sir John (1820–1914). English draughtsman. He joined the staff of Punch in 1851 and in 1901 retired after 50 years as the leading political cartoonist. He became even better known as the illustrator of Lewis *Carroll’s *Alice in Wonderland and *Through the Looking Glass. He was knighted in 1893.

Tennyson, Alfred, 1st Baron Tennyson (1809–1892). English poet, born at Somersby, Lincolnshire. Son of a clergyman, his family had a history of manic depression, obsessions and/or fits of rage. At Trinity College, Cambridge, he met Arthur *Hallam, who became his greatest friend and whose sudden death (1833) evoked his famous elegy In Memoriam (published anonymously in 1850). Some of his juvenilia had already appeared in print and a volume published in the same year as Hallam’s death contained his first successes such as *Oenone, *The Lotus-eaters and A Dream of Fair Women. A further collection (1842), including Morte d’Arthur (the genesis of Idylls of the King), Locksley Hall, Ulysses and such famous lyrics as Break, Break, Break, confirmed his reputation. A state pension of £200 (1842) per annum relieved immediate financial anxiety but it was not until 1850, when he succeeded *Wordsworth as Poet Laureate, that he felt free to marry Emily Sellwood, to whom he had been engaged for 17 years. By now his poetry became a source of wealth. As Laureate he had to write poems to commemorate great events (e.g. Ode on the Death of the Duke of Wellington and The Charge of the Light Brigade), Maud (1855) was read or recited in every drawing room; of *Enoch Arden (1864) 60,000 copies were at once sold. (Richard *Strauss set it in 1897 as a melodrama for narrator and piano.) In 1854 Tennyson began to live at Farringford, his house at Freshwater in the Isle of Wight, and he began to build his second home near Haslemere in 1868. Meanwhile, he had found inspiration in the legends of King Arthur and his Idylls of the King were appearing in steady sequence (1855–89). Of his verse plays the genius of *Irvings managed to make something of *Becket (1879), but the others, e.g. Queen Mary (1876) and Harold (1877), were among his least successful works. He received a peerage in 1884.

Tennyson was so prolific and the demand from his public so great that much that is trite and second-rate appears in his Collected Works; his skills, his complete mastery of versification and the lilting music of his lines, turned opinion against him when a later age equated roughness with sincerity. He was capable of deep emotion, as In Memoriam and many other poems show. His approach was not primarily intellectual but he brought to the problems and discoveries of his day a philosophic outlook and a somewhat scientific mind. In 1890 he declined some poems on wax cylinders, now available on CD and YouTube. His son Hallam Tennyson, 2nd Baron Tennyson (1852–1928) was Governor-General of Australia 1903–04.

Tenzing Norgay (1914–1986). Nepalese mountaineer. He first climbed as a porter with an expedition to Everest in 1935. In 1952 he reached 8600 m. and in 1953, in John *Hunt's expedition, he and Edmund *Hillary reached the summit (8848 m.). He became President of the Sherpa Association.

Terborch (or Terburg), Gerard (1617–1681). Dutch painter. He spent much of his time as a young painter in travel. One of his finest pictures (now in the National Gallery, London) portrays the delegates to the peace congress of Westphalia which ended the Thirty Years' War (1648). By 1650 he was back in Holland and perfected a type of genre picture, nearly always of small size, depicting scenes in which one or more figures, usually ladies, are reading, writing, playing music etc. in rooms appropriate to the elegance of their attire. Soft and delicate colour harmonies characterise his work.

Terence (Publius Terentius Afer) (c.190–160 BCE). Roman comic playwright, born in Carthage. Taken to Rome as a slave, he was educated and freed by his master. He achieved great success with *Andria (166), the first of six plays, all extant. His others were *Hecyra (The Mother-in-law, 165), *Heauton Timorumenos (The Self-punisher, 163), *Eunuchus (161) on which the first English comedy, *Ralph Roister Doister was based, *Phormio (161), *Adelphi (The Brothers, 160). All were based on Greek originals, *Hecyra and *Phormio on plays by Apollodorus, the rest derived from *Menander. The stock situations and characters of ancient comedy were later again revived by *Shakespeare and *Molière. Terence was famed for use of polite colloquial speech.

Teresa of Ávila, St (also known as St Teresa of Jesus: Teresa Sánchez de Cepeda y Ahumada) (1515–1582). Spanish nun. She entered a Carmelite convent in Ávila (c.1526) and had lived there over 20 years, much troubled by ill health, before she left to found, after considerable opposition, a convent governed by the original, stricter rule. St Joseph's Convent at Ávila was the first of 15 established during her lifetime for ‘discalced’ or barefooted Carmelites (a separate order from 1580), for men as well as women. Despite this immense practical activity her books are among the most famous examples of mystical literature. The Life (1562–65) is a spiritual autobiography; The Way of Perfection (1565) provides guidance for her nuns, The Foundation (from 1576) tells of her work in establishing the new convents, and The Interior Castle (1577), perhaps her most illuminating work, is an account, written with all the conviction of her rich experience, of a contemplative life. Minor works too and letters, vivid, witty and wise, help to reveal one of the most attractive personalities of religious history. She was canonised only 40 years after her death. St Teresa in Ecstasy (in Rome) was one of *Bernini's greatest sculptures. General *Francis kept her mummified hand on his desk.

Teresa of Calcutta, St (formerly known as Mother Teresa: Anjezë Gonxhe Bojaxhiu) (1910–1997). Albanian Roman Catholic missionary, born in *Skopje, then in the Ottoman Empire. She joined the order of Sisters of Loreto in 1929. As principal of St Mary's High School, Calcutta, she founded the Missionaries of Charity in 1950 and, through this organisation, founded 50 orphanages and refuges for the destitute in India, notably the Pure Heart Home for Dying Destitutes. She was awarded the Pope John XXIII Peace Prize in 1971, the Nobel Prize for Peace in 1979, and the OM in 1983. The Order was established in other countries. In 2003 she was beatified by Pope *John Paul II, and was canonised by Pope *Francis in 2016.

Teresa of Lisieux see Therese of Lisieux, St

Terfel, Sir Bryn (Bryn Terfel Jones) (1965– ). Welsh bass-baritone. In 1992 he made his debut at Covent Garden, Salzburg and Vienna, and was soon recognised as a *Mozart specialist as Figaro and Don Giovanni. Later roles included Wotan in *Wagner's Ring in New York and *Verdi's Falstaff. He also recorded popular songs.

Terry, Dame Ellen (1847–1928). English actor. She achieved immense success as a Shakespearean actor and was *Irving’s leading lady 1878–1902. She married three times, first and disastrously to the painter G. F. *Watts (1864). The theatrical designer E. G. *Craig was her son by Edward Godwin, an architect. She had a long ‘paper courtship’ with G. B. *Shaw. Other members of her family won fame on the stage: her brother, Fred *Terry (1863–1933), who created the part of Sir Percy Blakeney in *The Scarlet Pimpernel, her granddaughter Phyllis Neilson-Terry and her great-nephew John *Gielgud.

Tertullian (Quintus Septimus Florens Tertullianus) (c.155–c.225) Latin theological writer, born in Carthage. A convert, he became a presbyter of Carthage, but little is known of his life. Of his 31 surviving works one of the greatest was *Apologeticus (197), written to defend Christianity against charges that it was immoral, useless and dangerous to the state; it warns Roman officials that the blood of martyrs provides the seeds of growth. A second series deals with practical subjects: attendances at theatres and games, idolatry and extravagance in dress etc. are condemned; chastity and fasting are among the virtues praised. In his theological works he claims that true doctrine is handed down through apostolic succession and cannot be assailed by argument. He
further stresses the ascendancy of faith over reason by such paradoxical assertions as his saying that a subject of belief 'is certain because it is impossible'.

**Tesla, Nikola** (1856–1943). Serb-American electrical engineer, born in Smiljan, Croatia. Son of an Orthodox priest, he was educated at Graz and Prague and migrated to the US in 1884. He worked briefly with Thomas *Edison* and, from 1885, with George *Westinghouse. Edison* was deeply committed to the use of direct current (DC); *Westinghouse* and Tesla saw greater efficiency and economy with alternating current (AC). In 1888 Tesla invented the first AC electric motor, substantially in the form still in current use, and this was the most important single development in the Electric Revolution. He sold his patents to *Westinghouse* and set up his own laboratories. In 1891 he invented the *Tesla coil*, an air-core transformer used to produce high voltage in radio (and later television) equipment. He improved the transmission of AC over long distances and was the first to demonstrate that the earth is an electrical conductor. *Tesla* did not patent most of his inventions and died in poverty, bitterly disappointed not to have received a Nobel Prize. The *Tesla* luxury electric sedan (2010) was named for him.

**Tetrazzini, Luisa** (1871–1940). Italian singer, born in Florence. She made a great name for herself as a coloratura soprano, mainly in Italian opera, and commanded huge audiences in virtuoso recitals throughout the world.

**Thackeray, William Makepeace** (1811–1863). English novelist, born in Calcutta. Soon after the death of his father, an official in the East India Company, he went to England (1817) where he was subsequently looked after by his mother (later portrayed as Helen Pendennis) and his stepfather (afterwards transformed into Colonel Newcome). From Charterhouse ('Grey Friars') he went to Cambridge, where prospects of wealth encouraged idleness, travel (after failure to get a degree) and a half-hearted study of art and law. The disappearance of most of the money through the failure of a Calcutta agency (1833) forced him into activity. Unable to sell his pictures, he took to journalism in 1836, the year when he married Isabella Shawe. In his first period of writing appeared *The Yellow-plush Papers* (1840) in which Thackeray, in the guise of a footman called Yellow-plush, dilated with good-humoured satire upon the social follies and foibles of his time. *Frazier's Magazine, The Times* and *Punch* were among the periodicals that accepted his work. In 1840 his wife showed signs of insanity. After trying to cope with an increasingly impossible situation he was forced to part from her and place her under control. She lived for another 50 years but never recovered. The effect upon his work was to soften its asperity and introduce a new note of pathos. *The Great Hoggarty Diamond* (1841) and the *Punch* series (1846–47) later published as *The Book of Snobs* are among the numerous writings that preceded the publication of his best novels. The first, *Vanity Fair* (published as was then the custom in monthly parts, 1848–50), tells of the manoeuvres of the clever adventuress Becky Sharp, in the days of Waterloo. *Henry Esmond* (1852) is the story of a disputed inheritance in Ireland with a background of *Marlborough's war and Jacobite intrigue. Its sequel, The Virginians* (1857–59), continues the hero's story in America; *Pendennis* (1848–50) returns to Thackeray's own time with several autobiographical passages. *The Newcomes* (1853–55), in that it purported to be written by Pendennis is aligned with the earlier book. The later novels show a marked decline. The best known of his miscellaneous writings include the delightful children's story, *The Rose and the Ring* (1854), and two series of lectures collected as *The English Humorists of the Eighteenth Century* (1853) and *The Four Georges* (1860). In 1860 he fulfilled an ambition by becoming editor of the *Cornhill* magazine. As a novelist, Thackeray had the same taste for melodramatic plots as *Dickens* but his stories are more tightly constructed; while his characters move within a narrow range, his humour is more astringent than that of Dickens and his compassion less evident. This was partly due to the unhappiness of his domestic life, which, as the years passed, made him increasingly sensitive to personal slights.

**Thalberg, Irving Grant** (1899–1936). American film production executive. After a sickly childhood, he developed secretarial skills and became head of production at Universal Studios and, from 1924, at Metro-Goldwyn-Mayer (MGM). Known as 'the boy wonder', he was the subject of F. Scott *Fitzgerald's* novel *The Last Tycoon*, and married the Canadian-born actor *Norma Shearer* (1902–1983).

**Thales** (c.640–c.550 BCE). Greek philosopher, born in Miletus, Asia Minor (now Turkey). Regarded as one of the 'seven wise men' of Greece, he was held to be the first of the philosophers because he sought to explain the universe rationally rather than by mythology. The tradition recorded by *Aristotle* that Thales believed that all things are made of water is likely that he was a merchant and that in his travels in Babylonia and Egypt he acquired the mathematical knowledge that enabled him, e.g. to predict the solar eclipse of 585 BCE.

**Thant, U** (1909–1974). Burmese diplomat. After working as a school teacher 1928–47, he entered the public service in Burma and became the trusted adviser of Prime Minister U *Nu. In 1957 he became Burma’s permanent representative at the
United Nations, and on the death (1961) of Dag *Hammarskjöld was made Acting Secretary-General of the organisation, then Secretary-General 1962–71.

Tharp, Twyla (1941– ). American dancer and choreographer, born in Indiana. She worked in New York with her own modern dance troupe, performed extensively in film television and in her own ballets, often based on popular music e.g. Hair, and *Sinatra songs.

Thatcher, Margaret Hilda (née Roberts), Baroness Thatcher of Kesteven (1925–2013). British Conservative politician, born in Grantham, Lincolnshire. Her father, a strict Methodist, owned two grocery stores and was a local councillor and mayor. Educated at Kesteven and Grantham Girls' School, at Somerville College, Oxford University, she studied chemistry under Dorothy *Hodgkin, and worked as an industrial chemist 1947–51. She was active in Conservative student politics at Oxford, and became deeply influenced by the economist Friedrich von *Hayek. In 1951 she married Denis Thatcher (1915–2003), a former oil industry executive, and became the mother of twins (1953). She studied law at Lincoln's Inn and was called to the bar in 1953. Conservative MP for Finchley 1959–92, and Parliamentary Secretary to the Minister of Pensions and National Insurance 1961–64, she was appointed Secretary of State for Education in Edward *Heath's Cabinet 1970–74. In February 1975 she was elected leader of the Conservative party (defeating Heath). In the general election of May 1979, she defeated James *Callaghan's Labour Government to become Britain's Prime Minister 1979–90, the first women to hold the office.

Her election destroyed the Keynesian consensus dominating British economic policy since the 1940s and her enthusiastic adoption of von Hayek's paradigm was a turning point in political economy in the West, soon followed in the United States by *Reagan, in New Zealand, by Roger *Douglas and in Australia, in modified form, under Bob *Hawke. (Coincidentally, in 1979 dramatic changes were initiated by Pope *John Paul II, *Deng Xiaoping in China and the Ayatollah *Khomeini in Iran.) Like Khomeini, she had a conviction of infallibility, scepticism about 'progress', commitment to absolutes and an invoking of the Manichean contest between Good and Evil. Paradoxically, she showed no interest in gender-related issues.

Mrs Thatcher urged a commitment to 'Victorian values', of self-help, rejecting the 'nanny state' (a coinage by Iain *Macleod) as intrusive and all encompassing, inhibiting personal choices about education and health, insisting that lower taxes would stimulate economic activity and job creation. She was deeply hostile to trade unions and seemed indifferent to high unemployment. She began a major program of 'privatisation', selling off public assets: schools and hospitals, even prisons, to be run as trading enterprises. She 'outsourced' policy advice to consulting firms, bypassing public servants. She promised to eliminate 'feather bedding' and phase out tariffs. She promoted 'deregulation', arguing that market forces would require higher ethical standards. (The banking crisis of 2008 challenged that assumption.) The changes occurred with little public debate: as the acronym TINA put it, 'There is no alternative.' She described her supporters as 'dries' and her opponents as 'wets'. She often resorted to populism in her campaigning and was strongly supported by the *Murdoch press.

War with Argentina over the Falkland Islands (April–June 1982) was the most controversial act of her first term, but the economy began to recover and she won a second term with a large majority in June 1983. In October 1984 she survived an assassination attempt when the IRA bombed a Brighton hotel during a Conservative Party Conference. In June 1987 she became the first British Prime Minister since *Palmerston to win a third consecutive election.

She had a major role in persuading President Reagan to collaborate with *Gorbachev. British politics moved sharply to the Right in the era she dominated and Tony *Blair's New Labour was distinctly Thatcherite.

She remarked, notoriously, in 1987: 'There is no such thing as society. There are individual men and women, and there are families.' Personal enrichment displaced the setting of social goals, and all values could be measured. Often called 'The Iron Lady', she alienated many colleagues with her imperious style, increasing opposition to closer involvement with the European Community and the rigidity of her commitment to neo-classical economics, leading to significant regional unemployment. Increasing preoccupation with the immediate and material had a crowding-out effect on community values and the concept of 'the public good'. She was forced out by colleagues in November 1990 and replaced by John *Major, after serving 11 years 6 months and 25 days, the longest single term since Lord *Liverpool. She received the OM in 1990, the US Presidential Medal of Freedom in 1991, a peerage in 1992 and became LG in 1995. She suffered two volumes of memoirs, The Downing Street Years (1993) and The Path to Power (1995). She suffered debilitating strokes after 2002 and had a ceremonial funeral at St Paul's Cathedral.

Theaetetus (417–369 BCE). Greek mathematician. He studied under Theodorus of Cyrene and at the Academy with *Plato. None of his writings has survived, though we have adequate accounts of them from other sources. Plato wrote a dialogue about him (the Theaetetus) and he is the principal character in
Athenian soldier and statesman. During the Persian Wars he recognised the importance of a navy for Athens, having secured the banishment of his rival *Aristides, he made use of the opening of a new seam in the silver mines at Laurium to raise the total number of ships from 70 to 200. When the Persians forced the pass of Thermopylae, the ‘gateway’ to Athens on the north, he persuaded the citizens to take refuge with the ships and himself directed the strategy by which the Persian fleet was destroyed at the Battle of Salamis (480). In the next year the Persians were forced to withdraw. Arrogance soon cost Themistocles his popularity and his anti-Spartan policy threatened Greek unity. Banished from Athens, he went first to Argos and then, after accusations of intrigue with the enemy, to Persian territory, where he was generously received. He showed unusual religious tolerance and, though he had to take large areas of land to provide settlements for his people to regain Italy from the German mercenary *Odovacar who had made himself king. Theodoric in 488 was urged by the emperor Zeno to lead his Ostrogoths, he was educated in Constantinople and proffering only *Odovacar who had made himself king. Theodoric succeeded, after four years of confused fighting, only by inspiring the treacherous murder of his opponent. Setting up his court at Ravenna and proffering only the most nominal allegiance to Zeno, he consolidated and enlarged his kingdom and entered into friendly relations with the Franks and other peoples of Europe. He showed unusual religious tolerance and, though he had to take large areas of land to provide settlements for his 200,000 Ostrogoths, he ruled with prudence, making use of many of the old Roman institutions and paying special attention to the preservation of the splendour and dignity of Rome.

*Theodoric (known as ‘the Great’) (c.454–526). King of Italy 493–526. Son of the ruler of the Ostrogoths, he was educated in Constantinople and in 488 was urged by the emperor Zeno to lead his people to regain Italy from the German mercenary *Odovacar who had made himself king. Theodoric succeeded, after four years of confused fighting, only by inspiring the treacherous murder of his opponent. Setting up his court at Ravenna and proffering only the most nominal allegiance to Zeno, he consolidated and enlarged his kingdom and entered into friendly relations with the Franks and other peoples of Europe. He showed unusual religious tolerance and, though he had to take large areas of land to provide settlements for his 200,000 Ostrogoths, he ruled with prudence, making use of many of the old Roman institutions and paying special attention to the preservation of the splendour and dignity of Rome.

*Theodore (1816–1868). Emperor of Ethiopia 1855–68. Originally a brigand named Kassa, he fought his way to supremacy and showed considerable talents as a ruler though prone to unpredictable violence. Taking the absence of a reply to a letter sent by him to Queen *Victoria as a slight, he seized the British Consul and other Europeans. Eventually a British force was sent under Sir Robert *Napier. When Theodore’s stronghold of Magdala was taken, he shot himself.

*Theodore (Theodor, Baron von Neuhoff) (1694–1756). German adventurer, self-styled ‘king’ of Corsica. The son of a Westphalian nobleman, he led a life of adventure and political intrigue. In 1736 he landed in Corsica with instructions he had received from the Austrian Government in 1729 to investigate the causes of a rebellion there. On his arrival he was crowned King and proceeded to issue coins and acquire revenue by selling knighthoods in his ‘Order of Deliverance’. This not proving enough, he left to seek foreign aid, but after two attempts to return had failed he settled in London, where he was imprisoned for debt and died in Soho.

*Theodorakis, Mikis (1925– ). Greek composer. He worked in the Resistance during World War II, was deported for his political activity during the civil war 1947–52 and studied with *Messiaen in Paris. He was extraordinarily prolific in a variety of forms, including seven symphonies, a Requiem, chamber music, the ballet Antigone (written for Margot *Fonteyn), songs, choruses, an opera and film music, including Zorba the Greek. Imprisoned 1967–70, he had several terms in parliament, left the CP in 1986 and was Minister without Portfolio 1990–92.

*Theodore, Edward Granville (1884–1950). Australian Labor politician and director, born in Port Adelaide. The son of a Romanian (Teodorescu) father and an Anglo-Irish mother, he left school at 12, worked in mines, then became a union organiser in Queensland and state president of the Australian
Workers’ Union (AWU) 1913–16. Queensland State MP 1909–25, he was Treasurer 1915–19 and a reforming Premier 1919–25. A Federal MP 1927–31, in the *Scullin Government he was Treasurer 1929–30; 1931–32, stepping down at a critical time to answer allegations of bribery about mining leases in Queensland. This damaged Labor’s campaign to meet the impact of Depression, as Theodore was the strongest figure in the Government, with the clearest economic strategy, paralleling the ideas of *Keynes. Theodore’s reinstatement as Treasurer in January 1931 provided Joseph *Lyons with a reason to defect from the ALP. Jack *Lang hated him. He became a director of mining and publishing companies and during World War II directed the Allied Works Council 1942–44.

**Theodosius I** (known as ‘the Great’) (c.346–395). Roman Emperor 379–95. Born in Spain, son of the Count Theodosius who had protected Britain from raids from Scotland, he was summoned by *Gratian to be his co-emperor. In this role he restored law and order in the Balkans by providing the barbarians with land in return for their service in the Roman army. On the death of Gratian he maintained Valentinian II in power in Italy until his somewhat mysterious death (492). Despite his ability, Theodosius, who had been baptised (480) and condemned any who rejected the decisions of the Council of Nicæa, could be fiercely cruel. Having pardoned rioters in Antioch, he punished a similar outbreak in Thessalonica by a massacre (390) in which 7000 perished, an act for which St *Ambrose insisted that he make public atonement in Milan Cathedral. He was succeeded by his sons Honorius and *Arcadius.

**Theophrastus** (368/373–c.287 BCE). Greek naturalist and philosopher. Taught by *Plato and *Aristotle, he inherited the latter’s library and manuscripts and carried on his school at Athens. Most of the 224 books he is said to have written are lost, including the series on zoology, but books on plants, stones and fire are among the survivors, which also include the *Characters, a book on moral types which may not be wholly his work.

**Thérèse of Lisieux, St** (known as ‘the Little Flower’ or St Thérèse of the Infant Jesus) (Marie-Françoise-Thérèse Martin) (1873–1897). French nun. Daughter of a watchmaker, at the age of 15 she entered the Carmelite convent of Lisieux, where she spent the rest of her short life and died of tuberculosis, complicated by her self-inflicted privations. *L’Histoire d’une âme* (1898), an account of her experiences, quickly established her cult throughout France. She was canonised in 1925, made patron saint of France in 1944 and in 1997 became the youngest Doctor of the Church.

**Thiers, (Marie Joseph Louis) Adolphe** (1797–1877). French politician and historian, born at Marseilles. He went to Paris (1821) and became known by his *Histoire de la Révolution* (1823–27) which revealed his opposition to *Charles X’s regime. He supported the revolution that brought *Louis Philippe to the throne (1830), was elected a deputy and became Minister of the Interior (1832) and Prime Minister (1836). The king’s refusal to intervene in the civil war in Spain soon forced his resignation. He returned in 1840 but his government fell when Great Britain and her allies thwarted his attempt to sustain the seizure of Syria from the Turks by *Mehemet Ali, the Egyptian viceroy. For the rest of Louis Philippe’s reign he vigorously opposed *Guizot’s right-wing government, while writing his *Histoire du Consulat de l’Empire* (1845–62). He supported Louis Napoléon in the first stages of the revolution of 1848 but turned against him when he made himself Emperor as *Napoléon III (1851). He was expelled from the country and spent the next 12 years on his literary work. A deputy again 1863–70, he was the only major politician to oppose the Franco-Prussian war and, on France’s defeat, negotiated peace with *Bismarck. Pending any decision to revive the monarchy he was elected (February 1871) ‘Chief of the Executive Power’ and suppressed the Paris Commune brutally. In August 1871, he was elected first president of the Third French Republic, resigning in 1873 in conflict with the ultra-conservative legislature.

**Thistlewood, Arthur** (1770–1820). English conspirator. Having lived in America and France, where he imbibed revolutionary doctrines, he enlisted others to join him (1820) in an attempt to murder the members of the British Cabinet, while at dinner. The plan was betrayed and the plotters were arrested at a house in Cato Street (after which the conspiracy was named). Thistlewood and four others were hanged, five more were transported.

**Thomas, St** (‘twin’, T’oma in Aramaic, Didymus in Greek) (d.c.75 CE). Christian apostle, his personal name may have been Judas. From his reluctance to accept the fact of the resurrection without tangible evidence, originated the phrase ‘Doubting Thomas’. Tradition relates that he became a missionary in
India. The ‘Christians of St Thomas of Malabar’ claim to have been founded by him and a shrine (rebuilt in 1547 by the Portuguese) near Madras is said to indicate his place of martyrdom. He is Portugal’s patron saint.

**Thomas Aquinas, St** see Aquinas, St Thomas

**Thomas (of Canterbury), St** see Becket, St Thomas

**Thomas à Kempis** (Thomas Hammerken) (1380–1471). German Augustinian monk and mystic, born at Kempen near Cologne. He seems to have spent his whole life at the monastery of Zwolle (now in the Netherlands) and there wrote in Latin *The Imitation of Christ*, which was published posthumously (1486) and, in its many translations, has proved probably the most popular of all devotional works. Its four books relate in simple and sincere language the progress of the Christian soul to perfection, its gradual dissociation from the human world and its eventual union with God. Its authorship has also been attributed to Jean Charlier de Gerson, a French theologian.

**Thomas, Dylan** (1914–1953). Welsh poet, born in Swansea. He moved to London in 1932 and published *Eighteen Poems* in 1934, followed by *Twenty-five Poems* (1936) and *The Map of Love* (1939), the last containing prose as well as poetry. *The Collected Poems* appeared in 1952. His poetry, rich in vivid and highly original imagery, technically ingenious, frequently obscure, has been highly praised as part of a 20th-century neo-romanticism. He achieved immense posthumous success with his radio play *Under Milk Wood* (1954), a brilliant evocation of a day in an imaginary Welsh village. It later proved successful on stage and screen. He also wrote the autobiographical sketches *Portrait of the Artist as a Young Dog* (1940), and an unfinished novel, *Adventures in the Skin Trade* (published 1955). His death, hastened by excessive drinking, occurred in New York during a lecture tour. His wife, *Caitlin Thomas* (1914–1994), wrote an autobiography of great poignancy, *Leftover Life to Kill* (1957).

**Thomas, Norman Mattoon** (1884–1968). American socialist, born in Marion, Ohio. Educated at Princeton, he became a Presbyterian minister 1911–31, joined the Socialist Party in 1918 and ran for President of the US in every election from 1928 to 1948. His highest vote, 882,000, was in 1932. Despite overwhelming defeats at the polls, he had the satisfaction of seeing his program adopted by Democrats and Republicans.

**Thomas, R(onald) S(tuart)** (1913–2000), Welsh poet, born in Cardiff. He was an Anglican priest in Wales, living remotely but writing poems of great simplicity and intensity, e.g. ‘A Marriage’, ‘Via Negativa’ and ‘The Bright Field’.

**Thompson, Francis** (1859–1907). English poet, born at Preston, Lancashire. Having abandoned his medical studies he went to London, where he lived in direst poverty and misery relieved by opium until rescued by Wilfred and Alice Meynell, who sent him to hospital and subsequently watched over him through years of ill health. Of his works, which were preponderantly religious, *The Hound of Heaven*, contained in a collection of poems published in 1893, is best known. It tells how the poet in his flight from God is pursued and overtaken. Its style is reminiscent of 17th-century poets, e.g. *Crashaw.*

**Thomson, James** (1700–1748). Scottish poet. Intended for the ministry, he went to London to seek his literary fortune and achieved recognition by *The Seasons* (1730), originally published separately, beginning with *Winter* (1726), in Miltonic blank verse. His *Alfred, a Masque* (1740) contained the song *Rule, Britannia*. Thomson used the forms of the classical age to which he belonged but some of his rapturous descriptions of nature in *The Seasons* presaged Romanticism.

**Thomson, James** (1834–1882). British poet, born in Scotland. Brought up in poverty, he tried various careers, including that of an army instructor from which he was dismissed in 1862. He went to London where he lived a lonely life, made worse by the use of stimulants and drugs to relieve illness and melancholy. Friendship with Charles *Bradlaugh enabled him to contribute to the National Reformer*, for which he wrote his most famous poem, *The City of Dreadful Night* (1874), in which London is pictured as a city of despair. He attached the initials B. V. (Bysshe Vanolis) to his name.

**Thomson, Sir Joseph John** (1856–1940). English physicist, born in Manchester. Educated at Owens College and Trinity College, Cambridge, he became Cavendish professor of experimental physics at Cambridge 1884–1918 and Master of Trinity 1918–40. He discovered (1897) the electron and deduced that cathode rays consist of these sub-atomic particles. This work laid the foundations of modern atomic physics. He invented (1911) positive-ray analysis and showed that the naturally occurring elements are mixtures of isotopes. He won the Nobel Prize for Physics (1906),
received the OM (1912) and the Copley Medal (1914) and became President of the Royal Society 1915–20. Eight of his students became Nobel Laureates.

His son, Sir George Paget Thomson (1892–1975), won the Nobel Prize for Physics (1937) for discovering the diffraction of electrons by transmission through crystals jointly with the American physicist C. J. *Davisson who had made the same discovery by a different method. He was professor of physics at Aberdeen 1922–30 and at Imperial College, London 1930–52, and knighted in 1943.

Thomson, Virgil (1896–1989). American composer and critic. His works, notable for their economy and simplicity of style, include symphonies, sacred choral music and two operas with libretti by Gertrude *Stein.

Thomson of Fleet, Roy Herbert Thomson, 1st Baron (1894–1976). Canadian newspaper proprietor. After small beginnings as a seller of radio equipment, he acquired radio stations and newspapers in Canada, breaking into the British market with the purchase of the Scotsman (1953). His greatest single acquisition was the *Kemsley Newspaper groups (1959) which included the Sunday Times. He became a British citizen in 1963 and was given a peerage in 1964. The Thomson Corporation bought The Times, London in 1966, selling it to Rupert *Murdoch in 1981.

Thoreau, Henry David (1817–1862). American poet, essayist and mystic, born in Concord, Massachusetts. His birthplace became the centre of his life: he returned there after graduating at Harvard, where he added a love of the classics, especially of *Homer, to that of the English poets whom he already knew. His first book, A Week on the Concord and Merrimack Rivers (1849), intertwined philosophy and observation. From Concord he went into a two-year retreat in a cabin which he constructed at Walden Pond. The record of that experience, contained in his most famous book, Walden (1854), remains an American classic. It tells a story interesting in itself and is important as a study of nature, but its greatest significance is derived from the revelation of his own idealistic faith. Nor was his faith a matter of theory only, he preferred prison to paying a poll tax to sustain his life: he returned there after graduating at Harvard, Massachusetts. His birthplace became the centre of his life, he returned there after graduating at Harvard, where he added a love of the classics, especially of *Homer, to that of the English poets whom he already knew. His first book, A Week on the Concord and Merrimack Rivers (1849), intertwined philosophy and observation. From Concord he went into a two-year retreat in a cabin which he constructed at Walden Pond. The record of that experience, contained in his most famous book, Walden (1854), remains an American classic. Nor was his faith a matter of theory only, he preferred prison to paying a poll tax to sustain his life: he returned there after graduating at Harvard, Massachusetts.

At the Old Vic, London (1914–18), working with Lilian *Baylis, she was effective in *Shakespeare and as Hecuba in *Euripides' The Trojan Women. *Shaw wrote St Joan (1924) for her and she played the title role 244 times in its first London season. She received a DBE in 1931. She appeared in 15 films, toured widely and continued to play in old age, making a hit in a revival of Arsenic and Old Lace (1966).

Trewin J. C., Sybil Thornndike. 1955.

Thornhill, Sir James (1675–1734). English painter. He is best known for the decorative murals he painted for *Wren's hall at Greenwich, for the dome of St Paul's Cathedral and for great baroque houses such as Blenheim. His portraits included one of the criminal Jack Sheppard. Knighted in 1720, he was appointed history painter to the king in 1728. *Hogarth became his son-in-law (1729) and they collaborated in a conversation piece of the House of Commons (1730).

Thorvaldsen, Bertel (1768/70–1844). Danish sculptor. He spent most of his life in Rome and came to be recognised as the chief exponent of neoclassicism after *Canova. Modern taste has rebelled against the smooth perfection of his style but his contemporary success was immense. Among his patrons was *Napoleon, who commissioned a frieze of *Alexander's campaigns. He left all his unsold works, religious and classical, to his country and they are collected with casts of many other of his important works, in the Thorvaldsen Museum, Copenhagen.

Thrale (Piozzi), Hester Lynch (née Salusbury) (1741–1821). English writer, born in North Wales. She had learning, vivacity and charm, but was unsuitably married to a wealthy Southwark brewer. At her country house at Streatham she entertained a lively, intellectual circle including Samuel *Johnson. The house became his second home. He was outraged when, three years after her husband’s death (1781), she announced her impending marriage to Gabriel Piozzi and later lived happily with him in Wales. She published a book of anecdotes about Dr Johnson (1786) and his correspondence with her (1788).

McCarthy, W., Hester Thrale Piozzi. 1986.

Throckmorton, Francis (1554–1584). English conspirator. He became entangled in plots to restore Roman Catholicism in England and to bring *Mary Queen of Scots to the English throne. Caught in the act of writing in cipher to Mary, he was tortured and executed. He came from a family long distinguished in public affairs: his uncle, Sir Nicholas Throckmorton (1515–1571), served Queen *Elizabeth well as Ambassador in France and Scotland. Elizabeth Throckmorton, daughter of Sir Nicholas, was lady-in-waiting to Queen Elizabeth but was disgraced for marrying Sir Walter *Raleigh.
Thucydides (c.470–400 BCE). Athenian historian. Naval commander in the Peloponnesian War, for his failure to capture Amphipolis (424) he was forced to live in exile for 20 years. He then wrote his famous unfinished history of the war which carries the story as far as 411. The first book is introductory and discloses his own methods of impartial record. The remainder contain in chronological sequence narratives of the summer campaigns alternating with accounts of diplomacy in the winter months. An exception to this method is the interpolation of speeches said to have been made by the characters concerned but in reality expressing the author’s summing up of the situations. Lucid, impartial and often writing with restrained passion, Thucydides created the greatest historical work to survive from the ancient world.

Thurber, James Grover (1894–1961). American humorist, born in Columbus, Ohio. He worked on the *New Yorker* for many years and won fame with his essays, stories and drawings, the last especially noted for the originality of their anarchic humour. Among his favourite subjects were dogs, dominating women and the pathetic little men whom they owned. Sometimes his cartoons accompanied his text, sometimes they stood alone. His publications include *My Life and Hard Times* (1933), *Men, Women and Dogs* (1943) and a later work, *The Years with Ross* (1959); Harold *Ross being editor of the New Yorker*. Thurber suffered from deteriorating sight, the result of an accident as a boy.

Thutmose III (Thothmes) (d.c.1450 BCE). Egyptian pharaoh 1504–1450 BCE. Until 1482 he shared power with his stepmother *Hatshepsut then proved to be probably Egypt’s greatest ruler*. He led 17 campaigns into Asia, conquered Syria and Mesopotamia, extended Egyptian trade built temples and erected many obelisks. He raised Egypt to its greatest power and was a skilled horseman and archer.

Tiberius (Tiberius Claudius Nero) (42 BCE–37 CE). Roman Emperor 14–37 CE. Son of a high priest and magistrate Tiberius Claudius Nero and *Livia Drusilla, later wife of *Augustus, he was adopted by his step-father, whom he succeeded. As early as 15 BCE he had shown his abilities as a soldier on the Alpine frontiers and later he achieved further successes in Germany, his troops by 9 BCE having reached the Elbe. To further Augustus’s dynastic scheme he was now forced to divorce his wife Agrippina, whom he loved, and marry the Emperor’s widowed daughter, Julia. Partly in anger, partly to conceal Julia’s notorious profligacy, Tiberius withdrew to Rhodes. This act cost him the favour of the Emperor by whom it was misunderstood. However, the sudden death of his two grandsons left Augustus no choice: Tiberius was recalled, adopted (4 CE) and acknowledged, as his colleague and heir. During the first eight years of his reign he showed his old efficiency, though he also appeared pedantic, austere and suspicious. From 23, however, he fell more and more under the influence of the ambitious and unscrupulous *Sejanus, prefect of the imperial guards*. In 26 Tiberius retired to the island of Capri whence stories of unspeakable and improbable orgies (he was nearing 70) drifted back to Rome, where Sejanus, now in undisputed control, exercised a corrupt tyranny. In 31 Tiberius roused himself to organise with his usual skill the downfall of Sejanus but in his last years he was embittered and disillusioned. Outside Rome and in the provinces his reign was remembered as one of prosperity and enlightened rule. The ministry and crucifixion of *Jesus Christ occurred during his reign.*

Tibullus, Albius (c.60–19 BCE). Roman poet. A friend of *Horace, his love poems and those descriptive of the countryside are tender and charming.*

Tichborne Claimant, the, see Orton, Arthur

Tiepolo, Giovanni Battista (1696–1770). Italian decorative painter, born in Venice. The finest exponent of the late baroque or rococo styles in Italy, his pictures were often contrived to enhance architectural effects by being allowed to ‘escape’ from their frames or the spaces where they were assigned. From 1733 to 1750 he flooded the palaces and churches of northern Italy with examples of his work, sometimes aided by assistants (including his sons), who, however, had no hand in the oil sketches from which pictures were worked up. Outstanding is the festive and theatrical *Banquet of Cleopatra* (1743–44) in the National Gallery of Victoria. In 1750 he was commissioned to decorate *Neumann’s architectural masterpiece, the Warzburg Residenz in Germany*, for which he produced some of his greatest work. His last years (from 1762) were spent in Spain, decorating palaces in Madrid and Aranjuez, where the light and airy atmosphere of earlier work is carried to the point where his pictures seem to dissolve in light.

Tiffany, Louis Comfort (1848–1933). American glass designer. Son of Charles Lewis Tiffany (1812–1902), a jeweller who established Tiffany & Co. in 1835, he invented ‘favrile’ (iridescent) glass and developed an ornate art nouveau style for lampshades, jewellery and decorative windows, combining glass and metals.
Tiglath-Pileser III (d.727 BCE). King of Assyria 745–727 BCE. Like his namesake Tiglath Pileser I (1114–1076 BCE), whose conquests, however, proved ephemeral, he overcame Babylon and became its king in 729. He occupied Syria, Phoenicia and Palestine. He was an able strategist, preferring blockade to invasion, an efficient administrator and a formidable archivist.

Tilden, Bill (William Tatum) (1893–1953). American lawn tennis player. Distinguished by his great size, he was the leading amateur player of the early 1920s. He led the US Davis Cup team to seven straight victories (1920–26). After an intervening period of French domination (Jean *Borotra) he again won (1930), at the age of 37, the singles title at Wimbledon. In the following year he turned professional. His career was destroyed by disclosure of his homosexuality.

Tilden, Samuel Jones (1814–1880). American politician. Having made a fortune as a railway lawyer, he resumed an early interest in politics at a time when the Democratic Party, to which he belonged, was recovering after the Civil War. As Governor of New York 1875–76 he made a successful stand against corruption and was a Democratic candidate in the disputed presidential election of 1876. It was held that the majority of one held by his Republican opponent, Rutherford *Hayes, in the Electoral College resulted from fraudulent returns by the Negro-controlled states of South Carolina, Florida and Louisiana. A special commission (with a Republican majority) declared in favour of Hayes. Tilden accepted the ‘Compromise of 1877’, hoping that this would heal Civil War wounds.

Tillett, Ben (jamin) (1860–1943). English trade union leader and Labour politician. Having organised the Dockers Union (1887) he remained its General Secretary until it amalgamated (1922) with the Transport and General Workers Union; he was closely associated with the famous strike of 1889. He was Labour MP for North Salford 1917–24 and 1929–31.

Tilly, Johann Tserklaes, Count of (1559–1632). Flemish soldier, born in the castle of Tilly in Brabant. He had fought for Spain and against the Turks before entering the service of Maximilian, Duke of Bavaria (1610). On the outbreak of the Thirty Years’ War (1618) he commanded the armies of the Catholic League. He gained early successes at Prague and in the Palatinate and forced Denmark to come to terms by his victory at Lutter (1629). He succeeded *Wallenstein (1631) as Commander-in-Chief of the imperial armies and those of the League, but in 1632 was routed by *Gustaf II at Breitenfeld and in a second defeat was mortally wounded.

Timoshenko, Simeon Konstantinovich (1895–1970). Russian (Ukrainian) marshal. He was Commissar for Defence 1940–41 until *Stalin took the job and made him Commander-in-Chief in the Ukraine 1942. He was blamed for failing to halt German advances and shunted to the sidelines.

Timothy (Timotheus, St (d.c.97). Christian Bishop. Son of a Greek father and Jewish mother, he accompanied *Paul in his missions and became first Bishop of Ephesus. The Epistles to Timothy in the New Testament, with that supposed to be addressed to Titus, are called the ‘pastoral Epistles’. On grounds of style and content, modern critics have rejected Pauline authorship, but the personal details suggest that they have a basis in letters written by St Paul, though probably enlarged and adapted for his own purposes by a later editor.

Timur (Timur Lenk, Timurlane; called ‘the Lame’) (1363–1405). Mongol (Turkic) conqueror, born near Samarkand. Said to have been descended from *Genghis Khan in the female line, despite being crippled from birth he took advantage of a period of Moslem anarchy to establish his rule in Samarkand by 1369, and assumed the title of Great Khan. For the rest of his life he followed a career of conquest with extreme brutality in war but with firm, just rule over conquered territory and with an appreciation of the arts. By 1385 he was master of all central Asia: his armies had conquered Persia, Georgia and Armenia, had defeated the Tartars and marched as far north as Moscow. He invaded India (1398), sacked Delhi and founded a sultanate which later grew into the Moghul empire. After overrunning Syria he smashed the Turkish army at Ankara (1402). He died while preparing to invade China. Among English plays inspired by his career are *Marlowe’s Tamburlaine the Great (1590) and Nicholas *Rowe’s Tamerlane (1702).

Tinbergen, Jan (1903–1994). Dutch economist. He served on the staff of the Central Bureau of Statistics at The Hague, 1929–36 and 1938–45 and between 1936 and 1938 he was engaged in research on commerce for the League of Nations. He was director of the Central Planning Bureau at The Hague 1945–55, and professor of development planning, first at Rotterdam and then Leyden universities until 1975. He shared the first Nobel Prize for Economic Science in 1969 with Ragnar *Frisch for their work in developing econometrics. His brother, Nikolaas Tinbergen (1907–1988), an experimental zoologist, taught at Oxford from 1949 and was professor in
animal behaviour 1966–74. He wrote *The Study of Instinct* (1951) and *Animal Behaviour* (1965) and shared the 1973 Nobel Prize for Medicine with Karl von *Frisch and Konrad *Lorenz for their pioneering work in ethology.

**Tintoretto** (Jacopo Robusti) (1518–1594). Italian painter, born in Venice. Son of a dyer (hence the name by which he is known), except for short visits he seems to have spent all his life in Venice. Here with his wife and children he lived happily, respected for his piety and increasingly renowned for his work. His fellow Venetian, *Titian, in whose studio he worked for a time, and *Michelangelo, were the strongest influences on him but mainly he was self-taught. In his earlier works, many of them mythological, he seems to have spent all his life in Venice. Here with his wife and children he lived happily, respected for his piety and increasingly renowned for his work. His fellow Venetian, *Titian, in whose studio he worked for a time, and *Michelangelo, were the strongest influences on him but mainly he was self-taught. In his earlier works, many of them mythological, he continued the ideals of the High Renaissance but as the Counter Reformation proceeded and he continued the ideals of the High Renaissance but as the Counter Reformation proceeded and he became more and more absorbed by religious themes he gradually became the most robust exponent of the style loosely called *Mannerism*. In his *St Mark* series (1548) the thunderous atmosphere, the glowing and insubstantial architecture, the perspective effects produced by design and lighting, exemplify the vigour and inventiveness of Tintoretto’s grand operatic manner. His greatest undertaking was the decoration of the Scuola de San Rocco in Venice. In the Doge’s Palace he executed an enormous *Paradise*, in which the milling, over-crowded figures are manipulated with the control of a master choreographer. His portraits of the celebrities of his day are much less spectacular and rely upon characterisation more than upon the splendour of the garments. His last pictures at San Giorgio Maggiore, especially *The Last Supper* (1591–94), show the final culmination of his colour techniques.

Tirpitz, Alfred, Graf von (1849–1930). German admiral. He commanded the East Asia fleet, based on Tsingtao 1896–97, before his appointment as Secretary of State for the Imperial Navy (1897), becoming the driving force behind the successful campaign for a greater German navy. He was dismissed (March 1916) because his demand for ruthless submarine warfare, adopted later, was considered premature. He thus missed the Battle of Jutland. He founded the Fatherland Party and was elected to the Reichstag 1924–28.

**Tippett, Sir Michael Kemp** (1905–1998). English composer. A late developer, in striking contrast to *Britten, he studied at the Royal College of Music and was musical director of Morley College, London (1940–52). He was jailed as a conscientious objector in 1943. The Elizabethan composers and *Purcell as well as later influences, e.g. *Stravinsky, *Hindemith and jazz, all contributed to his highly individual idiom, notable for springy rhythms and for ‘long-breathed’ melodies that are woven into an elaborate contrapuntal texture. His works include four symphonies, a Concerto for Double String Orchestra (1939), a Piano Concerto (1956), string quartets, operas to his own libretti *The Midsummer Marriage* (1954) and *King Priam* (1962) the oratorio *A Child of our Time* (1944), and the cantata *The Vision of St Augustine* (1966). In the Concerto for Orchestra (1963) he constructs the movements out of consecutive sections each associated with a certain group of instruments. He was knighted in 1966, given the CH in 1979 and the OM in 1983.

**Tippoo Sahib** (1749–1799). Indian ruler. Son of *Haider Ali, from whose French officers he acquired his military skill, he became Sultan of Mysore on his father’s death (1782). The peace (1783) between Great Britain and France, to which he as France’s ally adhered, gave him time to consolidate his rule, but in 1789, moved by an almost obessional hatred of Britain, he invaded the protected territory Travancore and, as a result of the retaliatory war by Britain, lost half his territory (1792) and had to pay a huge indemnity. As he continued to intrigue, however, the war was renewed (1799), he was quickly driven back into his capital Seringapatam, and was killed when the city was stormed after two months’ siege. Tippoo was fanatical and cruel, but as a ruler showed great industry and (e.g. by a new currency and calendar reform) interest in his country’s welfare.

**Tiselius, Arne Wilhelm Kaurin** (1902–1971). Swedish chemist. Appointed professor of biochemistry at Uppsala (1938), he became known for his application of electrophoresis to the analysis of proteins, especially serum proteins. He also adapted chromatographic techniques to the analysis of colourless substances. From its foundation (1946) he was President of Sweden’s State Council for Research in Natural Sciences. He won the Nobel Prize for Chemistry (1948).

**Titian** (Tiziano Vecellio) (c.1488–1576). Italian (Venetian) painter, born in Pieve di Cadore. Apprenticed to a mosaicist at nine, he entered the studio of Giovanni *Bellini and later studied with *Giorgione, who influenced his early work. However, an independent style is already apparent in the first of his famous works, *Sacred and Profane Love* (c.1515) a work, despite its allegorical subject, of human realism. From this time his technique steadily developed. Experiments are made with figures in action, pyramidal shapes and diagonals become the compositional bases of several of his works, and significance is given to the main figures by use of light and shade. From 1516 to 1530 the series of great religious pictures, including the
Titian (Titus Flavius Vespasianus) (39–81 CE). Roman Emperor 79–81. Elder son of the emperor *Vespasian, he was a brilliant soldier and, after his father's elevation, quickly brought the Jewish rebellion to an end by the capture of Jerusalem. He became virtual co-ruler with Vespasian and on his succession not only delighted the Roman populace by his magnificent displays but won esteem by firm, just rule and by his discouragement of flatterers and informers. His popularity was threatened only by his passion for the Jewish Berenice (the Bernice of Acts xxxv), whom he had brought to Rome but soon dismissed. He completed the Colosseum and did much to help the survivors of the tragic eruption of Vesuvius (79).

Tizard, Sir Henry Thomas (1885–1959). British scientist. After playing an important part in aeronautical research in and after World War I, he was Rector of the Imperial College of Science and Technology 1929–42 and President of Magdalen College, Oxford 1942–46. He chaired the Air Defence Committee 1935–40, became the great advocate of radar and clashed with Churchill's adviser, Lord *Cherwell. He opposed saturation bombing of German cities and became Chairman of the Advisory Council on Scientific Policy 1947–52.

Tocqueville, Alexis de (1805–1859). French political writer, born in Paris. He came of an aristocratic family, studied law, and in 1831 visited the US with *Gustave de Beaumont to investigate the penal system and wrote the extraordinarily vivid Du Système pénitentiaire aux États-Unis (1833), with a long appendix on the Australian system. Writing and an incursion into French politics occupied the rest of his life. He became a deputy 1839–48, Foreign Minister June–October 1849 and in 1851 was imprisoned for opposing the coup d'état of Louis Napoléon (*Napoléon III). In his two well known books La Démocratie en Amérique (1835–39) and L'Ancien Régime et la Révolution (1856, 1859), he concluded that by abolishing aristocracies (with their inborn protection of the rights and privileges of the different social classes), the peoples both of France and America had sacrificed liberty for equality, that demands for economic equality must necessarily follow those for social equality and that the final result must be authoritarian, centralised rule. His arguments were given point by the rule of *Napoléon
I and Napoléon III in his own epoch, and his foresight justified by the centralising tendencies of modern democratic governments.

**Toddleben, Eduard Ivanovich** (1818–1884). Russian soldier. He developed a genius for military engineering and won international fame for his defence of Sebastopol (1854–55) during the Crimean War. In the Russo-Turkish War (1877–78) he was put in charge of the siege of Plevna, which he eventually captured.

**Toedt, Fritz** (1891–1942). German engineer. He shared with *Hitler a taste for the grandiose, and undertook much of the constructional work under the Nazi regime (e.g. the autobahns) and the Siegfried line. During World War II, squads of the Todt organisation were most effective in keeping communications open and in bringing factories back into production after bombing attacks. Minister for Armaments and Munitions 1940–42, he died in a plane crash and was succeeded by Albert *Speer.*

**Toer, Pramoedya Ananta** see *Pramoedya Ananta Toer*

**Togliatti, Palmiro** (1893–1964). Italian Communist leader. While a student at Turin University he made a study of socialism. In 1926 he became Secretary of the Italian Communist Party (a post he retained until his death) and in that year went into exile and lived abroad, mostly in Moscow, for 18 years (from 1935 as secretary of the Comintern). He returned to Italy (1944) after *Mussolini’s* fall, and joined Badoglio’s Cabinet. He built up the Italian Communist Party to be the second largest party in the country and the largest Communist Party in Western Europe. To secure support he compromised on Communist doctrine to the extent of recognising Roman Catholicism as the state religion and the Lateran Treaty by which the Vatican City became an independent state.

**Togo Heihachiro, Count** (1847–1934). Japanese admiral. In command of the fleet during the Russo-Japanese War 1904–05, he succeeded in bottling up the Russian Pacific fleet in Port Arthur and then (May 1905) in annihilating (in the ‘Tsushima Straits’) a relieving fleet sent from Europe. He received the British OM in 1906.

**Tolbukhin, Fyodor Ivanovich** (1885–1949). Russian soldier. In World War II, having made his name as a general at Stalingrad, he became commander of the army that swept through the Ukraine (1943), reconquered the Crimea, Romania and Bulgaria (1944) and finally (1945) Budapest and Vienna. He became a marshal in October 1944.

**Toller, Ernst** (1893–1939). German-Jewish playwright and poet. He was imprisoned for taking part in the Communist rising in Germany after World War I. His plays, e.g. *Man and the Muses* (1921) and *The Machine Wreckers* (1923), reflect his revolutionary opinions. He also wrote poetry and autobiographical works. He lived in exile after *Hitler’s* rise to power, and committed suicide in New York.

**Tolstoy, Aleksei Nikolaievich** (1882–1945). Russian writer. A distant cousin of Lev *Tolstoy, he went abroad after the Revolution but returned (1922) and
soon became well known for science fiction like that of H. G. *Wells. His *The Road to Calvary (1945), describing events before and during the Revolution, won a *Stalin Prize. His patriotic play about *Ivan the Terrible was a great success during World War II. His best work was an unfinished historical novel, *Peter the Great.

**Tolstoy, Lev (Leo) Nikolaiievich, Graf [Count] (1828–1910).** Russian novelist and moral philosopher, born in Yasnaya Polyana. Brought up on his mother's family estate of Yasnaya Polyana ('Bright Glade'), in Tula province, 190 km south of Moscow, after the early loss of both parents he was privately educated until he went to Kazan University (1844–47) to study law and languages. A life of ease and mild dissipation followed, but in 1851 he joined the army and from 1853 took part in the Crimean War. This inspired *The Sebastopol Stories (1865) which, together with the autobiographical sequence *Childhood (1852) and its two sequels, established him as a writer. Life in St Petersburg did not attract him, and he travelled over much of Europe. From 1862 he settled down with his young wife, *Sofya Andreyevna Behrs (1844–1919), became the father of 13 children, and applied himself to the management of his estates, establishing peasant schools on the pattern of those he had seen abroad, attending to the problems arising from the emancipation of serfs and filling the role of a humane and forward-looking landlord. To this happy period belong his two most famous novels.

*War and Peace* (1865–69) gives an epic account of Russia's conflict with *Napoleon between 1805 and 1813. It pulsates with life, driven by inexhaustible energy, proclaiming human complexity, with characters full of contradictions. About 580 individuals appear, 167 of them historic figures, including *Napoleon*, Tsar *Aleksandr I* and Marshal *Kutuzov*. But despite the complexity, the story is easy to follow.

The outstanding characters are Count Pierre (Pyotr) Bezúkhov, Prince Andréi Bolkónsky and Countess Natásha Rostóva. Pierre inherits wealth, but is tormented by contradictions and injustice and devotes himself, tirelessly but not always successfully, to making sense of his world. He is an observer rather than an activist, often indecisive, plagued by self-doubt. Prince Andréi, born into a military dynasty, is thoughtful and philosophical, drawn into active service against his better judgment. There have been tragedies in his personal life. The beautiful Natásha, romantic and impulsive, breaks hearts and vacillates. *War and Peace* is the longest of the great Russian novels, running to 560,000 words. The work went through endless revision, and Countess Tolstoy copied the complete manuscript seven times. He made 33 attempts to write a novel on the life of *Peter the Great*, but gave up in frustration.

Tolstoy's genius for reaching the heart of women (although not in real life) is shown in the other great novel, *Anna Karenina* (1874–76). Anna Karénina, married to a workaholic bureaucrat, Count Aleksei Karénin, and mother of Sergei, falls in love with Count Aleksei Kirillovich Vrónsky, a cavalry officer, dashing, handsome, shallow and rich, and goes to live with him. Anna and Vrónsky have a deeply asymmetrical relationship: she is shunned by society, loses access to her son, gives birth to a daughter Anna, while Vrónsky gives up nothing – he continues to socialise, gamble, drink, flirt and he leaves her alone with the child. The most powerful writing in *Anna Karenina* is based on the triangle of Anna > Aleksei (Karéni) > Aleksei² (Vrónsky) and the tensions arising from family, duty, divorce, custody, desire.

The novel ends with the inevitability of a Greek tragedy. Anna, maddened, confused and despairing, after the collapse of her relationship with Vrónsky, is driven to the Moscow railway station and on the way experiences an astonishing stream of consciousness in which she absorbs sharply etched images of the world she is about to leave. Once at the station, in revenge against Vrónsky and to annihilate herself, she hurl herself under a train.

Tolstoy had always been troubled by inner conflict. His eager acceptance of life and his zestful response to the demands of natural instincts conflicted (as is apparent in his books) with his reactions as moralist and reformer. About 1877 the conflict became acute and he emerged from the struggle as a kind of solitary prophet, revered even by his opponents.

There is a striking parallel between Tolstoy and *Wagner. As artists, each was a genius, with staggering achievements. But in every other area they were cranks. Tolstoy was reactionary and violent as a young man, then became increasingly eccentric in his judgments, finally repudiating all artistic expression, whether in music or literature.

Vladimir *Nabokov wrote: 'Most people approach Tolstoy with mixed feelings. They love the artist in him and are intensely bored by the preacher … [But] Tolstoy is homogeneous, is one, and the struggle which … went on between the man who gloated over the beauty of black earth, white flesh, blue snow, green fields, purple thunderclouds, and the man who maintained that fiction is sinful and art immoral – this struggle was still confined within the one man.'

His teachings, set out in *What I Believe* (1883) and *What Then Must We Do?* (1886), amounted to Christianity stripped of theology and he called himself a 'Christian anarchist'. *The Gospel in Brief* (1896) was an attempt to reconcile the four synoptic Gospels. He denounced all authority and all violence, even in resisting evil. (*Gandhi corresponded with him from South Africa about this, and set up a Tolstoyan commune and school.*) Albert *Schweitzer's concept of 'reverence for life' was deeply influenced by Tolstoy. The philosopher Ludwig *Wittgenstein was another Tolstoyan. To reconcile his life with his teachings, Tolstoy became a vegetarian, refused to exploit the services of others and tried (1895) to
renounce all property rights in his estate and book royalties. The family quarrels that ensued were of such intensity that they embittered his last years. He was excommunicated by the Synod of the Russian Orthodox Church in 1901.

Tolstoy would have been the obvious choice to receive the first Nobel Prize for Literature in 1901, but he was not nominated, presumably for failing to meet the requirement in Alfred *Nobel’s will to have produced ‘the most distinguished work of an idealistic tendency’. Instead, the award went to the French Parnassian poet René *Sully Prudhomme. However, Tolstoy was nominated for the Nobel Prize for Peace in 1901, 1902, 1909, and for Literature in 1902, 1903, 1904, 1905, 1906.

Tolstoy’s late novels were *The Death of Ivan Ilyich* (1886) and *Resurrection* (1899). His short stories include *What Men Live By* and *What Shall It Profit a Man?* (1885), and *How Much Land Does a Man Need?* (1886). *Father Sergius* (1890), *The Kreutzer Sonata* (1899) and *Hadji Murad* (1896–1904, published posthumously in 1912) are novellas. However, his reputation as a novelist, perhaps the greatest in all literature, rests on his famous two works.

Tolstoy had a cranky, totally dismissive, attitude towards *Shakespeare, accusing him of arousing ‘irresistible repulsion and tedium’. He had an irrational hatred of *King Lear* because in his last years, when he tried to renounce his wealth, rank and possessions, he was living Lear’s life. George *Orwell wrote an important essay, ‘Lear, Tolstoy and the Fool’. Tolstoy became increasingly critical of his two masterpieces, and dismissive of all high art forms.

In his last decades, Tolstoy became an international celebrity. He appeared in many newsreels. His estate at Yasnaya Polyana and house in Moscow attracted pilgrims from all over the world and he conducted a large correspondence with disciples. His death, in 1910, at the stationmaster’s cottage at Astapovo, after he had run away from home, was recorded by the world’s newsreel photographers but he refused to see his wife.

Tompion, Thomas (1638–1713). English clockmaker. Both his father and grandfather were blacksmiths, which may have set his mind to working in metals but cannot account for the extraordinary skill and artistry he brought to his craft. The first clocks for Greenwich Observatory were built by him (1676). For *William III he made a clock that would strike the hours and quarters for a year without rewinding. Survivors of the 650 clocks made by him now fetch very high prices. In addition he made about 5500 watches, including some of the earliest to be fitted with balance springs.

Tone, (Theobald) Wolfe (1763–1798). Irish politician. Having become convinced that only independence would bring about Roman Catholic emancipation and overcome the many injustices of British rule, he formed the Society of United Irishmen (1791) and in 1795 left the country to seek help in America and France. He accompanied the French invasion fleet (1796) and after its failure returned to Ireland with a small squadron to aid the rebellion of 1798. Defeated and captured by the British, he killed himself in prison while awaiting execution. His journals show him to have been a man of good nature, gaiety and wit.

Tooke, John Horne (1736–1812). English politician. His father’s name was Horne, and he added the name Tooke (1782) at the request of a rich friend of that name. He became a clergyman as a young man but spent his life in political agitation, at first on behalf of John *Wilkes, but after a quarrel he formed (1771) the Constitutional Society to agitate for parliamentary and economic reform. In 1777 he was imprisoned for raising money for American troops ‘murdered’ at Lexington (in the War of American Independence). He filled the time by writing *The Diversions of Purley* (published 1786 and 1805), which, amid much philological, metaphysical and political comment, pointed to the need for studying Anglo-Saxon and Gothic. His attitude when the French War opened caused him to be tried for treason (1794), but he was acquitted. After two failures to enter parliament he was elected for Old Sarum in 1801, but unseated, as a clergyman.

Torquemada, Tomás de (1420–1498). Spanish inquisitor. A Dominican friar, having become confessor to Queen *Isabella easily persuaded her and King *Ferdinand I (jealous of the rich Moors and Jews of Castile) to ask the pope for the Inquisition to be established in Spain. In 1483 he became the first inquisitor-general, and centralised and organised a campaign of torture hitherto unparalleled. He was largely instrumental in the expulsion of the Jews (1492).

Torricelli, Evangelista (1608–1647). Italian physicist and mathematician. He succeeded (1642) his former teacher *Galileo as professor of mathematics at the Florentine Academy. He demonstrated (1643)
the first man-made vacuum (soon known as the Torricellian vacuum) in experiments with a long glass tube inserted in a trough of mercury. This also proved that the weight of the atmosphere was equivalent to a column of 760 mm, and became the principle of the mercury barometer. He also discovered the law (now known as Torricelli’s Law) governing the flow of liquids through small holes.

Torrigiano, Pietro (1472–1528). Florentine sculptor. He had to leave Florence after breaking *Michelangelo’s nose in a fight. He worked in the Netherlands (1509–10) and then went to England, where he did some of his best work, notably the tombs of Margaret Beaufort, *Henry VII, and his wife, Elizabeth of York, in Westminster Abbey.

Toscanini, Arturo (1867–1957). Italian conductor, born in Parma. Trained as a cellist, he made his debut as a substitute conductor in Rio de Janeiro in 1886 and quickly rose to prominence. He premiered *Puccini’s *La Bohème in Turin (1896). He was Chief Conductor at La Scala, Milan 1898–1903, 1906–08 and 1921–24, at the Metropolitan Opera, New York 1908–15, and of the New York Philharmonic Symphony Orchestra (1928–36). As a protest against fascism in Italy and Germany he left Europe in 1937 for the US, where he created and conducted the NBC Symphony Orchestra until his retirement (1954). His repertoire revealed a remarkable catholicity of taste and included not only the German and Italian classics, but composers as different as *Debussy, *Elgar and *Sibelius. This, combined with an astonishing musical memory, deep insight into a composer’s meaning, scrupulous (sometimes rigid) fidelity to the score and the driving energy of his interpretations, made him an outstanding (if controversial) conductor. He never performed the music of Gustav *Mahler, his great rival as a conductor.

Toulouse-Lautrec, Henri (Marie Raymond) de (1864–1901). French painter and lithographer, born at Albi. Descended from an ancient family of southwest France, a fall from a horse broke his thighbones, and he was crippled. Left only 1.55 metres (61 inches) tall, he felt cut off from his family, sought refuge in art and went to Paris in 1882. There, in the cafés and cabarets of Montmartre (e.g. the Moulin Rouge) he found the subjects for his pictures and drawings – dancers, singers and prostitutes – as well as circus and racecourse scenes. He shared the gay, grotesque, dissipated life of those he painted and developed a sympathetic insight into their character. The main influences on his style were Japanese woodcuts and the work of *Degas. In the last decade of his life he mastered lithography and his work in that field had an important influence on the development of poster art.

Tourner, Cyril (c.1575–1626). English dramatist. His fame rests on two plays, The Revenger’s Tragedy (printed 1607) and The Atheist’s Tragedy (printed 1611). The greater is the first, a dark, tightly woven intrigue of blood in which the Machiavellian protagonist becomes as corrupt as his opponents. It was very influential on the contemporary theatre.

Tourville, Anne Hilarion de Colentim, Comte de (1642–1701). French sailor. Having made a name for himself against the Turks and the Algerian pirates, he fought the combined Dutch and Spanish fleets (1677), but his great triumph came (1690) when, commanding the French fleet that was aiding the exiled *James II against *William III, he won a dramatic victory over the Dutch and English near Beachy Head. For a time he commanded the Channel and anchored in Torbay. However, he suffered complete defeat when conveying the invasion fleet intended to bring back James II, with the loss of 16 men-of-war in one of the longest naval battles of history (19–24 May 1692). Despite this he was made a marshal of France.

Toussaint l’Ouverture, Pierre Dominique (c.1746–1803). Haitian leader. Born a slave, he managed to acquire enough education to read French works on *Caesar’s and *Alexander’s campaigns. The military and diplomatic lessons thus learned he was able to put to good account in the Negro rebellion of 1791 from which he emerged as the most important man in the island. When France, then in the throes of revolution, abolished slavery in her colony (1794) he returned there, held the Spanish and British at bay and made himself Governor-General for Life under a new constitution (1801). He would have liked to come to terms with France but *Napoléon Bonaparte, now in control, sent a force against him. Toussaint surrendered (1802) and was taken to France, where he died in prison partly from the hardships inflicted on him. He was a remarkable man, a firm, just and usually humane ruler, though often sharp-tongued and a natural intriguer.

Tovey, Sir Donald Francis (1875–1940). English musician and musicologist. Reid professor of music at Edinburgh University 1914–40, he was acclaimed for his Essays in Musical Analysis (6 volumes 1935–37). Also a pianist, he composed concertos for cello and piano, chamber music and an opera, *The Bride of Dinnipus (1929). He was knighted in 1935.

Grierson, M., Donald Francis Tovey. 1952.

he built the first ‘maser’ (microwave amplification by stimulated emission of radiation) and by 1958 he had worked out the theoretical basis of an ‘optical maser’, using highly concentrated visible light; this was the ‘laser’ (light amplification by stimulated emission of radiation). In 1964 he shared the Nobel Prize for Physics with A. M. *Prokhorov and N. G. Basov for work in quantum mechanics. Masers and lasers became indispensable scientific, medical and industrial tools.

**Townshend, Charles, 2nd Viscount** (known as ‘Turnip Townshend’) (1674–1738). English diplomat, politician and agriculturist. He became, on *George I’s accession, Secretary of State in the Whig ministry which crushed the Jacobite rebellion of 1715. In 1717 he was briefly Lord Lieutenant of Ireland, but soon was back in office in London, and in 1721 was again Secretary of State, sharing power with his brother-in-law Robert *Walpole. His interventionist foreign policy alarmed Walpole because a close alliance with France would divide Europe into two potentially hostile leagues. Forced to resign (1730), Townshend spent his retirement studying and improving agricultural methods on his Norfolk estates. His introduction of the Norfolk four-course crop rotation – wheat, turnips (or other roots), barley, and grass or clover – gained him his nickname.

**Townshend, Charles** (1725–1767). English politician. Grandson of ‘Turnip’ *Townshend, educated at Cambridge and Leyden, he was a Whig MP 1747–67 and an epileptic. One of the most brilliant and wayward of 18th-century parliamentarians, he was a thorn in the flesh of any ministry he opposed and equally dangerous to any ministry he joined. In most of the Pitt-Newcastle combinations during the Seven Years’ War, he joined and left *Bute, and assailed *Grenville over the question of John *Wilkes. His greatest capacity for harm was seen when he became Chancellor of the Exchequer (1766) in the ministry dominated by *Pitt (by then Earl of Chatham), who was, however, so ill that he could only sporadically exercise authority. Thus able to ignore the known wishes of his leader, Townshend, in his anxiety for revenue, introduced a bill to tax all tea, glass, paper and several other products entering American ports. This measure precipitated the events that led to the American War of Independence.

**Toynbee, Arnold** (1852–1883). English economic historian. His great and influential work, *The Industrial Revolution in England* (edited by Alfred *Milner and published posthumously in 1884), was originally composed as a course of lectures at Oxford. Its title popularised the term ‘industrial revolution’ to describe the social and economic changes that transformed British life in the late 18th and early 19th centuries. He gave vigorous support to adult education and did much social work: Toynbee Hall in Whitechapel, London, was built in his memory.

His nephew, **Arnold Joseph Toynbee** (1889–1975), was a historian, the range and scope of whose work exceeded even *Gibbon. Educated at Winchester and Balliol College, Oxford, he worked in the Foreign Office during both World Wars, taught at London University as professor of Byzantine and Modern Greek language, literature and history 1919–25 and research professor of international history 1925–55. His *A Study of History* (12 volumes, 1934–61) analyses the growth and decay of past civilisations and contends that their survival depends on their response to internal and external challenges. He supports his arguments by a mass of illustrative material, fascinating in itself and indicative of his astonishing industry and receptivity of mind. He was awarded a CH in 1956. Critics complained that he selects examples that support his argument but neglects those that appear to counter his main thesis, and his reputation diminished after his death.

**Toyoda Sakichi** (1867–1930). Japanese inventor and industrialist. In 1897 he invented an automatic power loom and the Toyoda Automatic Loom Works, set up in 1926, became the centre of a diversified industrial empire. His son *Toyoda Kiichiro* (1894–1952) established the Toyota Motor Corporation at Koromo (now Toyota City) and the first model Toyota car was produced in 1937. By 1955 Toyota was the world’s third largest producer and by 1990 had plants in 22 countries.

**Tracy, Spencer** (1900–1967). American actor. Originally intended for the priesthood, he became a stage actor, starting in tough guy roles, and made the first of 72 films in 1930. He won two Academy Awards (1937, 1938), received seven more nominations and co-starred in eight films with Katharine *Hepburn, his lover for many years.

**Traherne, Thomas** (1637–1674). English religious poet. Educated at Oxford, after some years as a country rector he spent the rest of his life as chaplain to Sir Orlando Bridgeman, Lord Keeper of the Seal. Most of his work appeared after his death and two books of poems were found and printed in 1903 and 1906. *Centuries of Meditations*, written in musical prose, was printed in 1906 and *Poems of Felicity* in 1910. His *Thanksgiving for the Body* showed that he had not the mystic’s usual fear of the senses.

**Train, George Francis** (1829–1904). American eccentric, born in Boston. He pioneered prefabricated buildings in Victoria during the Gold Rush (1853), began the first horse-drawn tram system in Liverpool (1860), was co-founder of the Credit Mobilier scheme in the US (1863), making and losing millions of dollars. He travelled round the world in 80 days (1870–71), claiming to have been the original of Jules *Verne’s Phileas Fogg, ran for president (1872), went to jail 15 times and was certified insane.
Dictionary of World Biography

Trajan (Marcus Ulpius Traianus) (c.53–117). Roman Emperor 98–117. Born in Italice (near Seville), he was a distinguished soldier, consul under *Domitian and eventually adopted as heir by the emperor *Nerva. As Emperor he overcame Dacia (central Romania) in two campaigns (101–02 and 105–06) and colonised it with Romans, but his Parthian conquests (113–17) proved ephemeral. His exploits are carved on the column that bears his name in Rome. He was a wise and moderate ruler, as is shown by his fair-minded letter to *Pliny about the treatment of Christians. He arranged the succession of his kinsman *Hadrian.

Trastámara. Spanish dynasty (*Isabella)

Traven, B. (Benick Traven Torsvan) (c.1890–1969). American novelist, born probably in Chicago. Of Swedish or German descent, he kept his identity a close secret, lived in Germany, using a variety of names, including Otto Feige and Ret Marut, and moved to Mexico in 1924. He was an anarchist, deeply opposed to capitalism and imperialism. His novels, published in German, included The Death Ship (1926, translated 1934) and The Treasure of the Sierra Madre (1927, 1934).

Travers, Ben (1886–1980). English playwright. Noted for farce, he wrote originally for the actors Ralph Lynn, Robertson Hare and Tom Walls. A Cuckoo in the Nest was first produced in 1925, Rookery Nook in 1926, Thark in 1927 and Plunder in 1928. All have been regularly revived.

Tree, Sir Herbert Beerbohm (1853–1917). English actor-manager. The half-brother of Sir Max *Beerbohm, he was lessee-manager of the Haymarket Theatre (1887–97), where he achieved one of his greatest successes, Trilby (1897). Profits enabled him to build Her Majesty’s Theatre where, for 20 years, he provided lavish productions of *Shakespeare and other plays (Carol *Reed).

Treitschke, Heinrich von (1834–1896). German historian, born in Saxony. He completed his education in the liberal atmosphere of Leipzig and Bonn Universities, but in the Austro-Prussian War (1866) he completely identified himself with Prussia. When a series of academic appointments had brought him (1874) to Berlin he shared *Bismarck’s vision of a united, nationalistic Germany under Prussian leadership. This bias permeates his great History of Germany in the Nineteenth Century (1879–94). Despite prolonged and accurate research, its literary brilliance, and its excellent chapters on the cultural and social achievements of the lesser states, the book provided an armory of justification for the Prussian militarists who were planning for World War I. He wrote several other volumes of historical and political essays. His usefulness as a member of the Reichstag (1871–84) was much hampered by deafness.

Trenchard, Hugh Montague Trenchard, 1st Viscount (1873–1956). British airman. A colonel in the Royal Scots Fusiliers, he had fought in South Africa before taking up flying and joining the RFC. In World War I he commanded the British air forces in France and his persistent advocacy brought into being the Independent Air Force and the beginning of strategic bombing. He was Chief of the Air Staff 1918, 1919–29 and became (1927) the first Marshal of the RAF. The RAF was largely the creation of his strategic insight and organisational planning. He was Commissioner of the Metropolitan Police, London 1931–35 and received the OM in 1951.

Trevelyan, Sir George Otto, 2nd Baronet (1838–1928). British politician and historian. His father was an Indian civil servant, his mother, Harriet, a sister of *Macaulay. He was a Liberal MP 1865–86 and 1887–97 and a minister. He is better known as a writer, especially for The Life and Letters of Lord Macaulay (1876), The Early History of Charles James Fox (1880) and The American Revolution (1899–1914). He was awarded the OM in 1911.

His son, George Macaulay Trevelyan (1876–1962), was Regius professor of history at Cambridge 1927–40 and master of Trinity College 1940–51. His works include a remarkable trilogy on the life of Garibaldi (1907–11), England under Queen Anne (1930), and English Social History (1944), which achieved a great popular success. They read well and were highly praised in their time as literature and history, but his judgments were both cautious and conventional and he left no followers. In 1930 he received the OM. The Trevelyan family were the only father and son so honoured until the Duke of *Edinburgh and Prince *Charles.

Trewhittch, Richard (1771–1833). English engineer, born in Cornwall. Largely self-educated, he worked as a mining engineer and invented (1798) a pumping engine driven by water pressure. More important was the high pressure steam engine (patented in 1802) which he applied to both road and rail transport. For the latter, to win a bet, he used the Penydaren tramway on which he gave several demonstrations. The engine was also used for a dredging machine when he was working on a tunnel under the Thames (1806). He went to Peru (1816) where his engine was introduced in the silver mines and for a time served as a military engineer under *Bolívar. When he returned after 11 years’ absence he was almost forgotten, and when he died while working at Dartford he had to be buried at the expense of his fellow workers.

Trevor-Roper, Hugh Redwald, Baron Dacre (1914–2003). English historian. He studied at Christ Church, Oxford, and taught at the University 1936–80. During World War II he served in military intelligence, which commissioned him to investigate

**Trocmé, André** (1901–1971). French clergyman. Pastor of the Reformed Church in Le Chambon-sur-Lignon, he organised a network that saved 5000 Jews by smuggling them into Switzerland, and was recognised by Israel as ‘Righteous among the Nations’.

**Trollope, Anthony** (1815–1882). English novelist, born in London. Son of the writer Fanny *Trollope. He had an unhappy childhood because of the harshness and extravagance of his irresponsible father, a failed barrister. Educated at Harrow and Winchester, after a short time in Belgium he became a clerk in the GPO, London (1834); but after a breakdown he was sent as a deputy postal surveyor to Ireland, where hunting, marriage and steady promotion made a new man of him and he began to write. (He is also credited with the invention of the red pill box.) In 1859 he returned to England and settled at Waltham Abbey which he left (1871) for Montagu Square, London. With a happy domestic life, with his novels and with official journeys (e.g. to Australia, South Africa and America) to provide subjects for travel books, he was content. The more important of his novels fall within two series. The ‘Barsetshire’ series, which comprises chronologically *The Warden* (1855), *Barchester Towers* (1857), *Doctor Thorne* (1858), *Framley Parsonage* (1861), *The Small House at Allington* (1864) and *The Last Chronicle of Barset* (1867), is mainly concerned with clerical intrigue in the cathedral town of Barchester and reveals to the full his great gift of characterisation (e.g. Mrs Proudie, the Bishop’s vulgar but masterful wife). For the second series, which is political, Trollope gained some firsthand experience when he stood unsuccessfully as parliamentary candidate for Beverley (1868). The books are concerned with the fortunes of Plantagenet Palliser (Duke of Omnium) and his wife Glencora, and once again the interplay of character and motive is enthralling. The best known of this sequence are *Phineas Finn* (1869), *Phineas Redux* (1874) and *The Prime Minister* (1876). Trollope’s other novels include *The Claverings* (1867) and *The Eustace Diamonds* (1873).

His autobiography (1883) revealed the almost cold-blooded persistence with which he wrote his daily quota of 2500 words before breakfast; he admitted the strength of the money motive and recorded that by 1879 he made £68,939 17s. 5d from his books. Such methods and motives suggest lack of spontaneity and it is true that his style is at times pedestrian but the characters are so vividly brought to life that interest is sustained. After a period of neglect, Trollope won new popularity, especially after successful television series based on his novels. In March 1993 he was reinterred in Westminster Abbey. He was the most prolific of all major English novelists (even more so than Samuel *Richardson) with 47 to his credit.

**Tromp, Maarten Harpertszoon** (1597–1653). Dutch sailor. He went to sea as a child and after capture by the English had to serve as a cabin boy for two years. His most famous achievements took place during the long and evenly matched struggle with Cromwell’s soldier-admirals *Blake and *Monck for command of the narrow seas. From encounter to encounter (over a score in all), fortune veered. In May 1652 Blake, with only 15 ships, had the best of a fight with 40 ships under Tromp, but only six months later it was a triumphant Tromp who, according to legend, sailed down the Channel with a broom at his masthead to show that the English had been swept from the seas. Yet in February 1653, a three-day battle in which Tromp showed his usual courage in defence of a large convoy, cost the Dutch nine warships and 30 out of 200 merchantmen. In the last desperate encounter fought off the Dutch coast against the English under Monk, Tromp lost 30 warships and was killed.

**Trotsky, Leon (Lev Davidovich Bronstein)** (1879–1940). Russian revolutionary politician, born in Yanovka, Ukraine. From a middle-class Jewish family, he was expelled from Odessa University and joined the Russian Social Democratic Labour Party (1896). Exiled to Siberia 1898–1902, he escaped and lived in London 1902–05, where he took part in the 1903 RSDLP congress. When it split, Trotsky joined the Mensheviks (minority faction). In 1905 he returned to Russia to become President
of the first Soviet in St Petersburg but was again arrested, once more sent to Siberia and repeated his successful escape. At the outbreak of World War I he went to Paris but, expelled (1916) for pacifist and revolutionary propaganda, eventually reached New York. After the Revolution of March 1917, he returned to Russia and, after being arrested by the provisional government, joined the Bolsheviks and with *Lenin organised the November revolution which brought them to power. As Commissar for Foreign Affairs November 1917–March 1918, he negotiated the Treaty of Brest-Litovsk with Germany and as Commissar for War 1918–25 virtually created the Red Army, directing it with strategic brilliance in the Civil War. His policy of 'permanent revolution', based on the contention that Bolshevism could not survive in Russia unless revolutions were stirred up in the west, was not, however, accepted by the majority of the party. When Lenin died (1924), he lost a power struggle against *Stalin, partly because his brilliance as writer and orator made him suspect, and being Jewish was a negative factor. But he also exhibited an uncharacteristic passivity. Trotsky headed various opposition factions but was expelled from the party (1927) and was ordered to leave Russia (1929). From Turkey he travelled widely and at the same time built up dissident Communist groups, some of which long survived his death. In the official Communist Party, ‘Trotskyite’ became a term of abuse applied to anyone whose loyalty to party decisions was in doubt. In 1937 Trotsky settled in Mexico. In August 1940 he was murdered with an ice axe by Ramon Mercader, alias Jacques Mornand, alias Frank Jacson (1914–1960?), a Spaniard whose mother was the mistress of a NKVD general. Released from jail in 1960, Mercader flew to Prague and disappeared. Trotsky was a brilliant and prolific writer whose works include The History of the Russian Revolution (3 volumes, 1932–34) and The Revolution Betrayed (1937).

Trudeau, Edward Livingston (1848–1915). American physician. As a sufferer from pulmonary tuberculosis he benefited from the air of the Adirondacks and established the Trudeau Sanatorium there (1884). He was the first in the US to isolate and study the tubercle bacillus.

Trudeau, Pierre Elliott (1919–2000). Canadian politician and lawyer, born in Montréal. From a rich business family, he won a law degree at Montréal University, and after brief army service undertook further study at Harvard, l’Institut d’Études Politiques in Paris and the London School of Economics. Called to the bar in 1943, he was associate professor of law at the University of Montréal (1961) and became a member of the House of Commons 1965–84. Parliamentary Secretary to the Prime Minister 1966–67 and Attorney-General 1967–68, he was elected Leader of the Liberal Party in 1968 and held office as Prime Minister 1968–79 and again 1980–84. One of his main preoccupations was to satisfy the aspirations of French-speaking Canada without destroying the federal system. He became a QC (1969), was appointed CH (1984) and CC (1985), and wrote extensively, including Memoirs (1993). His son, Justin Pierre James Trudeau (1971– ), born in Ottawa and won degrees from McGill and the University of British Columbia, was a teacher and acted on television. Elected to the House of Commons 2008–, he became Leader of the Liberal Party 2013– and was Prime Minister 2015–, when the Liberals won an absolute majority, defeating Stephen *Harper, despite having fallen to third position in 2011. Trudeau, P. E., Federalism and the French Canadians. 1968.

Truffaut, François (1932–1984). French film director. Critic and publisher of Cahiers du Cinéma from 1954, he worked as an assistant director to Roberto *Rossellini in 1956 and directed his own films from 1957. His study of childhood, Les Quatre-cents Coups, won first prize at the Cannes Film Festival in 1959. He was thereafter recognised as the leader of the French ‘New Wave’ of realist cinema, which deliberately dispensed with accepted formulae in the structure of film stories.

Trujillo Molina, Rafael Leonidas (1891–1961). Dominican dictator. He graduated from the military academy in 1921 and by 1928 he had risen to be Chief of Staff. He was President of Dominica, 1930–38 and 1942–52, but he remained in total control ruling through nominees (1938–42), and in 1952 was succeeded by his brother Hector Trujillo. His rule was bloody, especially the Parsley Massacre of October 1937 in which more than 25,000 ethnic Haitians were slaughtered. While enriching his own family he pursued a conciliatory policy towards the US, and provided a firm administration that brought social and economic benefits. He created national parks and suppressed illegal logging. Within six months of his assassination the last of the Trujillo clan had left the country. From 1936 to 1961 Santo Domingo, the capital, was known as Ciudad Trujillo.

Truman, Harry S. (1884–1972). 33rd President of the US 1945–53. The initial ‘S’ represents the names of his grandfathers but has no other significance. Born on the family farm at Lamar, Missouri, despite bad eyesight which prevented his entry into West Point Military Academy, he served as an officer in World War I. In 1922 he was a partner in a Kansas City haberdashery which failed in a recession. He insisted on paying all creditors in full, which took 12 years. He studied law but did not qualify, and entered politics as a Democrat. He presided 1926–34 over an administrative court
in Jackson County for controlling expenditure on construction. As US Senator 1935–45 he became well known through his chairmanship 1941–44 of the Committee for Investigation of the Defence Program. He replaced Henry *Wallace on the Democratic ticket, was elected as Vice President (November 1944) and succeeded to the presidency on Franklin *Roosevelt’s death (April 1945). Acting on advice by Henry L. *Stimson, he took responsibility for dropping atom bombs on Hiroshima and Nagasaki, news of which came when he was attending the Potsdam Conference (July–August 1945) with *Stalin and *Churchill (later, *Atlee) to plan the division of Germany. In March 1947 the ‘Truman Doctrine’ offered political and military aid to nations resisting Communist influence. With George *Kennan and Dean *Acheson he developed the policy of ‘containment’ of Communism. The *Marshall Plan, announced in June 1947, provided massive economic aid to war-ravaged European nations. As Cold War tensions increased, Stalin rejected an offer of Marshall Plan assistance to the Soviet bloc.

In November 1946 the Democrats were heavily defeated in elections for the 80th Congress and Truman faced a Southern challenge for nomination in 1948. The Democrats split three ways, with J. Strom *Thurmond, on the right, standing as a ‘ Dixiecrat’, Truman taking the middle ground and Wallace, on the left, running as a ‘Progressive’. Thomas E. *Dewey was the Republican nominee. Truman travelled 48,300 kilometres in a ‘whistle-stop’ railway tour across the nation, making 315 speeches. He won an unexpected (but comfortable) victory, with Electoral College votes from 28 states. In 1949 the North Atlantic Treaty Organization (NATO) was established and the ‘Point Four’ program provided technical assistance to the Third World. However, *Mao’s victory in China caused a violent anti-Communist reaction in the US (exacerbated by the *Hiss and *Rosenberg trials), contributing to the rise of Joe *McCarthy and Richard *Nixon. When North Korea invaded the South (June 1950), Truman sent in US troops, under Douglas *MacArthur, supported by a UN mandate. He dismissed MacArthur (April 1951) for publicly proposing a military strike against China, which was thought (wrongly) to have initiated the Korean War. This provoked a huge political reaction in the US which soon subsided. In 1952 the US tested the world’s first hydrogen bomb. Truman’s domestic policy, the ‘Fair Deal’ aimed to promote racial harmony and help the poor. He declined to stand for re-election in 1952 and secured the nomination of Adlai *Stevenson, who then lost to *Eisenhower. He wrote Memoirs (1955–56). His reputation grew after his retirement.

Trump, Donald John (1946–). 45th President of the United States 2017–. Born in New York, he was the son of a property developer of German descent, and a Scottish mother. Educated at Wharton College in the University of Pennsylvania, he owned hotels, casinos and golf courses, became a beauty pageant impresario and won a national reputation on television for his brash optimism, propensity for stunts, and natural aggression as the host of The Apprentice 2004–14. He founded the now defunct Trump University in 2005. In June 2015 he announced his candidacy for the Republican presidential nomination. His populist appeal to nationalism and occasional racism and misogyny was successful with voters in primaries, but threatened the Republican establishment and alarmed America’s allies. He won the Republican nomination for President in May 2016, after defeating 15 rivals. In November 2016 he beat Hillary *Clinton, winning 30 states, and a narrow lead in the Electoral College, with a popular vote of 63 million, 2.8 million behind Clinton’s. Only 55.3 per cent of those eligible actually voted. Trump was the oldest person to be elected President, and the only one without experience in government or the military.

Trumper, Victor Thomas (1877–1915). Australian cricketer. His batting achievements included 3163 runs in test cricket, of which 2263 were made against England. His greatest performance was 300 not out made in 1899 against Sussex at Hove.

Truth, Sojourner (c.1797–1883). American evangelist, born in Ulster County, New York. Born a slave and given the name Isabella, she was freed in 1827, became a touring evangelist and a passionate campaigner for abolition of slavery and for female suffrage.

Tsai Lun see Cai Lun

Tshombe, Moïse Kapenda (1919–1969). Congolese politician. After the Belgian Congo had become an independent republic (1960) he declared the independence of Katanga, the copper-producing province of which he was President. United Nations troops were sent against him on the invitation of the Congo Prime Minister, Patrice *Lumumba, for whose mysterious death (1961) Tshombe was alleged by his enemies to have some responsibility. In 1963 having lost health and power, he went into exile, but in 1964, after a change of political climate, he was recalled to be Prime Minister by President *Kasavubu. In 1965, both President and Prime Minister had to give way to the military leader General *Mobutu. After fleeing abroad he was kidnapped and flown to Algiers (1967) where he died.

TsioIkovsky, Konstantin Eduardovich (1857–1935). Russian physicist. Originally a school teacher (hampered by extreme deafness), he carried out fundamental research into aeronautics, constructed the first ‘wind-tunnel’ and by 1895 was writing about space travel. From 1898 he was predicting (with a high degree of accuracy) future space exploration in rockets using liquid fuel. The launching of Sputnik I (1957) was timed to coincide with his centenary.

Tsvetaeva, Marina Ivanovna (1892–1941). Russian poet, born in Moscow. Her father was a professor who founded the Pushkin Museum of Fine Arts. She observed the Revolution and the following famine, lived in Paris from 1922, returning in 1939, but was ostracised. Her husband was executed in 1941, her daughter jailed as a spy and she hanged herself (although it could have been murder). Her lyric poetry, most written in exile, was published in 1961 and championed by Vladimir *Nabokov and Joseph *Brodsky. Minor planet 3511 Tsvetaeva was named for her in 1982.

Tswett, Mikhail Semenovich (1872–1919). Russian chemist and botanist. Inventor of the important chemical technique known as chromatography, he showed (1906) that plant pigments dissolved in petrol could be separated by means of their differential rates of absorption by powdered calcium carbonate in a vertical glass tube. This method of analysis has since been widely developed.

Tubman, William Vachanarat Shadrach (1895–1972). Liberian politician. A lawyer, judge and leader of the ‘True Whig’ party, he was elected President in 1944 and re-elected six times, dying in office. He attempted social, economic and educational reforms.

Tudjman, Franjo (1922–1999). Croatian politician. During World War II, he became the youngest general in *Tito’s partisans, was a fervent Marxist, then an academic, teaching history at the university of Zagreb. He was expelled from the Yugoslav CP in 1967 for his advocacy of Croatian nationalism. In 1989 he founded the Croatian Democratic Union, was elected President of Croatia 1990–99 and declared its independence in 1991. War with Serbia, the fourth in 90 years, broke out with massive loss of life, only token intervention by the UN and an ineffective response by the European Community.

Tudor. Welsh dynastic family that ruled England from the accession of *Henry VII (1485) to the death of *Elizabeth I (1603). Its links with the English royal line were established by the marriage of Owen Tudor to *Henry V’s widow, Catherine of France. Henry VII’s claim to the throne rested, however, upon the marriage of his father Edmund Tudor, son of Owen, to Margaret Beaufort, granddaughter of John Beaufort, one of the legitimised children of *John of Gaunt and Catherine *Swynford.

Tudor, Antony (originally William Cook) (1908–1987). Anglo-American ballet dancer and choreographer. He trained in England but worked in the US from 1940. He was a driving force in the American Ballet Theatre, linked with *Balanchine as a creator of modern ballet.

Tukhachevsky, Mikhail Nikolaievich (1893–1937). Russian marshal. Of noble origin, he joined the army in 1911 and was a prisoner-of-war 1915–18. He supported the Bolsheviks in 1918, commanding the Red Army in the Caucasus during the civil war, and becoming Chief of Staff 1925–28 and Deputy Commissar of Defence 1931–37. He was accused of treason and shot on the basis of evidence by the NKVD and the Gestapo. *Khrushchev rehabilitated him in 1958.

Tull, Jethro (1674–1741). English agriculturist. Called to the bar in 1699, as a result of the enclosure system, which by bringing large acreages under direct control of landlords encouraged more scientific agriculture, he turned to farming. A prolonged tour of Europe enlarged his knowledge, among the things learnt being the value of the cultivator in aerating the soil and allowing access of water. His practices were explained in Horse-hoeing Husbandry (1733). He invented a seed drill (1701), and his advocacy of planting cereals and turnips in rows instead of by broadcasting the seed was of the greatest importance in improving yields.

Tupolev, Andrei Nikolaievich (1888–1972). Russian aeronautical engineer. Educated at the Moscow Higher Technical School, in 1922 he became director of the Central Aero-hydro-dynamic Institute. He fell into disfavour with the authorities in 1938 but was reinstated in 1943. He was responsible for over 100 aircraft both civilian and military. The Tu-104 (1955) was the first jet transport to provide a regular commercial service for passengers.
Turenne, Henri de la Tour d'Auvergne, Vicomte de (1611–1675). French soldier. A grandson of *William the Silent (Prince of Orange), after his father's death he was brought up in Holland as a Protestant. He returned to France in 1630 and soon showed his military abilities during the Thirty Years' War. In 1641 he was given the supreme command and in 1643 was rewarded for his conquest of Roussillon from the Spanish by being made a marshal of France. He ended the Thirty Years' War with triumphant campaigns in Bavaria and Flanders. In the civil wars that ensued he at first joined the Fronde, but later was reconciled with the regency government led by *Mazarin, and thus found himself opposed to his great military rival *Condé. From a period of confused fighting Turenne emerged victorious, while Condé, a declared traitor, crossed the frontier and took service with Spain. The contest between the two men continued with Condé leading the Spanish army, Turenne the French, and was only finally settled when Turenne, after overrunning much of the Spanish Netherlands, finally, with the help of a force of *Cromwell's Ironsides, defeated Condé at the Battle of the Dunes (1658), which led to the surrender of Dunkirk. Peace followed (1659) and when hostilities were resumed (1667) Condé had been pardoned and taken into favour by *Louis XIV. In 1668 Turenne turned Catholic. In the war (1672) with Holland, soon joined by the emperor Leopold and other allies, the two great commanders campaigned in concert. In the winter of 1674–75 Turenne fought his last and most brilliant campaign in Alsace but in the spring, while reconnoitring the imperialist position near the defile of Sassbach, he was struck by a cannon ball and killed.

Weygand, M., Turenne: Marshal of France. 1930.

Turgenev, Ivan Sergeievich (1818–1883). Russian novelist, born in Oryol. Brought up on the family estate, he quarrelled with his masterful and neurotic mother about her treatment of the serfs. After a university education and a short time in the civil service he achieved his first popular success as a writer with A Sportsman's Sketches (1847–52), a series of delightful rural sketches. In 1843 he fell in love with Pauline *Viardot (née Garcia), a famous singer then visiting Russia. She was married but, moved by a hopeless but enduring passion, he followed her around from place to place in Germany and France. He even maintained a friendship with her husband and collaborated with him in the French translations of his works, sometimes even sharing their home. This barren love affair may explain why so many of the men in Turgenev's books are such emotional weaklings. Turgenev was on bad terms with *Dostoevsky, *Tolstoy and other Russian contemporaries. After 1856 he spent much time in Paris, where he was a friend of *Flaubert, *Zola, *Daudet, the * Goncourt brothers and Henry *James. He died near Paris.

His most important novels, among which are A Nest of Gentlefolk (1859), Fathers and Sons (1862), a story of political conflicts between the generations, and Virgin Soil (1876), belong to a series referring to social and historical developments in Russia between 1830 and 1870. These were criticised both by the progressives and the reactionaries although much admired outside Russia. Of equal or greater fascination are the short stories, love stories, tales of the countryside and of the supernatural. Here the fastidious elegance of his style can be appreciated at its best.

Turgot, Anne Robert Jacques (1727–1781). French economist and administrator. Having abandoned the idea of a Church career, he lived in Paris in the midst of the great intellectual ferment of which *Diderot's Encyclopédie was the symbol. Turgot's interests were mainly economic and in his writings on the subject, especially in his advocacy of free trade, he anticipated the work of Adam *Smith. As intendant of Limoges (1761–64) he was able to put theory into practice: by substituting a money tax for the corvée (the compulsory road-labour of peasants dating from feudal times) he greatly improved communications; and by establishing free trade in corn, by stimulating the porcelain industry and encouraging new ones he transformed the Limousin from one of the poorest into one of the richest regions of France.

On the accession (1774) of *Louis XVI he was called upon to do for the country what he had done for the region. As controller general with the watchwords 'no bankruptcies, no tax increase, no loans', he began by making stringent economies, including the suppression of some 32,000 government posts. The measures which followed — abolition of the corvée, free trade in corn (followed by bread riots), and a minor land tax on nobles and clergy — produced such a selfish outcry from those adversely affected and the privileged classes in general that Louis lost his nerve and in 1776 Turgot had to resign. His declared conviction that the alternative to far reaching reforms was revolution was soon borne out.

Turing, Alan Mathison (1912–1954). English computer scientist, logician, mathematician and cryptographer, born in London. Educated at King's College, Cambridge and Princeton (where he worked with Alonzo *Church), he published a paper 'On Computable Numbers ...' (1936) which proposed a formal theory of how a universal computer would work, embodying the logic of all future computing machines. During World War II, he worked as a cryptographer at Bletchley Park, Bucks., and produced a device (the 'bombe') that cracked the German Enigma naval codes and was decisive in winning the Battle of the Atlantic. Reader in mathematics at Manchester University 1945–49,
he worked on the Manchester Mark I computer, investigated artificial intelligence and morphogenesis (mathematical biology) and became FRS in 1951. Convicted, in 1952, of an act of gross indecency with a young man, he accepted chemical castration as an alternative to imprisonment and committed suicide by eating an apple laced with cyanide. In 2009, Prime Minister Gordon Brown made an official apology about Turing's treatment. He received a posthumous royal pardon in December 2013.

**Turnbull, Malcolm Bligh** (1954– ). Australian lawyer, banker, writer and Liberal politician, born in Sydney. Educated at Sydney University, and a Rhodes Scholar in Oxford, he became a journalist, barrister and merchant banker, leading the ‘Yes’ campaign in the failed 1999 Referendum on a Republic. Member of the Australian Parliament 2004–, he was Minister for the Environment and Water 2007, and Leader of the Opposition 2008–09 until deposed, narrowly, by Tony Abbott. Minister of Communications 2013–15, he defeated Abbott in a party room ballot and was Prime Minister 2015–.

**Turner, Frederick Jackson** (1861–1932). American historian. Professor of history at Wisconsin University 1892–1910 and Harvard 1910–24, he was the proponent of the ‘frontier school’ of American historiography, arguing that pushing back the frontier created the essential and distinctive elements of American society, culture, politics and the economy.

**Turner, John Napier** (1929–). Canadian politician and lawyer, born in England. Educated at the University of British Columbia, he was a Rhodes Scholar at Oxford, became a lawyer in Montréal and a Liberal MP 1962–75, serving as Attorney-General 1968–72 and Minister for Finance 1972–75. In 1975 he resigned over policy differences with Pierre Trudeau, became active in business, and was nominated to succeed him as party leader and Prime Minister of Canada, June 1984, although he was not an MP or senator. In September 1984 his government was overwhelmingly defeated but Turner remained as Opposition Leader until 1990.

**Turner, Joseph M(allowd) W(illiam) (1775–1851).** English painter, born in London. His father kept a barber’s shop in Maiden Lane, Covent Garden. He was sent to the free school at Brentford and in 1789 gained entrance to the Royal Academy school. His first money was made by selling sketches in his father’s shop and colouring engravings. With his savings he made sketching tours and also worked with his friend Thomas Girtin, whose style in water colours influenced him greatly. His first Academy exhibit was shown in 1791. His early oil paintings were influenced by Richard Wilson and Claude Lorrain but after going to the Continent (1802) he came to admire Titian and Poussin. Elected ARA in 1799, he became RA in 1802. By about 1810 he had fully developed the technique that made him famous, showing the subject of his picture, whether a natural phenomenon, mythological figures, or—in accordance with the romantic vogue of the time—an ancient building, through cascades and explosions of light and colour. He sometimes painted direct from nature but usually in the studio, where an astonishing visual memory enabled him to reproduce almost exactly the original scene. He would execute a subject, e.g. Blois, as watercolour, gouache and oil (Blois on the Loire, c.1829). They were often reproduced as etchings or engravings, as in the series *Rivers of England* (1823–27) and *Rivers of France* (1833–35) which popularised his work. He visited France, Italy, Switzerland and Germany several times, and his best paintings include many studies of Venice. Among his greatest works are *Burning of the Houses of Lords and Commons* (1834), *The Fighting Temeraire* (1838), *The Slave Ship* (Slavers Throwing Overboard the Dead and Dying, Typhoon Coming On), (1840) and *Rain, Steam and Speed—The Great Western Railway* (1844). Despite prolonged attacks by the leading art critics of the time Turner was supported by the Royal Academy and, to his surprise, by John Ruskin and above all, by Lord Egremont of Petworth, with whom Turner often stayed and where some of the best of his pictures are still exhibited. In his old age Turner lived as a recluse in Chelsea under an assumed name and there died. He was buried in St Paul’s Cathedral. He left £140,000, more than 300 oils, 20,000 water colours and 19,000 drawings to the nation, many exhibited in the Tate Gallery, in extensions built by Sir Joseph Duveen (1908) and Sir Charles Clore (1987). Until the 20th century his works were more admired in Europe than in Britain. Modern Rome—Campo Vaccino (1839) sold in London for $US44.9 million in 2010.

**Turner, Ted** (Robert Edward III) (1938–). American broadcasting executive. He inherited an advertising agency from his father, moved into radio and television and in 1980 founded Cable News Network (CNN), a global 24-hour newscast, which reached its highest penetration during the Gulf War (1991). The immediacy of CNN’s coverage not only influenced reporting but policy outcomes and, by breaking down frontiers, illustrated Marshall McLuhan’s concept of the global village. Turner won the America’s Cup for yachting, owned the Atlanta Hawks and in 1991 married the actor Jane Fonda. He sold CNN to Time-Warner, gave $US1 billion to the UN for an environment fund and was the biggest landowner in the US.
Turpin, Dick (1706–1739). English criminal. Romanticised in Ainsworth’s novel Rookwood (1834), he was a brutal thief engaged in smuggling, housebreaking and highway robbery. He was hanged at York. The legend of his ride on ‘Black Bess’ seems to have been adapted from the story of ‘Swift John Nevison’, who is said to have established an alibi for a murder at Gadshill at 4 a.m. by arriving at 7.45 p.m. on the same day at York (1676).

Tussaud, Marie (née Grosholtz) (1760–1850). Swiss modeller. Founder of the waxworks that bear her name, she learned modelling in Paris from her uncle, J. C. Curtius, whose wax museums she inherited (1793). She prepared death masks from heads severed by the guillotine. Having separated (1800) from her soldier husband she established her exhibition in London, first at the Lyceum Theatre and then (1835) in Baker Street. The move to Marylebone Road was made in 1884 after her death.

Tutankhamen (Tut-ankh-amen) (d.c.1323 BCE). Egyptian pharaoh of the XVIIIth dynasty. He was son-in-law and successor of *Akhenaton, who had tried to impose a sort of monotheism with Aton as the one god. Popular and priestly opposition had rent the kingdom, and under the young pharaoh the country reverted to its former polytheism, with Amon as a principal god. As he was only 18 when he died after a reign of six years, he had little opportunity to show his qualities. His tomb was found undisturbed after a reign of six years, he had little opportunity to show his qualities. His tomb was found undisturbed by Lord *Carnarvon and Howard *Carter (1922). Its magnificent treasures are displayed in the Cairo Museum.

Twain, Mark (pseudonym of Samuel Langhorne Clemens) (1835–1910). American author and humorist, born in Florida, Missouri. His father was a Virginia lawyer who had moved west to seek a fortune by land speculation but died poor (1847). The boy, who had a casual upbringing in Hannibal, Missouri, where the river provided many scenes for his later books, became a journeyman printer. After some years of wandering, he visited New Orleans and became a pilot on the Mississippi (1857–61). His later pseudonym was derived from the leadsman’s cry indicating that the water was two fathoms deep. The Civil War ended this chapter and he joined his brother in Nevada to prospect for gold. But soon his early humorous writings began to appear. He was encouraged by Artemus *Ward and in his writings for the San Francisco papers by Bret *Harte. A commission to visit and write about the Sandwich Islands was followed by a lecture tour in the east which proved a great success. A Mediterranean tour resulting in Innocents Abroad (1869) established his fame. Having married Olivia Langdon of New York State (1870) he settled down as editor of the Buffalo Express but was fortunately encouraged by friends to draw on his boyhood memories of life on the great rivers for Tom Sawyer (1876) and his masterpiece Huckleberry Finn (1884). In later life, as well as having to submit to much ceremonial and hero worship he dissipated his energies in foreign travel. A Tramp Abroad (1880) records a European walking tour and business ventures which sometimes involved heavy losses. Meanwhile, and partly to recoup himself, he continued to write with industry and versatility. The burlesque A Connecticut Yankee in King Arthur’s Court (1889) is sometimes very funny; Personal Recollections of Joan of Arc (1896) reveals a long-felt devotion to this historic heroine. Others, e.g. The Stolen White Elephant, show his satirical gifts. He went on a round-the-world lecture tour (1895–96) and visited Australia and New Zealand. He will always be remembered by the books which owe their inspiration, vigour and freshness to the river lands of his childhood. His journalism was powerful and incisive and he attacked the conventional wisdom with zest and courage.

Tweedsmuir, 1st Baron see Buchan, John

Tyler, John (1790–1862). 10th President of the US 1841–45. Son of a governor of Virginia, he became a lawyer, congressman 1816–21. Governor of Virginia 1825–27 and US Senator 1827–36. Supporting States’ rights he joined the new Whig party formed by President *Jackson’s opponents. In 1841 he became Vice President to W. H. *Harrison, on whose death, a month after inauguration, he succeeded as President. His term of office was rendered largely ineffective by the party split created by the conflict between the national policies of Henry *Clay and the belief in States’ rights favoured by the president. It was marked, however, by the annexation of Texas (1844), and the *Webster-Ashburton Treaty (1843) which resolved difficulties with Great Britain.

Tyler, Wat (or Walter) (d.1381). English rebel and popular leader. In the Peasants’ Revolt (1381) he led the Kentishmen, who with the men of Essex converged on London to present their demands, of which the main one was the abolition of serfdom and the crippling poll-tax. Three days and nights of burning and looting had already occurred when, at a conference with *Richard II at Smithfield, Tyler, acting as spokesman, was struck down by Lord Mayor Walworth. He was killed in the subsequent scuffle; only Richard’s courage in taking over the leadership...
of the peasants saved the situation. The gesture was a
token one, however, and few of the rebels' grievances
were met or their hardships lightened.

Tylor, Sir Edward Burnet (1832–1917). English
anthropologist. A journey through Mexico with the
ethnologist Henry Christy, described in Anahuac,
or Mexico and the Mexicans (1861), gained him a
considerable reputation as an anthropologist. His
later books included Primitive Culture (2 volumes,
1871), which quickly became a standard work, and
an excellent introduction to the subject, Anthropology
(1881). He was professor of anthropology at Oxford
1896–1909.

critic. Immensely influential, he wrote for The
Observer and The New Yorker, worked with Laurence
*Olivier at the National Theatre and arranged the

He worked as teacher and draftsman, then studied
at Marburg, worked for years on polar diamagnetism
and became (1853) professor of natural philosophy
at the Royal Institution in London, where he later
succeeded (1867) *Faraday, whose biography he
wrote, as superintendent. In 1859 he identified
the role of water vapour, CO² and methane as key
factors in maintaining atmospheric temperature.
Interest in glaciers and meteorology turned him into
a mountaineer: he was among the first to climb the
Matterhorn, and made a first ascent of the Weisshorn
(1861). His other researches concerned heat, sound
(lighthouse sirens) and light (the ‘Tyndall effect’: the
imitation of the blue of the sky by passing a beam of
light through a cloud of very fine particles).

Tyndale, William (c.1494–1536). English Biblical
translator, born in Gloucestershire. He graduated
at Hart Hall, Oxford, and later at Cambridge came
under the influence of humanists such as *Erasmus
(one of whose works he translated) and the religious
reformers. He mastered eight languages, and
translated directly from Greek and Hebrew. Having
set his heart on biblical translation but having failed
to get patronage in London he went (1524) to
Hamburg, to Wittenberg (where he met *Luther)
and to Cologne. Here he began printing his New
Testament but, forbidden to proceed, fled to Worms.
Of the edition there printed (1526) and smuggled
into England, almost all copies were destroyed. His
later works were published at Antwerp and they
included translations of the Pentateuch (1530), Jonah
(1531) and New Testament revisions. The section
Joshua – II Chronicles was left in manuscript. Both
in his marginal notes to the biblical books and in
his many theological works he revealed his Lutheran
doctrines and attacked papal supremacy. He engaged
in bitter controversy with Thomas *More. In May
1535 Tyndale was lured out of the ‘English House’
on a pretext by an appalling opportunist, Harry
Phillips, arrested and, after 16 months' imprisonment
at Vilvoorde, near Brussels, convicted of heresy by an
Imperial court. Despite sporadic efforts by *Henry
VIII to save him, he was strangled there and his body
burned at the stake.

His superb use of the words and rhythms of the
English language is enshrined in the Authorised
Version of the Bible: about 84 per cent of the New
Testament, and 76 per cent of those books in the
Old that he completed, is his work. His influence
on written English was comparable with Luther's
on German. His monosyllabic style is at its best in 2
Kings iv:8–37.

Daniell, D., William Tyndale. 1994; Moynihan, B.,
William Tyndale: If God Spare My Life. A story of
martyrdom, betrayal and the English Bible. 2002.

He worked as teacher and draftsman, then studied
at Marburg, worked for years on polar diamagnetism
and became (1853) professor of natural philosophy
at the Royal Institution in London, where he later
succeeded (1867) *Faraday, whose biography he
wrote, as superintendent. In 1859 he identified
the role of water vapour, CO² and methane as key
factors in maintaining atmospheric temperature.
Interest in glaciers and meteorology turned him into
a mountaineer: he was among the first to climb the
Matterhorn, and made a first ascent of the Weisshorn
(1861). His other researches concerned heat, sound
(lighthouse sirens) and light (the ‘Tyndall effect’: the
imitation of the blue of the sky by passing a beam of
light through a cloud of very fine particles).

Tyson, Edward (1650–1708). English anatomist.
Best known for his Orang-Outang of 1699, describing
the anatomy of a primate (actually a chimpanzee)
brought back from Malaya. Tyson saw the specimen
as halfway between a man and an ape, a link on the
Great Chain of Being. Throughout the 18th century,
there continued to be fierce debate as to whether
such higher primates were really forms of men, or of
monkey, and whether man gradually shaded into the
primates, or whether there was a sharp distinction.

Tzara, Tristan (originally Samuel Rosenstock)
(1896–1963). French poet and essayist, born in
Romania. In 1916 in Zürich he founded the 'dadaist'
movement, using random assemblages of ideas, words
and objects, and became a Surrealist by 1922. He
later joined the Communist Party and the Resistance.

Tz'u Hsi. Dowager empress of China see Cixi.
U

Uccello, Paolo (c.1400–1475). Florentine painter. He worked as a boy in *Ghiberti's studio, and was later in Venice and Padua as well as Florence. In most of his paintings he is preoccupied with problems of perspective which he worked out by mathematical means. This is evident in the well-known fresco *The Deluge done for S. Maria Novella in Florence. He won contemporary fame for three panels of the *Battle of San Romano, painted for the Medici palace in Florence, but now dispersed. He was one of the first to draw plants and birds from nature, a sign of the spirit of innovation that marked the Early Renaissance.

Uchida, Dame Mitsuko (1948– ). Japanese-British pianist, born near Tokyo. Trained in Vienna, she became a great specialist in *Mozart,*Beethoven, and *Schubert. She also toured, recorded extensively and taught.

Udall, Nicholas (1505–1556). English playwright and scholar. He was headmaster of Eton from 1534 until dismissed and imprisoned for misconduct (1541). He translated a number of classical and scholarly works but is remembered as the author of the earliest extant English comedy, *Ralph Roister Doister* (c.1553), inspired by *Plautus and *Terence and written in doggerel verse.

Ulanova, Galina Sergeyevna (1910–1998). Russian ballerina, born in St Petersburg. Her father was an artist, her mother a dancer. *Prima ballerina assoluta in her time, she danced with the Kirov Ballet 1928–45 and the Bolshoi 1945–63, was held up as an icon of Soviet dance by the Soviet regime and highly decorated but not allowed to travel until 1956 when she led a visit to London. *Prokofiev wrote *Romeo and Juliet for her. After 1963 she taught at the Bolshoi.

Umberto II (Humbert) (1844–1900). King of Italy 1878–1900. Son and successor of *Vittorio Emanuele II, he was poorly educated, hugely moustached and largely kept out of the affairs of government. His reign included the war with Ethiopia, ending with a disastrous defeat at Adowa (1896). Having escaped several earlier attempts on his life he was assassinated at Monza by Gaetano Bresci, an Italian anarchist from New Jersey.

Unamuno y Jugo, Miguel de (1864–1936). Spanish-Basque philosopher and writer, born in Bilbao. He became professor of Greek language and literature at the University of Salamanca 1891–1901 and rector 1901–14, 1915–24, 1931–36, being removed three times for his political stances – in favour of the Allies in World War I, against *Primo de Rivera's dictatorship and against *Franco's extremism. A pioneer existentialist, in the sense that he tilted against dogmatism and hypocrisy, he was a modern *Don Quixote, the hero or anti-hero whom he came to regard as the symbol of the nobility and tragedy of man (see *Life of Don Quixote and Sancho, 1905). Yet even such a generalisation was alien to him as he propounded no general system and was above all an analyst and critic. His longing for eternal life and his realisation that reason and scientific thought stand as bars to the acceptance of immortality are the theme and substance of *The Tragic Sense of Life (1913) and other of his numerous poems, essays and novels.

Umar I (Umar ibn al-Khattab) (c.581–644). Second caliph of Islam 634–44. Born in Medina, he succeeded *Abu-Bakr, and maintained the discipline and control of his armies as they advanced to the conquest of Syria, Mesopotamia (Iraq) and Egypt. He was the first caliph to be known as Commander of the Faithful. His descendant *Umar II (Umar 'abd al-Aziz) (682–720), ninth Umayyad caliph 717–20, was born in Aleppo and ruled from Damascus. He imposed the ‘ordinances of Umar’ by which restrictions (e.g. of dress) were placed upon Jews and Christians.

Umayyad (Omayyad). Arab-Muslim dynasty, established by *Mu’awiyah I during the civil wars that followed the death of *Uthman, and which dominated Islam 661–750, ruling from Damascus, until overthrown by the Abbasids. An independent Umayyad dynasty ruled in Spain 756–1031.

Umberto I, he married (1930) Princess Marie José, a sister of King *Leopold III of the Belgians. He became King after his father's abdication in May 1946, but in a referendum held in June a majority voted for a republic. Umberto left Italy 'temporarily' but in 1947 a ban was placed on his return or that of his descendants. He died in Geneva.

U Nu see Nu, U

Uchida, Dame Mitsuko (1948– ). Japanese-British pianist, born near Tokyo. Trained in Vienna, she became a great specialist in *Mozart,*Beethoven, and *Schubert. She also toured, recorded extensively and taught.

Udall, Nicholas (1505–1556). English playwright and scholar. He was headmaster of Eton from 1534 until dismissed and imprisoned for misconduct (1541). He translated a number of classical and scholarly works but is remembered as the author of the earliest extant English comedy, *Ralph Roister Doister* (c.1553), inspired by *Plautus and *Terence and written in doggerel verse.

Ulanova, Galina Sergeyevna (1910–1998). Russian ballerina, born in St Petersburg. Her father was an artist, her mother a dancer. *Prima ballerina assoluta in her time, she danced with the Kirov Ballet 1928–45 and the Bolshoi 1945–63, was held up as an icon of Soviet dance by the Soviet regime and highly decorated but not allowed to travel until 1956 when she led a visit to London. *Prokofiev wrote *Romeo and Juliet for her. After 1963 she taught at the Bolshoi.

Umberto II (Umberto Nicola Tommaso Giovanni Maria di Savoia) (1904–1983). King of Italy 1946. Son of *Vittorio Emanuele III and grandson of *Umberto I, he married (1930) Princess Marie José, a sister of King *Leopold III of the Belgians. He became King after his father's abdication in May 1946, but in a referendum held in June a majority voted for a republic. Umberto left Italy 'temporarily' but in 1947 a ban was placed on his return or that of his descendants. He died in Geneva.

Unamuno y Jugo, Miguel de (1864–1936). Spanish-Basque philosopher and writer, born in Bilbao. He became professor of Greek language and literature at the University of Salamanca 1891–1901 and rector 1901–14, 1915–24, 1931–36, being removed three times for his political stances – in favour of the Allies in World War I, against *Primo de Rivera's dictatorship and against *Franco's extremism. A pioneer existentialist, in the sense that he tilted against dogmatism and hypocrisy, he was a modern *Don Quixote, the hero or anti-hero whom he came to regard as the symbol of the nobility and tragedy of man (see *Life of Don Quixote and Sancho, 1905). Yet even such a generalisation was alien to him as he propounded no general system and was above all an analyst and critic. His longing for eternal life and his realisation that reason and scientific thought stand as bars to the acceptance of immortality are the theme and substance of *The Tragic Sense of Life (1913) and other of his numerous poems, essays and novels.
His passionate love of Spain was shown not only in his books but in his political opinions and acts. He became known outside Spain for his opposition to the dictator *Primo de Rivera and the monarchy. He returned triumphantly from exile when the republic was formed but was soon as disillusioned with the new Socialist regime as with the old, though he strongly protested against the Falangist state foreign intervention in the Civil War.

Undset, Sigrid (1882–1949). Norwegian novelist. She was the daughter of a well-known antiquary who inspired her fascination with medieval Norway, the setting of several of her best novels culminating with Kristin Lavransdatter (3 volumes, 1920–22) and Olav Audunsson (1925–27) for which she was awarded the Nobel Prize for Literature (1928). Treating the characters and themes with modern realism she brought a remarkable sense of conviction to her picture of life in 14th-century Norway. Of her many contemporary novels, the tragedy Jenny (1911) is among the best known.

Begley, A., Updike. 2014

Urban II (Odo) (1042–1099). Pope 1088–99. In 1095 he proclaimed the 1st Crusade at the Council of Clermont. He followed this up with letters, sermons and exhortations, the result being the capture of Jerusalem (1099) and the establishment there of a feudal kingdom.

Urban VI (Bartholomeus Prignanus) (1318–1389). Pope 1378–89. In the year of his election the College of Cardinals, claiming that they had chosen Urban under pressure from the Roman mob, chose *Clement VII. The latter went to Avignon, where he was recognised by France and her political associates, while Urban remained at Rome. So began the Great Schism (1378–1417), with two rival popes competing for the allegiance of Christendom.

Urey, Harold Clayton (1893–1981). American chemist, born in Montana. He studied in California and in Copenhagen with *Bohr. He discovered (1931) deuterium, the heavy isotope of hydrogen, and this led almost at once to the commercial production of heavy water. He subsequently worked out methods for separating the heavy isotopes of carbon, oxygen, nitrogen and sulphur. He won the Nobel Prize for Chemistry in 1934. He was professor of chemistry at Colombia 1934–45 and Chicago 1945–58, then continued research at La Jolla, California. His work in separating isotopes was essential in the development of the atomic and hydrogen bombs. In 1953, with Stanley *Miller, he explained the creation of amino acids. Urey campaigned for an international ban on atomic weapons, wrote extensively on geochemistry and the development of the solar system, and consulted for NASA.

Usama (Osama) bin Laden see Laden, Osama bin

Uspensky, Gleb Ivanovich (1840–1902). Russian novelist. His themes are generally concerned with the impact of industrialisation on peasant life treated realistically as in The Power of the Soil (1882). Depressed by social conditions, he commited suicide.

Ussher (or Usher), James (1581–1656). Irish prelate and scholar. Famous for his calculations of biblical chronology, he arrived at the long accepted date of 4004 BCE for the Creation. He was ordained in 1601 and appointed professor of divinity in Dublin (1604), Bishop of Meath (1621) and Archbishop of Armagh (1625).

Ustinov, Sir Peter Alexander (1921–2004). English actor, producer and playwright. Of Russian descent, he first appeared on the stage in 1938 and soon became well known for his versatility and skill in a wide variety of roles both on the stage and in films. Among his plays the most successful were The Love of Four Colonels (1951), Romanoff and Juliet (1956) and Overheard (1981). He also produced operas, was an active Ambassador for UNICEF, wrote an autobiography Dear Me (1977) and My Russia (1983).

Utamaro Kitigawa (1753–1806). Japanese graphic artist. The first great artist of the *ukiyo-e* ('floating world') school, his works illustrated everyday scenes in Japanese towns. His prints appeared in book form, e.g. *Insects, Types of Love* and *Book of Birds and Flowers*. His striking use of colour, especially red and gold, and his sensuous portraits of women were much admired by European collectors. He was followed by *Hokusai* and *Hiroshige.

**Uthman** (Uthman ibn Affan) (c.575–656). Third caliph of Islam 644–656. Born in Medina to the *Umayyad* clan, he was the first of his rank to accept Islam and married an unnamed daughter of *Muhammad*. A council chose him as a compromise to succeed *Umar* as caliph. He published an authorised version of the *Qu'an*, reducing the influence of scholars who preached their own variants. Rebellions broke out in Egypt and Iraq, the army opposed him and he was murdered.

**Uthman** (Othman or Osman) I (c.1258–c.1326). Turkish ruler. Regarded as founder of the Ottoman empire, named for him, he established a sultanate in northwest Anatolia about 1300. Within a century the Ottoman or Osmanli Turks had conquered Anatolia and Bulgaria, confining the Byzantine Empire to the enclave of Constantinople until its fall in 1453.

**Utrillo, Maurice** (1883–1955). French painter. The adopted son of Miguel Utrillo, a Spaniard, his mother, the French painter Suzanne Valadon, encouraged him to take up art, partly to combat the alcoholism of which he was a victim at an early age. The pictures that won him fame in the 1920s were much influenced in their colouring by the Impressionists, notably *Pissarro*, but his freshness of vision resulted from an almost naive affection for his subjects, mostly the narrow streets of Montmartre and little French towns near Paris. Success and his way of life soon dimmed his powers and many of his later pictures display an exaggerated style almost like caricature. Collectors have been embarrassed by the frequent forgery of his works.

Valéry, Paul Ambroise (1871–1945). French writer, born in Sète, near Marseilles. Son of a Corsican father and Italian mother, he settled in Paris (1892) and wrote graceful pictorial poems that show the influence of his friend *Mallarmé. For nearly 20 years from 1898 he published no poems but devoted himself to mathematical and philosophic studies. When he resumed writing poetry it was in an entirely new style. *La jeune parque (1917) is a harmonious but difficult poem dealing with feminine ‘consciousness’ in symbolic and philosophic terms. Valéry’s prose works include *Soirée avec M. Teste (1896), an analytical self-study of the inner workings of a human mind, and many essays on aesthetic themes, e.g. *Eupalinos and *L’Âme et la danse (both 1924). Valéry was elected to the Académie Française in 1925 and in later life his lectures at the Collège de France became well known. He was working on a version of *Faust when he died.

Valla, Lorenzo (1406/7–1457). Italian humanist scholar, born in Rome. He spent some years moving from university to university before settling in Naples under the protection of Alfonso V. A defence of *Epicurus, in which he maintained that satisfaction of the appetites was the chief good, provided a warning of controversy to come. He went on to prove that a document ‘discovered’ in 1440 and purporting to be a transfer of the temporal power of the emperor to the papacy was a recent forgery. By similar critical methods that became the basis of later historical research he refuted the contention that the Apostles’ Creed was in fact the joint work of the apostles. He came (1447) secretary to the humanist pope Nicholas V.

Valerian (Publius Licinius Valerianus) (c.200–260?). Roman Emperor 253–60. Born to a senatorial family, he persecuted the Christians, and made his son *Gallienus co-ruler, dividing the empire. Valerian took the eastern empire, was defeated by the Persians and became the only emperor to die in captivity.

Valois. French dynasty which ruled from the accession of *Philip VI (1328) to the death of *Henri III (1589). The county of Valois was bestowed (1285) by Philip III on his third son Charles, who founded the family, which was thus a junior branch of the Capetian line. When the main dynastic line failed under the miscalled Salic Law, by which the succession could not pass to or through females, the crown passed to the house of Valois.

Van Allen, James Alfred (1914–2006). American physicist. Professor of physics at Iowa State University 1951–85, he was a pioneer of space research with rockets and artificial satellites, and investigated cosmic rays. He discovered (1960), from the results...
of the first communications satellite (*Echo I*) sent up by the US, a belt of radiation that surrounds the earth (and is now named after him).

**Vanbrugh, Sir John** (1664–1726). English dramatist and architect. Grandson of a Flemish refugee, he failed in the wine business, worked in India, and was arrested and imprisoned in France as a suspected spy (1690). On his release (1692) he returned to England and quickly established a reputation as both playwright and architect. His first comedy *The Relapse* (1696) was followed by *The Provoked Wife* (1697). His third play *The Confederacy* was staged in 1705 at the New Opera House in the Haymarket, which he himself had built, and managed in partnership with *Congreve*. Three years earlier he had produced grandiose designs for Castle Howard, the Earl of Carlisle's Yorkshire seat, and in 1705 was commissioned to build the even more spectacular Blenheim Palace for the Duke of Marlborough. Despite frequent quarrels with the duchess, Sarah, over the plans and the enormous expense, he succeeded in creating the most splendid and by far the largest example of English baroque. He became Comptroller of Works in 1702 and was knighted by *George I*. His last play, *The Provoked Husband*, was unfinished at his death.

**Van Buren, Martin** (1782–1862). 8th President of the US 1837–41. Born at Kinderhook, near Albany, New York, he became a lawyer and was prominent in state politics. His wife died in 1819 and he never remarried. A political manipulator of great skill, he established the first political ‘machine’, in New York and was known by his supporters as ‘The Little Magician’, by detractors as ‘The Sly Fox’. He became US senator 1821–28 and Governor of New York state 1829. When his friend Andrew *Jackson* became President (1829) he chose Van Buren to be his Secretary of State 1829–31, Minister to Great Britain 1831–32 and Vice President 1833–37. *The Autobiography of Martin Van Buren* (1833) is illuminating on the development of party politics in the US. Jackson's influence secured him Democratic nomination and election to the presidency in 1836. Van Buren was the first president born as a United States citizen. He opposed the extension of slavery but opposed its abolition in the South. Despite skilful handling of a financial panic, in 1840 he was defeated for a second term by William Henry *Harrison*. In 1844, at the Baltimore Convention, he sought renomination for president, but failed to win the two-thirds majority required and withdrew. He emerged from retirement in 1848 to run unsuccessfully for the presidency as a ‘Free Soil’ candidate. Van Buren was also known as ‘Old Kinderhook’, from his hometown. The abbreviation ‘OK’, which first appeared in print in 1839, was popularised in the 1840 presidential election by the Democratic OK Club.

**Vance, Cyrus Roberts** (1917–2002). American lawyer and administrator, born in West Virginia. Educated at Yale, after naval service he became a New York lawyer in 1947 and in 1957 was appointed special counsel to a Senate subcommittee. He became General Counsel to the Department of Defence in 1961, Secretary of the Army in 1962 and Deputy Secretary of Defence 1964–67. He was the president’s special envoy to negotiations for peace in Cyprus (1967) and Vietnam (1968). President Carter made him Secretary of State in 1977 and he resigned over the Iranian crisis in 1980. With David *Owen* he was the joint UN mediator in Bosnia 1992–93.

**Vancouver, George** (1758–1798). British naval explorer. As a youth he sailed with Captain *Cook* on his second and third voyages 1772–75, 1776–79 and later he was commissioned to lead an expedition to northwest America, partly to settle a territorial dispute, partly to explore. On the voyage out he went by the Cape route to Australia, where he explored the southwest coast, and thence to Tasmania, New Zealand and Hawaii. He spent three years (1792–94) on the American coast during which he circumnavigated Vancouver Island (named by the Spaniards after him) and made an accurate survey of the coasts of what are now California and British Columbia.

**Vanderbilt, Cornelius** (known as ‘the Commodore’) (1794–1877). American financier. As a boy he established a ferry service from Staten Island to New York which expanded until he controlled several shipping lines. He then turned to railways, and after a series of financial battles gained control of the New York Central Railway and many other lines. He amassed a vast fortune and used part to found the Vanderbilt University. His granddaughter Consuelo Vanderbilt married the 9th Duke of Marlborough.

**Van der Weyden** see Weyden, Rogier van der

**Van de Velde, Dutch family of painters. Willem van de Velde the Elder** (the Elder) (1611–1693) painted large pictures of ships and sea battles, usually drawn in black paint or Indian ink on a white ground. In 1672 he and his elder son, *Willem van de Velde* (the Younger) (1633–1707), were in London where they remained as official marine painters. Several hundred marine paintings are attributed to Willem the Younger, who is held to be among the greatest masters in this genre. Many of their paintings of sea fights were made from sketches done on the scene of action and sometimes under fire. *Adriaen van de Velde* (1636–1672), the younger son, painted gentle Dutch landscapes with figures and grazing cattle.

**Van Doren, Carl** (Clinton) (1885–1950). American editor and biographer. He taught at Columbia University and won a Pulitzer Prize for *Benjamin

Van Druten, John William (1901–1957). American playwright, born in England. His exploration of adolescence Young Woodley (1928), first made him known. His plays include Bell, Book and Candle (1950), and I am a Camera (1951), a picture of interwar Berlin based on Christopher Isherwood’s stories. He became a US citizen in 1944.

Van Dyck, Sir Anthony (1599–1641). Flemish painter, born in Antwerp. Son of a well-to-do silk merchant, he was a prodigy in art, by 1617 one of the chief assistants of Rubens with whose work, especially his portraits and religious subjects, Van Dyck’s work has been often confused. Van Dyck was invited to England for the first time in 1620 but stayed only a few months. From 1621 to 1627 he was in Italy (Genoa, Rome, Sicily, Venice), and with Titian as a strong influence, he perfected a style of aristocratic portraiture which remained fashionable for 150 years. After winning a great reputation among members of Genoese society, he returned to Antwerp where, working in friendly competition with Rubens, he found an overwhelming demand for his portraits. In 1632 under pressure from Charles I he returned to England, where he remained for the rest of his life and painted many portraits of the sad and solemn king, of his family and of the great men and ladies of the court. The glittering clothes, the texture of the materials, the perfumed hair, the jewelled accessories, the very dogs and horses, combine to give a romantic effect. The draughtsmanship is sure and true (his etched heads are superb) and the characterisation convincing. As a court painter he has had few equals. Strong R., Sir Anthony Van Dyck. 1972.

Vane, Sir Henry (1613–1662). English parliamentarian. Son of Sir Henry Vane (1589–1655), Secretary of State 1640–41, he became a diplomat, lived in Boston 1635–37 and was Governor of Massachusetts 1636–37. Member of Parliament 1640–53, 1659–60, he ‘leaked’ information purloined from his father to John Pym which led directly to the impeachment and execution of Strafford. After Pym’s death he became Cromwell’s main parliamentary supporter, took part in the creation of the New Model Army (1644–45) and the settlement of Scotland (1652–53). Under the Commonwealth he was a member of the Council of State. Disagreement with Cromwell brought a temporary eclipse but after his leader’s death he was again active. After the Restoration, he was the only man apart from the actual regicides to be executed.

Van Eyck see Eyck, Hubert van and Jan van

Van Gogh see Gogh, Vincent van

Vanier, George Philias (1888–1967). Canadian diplomat. Trained as a lawyer, he practised in Montréal. In World War I he won the DSO, MC and bar. Afterwards he held a number of official posts, culminating with that of Minister to France 1939–40. During World War II he served on the Defence Board in Ottawa and as Minister to the Allied Governments exiled in London, returning to Paris as Ambassador 1944–53. He was the first French-Canadian to serve as Governor-General 1959–67. His son, Jean Vanier (1929–), a philosopher, established L’Arche, an international network of 67 communities for the intellectually disabled.

Van Loon, Hendrik Willem (1882–1944). Dutch-American historian and biographer, born in Rotterdam. He emigrated to the US in 1903, studied at Cornell, Harvard and Munich universities and, after a period as a war correspondent, wrote a series of books that aimed to explain the world and its complexities to both children and mystified adults, illustrated by himself. All were enormously successful: they include The Story of Mankind (1921), The Story of the Bible (1923), The Story of America (1927), The Home of Mankind (1933), The Arts of Mankind (1938), Van Loon’s Lives (1943) and the autobiographical Report to St Peter (1944).

Van Rijn, Rembrandt see Rembrandt van Rijn

Vansittart, Robert Gilbert Vansittart, 1st Baron (1881–1957). English diplomat. As Permanent Under-secretary for Foreign Affairs 1930–38 he expressed to his political superiors his misgivings about Hitler and his policies. These warnings went unheeded and he was shunted off as Chief Diplomatic Adviser to the Foreign Secretary 1938–41. He retired in 1941.

Colvin, I., Vansittart in Office. 1965.

Van’t Hoff, Jacobus Henricus (1852–1911). Dutch physical chemist. One of the founders of physical chemistry in its modern form, he held professorships at Amsterdam 1877–87, Leipzig 1887–94 and Berlin 1895–1911. In 1874 he proposed the theory that the four valencies of the carbon atom are directed to the corners of a regular tetrahedron, thus establishing the field of chemical structure now called stereochemistry. In 1887 he established his theory of solutions, which is the basis of present-day knowledge of the subject. He showed that the osmotic pressure of a dilute solution is equal to the pressure that the dissolved substance would exert if it were a gas
occupying the same volume at the same temperature and pressure. Other studies included reaction velocity and thermodynamics. Van't Hoff was awarded the first Nobel Prize for Chemistry (1901).

Vanzetti, Bartolomeo see Sacco, Nicola

Vargas, Getulio Dorneles (1883–1954). Brazilian politician, born in São Boria. Governor of the province of Rio Grande del Sul 1928–30, he ran for election to the presidency in 1930 and was declared the loser in a tainted poll. With the help of the army, he seized power and was President 1930–45. He adopted something of the style of *Mussolini and the policies of Franklin D. *Roosevelt, developing a moderate, corporatist dictatorship which he called O estado novo. He took Brazil into World War II on the Allied side, but afterwards had to give way to constitutional demands. He resigned (1945) but remained leader of a reformed Labour Party. After a free election he again became President (1951), but the rise in the cost of living soon dimmed his popularity and when a group of officers gave him the choice of resignation or exile he shot himself.

Dulles, J. W. F., Vargas of Brazil, a political biography. 1967.

Vasarely, Victor (1908–1997). Hungarian-French artist. He worked in Paris from 1930 and became a pioneer of op art with geometrical abstractions which were much reproduced. He won the São Paulo Biennale Grand Prix in 1965 and was represented in museums throughout the world.

Vasari, Giorgio (1511–1574). Italian art historian. Though he gained considerable contemporary reputation as an architect (e.g. of the Uffizi in Florence) and as a Mannerist painter (e.g. of overcrowded battle scenes in the Palazzo Vecchio), he is remembered for his book The Lives of the Artists (1550), containing the biographies of the Italian painters of the previous 300 years. Despite considerable inaccuracy and bias it is the only source for much of the material, is full of lively anecdotes and shrewd comment. A revised and enlarged edition appeared in 1568.

Vasco da Gama see Gama, Vasco da

Vasks, Pēteris (1946– ). Latvian composer. Son of a Baptist pastor, he became a violinist and composer, influenced by *Lutosławski and *Penderecki. Describing his work as ‘food for the soul’, he composed three symphonies, a violin concerto, ‘Distant Light’, two cello concertos and much chamber and choral music.

Vauban, Sebastien le Prestre de (1633–1707). French military engineer. Orphaned and destitute, he joined the army and served under *Condé, having gained (1655) an engineer’s commission in the army of the King. He was primarily engaged in the taking and making of fortresses. He also developed the socket bayonet and ricochet fire. In the Spanish Netherlands (Belgium) (1672–78) he conducted 17 successful sieges, reducing Maastricht in 13 days by an approach by parallels, a method he introduced. In the decade between the wars (1678–88), he constructed the magnificent series of frontier fortresses which were effective until they fell under the attack of German howitzers in World War I. Already a general, he was appointed Marshal of France in 1703. Twelve ‘Fortifications of Vauban’ were inscribed on UNESCO’s World Heritage List in 2008.

Vaughan, Henry (1622–1695). Welsh religious poet. In 1647 he began practising medicine in his native Brecknockshire. He began writing secular poetry (Poems with the tenth Satyre of Juvenal Englished 1646) but after a religious conversion (c.1648) wrote only devotional verse and prose meditations. His religious poetry, the best of it in Silex Scintillans (1650) and Thalia Rediviva (1678), owes much to the influence of George *Herbert. In his natural descriptions and some of his thought (e.g. the nearness of a child to God, based in a belief of a life before birth) he seems to presage *Wordsworth.

Vaughan Williams, Ralph (1872–1958). English composer, born in Gloucestershire. Son of a clergyman, his mother was related to the *Darwin and *Wedgwood families. He studied at Trinity College, Cambridge (where, in 1901, he took a Mus. Doc.), the Royal College of Music under *Stanford and *Parry, in Berlin with *Bruch (1897–98) and in Paris with *Ravel (1909). However, the turning point came with his discovery of English folksong (1905) and of the Tudor polyphonic tradition. His Fantasia on a Theme of Thomas Tallis (1909), probably his best work, shows the influence of both Church music
and Ravel's orchestration. His song cycle On Wenlock Edge (1909), to poems by A. E. *Housman, remains in the repertoire, as do many songs, hymn tunes and folksong arrangements. He wrote nine symphonies between 1901 and 1958, of which No. 4 (1935), a stark and violent work, marks an abrupt change from his romantic and lyrical style. He wrote several operas, including Hugh the Drover (1914) and The Pilgrim's Progress (1951), many choral works, The Lark Ascending (rhapsody for violin, 1921), and the ballet Job (based on *Blake's etchings, 1931). He received the OM in 1935 and continued composing until his death.

Vavilov, Nikolai Ivanovich (1887–1943). Russian geneticist, born in Moscow. A Mendelian, from 1914 he travelled incessantly to collect varieties of wheat, other cereals and potatoes from their natural habitat, establishing in Leningrad the world's largest 'bank' of genetic variation in crops. From 1936 he was attacked by his former protégé T. D. *Lysenko, arrested in 1940 and starved to death in a labour camp. He was posthumously rehabilitated. Minor planet 2862 Vavilov (1977) and a moon crater were named for him.

Veblen, Thorstein (Bunde) (1857–1929). American economist and sociologist, born in Wisconsin. Of Norwegian descent, he learned English at school, won a PhD at Yale, taught at Chicago, Stanford and Missouri, and had a broken career because of marital difficulties. He wrote several successful books. The Theory of the Leisure Class (1899) is an analysis of the psychological motives for the business class in an acquisitive society. His style was astringent and witty, the concept of 'conspicuous waste' was one of his creations. Others works include The Theory of Business Enterprise (1904) and The Engineers and the Price System (1921).

Vega Carpio, Lope Félix de (1562–1635). Spanish dramatist and poet. As a young man he took part in the Spanish expedition to the Azores (1583) and sailed with the Armada (1588). He was also secretary to the Duke of Alva, the Marquis of Málpica and the Marquís of Sarria. He had many love affairs, was twice married and had several illegitimate children. His sensuousness is reflected in his love poems, and in this, and the religious poetry which was written in his periods of remorse and his charitable gifts to the Church and poor, there is a dichotomy that makes his writing more immediate and personal than that of many of his contemporaries. He had great literary prestige during his lifetime, which was, however, marred by tragedy, including the death of two wives, the blindness and madness of a mistress, the abduction of a daughter and the deaths of two sons. After 1588, his dramatic production was huge and generally sensational, and approximately 500 pieces (including entremeses and autos) survive of approximately 1500. He was the master of the Comedia in three acts, full of action and sentiment but not noted for individual characterisation or powerful situation. His plays are roughly (1) 'cloak and sword' plays comedies of intrigue, complicated aristocratic love stories such as La discreta enamorata, Noche de San Juan, and Maestro de Danzar, and (2) plays on Spanish history or legends, such as Peribnez, Fuentovejuna and El ultimo godo.

Lope de Vega is critically praised for his neatness and inventiveness of plot, his lyricism, his sympathetic and unpatronising portrayal of the peasant characters of his plays, and his charming lovers. He also wrote many poems, religious and secular, a pastoral novel Arcadia (1581) amongst others, prose, a mock epic about cats and an autobiographical novel La Dorotea (1632).

Veidt, Conrad (originally Hans Walter Konrad Weidt) (1893–1943). German actor and director, born in Berlin. He made his stage debut in 1913 and from 1916 appeared in 119 films, notably as Cesare the somnambulist in The Cabinet of Dr Caligari (1919), The Thief of Bagdad (1940) and as Major Strasser in Casablanca (1943). He left Germany in 1933 and became a British subject.

Veil, Simone (née Jacob) (1927– ). French administrator, born in Nice. She survived a concentration camp, then served at the Ministry of Justice 1957–65, first as an attaché and later (from 1959) as an assistant. She was Secretary-General to the Conseil Supérieur de la Magistrature 1970–74 and a member of the French Broadcasting Administration 1972–74. She achieved wide popularity and recognition as Minister of Health 1974–77, Minister of Health and Social Security 1977–78 and Minister of Health and Family Affairs 1978–79; she was noted for her concern for women's rights in the family. She was President of the European Parliament at Strasbourg 1979–82 and Minister for Social Affairs, Health and Towns 1993–95.

Velázquez, Diego Rodríguez de Silva y (1599–1660). Spanish painter of Portuguese descent, born in Seville. At the age of 14 he began to study under Francisco Pacheco, an indifferent artist whose daughter he married. At first working closely from life, he painted genre scenes, such as kitchen interiors, with figures and objects in realistic detail. The strong contrasts of light and shade recall the chiaroscuro of *Caravaggio, then becoming popular in Spain. In 1622 and 1623 Velázquez visited Madrid where he painted his first portrait of *Philip IV, which led to his appointment as court painter and to other more or less honorific appointments as his reputation grew. *Rubens visited Madrid in 1628 and his influence enabled Velázquez to go on a two-year visit to Italy (1629–31), which resulted in a softening of the harshness of his early style: colour began to show in the shadows, light and space became his preoccupations, whilst the range of
subjects was enlarged. He resumed his position as royal painter on his return. In his royal portraits he avoids flattery but the infantes and infantes have freshness and charm despite their elaborate and formal clothes. Velázquez was an assiduous courtier, eager for royal favours but his treatment of his masters is unsparing. In his only surviving battle piece, the Surrender of Breda (1634–35), the chivalrous compassion depicted in the attitude of the victors to the defeated gives a humanity to the picture almost unknown in paintings of this kind. Where he is less inhibited by his subject, e.g. in his pictures of court jesters and buffoons (notably the moving Calabazas, 1637, in the Prado), he is at his most effective in combining realism with interpretation of character. The loose brush work of the views of the Medici Gardens, two of his rare landscapes, indicate a stylistic development to which his second visit to Italy (1648–51) may have contributed. To this last period belong the masterpieces The Toilet of Venus (The Rokeby Venus, painted in Italy, his only nude, now in the National Gallery, London), the outstanding portraits of his mulatto slave Juan de Pareja (1649, New York), Pope Innocent X (1650, the subject said ‘troppo vero’), Maid of Honour (Las Meninas, 1656, in the Prado, Madrid), voted in 1985 as the world’s greatest painting by an international panel of experts and The Tapestry Weavers (Las Hilanderas). Velázquez was a rapid but not very prolific painter: of 125 canvasses confidently attributed only 98 survive. He founded no school of painting and his genius was unknown outside Spain until the 19th century. Among painters deeply influenced by Velázquez were *Manet, *Picasso, *Dalí and *Bacon.

Venizelos, Eleutherios (1864–1936). Greek politician, born in Crete. He was prominent in the rising of 1896 against Turkish rule, and after limited self-government was conceded, became Crete’s Justice Minister 1899–1901. He continued the struggle for union with Greece. In 1909 he was summoned to Athens to become Greek Prime Minister, and having overcome a constitutional crisis he became the prime mover in building up the Balkan alliance which resulted in the wars of 1912–13 against Turkey and Bulgaria. The aim of Venizelos’s life since boyhood, the union of Crete with Greece, was now achieved. World War I led to a deep rift between King *Constantine (who was married to the German Emperor’s sister) and his pro-Allied Prime Minister. Venizelos eventually felt himself obliged to set up a provisional government at Salonica (1916) and there were two governments in Greece until the Allies forced the deposition of Constantine (1917). Venizelos led the Greek delegation at the Paris Peace Conference (1919) but was defeated at the election of 1920 (when Constantine was recalled). After the Greek defeat by the Turks in Asia Minor (1921–22) the monarchy was suspended in 1923 but Venizelos remained (except briefly) out of office until 1928. Defeated in 1932 after a successful term during which he had done much for the economic reconstruction of the country, he returned to Crete, where he took part in an unsuccessful revolt against the restored monarchy (1935). Forced into exile, he died in Paris.

Ventris, Michael George Francis (1922–1956). British architect and scholar. While practising as an architect he pursued his self-imposed task of interpreting the ancient Mycenaean writing known as Linear Script B. His conclusion that it was an early form of Greek writing gradually gained general acceptance. In collaboration with John Chadwick of Cambridge University he wrote Documents in Mycenaean Greek (1956). He was killed in a motor accident – possibly as suicide.

Verdi, Giuseppe (Fortunino Francesco) (1813–1901). Italian composer, born at Roncale, near Parma, four months after his great operatic rival Richard *Wagner. Son of a village tradesman, he studied under the local organist. A friend and patron, Antonio Baretti, a rich merchant (whose daughter Margherita he married in 1836), supported his early musical education. The Milan Conservatoire refused to admit Verdi (as he was over age for admission), and he continued his training in Milan with Vincenzo Lavigna, a repetiteur at La Scala. After Verdi’s daughter (1838), son (1839) and wife (1840) died, he sank into depression. However, friends persuaded him to return to composition, leading to his first major success, Nabucco (Nebuchadnezzar) (1842). Ernani (Venice, 1844) followed and then Macbeth (Florence, 1847), in which Verdi developed a strong melodic style ideally suited to the dramatic episodes of the plot.

Verdi’s genius combined popular appeal, with vocally attractive arias beloved of amateurs and record collectors, with, in later decades, growing sophistication and psychological penetration. His most performed operas are Rigoletto (1851), based on Victor *Hugo’s Le roi s’amuse, an immediate success which has never left the repertoire; psychologically complex, intensely dramatic and superbly scored, Il Trovatore (The Troubadour, 1853), a complicated story of jealousy and vengeance, and La Traviata (The Fallen Woman, 1853), drawn from the play La Dame aux camélias by *Dumas fils.

Shakespearean in his range, Verdi was a skilled writer (including excellent letters) and sometimes his own librettist. Don Carlos – the French title, Don Carlo in Italian (1867), based on a drama by *Schiller, is his longest opera. Set in France and Spain in the 1560s, it is a powerful psychological study of family
conflicts (with Oedipal hints of incest), dynastic rivalries, personal frustration, freedom v. authority and religious fanaticism.

The achievement of dramatic ‘truth’ (verismo), now Verdi’s main aim, made such demands on acting ability that the virtuoso singers, so long the mainstay of opera, were deprived of their dominance. The quality of Simon Boccanegra (Venice, 1857), Un Ballo in Maschera (Rome, 1859) and those that followed, including I Vespri Siciliani (Paris, 1867) was not immediately recognised. Aida (Cairo, 1871) was commissioned for the opening of the Suez Canal.

He bought an estate at Sant’Agata, near Busseto in 1848 and later became a major landowner. He spent some time in Paris, visited St Petersburg (1861) and London (1862, 1875). He lived with the soprano Giuseppina Strepponi (1815–1897) from 1849, married her in 1859 and generally lived happily ever after, although he had other amours, even in old age.

Verdi played a symbolic political role and the letters of his name became a political acronym for the unification movement (Vittorio Emanuele Re D’Italia). An ardent patriot (‘a Liberal, but not a Red’), he was elected as a Deputy 1861–65 in the national parliament and Senator (from 1874) but rarely sat. He wrote some religious works, including the Requiem (1874), dedicated to the memory of Alessandro *Manzoni, and Four Sacred Pieces (published 1898) including Ave Maria and a Stabat Mater.

Of his three Shakespearean operas, Macbeth (1853) had a libretto by Francesco Piave, while for Otello (1887) and Falstaff (1893), the librettist was the composer and poet Arrigo *Boito, whose work rivals Lorenzo *Da Ponte or *Wagner. Iago’s aria in Act 2 of Otello, ‘Credo in un Dio crudele …’ (‘I believe in a cruel God …’) is a dramatic masterpiece, but not using Shakespeare’s words. Falstaff, first performed in Verdi’s 80th year, a work of genius with words and music at the highest level, is drawn largely from The Merry Wives of Windsor. The action proceeds at breakneck speed in a variety of genres – farce, inner reflection, betrayal, joy and reconciliation. Among the greatest passages in Falstaff are Ford’s chilling aria ‘È sognò o realtà? (‘Is it a dream or reality?) in Act 2, and the finale, an exuberant fugue ‘Tutto nel mondo e burla …’ (‘Everything in the world is a jest …’)

Verdi died in the Grand Hotel, Milan, leaving an estate worth $US40 million (in 2013 values). *Schoenberg and *Stravinsky admired Verdi. His reputation continues to grow. Of his 27 operas, more are in the international repertoire now than at his death: all are available on CD and most on DVD.

Verlaine, Paul (1844–1896). French poet, born in Metz. At 17, after leaving the Lycée Condorcet, Paris, he became a clerk in the municipal service and was already writing poetry. Soon, as a contributor to Le Parnasse contemporain, he mixed with such poets as *Lecomte de Lisle, Catulle *Mendès and *Mallarmé. His first volume, Poèmes Saturniens (1860), won moderate praise; the next, Fêtes galantes (1869), was a more mature work evocative of the elegance of the 18th century in which it was set. His courtship of his 16-year-old bride Mathilde Mauté is recorded in La Bonne Chanson (1870), but in 1871, having met the young *Rimbaud, he left her and their infant son to spend a year of bohemian wandering with him in Belgium and England. In Brussels (1873), Rimbaud threatened to leave him. They quarrelled, Verlaine shot him in the wrist and he was later arrested and sentenced to two years’ imprisonment. While in prison he wrote Romances sans paroles, in which the meaning is almost submerged by the music of the words. On his release he became a schoolmaster, and in a mood of religious penitence wrote Sagesse (published 1881). Back in France (1877) he continued to teach for a time, the poems in his Amour (1888) were inspired by grief at the death of a former pupil whom he had adopted as a son. Despite growing fame he had difficulty in making a living and his works progressively deteriorated. His critical writings, e.g. Poèmes maudits (1884), short stories and lecture tours were not remunerative. Alcoholism and illness brought him to poverty and squalor, though his friends and admirers, and even the state, rallied to his help at the end.

Vermeer, Johannes (or Jan) (1632–1675). Dutch painter, born in Delft. He spent all his life in his birthplace where, in 1653 he joined the Guild of St Luke as a master painter. Except for a famous View of Delft (1658–60) and a very few portraits and other pictures, he painted mainly interiors, where a single wall and a tiled floor provide backgrounds for the harmoniously composed figures in the soft serene light pouring through tall windows, lighting effects over which he gained a supreme mastery. The figures, mostly young women, appear singly or in very small groups and confirm by their attitudes and occupations the pictures’ moods. It is likely that he used a camera obscura to assist with proportions and to capture tonal changes. Vermeer was popular in his own day but was then almost forgotten until the 19th-century revival after 1866 by the art historian Theophile Thoré. A slow worker, only about 35 of his paintings survive. *Proust thought View of Delft ‘the most beautiful painting in the world’ and other masterpieces include The Milkmaid (c.1658), The Little Street (1658), Girl with a pearl earring (1665) and Girl with the red hat (c.1665). Vermeer can be recognised by the monumental and spacious effect he gives to small rooms by sitting close to the model,
by his characteristic dark blues and warm yellows and by the occurrence in picture after picture of the same small objects painted with the same meticulous detail. Such idiosyncrasies provided an opportunity for the forger Hans van *Meegeren in World War II (although as Vermeer’s work has become better known, it is hard to see how the forgeries could have fooled anybody). Vermeer cared little for commercialism. At his death his baker held two of his paintings for unpaid bills, and his wife, declared bankrupt, could not retrieve them. The microscopist *Leeuwenhoek, an exact contemporary, was his executor but it is uncertain if they were friends.

**Verne, Jules** (1828–1905). French novelist, born at Nantes. Originator of ‘scientific’ romances, he wrote a long series beginning with *Five Weeks in a Balloon* (1863) and including *Twenty Thousand Leagues under the Sea* (1870) and *Around the World in Eighty Days* (1873). Their enormous success, based largely on their plausibility, inspired H. G. *Wells and later writers of science fiction. He lived in Amiens from 1872. His lost novel *Paris in the 20th Century* was published in 1994.

**Vernier, Pierre** (c.1580–1637). French mathematician and soldier born in Orins, France-Comté. After working as an engineer for the Habsburgs in the Spanish Netherlands, he became captain of the château at Orins 1622–38. In 1630 using the vernier to subdivide the smallest divisions of an ordinary scale he greatly improved the accuracy of linear and angular measurements.

**Veronese** (Paolo Caliari) (1528–1588). Italian painter, born at Verona. Though the titles of his pictures, e.g., *Marriage of Cana* (1563), *Feast of the House of Levi* (1573) etc. are religious, the episodes depicted are removed in time and place to contemporary Venice. In architectural settings of unparalleled magnificence, emphasised sometimes by his experiments in false perspective, he sets the men and women of the aristocratic world in which he moved, brilliant in silk brocades and glittering with jewels. He had to appear before the Inquisition (1573) for introducing dwarfs and jesters into biblical scenes but he claimed the artistic privilege of a decorator. Though he was a contemporary of the Mannerists his work is nearer to that of the High Renaissance. Most of the paintings went to adorn the great palaces of Venice and Rome.

**Veronica, St** (1st century CE?). Legendary saint. According to tradition she was a woman of Jerusalem who offered her veil to Jesus to wipe the sweat from his face while he was carrying the cross to Calvary. His features, so it was said, were miraculously imprinted on the fabric and the picture survived and was eventually brought to Rome. A naturalistic explanation suggests that the name Veronica is derived from the cloth itself *vera icon* (*the true image*).

**Verrocchio** (Andrea di Michele di Francesco Cioni) (1435–1488). Italian painter and sculptor, born in Florence. He took his familiar name from Giuliano Verrocchi, the goldsmith who was his first teacher, but like so many of the great Renaissance figures he worked with almost equal facility in all the arts and crafts. Not only was he a painter and sculptor but he showed his skill as a metal worker and wood carver. He succeeded (1467) *Donatello in the service of the Medici and among his many tasks were the making of tournament armour and carnival masks. There are notable differences between him and his predecessor: Donatello’s statue *David* is an idealised naked youth, Verrocchio portrays him with sword and armour. Among his pupils was *Leonardo da Vinci who is said to have painted the angel on the left of The Baptism* (now in the Uffizi, Florence), one of Verrocchio’s few known paintings. At his death he was still working on the equestrian statue of Bartolomeo *Colleoni, a magnificent portrayal of the great and arrogant Venetian mercenary.

**Verwoerd, Hendrik Frensch** (1901–1966). South African politician, born in Amsterdam. He went to South Africa as a child, was educated at Stellenbosch University, to which, after further study in Europe, he returned (1928) as head of the Department of Sociology and Social Services. He edited *Die Transvaaler*, a new Afrikaans daily, 1938–48, then became a senator. In 1950 he became Minister of Native Affairs in the Nationalist Government and strictly applied the apartheid policy of racial segregation. This he continued when he became Prime Minister 1958–66. In 1960 South Africa decided by referendum to become a republic, and the decision was put into effect (1961) when South Africa left the Commonwealth. An English settler had attempted to assassinate him in 1960, and in September 1966 he was stabbed to death in the House of Assembly at Cape Town.

**Vesalius, Andreas** (1514–1564). Flemish anatomist, born in Brussels. He studied in Paris and Louvain before becoming professor of surgery at Padua University, where he had just (1537) taken his degree. His publications were based on the works of *Galen,
but by carrying out dissections (a revolutionary practice at that time) he was able to point out many errors. His greatest work, De humani corporis fabrica (1543), was enriched by superbly engraved illustrations. Upset by criticism, Vesalius burnt his books and became court physician to the emperor *Charles V and his son *Philip II of Spain. He died returning from a pilgrimage to Jerusalem.

Vespucci, Amerigo (1451–1512). Italian merchant adventurer and navigator, born in Florence. He was immortalised by the adoption of the name America, first applied to South America in maps (1507) by Martin *Waldseemüller. An agent of the *Medici at Seville and a successful man of business, he was given the task of fitting up the royal fleets of Brazil, observing the mouths of the Amazon and Orinoco, visiting Trinidad and Haiti. (They supposed themselves to be off the coast of India.) In the second voyage, 1501–02, commanded by *Goñcalo Coelho (1451/4–1512), he returned to Brazil, named Salvador and the site of Rio de Janeiro (January 1502), possibly observing the Rio de la Plata and parts of Patagonia. Pilot Major of the Commercial House for the West Indies, Seville 1508–12, he was probably the first to propose that the Americas were not part of Asia. The wide currency given to his accounts of his voyages (a German translator even mentions ‘America’ i.e. South America, as being called after ‘its discoverer Americus’) ensured that his name, not ‘Columbus’, was inscribed on the first maps of the New World.

Vianney, St Jean-Baptiste-Marie (1786–1859). French priest, known as ‘the curé of Ars’. A holy innocent, renowned for his devotion, he was the parish priest at Ars, near Lyon, 1818–59. Credited with many miraculous cures, he was beatified in 1905, canonised in 1925 and became the patron saint of parish priests in 1929.

Vickers, Thomas (1833–1915) and Albert (1838–1919). British industrialists. The two brothers entered a Sheffield steelmaking firm, and gradually control passed into their hands. Decisive steps that led to their becoming ranked among the great armament makers in the world were the taking over (1897) of the Maxim, Nordenfelt Company (*Maxim) and the Naval Construction and Armament Company of Barrow-in-Furness. A wide variety of armament from machineguns to battleships (and aeroplanes after the brothers’ deaths) was made by the firm, known (from 1911) as Vickers Ltd.

Vico, Giambattista (Giovanni Battista) (1668–1744). Italian philosopher of history. A professor at the University of Naples and historiographer to *Charles III of Naples, his major work was Scienza Nuova (1725, revised 1730, 1744). A critic of *Descartes and an anti-Utopian, he rejected the idea of uniform laws in history and promoted cultural pluralism, arguing that all national history is shaped by individual differences – geography, climate, anthropology, language, institutions, ritual, art and custom, often expressed in myth. To Vico, knowledge was not a science but a deeply subjective human process. He opposed rational absolutism, ‘the vaunting of judgment without context, applying abstractions without reference to reality or history’. Interest in Vico was revived by *Michelет, *Weber, *Croce, *Yeats and *Berlin. He also influenced James *Joyce.

Victor Emmanuel II and III see Vittorio Emanuele II and III.

Victoria (Alexandrina Victoria) (1819–1901). Queen of Great Britain, Ireland and British territories overseas 1837–1901, Empress of India 1877–1901. Born in Kensington Palace, London, she was the only child of *George III’s fourth son, Edward, Duke of *Kent and Strathearn, and of Victoria of Saxe-Coburg, sister of *Leopold, later King of the Belgians. She became queen
on the death of her uncle, *William IV. Another uncle, Ernest Augustus, Duke of *Cumberland, became King of Hanover, where its succession laws did not allow a woman to reign, ending the common sovereignty of the two countries. During the first years of her reign the young queen found a friend and political mentor in her Prime Minister, Lord *Melbourne, but after her marriage (1840) to her cousin *Albert of Saxe-Coburg, her husband became the dominant influence in her life.

Victoria bore nine children between 1840 and 1857. She doted on the eldest *Victoria (Vicky), but had a stressful relationship with Albert Edward (Prince of Wales from infancy, then *Edward VII) and some others. She was physically and emotionally remote, but obsessively controlling. She inherited haemophilia from her father, was a carrier but not a sufferer, and transmitted it through her daughters Alice and Beatrice and son Leopold.

Prince Albert’s influence was important in foreign affairs, where his interventions, generally prudent, and aimed at the liberalisation of the European monarchies, sometimes provoked friction with her foreign ministers, especially *Palmerston. The network of royal relationship which played an important part in international affairs during the 19th century was greatly extended as their children reached marriageable age.

The prince consort’s death in December 1861 shattered her happiness. She remained in complete seclusion at Windsor until 1864 and did not open parliament in person until 1866. Only the tact and flattery of her Prime Minister *Disraeli induced her to emerge: his proposition that she be proclaimed as Empress of India (1877) greatly pleased her.

Victoria’s distrust of her eldest son and her long refusal to allow him any part in public affairs did serious damage to his character. For the other great prime minister of her reign, *Gladstone, the queen had respect but no affection: ‘he speaks to me as if I were a public meeting’. In her last years, the public identified her with the nation’s great achievements. The Jubilee (1887) and the Diamond Jubilee (1897) celebrations revealed the extent of her popularity and even veneration. Although neither intellectually brilliant nor highly imaginative, she had much shrewdness and common sense and, despite her identification with ‘Victorian morality’, her judgments were usually charitable and kind, and she was racially tolerant. Oddly, she was fiercely opposed to votes for women but sympathetic to Alfred *Dreyfus. If her taste was no better than that of the majority of her subjects, it was certainly no worse. During her reign, ‘constitutional government’ in the modern sense was fully developed. She did not conceal her opinions, often showed bias (especially towards the Conservatives in her old age) but never acted against formal ‘advice’. Her reign restored the crown’s prestige and became a symbol of public service and imperial unity. A voluminous correspondent, few women have revealed themselves more fully than she did in her letters, thousands of which have been published.

She was the longest reigning British monarch until 9 September 2015 when *Elizabeth II overtook her.

Victoria Adelaide Mary (1840–1901). Empress of Germany. Eldest child of Queen *Victoria, known in Great Britain as the Princess Royal, she was trained in politics by her father, *Albert, the Prince Consort. Her marriage (1858) to the future emperor *Friedrich of Germany, who shared her views, gave promise of a liberal empire, but he died of cancer (1888) within three months of his accession. Already unpopular for her English connexions and her insistence on calling in an English doctor for her husband, she became estranged from her son, Kaiser *Wilhelm II, and lost all influence.

Victoria, Tomás Luis de (Tommaso Ludovico da Vittoria) (1548–1611). Spanish composer. His output was entirely of religious music. The two settings of the Passion and nine Lamentation lessons contained in his Holy Week Office (1585) and his Requiem Mass for the empress Maria (published 1605) are of special importance. His work superficially resembles that of *Palestrina but he had a more pronounced sense of harmony and key relationship.

Vidocq, Eugène François (1775–1857). French criminal and detective. Son of a baker, he started his career by robbing the till of his father’s shop. After a period as a circus acrobat and (as a supposed savage) a ‘drinker of blood’, he joined the army, but in Paris in 1796 he was sentenced to eight years in the galleys for forgery. He escaped to join a gang of highwaymen, whom he handed over to the police. Accepted now as a police informer he became (1809) head of the ‘Brigade de Sûreté’, which he may have founded himself. His success as a detective was regarded as marvellous until it was found that he himself organised many of the burglaries he ‘discovered’ and in 1825 he was dismissed. His Memoirs (1828), possibly spurious, contain as much fiction as truth.
Viete, Francois (1540–1603). French mathematician. Son of an attorney, he studied law, and began his career as an advocate and a councillor in the parliament of Brittany. As a Huguenot, he was banished from court during the reign of *Charles IX but restored to favour by *Henri IV. One of his greatest political services lay in decoding enemy messages during the war against Spain. Viete was one of the first to advocate algebraic rather than geometrical constructions in mathematical proofs. He introduced many key technical terms into algebra, such as ‘coefficient’ and ‘negative’, and pioneered the technique of using letters of the alphabet to denote unknown quantities. He was principally concerned with algebra as a practical tool and most of his own work in the subject was geared to solving cosmological and astronomical problems. He was deeply involved in calendar reform. When Pope *Gregory XIII proposed a major reform of the calendar (by making 15 October 1582 follow immediately after 4 October), Viete was one of the sternest opponents of the new Gregorian calendar (although his own astronomical calculations were incorrect).

Vigee-Le Brun, (Marie) Elisabeth Louise (1755–1842). French painter. Daughter of a portraitist who trained her, she married the artist, critic and dealer J.B.P. Le Brun. She painted *Marie Antoinette more than 20 times, left France on the onset of Revolution (1789), then lived in Italy, Russia and England. Her subjects included Emma *Hamilton, Lord *Byron and Madame de *Stal.

Vigeland, (Adolf) Gustav (1869–1943). Norwegian sculptor. Under a unique agreement, Vigeland was provided with a studio and a livelihood on condition that he hand over all his work to the Oslo municipality, which in turn promised to exhibit them in perpetuity. The result is an array of robust and realistic nudes in single figures or groups in a beautiful setting in the Vigeland Park, Frogner, in Oslo. The influence of *Rodin is apparent but both the merits of the work and its symbolism (clearly linked with the life cycle) have provoked much controversy.

Vigny, Alfred Victor, Comte de (1797–1863). French Romantic writer, born in Loches. After serving in the army for 12 years, an experience that inspired Servitude et grandeur militaires (1835), he became one of the leading figures in the Romantic literary movement. His Poemes antiques et modernes (1826) show the influence of *Byron. The *Scott-inspired Cinq-Mars, a novel of the reign of *Louis XIII, appeared in the same year. Chatterton (1835) a play written for the actor Marie Dorval, for whom he cherished a jealous love for years, is considered his masterpiece. He had married (1825) Lydia Bunbury, an Englishwoman, but the marriage was not a success. He was no more fortunate in public life. His attempt to enter parliament (1848–49) was unsuccessful. These failures are reflected in the pessimism of his work. After his death the philosophic poems Les Destinées appeared in 1864, while Daphne, concerned with the struggle between Christianity and what he considered a new paganism, was published only in 1912.

Villa, Francisco (1877–1923). Mexican bandit and revolutionary. After escaping from peonage he became a bandit and was nicknamed Pancho Villa. His aid in the revolution of 1910–11 helped *Madero to overthrow Porfirio *Diaz. Later he came into conflict with his previous allies and Villa was obliged to flee to North Mexico where he operated as a rebel until 1920. An American punitive expedition under General *Pershing was sent against him (1916) after the murder of several Americans but failed to take him and caused much ill feeling in Mexico. Villa, a daring and impulsive fighter for social justice, became a popular hero.

Villa-Lobos, Heitor (1887–1959). Brazilian composer. One of the first South American composers to win international recognition, he was largely self-taught. Most of his vast output, which includes operas, symphonies, chamber music and piano music, is influenced by the style of Brazilian folk song. The Chôros, for various instrumental combinations, blend Brazilian, Indian and popular elements and the suites entitled Bachianas Brasileiras fuse Brazilian melody with the manner of *Bach.

Villars, Claude Louis Hector, Duc de (1653–1734). French soldier. One of *Louis XIV’s most famous generals, in the opening stages of the War of the Spanish Succession his bold efforts against the Austrians were constantly foiled by the hesitant obstinacy of his ally, the Elector of Bavaria. In 1705 he conducted a masterly defence of the northeastern frontier of France against *Marlborough, and, after forcing his retreat, captured the Allies’ reserves of food, equipment and artillery in Alsace. He was equally successful against Prince Eugène (1708). He was wounded at Malplaquet (1709) but, after Marlborough’s recall, he more than held his own until the Peace of Utrecht (1712) brought the war to an end.

Villeneuve Pierre Charles Jean Baptiste Sylvestre de (1763–1806). French sailor. One of *Nelson’s leading antagonists in the Napoléonic Wars, he was a captain at the Battle of the Nile and managed to save his own ship and two frigates in that disaster (1798). Chosen by *Napoléon to play the leading part in the strategy to gain command of the Channel for long enough to enable him to invade England, Villeneuve slipped out of Toulon early in 1805 and joined by a Spanish squadron from Cadiz, reached the West Indies in May. Nelson followed. Villeneuve doubled back, but after an encounter with the British off Ferrol, he decided that the remainder of the plan to rescue the ships blockaded at Brest and then enter the
Channel was impractical; he turned south to Cadiz where Nelson found him. Anxious to redeem himself before a successor could arrive, Villeneuve sought battle and at Trafalgar was defeated and captured. Released in 1806 he killed himself on the journey to Paris rather than face Napoléon’s anger.

Villiers, Barbara see Cleveland, 1st Duchess of

Villiers de l’Isle-Adam, Auguste, Comte de (1838–1889). French writer. He dedicated an early volume (1838–1840) of symbolist poetry, *Premières poésies*, to de *Vigny*, but is chiefly remembered for his prose works, late Romantic studies in the fantastic and the macabre. But is chiefly remembered for his prose works, late Romantic studies in the fantastic and the macabre. The best known are *Contes cruels* (1883), short stories in the manner of *Poe, the novel L’Éve future* (1886), and the play *Axël* (1885). Both his plays and novels suffered because they were used to display ideas rather than to represent the development of character.

Villon, François (1431–c.1470). French poet, born in Paris. Of obscure parentage, he was brought up by Guillaume de Villon, a priest who lectured in canon law. After graduating in the Sorbonne he continued the irregular life of his student days. In 1455 he stabbed Philippe Chermoye, a priest, to death in a brawl, fled to the countryside, joined a band of criminals and learned the thieves’ argot in which he later wrote ballads. He returned to Paris (1456) but continued his criminal life and took part in a robbery at the Collège de Navarre. In 1460 he was under sentence of death at Orléans for an unknown crime, but he was released after an amnesty. Another amnesty, this time to mark a visit by the new king, *Louis XI*, saved him again in 1461. He returned to Paris (1462) only to be imprisoned once again for the old Navarre robbery. He was freed through the influence of Guillaume de Villon, but a street brawl, at the cost of another life, again brought a death sentence. This sentence was commuted to 10 years’ banishment from Paris. Nothing more is known of his life.

Villon used medieval verse forms but the individuality of the poet’s voice, the intensity of his feeling, his perception, and surprisingly if his life be considered, a strain of religious devotion, have given his work a permanent appeal. The poems are variously ribald, urbane, boisterous, and penitent, learned and coarse; they revel in life and are preoccupied with death. The major works, *Le Lais ou Petit Testament* (written 1456) and *Grand Testament* (1461), comprise poems interspersed with ballads. In addition (apart from ballads in argot) there is the grim *Ballade des pendus* (written under sentence of death) which ranks with the *Ballade des dames du temps jadis* with its famous refrain ‘Mais où sont les neiges d’antan?’ (‘But where are the snows of yesteryear?’).

Villon’s work was first printed in 1489 and a critical edition appeared in 1533. A period of neglect intervened but, in the 19th century, French scholars made serious studies, and several English poets, including *Rossetti* and *Swinburne*, chose pieces for translation.

Vincent de Paul (originally Depaul), St (1581–1660). French priest. Son of a peasant in the Landes, he was ordained in 1600. There are various versions of the story of his being captured by Moorish pirates and sold into slavery at Tunis. He escaped to Rome and the French ambassador there sent him on a confidential mission to *Henri IV of France, where he became chaplain (1610–12) to Marguerite de Valois, Henri’s wife. Later, as tutor to the family of the general in charge, he had an opportunity to show his compassion for the convicts condemned to work in the galleys. By 1633 he had acquired enough influential friends to set up two charitable orders, the ‘Priests of the Mission’ (or ‘Lazarists’, after the Convent St Lazare in Paris where they were established) for men, and the ‘Little Sisters of the Poor’ for women. Hospices for the old, the poor (La Salpêtrière) and foundlings were also started and missionaries dispatched abroad. He was canonised in 1737. The lay Society of St Vincent de Paul, founded by students in Paris (1833), has spread through the world.

Vinci, Leonardo da see Leonardo da Vinci

Vinogradoff, Sir Paul Gavrilovich (1854–1925). Russian-British historian. After settling in England (1901) he was appointed to a professorship in jurisprudence at Oxford in 1903. His outstanding contributions to medieval history include *Villeinage in England* (1892), *The Growth of the Manor* (1905) and *Outlines of Historical Jurisprudence* (1920–22).

Violette-le-Duc, Eugène Emmanuel (1814–1879). French architect. Talent as a draughtsman combined with a love of medieval architecture shaped his career. He was employed by Prosper *Mérimée at the Commission des Monuments Historiques to carry out a robust restoration of decaying buildings, beginning at Vézelay with the Madeleine Abbey (1840), followed in Paris by Sainte-Chapelle, Notre Dame and Saint-Denis, the medieval fortress-city of Carcassonne, and Saint-Sernin in Toulouse. His works included a 10 volume dictionary of architecture and a six-volume dictionary of furniture.
Virchow, Rudolf Carl (1821–1902). German pathologist. Professor of pathology at Würzburg 1849–56 and Berlin 1856–1902, his Cellular Pathology (1858) became the standard text in the new discipline. He became a progressive member of the Reichstag 1880–93 and an opponent of *Bismarck who once challenged him to a duel.

Virgil (Publius Vergilius Maro) (70–19 BCE). Roman poet, born near Mantua. He was given the best education but did not take the usual course of entering public life. After some years in the country writing poetry, he went to Rome and attracted the friendship of *Maecenas. His earliest known works are the Eclogues or Bucolics (c.37), pastoral poems modelled on those of *Theocritus. In the four books of the Georgics (completed 30) he uses graceful poetical techniques and verbal artistry in a series of didactic poems on agriculture olive-growing and vine culture, stock-raising and bee-keeping. His greatest work is the Aeneid published after his death, a national epic that tells the story of the flight of Aeneas (a minor prince in *Homer) from defeated Troy, his stay at Carthage with Queen Dido, and his final settlement in Italy, where his descendants were to found the Roman nation. The Aeneid stems from Homer and uses Homeric mechanisms but differs completely in being the product of a sophisticated society rather than of the heroic semi-barbaric world of Homer. A main weakness is in the character of Aeneas himself. The fine poetry is there, the resonant verse, the romantic episode (e.g. that of Dido) but the hero remains something of a dull prig. From the first the Aeneid was used as an educational work and it was natural that this use should survive the change to Christianity. In the process Virgil emerges in the role of a prophet and in the Middle Ages passages of his works were held to contain prophecies of Christ's coming. In the Divine Comedy, Virgil appears as Dante's guide through Inferno. From the 15th century until the 18th, the Aeneid was regarded as a model of epic form.

Visconti, Gian Galeazzo (1351–1402). Italian nobleman, Duke of Milan. He sprang from a family which from 1262 (when Ottone Visconti had been made Archbishop), gradually assumed ascendancy in Milan. Gian Galeazzo, who had succeeded his father in Pavia (1378), and dispossessed his uncle in Milan (1385), concentrated the family power in his own hands. By uniting Milan with the neighbouring cities into a single powerful state, he gained the title of Duke from the emperor. He married his daughter Valentina to the Duke of Orléans, an alliance held to justify the future claims of French kings to the territories of Milan.

Visconti, Luchino, Duca di Mondrone (1906–1976). Italian film director, born in Milan. Member of a noble Milanese family, he worked with Jean *Renoir as an assistant director, then went to the US. His first film Ossessione (1942) was mutilated by Fascist censors but marks the beginning of the Italian neo-realist school. His 16 films had varying success but the best were regarded as masterpieces: Rocco and his Brothers (1960), The Leopard (1963), The Damned (1969) and Death in Venice (1971). Visconti, also a successful operatic producer, was murdered by a young lover.

Vitellius, Aulus (15–69 CE). Roman Emperor (69), one of four in that year. Sent by *Galba to command on the lower Rhine, he was proclaimed Emperor by his troops and, after the defeat and death of *Otho, hastened to Rome. His gluttony, extravagance, cruelty and inertia in the face of *Vespasian's army advancing from the north left him with no friends. When his enemies entered Rome he was killed by being dragged through the streets.

Vitruvius (Marcus Vitruvius Pollio) (c.80/70–c.15 BCE). Roman architect and engineer. His celebrated 10 book treatise, De Architectura is virtually an encyclopaedia, and, as it is the only Roman work of its kind to survive, Vitruvius had enormous influence on the architects of the classical revival from the late 15th century, when the work was first printed, to the 18th century.

Vittoria, Tommas see Victoria, Tomás Luis de
slaughterer of animals, his private life was disorderly and the description ‘father of his country’ no mere figure of speech. He died of malaria in Rome and, being excommunicated, was buried in the Pantheon.

**Vittorio Emanuele III** (1869–1947). King of Italy 1900–46. He succeeded on the assassination of his father *Umberto I*. Diminutive, he was an expert numismatist and, for a member of his dynasty, widely read. He reigned as a constitutional monarch without serious problems (although he used his influence to ensure that Italy should join the Allies in World War I) until the rise of *Mussolini and the ‘march on Rome’ (1922) caused him to take the decision which eventually proved fatal to his dynasty. He chose (against parliamentary and military advice) to give a constitutional appearance to an unconstitutional act by inviting Mussolini to become his Prime Minister. This made the king an accomplice (even if at times an unwilling one) of the Fascist dictator. He gave active assistance in the conspiracy that led to Mussolini’s downfall and arrest (1943), but his countrymen could not forget the past. Vittorio Emanuele retired from public life (1944) after appointing his son *Umberto Lieutenant General of the realm and abdicated in 1946. He died in exile in Egypt.

**Vittorino da Feltre** (1378–1446). Italian educationist. From 1425 he directed a school at Mantua under the patronage of Marquis Gian Francesco Gonzaga, whose children were among the pupils. By combining religious instruction with physical training and classical studies Vittorino aimed at producing the Renaissance ideal of a complete, balanced individual. The school provided a pattern followed by the many succeeding humanist educators.

**Vivaldi, Antonio** (c.1675–1741). Italian composer and violinist, born in Venice. He was ordained (1703) but turned to music (1709). For many years he conducted the concerts at the Conservatorio dell’Ospedale della Pietà in Venice, a music school for orphan girls whose concerts enjoyed great prestige. He wrote operas and choral works but his fame rests on the large number of concertos that form the bulk of his output, for example the 12 concertos of *L’Estro Armonico* (1712). Many are for violin but he wrote examples for other instruments and for various instrumental combinations; several were transcribed by J. S. *Bach. Vivaldi was a great violin virtuoso and had considerable influence on violin technique and on the concerto. Vivaldi was forgotten after his death until a revival that began in the 1930s.

**Vives, Juan Luis** (Ludovicus Vives) (1492–1540). Spanish humanist. The dedication of his translation of St Augustine’s *Civitas Dei* to *Henry VIII* brought an invitation to go to England as tutor to Princess *Mary. His disapproval of the royal divorce was punished by imprisonment. From 1528 he lived and taught mostly in Bruges. His *De Disciplinis* (1531) became one of the best known books of guidance on humanist studies, and his psychological observations in a commentary (1528) on a work by *Aristotle (De Anima)* show a remarkably modern outlook.

**Vladimir I, St** (c.956–1015). Russian ruler, Grand Prince of Kiev c.980–1015. Eight years of civil war broke out on the death of his father, Sviatoslav, until Vladimir defeated his brothers, imposing his rule from the Baltic to the Crimea. He forced Russian conversion from paganism to Greek Orthodoxy, according to legend having first considered Catholicism, Islam and Judaism.

**Vlaminck, Maurice de** (1876–1958). French landscape painter. Of Belgian descent, an admirer of *van Gogh, he became a friend of André *Derain, with whom he joined the revolutionary group known, because of its violent use of strong colour, as the ‘Fauves’ (‘wild beasts’). This period of his development lasted until 1907 when he came for a time under the influence of *Cézanne. His later, more realistic, work lacks the earlier force. As a young man Vlaminck was well known as a racing cyclist.

**Vogel, Sir Julius** (1835–1899). New Zealand politician, born in London. He migrated to Victoria, then to New Zealand (1861) and in the same year founded the *Otago Daily Times*. He entered parliament in 1862 and as Colonial Treasurer he made bold proposals for the financing of immigration, railways and other public works by large loans. His policy as Premier 1873–75 and 1876 led to the abolition of the provinces (1876).

**Volstead, Andrew Joseph** (1860–1947). American politician. A lawyer, he was a progressive Republic Congressman 1903–23 and supported liberal measures. He gained national attention as sponsor of the act (known as the Volstead Act) which made detailed legislative provisions for the enforcement of the 18th Amendment to the US Constitution – the prohibition of the sale of alcohol. The act was passed in 1919 despite President Woodrow *Wilson’s veto. It was abrogated by the repeal of prohibition (1933).

**Volta, Alessandro Giuseppe Antonio Anastasio, Conte** (1745–1827). Italian physicist. Professor of physics at Como 1774–79 and at Pavia 1779–1804, from 1815 he directed the philosophical faculty at Padua. He isolated methane in 1776, used ‘marsh gas’ in lamps, developed the ‘electrophorus’ to generate static electricity, became the rival of *Galvani and was awarded the Copley Medal in 1794. He discovered that electrical effects could be brought about by contact between two dissimilar metals, and he invented the simple battery or ‘voltaic pile’ (1799). He also investigated electrification by friction, and
invented the electrophorus and the condensing electroscope. He is commemorated by the name volt given to the unit of electromotive force.

Voltaire (pen name of François-Marie Arouet) (1694–1778). French writer, born in Paris. Epitome and genius of the 18th-century Enlightenment, son of a notary, he was educated at the Jesuit college of Louis-le-Grand but soon found congenial company in a lively young set of sceptical aristocrats. He declined to study law and after a year spent in the country studying history returned to Paris. Accused of lampooning the regent, the Duke of Orleans, he was sent to the Bastille where he changed his name to Voltaire (supposedly an anagram of his name, Arouet l(e) j(eune), and revised his first tragedy, Oedipe (1718), a great success. Publication of an epic (La Ligue) was forbidden because it championed *Henri IV's efforts to establish toleration, but it was secretly printed and later revised and reissued as L'Henriade (1728) in England where Voltaire had been allowed to go (1721) after further confinement in the Bastille. In England he was lionised by the fashionable and literary worlds (*Bolingbroke, *Walpole, *Swift, *Pope and *Gay) and was influenced by the ideas of *Newton and *Locke. After his return (1729) he wrote several more plays, and a history of the Swedish king *Charles XII which (with a later one on the age of *Louis XIV) initiated modern historical methods. Most controversial were his Lettres philosophiques (1734) in which his praise for the constitution, tolerance, and scientific achievements of England implied a criticism of France. From the storm this raised he found shelter at the home of Émilie, Marquise du Châtelet, at Cirey-sur-Blaise near the Lorraine frontier. Here he stayed for 10 years writing more plays (of which Alzire, 1736, is regarded as one of his best), two philosophical letters and other works. By 1736 *Friedrich II ('the Great') of Prussia was already trying to persuade the great literary lion of Europe to grace his court but it was not until after Émilie's death (1749) that he eventually succeeded. Voltaire lived in Berlin or Potsdam (1750–53) but the vain writer and the authoritarian king were ill at ease. He moved to Colmar (1753–54), then divided his time between Geneva and Lausanne. Finally in 1758 he made a permanent home in France at Ferney, near the Swiss frontier. In 1755 his mock epic on Joan of Arc, La Pucelle, appeared and in 1760 his best known work, Candide, in which Candide travels in the company of futilely optimistic Dr Pangloss (a satire on *Leibniz) who, however great the injustice and intolerance encountered, can only reflect that everything is for the best in the best of all possible worlds. *Diderot and d’*Alembert persuaded Voltaire to write many articles for their Encyclopédie, author and book alike contributing to the great revolution of ideas that preceded the political upheaval. Not only was much of Voltaire's later work propagandist but he took practical steps (e.g. in defence of Jean *Calas) to right injustice. His belief in tolerance is summed up in his phrase 'I may disapprove of what you say but I will defend to the death your right to say it.' In February 1778 he was triumphantly received in Paris, but the excitement was too much for him at his age (84) and he died of uraemia in May.

Vonnegut, Kurt, Jr. (1922–2007). American novelist. Educated in science at Cornell, he served in World War II and was a prisoner of war in Germany. His novels, written in a ‘hip’ humorous style, reminiscent of some science fiction, deal with the threats to individuality in a technologically obsessed society and include Player Piano (1952), Slaughterhouse Five (1969), Breakfast of Champions (1973) and Slapstick (1976). He was also a prolific essayist.

Voronoff, Serge (1866–1951). Russian physiologist. Working in Switzerland, he gained considerable notoriety in the 1930s with experiments designed to prolong human life by grafting animal glands, especially those of monkeys, into the body.

Voroshilov, Klimenty Yefremovich (1881–1969). Russian political soldier. A sheetmetal worker, he joined the Bolsheviks in 1903, led Red Army guerrillas against the Germans 1918, defended Tsaritsyn (later Stalingrad, now Volgograd) in 1919 during the Civil War and worked closely with *Stalin. He became Commissar for Defence 1925–40, a Politburo member 1926–60 and Marshal of the Soviet Union (1935). However, he failed during the war with Finland (1939–40) and the German encirclement of Leningrad (1941), and *Stalin dismissed him. On Stalin's death he became President of the USSR 1953–60, but lost any influence after 1957 when his attempt to dislodge *Khrushchev failed.

Vorster, Balthazar Johannes (1915–1983). South African politician and lawyer. A founder of the pro-Axis Ossewa Brandwag (‘Oxwagon Guard’), he was interned 1942–44 for opposing the war effort. In 1953 he entered parliament as an extremist National Party member, becoming a deputy minister (education, arts and science, social welfare and pensions) in 1958. He was Minister of Justice 1961–66, and was noted for a stringent application of apartheid law and traditional Boer principles. This also characterised his term as Prime Minister 1966–78. In 1978 he resigned and was elected President. In 1979 disclosures concerning the involvement of a former Cabinet minister, Connie Mulder, in improper use of public funds for party propaganda led to his resignation (1979). Despite his hard line on racial issues, he cultivated trade and diplomatic links with black African states.
Voysey, Charles Francis Annesley (1857–1941). English architect and designer. Influenced by the work of *Pugin and the Arts & Crafts movement, he was a successful designer of wallpapers, fabrics and furniture.

Voznesensky, Andrei Andreivich (1933–2010). Russian poet. Trained as an architect, he greatly admired *Pasternak, *Mayakovsky and the symbolists, was denounced by *Khrushchev as 'modernist' and attacked the Writers' Union for its inefficacious opposition to censorship. Six volumes of his poems have been translated into English.

Vries, Hugo de (1848–1935). Dutch botanist and plant geneticist. Born of a wealthy and long established Baptist family, his interests, even at school, tended towards natural history, and his early research was on plant cells. He spent part of the 1870s working for the Prussian Government on cultivated plants such as sugar beet, potatoes and clover. He was professor of plant physiology at Amsterdam University 1877–1918. He is best known for work from the 1890s on plant inheritance: how hereditary characteristics were passed down had been a source of immense debate within evolutionary theory. In his two major books, Intracellular Pangenesis (1899) and Die Mutationstheorie (1901) de Vries argued that inherited characteristics were quite separate individual units each of which had its own separate gene bearer. De Vries called this bearer a 'pangene'. Pangenes combined in fixed ratios to breed either true or mutant forms as de Vries showed with his own extensive experiments on hybridisation. He made use of *Mendel's writings, and came to the conclusion that mutations could be preserved because the information for them was contained in fixed, transmissible genetic material. He believed that evolution occurred by quite large 'steps' (corresponding to mutant forms of pangene), though this notion won little favour with the scientific community.

Vries, Peter de see De Vries, Peter

Vuillard, Édouard (1868–1940). French painter and lithographer. A member of the 'Nabis' ('prophets') group, influenced by *Gauguin, and a friend of *Bonnard, he developed the style called 'intimism'.

Vyshinsky, Andrei Yanuarevich (1883–1954). Russian lawyer and politician. He became public prosecutor (1931) and was soon notorious for the rancour and vindictiveness with which he conducted state trials, notably in the 'purges' of 1936–37. From 1943 he became active in foreign affairs and was *Molotov's successor as Foreign Minister 1949–53. As a delegate to the United Nations he often attacked western policies with the same vigour as he had shown in the Soviet courts.
W

Waal, Johannes Diderik van der (1837–1923). Dutch chemist. Poverty delayed his progress so much that his doctoral dissertation was not published until 1873. In one of the most important papers of its kind ever published he pointed the way to all modern methods of gas liquefaction. Receiving immediate academic appreciation he became (1877) professor of physics at Amsterdam, where he had a great reputation as a teacher. He won the Nobel Prize for Physics (1910).

Wagner, (Wilhelm) Richard (1813–1883). German operatic composer, born at Leipzig. His father Friedrich, an actuary, died in 1813 and his mother married the actor and painter Ludwig Geyer, leading to speculation about his paternity. He grew up in Dresden, returning to Leipzig in 1827 where he attended the Nikolaischule and studied with Christian Weinlig, cantor of the Thomaskirche, J. S. *Bach's old job. His musical career started unhappily with immature compositions and ill paid conductorships of small orchestras, e.g. at Königsberg and Riga. In 1836 he married the actor Minna (Wilhelmine) Planer (1809–1866) and their relationship was marked by frequent separation and misunderstanding. (There were no children.) In Paris (1839–42) he was forced to keep himself by hack-work while trying to gain support for the operas he was writing. *Rienzi (1842) was a great success at the Dresden opera and in 1843 Wagner became Director of the Court Orchestra. *Der Fliegende Holländer (The Flying Dutchman, 1843) and *Tannhäuser (1845) were less well received.

Wagner was now becoming involved in revolutionary politics. As a result *Lohengrin, which had been written in Paris, was refused by the authorities. He supported Mikhail *Bakunin's attempt at revolution in Dresden (1849) and, when this failed, was exiled from Saxony until 1862, taking refuge in Switzerland. *Liszt came (1849) and, when this failed, was exiled from Saxony in 1855 and 1877, was received both times by Queen Victoria and had a major success in Moscow and St Petersburg in 1864.

Wagner was shaped by many influences: Greek, Icelandic and Teutonic mythology, *Aeschylus, medieval legend, the romances of *Gottfried von Strassburg and *Wolfram von Eschenbach, *Shakespeare, *Beethoven, *Grimm's fairy stories, *Feuerbach, *Schopenhauer, even Buddhism. By his innovations he altered the course of operatic history. In his essay, 'The Art Work of the Future' (1849), he propounded the idea of all art work (total art work) as a synthesis of all the art forms, on a Michelangelesque scale, with music, poetry, dance, mime and scenic effects, all of equal importance, a concept that anticipates the development of cinema. He abolishing the classical structure of opera with arias and recitative links and substituted a continuous dramatic narrative. Following *Weber's practice, he broke with tradition by concentrating the thematic material in the orchestral accompaniment, Beethoven being his model for the development of this material. He went far beyond his predecessors in the expansion of orchestral resources and development of chromatic harmony. Few composers have been so slow to gain contemporary recognition or have been the subject of such bitter controversy.

In 1848 Wagner had begun working on the libretto of the cycle *Der Ring des Nibelungen (The Ring of the Nibelungs), comprising *Das Rheingold (Rhinegold, 1853–54), *Die Walküre (The Valkyries, 1854–56), *Siegfried (1856–57, 1869) and *Götterdämmerung (Twilight of the Gods, 1869–74). He described *The Ring as a 'stage festival play'.

The Ring is essentially symphonic, and Wagner's argument is long and interrelated, with the orchestra playing the role of *Freud's 'Id' (instinctive unconscious desires), sometimes as Greek chorus. The text (short fluid lines without rhyme) and music are seamlessly integrated. Jean *Cocteau described Wagner as writing 'music for the entrails' and he often seems to bypass the brain and go straight to the viscera. His psychological insights foreshadowed *Freud to an uncanny degree. His use of a recurrent theme (leitmotiv – 'leading motif') to denote a person (for example, *Siegfried), place (Valhalla) or a concept (Redemption), gives the drama unparalleled intensity and evokes powerful instinctive reactions.

In *The Ring, unlike the operas of *Mozart, *Rossini, *Verdi, *Bizet, or *Puccini, it is rare to have individual choruses, solos, duets, trios, and so on, which lead to tumultuous applause, stop the action on stage, and can be performed as excerpts in concerts or on records. Wagner has more in common with *Shakespeare and *Strindberg: his context is central, not showstoppers such as 'Nessun dorma' or 'The toreador's song'.

The heavy mythology and cast of gods and demi-gods are only metaphors: *The Ring's gods are not transcendental – their characteristics are exaggeratedly human. The subject matter of the tetralogy is making sense of human existence with the struggle for self-understanding and fulfillment in a materialist, post-religious age, confronting the problems of hatred, violence, greed, pain, fear, frustration, duty, failed marriage and unattainable love. Ultimately, the world of the gods is destroyed. Humans have to create a new world.

*The Ring works its way through gigantic themes: love v. power/wealth, love v. law, man v. nature, being divine v. being human, feeling v. understanding, sexual taboos. The tenderness of Wagner's depiction of the desperate needs and frailty of humans is compelling, but his work depicts power, violence and rage as well.
Having completed the first two operas and part of Siegfried he interrupted the enterprise to write Tristan and Isolde (1859), a story of doomed love, the conflict between passion and duty, set in Brittany. Wagner created a new sound with the 'Tristan chord' (F, B, D#, G#) which begins the work and recurs constantly. Isolde's 'Liebestod' ('Love Death'), which closes the opera, has an incandescent beauty. Even for Tristan there were long and daunting delays before the enthusiasm of King *Ludwig of Bavaria enabled it to take place in Munich in 1865.

Since The Ring would require a special theatre for its performance, Wagner knew that production must be distant, and he was always in debt. Tristan was followed by Die Meistersinger von Nürnberg (The Mastersingers, 1868), the complex story of a 16th-century song contest in Nuremberg, involving the politics of art and the role of professional guilds, also written to promote German national sentiment in music and as a strong rejection of the French operatic tradition. These two operas were conducted by Hans von *Bülow. Cosima Wagner (née de Flavigny, later known as Cosima Liszt) (1837–1930), daughter of Liszt and Countess Marie d'Agoult, was married to von Bülow but had two daughters by Wagner, and lived with him at Trübschen, near Lucerne, from 1868. The birth of their son Siegfried (1869–1930) was celebrated by the Siegfried Idyll for orchestra. They married in 1870 and lived at 'Wahnfried', Bayreuth from 1872.

Wagner created a new sensory ambience at his Festspielhaus (Festival Theatre) in Bayreuth, which he planned in detail to be equipped by its size and mechanical arrangements to house the production of The Ring, with all the lavish scenic effects, aerial flights and elaborate transformations in which he took such delight. With the help of *Nietzsche and disloyal; he lived on friends, whom he often alienated by ingratitude; he was sybaritic and extravagant. He kept his first wife in a torment of jealousy (e.g. of Mathilde Wesendonck, who inspired his Isolde). He gave genius a bad name. He was deeply anti-Semitic, although Jews had been among his strongest artistic and financial supporters. However, The Mastersingers contains ample evidence of the humour, humanity and attractive high spirits to which contemporary accounts bear witness.

After World War II, the Bayreuth Festival was revived by the sons of Siegfried and Winifred Wagner. Wieland (1917–1966), a producer and stage designer and Wolfgang (1919–2010) were joint directors 1951–66, and Wolfgang was sole director 1967–2008. Wieland's austere, anti-romantic productions were controversial and his work has been abandoned at Bayreuth but retained at Stuttgart.

Cosima Wagner directed the Bayreuth Festival Theatre until 1906, when Siegfried, a moderately gifted composer and conductor, succeeded. On his death in 1930 the directorship passed to his widow Winifred (née Williams) (1897–1980), an English born traditionalist and Hitler sympathiser. (Hitler identified himself with Bayreuth and the Wagner family.)

Montsalvat is the sanctuary for the Holy Grail and, until it was stolen by the evil, self-castrated, magician Klingsor, the 'holy spear' which pierced Christ's side.
Wahid, Abdurrahman (widely known as Gus Dur – ‘elder brother’) (1940–2009). Indonesian politician. A Muslim cleric, tolerant and pluralistic, he was Leader of Nahdlatul Ulama (NU). Despite suffering from strokes and partial blindness, he was elected as President of Indonesia 1999 until impeached by the People’s Consultative Assembly and removed (July 2001). *Megawati Soekarnoputri replaced him.

Wakefield, Edward Gibbon (1796–1862). English colonial theorist, born in London. After holding diplomatic posts in Turin and Paris, he was imprisoned in Newgate (1827–30) for abducting an heiress, and while there studied colonial government and outlined his views in A Letter from Sydney (1829). He proposed ‘systematic colonisation’ by free settlers (no convicts) with some capital, land to be sold at a ‘sufficient price’ to ensure that labourers did not buy their own farms until they had accumulated assets. To test his theories the South Australia Association was formed to found a new colony in that area, but before this had taken place (1836) Wakefield ended his connexion with the promoters. He formed (1837) a similar Association (which became chartered company in 1841) for the colonisation of New Zealand. In 1838 he went with Lord *Durham to Canada to advise on the use of crown lands and was elected to the Lower Canada House of Assembly (1842). In 1839 he had encouraged the dispatch of the first group of settlers to New Zealand. In 1849 his book A View of the Art of Colonisation appeared. Meanwhile settlements had been made in New Zealand under the auspices of the Company and in 1852, after a constitution had been enacted, he went there himself. He was a member of the first assembly of 1854 and died in Wellington. *Marx cited Wakefield in Das Kapital.

Waksman, Selman Abraham (1888–1973). American microbiologist, born in Ukraine. A naturalised American from 1916, he was professor of microbiology at Rutgers University, New Jersey 1930–56. After examining a great many microscopic organisms from soil, he isolated two powerful antibiotics (a term of his coinage) – the highly toxic antituberculous streptomycin (1945) and, relying on the research of Albert *Schatz, the highly toxic antituberculous streptomycin (1943) which was effective in treating tuberculosis. He was assiduous in denying any credit to Schatz and won the Nobel Prize for Physiology and Medicine (1952) as the sole discoverer of streptomycin.

Waksman, S. A., My Life with the Microbes. 1954.

Waldheim, Kurt (1918–2007). Austrian diplomat. After wartime army service, he entered the Austrian foreign service after World War II and served as counsellor and head of the personnel division, Ministry of Foreign Affairs, 1951–55. He was an observer or representative to the UN 1955–56, 1964–68 and 1970–71. In 1960–64 he served as Director-General of Political Affairs at the Austrian foreign ministry, and was Minister for Foreign Affairs (1968–70). He became Secretary-General of the United Nations 1972–81. He was elected President of Austria 1986–92 after a bitter election campaign, in which his wartime record and complicity in anti-Semitism aroused international criticism, and some official boycotts.

Waldo, Peter (or Pierre) (d.1210?). French religious reformer. A rich merchant of Lyons, he gave up his wealth and formed a band of itinerant preachers. His followers (known as the Poor Men of Lyons or the Waldenses), rejected the sacramental claims of the priesthood and said that every man may exercise priestly functions if moved by the spirit. The sect was rigorously but intermittently persecuted by popes and rulers throughout history (e.g. in 1655, provoking Milton’s sonnet ‘Avenge, O Lord, thy slaughtered saints’), but it has survived in isolated parts of France and Italy.

Waldseemüller, Martin (c.1470–1521). German cartographer. In 1507, in Dieppe, he published a world map that clearly identified a New World, distinct from Asia and first used the name America (for South America), from the navigator Amerigo *Vespucci. By 1513 he had concluded that Vespucci’s claim to priority was exaggerated but it was too late to substitute Columbus’s name.

Wales, Jimmy Donal (1966– ). American internet entrepreneur, born in Alabama. Educated in Alabama and Indiana, he worked in Chicago, and later relocated to London. In 2001, assisted by Larry Sanger, he founded Wikipedia, a free online encyclopaedia, far larger, more comprehensive (and controversial) than any other reference works, and which has essentially put traditional encyclopaedias (such as Encyclopedia Britannica) out of business.

Walesa, Lec (1943– ). Polish politician and trade union leader. A shipyard worker from Gdansk (formerly Danzig), a practising Catholic and Polish nationalist, Walesa was sacked in 1976 for his anti-government activity. He became a co-founder in 1978 of the Baltic Free Trade Unions, an underground movement. In 1980 he led a strike of shipyard workers in Gdansk which aroused massive public support and international sympathy, and led to the founding of the independent trade movement, Solidarity, which sought significant political concessions from the Polish Government. The imposition of martial
law in December 1981 led to Walesa’s arrest and imprisonment for 11 months. He was awarded the 1983 Nobel Peace Prize, elected as President of Poland 1990–95 but defeated by Aleksander Kwasniewski in November 1995.

Wallace, Alfred Russel (1823–1913). English naturalist. Originally trained as a surveyor and architect, he turned to natural history and explored with Henry William Bates the Amazon basin (1848–50) but his collections were lost in a shipwreck on the way home. He investigated (1854–62) animal and plant life in the Malay archipelago. Influenced by *Malthus, but independently of *Darwin, to whom he communicated his ideas, he developed the theory of natural selection. Their joint work was read to the Linnean Society in 1858. Their views were not, however, identical. Wallace did not believe, for example, that natural selection alone could explain such changes as the loss of human hair. He thought too that the male adornments required to provoke sexual selection by animals would conflict with other requirements for the ‘survival of the fittest’ by natural selection. In 1859 he proposed what is still called ‘Wallace’s Line’, the faunal boundary between Southeast Asia and Australia, running through Indonesia and wrote the important treatise The Geographical Distribution of Animals (1876). He campaigned for socialism and spiritualism and, oddly, against vaccination. He was awarded the first Darwin Medal (1890) and received the OM in 1910.

Max, D. T., Every Love Story is a Ghost Story. 2012.

Wallace, (Richard Horatio) Edgar (1875–1932). English author. An orphan, brought up in poverty, he joined the army and later became a sporting journalist. An immense literary output, mainly of thrillers, include the bestselling novels The Four Just Men (1905) and Sanders of the River (1911), and successful plays, e.g. The Ringer and On the Spot.

Wallace, Henry Agard (1888–1965). American politician, born in Iowa. His grandfather, also Henry Wallace (1836–1916), founded the journal Wallace’s Farmer (1895); his father, Henry Cantwell Wallace (1866–1924), succeeded as editor and served as US Secretary of Agriculture 1921–24. H. A. Wallace also edited Wallace’s Farmer (1924–33) and developed high-yielding strains of hybrid corn (maize). Franklin D. *Roosevelt appointed him Secretary of Agriculture 1933–41, and he was Vice President of the US 1941–45, but lost the 1944 nomination to *Truman because major party figures were apprehensive that Roosevelt would soon die (as he did). Wallace was Secretary of Commerce 1945–48 until dismissed by President *Truman for attacking the government’s foreign policy. He ran unsuccessfully for the presidency (1948) as candidate for the Progressive Party which, in 1950, he denounced as a Communist front.

Wallace, Lew(is) (1827–1905). American soldier and author. He served in the Civil War as a Major General, was Governor of New Mexico 1878–81 and Minister to Turkey 1881–85. He is remembered, however, as author of the novel Ben Hur (1880), set in the time of Christ. It was one of the most successful books ever published, and the basis of several lavish films.

Wallace, Sir William (c.1274–1305). Scottish patriot. He emerged from obscurity as the leader of the Scottish national resistance to the pretensions of the English king, *Edward I. After early successes he inflicted a major defeat on an English army at Stirling Bridge (1297) and, advancing rapidly, devastated England’s border counties. Against this threat Edward moved in person and gained a decisive victory at Falkirk (1298). For a short time Wallace maintained a guerrilla struggle before making his way to France, where he tried to enlist support, and possibly visiting Rome. He was back in Scotland in 1303 but was betrayed (1305) to the English by Sir John Menteith, taken to London and hanged, drawn and quartered.
Wallenberg, Raoul (1912–1947). Swedish diplomat. He served in Hungary from July 1944 and was responsible for saving the lives of 70,000 Jews. He was taken prisoner by the Russians in January 1945 and disappeared. Following reports that he was still alive, an international 'Free Wallenberg' campaign was mounted. KGB archives, released in 1992, indicated that Wallenberg had died violently, in custody, in 1947.

Wallenstein (or Waldstein), Albrecht Eusebius Wenzel von, Duke of Friedland and Mecklenburg and Prince of Sagan (1583–1634). Bohemian soldier. He came of a noble Czech family, and added to his family wealth by marrying a rich widow. Converted from Protestantism to Catholicism, he raised troops privately in support of the cause of the emperor *Ferdinand II in Bohemia against *Friedrich of the Palatinate at the beginning of the Thirty Years' War. From the land of the defeated Protestant nobles he added still further to his own estates until his duchy of Friedland (he became Duke in 1623) became an almost independent state. In 1625 he was made Imperial Commander-in-Chief, quickly restored the situation in Hungary and Silesia, and advanced to the Baltic, gaining the duchy of Mecklenburg as a reward. Held up, however, by the siege of Stralsund and unable to carry out his intention of building a fleet he made peace with the Danes. Meanwhile his arrogance and his pretensions to act as a separate ruler roused jealousy of the traditional Catholic nobility, and in 1630 Ferdinand found himself compelled to dismiss him. Wallenstein retired to his duchy of Friedland, but the emperor, dismayed by the victorious campaign of *Gustaf II of Sweden, was forced to recall Wallenstein, who after preliminary success in Bohemia and Saxony was defeated by the Swedes at Lutzen (1632). Defeat was more than compensated for by Gustaf’s death. In 1633 Wallenstein was strangely inactive, he was negotiating both with Catholics and Protestants, with the probable aim of imposing a peace which, under nominal imperial rule, would leave him supreme. Ferdinand, aware of these manoeuvres, had already signed an order of dismissal when Wallenstein was murdered by a group of officers.

Waller, Edmund (1606–1687). English poet. Related to John *Hampden and Oliver *Cromwell and his wealth, already considerable, was increased when he married an heiress (1631). After her death (1634) he courted without success Lady Dorothy Sidney (the 'Sacharissa' of his poems). He served as MP 1621–43, 1661–87. After joining the opposition, he veered in his allegiance and engineered the 'Waller plot' to enable *Charles I to seize London (1643). For this he was banished, but in 1651 was reconciled with Cromwell, to whom he wrote a panegyric. He contrived to remain in favour under *Charles II. As a poet he was important for the development of the heroic couplet but is better remembered for such charming lyrics as Go Lovely Rose.

Waller, 'Fats' (Thomas Wright) (1904–1943). American jazz composer and pianist, born in New York City. He influenced jazz technique, especially 'stride' piano playing. His best known numbers are Ain't Misbehavin', Honeysuckle Rose and Squeeze Me.

Kirkeby, E., Ain't Misbehaving. 1966.

Waller, Sir William (c.1597–1668). English soldier. He served in the Thirty Years' War and fought for parliament in the English Civil War, but after a series of successes in the south and west, was defeated at Roundway Down (July 1643). Convinced that the latter was due to the unreliability of his troops, he helped to found the New Model army (*Cromwell), but as an MP surrendered his command (1645) under the Self-denying Ordinance. As a Presbyterian he opposed Cromwell and the army extremists: he favoured a settlement with *Charles I, and later conspired for *Charles II's return.

Wallis, Sir Barnes Neville (1887–1979). British aeronautical engineer. He trained as a marine engineer and later became designer in the airship department of Vickers Ltd. He designed the airship R100 but is most remembered for the bouncing bombs used against the Möhne and Eder dams during World War II. At the time of his death he was working on a square-shaped aeroplane capable of 5000 mph (8500 kph).

Wallis, John (1616–1703). English mathematician. Professor of geometry at Oxford (from 1648), his most important work is the Arithmetica Infinitorum (1655) which paved the way for the introduction of calculus and the binomial theorem. He introduced negative indices and our present symbol for infinity. Among many other works he wrote Treatise of Algebra (1685). He was among the founders of the Royal Society.

Walpole, Horace, 4th Earl of Orford (1717–1797). English man of letters. Fourth son of Sir Robert *Walpole, at Cambridge he became a friend of the poet Thomas *Gray, with whom he made the 'grand tour' of Europe. He was an MP 1741–68, obtained several sinecure offices, but took no active part in politics. In 1747 he bought a house near Twickenham and devoted many years to transforming it into the fanciful 'little Gothic castle' of Strawberry Hill: he spent most of the rest of his life there, establishing a private press. His letters, witty, graceful and with a love of gossip, are now regarded as his most
important literary work. They provide a valuable firsthand account of polite society and of such events as the Gordon riots. Though clearly intended for publication, they reveal, none the less, a warm and affectionate disposition. Of his other writings the most famous is *The Castle of Otranto* (1764), an early and influential ‘Gothic novel’. In 1791 he inherited the earldom from his nephew. He invented the term ‘serendipity’.

**Walpole, Sir Hugh Seymour** (1884–1941). English novelist, playwright and critic, born in Auckland. Son of an Anglican bishop, he was educated at Cambridge University, and achieved early success with *Mr Perrin and Mr Traill* (1911), a psychological study of a schoolmaster. He served with the Red Cross in Russia 1914–17 and *The Dark Forest* (1916) courageously revealed his homosexuality. The tenor Lauritz *Melchior was his lover. He wrote 40 more novels including *The Cathedral* (1922), *Portrait of a Man with Red Hair* (1925), *Rogue Herries* (1930) and *John Cornelius* (1937), studies of *Scott, Trollope and Conrad and much criticism. He was satirised as Alroy Kear in *Maugham’s Cakes and Ale.*

**Walpole, Robert, 1st Earl of Orford** (1676–1745). English Whig politician, born in Houghton Hall, Norfolk. Third son of a Norfolk landowner, after the death of his brothers the inheritance came to him. Educated at Eton and King’s College, Cambridge, he was an MP 1701–12, 1713–42, then created Earl of Orford. Under Queen *Anne, he was War Secretary 1708–10 and Treasurer to the Navy 1710, but resigned with his colleagues when the Tories came to power (1710) and he had to await the accession of *George I before returning to office. He was First Lord of the Treasury and Chancellor of the Exchequer 1715–17, 1721–42, sharing leadership with his brother-in-law Viscount *Townshend until 1730, then Prime Minister in all but name. (The king was frequently absent, English politics bored him and he spoke the language poorly: all three factors aided development of the Cabinet system.) Walpole was little interested in foreign affairs and left the handling of them to the King and Lord *Townshend while he concerned himself with the domestic situation. After Townshend’s retirement (1730) his position was even stronger and he had powerful support from Queen *Caroline. In 1721 he handled the South Sea Bubble crisis coolly and thereafter, in a long period of peace, built up British prosperity by retrenchment (involving a dangerous neglect of the armed services), by establishing a sinking fund and by lightening taxation. He kept control of parliament by the traditional method of bribery (‘every man has his price’), the awarding of honours and contracts, with subdety and skill. Jealousy made him secure his own position by keeping potential rivals, e.g. *Carteret, in the background. A Cabinet of second-raters was the inevitable result. Consistently isolationist, he tried to keep Britain out of European wars by a policy of appeasement. The ‘War of Jenkins’ Ear’ broke out with Spain in 1739, leading on to the War of Austrian Succession in 1742; he opposed both. He resigned after a hostile vote (1742) and retired from politics. Even *Macaulay, who praised his ‘prudence, steadiness and vigilance’ admitted that ‘he was content to meet daily emergencies by daily expedients’. His major collection of paintings was sold to *Catherine the Great and became part of the Hermitage Museum in St Petersburg.*

**Walpurga** (or Walburga) St (d.c.780). English abbess, born in Wessex. With her brothers (St) *Willibald and (St) Winebal, she founded a double monastery at Heidenheim, now in Baden-Württemberg. She was confused with Waldburg, a fertility goddess, and the eve of 1 May, ‘Walpurgis night’, is, according to German legend, a time when witches hold their sabbaths and sacrifice to the Devil.

**Walser, Robert** (1878–1956). Swiss novelist, short story writer and poet, born in Biel. He worked as a clerk and had long periods of illness and isolation. His short stories have a hallucinatory quality and were admired by *Kafka, Hesse and Sebald. His works were first translated into English only in the 1970s and *The Assistant (tr. 2007), The Tanners (tr. 2009), and Berlin Stories (tr. 2012) are good ones to start with.*

**Walsingham, Sir Francis** (1530–1590). English diplomat and Secretary of State. He lived abroad to escape the troubles of *Mary’s reign but, when Elizabeth succeeded, his abilities were discovered by *Burghley and in 1570 he was sent as Ambassador to Paris. After his return he was appointed Secretary of State (1573). His main task was to gain information of links between the powers on the Continent and Roman Catholic conspirators in England, whose object was to murder or dethrone Elizabeth and replace her by *Mary Queen of Scots. To achieve this he maintained a body of spies which (though far from being comparable to a modern secret service) kept him closely informed of the comings and goings of conspirators. Letters were intercepted and decoded but subsequently delivered to give a feeling of false security to his victims, which enabled him to arrest them at their most unguarded moments. Exposure of the *Babington plot which clearly implicated Mary and led to her execution was among his notable successes. Walsingham was a patron of arts and letters and supported voyages of exploration and colonisation but was so ill rewarded that he died in poverty.*
Walter, Bruno (Bruno Walter Schlesinger) (1876–1962). German-Jewish-American conductor, born in Berlin. Trained as a pianist, he conducted at the Vienna Imperial Opera 1901–12 as a protégé of *Mahler whose Das Lied von der Erde (1911) and Symphony No. 9 (1912) he premiered. General music director at the Munich Opera 1913–22 and the Gewandhaus Orchestra, Leipzig 1929–33, he left Nazi Germany for Austria, where he helped to shape the character of the Salzburg Festival and became artistic adviser to the Vienna State Opera. On the annexation of Austria by Germany (1938), he sought refuge in Paris and then in the US, where he became a citizen in 1946. Walter's repertoire was wide but he excelled in interpretations of *Mozart and Mahler. He promoted the career of Kathleen *Ferrier and made outstanding recordings with her.

Walter, John (1739–1812). English publisher. Having acquired a printing office (1784) he founded the *Daily Universal Register (1785) which he renamed (1788) *The Times. Under his younger son, John Walter II (1776–1847), it developed into a great national newspaper. *John Walter III (1818–1894) continued the family association.

Walter the Penniless (d.1097). Burgundian knight. With *Peter the Hermit, he led the march across Europe of the enthusiastic but undisciplined body that set out in advance of the organised armies for the 1st Crusade. Having crossed the Bosphorus they were all but wiped out by the Turks at Nicaea.

Walther von der Vogelweide (c.1170–1230). German minnesinger. The greatest of medieval German lyric poets, after several vicissitudes at the court of Vienna he became (c.1215) court minstrel to the emperor *Friedrich II, who rewarded him with an estate. As well as songs, he wrote maxims which have conventional gallantries of courtly love but the more natural affections of the less high-born. As well as songs, he composed music, e.g. *Henry V, *Hamlet and *Richard III and music for coronations, *Crown Imperial (1937) and *Te Deum (1953). Later works include a comic opera *The Bear (1967) and a *Magnificat and *Nunc Dimittis. Knighted in 1951, he received the OM in 1968.

Wan Li (1916–2015). Chinese government official. A teacher, he became an administrator in the CCP, worked with *Zhou Enlai and *Deng Xiaoping, was persecuted 1966–73 during the Cultural Revolution, restored, dismissed again in 1976, and then rose steadily with Deng. He was Chairman of the Standing Committee of the 7th National People's Congress 1988–93 and promoted non-political interests including tennis and bridge.

Wang Hongwen (1934–1992). Chinese Communist politician. Of unknown background, he was apparently well-educated, became a textile worker and rose to power in Shanghai during the Cultural Revolution. As a protégé of *Mao Zedong he was a Politburo member 1973–76 and third in the Chinese Communist Party hierarchy. He was forced out in October 1976, attacked as one of the 'Gang of Four', tried in 1980 and sentenced to life imprisonment.

Wang Wei (courtesy name Mojie) (701?–761). Chinese poet, musician, painter, calligrapher, born in Shaxi. An outstanding artist of the Tang dynasty, he was a Zen Buddhist and civil servant. None of his paintings survive, but 400 poems are attributed to him, the most famous being 'Deer Park', a beautiful but elusive quatrain. *Mahler quoted from Wang Wei in Das Lied von der Erde.

Warbeck, Perkin (c.1474–1499). English pretender to the throne, born in Flanders. He was persuaded by the Yorkists to claim that he was *Richard, Duke of York, the younger of *Edward IV’s sons believed to have been murdered in the Tower of London. In 1492 he was ‘recognised’ by Edward IV’s sister, Margaret, Duchess of Burgundy. After an unsuccessful landing at Deal, Kent (1495), he went to Ireland and then to the court of *James IV of Scotland, where he was married to Catherine Gordon, the Earl of Huntley’s daughter. He next sailed to Cornwall, failed to take Exeter by siege, fled and eventually surrendered to *Henry VII. He was imprisoned in the Tower of London and after an attempt to escape and alleged involvement in a plot with Edward, Earl of Warwick, he was tried and executed.

Warburg, Emil Gabriel (1846–1913). German physicist. He carried out extensive experimental investigations of electrical conduction in solids, liquids and gases. His work on spark discharges in rarefied gases led on to the experiments by *Franck and G. L. *Hertz on electron collisions. He later moved in the direction of photochemical studies and confirmed the fundamental law of the quantum nature of light absorption formulated by *Einstein. Warburg was a celebrated teacher. During his 10 years at the Berlin Physics Institute he trained about a fifth of the productive German physicists of the next generation.

Warburg, Otto Heinrich (1883–1970). German biochemist. Son of E. G. *Warburg, he was an outstanding pioneer in biochemical methodology. His work on respiration in tissues, identifying enzymes that consume oxygen and absorb light in cells, won the 1931 Nobel Prize for Medicine. Before viruses were understood, he rejected the germ theory of cancer, identified metabolic changes as a major cause and helped to establish that vitamins are components of enzymes. He directed the Kaiser Wilhelm Institute (later renamed for Max *Planck) in Berlin from 1931. Although half-Jewish, Warburg was allowed to continue his research throughout the Nazi regime but had to refuse a second Nobel Prize in 1944.

Warhol, Andy (1928?–1987). American artist and film maker. He was a leading exponent of pop art in the 1960s using household objects, such as Campbell’s soup cans and sculptures of Brillo soap pads. He also produced multiple image photographic silk screens of subjects including Marilyn *Monroe and the electric chair. Later he made ‘underground’ films, some of which lasted as long as 25 hours. These included *Chelsea Girls (1966) and *Blue Movie (1969). His New York based ‘Factory’ became a fashionable studio and centre for the artistic avant-garde and eccentrics of the 60s and early 70s.

Warlock, Peter (pseudonym of Philip Heseltine) (1894–1930). English composer. He wrote music criticism and edited music under his own name Heseltine. He wrote nearly 100 songs, in which the predominant moods are Elizabethan jollity (many were settings of Elizabethan poems) and sensuous melancholy, e.g. *The Curlew (1923), a setting for tenor and chamber ensemble for poems by Yeats. He also wrote choral and orchestral works, e.g. the *Capriol Suite for strings (1926). He died of gas poisoning, a probable suicide.

Warner, Harry Morris (1881–1958). American film producer. His parents, whose family name was Eichbaum, migrated from Russia to the US in 1890. With his brothers *Samuel, Albert and *Jack, he formed (1923) the motion-picture company Warner Brothers. He produced (1929) *The Jazz Singer, the first talking picture.
Warner, Sir Pelham Francis (1873–1963). English cricketer. As captain of Middlesex and England for many years and as one of the most attractive and informed writers on the game, he occupied an important place in the history of English cricket.

Warren, David Ronald de Mey (1925–2010). Australian inventor. He studied in Sydney, Oxford and Melbourne, worked for the Australian Aeronautical Research Laboratories, and in 1953 developed a prototype of the ‘black box’, a flight data recorder, now universally adopted, but then dismissed as pointless, especially in his native land.

Warren, Earl (1891–1974). American lawyer and Republican politician. He served as Attorney-General 1939–43 and Governor 1943–53 of California until President *Eisenhower appointed him as Chief Justice of the US Supreme Court 1953–69. His activist court made liberal decisions that changed the US more than Congress or the presidency by ruling against segregated schools (1954), securing legal protection for accused persons, redistributing state legislative districts, striking down censorship laws, and emphasising civil liberties and the right to dissent. His commission of enquiry into President *Kennedy's assassination (1963–64) was attacked as inadequate and its conclusions criticised. Warren was a favourite whipping boy for right-wing extremists.

Warwick, 1st Earl of, Richard Neville, 2nd Earl of Salisbury (known as ‘Warwick the Kingmaker’) (1428–1471). English nobleman. Son of the 1st Earl of Salisbury (d.1460), he claimed the Warwick earldom (1449) through his wife's rights. He owned so much land and wealth that he was able to hold the balance in the Wars of the Roses. At first he joined the Yorkist faction and after the death of its leader, *Richard, Duke of York, was able (1461) to supplant *Henry VI by Richard's son, *Edward IV. Edward was not the man, however, to submit tamely to a power behind the throne, and when Warwick secretly married (1469) his daughter Isabel to the king's brother, the Duke of Clarence, Edward was strong enough to force Warwick and Clarence to take refuge in France, where a reconciliation took place with Margaret, *Henry VI's queen. As champion of the Lancastrian cause Warwick now returned to England, compelled Edward in his turn to leave the country, and reinstated Henry VI. In March 1471 Edward landed in Yorkshire, was joined by his repentant brother Clarence, and met, defeated and killed Warwick at Barnet. Warwick's younger daughter Anne Neville (1456–1485) married the future *Richard III.

Kendall, P. M., Warwick the Kingmaker. 1957.

Washington, Booker Taliaferro (1856–1915). Afro-American educationist, born in Virginia. By becoming (1872) a janitor at the Hampton Normal and Agricultural Institute he was able to work his way through the course and graduate (1875). He then began to teach, and interested himself in educational methods. In 1881 he became principal of a school for African-Americans at Tuskegee, Alabama, and made it a centre of Negro education. His writings, e.g. his autobiography Up from Slavery (1901), aimed to promote racial understanding.

Washington, George (1732–1799). 1st President of the US 1789–97. Born at Bridges Creek, Virginia, he was the eldest of his father's six children by his second wife, there being already four children in his first family. His father was the grandson of John Washington, whose family home was at Sulgrave, Northamptonshire, England, and who had emigrated (1656/7) to Virginia, where his domains had been enlarged by his successors. After his father's death (1743) George, then aged 11, came under the guardianship of his elder half-brother Lawrence, with whom he lived at Mount Vernon. Here he came to know Lord Fairfax and his brother, who was Lawrence's father-in-law. The brothers took George under their wing, encouraged him to educate himself in their large library and, by sending him to survey their own outlying land, enabled him to become (1749) a public surveyor. The deaths of Lawrence (1751) and his daughter soon afterwards gave George the ownership of the Mount Vernon estate. In 1751 he had been appointed Adjutant General, with the rank of major, of the provincial militia, and in 1753 was sent on a dangerous mission (described in his Journey to the Ohio) to the French commander, 600 miles distant, to warn him against encroachments upon British territory. The warning being disregarded, Washington accompanied General Braddock on the disastrous expedition of 1755 and showed great skill in rallying the routed survivors. On his return he was given command of all the Virginian forces, but the subsequent fighting in which he took part was of only
In 1789 he chose his first government: men of such different outlook as Thomas *Jefferson and Alexander *Hamilton. Jefferson eventually went into opposition and after his unanimous re-election (1792) Washington worked mainly with the Federalists. Among his most important decisions was that which kept America neutral in the war between England and France. He refused a third term of office. Henry *Lee’s words, contained in the Resolutions in the House of Representatives at the time of his death, remain his finest epitaph: ‘First in war, first in peace, and first in the hearts of his countrymen’. In 1776 he was promoted ‘General of the Armies of the United States’ as part of the Bicentennial celebrations.

Wassermann, August von (1866–1925). German bacteriologist. After practising as a physician for some years he became (1902) a professor at the *Koch Institute for Infectious Diseases at Berlin and in 1913 was given the direction of a new institute of experimental therapy. He is best remembered for the reaction test for syphilis which bears his name, but he also worked to provide antitoxins for immunisation against other diseases, e.g. diphtheria cholera, tuberculosis.

Waterhouse, Alfred (1830–1905). English architect, born in Manchester. He designed several important London buildings, e.g. the Natural History Museum, St Paul’s School and the Prudential building in Holborn.

Watson, (John) Chris(tian) (originally Tanck) (1867–1941). Australian Labor politician, born in Valparaiso, Chile. Son of a German sailor lost at sea, he was brought up in New Zealand and became a printer. After serving in the New South Wales Parliament 1894–1901, he was a foundation member of the Commonwealth Parliament 1901–10, the first federal leader of the Australian Labor Party 1901–07 and the first Labor Prime Minister April–August 1904. He left the ALP over conscription (1916) and went into business.

Watson, James Dewey (1928–). American biologist, born in Chicago. One of the radio ‘Quiz Kids’, educated at Indiana and Chicago Universities, he worked with Francis *Crick in Cambridge on establishing the structure and function of DNA (deoxyribonucleic acid) and published the joint findings in Nature in 1953. In 1962 he shared the Nobel Prize for Medicine with Crick and Maurice *Wilkins. He wrote The Double Helix (1968), a lively account of the DNA discovery. He was a professor of biology at Harvard 1961–76, director of the Cold Spring Harbor Laboratory 1968–93, and its President 1994–2004, and of the National Centre for Human Genome Research 1989–92. Awarded the US Presidential Medal of Freedom in 1977, he was appointed FRS 1981, received the Copley Medal in
Watteau, (Jean) Antoine (1684–1721). French painter, born in Valenciennes. He grew up in a border town and was in contact with the Flemish tradition. He went to study in Paris (1702) but continued to paint in the Flemish manner until he made his permanent home in Paris. While living there (1712–19) he introduced a new and highly sophisticated style in the terms of Watteau's own day. Paintings like the "Embarkation for Cythera" (1717) are among the masterpieces of baroque art. To these subjects he brought techniques derived from a study of "Rubens" work and his own acute observation. In part, too, the pictures represent a dreamlike escape from reality. He died of tuberculosis from which he had long suffered and for which a visit to England (1719) was a vain attempt to find a cure. His last masterpiece, "Gilles" (1720–21), a pierrot in white (and a self portrait), is in the Louvre.

Watson-Watt, Sir Robert Alexander (1892–1973). Scottish physicist. He played the chief part in the introduction of radar. While superintendent of the Radio Department at the National Physical Laboratory, he convinced military and political leaders of the possibility of applying to the location of aircraft the known principle of range-finding by the reflection of radio waves (1935). In the following years he led the team that developed this idea into an important defence weapon for World War II. He was elected FRS in 1941 and knighted in 1942.

Watts, George Frederic (1817–1904). English painter and sculptor, born in London. He gained wide popularity, mainly through reproductions of allegorical pictures such as Love and Death, Hope and Mother and Child but his best work is in his portraits ("Russell, *Disraeli, *Shaftesbury, *Tennyson, *Gladstone, *Manning, *Carlyle, Ellen *Terry). 54 of them in the National Portrait Gallery, London. His first marriage (1864) to the actor Ellen Terry, then barely 17, was dissolved. He was an original member of the OM (1902). He also created monumental sculptures e.g. Physical Energy (1902). Watts thought of himself as the English *Michelangelo. Posttery has not agreed, although he had some influence on Henry *Moore.

Watts, Isaac (1674–1748). English hymn writer. He was a nonconformist pastor in London, constantly handicapped by ill health and from 1712 he lived with and was cared for by Sir Thomas and Lady Abney. He wrote a metrical version of the Psalms and was a most prolific writer of hymns, among the best known being O God, our help in ages past, When I survey the wondrous cross and Jesus shall reign where'er the sun.

Waugh, Evelyn Arthur St John (1903–1966). English novelist, born in Hampstead. Son of a publisher, he was educated at Lancing College, Sussex and Hertford College, Oxford. He taught unhappily at three schools (1925–27), material he turned to advantage in his first success, the novel Decline and Fall (1928). His marriage to Evelyn (he called her 'she-Evelyn') Gardner broke up in 1929. In 1930 he published a satire on Mayfair, Vile Bodies, and became a Roman Catholic. Journalism followed and the first of several visits to Africa which inspired the novels Black Mischief (1932), A Handful of Dust (1934) and Scoop (1938). He wrote a notable biography of Edmund *Campion (1935) and married Laura Herbert in 1937. He joined the Royal Marines in 1939 and served with the commandos (and Randolph *Churchill) in Yugoslavia 1944. His World War II experiences produced the great trilogy Sword of Honour (Men at Arms, 1952, Officers and Gentlemen, 1955, Unconditional Surrender, 1961). Brideshead Revisited (1945) was a popular and critical success, later a television series. The Loved One (1948), also filmed, was a biting satire on the Californian funeral business. The Ordeal of Gilbert Pinfold (1957) was a savage self-portrait of a Catholic novelist, hallucinating on pills and alcohol, fighting against paranoia and despair. One of the great stylists, Waugh's work was distinguished by wit, cynicism and a firmly reactionary view of life, sustained only
by his family and pre-Vatican II Catholicism. His son Auberon Alexander Waugh (1939–2001) was a polemical journalist, novelist and critic.

Wavell of Cyrenaica, Archibald Percival Wavell, 1st Earl (1883–1950). British field marshal, born in Colchester. Son of a major general, educated at Winchester and Sandhurst, in World War I he served in Flanders (losing an eye at Ypres), Russia and Egypt. Commander-in-Chief in the Middle East 1940–41, his brilliant campaign of December 1940 resulted in the conquest of Cyrenaica and the capture of 130,000 Italian prisoners. *Churchill then directed Wavell to divert forces from North Africa to Greece (April 1941), a doomed campaign that enabled the Germans to recapture Libya and threaten Egypt. Churchill never forgave Wavell for his own strategic blunder. He was appointed Commander-in-Chief, India, 1941–43 and Supreme Commander, Allied Forces in the Southwest Pacific January–March 1942 when Japan invaded Indonesia, Malaya and Burma. Viceroy of India 1943–47, he interned *Gandhi and *Nehru (1942–44) during their ‘Quit India’ campaign, but cooperated with them after 1945 to secure the basis for an orderly transfer of power on independence. His books include Allenby (1940), Generals and Generalship (1941) and the anthology of poetry Other Men’s Flowers (1944).

Wavell, A. P., Generals and Generalship. 1941.

Waynflete, William of (c.1395–1486). English scholar and prelate. He had been headmaster of Winchester for 11 years when (1441) he was called upon by *Henry VI to organise his new school at Eton, of which he became provost when it opened (1443). He became Bishop of Winchester (1447) and founded Magdalen College, Oxford (1448).

Webb, Sir Aston (1849–1930). English architect. He was best known for the new east front of Buckingham Palace, as well as the Victoria Memorial and Admiralty Arch which distinguish its ceremonial approach. He designed large extensions to the Victoria and Albert Museum (1909).

Webb, Mary (née Meredith) (1881–1927). English novelist, born in Shropshire. Her best known works are the novels The Golden Arrow (1916) and Precious Bane (1924), which won the Femina Vie-Heureuse Prize.

Webb, Sidney James, 1st Baron Passfield (1859–1947) and Beatrice Webb (née Potter) (1858–1943). English socialists and sociologists. Sidney was educated in London, became a civil servant (1878) and a barrister (1885) and was an active member of the Fabian Society from 1884. Beatrice was the daughter of a wealthy industrialist, assisted Charles Booth in an investigation of London working-class conditions and had written The Co-operative Movement in Great Britain (1891) before she married Sidney in 1892. He was a member of the London County Council 1892–1910. Their careers were a literary and political collaboration. They visited Australia in 1898. They sat on many royal commissions, e.g. on trade union law, the coal mines, and the Poor Law (for which in 1909 Beatrice produced a notable Minority Report), and they helped start the London School of Economics (1895) and the New Statesman (1913). Their works on social history were of great importance e.g. The History of Trade Unionism (1894), English Local Government, (10 volumes 1906–29) and The Decay of Capitalist Civilisation (1921). Sidney became a Labour MP 1922–29 and served under MacDonald as President of the Board of Trade 1924 and Secretary of State for the Dominions and the Colonies 1929–31. After visiting the USSR (1932), the Webb’s wrote Soviet Communism (1935), a thorough but excessively admiring account. Sidney received the OM in 1944.

Weber, Sir Andrew Lloyd see Lloyd Webber, Andrew, Baron Lloyd Webber

Weber, Carl Maria Friedrich Ernst von (1786–1826). German composer, born in Eutin. Son of a musician, he was a cousin of *Mozart’s wife Aloysia Weber (1759–1839). In the hope that he would become a youthful prodigy he was sent to study music under Michael *Haydn (brother of Joseph). After his first post as conductor at Breslau he entered the service of the Duke of Württemberg, where he and his father were expelled for debt and dissipation. To his early period belong his only two symphonies (of little worth), two tuneful concertos (and one concertino) for clarinet and strings and the operas Sylvana (1810) and Abu Hassar (1811). He was director of the Prague opera 1813–17 and directed German opera at Dresden 1817–26. Here he succeeded in checking the dominance of Italian opera and in establishing the school of German romantic opera with its emphasis on the supernatural. His own contribution comprised his three mature operas, Der Freischütz (The Freeshooters,1821), Euryanthe (1823) and Oberon (1826). Only Der Freischütz has remained popular, but their colourful, dramatically apt orchestration, the occasional use of leitmotifs and a new structure of the overture (based solely on themes from the opera itself) influenced *Wagner profoundly. Weber died of tuberculosis while in London for the production of Oberon at Covent Garden. Of his other works, one remains outstandingly popular, his piano waltz Invitation to the Dance (1819), to which the orchestration by *Berlioz and, later, by *Weingartner gave a fresh brilliance.

Weber, Max (1864–1920). German sociologist. Between bouts of disabling illness, he held chairs at Freiburg and Heidelberg and wrote voluminously on social subjects, some of his most valuable work being
concerned with the categorising of social groups. His best known work, *The Protestant Ethic and the Spirit of Capitalism* (1920), an attempt to explain the link between the two halves of his title, was influential in England and America.

**Webern, Anton** (Friedrich Wilhelm von) (1883–1945). Austrian composer, born in Vienna. He studied composition with *Schoenberg, whose methods he adapted to his own purposes. After conducting in Danzig, Stettin and Prague, he directed the Vienna Workers' Symphony Orchestra 1922–34. His orchestral works include a Passacaglia and two symphonies. He also wrote songs and two cantatas dating from World War II. The Nazis banned his works and forbade him to teach, but he had some sympathy for *Hitler. After liberation he was accidentally shot dead by an American soldier, Raymond Bell. In his compositions (most of which are very short) Webern, who developed Schoenberg's principle of serialism by dividing the series into small cells and extended the serial principle to instrumental timbre, has had important influence on postwar composition (including *Stravinsky's late works*).

**Webster, Daniel** (1782–1852). American lawyer, orator and politician, born in New Hampshire. He practised law first in his native state and then in Boston, where, with legal skill and with magnificent eloquence, he argued cases involving major constitutional issues. Elected Member of the House of Representatives 1813–17, 1823–27; in the second period he was the principal spokesman in Congress for the administration of President John Quincy *Adams.

Webster was one of the greatest of American orators. His speech on the bicentenary of the Pilgrim Fathers (1825) and *Jefferson, 1826* demonstrate his mastery of phrase and superb gift of matching style with content.

US Senator from Massachusetts 1827–41, 1845–50, he was prominent in creating the new Whig Party (1833), but never secured the presidential nomination. He twice declined nomination as Vice President (1840, 1848) and in both cases the incumbent president died. He supported William Henry *Harrison in 1840 and served as Secretary of State 1841–43. The Webster–Ashburton Treaty (1842), with Britain, defined the US–Canadian border and ended the slave trade on the high seas. Although strongly opposed to slavery, in the interests of preserving the Union, Webster worked tirelessly to secure passage of the Compromise of 1850 which retained slavery in the South but prevented its expansion to the West. He became Millard *Fillmore's Secretary of State 1850–52, dying in office.

**Webster, John** (c.1580–c.1625). English dramatist. Many of his plays were written in collaboration, notably with *Dekker and Heywood, only three, in fact, of the surviving plays are known to be his independent work: *The White Devil* (1612), *The Duchess of Malfi* (c.1614) and the much less important *The Devil's Law Case* (1623). The first two, based on Italian originals, vie with *Shakespeare's work in tragic intensity, but the characterisation is cruder, the range of emotions narrower, and humour, except in its grimmest form, is lacking, Webster's poetry, however, occasionally touches greatness.

**Wedekind, Frank** (1864–1918). German dramatist. Promoter, cabaret performer, poet, actor and director, he wrote many expressionist plays that anticipate the work of Bertolt *Brecht. The best known are Earth Spirit (1895) and Pandora's Box (1904), in which the central character is the courtesan 'Lulu'. G. W. Pabst filmed *Pandora's Box* and Alban *Berg composed the opera *Lulu.*

**Wedgewood, Josiah** (1730–1795). English potter. Descendant of a family of Staffordshire potters, in 1759 he started his own business in Burslem. He eventually succeeded in developing for large-scale manufacture the hard white earthenware already made in Staffordshire and possessing many of the qualities of porcelain. His improvements to body and glaze were made by introducing china-clay and china-stone, then recently discovered in Cornwall. Apart from this utilitarian product, Wedgwood became famous for his 'jasper ware', generally pale blue or green and, to accord with the classical taste of the time, adorned with a frieze of Greek figures embossed on it in white. For these decorative pieces, made nearby at his new works (1769) called Etruria, he employed many artists, notably *Flaxman. Wedgwood was an enlightened employer who did much to improve education and living conditions of his men. Charles *Darwin was his grandson.

Weelkes, Thomas (c.1575–1623). English composer. He wrote Church music, music for keyboard and for viols, but is at his most original in madrigals, regarded as among the finest of the Elizabethan School.

Wegener, Alfred Lothar (1880–1930). German geophysicist, meteorologist, polar researcher and geologist, born in Berlin. He studied at Heidelberg, Innsbruck and Berlin and, before World War I, taught at Marburg. From 1910, following the ideas of Eduard *Suess, he developed his theory of Continental Drift or Displacement. Empirical evidence for this seemed to be the close jigsaw fit between coastlines on both sides of the Atlantic, and palaeontological similarities between Brazil and Africa. But Wegener had strong convictions that geophysical and geotectical considerations would also support a theory of wandering continents. As to the cause of the displacement he looked to tidal forces and a ‘flight from the poles’. Wegener supposed that the Mesozoic had seen the existence of a united supercontinent, ‘Pangea’. This had split apart into Laurasia and Gondwana. During the Cretaceous, South America and North America had split, but not till the end of the Quaternary had North America and Europe finally divided, or South America split from Antarctica. He died on his fourth expedition to Greenland. The South African geologist Alexander du Toit supported Wegener, but it was the development of paleomagnetism by P. M. S. *Blackett and others in the 1950s that provided conclusive evidence for continental drift. Craters on Mars and the moon, and an asteroid (29227 Wegener), were named for him.

Weil, Simone (1909–1943). French social philosopher and mystic, born in Paris. Daughter of a rich Jewish (but agnostic) physician, she was a youthful prodigy and studied philosophy, literature and science. She taught philosophy in provincial lycées, worked for socialist journals. She was severely burnt in Spain, suffered from acute migraine and contracted tuberculosis. In 1938 she had a series of mystical experiences, became absorbed in Catholicism and, although she did not enter the Church, was instrumental in converting others. She wrote an important short essay, *The Iliad, or the Poem of Force* (1939). She left France in 1942 for the US (via Casablanca), then went to England to work for General de *Gaulle. Suffering from tuberculosis, she refused to eat and died in a sanatorium in Kent. The posthumous publication of her books aroused intense critical interest. They include *Waiting on God* (Attente de Dieu, 1951), *The Need for Roots* (L’Enracinement, 1952) and *Notebooks* (2 volumes, 1956). Between 1992 and 2012, 2500 scholarly works on Weil were published.

Weill, Kurt (1900–1950). German American composer. A pupil of *Humperdinck and *Busoni, his best known work is *Dreigroschenoper* (The Threepenny Opera, 1928), a modernised version of *Gay’s Beggar’s Opera* with libretto by *Brecht, who also collaborated with Weill in later works, equally harsh and satirical in character, e.g. *Happy End* and *The Rise and Fall of the City of Mahagonny* (both 1929). These works are deliberately ‘popular’ and jazz-inspired in idiom, and in them Weill shows himself as much a political and social satirist as a musician. In 1933 he was obliged to flee Nazi Germany, settling (1935) in the US, where he produced music for plays and a folk opera, *Down in the Valley* (1948). He married the singer and actor Lotte *Lenya.

Weinberg, Steven (1933– ). American astrophysicist. Educated at Cornell, Copenhagen and Princeton universities, he held chairs in physics at the University of California (Berkeley) 1964–73, Harvard 1973 and Texas 1982. He wrote the bestseller *The First Three Minutes* (1977) and shared the Nobel Prize for Physics 1979 with Abdus Salam and Sheldon Glashow for their research on unification of the weak force and electromagnetic interaction between elementary particles.

Weinberger, Jaromir (1896–1967). Czech composer. Chiefly remembered for his opera *Schwanda the Bagpiper* (1927), in 1938 he left Czechoslovakia and eventually settled in the US.

Weingartner, (Paul) Felix von (1863–1942). Austrian conductor, composer and critic. He studied at Leipzig and then under *Listz. As conductor, he held posts in Berlin, Munich, Vienna where he was *Mahler’s successor at the Imperial Opera 1907–11 and elsewhere, and became well known by his foreign tours. His compositions, which include operas, symphonies and chamber music, lack individuality. He wrote books on *Beethoven’s symphonies and the art of conducting.*

Weismann, August Friedrich Leopold (1834–1914). German geneticist, born at Frankfort-am-Main. He studied medicine at Göttingen, and practised at Rostock and then in Frankfurt. He became professor of zoology at Freiburg in 1873. During the 1860s he carried out detailed microscopic investigations into insects, crustaceans and embryology, though difficulties with his eyes eventually put a stop to this work. Weismann is best remembered for his ‘germ plasm’ or chromosome theory of heredity. He grasped the centrality of the transmission of ‘information’ in biology. Within evolutionary theory there was deep disagreement as to how constant features and variations...
were passed on by inheritance. *Darwin had early favoured 'pangenesis', the theory that all characters were coded together in the genetic material. Other biologists had stressed the inheritance of acquired characteristics. Weismann launched a full-scale attack on this latter theory. His own experimentation had convinced him of the totally separate existence of genetic cells (germ cells) from body cells. He believed in the reality of an unbroken line of descent between the germ cells of successive generations, punctuated only by mutations in those cells (whereby evolution occurred). He argued that the hereditary material is contained in 'chromosomes'. Fertilisation takes place by the bringing together of chromosomes from two individuals, and variation resulted from the combinations of different chromosomes that occurred. Weismann's essentially genetic theory of the action of evolution was wrong in detail, but essentially underlies modern genetic theory.

**Weiss, Peter Ulrich** (1916–1982). Swedish-German writer, born in Babelsberg. From a Czech-Jewish family that left Germany in 1934, settling in Sweden in 1939, he became a painter, documentary film maker and Marxist social critic. His best known work is Marat/Sade (1963), in full The Persecution and Assassination of Jean-Paul Marat as Performed by the Inmates of the Asylum of Charenton under the Direction of the Marquis de Sade), first published in German, which was staged in many countries and made into a powerful film (1967) by Peter *Brook.

**Weizmann, Chaim** (1874–1952). Israeli chemist and politician, born in Motol, Belorussia. Educated in Berlin and Freiburg, he lectured at Geneva (1900–04) and was a reader in biochemistry at Manchester 1904–16, becoming director of the Admiralty laboratories 1916–19. He pioneered biotechnology by using bio-organisms to extract acetone from maize. This was of enormous importance in making explosives during World War I and attracted the interest and friendship of A. J. *Balfour. The Balfour Declaration (1917) promised the Jews a 'national home' in Palestine. Weizmann was President of the World Zionist Organisation 1921–31, 1935–46, of the Hebrew University, Jerusalem 1932–50, and first director of the Sief Research Institute (later named for Weizmann) in Rehovot 1934–48. He served as the first president of Israel 1948–52. His nephew, Ezer Weizmann (1924–2005), was a general in the Israeli air force, served as Minister for Science 1988–92, urged a settlement with Israel's Arab neighbours and became President 1993–2000, resigning over accusations of accepting gifts from businessmen.

**Welensky, Sir Roy** (Raphael) (1907–1991). Rhodesian politician, born in Salisbury. Of Lithuanian-Jewish and Afrikaner parentage, at 18 he became heavyweight boxing champion of Rhodesia. He worked as a barber and engine driver and, having gained a reputation as a forthright and belligerent trade union leader, first entered the legislature of Northern Rhodesia (Zambia) in 1937. He became a member of the Executive Council (1940) and founded (1941) the Northern Rhodesian Labour Party. He took part in the discussions (1950–51) which led to the formation of the Federation of Northern and Southern Rhodesia with Nyasaland. He joined the new federal government as Minister of Transport (1953) and succeeded Lord *Malvern (Sir Godfrey Huggins) as Prime Minister 1956–63 and was bitterly disappointed when the federation ended in 1963.

**Welf-Este see Guelph-D'Este.**

**Welles, (George) Orson** (1915–1985). American film and theatre director, producer, writer and actor, born in Kenosha, Wisconsin. The son of a successful inventor and a concert pianist, he was orphaned at 12 and had a peripatetic childhood punctuated by short bursts of education. At 16 he made his debut as an actor with the Gate Theatre, Dublin and was strongly influenced by the Anglo-Irish actor-director Micheál MacLiammóir (1899–1978). After some years in touring companies, he founded the Mercury Theatre, in New York (1937) with John Houseman (1902–1988) and this led to innovative stage, radio and film productions. His realistic radio production (1938) of H. G. *Wells' War of the Worlds* caused a sensation and even some panic. His masterpiece, the film *Citizen Kane* (1941), which he wrote, directed and acted in, was a thinly disguised and controversial biography of W. R. *Hearst, the newspaper proprietor (with some elements of R. R. McCormick). Many film historians regard it as the greatest American film. Welles was 25
when he made it. His second feature *The Magnificent Ambersons* (1942) also used the Mercury stock cast, but not Welles himself. He directed and acted in the films *Macbeth* (1947), *Othello* (1952), *Mr Arkadin/ Confidential Agent* (1955), *Touch of Evil* (1958), *The Trial* (1962) and *Chimes at Midnight/Falstaff* (1966). None of his later films made money so major production houses were unwilling to back him. He was forced to earn money as the narrator of many film and television productions of dubious value. Welles’ influence on European and American film makers has been enormous. His film roles for other directors include *Jane Eyre* (as Edward Rochester), *The Third Man* (Harry Lime), *Moby Dick* (Father Mapple) *A Man for All Seasons* (Cardinal Wolsey), *Catch 22* (General Dreedle) and *Waterloo* (Louis XVIII.) His semi-documentary *F for Fake* (1975) was highly regarded. His ashes are buried in Ronda, Spain.

Welles, Sumner (1892–1961). American diplomat. He began his career (1915) as Secretary to the US embassy in Tokyo and later specialised in Latin American affairs. He supported Franklin Roosevelt politically, became Assistant Secretary of State 1933–37 and Undersecretary 1937–43. During World War II he played a leading part in the negotiations that led to the signing of the Atlantic Charter (1941). Roosevelt essentially bypassed Cordell Hull and used Welles as his foreign policy instrument until forced out by a homosexual scandal, complicated by heavy drinking.

Wellesley, Richard Colley Wellesley, 1st Marquess (1760–1842). Anglo-Irish politician and administrator, born in London. Eldest son of the 1st Earl of Mornington, whose Irish title he inherited (1781), his younger brother, Arthur, became Duke of *Wellington*. Wellesley, who had been a member of the Indian Board of Control 1793–97, served as Governor-General and Commander-in-Chief in Bengal and India 1797–1805. He pursued a forward policy aimed at destroying French influence and extending British rule. He first dealt with the Nizam of Hyderabad, whose French-trained forces he contrived, by diplomacy and a display of force, to disarm without firing a shot. Next he turned against *Tippoo, Sultan of Mysore*, who was killed at the storming of Seringapatam (1799). Mysore was virtually brought under British rule. For the remaining years of his rule Wellesley was engaged in a prolonged struggle with the Mahratta confederacy, in which the victories of his brother played a decisive part. Before a final settlement was reached, however, Wellesley, whose annexationist policy alarmed some of the Company’s directors, was recalled. During his tenure of office the small strips of British-held territory had been enlarged to become the foundations of an empire. He later served as Foreign Secretary 1809–12 and Lord Lieutenant of Ireland 1821–28 and 1833–34.

Wellesley, Richard Colley Wellesley, 1st Marquess (originally Wesley) (1769–1852). Anglo-Irish Field Marshal and politician, born in Dublin. Son of the 1st Earl of Mornington and a younger brother of the 1st Marquess *Wellesley* (whom he much disliked), he first gained an army commission in 1789 but did no regimental service until war with France broke out (1793). He served in a futile Dutch campaign (1794) but his first opportunity for distinction came when he was serving in India, where his brother was Governor-General. He successfully restored order after the fall of Seringapatam and held an independent command in the Mahratta wars. His greatest triumph was at Assaye (1803), where the Mahratta army was shattered. He returned to England (1805) and married Lady Katharine Pakenham (1806), a miserable union for both. A Tory MP 1806–09, he was Chief Secretary for Ireland 1807–09, interrupting his term to command the expedition sent (1808) for the relief of Portugal. Despite early successes, including the Battle of Vimeiro, he was superseded, and not responsible for the much criticised Convention of Cintra by which the French were allowed to withdraw rather than surrender. In 1809 he resumed his command in Portugal, which the French were again invading. He gained a victory at Talavera, which earned him the title Viscount Wellington and enabled him to take up a secure position in the prepared lines of Torres Vedras. Here, after checking the French at Busaco (1810), he stood firm against *Masséna’s advance. In 1811 he was strong enough to advance in turn, but had to await the fall of Ciudad Rodrigo (January 1812) and Badajoz (May).

Though he then captured Madrid he had to retire and winter in Portugal once more. Rapidly advanced to Earl and then Marquess in 1812, he received £100,000 from parliament. In 1813, promoted Field Marshal, with the French forces depleted to replace *Napoléon’s losses in the Russian campaign*, he advanced across Spain and after the victory of Vittoria (July), forced the enemy to retire to France. Wellington followed, and after winning the last victory of the Peninsular War at Toulouse (April 1814), heard that Napoléon had abdicated four days before. He was created Duke of Wellington and parliament voted him £400,000 to buy estates. He was discussing peace terms at the Congress of Vienna (1815) when he heard of Napoléon’s escape from Elba. Wellington was placed in command of the allied army of the Netherlands and, though Napoléon succeeded in dividing his opponents, defeating the Prussians at Ligny and checking the British at Quatre Bras, it did not prevent Wellington, with the help of *Blücher’s Prussians* in the later stages, gaining his final victory at Waterloo (18 June 1815). Parliament granted him a further £200,000 as there were no more British honours to give, although Spain, Portugal, France and the Netherlands conferred titles.
Wells, H(erbert) G(orge) (1866–1946). English writer, born in Bromley, Kent. Son of a professional cricketer, he worked first as a draper's assistant, then took to teaching and, with the aid of scholarships, graduated in science (1888). He joined the Fabian Society (founded 1884), but, though he reached a theoretical belief in scientific planning, he was too much the born novelist to be bound by dogma. He disdained the stylistic graces of Henry *James and professed to regard writing as a utilitarian means of expressing his ideas. But his characters, like those of *Dickens (with whom he had affinities), came to life beneath his pen, and Wells the novelist and Wells the social theorist tended to go their separate ways. His characters mostly moved in the world of the lower middle class, a world whose boundaries were changing quickly with new opportunities, new hopes, new challenges. Wells watched reaction to these changes with an observant and understanding eye; the new trends and new problems were the themes in which he took most delight. But before he embarked upon them there was a phase of fantasy and 'science fiction', as it came to be called. To this period belong *The Time Machine and *The Wonderful Visit (both 1895), *The Invisible Man (1897), *The War of the Worlds (1898), and When the Sleeper Wakes (1899, revised as *The Sleeper Awakes, 1910). In the same vein, written much later in the shadow of coming events, was *The Shape of Things to Come (1933). The great novels of Wells’ maturity were introduced by *Love and Mr Lewis (1900), then followed *Kipps (1905), *Tono-Bungay (1909), *Anne Veronica (1909) and the *History of Mr Polly (1910). *Mr Britling Sees it Through (1916) recalls World War I, but on the whole the later novels show a decline. Throughout his long life he was a tireless philanderer. The most successful of his later books was *An Outline of History (1920), 'an attempt to reform history teaching by replacing narrow nationalist history by a general review of the human record'. He also wrote *Experiment in Autobiography (1934), as well as a number of social and political works. In 1939 he began a campaign for recognition of universal human rights, which had been ignored for a century, and his book *H. G. Wells on the Rights of Man (1942) had a significant influence on *Roosevelt’s exposition of war aims and the Universal Declaration of Human Rights (1948). He was nominated four times for the Nobel Prize for Literature.

Welty, Eudora (1909–2001). American novelist and photographer, born in Mississippi. Her novels and short stories about the Old South gained critical acclaim. She won a Pulitzer Prize with *The Optimist’s Daughter (1973) and received the Presidential Medal of Freedom in 1989.

Wenceslas, St (d.929). Bohemian Duke and patron saint. He was the grandson of Borivoj, a Czech chieftain who had been converted to Christianity by the Byzantine missionary *Methodius. The memory of his enlightened rule, a reputation for sanctity and the fact that he was murdered during a heathen rebellion ensured him an honoured place in national history, and mention as the hero of the familiar carol.

Wen Jiabao (1942– ). Chinese Communist politician, born in Tianjin. Trained as an engineer, and a protégé of *Zhao Ziyang, he was an able technocrat who became Premier of China 2003–13. Criticism of his family’s wealth actually confirmed the success of China’s adoption of capitalist norms.

Wenner-Gren, Axel (1881–1961). Swedish industrialist and entrepreneur. He owned Electrolux (manufacturers of household appliances), and controlled banks and newspapers, then moved into...
monorails and early computers. In 1939 he offered himself as a mediator to avoid the outbreak of World War II and became mistrusted on both sides.

**Wentworth, William Charles** (1790–1872). Australian politician, born near Norfolk Island. His father D’Arcy Wentworth (1762–1827) was assistant surgeon in New South Wales and his mother, Catherine Crowley, a convict. Educated at Greenwich, he crossed the Blue Mountains in 1813 in the first major inland exploration, then studied at Cambridge and in 1819 published *A Statistical, Historical and Political Description of the Colony of New South Wales*, the first book written by a native born colonist. Called to the English bar in 1822, he returned to establish *The Australian* (1824), a newspaper that espoused the cause of convict emancipation. He was one of the most powerful speakers in the New South Wales Legislative Council and took a prominent part in the negotiations (1852–53) by which the colony gained responsible government. He lived in England from 1855, died there but was buried in Sydney. His great grandson, William Charles Wentworth IV (1907–2003) was an idiosyncratic Member of the House of Representatives 1949–77, briefly a minister and an original thinker on rail unification, Aboriginal land rights and science.

**Werfel, Franz** (1890–1945). Austrian poet, novelist and dramatist. Of Jewish parentage, his poetry, mostly written in early life, is characterised by a deep compassion for mankind. The themes of his plays were both historical and modern. He married Alma *Mahler* in 1929. He was best known for his novels, especially *The Song of Bernadette* (1941), concerned with the origins of the Lourdes miracles, and *Jacobowsky and the Colonel* (1945), a comedy filmed as *Me and the Colonel*. From France, where he had taken refuge after the German occupation of Austria, he escaped on foot (1940) over the Pyrenees during World War II and eventually reached the US.

**Wesker, Sir Arnold** (1932– ). British playwright, born in the East End of London. Of Jewish parentage, he found a setting for his play *Chicken Soup with Barley* (1958), part of a trilogy completed by *Roots* (1959) and *I’m Talking about Jerusalem* (1960). Among a variety of occupations, he was employed in a hotel, which provided a setting for *The Kitchen* (1961) and as a clerk in the RAF, *Chips with Everything* (1962). From 1961 until its ultimate failure in 1970 he devoted himself to running Centre 42, a TUC project for introducing workers to mainstream culture. Later plays include *The Journalists* (1975) and *Caritas* (1981).

**Wesley, Charles** (1707–1788). English hymn writer. Brother and devoted adherent of John *Wesley*, he wrote more than 6000 hymns, including *Jesu, Lover of my Soul*, *Hark The Herald Angels Sing* and *Love Divine, all Loves Excelling*.

**Wesley, John** (1703–1791). English founder of Methodism, born in Epworth, Lincolnshire. A member of an old family linked with that of the Duke of *Wellington*, he was educated at Charterhouse and Oxford, and ordained deacon (1725) and priest (1728). Elected a fellow of Lincoln College he remained in Oxford to teach, and there he, his brother Charles, George *Whitefield* and other religiously earnest young men began to be known as Methodists pledged to live according to the ‘method laid down in the New Testament’. In 1735, when he crossed the Atlantic to go to Georgia under the auspices of the Society for the Propagation of the Gospel, he was still a High Church man but he became an admiral of the work of the Moravian Brethren and on his return to England made friends with their missionary, Benjamin Peter Bohler, who convinced him that to be a Christian it was not enough to believe in a body of orthodox doctrine but that a positive act of acceptance was necessary, resulting in living in union with and under the direct guidance of Christ. Such an instant conversion was experienced by Wesley himself at a meeting in London (24 May 1738): ‘I felt my heart strangely warmed. I felt I did trust in Christ alone for salvation, and an assurance was given me that He had taken away my sins …’ This change meant an actual if not a formal breach with Anglicanism. As pulpits were refused, John and *Charles Wesley* held vast open-air meetings, the first at Bristol, which some 3000 attended. The rest of his life was a prolonged
West, Nathaniel (Nathan Wallenstein Weinstein) (1903–1940). American novelist, born in New York City. Before he was killed in a car crash at the age of 37, West had written four novels which, taken together, are a picture of disillusionment and an indictment of the American Dream. In his ‘black comedy’ vision of society, the common pursuits of happiness and liberty are inverted and seen as the paths of boredom, nightmare, neurosis and failure. His novels are *The Dream Life of Balso Snell* (1931), *Miss Lonelyhearts* (1933), *A Cool Million* (1934) and *The Day of The Locust* (1939).

West, Dame Rebecca (real name Cicely Isabel Andrews, née Fairfield) (1892–1983). British novelist, critic and journalist, born in Ireland. Trained as an actor, she adopted her pen name from an *Ibsen character and wrote a long series of original and penetrating books, including studies of Henry *James (1916), D. H. *Lawrence (1930) and St *Augustine (1933), Black Lamb and Grey Falcon* (about Yugoslavia, 1942), and several volumes reporting notable trials. She had a son, the writer Anthony West (1914–1987), by H. G. *Wells and was the lover of Lord *Beaverbrook.

Westinghouse, George (1846–1914). American inventor. He had no academic training as an engineer but after taking part in the Civil War he went to work on the railways. He invented (1867) an automatic brake worked by air pressure and formed a company to manufacture it. Later he applied the same principles of air pressure to the movement of signals and points. He also devised gas and water meters and a system for safely transporting gases over long distances. He took out over 400 patents. Nikola *Tesla worked for him (1885–88) and in 1888 Westinghouse bought all his patents for the alternating current (AC) electric motor. At his workshops in Pittsburgh he also manufactured electrical equipment, including generators to utilise power from Niagara Falls. His campaign for the use of alternating current for the distribution of electricity was ultimately successful.

Westminster, 1st Duke of, Hugh Lupus Grosvenor (1825–1899). English nobleman. From an old Norman family which married well, he was the richest man in Britain, owning much London property, including Mayfair and Belgravia. He inherited a marquessate and in 1874 received the
last non-royal dukedom from Queen Victoria on *Gladstone’s nomination; the reasons are obscure. His grandson, Hugh Richard Grosvenor, 2nd Duke of Westminster (1879–1953), known as ‘Bend Or’, a magnifico, gambler, hunter, racehorse and yacht owner, served with *Milner and *Roberts in the Boer War, was a ‘die-hard’ (*Halsbury) in 1911 and won the DSO in World War I. He developed estates in Scotland, South Africa, Canada and Australia, married four times and was a disagreeable figure in English society. His cousin, William Grosvenor, the 3rd Duke (1894–1963), was kept in seclusion by the family.

Wettin. German dynasty. First prominent in the 10th century in Thuringia, the conferment of the electorate of Saxony on the Margrave Friedrich (1423) confirmed the family’s supremacy in that area. It was weakened, however, by a territorial partition between his grandsons: Ernest, founder of the Ernestine line, obtained the electorate and the larger part of the territory, while the Albertine line, stemming from his brother, was given the rest. The position was reversed during the Reformation. The Ernestine line, which provided *Luther’s strongest princely supporters, was deposed by *Charles V and the Albertine line substituted. Its members were also intermittently kings of Poland (1697–1763). After the fall of the Holy Roman Empire during the Napoleonic period, the elector of Saxony took the title of King. Meanwhile the Ernestine line had split into a number of branches, one of them that of Saxe-Coburg, from which sprang *Leopold I of the Belgians, *Albert, Victoria’s Prince Consort, and the kings of Bulgaria. Although Wettin was the family name of *Edward VII and *George V (until 1917), British courtiers thought it sounded ‘unsuitably comic’ and the cumbersome ‘Saxe-Coburg-Gotha’ was invariably used.

Weyden, Rogier van der (c.1399–1464). Flemish artist. Probably a pupil of Robert *Campin, identified as the ‘Master of Flémalle, he was appointed city painter of Brussels in 1436. Whether or not he actually visited Italy in 1450 (as supposedly) is uncertain but his *Entombment (Uffizi) certainly has affinities with Italian art. For the most part he worked in the Gothic tradition of the van *Eycks, but the figures, with the folds of the garments emphasised, and characters of the subjects more boldly defined by expression and gesture, give a more dramatic effect, sometimes at the expense of observed detail. Among his most characteristic paintings are the Adoration of the Magi (Munich) and the magnificent Descent from the Cross (Madrid).

Beenken, H., Rogier van der Weyden. 1951.

Weygand, Maxime (1867–1965). French general, born in Brussels. His parentage was uncertain (even to him), but his mother may have been *Metternich’s daughter Mélanie. He joined the French army in 1886 and was deeply opposed to Alfred *Dreyfus. As Chief of Staff 1914–23 to Ferdinand *Foch he made a great impression with his clear mind and quiet competence. He led the ‘allied armies of intervention’ (mostly French) in Poland 1919–20 and forced the Red Army back to the boundaries agreed on at Brest-Litovsk. He was elected to the Académie Française in 1931. Commander-in-Chief of the French Army 1931–35, in 1939 he was recalled to service as Commander-in-Chief in the Levant. He replaced *Gamelin as allied Generallissimo May–June 1940 after the German breakthrough, but was too late to retrieve the situation. He served as *Pétain’s Minister for Defence 1940–41 and Governor-General of Algeria 1941–42. He was imprisoned 1942–46, first by Germans, then by the French.

Weygand, M., Recalled to Service. 1952.

Wharton, Edith (née Newbold Jones) (1862–1937). American novelist, born in New York. From a socially prominent family, she married in 1885, lived in France from 1907 and was divorced in 1913. Strongly influenced by *James, her novels include The House of Mirth (1905), the more realistic Ethan Frome (1911), The Age of Innocence (1920, a Pulitzer Prize winner, filmed by Martin *Scorsese in 1993) and Old New York (1924). Her writing was concerned with the lives of the rich, leisured, cosmopolitan Americans of her own class. Wit, irony and satire characterise her novels, with more than a hint of anti-Semitism. Her themes are ethical as well as social, and sometimes, especially when writing of the position of women, she achieves tragic intensity.

Whately, Richard (1787–1863). English scholar and Churchman. At Oxford, where he obtained a fellowship (1811) he associated with *Keble, *Newman and *Pusey but held no extreme religious views. He became Archbishop of Dublin (1831). He wrote much but is remembered by Historic Doubts Relative to Napoleon Buonaparte (1819), a satire on rationalist criticism of the Scriptures.

Wheatstone, Sir Charles (1802–1875). English physicist. Like *Faraday, he had no formal education in science, but while apprenticed to his uncle, an instrument-maker, became absorbed in experiments in physics. This led to his becoming (1834) professor of experimental philosophy at King’s College, London, an appointment which he held for the rest of his life. He was elected FRS in 1837, the year in which he patented the first electric telegraph with W. F. Cooke. Another invention of his was a clock for which polarised light was ingeniously used to measure time, but curiously enough he did not invent the so-called ‘Wheatstone bridge’ for measuring electrical resistance. The many other products of his inventive mind include the ‘concertina’. He was knighted in 1868.
Wheeler, Sir (Robert Eric) Mortimer (1890–1976). English archaeologist. After being keeper of the London Museum (1926–44), he held an archaeological professorship at London University. His most notable work was on Roman Britain (e.g. at Verulamium near St Albans) and on the Indus Valley civilisation of ancient India. He did much to popularise archaeology by writing, broadcasting and television appearances.

Whewell, William (1794–1866). English philosopher of science. Son of a carpenter, educated at Cambridge, he became a clergymen, professor of mineralogy 1828–32 and of moral philosophy 1838–55 at Cambridge, and Master of Trinity College 1841–66. A polymath, he was a poet, wrote on *Plato, translated *Goethe, published on crystallography, tidal movements and Gothic architecture, and coined many new words including ‘scientist’, ‘ion’, ‘cathode’, ‘Eocene’ and ‘Miocene’. He worked on the refraction of crystals and built up maps of cotidal times, wrote on the works of *Kant and on the history and philosophy of science, but had no interest in experimentation and was suspicious of contemporary research. He died after falling from a horse.

Whistler, James (Abbott) McNeill (1834–1903). American artist. After a brief incursion into military life at West Point Academy and a short period with the Coastal Survey Department (where he learned to etch), he went to Paris (1855) to study art. From the 1860s he lived mostly in London, and the Thames near his Chelsea home inspired some of his finest work. *Courbet’s work in Paris impressed him most, but a later and stronger influence was that of *Hokusai. In his famous Nocturnes, for example, he was more concerned with tone values than with the direct reproduction of nature’s effects attempted by the Impressionists. Even his well known portraits of his mother and of Thomas Carlyle are studies in black and grey. A similar preoccupation with tone is seen in his Little White Girl hung at the Salon des Refusés in Paris (1863). Some of his best work is to be seen in his etchings of London and Venice. Whistler was slow to gain recognition, partly because of an angularity of character. Being extremely resentful of *Ruskin’s criticism, he embarked on the famous libel suit (1878) in which he obtained a farthing damages. The trial is documented in The Gentle Art of Making Enemies (1890).

Whitaker, Joseph (1820–1895). English publisher. He founded The Bookseller (1858) and the Almanack that bears his name (1869).

White, Edward Douglass (1845–1921). American jurist. After serving in the Confederate army, he joined the Ku Klux Klan after the Civil War, becoming an attorney, law professor and judge in New Orleans. He was a US senator from Louisiana 1891–94 until appointed a justice of the US Supreme Court 1894–1910. W. H. *Taft then promoted him to Chief Justice 1910–21. A conservative centralist, critical of special interests and states’ rights, he was the first chief justice from the ‘deep South’ and the first associate justice to be promoted.

White, Gilbert (1720–1793). English clergyman and naturalist, born at Selborne, Hampshire. Curate of Selborne from 1751, his Natural History and Antiquities of Selborne (1789) records in prose of great charm his observations of nature. In 1885 the Selborne Society was founded in his memory.

Scott W. S., Gilbert White. 1950.

White, Patrick (Victor Martindale) (1912–1990). Australian novelist and playwright, born in London. His parents were Australian and, as a child, he lived in rural New South Wales. Educated at Cheltenham and King’s College, Cambridge, he served in the RAF during World War II and returned to Australia in 1948. His play The Ham Funeral (1947) anticipated *Beckett’s Waiting for Godot, but was not performed until 1961. His books include The Aunt’s Story (1948), The Tree of Man (1954), Voss (1957), Riders in the Chariot (1961), The Vivisector (1970), The Eye of the Storm (1973), The Twyborn Affair (1979), and an autobiography, Flaws in the Glass (1981). In 1973 he received the Nobel Prize for Literature ‘for an epic and psychological narrative art which has introduced a new continent into literature’.

White, T(erence) H(anbury) (1906–1964). English author. He is chiefly known for a series of Arthurian fantasies which reflect his love of the Middle Ages and of traditional sports such as falconry taken up while he was a teacher at Stowe (until 1936). These tales, of which The Sword in the Stone (1939) was the first, were published as the trilogy The Once and Future King (1958).

Whitefield, George (1714–1770). English preacher. One of a large family left fatherless, he was a servant at Pembroke College, Oxford, where he first came under Methodist influence and worked devotedly among prisoners and the sick. Ordained as deacon (1736), he immediately attracted attention as a preacher. He followed John *Wesley to Georgia and on his return, to collect funds moved from place to place, preaching wherever he halted and attracting a huge following by his eloquence and sincerity. His Calvinistic doctrines
on predestination led to a breach with Wesley and, though a personal reconciliation took place, each took a separate religious path. For Whitefield his followers built a large church at Moorfields, London, known as the Tabernacle.

**Whitehead, Alfred North** (1861–1947). English mathematician and philosopher. He studied and taught mathematics at Cambridge 1880–1910 and in 1898 published *A Treatise in Universal Algebra*. He collaborated with Bertrand *Russell in Principia Mathematica* (3 vols, 1910–13), taught at University College, London 1911–14 and was professor of applied mathematics at the Imperial College 1914–24. He became increasingly interested in philosophy and wrote several books attempting to link physical evidence into a philosophical scheme. In *The Principle of Relativity* (1922) he propounds an alternative to *Einstein’s theory. A move to Harvard University (1924) coincided with the inclusion of metaphysics in his wide range of thought. The best known of his books in this field was *Science and the Modern World* (1926), others include *Process and Reality* (1929), the highly important *Adventures of Ideas* (1933) and *Nature and Life* (1934). Whitehead was awarded the OM in 1945.

**Whitelaw, William Stephen Ian, 1st Viscount Whitelaw** (1918–1999). British Conservative politician. A guards officer who won the MC, he became a farmer and MP 1955–83, serving as a minister under Edward *Heath 1970–74 and Deputy Prime Minister 1979–88 to Margaret *Thatcher. In 1983 he was made the first hereditary peer since 1964, although he had no heir, and also received a CH and a KT.

Whitney, William (1819–1892). American poet, born in Long Island. He grew up in Brooklyn and his knowledge of America by a trip to New Orleans, which he made a

**Whitman, Walt** (1819–1892). American poet, born in Long Island. He grew up in Brooklyn and worked briefly as an office boy, printer, journalist and teacher. Among other journals he edited (1846–1848) the *Brooklyn Eagle* and teacher. Among other journals he edited (1846–1848) the *Brooklyn Eagle* which he made a platform from which to voice his anti-slavery views. At loggerheads with his proprietors, he left to enlarge his knowledge of America by a trip to New Orleans, from which he returned by the Mississippi and the Great Lakes. There followed a period of avid but unsystematic reading, from the Bible, *Homer and the classics, to Shakespeare and writers such as *Scott, *Carlyle, *Coleridge and *Emerson. Apart from a vein of mysticism in his poems, attributable to his philosophic readings, the main result was an attempt to shed European influences and introduce a national literature suited to the free, robust, democratic American. He began the realisation of this purpose with the first publication of *Leaves of Grass* (1855), an attempt 'to put a Person, a human...
being (myself, in the latter half of the 19th century in America) freely, fully and truly on record’ and ‘to loosen the mind of still-to-be-formed America from the folds, the superstitions and all the long, tenacious and stifling anti-democratic authorities of Asiatic and European past’. At first a volume of 12 poems, Leaves of Grass grew with successive editions to many times its original size. His poems are marked by irregular measures, long verse lines, strong rhythms and an incantatory manner. His themes were social, political, moral, beauty, death, war, sex. The language was free, frank and natural. Sometimes in his portrayal of himself he shows an unpleasing arrogance; sometimes there are passages which caused his works to be held immoral and led to his dismissal from a clerkship after the Civil War.

In 1873 he had a paralytic stroke but gradually recovered from complete invalidism. From 1884 he lived in retirement in Camden, New Jersey, where he died. In addition to his poems, Whitman wrote several prose works including Democratic Vistas (1871) and the random jottings in e.g., Specimen Days in America (1887). Whitman was the first great poet to be distinctively American, but it is ironic that it has always been to the intellectual that his work has appealed rather than to the ‘common man’ for whom he wrote.

Whitney, Eli (1765–1825). American inventor. He graduated at Yale University, and had been a tutor when a chance conversation turned his mind to the problem of separating seed and dirt from cotton fibre. The result was the ‘cotton gin’ (1792), a machine consisting of a wire-toothed drum that tore the fibre from the seeds, the fibre being in turn removed from the wires by revolving brushes. The use of a single machine to do the work of some 200 men revolutionised the cotton industry but, owing to patent difficulties, he got more prestige than money. The former, however, led to his being granted a government contract for the manufacture of firearms, which brought him a fortune. One of the greatest figures of the Industrial Revolution, his major achievement was the theory and practice of standardised interchangeable parts.

Whittier, John Greenleaf (1807–1892). American Quaker poet, born in Massachusetts. He worked untiringly for the abolition of slavery, as political activist and journalist, writing pamphlets and editing abolitionist journals. His numerous volumes of poetry, especially those depicting New England life and legends, gave him great contemporary popularity and some poems are still recalled. Among them are Snowbound, The Barefoot Boy, and the ballad Barbara Frietchie.

Whittington, Richard (c.1358–1423). English mercer. Son of a Gloucestershire knight, he acquired great wealth in London, which enabled him to lend money to *Henry IV and *Henry V, and, since he was childless, to bestow many benefactions on the city of London both before his death and by bequest. He was Mayor of London 1397–98, 1406–07 and 1419–20. The legend of Dick Whittington and his cat was first given currency in a play and a ballad in 1605. The only similarity between history and fiction seems to be that both Richard and Dick married an Alice Fitzwaryn (Fitzwarren).

Whittle, Sir Frank (1907–1996). British aircraft engineer. He joined the RAF (1923) and soon began studying the problems of jet propulsion for aircraft. Having striven hard and long for official support, he at last found himself with a small team of craftsmen, fired by his own enthusiasm, installed in a small, ill equipped workshop and using every spare hour to turn his idea into a reality. At last (1937) the first successful gas turbine engine was made. In 1941 a Gloster plane fitted with one of Whittle's engines flew and achieved excellent results, but owing to the time required for manufacture, the jet-propelled aircraft played no effective part in World War II. In 1948 Whittle was awarded £100,000 for his work, but, a natural individualist, he kept aloof from the great firms developing jet aviation. He received the OM in 1986.

Whittle, F., Jet. 1953.

Whitty, Dame May (1865–1948). English actor. She played character roles in many films (e.g. The Lady Vanishes and Night Must Fall), and married the director Ben Webster. Their daughter, Margaret Webster (1905–1972) was a theatrical director, e.g. of Paul *Robeson in Othello.

Whitworth, Sir Joseph, 1st Baronet (1803–1887). British engineer and inventor. Founder of the Whitworth scholarships in engineering science, he is best known for his invention of a gun barrel with a revolutionary type of bore, and for the now standard screw thread named after him. He was created baronet in 1869.

Whymper, Edward (1840–1911). English mountaineer. A wood engraver and book illustrator by profession, he is better known for his travels in Greenland (1867 and 1872) and for his mountaineering feats, including the first ascents of the Matterhorn (1865) when three of his companions lost their lives, and of Chimborazo in the Andes (1879).

Wyclif, John

Widodo, Joko (‘Jokowi’) (1961– ). Indonesian politician, born in Central Java. Mayor of Surakarta 2005–12, Governor of Jakarta 2012–14, and a protégé of *Megawati Soekarnoputri, he was nominated as the Indonesian Democratic Party of
Struggle (PDI-P) candidate for President in 2014. He defeated Prabowo Subianto by 53 per cent to 47 per cent and was President 2014–

Widor, Charles-Marie (1844–1937). French composer and organist. He was organist at St Sulpice, Paris 1869–1934 and professor of composition at the Paris conservatoire. He composed 10 symphonies for organ and many orchestral works, and edited *Bach’s organ music with his pupil Albert *Schweitzer.

Wieland, Christoph Martin (1733–1813). German writer. Son of a pastor, he first wrote pious and religious poems but, after contact with the literary and social world, he began to produce a variety of elegant and witty works. From 1762 he produced the first German translations of *Shakespeare (all in prose except *A Midsummer Night’s Dream). Of his original works, the narrative poem *Oberon (1780) is of particular charm. It is based on a medieval *chanson de geste which relates the fantastic adventures of Huon of Bordeaux at the court of Babylon. More important, perhaps, is the novel *Agathon (1766) the classical setting of which does little to disguise its autobiographical theme of a young man’s reaction to the impact of experience and philosophy. In 1772 Wieland went to be tutor to the future Duke Karl August of Saxe Weimar and remained at Weimar until his death. While there he translated many classical texts and wrote opera libretti.

Wien, Wilhelm (1864–1928). German physicist. As professor of physics at Giessen, Würzburg and Munich, he carried out important studies on cathode rays, canal rays, and blackbody radiation. He discovered (1893) the ‘displacement law’ (*Wien’s law) which shows how the intensity maximum in the spectrum moves to shorter wavelengths with increase in temperature, so that the product of the wavelength at maximum intensity and the absolute temperature is constant. This law made it possible to determine the temperature of bodies such as the sun and stars by observing the distribution of spectral intensity. He won the 1911 Nobel Prize for Physics.

Wiener, Norbert (1894–1964). American mathematician, born in Columbia, Missouri. A child prodigy who had enrolled by the age of 15 at Harvard Graduate School, he spent his late teens and early twenties trying out various approaches in mathematics, philosophy and zoology, before moving to the Massachusetts Institute of Technology (assistant professor, 1924, associate 1929, full professor 1932). He remained there until his retirement. Much of his early career was devoted to pure mathematics. He was concerned with harmonic analysis, and did work on Lebesgue integration and Brownian motion. The mathematical consequences of the laws of thermodynamics were worked out by Wiener. His most original work came after 1940 when he became absorbed in the development of computing machines. His penetrating analysis of feedback control in artificial intelligence systems led to interest in human intelligence, and to creative work in the general field of systems analysis. The science of communication and information opened up as a result of Wiener’s probings. His *Cybernetics was published in 1948.

Wieniawski, Henryk (1835–1880). Polish composer and violinist. He ranked immediately after *Paganini and *Sarasate as a great virtuoso and wrote many works to show off his prodigious technique, including two concertos, *Legende, *Scherzo-Tarantelle and *Fantasy on Gounod’s *Faust.

Wiesel, Eliezer (1928–2016). American-Jewish writer, born in Romania. His mother and sister were killed in Auschwitz; and his father survived Buchenwald. He revived the use of the term ‘Holocaust’ and wrote extensively about the wartime attempt to exterminate the Jews. He held chairs at Boston and Columbia Universities, received the Nobel Peace Prize (1986), the US Presidential Medal of Freedom (1992), Hon. KBE (2006) and many other awards. He campaigned for human rights in South Africa, Argentina, Bosnia, Nicaragua and Sri Lanka, denounced the Armenian genocide but was silent on Palestine.

Wiesenthal, Simon (1908–2005). Austrian-Jewish war crimes investigator, born in Poland. Trained as an architect, he was a Nazi prisoner 1941–45, worked to gather evidence for the prosecution of war criminals and founded the Jewish Documentation Centre in 1954. His agents tracked down Adolf *Eichmann in 1960.

Wiggin, Kate Douglas (née Smith) (1865–1923). American author. She was a pioneer of kindergarten teaching before becoming a writer. The best known of her novels, *Rebecca of Sunnybrook Farm (1903), gives a charming picture of New England life.

Wilberforce, William (1759–1833). English politician and philanthropist, born in Hull. From a wealthy Yorkshire family, after leaving Cambridge University he entered politics. He was first elected MP in 1780 and became a friend and supporter of *Pitt but, having been converted to evangelism (1784–85), devoted himself to philanthropic causes, e.g. the abolition of the slave trade, a bill for which he finally carried (1807) after 20 years’ struggle. His next objective was the abolition of slavery itself. He helped to found the Anti-Slavery Society (1825) but, as his health failed, leadership of the movement passed to T. F. *Buxton. A month before the measure was passed Wilberforce died. He helped to found the Church Missionary Society (1798) and the Bible Society (1803), and he wrote *A Practical View of Christianity (1797). His son, Samuel Wilberforce (1805–1873) was a High Church bishop of Oxford (1845) and of Winchester (1869). Though he opposed
*Newman and *Pusey he did much to invigorate the Anglican Church, supported retreats and religious communities, Cowley (for men) and others for women, and founded Cuddesdon Theological College. His nickname ‘Soapy Sam’ referred to his equivocal position in several controversies. He was killed by a fall from his horse.

**Wilbye, John** (1574–1638). English composer. One of the leading masters of the English madrigal, among the longer and best known examples are *Draw on Sweet Night* and *Sweet Honey-Sucking Bees*.

**Wilcox, Ella Wheeler** (née Wheeler) (1850–1919). American verse writer. Extremely prolific, she was described by the London *Times* as ‘the most popular poet of either sex and of any age’. Sentimentality was the key to her success.

**Wild, Jonathan** (1682–1725). English criminal. Having gone to London (c.1706) from Birmingham, where he was a buckle maker’s apprentice, he controlled a gang of thieves, whose loot he ‘recovered’ for its owners for a fee that he shared with his accomplices. Eventually, he was hanged at Tyburn. *Defoe* related his exploits, which Fielding elaborated, to provide a plot for his satirical romance, *Jonathan Wild the Great* (1743).

**Wilde, Oscar Fingall O’Flahertie Wills** (1854–1900). Irish writer and wit, born in Dublin. He showed his brilliance at Trinity College, Dublin, and then at Oxford, where he was regarded as the founder of the aesthetic movement which cultivated ‘art for art’s sake’. Wilde, notorious for his eccentricities of manner and dress, was satirised as ‘Bunthorne’ in Gilbert and Sullivan’s *Patience* (1881). His first book of poems was published in 1881 and in 1882–83 he lectured in the US. On returning to London he married (1884). Of his two sons, the younger, later known as *Vyyan Holland* (1886–1967), wrote tirelessly to vindicate his father’s reputation. In 1888 Wilde published *The Happy Prince*, a collection of children’s stories and in 1891 a novel *The Picture of Dorian Gray*, an arresting study in the macabre. Meanwhile he had established himself as the most brilliant conversationalist of his day, coining epigrams and paradoxes which provided the main substance of his highly successful comedies: *Lady Windermere’s Fan* (1892), *A Woman of No Importance* (1893), *An Ideal Husband* and *The Importance of Being Earnest* (both 1895). His *Salomé*, written in French, was refused a licence in London and became the libretto of an opera (1905) by Richard *Strauss*. In 1895 the Marquess of *Queensberry, who objected to Wilde’s close friendship with his son Lord Alfred *Douglas, accusing him of being a ‘sodomite’ (sic.) Wilde sued for libel, but evidence in the libel action resulted in his arrest for ‘gross indecency’, a humiliating trial and a sentence of two years’ jail with hard labour. From his experiences of prison life came his long poem *The Ballad of Reading Gaol* (1898) and the bitter *De Profundis* (published posthumously in 1905). After his release he lived in Paris under the name of Sebastian Melmoth. Dogged by ill health and poverty, he died there and was buried in the Père Lachaise cemetery.

**Ellmann, R., Oscar Wilde. 1987.**

**Wilder, Thornton** (1897–1975). American novelist and playwright. His novels include *The Bridge of San Luis Rey*, which won the Pulitzer Prize (1927), and *The Iles of March* (1940). His first successful play was *Our Town* (1938), followed by *The Skin of our Teeth* (1942). Later he wrote *The Matchmaker* (1954) and *A Life in the Sun* (1955), a version of the Oedipus legend.

**Wiles, Sir Andrew John** (1953– ). English mathematician, born in Cambridge. He taught in Oxford and Princeton and won international acclaim for solving the problem of *Fermat’s last theorem*, with a partial solution in 1993, fully developed in 1995. He won many awards, an asteroid (9999 Wiles) was named for him and his work was celebrated in songs, films, television programs and novels.

**Wilhelm I** (Wilhelm Friedrich Ludwig) (1797–1888). German Emperor 1871–88, and King of Prussia 1861–88. He went to England during the revolution of 1848 but returned in 1849 to lead the army which crushed the insurgents. He was regent for his brother, *Friedrich Wilhelm IV of Prussia (by then insane), from 1858 until he succeeded him. When he became King he quarrelled with the Diet over the reorganisation of the army, and even thought of abdicating, but in 1862 he appointed *Bismarck as his Chief Minister, and thereafter he gave continuous, though not uncritical, support to his minister’s triumphant policy by which, through wars against Denmark, Austria and France, Prussia was given a dominating position in Europe and became the hard core, round which the new empire was built (1871). Wilhelm, a good soldier and, though a reactionary ruler, an honourable man, disliked the newfangled imperial dignity thrust upon him as well as many of the means by which it was obtained, but he had neither the will nor power to quarrel with Bismarck to whom he owed so much.

**Wilhelm II** (Friedrich Wilhelm Viktor Albert) (1859–1941). German Emperor and King of Prussia 1888–1918. Grandson of the emperor *Wilhelm I and son and successor of *Friedrich III, he was the ‘Kaiser’ of World War I. Unlike his liberal-minded
father, he gloried in the traditions of the Prussian army and indulged in dreams of leading it to new triumphs. Though *Bismarck had been the hero of his youth he could not submit to the tutelage of anyone, however great. In 1890 he ‘dropped the pilot’ and thereafter Germany’s destiny lay in the hands of its able but impetuous and unpredictable ruler. At home he chose ministers for pliability rather than wisdom, abroad he stirred antagonism as though intentionally. He even managed to bring Britain, France and Russia together by truculent interference in their concerns. To Britain, for example, his telegram of congratulation to President *Kruger on the suppression of the Jameson Raid was a deliberate provocation, while his vast naval construction could have only one purpose. Thus, when the murder of Archduke *Franz Ferdinand (1914) proved to be the match that fired World War I, Germany and Austria stood alone. Even Italy, the third member of the Triple Alliance, joined her enemies (1915). The German army fought at first with all its old brilliance and success but it was the generals not the Emperor who gained the plaudits, and when the tide turned it was remembered whose policy had brought disaster. Wilhelm fled to Holland when defeated Germany became a republic and lived quietly at Doorn, near Utrecht until his death. His absence when defeated Germany became a republic and lived quietly at Doorn, near Utrecht until his death. His first wife, Augusta Viktoria of Schleswig-Holstein died in 1921 and he married Princess Hermine of Reuss (d.1947). His son, Crown Prince *Wilhelm (1882–1951), satirised as ‘Little Willie’ by British cartoonists, supported the Nazis from 1932.

Wilhelmina (1880–1962). Queen of the Netherlands (1890–1948). She was a daughter of King *Willem III (1817–1890) by his second wife *Emma of Waldeck-Pyrmont (1858–1934), who acted as regent for her daughter until she came of age (1898). In 1901 Queen Wilhelmina married Prince Hendrik of Mecklenburg-Schwerin. In World War II, when her country was overrun by the Germans, she headed the government in exile in Canada and did everything in her power to encourage resistance. She abdicated in favour of her daughter, *Juliana.

Wilkes, Charles (1798–1877). American naval officer. He led an exploring expedition to the Antarctic (1838–42) but did not land. Wilkes Land, in the Australian territory, is named for him. During the US Civil War, he provoked a diplomatic incident with the British by arresting the British mail steamer *Trent (1861) and removing Confederate officials.

Wilkes, John (1727–1797). English politician. Son of a wealthy distiller, as a young man he was prominent among the members of the Hellfire Club who celebrated their orgies at Sir Francis Dashwood’s residence, Medmenham Abbey. In 1757 he was elected MP for Aylesbury but in 1761 he became a violent opponent of Lord *Bute, Chief Minister of the young *George III. To this end he established a weekly newspaper *The North Briton, in No. 45 of which he asserted that the speech from the throne contained lies put into the King’s mouth by his ministers. He was arrested under a general warrant (soon held to be illegal) against authors, printers and publishers, but was acquitted on the grounds of parliamentary privilege. The government’s next step was to obtain a copy of his privately printed *Essay on Woman. Obscene extracts read out in the House of Lords caused its condemnation and, after a duel, Wilkes took refuge in France. During his absence he was expelled from parliament for his ‘No. 45’ and outlawed. On his return (1768), though elected four times in succession for Middlesex, he was imprisoned for 22 months and not allowed to take his seat. ‘Wilkes and Liberty’ became the Radical watchwords. Wilkes, not born to be a martyr, was elected Sheriff of Middlesex (1771), Lord Mayor of London (1774) and in the same year took his seat in parliament without opposition. Meanwhile he had made his peace with the court and in 1780 was to play a prominent part in the suppression of the Gordon Riots. However, by his stands for the freedom of the press, and against arbitrary governmental action he earned the epitaph of his own composing, ‘a friend of liberty’.

Thomas, P. D. G., John Wilkes: a friend to liberty. 1996.

Wilkie, Sir David (1785–1841). Scottish painter. He came to London in 1805, and won fame with his genre pictures such as *Village Politicians (1806) and *Penny Wedding, notable for their imaginative colour and sense of character. He was elected ARA (1809) and RA (1811). Later he turned (less happily) to historical pictures, e.g. The *Preaching of John Knox. He succeeded *Lawrence as court painter (1830) and was knighted in 1836.

Wilkins, Sir (George) Hubert (1888–1958). Australian explorer, born in Hallett Cove, South Australia. After service as a war correspondent in the Balkan Wars (1912–13) he accompanied *Stefansson’s expedition to the Arctic before joining the Australian Flying Corps in World War I. He was with the *Quest during * Shackleton’s last Antarctic voyage (1921–22). He was knighted (1928) for a flight from Alaska to Spitsbergen, one of several exploratory flights he made in the Arctic at this time, and in the Antarctic (1928) he led an expedition to Graham Land. In 1931 he tried unsuccessfully to navigate the submarine *Nautilus under the North Pole.

Wilkins, John (1614–1672). English scientist. Son of a goldsmith, he studied at Oxford, graduating in 1631, entered the Church, and became warden of Wadham College in 1648. In 1659 he was made
Master of Trinity College, Cambridge. Though a supporter of Oliver *Cromwell (whose sister he married) he became Bishop of Chester in 1668. He took an early interest in science and his A Discourse Concerning a New Planet. Tending to prove, that 'tis probable our Earth is one of the Planets (1640) was probably the first use of ‘Earth’ as a planetary name. He was a founder member (1660) of the Royal Society, a member of the Council and one of the secretaries. He took great interest in machines and technological improvements. He speculated about the moon possibly being inhabited. His Mathematical Magick (1648) analyses the principles of machines; Mercury, or the Secret and Swift Messenger suggests telegraphic communication. Perhaps his most important interest lay in attempts to construct a universal, rational language, spelt out in his An Essay towards a Real Character and Philosophical Language (1688).

Shapiro, B. J., John Wilkins. 1969.

Wilkins, Maurice Hugh Frederick (1916–2004). Irish biophysicist, born in New Zealand. His work on X-ray diffraction, assisted by independent research by Rosalind *Franklin, suggested that molecules of DNA (deoxyribonucleic acid) had a helical structure. This led to the conclusive work on DNA by Francis *Crick and Jim *Watson and in 1962 they shared the Nobel Prize for Medicine.

Wilkinson, John (1728–1808). English ironmaster, born in Cumberland. His improved methods for boring cannon led to the production of cylinders for high pressure steam engines and he worked with *Watt and *Boulton. He provided the iron for Abraham *Darby's bridge at Coalbrookdale (1779).

Willard, Frances Elizabeth (Caroline) (1839–1898). American social reformer, born in New York. She became a teacher and was briefly Dean of Women at Northwestern University (1874). She was a co-founder (1874) of the Women's Christian Temperance Union (WCTU), its secretary 1874–79 and president 1879–98. Using the slogan ‘Do everything’, she organised petitions, demonstrations, lobbying and publication in her advocacy of female suffrage and for ‘prohibition’ of the consumption of alcohol, which both became law decades after her death. She organised an international ‘Polyglot Petition’ (1883) against the drug trade and became a socialist in her last years. A powerful speaker and writer, Willard has been accused – probably unfairly – of linking alcohol with Afro-American crimes, thereby condoning lynching.

Willem-Alexander (1967–). King of the Netherlands 2013–. Son of Queen *Beatrix and Claus von Amsberg, he was educated at Leiden University and on his mother's abdication became the first Dutch king since 1890.

William (known as 'the Lion') (1143–1214). King of Scotland 1166–1214. He was the grandson of *David I and brother of Malcolm IV, whom he succeeded. Angered by the refusal of *Henry II of England to restore the disputed territories of Northumberland and Cumberland, he allied himself with Henry's rebellious sons but was captured at the siege of Alnwick. By the humiliating Treaty of Falkirk (1174) he was forced to do homage for his kingdom. From this obligation *Richard I's monetary needs for the 3rd Crusade enabled him to escape, but renewed war with King *John compelled him to make another large payment to obtain peace. Before he died he had brought the Scottish lords under firm control.

William 'the Silent' ('der Zweiger', Willem VII van Nassau-Dillenburg) (1533–1584). Stadholder of Holland and Zeeland 1572–84, Count of Holland, Prince of Orange. Descendant of the Counts of Nassau, he inherited (1554) their estates in the Netherlands and Burgundy as well as the principality of Orange (in Provence). His parents were Lutheran but at the insistence of the emperor *Charles V, then holding court at Brussels, and whose page he became, he was educated as a Catholic. In 1559 he was made stadtholder of Holland, Zeeland and Utrecht by the emperor's son, *Philip II of Spain, whom he served ably as a diplomat. He was horrified, however, by Spanish persecution of Protestants in the Netherlands. Failure to obtain an agreement which would secure toleration for all was followed (1567) by the arrival of the Duke of *Alba and the execution of Counts *Egmont and *Horn. William, who had left the Netherlands in 1567, realised that the time for compromise had gone and made plans for a rising against Spain. His first invasion (1568) failed but in 1572 he returned, aided by an alliance with the Sea Beggars (Gueux), a group of rebels who had taken to the sea and who, in 1572, captured Briel (Brielle), a port on the Maas. He founded the University of Leiden in 1575. He maintained his struggle and in 1576, by the Pacification of Ghent, even managed to unite the northern and southern provinces against the Spaniards. Under Alba's more conciliatory successor, the Duke of Parma, however, the Catholic provinces were regained for Spain, but by the Union of Utrecht (1579) the northern alliance was confirmed and strengthened. Anxious for French help, in 1580 William induced François, Duke of Anjou and Alençon, the surviving brother of King *Henri III, to accept sovereignty of the United Provinces. In February 1582, when the Duke arrived, it was clear that he was deeply unpopular and resented being offered limited powers. In March 1582 William was shot in the face, but survived. William resumed leadership as virtual head of state but was soon assassinated, in Delft, by Balthasar Gerard, a Catholic fanatic. In J. L. *Motley's
famous words: ‘As long as he lived, he was the guiding star of a whole brave nation, and when he died the little children cried in the streets’. The Orange family continued as a dominant force in Dutch politics.

**William I** (Guillaume) (‘the Conqueror’) (1027–1087). King of England 1066–87, Duke of Normandy 1035–87. Illegitimate son of Robert ‘the Devil’, Duke of Normandy, he succeeded his father as Duke (1035), but 12 years of fighting followed before he fully established himself. He married (1053) Matilda, daughter of Baldwin, Count of Flanders. His claim to the English throne rested upon a promise said to have been made (with no legal authority) by his cousin, *Edward the Confessor, while William was paying him a visit. He also seems to have obtained under duress an oath of fealty from *Harold, who was in his power after being shipwrecked on the Normandy coast and his claim was supported by the pope. On hearing that Harold had proclaimed himself King, he prepared to invade and on 14 October 1066 won the decisive Battle of Hastings, in which Harold was killed. William himself was crowned at Westminster on Christmas Day but the conquest was not complete until 1070. There was little devastation except in the north where resistance was strongest. *Malcolm of Scotland submitted in 1072 and, for a time, *Hereward the Wake maintained a pocket of resistance in the East Anglian fens. Once in control of the country, William proved himself a wise, just and resourceful ruler. He abolished slavery and curbed the tyranny of local barons by concentrating power in royal hands organised on civil, not military lines. (In the 17th century the term ‘feudal system’ was applied to his rule but it had no contemporary meaning.) By replacing Stigand, Archbishop of Canterbury, by *Launfranc he brought the English Church into closer touch with that of the Continent, but he strongly resisted the authoritarian claims of papacy. In 1086 he ordered the compiling of the Domesday Book, which recorded the value of royal, baronial and Church lands and the distribution of the population. In his later years he had to contend with the intrigues of his half-brother *Odo, Bishop of Bayeux, and the disloyalty of his own eldest son Robert. After falling from a horse in Mantes, he died in Rouen and was buried in Caen.

**William I and II of Germany see Wilhelm I and II**

**William II (Rufus)** (c.1056–1100). King of England 1087–1100. Called Rufus for his red hair, he was the second surviving son of *William the Conqueror, whom he succeeded as King. Normandy had passed to the elder son Robert, on which account the two brothers were in constant feud until the duchy finally fell into William’s hands (1096), Robert having been forced to ‘pawn’ it to enable him to go on the 1st Crusade. William was ruthless and brutal, he quarrelled with his great archbishop of Canterbury, *Anselm, but was an able soldier, held the barons in check and maintained firm if extortionate rule through his chief minister Rannulf *Flambard. He was accidentally shot while hunting in the New Forest by his companion Walter Tirel.

**William III** (Willem Hendrik) (1650–1702). King of England, Scotland and Ireland 1689–1702, Prince of Orange 1650–1702. Born in The Hague, the posthumous son of William (Willem) II of Orange and Mary, daughter of *Charles I of Great Britain, he was chosen stadholder of the United Provinces after the murder (1672) of de Witt. He brought the long struggle with *Louis XIV of France to an end by the honourable Peace of Nijmegen (1678), having meanwhile strengthened his position by marriage (1677) with the British princess *Mary, daughter of the future *James II. He formed (1686) the Grand Alliance to combat Louis’ renewed aggression and, seeking fresh allies, was glad, therefore, to accept an invitation from England to intervene on behalf of ‘English liberties’ endangered by his father-in-law James II. He landed at Torbay (November 1688) with an army of 15,000 and quickly gained almost universal support. James fled to France, a convention parliament declared the throne vacant and in February 1689 William and Mary were proclaimed joint sovereigns. Resistance in Scotland was all but ended by the death of ‘Bonnie *Dundee’ at the Battle of Killiecrankie (1689) and in Ireland by the surrender of Limerick (1691). The continental war was ended by the Treaty of Ryswick (1697). William, his power limited by the Bill of Rights (1689), neither liked, nor was liked by, his new subjects and his popularity waned further after the death of Mary (1694). He refused to commit himself to a single party and his administration included politicians from both Whigs and Tories. The foundation of the Bank of England and the start of the National Debt were of more interest to future generations than to his own. Another continental war (of the Spanish Succession) was about to start when he died. His final illness was complicated by a fall when his horse stumbled on a molehill. (Jacobites toasted the mole: ‘The little gentleman in black velvet.’)

**William IV** (William Henry) (1767–1837). King of the United Kingdom of Great Britain and Ireland, King of Hanover 1830–37. Born in London, he was the third son of *George III, created Duke of Clarence in 1789. His career in the navy earned him the nickname of ‘the sailor king’. He became titular Admiral of the Fleet (1811) and the office of ‘Lord High Admiral’ was revived for him 1827–28. In 1811 he parted from his mistress, the actor Mrs
Dorothea Jordan (1762–1816) who had borne him 10 children. In 1818 he married *Adelaide, daughter of the Duke of Saxe-Meiningen, but both their daughters died in infancy. On the death of the Duke of York (1827) he became heir presumptive and in 1830 succeeded *George IV. As King he objected strongly to Earl *Grey’s Parliamentary Reform Bill of 1832 but eventually promised to create as many peers as might be necessary to secure its passage through the House of Lords. He did not have to act on his promise because enough peers abstained to allow the bill to pass. His outspokenness and eccentric remarks (hence the description 'Silly Billy') were often an embarrassment to his ministers but he strictly observed the constitutional proprieties. He was succeeded by his niece, *Victoria.

William of Malmesbury (c.1095–c.1143). English historian. A monk, he compiled accurate and impartial histories, notably the Gesta regum Anglorum, the story of the English kings to 1128, continued in Historia novella (up to 1142). He also wrote accounts of the bishops and monasteries and a life of St *Dunstan.

William of Ockham (or Occam) see Ockham, William of

William of Waynflete see Waynflete

William of Wykeham see Wykeham

Williams, (George) Emlyn (1905–1987). Welsh actor and playwright. His successful plays included Night Must Fall (1935) and The Corn is Green (1941). He acted in his own and other plays including those of *Shakespeare and later his dramatised readings of *Dickens and Dylan *Thomas were widely acclaimed. His sensitive autobiography, George, 1961, related the stages by which he emerged from a poor home in Wales to Oxford University and success on the stage.

Williams, Roger (c.1603–1683). American colonist. He emigrated (1630) from England to Massachusetts, but was expelled through the intolerance of its Puritan rulers. He then established the new colony (chartered 1644) of Rhode Island with complete religious freedom. He epitomised his views in The Bloody Tenent on Persecution (1644) and many pamphlets, and also wrote A Key into the Language of America (1643), a remarkable grammar of Indian languages.

Williamson, Shirley Vivien Teresa Brittain (née Catlin), Baroness Williams (1930– ). British politician. Daughter of the novelist and pacifist Vera *Brittain, she was educated at Oxford and Columbia Universities and became secretary of the Fabian Society 1960–64. Elected a Labour MP 1964–79, from 1966 she held junior ministerial posts, becoming Secretary of State for Prices and Consumer Protection 1974–76 and Secretary of State for Education and Science 1976–79. Defeated in 1979, she was a co-founder of the Social Democrats, re-elected as MP (November 1981) in a by-election, losing in 1983. She went to the House of Lords in 1993. She married (1) the political philosopher Bernard Williams and (2) historian Richard Neustadt.

Williams, Tennessee (Thomas Laniel Williams) (1914–1983). American playwright. He first came into prominence with The Glass Menagerie (1945). This was followed by a series of major successes, most of them set in sordid surroundings in the Deep South in an atmosphere of impending tragedy with sex as a dominating theme. Among the best known are A Streetcar Named Desire (1947), it won the 1948 Pulitzer Prize for Drama, The Rose Tattoo (1951), Camino Real (1953), Cat on a Hot Tin Roof (1955, also a Pulitzer Prize winner), and Sweet Bird of Youth (1958). He also wrote screenplays, short stories and novels.

Williams-Ellis, Sir Clough (1883–1978). Welsh architect and environmentalist. An innovative designer, conservationist and town planner, he was a prolific writer and propagandist who created the model resort village of Portmeirion, North Wales. He coined the term and concept of ‘national estate’.

Williamson, Henry (1897–1977). English author and naturalist. He wrote successful books over a long period but it was by Tarka the Otter (1927) that he became renowned and is still best remembered.

Willingdon, 1st Marquess of, Freeman Freeman-Thomas (1866–1941). English Liberal politician, born in Sussex. Educated at Eton and Trinity College, Cambridge, he became MP 1900–06, 1906–10; Governor of Bombay 1913–19; and of Madras 1919–24. He served as Governor-General of Canada 1926–31 and Viceroy of India 1931–36 at the time of *Gandhi’s civil disobedience campaigns. Created baron (1910), viscount (1924), and earl (1931), he was the last person raised to a marquessate (1936).

Willis, Thomas (1621–1675). English physician. One of the leading anatomists of the 17th century, and a pioneer student of the nerves and brain, he graduated BA at Christ Church Oxford in 1636, and turned to medicine, getting his MB in 1646. Willis practised medicine in Oxford, and in 1660 became Sedleian professor of natural philosophy. He was an early member of the Royal Society and in the 1660s he moved his medical practice to London. His most important work is the Cerebri Anatomie (1664), the best anatomical account of the brain yet published. He offered new descriptions of the cranial nerves and described cerebral circulation. Willis also pioneered the clinical and pathological analysis of diabetes. He produced accurate descriptions of many fevers, such as typhus and typhoid, and puerperal fever, making considerable contributions to epidemiology.

Willkie, Wendell Lewis (1892–1944). American lawyer and Republican candidate, born in Indiana. A successful lawyer, active in the Democratic Party until 1939, although supporting many of Franklin D. *Roosevelt’s social goals, as President of the Commonwealth and Southern Corporation 1933–40 he became an outspoken critic of New Deal business regulation. He joined the Republican Party only a few months before winning its nomination for president, on the sixth ballot, in a campaign run by amateurs. In November he lost to Roosevelt by 22 million votes to 27 million. He attacked isolationists in his own party and provided strong support for US entry into World War II. After visiting China, Russia and Britain (1942) he wrote One World (1943), a passionate appeal for post-war international cooperation. In 1944 he polled poorly in Republican presidential primaries and withdrew his nomination shortly before his sudden death from heart disease.

Fullilove, M., Rendezvous with Destiny. 2013.

Wills, William John see Burke, Robert O’Hara

Wills Moody, Helen (Helen Newington Moody Roark, née Wills) (1905–1998). American lawn tennis player. With Suzanne *Lenglen she could claim to have brought lawn tennis for women up to modern championship standards, but unlike her rival she showed a ‘poker face’ whatever the fortunes or incidents of the game. She dominated the tournaments of America, England and France from 1923 to 1938.

Wilmington, 1st Earl of, Spencer Compton (1673–1743). English politician. He succeeded Robert *Walpole as First Lord of the Treasury in 1742 and died in office.

Wilson, Charles Thomson Rees (1869–1959). Scottish physicist. From 1895 he worked in the Cavendish Laboratory at Cambridge and held a professorship there 1925–34. He invented the ‘cloud chamber’ in which the behaviour of ionised particles can be observed and photographed by the tracks they make in supersaturated air. He shared the Nobel Prize for Physics (1927) with *Compton. Other honours included the Hughes Medal (1911), the Royal Society’s Royal Medal (1922) and Copley Medal (1935) and a CH (1937).

Wilson, Edmund (1895–1972). American literary critic, born in New Jersey. Educated at Princeton, he began as a journalist, then developed as a critic of encyclopaedic range, recognised as the greatest American man of letters of his time. He worked as Associate Editor of New Republic (1926–31), and was book reviewer on The New Yorker. In 1938 he married Mary *McCarthy, third of his four wives. His books include To the Finland Station, a study in the writing and acting of history (1940, a historical study of socialism until 1917), Memoirs of Hecate County (1946, short stories), The Scrolls from the Dead Sea (1955) and Patriotic Gore (1962, civil war literature). His literary criticism include Axel’s Castle (1931), a definitive analysis of the Symbolists, The Wound and the Bow (1941) and an anthology, The Shock of Recognition (1943). His revealing journals, kept from the 1920s, appeared in five volumes.

heading him to concentrate upon the problems of genetics and heredity. *The Cell in Development and Inheritance* (1896) was a pioneering contribution to understanding how cells work, especially the sex chromosomes. He was an enthusiastic supporter of Mendelian theory, and carried out extensive experimental research to work out the chromosomal theory of sex determination in detail. T. H. *Morgan built his experiments on fruit flies upon these foundations. Wilson was concerned to depict the cell as a flexible, developing entity, and to chart the emergence of the cell as part of evolutionary descent. He was not, however, a wholehearted Darwinian, believing that *Darwin had over-stressed the role played by natural selection.

**Wilson, (James) Harold, Baron Wilson of Rievaulx** (1916–1995). British Labour politician, born in Huddersfield, Yorkshire. Educated at Wirral Grammar School and Oxford University, where he later lectured on economics, he served in the ministry of fuel during World War II. A Labour MP 1945–83, he became, at 31, *Attlee's President of the Board of Trade 1947–51 (the youngest Cabinet minister since *Pitt) but resigned in protest against increased charges for social services to help pay for armaments. Under *Gaitskell, Wilson was the Opposition's Shadow Chancellor and regarded as leader of the Left after *Bevan moved towards the centre. After Gaitskell's sudden death Wilson was elected Labour's leader 1963–76. When Labour won the October 1964 election, with 317 seats to 304 for Alec Douglas-Home's Conservatives, Wilson became Prime Minister again 1974–76. In February 1974, Labour won a four seat majority in the House of Commons (although the Tories led slightly in the popular vote) and Wilson became Prime Minister again 1974–76. In October 1974 Wilson called a second election, increasing his majority to 42 seats, with a 2 per cent swing. He resigned as Prime Minister in April 1976 (being succeeded by James *Callaghan), was made a KG (1976) and a peer (1983), then had a slow decline into Alzheimer's disease.

**Wilson, Sir Henry Hughes, 1st Baronet** (1864–1922). British field marshal, born in Ireland. He commanded the Camberley Staff College 1907–10 and, as Director of Military Operations at the War Office 1910–14, developed close working relations with the French, especially *Foch, and was the chief liaison officer during World War I. In February 1918 *Lloyd George appointed him to succeed *Robertson as Chief of the Imperial General Staff and he served until 1922. As a 'political' soldier he was viewed with suspicion by many army colleagues. He broke with Lloyd George, fantasising that he was under Bolshevik influence and saw himself as a potential *Cromwell. Elected as MP for North Down in 1922, he was assassinated in London by two Sinn Féin gunmen.

**Wilson, Henry Maitland Wilson, 1st Baron** (1881–1964). British field marshal. After serving in the Boer War and World War I, 'Jumbo' Wilson (called for his size) commanded British troops in Egypt (1939–40), then Greece, Syria and Iraq (1941–42). He succeeded *Alexander in the Middle East command (1943) and from 1944 was in control of all Allied operations in the Mediterranean area.

**Wilson, Kenneth Geddes** (1936– ). American physicist. Professor at Cornell 1963–88, he developed a theory of second order phase transitions in matter and received the 1982 Nobel Prize for Physics. He then devoted himself to studying education in schools.

**Wilson, (Thomas) Woodrow** (1856–1924). 28th President of the US 1913–21. He was born at Staunton, Virginia, the son of a Presbyterian minister of Ulster and Scottish ancestry. After graduating at Princeton University, he briefly practised law and studied further at Johns Hopkins University. Deeply influenced by *Gladstone, he became increasingly prominent in the academic world during the next 25 years. After being professor of jurisprudence and political economy at Princeton (from 1890) he became its president in 1902. He instituted many reforms in the teaching system but his more liberal plans were rebuffed. In 1910 he was nominated as Democratic candidate for Governor of New Jersey by party bosses who hoped he would be easy to control, won election and served 1911–13. As Governor he instituted a full liberal program including Corrupt Practices and Employers' Liability Acts. In 1912, supported by
party liberals he won the Democratic presidential nomination at Baltimore on the 46th ballot, and was elected in November with 42 per cent of the votes, due to the Republican split between President *Taft and Theodore *Roosevelt. As President, Wilson continued his policy of reform (the 'New Freedom') with such measures as Workers' Compensation and Child Welfare Acts. Three Constitutional amendments were adopted during his Presidency: direct popular election of Senators (1913), prohibition of alcoholic beverages (1919), and votes for women (1920). After World War I broke out in 1914, Wilson maintained formal neutrality but indicated sympathy for the Allied cause. In 1916 he was re-elected on the campaign theme ‘He kept us out of war’. However, Germany's disregard for common humanity and neutral rights shown by the torpedoing of the *Luftiana (1915) and the sinking of several American ships and some explosions in US factories led to Wilson's successful appeal to Congress (‘The world must be made safe for democracy’) for a declaration of war (April 1917). Wilson soon asserted moral leadership of the Allies and in January 1918 set out his famous ‘Fourteen Points’, including establishment of a League of Nations, as the basis of a just and lasting peace. He attended the Paris Peace Conference (1919), the first time a president ever left the US during his term in office, but Wilson was gravely weakened (April 1919) by catching influenza during the great pandemic. The US had the highest principles but the least direct involvement and Wilson was soon outmanoeuvred by the advocates of a harsh peace, *Clemenceau, *Lloyd George and *Orlando. The Treaty of Versailles (June 1919) imposed severe sanctions on Germany but endorsed the League of Nations. Wilson was awarded the 1919 Nobel Prize for Peace. However, he faced a significant revival of isolationist sentiment at home. He undertook a speaking tour in the mid-West to support the Treaty, collapsed in Colorado in September 1919 and in October suffered a stroke from which he never recovered. The extent of his illness was kept from the public and conduct of affairs passed to his wife, and his secretary, Joseph Tumulty (1879–1954). In March 1920, the Senate voted by 49 to 35 to ratify the Treaty of Versailles, seven short of the 2/3 majority required. Thus the US never joined the League of Nations and Wilson's plan for international collective security was fatally weakened from the outset. Despite his tragic failures, Wilson has consistently been ranked by US historians as one of the six greatest presidents. He retired in Washington, died and was buried there.

Winckelmann, Johann Joachim (1717–1768). German archaeologist, critic, art historian and consultant, born in Prussia. Son of a cobbler, he had to struggle to obtain an education and it was only after 15 years as tutor and schoolmaster and much study that he realised his ambition of going to Rome (1755). He became a librarian in the Vatican and secretary to the great collector Cardinal Alessandro Albani. His *History of Ancient Art (1764) and *Reflections on the Painting and Sculpture of the Greeks (1765) were extremely influential in reviving popular interest in the art of Greece (which he never visited). He wrote extensively about the excavations at Pompeii and Herculaneum and has been called the 'father of modern archaeology'. *Goethe compared him to *Columbus. A great writer and a profound thinker, he was stabbed to death in Trieste by a homosexual acquaintance.

Windsor. British dynastic name adopted in 1917 when *George V gave up his German titles. (The previous name was *Wettin, the family of Prince *Albert, but invariably described as *Saxe-Coburg-Gotha.) In 1960 it was announced that descendants of Queen *Elizabeth II and Prince *Philip, other than those styled princes and princesses, should bear the surname Mountbatten-Windsor.

Windsor, Duke of see Edward VIII

Wingate, Orde Charles (1903–1944). British soldier. He served as an officer in British army intelligence in Palestine (1936–39) but was repatriated for his pro-Zionist activities. In Palestine he met and impressed *Wavell who sent him first to Ethiopia (1940) to organise guerrillas against the Italians and, in 1942, to India to conduct similar operations behind the Japanese lines in Burma. After careful training and practice, the first raid of Wingate and his ‘Chindits’ was made early in 1943. When Wingate with some 60 per cent of his original force returned in May he had proved that a force could live and fight for several weeks sustained only by supplies hazardously brought by air. Now hailed as a hero, Wingate persuaded *Churchill and *Roosevelt to allow him to command a large force of more than 20 battalions, British, Gurkhas and Nigerians, which should be dropped from the air to form an enclave behind the Japanese lines. The drop successfully took place, but, while Wingate was returning from a conference to discuss subsequent difficulties and delays, his aircraft crashed into a hill and he was killed. Courageous and...
imaginative, he was intolerant of opposition but was able to win and sustain the enthusiasm of political leaders as well as troops.

**Wingate, Sir (Francis) Reginald, 1st Baronet** (1861–1953). British general and administrator. He served in India and Aden before being posted to the Egyptian army. His record there led to his appointment as Governor-General of the Sudan in 1899–1916 where he created an efficient administrative structure. As High Commissioner to Egypt 1917–19, he was virtual ruler, collaborated with *Allenby in supporting the Arab revolt and began negotiations with *Zaghlul and the Wafd party.

**Winstanley, Gerrard** (1609–1676). English 'leveller', born in Lancashire. A failed cloth merchant, in 1649, with William Everard he led a group of 'diggers' who asserted their right to cultivate wasteland at Waltham-on-Thames and Cobham until dispersed by force and wrote six interesting tracts calling for communal ownership and the abolition of hierarchies. His *Law of Freedom in a Platform* (1652), dedicated to *Cromwell, advocated a Communist society. He also wrote on religion and was a forerunner of the Quakers.

Wint, Peter de (1784–1849). English water colourist. Of Dutch descent, he illustrated many aspects of English landscape and rural life. Among his paintings are *The Hay Harvest, Nottingham, Richmond Hill and Cows in Water*.

**Winterhalter, Franz Xavier** (1806–1873). German painter. He became famous for his royal portraits, e.g. of *Louis Philippe of France, *Napoléon III and the Empress Eugénie, the Empress Elizabeth of Austria, *Leopold I of the Belgians and Queen Victoria, Prince Albert and the British royal family*.

**Winthrop, John** (1588–1649). American colonist. An Englishman by birth, a Puritan by religion, prosperous both as lawyer and Suffolk landowner, he sponsored the Massachusetts emigration scheme and went there as its first governor in 1630, an office which he held until 1633 and from 1637 until his death. Many of the social and political institutions of Massachusetts preserved his memory but the rigid Puritanism of the administration caused many to leave the colony. Winthrop's diary is an important authority for the early period of American history. His son, *John Winthrop* (1606–1676), a chemist and first American Fellow of the Royal Society, established the first iron furnaces in Massachusetts. He became Governor of Connecticut 1660–76.

**Wiseman, Nicholas Patrick Stephen** (1802–1865). Anglo-Irish cardinal, born in Seville. Of Irish descent, he was educated for the priesthood at the English College in Rome, becoming rector in 1828. Realising the way for a revival in England had been prepared by the Tractarian movement in the Church of England (*Keble, *Newman, *Pusey*), he went there in 1840, became vicar-apostolic in London (1848) and in 1850 *Pius IX created him cardinal and Archbishop of Westminster, re-establishing the Catholic hierarchy in England after 292 years.

**Withering, William** (1741–1799). English botanist, born in Wellington. Son of an apothecary, he trained in medicine at Edinburgh University, graduating MD in 1766. Withering practised first in Stafford and then in Birmingham. He became an active member of the Lunar Society alongside Erasmus *Darwin, Joseph *Priestley and Josiah *Wedgwood. Withering is important in the history of botany for his *A Botanical Arrangement of all the Vegetables Naturally Growing in Great Britain* (1776), which made early use of the Linnaean method of classification. He also performed useful chemical and mineralogical analysis, and translated Torbern Bergman's *Mineralogy*. His most original scientific work was his championing of digitalis, derived from foxglove, as a specific for diseases ranging from dropsy to heart trouble. A slightly querulous man, Withering spent the last years of his life in bitter controversy with Erasmus Darwin and his son.

**Witt, Jan de see de Witt, Jan**

**Witte, Sergei Yulievich, Count** (1849–1915). Russian statesman. At first an official in the railway administration, he was appointed Minister of Finance (1892). He introduced various financial reforms, sponsored the building of the Trans-Siberian Railway and promoted industrial development. He lost favour and was dismissed (1903), but was recalled to negotiate peace with Japan (1905). The terms he secured in the Treaty of Portsmouth (1905) were more favourable than had been expected, and his reputation was enhanced. Created a count in recognition, he persuaded the tsar *Nikolai II to sign the Manifesto of 1905 promising to set up a Duma (parliament) that had elements of constitutional government. He became Premier (1905) but resigned almost immediately when he failed to obtain the support of the Duma. He was followed shortly by the more conservative *Stolypin*.

Wittelsbach. German dynasty. It enters history in the 11th century, taking its name from a castle in west Bavaria. Later there were numerous branches, the most important of which ruled in the Palatinate and (eventually as kings) in Bavaria. From the former branch, through *Elizabeth, daughter of *James I, stem the present British royal house and (after the failure of the royal Stuart line) the later Jacobite pretenders.

Wittgenstein, Ludwig Josef Johann (1889–1951). Austrian philosopher (naturalised British 1938), born in Vienna. His affluent family, originally Jewish, became Catholics in the 1830s, and his father Karl Wittgenstein (1847–1913) made a great fortune in the steel industry. Ludwig attended the Linz Realschule (*Hitler was a fellow student), the Berlin Technical High School and Manchester University where he studied engineering. Influenced by the writer Karl *Kraus, he later became interested in mathematics and at Cambridge worked with Bertrand *Russell. He served as an Austrian officer in World War I, then worked in Vienna as a school teacher and architect. His Tractatus Logico-Philosophicus (1921) presents a system usually described as logical atomism, comprising a theory of language and a closely related physical view of the world. Language is seen as basically made up of simple propositions, which are immediately meaningful because they picture (or have the same structure as) simple or ultimate facts. The Tractatus, notoriously difficult to interpret, also contains, among other doctrines, the view that the only meaningful assertions are either factual or strictly logical ones. It thus anticipates the central meaning of the theory of logical positivism. He returned to Cambridge in 1929, took out his PhD and became a Fellow of Trinity College 1930–36, 1939–51. He succeeded G. E. *Moore as professor of philosophy 1939–49. Wittgenstein's later work, published posthumously, is contained in The Blue and Brown Books (1958) and Philosophical Investigations (1953). It includes a rejection of his earlier view of language, eschews metaphorical speculation about ultimate facts and offers reflections on the nature of philosophy. Language is now seen to have a large number of functions, including promise-making and giving orders, for example. It is absurd, Wittgenstein argues, to assimilate all these to the business of stating facts. They are like games, which overlap in various ways but have no common character. Philosophy, he suggests, should be an attempt to clear up puzzles that have arisen, at least in part, through linguistic confusions. The concern of recent British philosophers with the clarification of concepts owes much to Wittgenstein's inspiration. His brother Paul Wittgenstein (1887–1961) was a pianist who lost his right arm in World War I and commissioned works for the left hand from *Ravel, Richard *Strauss, *Prokofiev, *Korngold, *Hindemith and *Britten.

Wladislaw. Four Polish kings. Wladislaw I (known as the ‘the Short’) (1260–1333, reigned from 1320) was instrumental in restoring the kingdom. Wladislaw II (Jagiello) (1350–1434, reigned from 1386), a grand duke of Lithuania, married the Polish queen *Jadwiga. He checked the power of the Teutonic knights and agreed to the conversion of the Lithuanian subjects to Christianity. Wladislaw III (1424–1444, King of Poland from 1434 and of Hungary from 1440) led two crusades against the Turks. The reign of Wladislaw IV (1595–1648, reigned from 1632) was one of internal turmoil and external wars.

Wodehouse, P(elham) G(renville) (1881–1975). English-American novelist and playwright, born in Guildford. From a family of dispossessed landed gentry, he was educated at Dulwich College, worked as a bank clerk, then began writing boys' stories. He moved to New York in 1909, lived there throughout World War I, and became successful as a musical comedy librettist (with Cole *Porter, George *Gershwin, Irving *Berlin and Jerome *Kern), and author of humorous serials for magazines, featuring such characters as Psmith, Ukridge, Mr Mulliner and the Earl of Emsworth. He wrote 96 books and developed a unique prose style. By weaving his consummately stylish humorous fancies round a few brilliantly conceived characters (caricatures even when they first appeared) and by never seriously altering the character of his dialogue, he maintained an almost unparalleled popularity for more than half a century. Bertie Wooster and his omnipresent manservant Jeeves (who first appeared in 1915) were successfully adapted for television. Among his best books were The Code of the Woosters (1938), Uncle Fred in the Springtime (1939) and Joy in the Morning (1947). His finest musical was Anything Goes (1934), written with Cole Porter. He lived in France from 1935, seemed oddly unaware that World War II was about to begin, was interned by the Germans in France in 1940, then held for a year in Belgium and Silesia. He made five wartime broadcasts for the Germans, evidence of extreme naivété, and never lived in England again. He became a US citizen in 1947. His admirers included W. H. *Auden, T. S. *Eliot, Aldous *Huxley, Evelyn *Waugh, George *Orwell, Ludwig *Wittgenstein, J. K. *Rowling and John *Le Carré.

Wöhler, Friedrich (1800–1882). German chemist. Trained in medicine he turned to chemistry, of which he was professor at Göttingen 1836–82. He was the first (1827) to isolate aluminium by reduction of its anhydrous chloride with potassium and he used similar means to isolate beryllium (1829). He was the first to make calcium carbide, from which he prepared acetylene, and he also improved the method of manufacturing sulphur. His synthesis of urea from ammonium cyanate by intermolecular re-arrangement (1828) disproved the theory that organic compounds could be produced only by living organisms. Many other examples of such synthesis followed, opening a new era in organic chemistry. 

Wolf, Hugo (Philipp Jakob) (1860–1903). Austrian composer. He contracted syphilis in 1878 and became manic depressive from 1890. His dismissal for insubordination while a student at the Vienna Conservatoire was followed by a period of precarious living. In the many songs he then wrote, the influence of *Schumann is especially evident. As music critic of the Wiener Salonblatt (1884–87) he made many enemies by his savage attacks on *Brahms and his circle and by his wholehearted support of *Wagner. His best known works are song collections: 51 settings of Mörike (1888), 20 of Eichendorff (1880–88), and 51 of *Goethe (1888–89). The Spanisches Liederbuch, 54 poems (1889–90) and the Italienisches Liederbuch, 46 poems (1890–91, 1896) set translations by Paul *Heyse. Wolf also wrote an opera, The Corregidor (1895) and the Italian Serenade for string quartet (1887). In 1897 he became insane and, after a brief period of recovery, ended his life in an asylum. His songs, among the greatest written, represent a unique blend of poetry and music into an organic whole, achieved by a close interdependence of the voice and piano parts and his own imaginative response to the written word.

Wolfe, James (1727–1759). British soldier, born at Westerham, Kent. While still a boy he adopted his father’s profession of soldier and he was only 17 when he took part in the Battle of Dettingen as a regimental adjutant. He fought at Falkirk and Culloden (against the Jacobites) and on the Continent. After the opening of the Seven Years’ War (1756) he was chosen by Pitt to command a brigade in *Amherst’s expedition against Cape Breton in Nova Scotia. Hailed for the skill and heroism that led to the fall of Louisburg (1758) he was given command of the expedition sent to capture Québec and end French rule in Canada. He finally achieved success (September 1759) by the discovery of a steep unguarded path that enabled him to land his troops and scale the cliffs of the St Lawrence River unobserved. The armies met on the Plains of Abraham outside the city. Both commanders, the French general *Montcalm and Wolfe were killed in battle but Wolfe lived long enough to hear of his complete victory. He was only 32, one of the youngest and most famous of British generals.

Grinnell-Milne, D., Mad is He? 1963.

Wolff, Kaspar Friedrich (1733–1794). German physiologist. One of the 18th-century pioneers of embryology, having studied at Berlin and Halle, he graduated in 1759. He served for a time as an army surgeon and developed a Berlin private practice. In 1767 he moved to St Petersburg as an Academician in Anatomy and Physiology. He researched there continuously until his death. Wolff’s work in embryology challenged the ‘preformationist’ hypothesis (which held that the embryo contained in miniature all the parts of the adult-to-be, ready formed). Wolff adopted the counter position that the embryo contained as yet undifferentiated tissue. He tried to show that the growing tips of plants contain undifferentiated tissue which only gradually unfolds into the distinct parts, such as leaf and flower. This more ‘evolutionist’ account came to dominate the field over the next half century.

Wolfit, Sir Donald (1902–1968). British actor manager. He made his debut in 1920 and his first London appearance in 1924. In 1937 he formed his own touring company and, through provincial tours and the lunchtime performances he gave in wartime, presented *Shakespeare’s plays and other classical drama to audiences which would otherwise never have seen them. Clement *Freud commented that “Gielgud was a tour de force, while Wolfit was forced to tour. He played character roles in many films.

Wolfit, D., First Interval. 1954.

Wolfram von Eschenbach (c.1170–1220). German epic poet and minnesinger. His love poems glorify married love and deep affection, in contrast to the tradition of courtly love where women are simply exploited. He wrote the epic Parzival, incorporating the legend of the Holy Grail and the inspiration for *Wagner’s operas Lohengrin and Parsifal.

Wollaston, William Hyde (1766–1828). English physician and chemist. He developed a method of making platinum malleable for conversion into wire and vessels, and the income from this enabled him to retire from medical practice and take up scientific research. He discovered palladium (1803) and rhodium (1804), drew up a table of equivalents, showed that static and current electricity are similar, devised a lens combination that eliminated aberration, and invented the camera lucida and the reflecting goniometer used to measure the angles of crystals. The mineral Wollastonite, a compound of calcium, silicon and oxygen, was named after him.

Wollstonecraft, Mary (later Godwin) (1759–1797). English writer and feminist, born in London. After an unhappy and violent childhood, she worked as a governess and translator and, inspired by the French Revolution, wrote her which anticipated Thomas *Paine’s Vindication of the Rights of Man. She married William *Godwin in 1796 and died soon after the birth of her daughter Mary (Mary Wollstonecraft *Shelley).

Wollstonecraft, Mary (later Godwin) (1759–1797). English writer and feminist, born in London. After an unhappy and violent childhood, she worked as a governess and translator and, inspired by the French Revolution, wrote her which anticipated Thomas *Paine’s Vindication of the Rights of Man. She married William *Godwin in 1796 and died soon after the birth of her daughter Mary (Mary Wollstonecraft *Shelley).

Wolseley, Garnet Joseph Wolseley, 1st Viscount (1833–1913). British field marshal. He held his first independent command in Canada where his administrative skill enabled him to suppress the Red River rebellion (1870) without bloodshed (Louis *Riel). He took a prominent part in carrying out and extending *Cardwell’s army reforms. His victory at Tel el Kebir (1882), by which he completely crushed the rebellion of *Arabi Pasha in Egypt, added still further to his fame, and he was created baron. In 1885 he arrived in Khartoum too late to save *Gordon, and he shares blame with *Gladstone’s Government. Nevertheless, he was promoted to Viscount. He created the modern British army, was Commander-in-Chief 1895–99 and received the OM in 1902.

Wolsey, Thomas (1471–1530). English cardinal and statesman, born in Ipswich. Son of a butcher (or innkeeper), he was educated for the priesthood at Oxford, became chaplain to the Archbishop of Canterbury (1501) and, a few years later, chaplain to the king. Under *Henry VIII, who liked and admired him and found him useful for diplomatic missions, Wolsey advanced quickly. He was made Bishop of Lincoln and then Archbishop of York 1514–30. He succeeded Archbishop William Warham to become Lord Chancellor 1515–29 and Henry’s chief minister. Pope *Leo X created him cardinal in 1517. An inveterate collector of ecclesiastical offices, Wolsey doubled up as Bishop of Bath and Wells 1518–22, Prince-Bishop of Durham 1523–29 and Bishop of Winchester 1529–30. Henry’s foreign policy aimed at maintaining a balance between the young *François I of France and the emperor *Charles V, who also became King of Spain. In Wolsey he found a skilful agent who was obsessed with the idea of making his master Europe’s arbiter. At home too he aimed at making Henry supreme, only once summoning parliament and when he did so addressing the members in the most arrogant terms; a strengthened court of the Star Chamber kept the nobles in check. Thus his unpopularity grew and he depended entirely on royal favour. This was at first lavish and enabled Wolsey to build the magnificent palace of Hampton Court (which he later found it expedient to hand over to his royal master), but Henry began to have misgivings about his minister’s growing power and did not support unreservedly his attempts to be elected pope. The crisis in their relations arose through Henry’s domestic affairs. Queen *Catherine had borne Henry six children but only one girl (Mary) had survived. He needed a son and planned to annul his marriage on the grounds that, despite papal dispensation, it was an infraction of Church law to marry his dead brother’s widow. With the agreement of Henry, Wolsey, as papal legate, summoned the king to appear before an ecclesiastical court. But these and subsequent proceedings were drawn out and indecisive, and Henry, blaming Wolsey for the delays, began negotiations with the papacy behind his back. The situation was abruptly changed when the troops of Charles V seized and sacked Rome (1527) and the pope was a virtual prisoner of Charles, Queen Catherine’s nephew. Henry now realised that he could only gain his purpose—doubly urgent now owing to his infatuation with Anne *Boleyn—by a breach with the papacy in which Wolsey would be unwilling to assist. Wolsey therefore retired in disgrace to his see at York (1529). But his enemies at court were not to be appeased. Charges were made against him and eventually one of treason, which he was summoned to London to answer. On the way he fell ill at Leicester Abbey and there died. Wolsey was a
great patron of education and Cardinal College (now Christ Church), which he founded at Oxford, remains his finest memorial.

Wood, Sir Henry Joseph (1869–1944). English conductor. With Robert Newman, he was co-founder of the famous Promenade Concerts in London which he conducted each year from 1895 to 1941. They were given at the Queen's Hall until it was destroyed by bombing in 1941, then at the Albert Hall, and are now called the Henry Wood Promenade Concerts. He wrote My Life of Music (1938).

Woodward, Robert Burns (1917–1979). American chemist. Educated at the Massachusetts Institute of Technology, he was a chemistry professor at Harvard 1950–79 and became known as the father of synthetic organic chemistry. He succeeded in synthesising penicillin, terramycin, chlorophyll, strychnine, quinine, reserpine, vitamin B12 and many other substances. He received the 1965 Nobel Prize for Chemistry, was a Fellow of the Royal Society and a Davy Medallist.

Woollcott, Alexander (1887–1943). American journalist. He became a famous dramatic critic in New York, respected and feared for his capacity to make or break plays. Later he won renown as a broadcaster and essayist. Sheridan Whiteside, the central character in the play (and film) The Man who Came to Dinner by George S. Kaufman and Moss Hart was based on him.

Woolley, Leonard (1880–1960). English archaeologist. Famed for his excavations of the site of the biblical ‘Ur of the Chaldees’ in Mesopotamia, after being assistant curator at the Ashmolean Museum, Oxford, he gained practical experience of excavation in Egypt, Syria, Nubia and at Carchemish in Turkey (assisted by T. E. *Lawrence). After being a prisoner of war in Turkey in World War I he spent 12 years from...
1922 excavating at Ur (by then in Iraq). At the royal cemetery, evidence of human sacrifice at the burials of the nobles was found and rich accumulations of artistic treasures were uncovered. These are described in The Royal Cemetery (1934). His other works include Digging up the Past (1930).

Woolley, C. L., Spadework. 1953.

Woolman, John (1720–1772). American Quaker preacher, born in New Jersey. A farmer’s son, he preached and wrote against slavery and published several religious works, as well as his Journal (1774, often reprinted).

Woolton, Frederick James Marquis, 1st Earl of (1883–1964). British administrator, businessman and Conservative politician. He ran Lewis’s department store, received a peerage in 1939 and was appointed party chairman 1945–55 and with R. A. *Butler was largely responsible for their return to power. He joined the Conservatives on their defeat in 1945, was appointed party chairman 1945–55 and with R. A. *Butler was largely responsible for their return to office in 1951. He served as a minister again 1951–54.

Woolton, Frederick James Marquis, 1st Earl of (1883–1964). British administrator, businessman and Conservative politician. He ran Lewis’s department store, received a peerage in 1939 and was appointed party chairman 1945–55 and with R. A. *Butler was largely responsible for their return to office in 1951. He served as a minister again 1951–54.

Woolton, Frederick James Marquis, 1st Earl of (1883–1964). British administrator, businessman and Conservative politician. He ran Lewis’s department store, received a peerage in 1939 and was appointed party chairman 1945–55 and with R. A. *Butler was largely responsible for their return to office in 1951. He served as a minister again 1951–54.
With unextinguish'd taper I kept watch,
Reading at intervals; the fear gone by
Pres'd on me almost like a fear to come;
I thought of those September Massacres,
Divided from me by a little month,
And felt and touch'd them,
a substantial dread;
The rest was conjured up
from tragic fictions,
And mournful Calendars of true history,
Remembrances and dim admonishments.
'The horse is taught his
manage, and the wind
Of heaven wheels round and
treads in his own steps,
Year follows year, the tide returns again,
Day follows day, all things have second birth;
The earthquake is not satisfied at once.'
And in such way I wrought upon myself,
Until I seem'd to hear a voice that cried
To the whole City, 'Sleep no more.'
1663, carried out in 1669). A visit to Paris (1665), where he met *Bernini, was important in developing his style. Surveyor-General of London 1666–69 and of the Royal Works 1669–1718, he was working on the restoration of the old Gothic St Paul's Cathedral, when the Great Fire (1666) destroyed it and about two-thirds of the city. Although his ambitious plans for rebuilding London were not accepted, he was commissioned to design a new St Paul's and 51 city churches, of which 20 survive. Early plans for St Paul's were rejected as (i) too grandiose and (ii) too modest; building began in 1675 and was extensively modified as work proceeded. The great dome was begun in 1698 and St Paul's was completed in 1711. Wren later worked, especially the western towers of St Paul's, shows familiarity (probably through engravings) with Roman baroque. His secular work is almost equally famous: the new buildings of Hampton Court for all their magnificence conform to the domestic charm of the old. To the same decade (the 1690s) belong the Royal Hospital, Chelsea, Kensington Palace and the start of work on Greenwich Hospital. Earlier the perfect proportions of Trinity College Library in Cambridge had given promise of what he could achieve. Knighted in 1673, he was President of the Royal Society 1680–82 and elected as a Whig MP in 1685, 1689 and 1701, rarely (if ever) attending. He married twice, and a son by each marriage survived him. Buried in St Paul's, his modest grave is marked by the inscription: ‘Si monumentum requiris, circumspice’ (*If you seek a monument, look around*).

Tinniswood, A., His Invention So Fertile: A Life of Christopher Wren. 2001.

Wright, Sir Almroth Edward (1861–1947). English pathologist. Professor of experimental pathology at London University 1902–46, he developed the first successful anti-typhoid serum and investigated parasitic diseases. He was the teacher of Sir Alexander *Fleming.

Wright, Frank Lloyd (1867–1959). American architect, born in Wisconsin. He studied civil engineering for a year at the University of Wisconsin, was influenced by the writings of *Viollet-le-Duc, then worked in Chicago (1889–93) in the office of Louis *Sullivan. Between 1900 and 1910 he designed 50 houses in the ‘Prairie style’, emphasising low, horizontal proportions: the prototype of the open-planned house. The Robie house in Chicago (1909) is a famous example. His highly original style integrated engineering techniques into architectural expression, by use of appropriate materials and stressing the importance of a harmonious relationship between building and landscape. Wright had a turbulent and well-publicised domestic life. He built a famous house and work centre, Taliesin, at Spring Green, Wisconsin in 1911. (In August 1914 his mistress, two of her children and four others were murdered there by a deranged servant and part of the house was burnt down.) He built another home and school, Taliesin West, at Scottsdale, Arizona. His Imperial Hotel, Tokyo (1916–22), one of the few major buildings to survive the 1923 earthquake, was demolished in 1968. By 1930 his work, using natural materials and related to landscape, appeared to be eclipsed by the mechanistic ‘international style’ of *Le Corbusier, *Gropius and *Mies van der Rohe, which he detested. He concentrated on teaching, then produced his greatest works. Among his masterpieces were the ‘Fallingwater’ house, near Pittsburgh (1936–37), the Johnson Wax Building, Racine, Wisconsin (1936–39) and the *Guggenheim Museum, New York (1956–59). He designed about 800 buildings of which 484 were constructed and 433 survive. Wright was also a furniture and window designer and a prolific writer, particularly influential in Europe. He wrote a revealing (but wildly inaccurate) Autobiography (1932). His hero was *Wagner and his life had operatic overtones.

Wright, Judith Arundell (1915–2000). Australian poet. Born into a pastoralist family, she was educated at Sydney University, travelled in Europe, worked on the land and at the University of Queensland, and married the philosopher and novelist J. P. McKinney. She published 12 volumes of poetry, the first, The Moving Image (1946), establishing her in the front rank of Australian poets. She wrote her family history in Generations of Men (1959), edited anthologies, published criticism and was an ardent campaigner for conservation of the environment and Aboriginal land rights. She had an intimate relationship with the economist H. C. *Coombs from 1972, which was only revealed after their deaths. Their letters to each other are moving.

Wright, Thomas (1711–1786). English astronomer, born in County Durham. He became one of the most original cosmological and astronomical thinkers in 18th-century England. Largely self-taught, he set himself up as a teacher of navigation and pursued astronomical research. In 1750 he published his most important work, the Original Theory, or New Hypothesis of the Universe. This was primarily an attempt to fuse his own heterodox religious views with physical truth. He believed that the universe had a divine and gravitational centre, which was the abode of light. He saw the Milky Way as a thin shell of stars, and proposed the existence of a multiplicity of star systems, each with its own supernatural centre. He later published his Second Thoughts in which he suggested that the universe rather consisted of an infinite sequence of concentric shells surrounding the divine centre. The sky is one of those opaque shells. Stars he saw as pinpricks, letting light pass through from within.

Wright, Wilbur (1867–1912) and Orville (1871–1948). American aviation pioneers and inventors, born in Millville, Indiana and Dayton, Ohio, respectively. The Wright brothers were the sons of a clergyman, lived austere and never married. They made and repaired bicycles in Dayton and became interested in gliding, after reading Otto *Lilienthal's experiments. When they began to think of aircraft construction, they found themselves frustrated by a lack of scientific data. To overcome this they built (1901) a small wind tunnel to determine the effect of air pressure on wing surfaces. They invented 'ailerons' or wing flaps as controls and finally they designed and built their first aircraft, a machine weighing 340 kg (750 lb.) and powered by a 12 h.p. petrol motor. On 17 December 1903 they made what are generally regarded as the first successful powered, sustained and controlled flights at Kitty Hawk, North Carolina. The first flight, made by Orville in Flyer I, lasted for only 12 seconds but on the fourth the machine travelled 260 metres (852 feet) in 59 seconds, a speed of 48 kph (30 mph). By 1905 Wilbur had remained aloft for 38 minutes in Flyer III. Incredibly, their achievements were never reported nor believed in the US and it was a successful demonstration at Le Mans, France (8 August 1908), which proved the sceptics wrong, making the brothers famous. In September 1908 Orville flew for 62 minutes; 8 days later he crashed, killing a passenger. The Wright Aeroplane Company was founded in 1909. Wilbur, who was the driving force, died of typhoid (R. W. *Pease).

Wriothesley, Henry see Southampton, 3rd Earl of

Wunderlich, Carl Reinhold August (1815–1877). German physician. He practised in Leipzig where he became professor. Among the earliest to recognise that fever was not a disease per se, but a symptom, he introduced the regular taking of temperatures and their recording on a chart. (The clinical thermometer he used was a clumsy instrument more than 30 cm long, which took near 20 minutes to register.)

Wundt, Wilhelm Max (1832–1920). German experimental psychologist. Son of a Lutheran pastor, he pursued a career in medicine, attending university at Tübingen, Heidelberg and Berlin, where he worked under *Du Bois-Reymond. He taught at Heidelberg until 1871, moving first to Zürich and then to Leipzig. After a generation in the shadows, his career blossomed. His laboratory became one of the great centres of psychological research. Wundt's approach to psychology was always physiological. He was concerned with response and reaction, with the speed of nerve impulses, and with the understanding of electrical impulses in the brain. His approach was frequently described as 'psychology without a soul', though he denied that his outlook was reductionist and materialist. Emil *Kraepelin was his pupil.

Wyatt, James (1746–1813). English architect. Son of a builder, after studying in Italy he returned to England and worked in the style made fashionable by the *Adam brothers. From about 1780 he became a leader of the Gothic revival. The eccentric William *Beckford gave him a wonderful opportunity when he commissioned (1796) Fonthill Abbey, and Wyatt escaped blame when the 276ft tower fell down (1820). Wyatt did much unfortunate restoration of churches and was chosen by *George III to work for him at Windsor Castle. The present appearance of the castle is due to his nephew Jeffry Wyatt (1766–1840), later Sir Jeffry Wyattville (thus titled to lessen the confusion caused by the fact that nine members of the Wyatt family were architects).

Wyatt, Sir Thomas (1503–1542). English poet and diplomat. He was sent on diplomatic missions to France and the papal court, after which he privately visited many Italian cities, where he admired and absorbed their literary culture. His further career was interrupted by *Henry VIII's suspicions about his relationship with *Anne Boleyn and he spent two brief periods in the Tower of London. He translated much of *Petrarch and is credited with introducing the Petrarchan sonnet into English literature. His own lyrics were published after his death, in Titel's Miscellany (1557). In the 20th century he has been recognised as a good, and even great, poet after centuries of critical neglect.

His son Sir Thomas Wyatt the Younger (1521?–1554), a soldier, raised a rebellion to prevent Queen *Mary's marriage to *Philip II of Spain and was executed when his plan failed.

Wycherley, William (1640–1716). English playwright. After some years in France and attending Oxford University, he went to London, where he lived a somewhat dissipated life while nominally studying the law. His first play, Love in a Wood (1671), was dedicated to the King's mistress, the Duchess of Cleveland, whose patronage he won with that of the Duke of *Buckingham and of the King himself. The Gentleman Dancing Master (1672) was less successful, but his third play, The Country Wife (1675), was one of the most entertaining Restoration comedies. It was adapted by *Garrick and has been revived in modern times. The Plain Dealer, written earlier but produced in 1676, was the last of his plays. He married the
Countess of Drogheda (1679) but was reduced to poverty by lawsuits that followed her death (1681). *James II came to his rescue with a pension. In later life Wycherley became a friend of *Pope. His plays have been condemned for their bawdryness (a reflection of the taste of the period) but his wit and satire are indisputably brilliant.

Wyclif (Wycliffe, Wicliffe), John (c.1320–1384). English ecclesiastical reformer, born in Yorkshire. He is first mentioned in 1360, when, already renowned for scholarship, he was master of Balliol College, Oxford. He soon left to work in nearby parishes, which allowed him to maintain his links with Oxford. By this time he was known at court and had come under the powerful patronage of *John of Gaunt. In 1374, the same year that he was presented with the living of Lutterworth, he was sent on an embassy to confer with the papal envoys at Bruges. The removal of the papacy to Avignon and its close connexions with the French crown had increased English resentment at papal exactions. Thus Wyclif, taking his stand on the authority of the New Testament, was voicing the popular view in denouncing the Church's right to interfere in secular affairs and in maintaining the state's right to withdraw ecclesiastical endowments. Supported by John of Gaunt, who wanted the Church's wealth for the French wars, Wyclif, whose aim was a return to apostolic simplicity, was able to evade episcopal and papal attempts to secure his condemnation. The scandal of two popes (1378) *Urban VI (supported by England) at Rome and *Clement VII at Avignon, persuaded Wyclif to go further. He not only attacked the Church's corruption and the pope's temporal power, he also rejected the system of priestly absolution, penances and indulgences. To convince his followers that these lacked scriptural authority he organised, with the help of the Oxford scholars, a complete translation of the Bible from the Latin Vulgate to which he contributed a rendering of the Gospels and probably most of the New Testament. It was condemned and suppressed. Nevertheless, nearly 200 manuscript copies survive, suggesting that it was widely used in his time. So far his support had been widespread even in the Church itself, but when he attacked the dogma of transubstantiation and assailed the whole hierarchy the attitude changed. Condemned by a synod (1382) he had to retire to Lutterworth, where he died. His followers, contemptuously called 'Lollards' after a Dutch word meaning 'mumblers', were generally stamped out. Wyclif's teaching strongly influenced Jan *Hus, the great Bohemian reformer, and the doctrines of both were condemned by the Council of Constance (1414–18).

Wyeth, Andrew Newell (1917–2009). American painter. His spare, sometimes unnerving, landscapes were extremely popular and widely reproduced. In 1963 President *Kennedy awarded him the Medal of Freedom for work 'which in the great humanist tradition illuminated and clarified the verities of life'.

Wykeham, William of (1324–1404). English prelate and patron of learning. He entered royal service (c.1347) and eventually as Lord Privy Seal and Lord Chancellor 1363–71 became the virtual head of the administration. Meanwhile his ecclesiastical progress continued and in 1367 he was appointed Bishop of Winchester. During *Edward III's closing years he fell into disfavour for supporting the parliamentary opposition but, with the accession of *Richard II, he was back in office and was again Lord Chancellor 1389–91. During his long career he had amassed a great fortune with which he founded Winchester College and New College, Oxford. He also bore the expense of rebuilding the nave of Winchester Cathedral in the new Perpendicular style.

Wynkyn de Worde see Worde

Wyss, Johann Rudolf (1781–1830). Swiss writer. He wrote the Swiss national anthem and finished and published *The Swiss Family Robinson (English translation 1814), which, originally written by his father for his children, quickly became a worldwide classic.

Wyszynski, Stefan (1901–1981). Polish cardinal. Bishop of Lublin 1946–48, he became Archbishop of Warsaw and primate of Poland 1948–81 and was created cardinal in 1953. Throughout the period of Communist rule he maintained the Church's position with the greatest courage. Imprisoned 1953–56, by cooperating with the government where this did not offend the Church's dignity and conscience, he saved it from still greater interference.
X, Malcolm see Malcolm X

Xavier, St Francis (Francisco de Jasso y Azpilicueta) (1506–1552). Spanish (Basque) Jesuit missionary, born in Javier, Navarre. He studied in Paris from 1525 and there met Ignatius *Loyola (1529) and was among the first members of the Society of Jesus. Ordained in 1537, in 1541 he made his first missionary journey to Goa in Portuguese India. From there (1545–49) he visited many parts of the East Indies including Ceylon, where he converted the King of Kandy. A mission he established in Japan (1549–51) endured for a century and attained great influence. He returned to Goa (1552) to organise a similar mission to China, but on his way there died of fever on the island of Changchwen (St John) near Macao. One of the greatest Christian missionaries, he became known as ‘apostle of the Indies’ and was canonised in 1622. As well as many interesting letters his writings include treatises on asceticism.

Xenakis, Yannis (1922–2001). Greek composer, architect and mathematician, born in Romania, living in France. He fought in the Greek Resistance, then worked as an architect for 12 years with *Le Corbusier, while studying composition with *Honegger and *Messiaen. He was the originator of ‘stochastic’ (i.e. dependent on random variables) music, in which pieces were programmed with the aid of a computer.

Xenophon (428–354 BCE). Greek soldier and writer, born in Attica. A pupil of *Socrates at Athens, he wrote several books about him, e.g. *Memorabilia, that reveal a much more conventional personality than that portrayed in *Plato’s works. Xenophon’s greatest experience as a man of action took place when (401 BCE) he joined the army of the Persian prince *Cyrus in revolt against his brother King *Artaxerxes. The death of Cyrus (400) left 10,000 Greeks marooned in Persia. Xenophon placed himself at their head and led them on the long and hazardous march across Asia Minor made famous by his *Anabasis. Next he joined the army of the Spartan king Agesilus, an act regarded as treasonable by the Athenians, who decreed his banishment. During his exile he lived in retirement at Scillus near Olympia, where he devoted much time to writing, and at Corinth. It is known that the banishment decree was eventually repealed but the exact date and manner of his death are uncertain. His other works include *Cyropaedia, a kind of political romance in which Cyrus I of Persia fills the role of a model ruler, and *Hellenica, a continuation of the work of Thucydides from 411 to 362 BCE. All Xenophon’s books are written in a clear, straightforward style and his historical works reveal a gift for narrative and an objective search for truth.

Xerxes I (Greek form of Kshajarsha) (c.519–464 BCE). King of Persia 485–64. Son and successor of *Darius I, having crushed revolts in Egypt and Babylon he continued his father’s preparations for an invasion of Greece. In the spring of 480 his great army began to cross the Hellespont (the Dardanelles) by a bridge of boats, an operation said to have taken a full week. No resistance was encountered during the march through Thrace until the Spartan king *Leonidas and his famous ‘Three Hundred’ made their heroic stand at the Pass of Thermopylae. When Xerxes reached Athens he found that the population had taken to the sea. Seated on his throne above the straits between Salamis and the mainland he had the humiliation of watching the destruction or dispersion of his ships. Fighting in Greece ended with the defeat and death of the Persian general Mardonius at Plataea 479. Much of Persepolis (Takht-e Jamshid) was built during his reign. Xerxes spent the rest of his reign in peace until his murder by the traitor Artabanus (see also *Ahasuerus). His grandson *Xerxes II (d.425 BCE) was murdered after ruling for 45 days.

Xia. Chinese dynasty, the first, possibly legendary, said to have been founded by Yu around 2200 BCE, displaced by the Shang about 1700 BCE.

Xi Jinping (1953– ) Chinese Communist official, born in Beijing. Son of the party veteran Xi Zhongxun (1913–2002), he became a party official in Fujian and Zhejiang provinces and in Shanghai. He became Vice President of China 2008–13 and *Hu Jintao’s presumed successor. General Secretary of the Chinese Communist Party and Chairman of the Central Military Commission 2012– and President of China 2013– , he represented the fifth generation of leadership since the Revolution. He argued for free trade, globalisation, action on climate change and strengthening legal institutions, while maintaining the CCP’s total monopoly on political power.

Ximenes (Jimenes) de Cisneros, Francisco (1436–1517). Spanish prelate and statesman, born in Castile. He completed his education for the priesthood in Rome, but though he received a papal nomination as archpriest for the Spanish diocese of Toledo, the archbishop refused to admit him and held him in prison for six years. After his release he retired to a Franciscan monastery where he gained such a reputation for learning and the austerity of his life that Queen *Isabella of Castile appointed him her confessor (1492). Three years later he became Archbishop of Toledo and in this dual capacity exercised his great talent for affairs of state. Eventually, Isabella having died (1504), and
with her husband and co-ruler *Ferdinand of Aragon often absent in Italy, her daughter and heiress Juana mad and her son-in-law *Philip of Burgundy dying in 1507, the influence of Ximenes (cardinal from 1507) became almost paramount. Much of what he did, and especially the centralising of monarchic rule and his financial management, was beneficial. The capture of Oran in Africa by an expedition (1509) financed and led by himself reduced piracy but his continued persecution of the Moors (in defiance of the promise of religious tolerance which led to the capitulation of Granada) did irretrievable harm. After the death of Ferdinand (1516), Ximenes became regent and fully maintained the royal authority, but on his way to meet his new sovereign, Carlos (afterwards the emperor *Charles V), the great minister died. Apart from his political achievements, Ximenes was a great patron of literature and the arts. He refounded the university of Alcalá de Henares and published at his own expense the great work of Spanish scholarship known (from Complutum, the Latin name for Alcalá) as the Complutensian Polyglot Bible.

**Xuantong** (Hsuan T’ung) see Pu’yi, Henry

Yadin, Yigael (1917–1984). Israeli archaeologist, soldier and politician, born in Jerusalem. He joined the Haganah defence force in 1933 and was Chief of Staff of the Israeli army (1948–52), professor of archaeology at the Hebrew University (1963–77 and 1981–84) and Deputy Prime Minister (1977–81). He carried out valuable work on the Dead Sea Scrolls, excavated Hazor (1955–58) and Masada (1963–65), and wrote several books.

Yagoda, Genrikh Grigorievich (1891–1938). Russian (Jewish) Communist official. He used the OGPU (United State Political Directorate) to raise forced labour for ‘Stalin’s first Five Year Plan and became head of the NKVD (Peoples’ Commissariat for Internal Affairs) 1934–36. He was shot as a ‘Rightist’ in the ‘Great Purge’.

Yakovlev, Aleksandr Nikolayevich (1923– ). Russian politician. He was influenced by the ideas of Aleksandr *Herzen (whose family name was also Yakovlev, but no relation). Inside the CPSU he worked in the science, culture, propaganda and journalism departments, was Ambassador to Canada 1973–83, a member of the Central Committee 1986–90 and the Politburo 1987–90. A close adviser of *Gorbachev, he concluded that the Party had no future and transferred his increasingly important support to *Yeltsin.

Yale, Elihu (1649–1721). British merchant, born in Boston, Massachusetts. He was educated in England, joined the East India Company and by 1687 was Governor of Madras. When the collegiate school of Saybrook, Connecticut, was moved to New Haven it was named after Yale (1718) in gratitude for a generous benefaction and, in 1887, renamed Yale University. It is regarded as the third oldest university in the US.

Yale, Linus (1821–1868). American inventor and industrial manufacturer. He invented various types of locks including those named after him.

Yamagata Aritomo, Prince (1838–1922). Japanese soldier and politician. One of the emperor *Mutsohito’s most influential counsellors (*genro*), he became War Minister in 1873 and Chief of Staff in 1878. He was responsible for modernising the organisation and equipment of Japanese forces. He served as Prime Minister 1889–91, 1898–1900 and continued the policy of modernisation that ultimately brought Japan to a position of influence. He became an Honorary OM in 1906.

Yamamoto Isoroku (1884–1943). Japanese admiral. Trained in naval aviation, he studied at Harvard, was a naval attaché in Washington and rose to be Commander-in-Chief of the Japanese combined fleet 1939–43. Although pessimistic about the outcome of war, he planned the Pearl Harbor strategy (1941) to strike a knockout blow against US naval forces. He directed the Battle of Midway (1942) and died when his plane was shot down in the South Pacific.

Yamashita Tomoyuki (1885–1946). Japanese general. He led the conquest of Singapore in 1942 and conducted the Philippines campaign. His success was ended by a counter-attack of US forces under General Douglas *MacArthur, by whom he was captured and hanged (for authorising atrocities) in Manila. His execution is now regarded as grossly excessive and vindictive.

Yang Jien see Sui Wendi

Yang Shangkun (1907–1998). Chinese politician and soldier. A member of the CPC from 1926, trained in Moscow and a veteran of the Long March 1934–35, he rose through the party apparatus but fell out with *Mao and was imprisoned 1966–79. He then rose with *Deng, although his approach to market reform was more cautious, became a Politburo member (1982) and President of the Peoples’ Republic 1988–93. His brother Yang Baibing (1920–1913) was a general in the People’s Liberation Army and another conservative who suppressed the Tiananmen Square demonstrations (1989).

Yeats, Jack Butler (1871–1957). Irish painter, born in London. Brother of W. B. *Yeats, he became a book illustrator and later a playwright who devoted himself to oils after 1915. He was regarded as the greatest Irish painter of his time.

Yeats, William Butler (1865–1939). Irish poet and dramatist, born in Dublin. Son of a barrister, John Butler Yeats, he was born into a Protestant family and, like his father and brother Jack Butler *Yeats, studied art. However, by 1889 he had published his first book of poems, *Crossways*, and soon became one of the leaders of the Irish literary movement. He was closely associated with Lionel Johnson, Katherine Tynan, and G. W. *Russell and took
part with Lady *Gregory in the various dramatic ventures that led to the opening of the Abbey Theatre, Dublin (1904). His lover Maude Gonne (Sean *MacBride) created some important roles. His early plays, The Countess Cathleen (1892, staged 1899) and Cathleen ni Houilhan (1902) contributed. Other plays included The Land of Heart's Desire (1894) and Deirdre (1907). Meanwhile volumes of his poetry were appearing in steady sequence. His early work was much concerned with Irish myth and folk lore, there were delicate romantic lyrics e.g. Down by the Salley Gardens (1889) and The Lake Isle of Innisfree (1892). Prose works, e.g. The Celtic Twilight (1893), evoked similar themes. In 1893 Yeats published an edition of *Blake, and the influence of mysticism, both the occult mysticism of the east and that of *Maeterlinck and the French symbolists, becomes apparent. The publication of a second collection of poems (1910) marked the beginning of Yeats's middle period, the twilight mists begin to disperse, imagination is tempered by reality, heroes of that violent phase in Irish history join those of myth. In 1917 he married Georgie Hyde-Lees (1892–1968) who was deeply involved in spiritualism and A Vision (1925) provides insight into his sources of poetic inspiration. Appointed as a senator of the Irish Free State 1922–28, he supported *Cospgrave's savage repression of Republican forces, indicated sympathy for *Mussolini and Fascism and authoritarian rule and emerged as a public character. In 1923 he won the Nobel Prize for Literature. In his later works, e.g. The Tower (1928), The Windling Stair (1933) and the last collections, there is greater simplicity but at the same time greater violence, of ecstasy, but also of bitterness at the inevitable consequences of old age. He edited The Oxford Book of Modern Verse (1936), died in Menton, in the south of France, and was reburied in Drumcliff, Co. Sligo in 1948. Despite his great output of plays, essays, critical, philosophical and esoteric works, he is remembered now only as a poet, especially for his disturbing imagery e.g. in Second Coming (1919), Sailing to Byzantium (1926), Byzantium (1930).

Ye Jianyi

Chinese marshal. He joined the Communist Party in Germany in 1924, was close to *Zhou Enlai and *Deng controlled the PLA and arranged the coup of October 1976 which overthrew the ‘Gang of Four’ and put Deng in power.

Yelets, Boris Nikolaevich (1931–2007). Russian politician, born in Sverdlovsk (now Yekaterinburg). He graduated as a construction engineer in 1955, joined the Communist Party in 1961 and was a party official in the Sverdlovsk oblast from 1968, rising to First Secretary 1976–85. He was brought to Moscow in 1985 by Mikhail *Gorbachev and made first secretary of the Moscow city party committee until his dismissal in 1987 after he had criticised the slow pace of reform. He used his exile from administrative responsibility to organise a major public campaign against entrenched privilege, bureaucracy and economic inefficiency. In March 1989 he was elected to the Congress of Peoples’ Deputies for the Moscow region with an unprecedented 89 per cent of the vote. Elected in May 1990 as Chairman of the Supreme Soviet of the Russian Soviet Federal Socialist Republic (RSFSR), this made him an alternative focus of power to *Gorbachev within the Soviet Union. Lacking the encumbrance of the CPSU, Yeltsin became immensely popular, while Gorbachev, shackled by the Party and his enemies within it, retained responsibility for economic reform. He was elected as President of the Russian Federation in June 1991 with 57 per cent of the popular vote. In August 1991, when hardliners staged a coup against Gorbachev, Yeltsin, supported by elements of the armed forces and KGB, led popular resistance in Moscow. The coup collapsed and Gorbachev returned to Moscow, increasingly dependent on Yeltsin. By December 1991, the USSR was dissolved and replaced by a loose federation, the Commonwealth of Independent States (CIS). The Russian Federation took control of the Kremlin and replaced the USSR in the UN Security Council. Yeltsin also became commander of the armed forces. He faced intractable problems in attempting to transform a command economy to a market economy and the Russian parliament was obstructive. Nationalism also became an increasingly powerful and disruptive force. In March 1993 he declared a state of emergency and ruled by decree, with strong support from President *Clinton. In October his troops crushed a coup organised by the parliament. In December 1993 Russian voters approved his new presidential constitution but elected a Duma largely hostile to reform. Russia's invasion and destruction of Chechnya (November 1994–February 1995) was politically damaging, so were his eccentric personal behaviour and his health problems. He defeated the Communist candidate, Gennady *Zyuganov, by 54 per cent to 40 per cent in the second round of the July 1996 presidential election. After repeated illnesses, he resigned suddenly on 31 December 1999.

Yersin, Alexandre Émile John (1863–1943). Swiss-French bacteriologist. He studied under *Pasteur and worked at the Pasteur Institute in Paris, where, with Pierre Roux, he did research on diphtheria serum. In Hong Kong he isolated (1894) bacillus for bubonic plague (*Yersinia pestis) and prepared an effective serum for it (1895). He lived in Indochina from 1895 and set up branches of the Pasteur Institute in China (*Kitasato).}

Dictionary of World Biography

Deville, P., Plague and cholera. 2012.

Yesinin, Sergei Aleksandrovich (1895–1925). Russian poet. Of peasant origin, he celebrated ‘wooden Russia’ and attacked the impact of the iron age and urban industrialisation. He briefly welcomed the 1917 Revolution, and soon became a leader of
Yevtushenko, Yevgeny Aleksandrovich (1933–2017). Russian poet. His poems first appeared in the USSR in 1952. He quickly became the most prominent of the young writers who rejected ‘socialist realism’ in literature. He incurred much criticism for his poem Babiy Yar, which pilloried Soviet hypocrisy and anti-Semitism. Shostakovich used Babiy Yar and four other Yevtushenko poems (including A Career, about Galileo) in his Symphony No. 13 (1962). He continued courageously to maintain his critical attitude in his autobiography, which was published in Paris (1963). His reputation fell sharply in the 1980s.

York, Henry Benedict Maria Clement Stuart, Cardinal-Duke of (1725–1807). British cardinal and pretender, born in Rome. Younger son of James Edward *Stuart, he was created Duke of York by his father in 1725, made a cardinal in 1747 by Pope Benedict XIV and served as Bishop of Frascati 1761–1803. The last male in direct descent from the Stewart/Stuart kings, on the death of his elder brother Charles Edward *Stuart in 1788, he proclaimed himself as Henry IX. Impoverished by loss of property after Napoleon’s invasion of Italy, he was granted a pension of £4,000 by George III in 1800. He died in Frascati and was buried in St Peter’s, Rome.

York, House of. English dynasty, a branch of the Plantagenets descended, through Richard, Duke of York, from Lionel, Duke of Clarence, second son of Edward III. Yorkist kings were Edward IV, Edward V and Richard III. Later the Duke of York became a common title in the British royal family, e.g. the kings James II, George V and George VI before accession and George III’s second son, Frederick Augustus (1763–1827), whose military career culminated in his appointment (1798) as Commander-in-Chief, the office he held 1798–1809, 1811–27.

Yoshida Shigeru (1878–1967). Japanese Liberal politician. A diplomat, he was Ambassador to Great Britain 1936–39 opposed extremist policies during World War II and was imprisoned (1945) until the Americans released him. He was Foreign Minister (1945–46) and twice Premier 1946–47, 1948–54, largely setting the pattern of post-war Japanese politics.

Young, Arthur (1741–1820). English agriculturist and writer. His father, a clergyman, owned an estate at Bradfield, Suffolk, which his son began to farm in 1763. As a farmer he was a failure, but he gradually gained success as an agricultural writer, basing his work on information gathered during a series of tours (from 1767) through the agricultural districts of England. In 1776 he went to Ireland where as estate factor to Lord Kingsborough he renewed his practical experience. Meanwhile he had begun to publish his observations, which, e.g. in Political Arithmetic (1774), extended to social and political comment. He edited the periodical Annals of Agriculture (1784–1809). Elected FRS, he received recognition from abroad which encouraged him to make journeys in France and Italy. His Travels in France (1792–94) is a most valuable account of that country on the eve of the Revolution. From 1793 he was secretary to the newly formed Board of Agriculture. Larger farms, enclosures of unfarmed land, the use of fertilisers, improvement of stock and secure tenure were among the things he advocated, supporting his arguments with statistics and surveys. The ‘agricultural revolution’ was in fact largely of his making. From 1811 he was blind.

Young, Brigham (1801–1877). American Mormon leader, born in Whitingham, Vermont. A carpenter, painter and glazier by trade, his life was completely changed when, in 1830, he saw the Book of Mormon and was later converted by a brother of the prophet Joseph Smith. In 1835 he became one of the ‘twelve apostles’ of the Mormon Church and after Smith’s murder (1844) – the result of his claim of divine sanction for polygamy – he led his people to Utah where he founded Salt Lake City. As President of the Church he was made territorial Governor (1849). Though deposed by the US government for adhering to polygamy he retained his hold over his co-religionists who under his guidance became a self-contained and prosperous community. He was survived by 27 wives and 56 children, to whom he bequeathed $US2.5 million. The Mormons (Church of Latter Day Saints) renounced polygamy in 1890.

Young, Francis Brett (1884–1954). English novelist. Trained as a doctor, he won the James Tait Black Memorial Prize with Portrait of Clare in 1927, but did not afterwards attain the same quality. His books were charming chronicles of life in his native rural Worcestershire, which he described with great affection.

Young, Thomas (1773–1829). English physicist and Egyptologist. Trained in medicine but interested mainly in physics, he was elected FRS in 1794 and became professor of physics at the Royal Institution 1801-03 and secretary of the Royal Society 1803–29. From 1801 he did much to establish the wave theory.
of light, particularly in attributing phenomena such as 'Newton's rings' to 'interference' between trains of light waves. He also put forward a theory of colour vision which was later improved by 'Helmholtz. He first used the term 'modulus of elasticity' in its modern sense, and introduced what is now known as 'Young's modulus'. He was also an outstanding linguist, attempted to decipher the inscriptions on the Rosetta Stone (*Champollion), and, following on the work of William *Jones, coined the term Indo-European (1813).

Youngusband, Sir Francis Edward (1863–1942). British soldier and explorer. As the culmination of a long period of difficult relationships and unsatisfactory negotiations, Colonel Youngusband, accompanied by an armed escort, advanced into Tibet (1904) and, after being attacked, reached Lhasa, the capital. An agreement resulted which marked the opening of Tibet to British trade. He explored and wrote about many parts of Central Asia and vainly tried to reach the summit of Everest.

Yousafzay, Malala see Malala Yousafzay

Ypres, 1st Earl of see French, John (Denton Pinkstone)

Ysaïe, Eugène (1858–1931). Belgian violinist, conductor, composer and teacher. He toured extensively, founded a famous string quartet, and wrote concertos and sonatas for violin.

Yuan. Chinese dynasty, also called Mongol, founded by *Kublai Khan, which had its capital in Beijing (then called Dadu) and ruled 1279–1368.

Yünn Shikai (1859–1916). Chinese general. As a soldier, he gained the highest honours under the dowager empress *Tz'u Hsi in her last years but fell from favour after her death (1908). On the outbreak of the revolution he was hastily given supreme command, gained some success over the revolutionaries, but, backed by the only fully trained troops in the country, was soon playing a double game. He persuaded the imperialists to accept the necessity for the young emperor's abdication and at the same time induced *Sun Yatsen, who had already been elected President, to stand down in his favour. He was President of China 1912–16. The next step to supreme power was the abolishing of parliament, but he over-reached himself when he followed this (1915) by a plan to make himself emperor. Confronted with the anger of the people and the defection of his own commanders he was forced to withdraw, a decision causing so much 'loss of face' as to bring about his death, the exact details of which are not known.

Ch'en, J., Yuan Shih-Kai: Brutus Assumes the Purple. 2nd ed. 1972.

Yudhoyono, Susilo Bambang (known as SBY) (1949– ). Indonesian soldier and politician, born in Java. An army general, he was a Minister under Abdurrahman *Wahid and defeated *Megawati Soekarnoputri to become President of Indonesia 2004–14.

Yukawa Hideki (1907–1981). Japanese physicist. While a lecturer at Osaka University, he evolved a theory of nuclear forces and predicted (1935) the existence of a particle (the meson) having a mass 200–300 times that of the electron. Mesons were observed in cosmic rays in 1936, but in 1947 these were found to be of a different type from those predicted by Yukawa, which were then observed. He became the first Japanese Nobel Prize winner when he was awarded the Prize for Physics (1949). In 1953 he was made director of the new Research Institute for Fundamental Physics in Kyoto, retiring in 1970.

Yunus Emre (1238?–1321?). Turkish poet. A member of a Sunni dervish sect, he was a travelling mystic and humanist, generally regarded as Turkey's greatest poet, having some parallels with *Omar Khayyam.

Yunus, Muhammad (1940– ). Bangladeshi social activist, economist and banker. In 1983 he founded the Grameen Bank, dedicated to providing microcredit, without collateral, to impoverished people, especially women, to enable them to become economically independent. The 2006 Nobel Prize for Peace was jointly awarded to Yunus and the Grameen Bank 'for their efforts through microcredit to create economic and social development from below'.
Z

**Zabarella, Jacopo** (1533–1589). Italian scientist and philosopher. One of the major figures in the revival of Aristotelian studies, he helped purify, by humanist methods, Aristotelian texts of medieval glosses and inaccuracies. He recognised the fruitfulness of Aristotelian theological and organic approaches to the study of the living body and the practice of medicine. Zabarella wrote extensively on the methodology of science. He tried to show that logic was not so much a system complete in itself but rather a tool for investigation. In this respect he was probably instrumental in reorienting Aristotelianism away from rationalist metaphysics and in the direction of a more experimental approach.

**Zaghlul, Sa’d** (1857–1927). Egyptian politician. Born into a peasant family, he was educated at the al-Azhar University in Cairo, and became a lawyer, journalist, judge and Minister of Education 1906–10. He encouraged introduction of Western, secular civilisation in Egypt but sought to end both the nominal rule by the Ottomans and the British protectorate. In 1918 he founded the Wafd party, clashed with *Wingate and was deported to Malta (1919). Negotiations with *Allenby and *Milner led to a more experimental approach.

**Zarafshani, Mohammad** (1948–2000). Czech athlete. Noted as a long-distance runner, between the Olympic Games of 1948 and those of 1952 he broke 13 world records in the 5,000 metres, 10,000 metres and Marathon. He was considered the best of his time.

**Zappa, Frank** (1940–1993). American rock musician. Leader of *The Mothers of Invention*, flourishing mainly in the 1960s and early 1970s, his major records include *Lumpy Gravy*, *We’re Only In It For the Money*, *The Mothers of Invention*, *How to Be a Soccer Player*, and *Bongo Fury*.

**Zamyatin, Yevgenyi Ivanovich** (1884–1937). Russian novelist. A naval engineer, he served in England 1914–17, became an early left-wing critic of *Lenin’s regime and had his works suppressed. He lived in Paris from 1931. An important anti-Utopian, his novel *We* (1924) was a forerunner of *Huxley’s Brave New World* and *Orwell’s Nineteen Eighty-four*. The best known of his novels and plays of Jewish life was *Children of the Ghetto* (1892, dramatised 1899). A philanthropist and keen Zionist, he organised the Jewish Territorial Organisation, which was a failure.

**Zangwill, Israel** (1864–1926). Anglo-Jewish writer. The best known of his novels and plays of Jewish life was *Children of the Ghetto* (1892, dramatised 1899). A philanthropist and keen Zionist, he organised the Jewish Territorial Organisation, which was a failure.

**Zarafshani, Mohammad** (1948–2000). Czech athlete. Noted as a long-distance runner, between the Olympic Games of 1948 and those of 1952 he broke 13 world records in the 5,000 metres, 10,000 metres and Marathon. He was considered the best of his time.

**Zautos, Emil** (1922–2000). Czech athlete. Noted as a long-distance runner, between the Olympic Games of 1948 and those of 1952 he broke 13 world records in the 5,000 metres, 10,000 metres and Marathon. He was considered the best of his time.

**Zedillo Ponce de Leon, Ernesto** (1951– ). Mexican economist and politician. He studied in the US and UK and became a banker, serving as a member of
Zeeman, Pieter (1865–1943). Dutch physicist. Professor of physics at Amsterdam (1900–35), he discovered (1896) the ‘Zeeman effect’, the splitting of spectral lines when a beam of light passes through a magnetic field. The effect was explained by *Lorentz and led to the development of magneto-optics. Zeeman also demonstrated the existence of magnetic fields around the sun and the stars. He shared the Nobel Prize for Physics (1902) with Lorentz.

Zeemanz, Walter (1838–1917). German physicist. As an officer in the Württemberg army, he became an observer in the American Civil War and retired in 1891 as a lieutenant-general. He soon fulfilled a long-held ambition to construct a rigid and dirigible airship. This he first accomplished in 1900. In 1912 he made a 12-hour flight which stirred such enthusiasm in Germany that 6,000,000 marks were raised for him to start a Zeppelin Institute for their manufacture. In World War I Zeppelins made several raids on England but their hydrogen-filled containers made them very vulnerable and they played only a restricted role. After the war Zeppelins were used commercially on flights between Germany and North and South America, but the superiority of aeroplanes and a series of disastrous accidents, notably the explosion of the ‘Hindenburg’ in Lakehurst, New Jersey, in May 1937, led to their abandonment.

Zernike, Fritz (1888–1966). Dutch physicist. Professor at Groningen University 1920–58, he won the Nobel Prize for Physics (1953) for his work from 1932 on the phase-contrast principle in microscopy, which made it possible to observe transparent, colourless micro-organisms in the living state.

Zeffirelli, Franco (1923– ). Italian theatre and film director. He began his career in the theatre, as an actor and designer, in 1945. He produced his first opera (La Cenerentola) at La Scala, Milan, in 1953 and later worked at Covent Garden and the New York Metropolitan. His notable stage productions included Hamlet and Romeo and Juliet, both marked by keen perception of the author’s intentions and vivid clarity in interpreting them. His films include Romeo and Juliet (1967), The Taming of the Shrew (1968), Othello (1968) and Hamlet (1990). He served as a senator 1994–2001 and was awarded an Hon. KBE in 2004.

Zeiss, Carl (1816–1888). German optical instrument manufacturer. He founded the famous firm at Jena, renowned for the precision with which lenses for telescopes, microscopes, field-glasses, cameras etc. were made. He was a pioneer of co-partnership.

Zeno of Citium (335–263 BCE). Greek philosopher, born in Cyprus. He founded the Stoic system of philosophy, called after the Stoa Poikile (‘painted porch’) in Athens where he taught a modification of the Socratic ideals of virtue, endurance and independence.

Zeno of Elea (fl. c. 450 BCE). Greek philosopher, born in Elea (now Velia), Southern Italy. He came to Athens with *Parmenides, of whom he was a disciple. According to *Aristotle he introduced the form of argument known as ‘reduction to absurdity’. A famous example of his method is his ‘proof’ that a hare can never overtake a tortoise, because by the time that the hare has covered the distance between them the tortoise will have made some small advance. When this distance, too, has been covered by the hare, another advance, however small, will have been made by the tortoise and so on indefinitely, there will always be a fractional gap between them.

Zenobia (fl. c. 260–270). Queen of Palmyra in Syria. After the death of her husband Odenathus, Rome’s ally against Persia, she ruled as regent for her son, established a brilliant court at Palmyra and increased her realm until she exercised power from the Egyptian frontier to the Black Sea. In 272 she revolted from Rome, her armies were defeated and her capital destroyed. Zenobia, in chains of gold, was led in the emperor *Aurelian’s triumphal procession through Rome. She died in a villa at Tivoli.

Zeppelin, Ferdinand, Count [Graf] von (1838–1917). German airship designer. As an officer in the Württemberg army, he became an observer in the American Civil War and retired in 1891 as a lieutenant-general. He soon fulfilled a long-held ambition to construct a rigid and dirigible airship. This he first accomplished in 1900. In 1912 he made a 12-hour flight which stirred such enthusiasm in Germany that 6,000,000 marks were raised for him to start a Zeppelin Institute for their manufacture. In World War I Zeppelins made several raids on England but their hydrogen-filled containers made them very vulnerable and they played only a restricted role. After the war Zeppelins were used commercially on flights between Germany and North and South America, but the superiority of aeroplanes and a series of disastrous accidents, notably the explosion of the ‘Hindenburg’ in Lakehurst, New Jersey, in May 1937, led to their abandonment.
the Cultural Revolution, rehabilitated and became First Secretary in Sichuan province 1975–80. A protégé of *Deng Xiaoping, he was Premier of China 1980–87 and General Secretary of the CCP 1987–89. He was dismissed from all posts because of his sympathy for the Tiananmen Square demonstrators and remained under house arrest until his death.

Zhonghe, Zheng (also Jen Ho, originally Ma He or San Bao) (c.1371–1433). Chinese admiral and diplomat. Born to a Mongol family, he became a eunuch in the Ming court and led seven great voyages of exploration for the emperor Zhu Di (1405–07, 1409, 1411, 1413–15, 1417, 1421–23, 1433), visiting India, Ceylon, Persia, Java, Arabia and East Africa. His largest excursion involved 300 ships and 27,000 men and it has been speculated that Chinese ships visited North and South America, Greenland, Australia and New Zealand.

Zhiriinovskiy, Vladimir Volfovich (1946– ). Russian nationalist politician. He founded the Liberal Democrats, a nationalist and xenophobic party that urged a return to Russia's tsarist frontiers, opposed market reforms, resisted Western cultural influence and called for more military spending. He contested the presidential election in 1991, running third to Yeltsin. In December 1993 his party won 25 per cent of the popular vote in elections to the Duma.

Zhivkov, Todor Christov (1911–1998). Bulgarian Communist politician. A printer, he rose through the Communist Party apparatus and became First Secretary in 1954. Premier of Bulgaria 1962–71 and President 1971–89, he was a devoted follower of Moscow. His daughter Liudmilla Zhivkova (1942–81), educated at Oxford, began to liberalise arts and media policy, then died of a cerebral haemorrhage. Convicted of embezzlement and abuse of power in 1992, he was kept under house arrest until 1997, then published self-serving Memoirs. He was the longest serving party leader in the Soviet bloc.

Zhou Enlai (also Chou En Lai) (1898–1976). Chinese Communist politician, born in Kiangsu Province. Son of a bankrupt mandarin, he studied in Tianjin and Tokyo, was jailed in 1920, then went to Europe until 1924, mostly living in Paris (where he worked at a Renault plant). He joined the Chinese Communist Youth League (1921) and became a student organiser in France and Germany. He returned as CCP Secretary in Guangzhou (Canton), working closely with the Guomindang and their Russian military advisers, then taught at the Huagpu Military Academy and was a political commissar with *Chiang Kai-shek's 1st Army (1926). In 1927 he broke with Chiang, led an abortive rising in Shanghai, escaped with a price on his head and became a member of the CCP Politburo 1927–76, a record term. He worked in Moscow in 1928, then shared party leadership with *Li Lisan until another unsuccessful rising at Nanchan (1930) led to direct Russian political intervention in the CCP. He retreated to Jiangxi (Kiangsi) in 1931 and was a rival of Mao's until the 'Long March' began. He then deferred to Mao (1935), accepted his 'peasant strategy' and was a leader in the March. His wife Deng Yingchao (1904–1992) was one of only 50 women who survived the entire Long March. When the Japanese war began, he was the CCP's liaison officer with Chiang's HQ at Chungking (Chungking) (1937–45). After the revolution, he was first premier of the Peoples' Republic 1949–76 and Foreign Minister 1949–58. Fluent in English and French, he was the best known figure of the regime overseas. He favoured greater technological change and closer links with the US to counter-balance Soviet influence in Asia. His position was strengthened by the 1973 Party Congress, then weakened by his own illness. Under *Deng Xiaoping his widow was elected to the Politburo (1978) and became head of the Chinese Peoples' Political Consultative Committee 1983–88.

Wilson, D., Chou. 1984.

Zhu De (also Chu Teh) (1886–1976). Chinese marshal and politician, born in Sichuan province. Son of a rich peasant, he took part in the 1911 Revolution against the Qing (Manchu) dynasty. He joined the army, rising to the rank of brigadier in 1916. He became an opium addict but, after breaking himself of the habit, was sent to Germany to study engineering in 1921. He joined the Communist Party in Berlin in 1922 and was expelled from Germany in 1926. He led the Nanchang rising against *Chiang Kai-shek (1927) and in 1928 organised an army with *Mao Zedong. He became Commander-in-Chief of the 4th Red Army from 1931. With Mao he led the celebrated 'Long March' from Jiangxi to Yenan (1934–36). He commanded the 8th Route Army against the Japanese until 1945, was Commander-in-Chief of the People's Liberation Army 1945–54 and, after Chiang's defeat, became Vice President of the People's Republic 1949–59. He served as acting head of state 1968–76.
Zhu Rongji (1928– ). Chinese Communist official. Trained as an engineer at Qinghua University, he joined the CCP in 1949 and worked through the Shanghai party machine. He was Mayor of Shanghai 1988–91, then appointed Deputy Prime Minister 1991–98, with special responsibility for promoting economic reforms, especially the ‘socialist market economy’. He succeeded *Li Peng as Prime Minister 1998–2003.

Zhu Xi (Chu Hsi) (1130–1200). Chinese philosopher, teacher and writer, born in Fukien province. As a civil servant under the *Song dynasty, finally working at the Imperial court, he wrote four commentaries on *Confucius (The Four Books, 1189) which became the basis of neo-Confucianism and were extremely influential in China, Japan and Korea, incorporating elements of Taoism and Buddhism, with a strong moral emphasis. His ideas became institutionalised and used as the basis of examinations for the civil service from 1313 until the 20th century. By then his thoughtful teachings had become fossilised.

Zhukov, Georgi Konstantinovich (1896–1974). Russian marshal. Son of a peasant, he served uncommissioned in World War I, joined the Red Army (1919) and rose steadily in rank until, in World War II, he became a marshal. When the Germans invaded Russia (1941) he commanded the central front and as Deputy Commissar for Defence 1942–44 (under *Stalin) directed the defence of Moscow and operations at Leningrad. His encirclement of Stalingrad (now Volgograd) resulted in the surrender of Field Marshal von Paulus (February 1943), the first major German defeat. He commanded the successful Ukraine offensive. The Battle of Kursk (July–August 1943) was the war's greatest armoured engagement, both sides having more than a million men and 3000 tanks, marking defeat for the German summer offensive. Zhukov led Soviet forces into Poland and Romania (1944), captured Berlin in the last days of the war, received the German surrender (1945) and commanded the Russian occupation forces (1945–46). Stalin, fearing his popularity, kept him away from Moscow but in 1953 the new Soviet leaders made him Deputy Minister of Defence under *Bulganin. As Defence Minister (1955–57), he backed *Khrushchev in June 1955 after a Presidium majority voted to oust him, helped organise a reversal by the Central Committee and was rewarded first with promotion to the Presidium, then (October) with dismissal since the counter-coup proved his strength as a potential rival. His Memories and Reflections appeared in 1969.

Zia ul-Haq (1924–1988). Pakistani general. He rose to the rank of Lieutenant General and was appointed Army Chief of Staff by Z. A. *Bhutto in 1976. In July 1977, Zia took power as President and martial law administrator, and Bhutto was executed on a murder charge in 1979. He was killed in a plane crash.

Ziegfeld, Florenz (1869–1932). American impresario born in Chicago. He was renowned as a showman with the lavish production (1907) of the Ziegfield Follies, from whose chorus line many dancers, later well known, started their stage or matrimonial careers. Showboat (1927) was among his many successes. He worked with Jerome *Kern, Irving *Berlin and W. C. *Fields.

Ziegler, Karl Waldemar (1898–1973). German chemist. He was best known for his observation of the Ziegler Catalysts (e.g. titanium trichloride) which produce stereospecific polymers leading to greatly improved industrial plastics. He shared the 1963 Nobel Prize for Chemistry.

Zieten, Hans Joachim von (1699–1786). Prussian soldier. A brilliant trainer and leader of cavalry, his exploits in the War of the Austrian Succession and the Seven Years' War made him a national hero. In the latter he was made a cavalry general on the battlefield of Liegnitz (1760) and by his dash won acclaim at Prague, Leuthen and Torgau. In his old age he was in high favour with *Friedrich II (‘the Great’).

Zinoviev, Grigori Evseyevich (original name Osvl Radomylsky) (1883–1936). Russian revolutionary politician. He left Russia (1908) and lived abroad with *Lenin, as a Bolshevik propagandist. He was a foundation member of the CPSU Politburo 1917–26, President of the Third International 1919–26 and Party Chief in Leningrad 1921–26. He had become notorious in British politics when the publication (1924) of a letter, allegedly by him, urging the supporters in Britain to prepare for violent insurrection, contributed materially to Ramsay *MacDonald's electoral defeat. After Lenin died (1924), party leadership was held by a triumvirate of *Stalin, *Kamenev and *Zinoviev. As Stalin moved towards one-man rule, Zinoviev allied himself with *Trotsky and was expelled from the party in 1926. Re-admission followed recantation but he was never again secure and was executed after condemnation in the 1936 treason trials. Kirovgrad was named Zinoviev after him between 1924 and 1936.

Zinzendorf, Nikolaus Ludwig, Graf [Count] von (1700–1760). German religious leader. By sheltering the persecuted Moravian Brethren on his estates, he enabled a revival to take place. His visits to England (where he came to know *Wesley), America and elsewhere greatly extended their influence.

Zoė (Porphyrogenita) (c.978–1050). Byzantine Empress 1028–50. ‘Born to the purple’ (as her name indicates), she was the daughter of Emperor Constantine VIII. She had a tense relationship with her sister Theodora (980–1056), who was co-empress 1042 and sole empress 1055–56. Zoė’s three husbands Romanos II, Mikhail IV and *Constantine IX, were crowned as co-rulers. She was involved in the deaths of the first two.

Zoffany, John (c.1734–1810). German painter. Resident in England from c.1758, among his early patrons was David *Garrick for whom he painted *Garrick in ‘The Farmer’s Return’ (1762) and similar works. From 1766 *George III commissioned royal portraits and conversation pieces and in 1768 he became a founder member of the Royal Academy. During a visit to India (1783–90) he found exotic subjects to extend his range. Although not a great painter, his works attract by their liveliness and glitter.

Zog I (Ahmed Bey Zogu) (1895–1961). King of Albania 1928–39. Before becoming King he had been Premier 1922–24 and President 1925–28. As King he was forced to rely on Italian support but he became irked by his dependence. As soon, however, as he tried to assert himself, *Mussolini ordered the invasion of his country. Zog took refuge abroad and was never able to return.

Zola, Émile (Édouard Charles Antoine) (1840–1902). French writer, born in Paris. After his father’s death (1847) he was brought up in poverty at Aix-en-Provence, where at the Collège de Bourbon he became a great friend of *Cézanne. His first novel, *Thérèse Raquin* (1867), a psychological crime story, established a new trend in fiction. Soon, however, he became deeply concerned about social evils and planned a series of novels relating the effects of environment on a single family (Les Rougon-Macquart) and intended to be an indictment of *Napoléon III’s regime. The empire had, however, collapsed years before the novels began to appear. This resulted in serious anachronisms as in *Germinal* (1885), where child labour in the coalfields, long abolished, was assailed as though it were one of the contemporary evils with which the novel was concerned. Other well known novels of this series include *L’Assommoir* (1877) on drunkenness and *Nana* (1880) on prostitution. His works lack humour, but their realism is impressive and few have evoked more convincingly the sordidness and stresses that accompanied the growth of industrialism. An exception was *La Débâcle*, a vivid story of the catastrophe of the Franco-Prussian War. Zola also made a name for himself in critical journalism and in 1898 made a sensational incursion into public affairs with ‘j’ accuse’, an open letter to the French president which forced reconsideration of the celebrated *Dreyfus case. Also an excellent photographer, he accidentally gassed himself.

Zoroaster (c.630–c.553 BCE). Persian prophet. Little is known about him except that in middle life he appears to have converted a King Wishtaspa (Hystaspes) and to have lived and preached under his protection. His teaching postulates a contest between Good, personified as Ormuzd, and Evil, unmentionable by name but represented by the evil spirit Ahriman and Asmodeus (wrath). The tradition of Zoroastrianism is maintained by the Parsees and their sacred writings, the Avesta. These include the Gathas, philosophic poems almost certainly attributable to Zoroaster himself. In *Thus Spake Zarathustra* *Nietzsche makes Zoroaster the spokesman of his own ideas.

Zoser (Djoser) (c.2686–2613 BCE). Egyptian pharaoh of the IIIrd dynasty. The first major ruler of Egypt, he established his capital at Memphis (near modern Cairo) and created an efficient administrative system. His chief minister was *Imhotep. He built the first great pyramid, a six-step stone structure intended as his tomb, at Sakkara.

Zuckerberg, Mark (1984– ). American entrepreneur and programmer, born in New York. Educated at Harvard, in 2004 he became the co-founder of Facebook, was a billionaire at 23, and in 2015 was worth $US44 billion.

Zuckerman, Solly Zuckerman, Baron (1904–1993). British anatomist, born in South Africa. Educated at Cape Town and London universities, he carried out research on the anatomy of monkeys and apes, and became professor of anatomy at Birmingham 1943–68. He advised the RAF against the saturation bombing of German cities during World War II and was chief scientific adviser to the British Government 1964–71. He was Secretary of the London Zoo 1955–77 and received the OM in 1968. His books include *Star Wars in a Nuclear World* (1987) and *Monkeys, Men and Missiles* (1988).
Zukerman, Pinchas (1948– ), Israeli violinist and conductor. He studied in Israel and New York, recorded and toured extensively and married the actor Tuesday Weld.

Zuma, Jacob Gedleyihlekisa (1942– ). South African (Zulu) politician. Deputy President of South Africa 1999–2005, he was elected leader of the ANC in 2007, defeating Thabo *Mbeki. After being acquitted of rape, corruption charges were dropped. Zuma was elected as President of South Africa 2009– , with a comfortable margin.

Zurbarán, Francisco de (1598–c.1664). Spanish painter. He worked mostly in Seville and in Madrid, but though he painted at the court of *Philip IV, his best work is found in his religious works and especially in pictures of single figures – saints and ascetic monks – at their devotions. The naturalism of his Spanish contemporary *Velázquez and the chiaroscuro of *Caravaggio are clear influences. His *Still-life with Lemons, Oranges and a Rose (1633, Norton Simon Museum, Pasadena) has an extraordinary ecstatic quality and is his most reproduced work.

Zweig, Arnold (1887–1968). German writer, born in Silesia. His most famous work was *The Case of Sergeant Grischta (1927). He left Germany to live in Palestine in 1934, returning to East Germany in 1948.

Zweig, Stefan (1881–1942). Austrian writer. Having gained an early reputation by his translations from English and French, he wrote a number of biographical essays, published in groups of three, e.g. *Balzac, *Dostoevsky and *Dickens (1910), *Casanova, *Stendhal and *Tolstoy (1928). He also wrote plays, short stories, essays and memoirs, e.g. *The World of Yesterday (1943). He left Austria in 1934 and, after some years in England, reached Brazil where he and his wife committed suicide in despair at the condition of the world. His collection of musical manuscripts is in the British Library.

Zwingli, Ulrich (1484–1531). Swiss religious reformer, born in Wildhaus, Sankt Gallen. After graduating at Basle University he became a parish priest at Glarus, and having served as chaplain in Italy denounced the mercenary system. In 1516 he moved to Einsiedeln, and denounced the superstitions connected with that place of pilgrimage. His wider influence, began with his appointment (1518) as preacher at the Great Minster in Zürich. Having persuaded the civil council to forbid the entry of indulgence sellers and the enlistment of mercenaries, he went on to preach that only those acts definitely forbidden in the scriptures need be regarded as sinful. Thus it was decided by the council that meat could be eaten in Lent, and other changes, e.g. the removal of images from church, were made after public discussion and debate. Eventually (1528) after a great disputation at Berne the *Ten Theses of the Reformed Church were adopted. Meanwhile monasteries had been secularised and a communion service substituted for the Mass. In 1524 Zwingli’s own marriage was announced. An attempt by Philip of Hesse to bring German and Swiss Protestantism into accord failed at the Colloquy of Marburg (1529), Zwingli’s belief that the Communion should be only commemorative being in conflict with *Luther’s sacramental doctrines. But the Roman Catholic cantons of his native Switzerland were the immediate threat. Although a treaty between Romanist and Protestant cantons had been signed in 1529, the Catholics attacked Zurich territory and at the battle of Kappel (October 1531) Zwingli, once more a chaplain with the troops, was killed. He was the least dogmatic of the great reformers. His urge to reform the Church sprang not from striking religious experiences but from his studies of the Scriptures.

Zworykin, Vladimir Kosma (1889–1982). American electronics engineer, born in Russia. He migrated to the US in 1919, investigated the photoelectric effect and, while working for the Westinghouse Electric Corp, developed (1924) a primitive electronic television camera, the kinescope, based on the cathode ray tube. Westinghouse showed little interest and in 1929 he joined RCA. By 1938 he had perfected his ‘Iconoscope’ which superseded the method of mechanical scanning devised by *Baird. He also worked on an electronic microscope with far greater magnifying power than optical instruments. Zworykin was called ‘the father of modern television’ (Philo *Farnsworth).
